Q. Have some of those changes been sudden fluctuations?

A. Yes.

Q. Now, can you describe any of the fluctuations of prices of Idaho white pine wsich took place about the year 1924 to 26?

1730 A. Yes.

Q. What variation took place in the price of Idaho white pine at that time?

A. In general the peak price is all softwood lumber was reached in the year 1920. Since that time, following that time there was a rescission in price up to about 1924 or '25.

Q. Was that gradual rescission?

A. Well, a very precipitous rescission during 1921.

Q. Yes.

A. More gradual during '22 and '23 and '24.

Q. Now, then what happened about 1925?

A. In 1925 and '26 the Idaho white pine was stationary or increased slightly, while the price of ponderosa continued to slightly decline.

Q. To what do you attribute that? Was that purely economic causes?

A. (Pause.)

Examiner DE BRULER. If you have sufficient knowledge, answer that question.

A. I think any reply would be largely conjectural on that.

Mr. BURR: Q. Have you ever made any cut in the price of Idaho white pine, which you made because in part of the use of the word "white" in connection with the California white-pine trade term?

A. I do not know that we ever made any that was entirely

1731 due to that cuase.

I said in part.

A. But certainly in part. It has been referred to in evidence here today. There was a considerable rescission in price during 1927. The prices as reported by the Western Pine Manufacturers' Association for the years 1922 and '23 showed a premium for Idaho white pine over ponderosa pine of from sixteen to seventeen dollars a thousand feet. Since the decline of 1927, in other words, during the years 1928 and '29, there has been a premium in price for Idaho white pine over ponderosa of from five dollars and fifty cents to eight dollars and fifty cents.

Q. Now, have any of those changes been made as the result of the action of your company?

A. Our company has, of course, no large control on the general lumber market, but we have—we did in September 1927 purposely make a drastic reduction in the price of our white pine. Do you want me to explain the reasons for that as we saw them?

Q. Yes, sir; if you please.

A. The principal reason for it was that we were not selling a sufficient quantity of Idaho white pine to satisfy our needs. The use of Idaho white pine had been reduced, I believe, because of the difficulty on the part of the buyer in being able to

1732 specify and surely buy a genuine white pine. White pine has gotten its price premium very largely over the years because of its superior lasting qualities, because of its ability—its adaptability to use where it would be exposed to the elements. We have felt that white pine should be made largely a specialty wood, to the extent that it is best adapted to those uses where it is exposed to the elements, in siding, in cornice work, in sash and frames. There is another point, another place where it is specially adapted for superior use, it it——

Mr. WHEAT. May I ask, Mr. Examiner, whether this is all in answer to the question why they reduced the price?

Examiner DE BRULER. It is somewhat prolonged.

Mr. WHEAT. Yes.

Examiner DE BRULER. I think what the Commission would want to know is what influence has the sale of the California white pine over the reduction of your prices, if any?

Mr. WHEAT. May I say this, it makes it very difficult for me to have to object to a question asked by the examiner.

Examiner DE BRULER. I understand. Exception noted.

A. I am sorry if I trespass. Just let me say this——

Mr. BURR. No, no. Let me say I am perfectly agreeable to not making the objection to a question and motion to strike as not having been made timely, but it does seem to me that this witness should get before the examiner and the Commission the motives which

1733 lead that company to that charge of price, and those motives are——

Examiner DE BRULER. As to the fact.

Mr. BURR. Are based right down on the market conditions and the necessity that they were under to maintain the market. I think if you will give him a little leeway, he will show us the bearing of the market situation and the status and reason whey they found it necessary to cut.

The WITNESS. I am trying to answer you. I think I can do it in another sentence.

Mr. BURR. Q. I think you can. I think we are interrupting unnecessarily for the defense's purpose or the Commission's.

Examiner DE BRULER. All right.

A. What I mean to say is there are certain uses to which Idaho white pine is especially adapted. One is in a place where it stand exposed, another is for pattern purposes, the making of patterns. We had come to the conclusion that because other woods not true white pines were being marketed under the white pine name, that it was no longer possible to get the price preferences that we had previously gotten, and that a drastic reduction was necessary to reintroduced genuine white pine and get it into the places where we believed it would best furnish us a permanent market.

Q. Now, that cut was made and the differential since that time has been less than it was for several years previous thereto; is that true?

1734 A. It has never been over eight dollars and fifty cents since that time.

Q. Since that time?

A. Yes.

Q. Now, yet me ask you this: As a matter of fact there was a new Idaho white mill that came into operation about that time, was there not?

A. Yes.

Q. That had some influence upon your decision, did it?

A. It gave us a larger proportion of the white pine cut to sell.

Q. A larger proportion to sell?

A. But the—perhaps I should add; in order to be entirely fair, that other small mills getting out about that time naturally reduced the total amount of Idaho white pine on the market, the year following that mill's coming into production as compared with the year previous.

Q. In other words, the Weyerheausers, while they were producing more others were producing less?

A. Yes.

Q. On account of exhaustion where they were working, is that true?

A. Yes; exhaustion, or unprofitable marketing conditions.

Q. Now, I want to ask you about a topic as to which you touched on in your last and rather long answer there. I want

1735 to ask you this: Is there a future for the genuine white pines in specialty work? If so, I would like to have you explain it a little bit more fully.

A. Certainly we can get permanently a premium for white pine only in those places where it will serve better than some other wood. Therefore we hope to push the selling of white pine for those uses where it is most exposed and where it does stand up best, also for those uses requiring the greatest nicety of work, as in patterns, which I suggested previously. We believe that white pine should be used very generally but we must look for our price premium on white pine to those special uses for which it is best adapted.

Q. Your premium does not apply to the low grades of common, does it?

A. Only to this extent, that the white-pine log cuts a higher percentage of grades than the average ponderosa log. Part of the additional price premium arises from that fact.

Mr. WHEAT. A greater percentage of what grades?

A. I said that the average white-pine log produces a higher percentage of the upper grades than the average ponderosa log, or the average grade log.

Examiner DE BRULER. You are speaking of Idaho white pine?

The WITNESS. Yes.

Mr. BURR. Q. Now, is there much of a use for wood for ornamental and scroll work and things of that kind?

1736 A. Not a great deal.

Q. Interior ornamentation?

A. Not a great deal. Much less than some years ago.

Q. There—they are not going into geegaw stuff quite so much, the fashions may change?

A. We hope not.

Q. For that kind of work white pine is superior to most varieties of wood, is it not?

A. It is the softest wood we know and is the most easily worked and has the least grain.

Q. It is of more uniform texture, is it not?

A. It is more uniform texture.

Q. And so far as that kind of work can be done by machinery, it can be done in white pine better than in most other varieties of wood, is that true?

A. I think that is true.

Q. And that is true as contrasted with Pinus ponderosa, is it?

A. Yes. Pinus ponderosa works well, but there is more variation. It takes more choosing in order to get the piece that is workable, and the grain is harder in it.

Q. Is there a little more shrinkage to Pinus ponderosa than there is to genuine white pine?

A. I would not like to testify on that. I do not know.

(At this time a short recess was taken.)

1737 Mr. BURR. You may cross-examine.

Cross-examination by Mr. WHEAT:

Q. You say you are selling strobus on the market now?

A. Yes.

Q. Are you familiar with the general sources of Pinus strobus at the present time?

A. I am familiar in a general way.

Q. Where does it come from?

A. Our own supply, as I said, comes from Minnesota. It is still being produced in the Lake States, Minnesota, Michigan, and Wisconsin. It is being produced, and still in considerable quantity, along the Appalachian Range from New England south to Virginia.

Q. How much virgin strobus is there left in Massachusetts?

A. I am not qualifying as a technical witness. I cannot tell you.

Q. You do not suppose it is very much, do you?

A. I think it is considerable.

Q. Virgin strobus?

A. Oh, virgin strobus? I beg pardon. No.

Q. No?

A. Not a great deal.

Q. Do you imagine there is very much virgin strobus left

1738 in Maine?

A. I have seen some conflicting statements. I do not think there can be a great deal.

Q. By the way, are you cutting virgin strobus yourself?

A. Yes. Not entirely.

Q. What proportion of your strobus that you sell is what you would call virgin strobus?

A. Less than half.

Q. Now, from what portions of the country do you meet effective competition from other strobus lumber to the strobus that you sell, to your virgin strobus?

A. Well, I could never make that classification in my mind as between virgin and second growth. We meet active strobus competition from Canada and from the Lake States, and from the East, in all of our sales, Chicago and east.

Q. Do you have any effective competition to your strobus from New Hampshire?

A. Yes, sir.

Q. What kind of strobus is cut in New Hampshire at the present time?

A. I think that is largely second growth.

Q. What is it used for?

A. It is used very largely for box manufacture and for house construction, too, in sheathing, lower lines.

Q. Common lumber?

1739 A. Common lumber, largely.

Q. From what point do you meet competition in Pinus strobus of the clear grades?.

A. The clear grades is a dangerous way to put it, if I may draw back a little from that.

Q. Selects, B and better?

A. In the selects, we meet it all through the East.

Q. From what portion is that cut largely?

A. I think from the Lake States, largely, and from Canada.

Q. By the Lake States, do you include Michigan?

A. I mean Michigan, Wisconsin, and Minnesota.

Q. Do you know what the cut of strobus in Michigan was last year?

A. I do not.

Q. You would be surprised, would you, if it were said to have been less than 100,000 board-feet?

A. I knew it was very small.

Q. How much Pinus strobus do you manufacture in a year?

A. I would guess something less than a hundred million feet.

Q. So your competition with Michigan strobus, that would not be a drop in the bucket, would it?

A. It would be equal to yours, if it is a hundred——

Q. Hundred thousand feet?

A. Hundred thousand feet, you said?

Q. Yes.

1740 A. I beg pardon. No; I do not think there is much competition from home-produced lumber in Michigan.

Q. How about home-produced lumber in the New England States of good grades of strobus?

A. That does not compete with us very actively.

Q. Your active competition comes from Canada, does it not?

A. Yes.

Q. There is not a great deal of strobus being cut in Minnesota, is there?

A. Apparently not; with the old days, it is growing less.

Q. The cut of strobus is growing less in Wisconsin, isn't it?

A. Yes.

Q. Nearly cut out in Wisconsin, isn't it?

A. I could not tell you that.

Q. Have you any idea what the cut is there?

A. I have not.

Q. It is small, relatively, is it not?

A. Yes.

Q. Now, do you know when the term Idaho white pine was first applied to Pinus monticola?

A. I do not.

Q. Was that before your connection with the lumber business?

A. I cannot tell you that.

1741 Q. Do you happen to know, or is your knowledge of the lumber business sufficient for you to tell us what the term white pine meant in the New England States fifty years ago?

A. I think it meant exclusively strobus.

Q. And when do you imagine, if you have any knowledge on which you can base such a guess on the matter, when did the term white pine become broadened out to include some other wood?

A. I think it was broadened to include white pine from Idaho at the time that the mills out here became active, which was around 1900.

Q. That is a different botanical species, isn't it?

A. It is a true white pine.

Q. I said it is a different botanical species, though, isn't it?

A. It is a different botanical species.

Q. Is it not?

A. I do not know that I would let that pass. I do not know whether it is a different botanical species. It is, but——

Q. You are not familiar with the botany?

A. Well, I know that it is a five-needle pine and is classed as a white pine. If by a different species you mean it is not a white pine, I do not believe that.

Q. Are you familiar with the term species as it is used in botanical studies?

A. In a general way. I do not know as I can define it for you.

1742 Q. You understand that the first name in the three names of all botanical objects——

A. Yes.

Q. Is the name of the genus, do you not?

A. Yes.

Q. That the second botanical Latin name is the name of the species, do you not?

A. Yes.

Q. And that the third is usually the distinctive name used for specific purposes, such as the name of the man who discovered that?

A. Yes. That is true with certain exceptions, as psedatsuga taxefolia.

Q. And I suppose at the end of that, I suppose you would add "du." I am trying to get at just this one point. What is known as strobus is a definite botanical name, is it not?

A. Yes, sir.

Q. And that refers to a certain species of white pine?

A. Yes, sir.

Q. Or pine which has been called white pine commonly?

A. Yes.

Q. And Pinus monticola is another botanical name referred evidently, is it not, to another species of pine?

A. Yes.

Q. That is all I wanted to get at. Now, you spoke of Pinus
1743 lambertina. Now, what is the common name for that?

A. Sugar pine.

Q. And how long, if you know, has sugar pine been known as a wood to be used for lumber purposes?

A. I cannot tell you.

Q. You are not familiar really with sugar pine, are you?

A. Only as you are familiar with an active competitor always.

Q. Did you ever manufacture sugar pine yourself?

A. No.

Q. Are you generally familiar with its qualities and utility?

A. Yes. We are manufacturing some of it at the present time in this new mill in Oregon.

Q. You have hardly started there?

A. Yes.

Q. Now, I understood you to say that you had also marketed no southern yellow pine?

A. I have wholesaled it in previous days.

Q. I am talking about the Weyerhearusers?

A. Not in the present connection.

Q. By the way, you said you were assistant general manager here prior to two years and a half ago. How long were you assistant general manager?

A. Since November 1916. That would be thirteen years ago—a little more.

1744 Q. And before that you were in the wholesale, and before that the retail——

A. Yes.

Q. Lumber business in Minnesota?

A. Yes.

Q. And what experience have you ever had in the woods, except your one year up in Canada, when you said you were cutting something else than pine?

A. None, in active work in the woods.

Q. Now, would you be surprised, Mr. Tate, if the quoted price for ten-inch no. 2 common Idaho white pine at the present time were $35.00 average, as against a quoted price for ten-inch no. 2 common ponderosa pine of $24.85 or a spread of approximately $11.00?

A. No, sir.

Q. You would not be surprised at that?

A. No, sir.

Q. Your testimony as I had it down is that never since 1927, when your company dropped the price of Idaho white pine, has there been a spread in these prices greater than $8.50?

A. If I may refer to this paper that I showed you a while ago.

Q. Yes. We want to straighten that out, if we can.

A. The quarterly reports of the United States Experiment Station at Missoula giving the average prices as reported to
1745 them by the Western Pine Manufacturers' Association shows a variation in the average price of white pine as compared with ponderosa running from five dollars and fifty-four cents up to a maximum of eight dollars and sixty-one cents. That is during 1928 and '29.

Q. Do these show, by the way, the average differentials in price between what is marketed as California white pine?

A. They do not. This is the report of the Western Pine Association.

Q. You have not those other figures?

A. I have not the other figures.

Q. Have you made a study of those other figures?

A. Not in detail; no.

Q. I will ask you a few questions on prices a little later, but first I want to ask you this, on this botanical matter, have you ever studied botany?

A. Long ago.

Q. Now, do you know that what botanist look for when they attempt to classify trees or other plants?

Mr. BURR. I do not think he is qualified to answer on this.

Mr. WHEAT. I want to know if he knows. If he does not know, he may say so.

A. I think I will say, no.

Q. Do you know whether or not the Pinus strobus tree as you look at it in the forest is white?

1746 A. You are referring to the bark of the tree?

Q. I am talking about looking at a Pinus strobus tree in the forest. Is it white?

Mr. BURR. The foliage, or the bark?

Mr. WHEAT. I am talking about the tree.

A. No. Looking at the tree, no tree is white.

Q. Then, in other words, in using that word white, it does not refer to anything that is apparent in the forest, does it?

A. Not in the standing tree.

Q. Now, does it refer to anything in the needles?

A. It has come to mean a five-needle tree, if that is what you mean.

Q. No; I am not asking you that question.

A. In appearance the needles are not white.

Q. Do you know whether the flowers of that tree are white?

A. No.

Q. Do you know the reason for calling—do you know what the reason was for calling it white?

A. I do not know, except as we reach upon conclusions, because the wood is white.

Q. Now, is the wood of the Pinus strobus white all the way through?

A. Compared with other woods; yes.

Q. What color, in actual color, is the heartwood of Pinus
1747 strobus?

A. It is almost as white as the sap, almost as white as any of the wood.

Q. The sap is?

A. It is not as white as the sap, of course.

Q. Has it a pinkish tinge?

A. I would not say it has a pinkish tinge. I never saw a pinkish tinge.

Q. What kind of a tinge has it? Is it gray or brown, or what?

A. It is gray, almost white.

Q. Almost white?

A. Yes, sir.

Q. How white is the sapwood.

A. It is a little whiter than the heartwood.

Q. The sapwood is around the outside edge of the wood, is it not?

A. I understand it is.

Q. Now, what color is the wood of Pinus monticola?

A. Almost identical with Pinus strobus. Very hard to distinguish.

Q. And do you know the color of the wood of Pinus lambertiana?

A. Almost the same.

Q. Almost the same?

A. Yes.

1748 Q. Do you know whether or not the shop lumber of the ponderosa tree is taken from that portion of the log which contains knots?

A. If it did not contain knots or other defects, it would not be in the shop, but it comes from near enough to the surface so that enough

of the limbs have dies out to leave large clear spaces between the knots that remain. Then it comes from near the surface.

Q. It must, then, come from where the limbs have dies off?

A. Yes.

Q. Some time ago?

A. Yes.

Q. Then what are the general uses for the ponderosa pine which you sell as ponderosa? Take for instance first the clears, what do you use those for, your selects, as you call them?

A. The selects are used for practically all purposes for which the white-pine selects are used for, whether rightly or wrongly.

Q. Yes; we are not going into that matter now. Now, what about the shop lumber from that tree, what is that used for largely?

A. The shop lumber is used wherever small clear cuttings are required.

Q. You sell, do you not, in the general market a considerable amount of ponderosa shop lumber?

1749 A. Yes.

Q. Every year?

A. Yes.

Q. Can you approximate the footage of that?

A. I cannot now.

Q. Well, does it run into a considerable amount?

A. Very large amount.

Q. By the way, do you sell any pondosa ponderosa shop lumber to what is known as the Weyerheauser sash and door mill, the technical name being the Rock Island Sash and Door Company?

A. We try to, not always successfully.

Q. Is that operated so that you are really in competition with other producers?

A. Really.

Q. Do you know whether or not the Rock Island Sash and Door Company is operated by the Weyerheauser interests?

A. I believe it is. I have never seen their stock records.

Q. Still it is one of the companies that you understand to be in that group, is it not?

A. Yes.

Q. And do you know whether or not the Rock Island Sash and Door Company purchases any California white pine for sash and door purposes?

A. I do not.

Q. Do you know whether you sell all of the shop lumber

1750 that that company buys?

A. I know we do not.

Q. Do you know whether all the rest that they buy is pondosa from some other section?

A. I do not.

Q. Do you know how much Pinus strobus they buy in a year?

A. I do not.

Q. Do you know anything about how much Idaho white pine you sell them per year?

A. I do not. Very little.

Q. Do you sell them any Idaho white pine shop lumber in the year?

A. I do.

Q. About how much?

A. I cannot answer that without referring to the record.

Q. Well——

A. A much smaller amount than the ponderosa.

Q. That is because the Idaho white pine produces a much smaller amount of shop, isn't it?

A. Quite so.

Q. In general, in selling Idaho white pine you have not a great percentage of shop to sell, have you?

A. No.

Q. But you have a considerable percentage of shop to sell from you ponderosa trees?

1751 A. Yes.

Q. You do not know, then, whether or not the Rock Island Sash and Door Company buys some Pinus ponderosa for sash or door purposes from the California region?

A. I do not.

Q. You never have this matter reported to you?

A. I have no direct knowledge of it.

Q. Who would in your organization?

A. No one in our organization.

Q. You mean in the Weyerheauser Sales Company?

A. In the Weyerheauser Sales Company.

Q. You are a portion of the Weyerheauser interests, are you not?

A. Yes.

Q. Now, who would in the Weyerheauser interests?

A. The management of the Rock Island Sash and Door Works.

Q. Referring to Mr. Esplund?

A. Mr. Esplund or Mr. Hanson.

Q. You know, however, that you do not sell all of the Pinus ponderosa that they buy for that purpose?

A. I am sure that we do not.

Q. But you do know that this Weyerheauser concern, if we put it that way, does use Pinus ponderosa for sash and doors?

A. Yes, sir.

Q. Use some Idaho white pine for sash and doors?

1752 A. Yes.

Q. And does it use much of any strobus for sash and doors?

A. Not a great deal.

Q. Do any of the large mills use any great portion of strobus for sash and doors?

A. I think not.

Q. There is a very large demand, is there not, throughout the United States for cut cash and doors?

A. Yes, sir. The total footage is very large.

Q. The total business of those great manufacturing plants is a large business, is it not?

A. Indeed, yes.

Q. Millions of sash and doors are made each year by them, are they not?

A. Yes.

Q. Have you any idea what proportion of Pinus strobus?

A. No.

Q. Could you approximate it?

A. No.

Q. One percent, do you think?

A. I do not know.

Q. Do you think it might be as high as five percent?

A. Yes.

Q. You do?

A. But I have no definite enough knowledge to answer
1753 your question.

Q. Have you any definite knowledge, have you made in connection with your sales work for the Weyerheauser Sales Company any definite study of the proportion of Idaho white pine, for instance, which goes into the great manufacturing plants?

A. Not from that standpoint.

Q. Can you approximate, and perhaps you can before the close of this hearing, the number of sash or the amount of Pinus ponderosa which you sell in the four shop grades in a year, say, take last year at the end, for example. You did not have a price break until right at the end, did you; so I should say 1928, perhaps, would be better. Take 1928 and you can give me the figure on the footage of C select 1, 2, and 3 shop that you sell. Is there any other important shop grades?

A. No.

Q. Have you any idea what proportion of the shop lumber which you sell goes into replacements, as against present new construction?

A. No, sir.

Q. Have any of your salesmen ever reported to you on that point?

A. No, sir.

Q. Any of your salesmen ever said to you that a considerable amount of this Pinus ponderosa shop lumber was made into sash or doors for replacement?

1754 A. I do not remember it.

Q. Have any of your salesmen ever reported to you that a market had been developed for such replacement material?

A. No, sir.

Q. You do not know, then, do you, offhand, what proportion of shop lumber in general does go into the replacement of sash and doors?

A. I do not.

Q. Can you give me any specific instances of complaints which have come to you regarding the necessity of replacing Pinus ponderosa sash or doors?

A. No.

Q. Now, has the general relative price of ponderosa wood marketed now as pondosa show any great change in the market? I say, the general relative price of them during the last ten or fifteen years?

A. Yes.

Q. In some way other than your own dropping of your Idaho white-pine price?

A. You are talking about the general price level of pondosa pine, formerly western pine?

Q. Yes; as it relates in general to the pines that are marketed.

A. Fifteen years ago would be about 1915, you mean?

Q. That is right.

1755 A. There was a rapid increase in price of all pines during the war up to the peak in 1920.

Q. Yes.

A. There has been a recession ever since to the present level.

Q. Yes. Now, with the exception of your one example which you gave of your own drop in price of Idaho white pine for various business reasons, has the wood marketed now as pondosa, can you say in general its relative price level with other woods with which it competes has been maintained?

A. Yes; in general.

Q. Do you know in general whether, grade for grade, the wood sold as California white pine enjoys a preferential in price over the wood sold as pondosa?

A. I testified awhile ago that it has a constantly diminishing preferential.

Q. Some years ago it was a fairly large preferential, was it not?

A. It was.

Q. And at the present time it is rather small, is it not?

A. Well, it has run from five dollars and a half to eight dollars and a half, I testified, in the last two years.

Q. I am not talking about Idaho white pine, sir.

A. Oh, I beg pardon.

Q. I am talking about as between California white pine and

1756 pondosa, grade for grade.

A. I beg pardon, I do not understand.

Q. The California white pine, as your studies would show, over a period of years, with the exception of common grade, enjoyed a slight differential in prices over pondosa?

A. Yes.

Mr. BURR. What do you mean grade for grade? Throughout the territory?

Mr. WHEAT. Throughout the territory; yes.

A. I think that is true, particularly of the shop lumber.

Q. Take, for example, no. 1 shop. Why should California white pine, no. 1 shop, have any price preferential over pondosa no. 1 shop?

A. There are two reasons I know. One is the fact that it is sold under the white pine name, which is a sufficient reason.

Q. Now, what is the other?

A. The other is because in general it is cut from a little larger type of logs, and for some purposes it is desired for that reason.

Q. You get more clear cuttings between the knots, do you, slightly, from that lumber?

A. Well, the larger the log the larger the cuttings that can be secured, the larger the defects, and the larger the cuttings beteween the defects.

1757 Q. By the way, people who buy shop lumber are experienced lumbermen, are they not?

A. They are.

Q. They are people who know what the lumber is and know what they are getting?

A. We find it so.

Q. Did they buy pondosa just as well after you changed the name as they did before?

A. I think the sash and door manufacturers did. They certainly know the species before and after the change.

Q. You advertised, s'ent a great deal on advertising, have you?

A. Yes.

Q. Are you members of the Western Pine Association?

A. We are not at the present time.

Q. When did you resign from that membership?

A. In February 1927.

Q. And that was after the change in name, was it?

A. Yes.

Q. Well, now, a considerable sum has been spent on advertising that name?

A. Yes.

Q. Do you think that it is as well known in the trade in general today, that is, the wood, as it was under its former name?

1758 Mr. BURR. What do you mean by well? Widely?

Mr. WHEAT. Q. As widely known by the trade in general?

A. I doubt that, because the previous name was a name which everyone knew and had known for generations. This is a new trade name which it takes time to introduce and which covers the product only of a restricted portion of the district.

Q. And costs a great deal of money to introduce, does it not?

A. It costs a great deal of money to introduce.

Q. Have you any idea how much has been spent on that?

A. I have not.

Q. It runs up over a quarter of a million, does it not?

A. It is a large sum.

Q. Now, the large remanufacturers of sash and doors whom you testified continued to purchase pondosa, they are thoroughly familiar with the tree from which it comes, are they not?

A. I think so.

Q. They are equally familiar with—do you think they are as familiar with the trade name California white pine as they are with the new trade name pondosa?

A. I do.

Q. How long have you yourself been familiar with the trade name California white pine?

A. For a long time. I cannot answer it more specifically
1759 than that.

Q. When you first went into the lumber business was about what year?

A. Well, I started running a retail yard in 1922.

Q. Did you sell any California white pine?

A. No.

Q. That had not entered the Minneapolis market, had it?

A. No.

Q. It is carried, probably, is it not, in retail yards in Minneapolis today?

A. Yes, sir.

Q. It is carried generally throughout the Eastern States?

A. You are talking about shop now?

Q. About California white pine.

A. Yes; it is.

Q. Various grades of it?

A. It is.

Q. So far as you know, Mr. Tate, does the trade, the lumber trade in general, recognize and understand the term California white pine?

Mr. BURR. Referring to wholesalers, retailers, or both?

Mr. WHEAT. I am referring to the wholesalers and retailers that this gentl'man comes in contact with.

Q. Are they familiar with that term?

A. I think the remanufacturers of lumber and the retailers
1760 of lumber in general are very well advised as to all trade names.

Q. Including California white pine?

A. Including California white pine.

Q. And including to a certain extent at the present time the term pondosa?

A. Yes.

Q. Do you think that on the adoption of your new name pondosa you were prejudiced at all in the lumber market?

A. (Pause.) We had never used the white-pine name.

Q. I am not talking about that at all. I am talking about whether or not, Mr. Tate, you were prejudiced in the market when you adopted the new name?

A. I presumed that there was some lost motion in introducing the new name. I believe there was, but it was introduced more successfully than we had anticipated would be possible.

Q. You have fairly regained the lost ground, I take it?

A. Some of it.

Q. Are you about on the same level or on a higher level, so far as the marketing of that lumber?

A. We have some resistance from those who used the words white pine.

Q. You never used the word white pine, did you?

A. No.

Q. What kind of resistance have you from those who used
1761 the word white pine before?

A. We have less of our competitive wood offered as white pine than previously.

Q. You had resistance, did you not, according to your testimony, when the term western white pine was used?

A. Yes.

Q. You did not use that name, did you?

A. We did not.

Q. And do you find that under the name pondosa you have less sales resistance than you did when you called it western pine?

A. I do not think there was any change in that respect.

Q. Now, the trade generally understands, does it not, that pondosa pine, so called now, is what used to be marketed as western white pine in general and by yourself as western pine?

A. Most of our trade do.

Q. Is the trade generally familiar, you think, with the quality and utility of that lumber in the building and construction business?

A. Yes, of course, there are all kinds of lumbermen, as there are in every line.

Q. Precisely.

A. There are some that are not very well posted. We still do some missionary work.

Q. The lumber business in general, Mr. Tate, has got to
1762 do a lot of missionary work, hasn't it?

A. We hope it will do a lot.

Q. Don't you find, Mr. Tate, that the lumber business as much as any large business of that sort, perhaps, in this country, is subject to consumer and small dealer misunderstandings?

A. I am sure of it, because I think that lumber as a commodity is a more complex subject that any other that I know, because of the many varying species and grades involved.

Q. It can be said, can it not, that any small mill even producing any kind of lumber is in a sense in competition with another small mill producing some very different kind of lumber?

A. Yes.

Q. But in general competition in lumber business runs along certain large, broad views, does it not?

A. Yes.

Q. Now, let me ask you this question, whether or not from your experience with Pinus ponderosa you have found that in its uses, the uses to which it is put, it competes more largely with what you have termed the genuine white pines than it does with what you have been terming southern yellow pine?

A. Yes, that is true.

Q. Do you know how your pondosa that you sell to the trade is resold?

1763 A. I do not.

Q. To the consumer by the retailer to whom you sell?

A. We do not.

Q. By the remanufacturers to whom you sell?

A. We do not.

Q. Do you know whether or not any efforts have been made by your organization or by the Western Pine Manufacturers' Association to stop remanufacture' or retailers from using the word white in connection with the sale of this lumber?

A. I do not.

Q. It is the same lumber, is it not, as it was before?

A. It is the same lumber.

Q. There has been no change in the nature of the lumber, has there?

A. No.

Q. Have you noted any particular change in the uses to which it is put?

A. The uses are long established. I do not think there can be any large change in the uses.

Q. I see.

A. In fact, we have been working for a change in the uses to which it is put and we find a great deal of difficulty that arises because of the confusion in the similarity of names.

Q. Of course, any seller of pondosa pine is in competition with any other seller of pondosa pine, is he not?

1764 A. Yes.

Q. Suppose a big new mill should come in here, would that mean added competition to you?

A. Yes.

Q. Suppose ten large new mills should be put in in the Klamath Falls region, where your new mill is going in, would that mean increased competition to you?

A. Yes.

Q. By the way, does that affect relative prices of wood, increased competition, ordinarily?

A. In general the lumber industry is unprofitable today because of overproduction.

Q. Well, irrespective of that particular matter, on which we all agree, any general increased competition means——

A. Means lower prices and harder selling.

Q. Now, what would have been the effect, or what would be the effect on relative prices, in your estimation as a sales expert, if the name California white pine were changed to pondosa pine?

A. I think the use of the name California white pine is worth real money to the manufacturers of that commodity. When it comes to putting a dollar and cents value on it, that is hard to do. That is a matter of opinion.

Q. Of course, I am not trying to look at it from their point of view, Mr. Tate, but from your point of view as a seller of
1765 pondosa. You said a few moments ago that if one new mill should go in it would affect your competition, did you not?

A. Yes, sir.

Q. If ten new mills went in it would affect your competition, and that new competitive conditions always affected prices. Now, I say if all California white pine were suddenly placed on the market as pondosa, would you find it easier or harder to sell your pondosa pine?

A. I think it would be easier to sell our pondosa pine from this area, and it would be easier to sell our—you did not ask me about white pine, I will not answer. I will not volunteer that.

Q. Now, suppose that name were to be changed to yellow pine, what effect would it have?

Mr. BURR. I think we are getting into speculation here.

Mr. WHEAT. Mr. Burr, this is exactly what the witness testified to, as to the use of white pine.

Mr. BURR. But the suggestion of any one particular name as a substitute for this, it seems to me gets into the realm of speculation, because the Commission has no authority or power to prescribe any particular name as a substitute.

Mr. WHEAT. I anticipated that you would make that argument and therefore I jotted down a few notes along that line. You are attempting here to make a claim of the hindrance to the pondosa people because of the use of the word white pine.

1766 Examiner DE BRULER. Have you got a copy of the complaint there?

Mr. WHEAT. Yes. Now, there is a specific contention that these people are prejudiced in marketing their——

Examiner DE BRULER. Gentlemen——

Mr. WHEAT. I wan the record to show two sentences more.

Examiner DE BRULER. All right. Go ahead.

Mr. WHEAT. I think we are entitled to test the validity of that contention by reference to other names.

Examiner DE BRULER. Go ahead, then.

Mr. WHEAT. Not at all the same question which was asked in the eastern hearing, which was whether or not they would change their practices if another name was used.

Q. What do you think would be the effect on prices of California white pine and pondosa if California white pine were changed to yellow pine?

A. I do not think the manufacturers would realize as much money on their stock marketing it as yellow pine as marketing it as white pine.

Q. Do you think that that would be true if the manufacturers should change—in California, should change their name from California white pine to western yellow pine?

A. Yes.

Q. You think there would be an effect on relative prices then between California white pine and pondosa?

1767 A. Yes.

Q. You think that would be true of the name California pine?

A. I think that any name which did not include white pine would work to their detriment in the marketing price of their lumber.

Q. Well, now, in other words, you feel that there is no name that they could adopt replacing the term California white pine which would keep them on a parity, price considered, on a parity which they now enjoy with pondosa?

Mr. BURR. He did not say that.

A. I do.

Mr. WHEAT. Wait a minute. He just said he did. His answer was I do.

A. I do not think any name carries the weight in lumber that the name white pine does.

Q. That finishes my line of questioning along that line. Have you ever had a buyer come in to you, Mr. Tate, and ask for a piece of five needle pine?

A. I think not.

Q. Have you ever had anybody come in and say, I want to get some three needle pine?

A. I think not. We have asked a buyer who came in and asked for white pine whether he meant a five needle pine or a three needle pine.

1768 Q. And what has he said?

A. In general, I think certain of the shop buyers, the large buyers, know the difference.

Q. They do? They know how many needles there are?

A. Yes.

Q. Is that true generally in the lumber trade?

A. I presume it would not be true throughout the retail trade.

Q. The white pines are five needles pines, are they?

A. Yes.

Q. Are there any white pines that are not five needle pines?

A. Not that I know of. I am not qualifying as a botanist.

Q. We will get back to our question, whether you are familiar with Pinus monophylla. Do you know whether or not there is a Pinus monophylla with four needles?

A. I do not.

Q. Do you know whether the purchaser in general is ordinarily interested in botany?

Mr. BURR. We will stipulate that he is not.

Mr. WHEAT. Good. That is fine.

Mr. BURR. I tried to stipulate that in the East two or three times, and avoid a lot of these questions, and we will concede it.

Mr. WHEAT. Now, I am trying to avoid as much of this as I can.

Mr. BURR. That is fine. I shall try to be briefer than I

1769 have been, if I can, and I am sure I can.

Mr. WHEAT. Q. What are the ordinary uses of southern yellow pine, if you know?

A. Southern pine is used largely for timbers, plank, structural grades, for sheathing, floor lining, roof lining, for flooring, for ceiling—for almost all purposes. It is not extensively used, I believe, where it is exposed to the weather.

Q. Do you cut any two-needle pine and call it?

A. Not knowingly.

Q. Did you ever sell any lodgepole pine?

A. No.

Q. You did not?

A. No.

Q. Weyerheauser interests do not sell any lodgepole pine, do I understand that?

A. Not as that. If they have any occasional trees.

Q. How is it sold?

A. I do not know. I do not know that we have any. I do not know of any.

Mr. BURR. That belongs to the yellow-pine group, does it not?

The WITNESS. Yes.

1770 Mr. WHEAT. You know that is the two-needle pine, Pinus monophylla?

A. No, sir.

Q. By the way, do Idaho white pine and the ponderosa in this area grow in mixed stands?

A. Yes. There is nearly always ponderosa present in the white pine stands, but it does not work the other way around.

Q. Are those all segregated down to no. 5 common, or are some of them sold mixed?

A. The grades, you mean? No; they are segregated.

Q. You segregate them all out?

A. Yes, sir.

Q. Do you know whether or not sugar pine is ever sold mixed with ponderosa?

A. Only the low grade sugar pine, I would say.

Q. Or the low grade ponderosa?

A. I have heard of upper grades of sugar pine being included in California white pine shipments, but I cannot testify to the special and exact reference.

Mr. BURR. It would be a very special circumstance, would it?

The WITNESS. Yes.

Mr. WHEAT. Q. How do you quote your Pinus strobus to your customers?

A. As pondosa pine.

Q. Your Pinus strobus?

1771 A. Pinus strobus? As northern white pine or Minnesota white pine. I beg pardon.

Q. Do you ever mix any other wood with that?

A. Not when sold as white pine.

Q. What do you charge for the clear white pine alone, over the ordinary run then, of your mill?

A. For the green stock, you mean? One dollar in some cases, two dollars in some cases.

Q. What is there that you eliminate from the strobus that you sell otherwise as northern white pine?

A. Practically nothing but Norway.

Q. Then in the wood which you do sell as northern white pine there is some Norway pine?

A. Not as northern white pine, northern pine.

Q. You quote it then as northern pine?

A. Yes.

Q. And you charge a little more for what wood?

A. For the occasional piece that we lay out that is not white pine, that is sold as white pine.

Mr. WHEAT. If Your Honor please, that is the extent of what I am now preparing to cross-examine this witness on. It now being five o'clock, there are a few other matters——

Mr. BURR. I would like to go ahead with my re-direct while the matter is fresh in my mind.

1772 Re-direct examination by Mr. BURR:

Q. Now, are you familiar under what circumstances as a general matter your northern white pine and Minnesota is sold with the Norway pine?

A. In the lower grades it is not very important to the user whether the species be entirely separated or not.

Q. In other words, that is the ordinary common, lower common, is it?

A. That is the ordinary lower grade.

Q. And that is used for box purposes and rough mater[illegible]?

A. And for sheathing or anything of that kind.

Q. Of a temporary nature; is that true?

A. Yes.

Q. Temporary uses?

A. Yes. Well, they can be permanent uses but not exposed to the elements, or not used where it matters, so far as their durability or texture are concerned.

Q. Now, what do you do with your higher grades of Norway?

A. Sell them as Norway. We have practically no Norway left. Formerly we made a grade of Norway selects and sold them separately from the white pine select.

Q. That sometimes is termed red pine, is it not?

A. Yes.

1773 Q. Now, do you mean that the stand that you are working on in Minnesota in those days is very sparsely—very sparse on red pine?

A. It contains almost no red pine; very little comparitively.

Q. Did you ever sell any Norway pine of the higher grades intermingled with the northern white pine?

A. I do not think so.

Q. Either as Norway pine or as white pine; is that true?

A. We sell it as northern pine in that case.

Q. When you sell it intermingled you sell it as northern pine?

A. Yes.

Q. Now, going back to the beginning of your cross-examination or thereabouts, I think you spoke quite at length about the second growth of the strobus. Now, in New England the white-pine forests in the closer regions, outlying the earlier settlements, the strobus cuts were made some long period ago, were they not?

A. Yes.

Q. Now, as the time wore on and the closer white pine was exhausted and a radius of cutting from the settlements receded, did it, lengthened I would say?

A. Yes.

Q. And part of the land went into agriculture and part went back into forestation, did it?

1774 A. Yes.

Q. Now, are some of the reforested areas growing up in white pine; are they of considerable duration, the length of period back that they have been growing up?

A. Yes. But I do not understand that they permit the stock to fully mature. It is usually cut before it has reached a very large size.

Q. And have several crops been taken off the same area?

A. I understand so. I think I should say that I cannot qualify as an expert on the situation as regards either virgin or second-growth pine. It comes to us simply as lumber to sell. We make no distinction in our selling as between the virgin or the second growth.

Q. Now, some of the second growth is coming up pretty good sized, is it?

A. Yes.

Mr. WHEAT. May I ask what the answer was?

The WITNESS. I said "yes", but I have no specific information about it.

Mr. BURR. Q. Sometimes in the virgin forests the stand is in the nature of a comparative recent growth, is it not?

A. Yes.

Q. So that this question of second growth and virgin timber shades in together, so that there is no line of demarcation, is that true?

1775 A. Often.

Q. Often in the remote sections is it true, that under natural conditions, fires from lightning and otherwise might start and sweep over a large area of virgin forest?

A. We are cutting second-growth timber at the present time, which has never been logged before, where the original forest was destroyed from some cause.

Q. And how large does that run?

A. It is large timber.

Q. Now, there was some testimony given by you as to the original of the word "white" as attached to certain species. Is the white oak a paler tree in point of bark than the black oak or the red oak? Are you familiar with that?

A. I do not think it is. I do not know that it is.

Q. Now, some trees are named by a given color, some species of common names are in accordance with the color of the bark, and other are in accordance with the color of the wood. Is that true?

A. I am sure that is true.

Q. Now, you say in the case of white pine, it is not because the bark is any paler than the bark of other pines, that it is called white pine?

A. I think the bark is whiter, paler than most other pines, but it is not from that point at all, I am sure, that the tree is named.

1776 Q. Is the Idaho white pine a paler tree than the ponderosa tree?

A. As to the bark?

Q. Yes.

A. Yes.

Q. Is the Idahop pine rather paler than the western yellow pine in the same locality?

A. I do not know that I can testify to that.

Q. Now, there is a difference, then, in the appearance, a slight difference in the shade of the bark, is there?

A. Oh, yes.

Q. Now, with regard to the wood, would you say that the term "white pine" has come to mean certain characteristics in the wood as well as the color of the wood?

A. I would say that it means the certain characteristics rather than the color of the wood.

Q. And those characteristics are the ones that have been testified to today, in which the characteristics of the genuine white pines are more uniform as regards the comparative diversity of quality of the Pinus ponderosa; is that true?

A. Yes.

Q. Now, then, the Rock Island Sash and Door Company, I think you said were controlled by the Weyerheauser interests, did you?

A. I understand so.

1777 Q. Now, then, do the Weyerheauser interests have an organization which controls the production policies of the various companies that are supposed to be Weyerheauser companies?

A. No.

Q. Do the individual companies control themselves through board of directors, or does the sales corporation control them?

A. The individual companies control.

Q. Now, then, your sales company, of which you are the manager, does that control the sales of the product that is made by the Rock Island Company?

A. No, sir.

Q. They market that themselves rather than through you, do they?

A. Yes.

Q. Now, do you know what varieties of millwork, sash and door, the Rock Island Sash and Door Company markets? I mean, what species of lumber?

A. I do not.

Q. Do you know whether—I think you testified that they make ponderosa sash and doors?

A. Yes.

Q. Do they market that as California white pine sash and door?

1778 A. I am very sure they do not. I have no direct knowledge on the subject. I know the Weyerheauser policy.

Q. Well, the Weyerheauser policy is not a matter that they are forced to obey, is it?

A. Ultimately they would be.

Q. Now, when you sell lumber that is for cutting-up purposes, for remanufacture, in other words, the shop grades, part of that goes into new structures, new buildings and all that, and part of it goes into replacements, is that true?

A. That is true.

Q. Do you have any means of knowing whether a man is buying that for replacement of not?

A. We do not.

Q. When the retailer buys it, quite likely he does not know himself how he is going to sell it, does he?

A. I think that is true.

Q. In other words, you have no complaints brought to the attention of your concern as to whether or not this is a matter that is a replacement matter, or does that come to you?

A. The only time that we have any knowledge that it is a replacement job, I would say, is where we are asked to furnish some special size of mouldings or siding to match an old building, something of that kind, but that is very seldom and is negligible as to quantity.

1779 Q. Now, can you by reference to your files find anything which would be in answer to opposing counsel's question as to complaints as to the replacement of the—the necessity of replacement of ponderosa prematurely?

A. We have no knowledge of where our lumber is used and therefore we do not know anything about the replacements.

Q. And it is for the reason that complaints naturally would not come to you and do not come to you, is that true?

A. They do not come to us.

Q. Now, I think you testified that California white pine in some respects more closely approximated to genuine white pine in its characteristics than the pondosa in some respects, did you?

A. I did not intend to.

Q. Well, I thought that was your testimony, that California white pine was better in some respects and had a greater degree of softness or something or other than pondosa?

A. I think you will find what I said was that the average tree in so-called California white pine is perhaps larger than the tree that is cut in this district as pondosa. That being the case it yields a larger percentage of selects and of shop lumber, and in the shop lumber itself the larger the timber the more true cutting type it is possible to get, because of the large clear spaces between the knots.

Q. I see. I stand corrected. Now, the same thing is true
1780 with regard to the size of the tree. If you were to compare the California so-called white pine, it is a little larger generally than the Idaho white pine, is it not?

A. That is true.

Q. Let me ask you this, you testified so in a rather large and general way. Is it true or is it not true that there are certain sections of California where the average tree of ponderosa would not be larger than the inland empire ponderosa in certain sections?

Mr. WHEAT. He has not testified that he knows anything about the California forests, in general. Of course, if he knows——

A. I have no personal knowledge on that. It is my general understanding, that is true.

Mr. BURR. Q. In other words, the California white pine, so called, varies?

A. Yes.

Q. In size in different stands, and all that, does it?

A. Yes; and I have seen very small stands of California white pine, in California.

Q. Was that virgin timber?

A. I do not know.

Q. I think you testified that the retailer as well as the manufacturers were familiar with the term California white pine, did you not?

1781 A. Yes.

Q. And that they had been so for quite a long period?

A. There are exceptions to that, but in general the larger retailers, it seems to me, are as well posted as the manufacturers.

Q. Now, is it true that the retailers, in your judgment, are familiar with the fact that under that well-known term the lumber furnished is not a genuine white pine?

A. I think the large majority of them.

Q. You think the large majority of them know that?

A. The large majority of them know it.

Q. But you think there are exceptions, or what do you mean by the large majority?

A. I judge there are exceptions.

Q. Now, I think you used a phrase which you afterwards qualified to some extent; I think the question related to the change of the name in the inland empire on the part of your competitors making products from Pinus ponderosa, the change of name on their part from western white pine to pondosa, and I think you have testified that there have not been very much change in the utilities and uses which the pondosa pine is now employed for, as contrasted with what the western white pine had previously been used for?

A. That is true.

Q. Now, I think you used this phrase in that same con-

1782 nection, that there can be no change in the uses. Now let me ask you this: You testified under direct examination with regard to the possibility of an increased use of genuine white pine for special purposes under a careful nomenclature of wood and species of wood. Would there not, in your judgment, be a realignment and readjustment to some extent of the utility and actual uses?

A. Absolutely.

Q. Of the various pines?

A. Absolutely. I am quite sure that there are some places and some uses which western white pine served in the old days that it cannot serve under the name of pondosa pine.

Q. Now, is there a policy on the part of the Weyerheauser Company, interests I should say, of attempting to adopt the same policy in such wasy as to place the lumber products where their utility, where their use is such as to be adapted to their actual qualifications of utility?

A. That has been a policy of the Weyerheauser Company for a great many years, trying to find the right wood for the right place, trying to recommend no wood for a use to which it is not well adapted.

Does the term California white pine in the trade, as a term for Pinus ponderosa products, aid or hamper that effort on the part of your interests?

Mr. WHEAT. If Your Honor please, I object, the same ob-
1783 jection, and I want the record to show that.

Examiner DE BRULER. Let the record show the objections.

Mr. WHEAT. And my exception to your ruling.

A. It hampers.

Mr. BURR. Q. Do you think that with proper nomenclature there will be and can be a modification of the uses of those pine lumbers?

A. A correction of the uses?

Q. Yes.

A. I do not know just what you mean by modification.

Q. Yes; a correction of the uses to some extent in conformity with the change of the nomenclature?

A. I think an absolute nomenclature which would set up the right divisions between white pines and other woods would be materially helpful to white pine immediately, and would ultimately be helpful to the other woods, for the reason that it would tend to credit the use of lumber where sometimes now it is discredited, through misunderstanding or confusion or failure of lumber bought for what it is not.

Q. Is Pinus ponderosa an inferior wood for all purposes to white pine?

A. No, sir.

Q. For what purposes do you regard it on a parity?

A. For purposes which do not require as fine cutting, as soft
1784 or as—as soft, as little grain, the pondosa works admirably. For many kinds of mouldings machines practically as smoothly as the Idaho white pine, as the white pine. Our experience has been that it does not always give the same service where exposed to the elements that the white pine gives. It is—it has rather more strength and a little more weight than the true white pine, and, where strength is required, it would be a better wood than white pine. There are many uses for ponderosa pine under its own name.

Q. Are there uses for which, in your judgment, it is a better wood to buy at the price at which it generally sells than white pine would be at the price at which it generally sells?

A. In general, I believe that ponderosa is a better buy today than white pine because of the confusion that exists as to the white-pine name.

Q. You mean for reselling?

A. Yes.

Q. I was talking about the ultimate consumer now.

A. That depends ultimately on the use to which the wood is put.

Q. My question is, Are there uses for which Pinus ponderosa at its price is a better buy for the ultimate consumer than white pine at its price?

A. Yes.

Q. Now, to return to the subject of advertising, you have spent considerable money on advertising white pine as such,
1785 have you?

A. Yes, sir.

Q. And that was done to a large extent in order to establish white pine as a specialty wood, was it?

A. Yes, sir.

Q. Has that been successful to the extent that you expected?

Mr. WHEAT. Well, now if your honor please——

Examiner DE BRULER. That is somewhat speculative.

Mr. BURR. Q. Have you been able to establish white pine thoroughly as a specialty wood as the result of that advertising, or otherwise?

A. No.

Q. What was that? You were able to deliver what you advertised, or aren't you?

A. Yes, we are able to deliver what we advertise in white pine.

Q. Well, does the ultimate consumer get that, or does he get California white pine white pine when your advertising creates consumer demand?

Mr. WHEAT. Well, I suggest that that is infinitely more speculative than the other question.

Examiner DE BRULER. Unless you know that. Do you know that?

1785 A. I know it is entirely possible for the consumer who should use white pine to specify white pine and get a wood that is not white pine, which makes it very hard for us to qualify on our advertising, to realize on our advertising.

Q. Now, your advertising of white pine was directed to create consumer demand, or directed to the retailer, or both?

A. Both.

Q. Now, then, when you try to create consumer demand, and the consumer seeks genuine white pine as the result of your advertising, what is the effect of the retailer being able to sell a variety which is known as white pine in the trade but which is not genuine white pine?

Mr. WHEAT. Now, before the answer is made to that, if there ever was a speculative question, then there is a prime example. I feel I must object.

Examiner DE BRULER. Let me hear that question again.

Mr. BURR. It is rather involved. I do not know whether it is clear.

Mr. WHEAT. I will add that objection.

Examiner DE BRULER. Read the question.

(Question read.)

Examiner DE BRULER. You may state what your knowledge is of that.

Mr. BURR. I think this gentleman is an expert, if there is anybody knows about marketing it is this gentleman.

Examiner DE BRULER. State what your knowledge is.

1787 A. My answer is that we cannot control our commodity only to the first purchaser, which is the retail dealer. We have no control beyond that. We know that the retailer can pass on

to his customer a genuine white pine or a wood that is not a genuine white pine which has been bought under the white-pine name.

Q. You cannot, then, actually control and carry through to the man that is putting up the house or the architect who represents him your genuine white pine and know that it is being delivered to him?

A. We cannot.

Q. When he asks for white pine, he may get genuine white pine, or he may get something that is known as white pine?

A. Yes.

Q. I think you testified that no name carries the weight that the word white does, did you, in your cross-examination?

A. I think that is true in softwood.

Q. Now, if California white pine were given a name, what is now called California white pine were given a name which did not include the word white, I think you testified with regard to the market conditions that in your judgment would ensue. Now, I think your testimony left a doubt as to whether California white pine would not, if marketed without the word white, fall lower on the market than the inland empire pondosa. At any rate, I would ask you to qualify that testimony as to whether in your judgment the California white

1788 pine would be unable to maintain itself against pondosa?

A. I think it would realize per thousand feet a higher average than the present pondosa, from the character of the trees from which it is cut.

Q. On accounts of its being larger?

A. Yes, sir.

Q. And wider, for shop lumber?

A. Yes, sir.

Q. And other purposes?

A. And other purposes.

Q. And that is true today, isn't it?

A. That is true today.

Q. Now, with regard to the sales resistance that you testified to on your direct examination, that sales resistance which you testified would result and is resulting from the word white as competition experienced by the genuine white pines, and in inland empire pondosa, that in your judgment would be removed, would it?

A. Yes.

Q. Now, isn't there such a thing as a wood being able to maintain a higher price and yet decreasing in point of volume in sales?

A. Yes. It nearly always works that way. The less you have to sell of a commodity, the higher price you can get for it.

1789 Q. Well, now is it possible that the sales resistance would be lessened by the elimination of the word white, but the California white pine as thus renamed, in some fashion or other, might still maintain its slight advantage in the market over pondosa, more than under less favorable circumstances?

A. I think it is inevitable.

Mr. BURR. That is all.

(Witness temporarily excused.)

(Thereupon adjournment was taken until 10:00 o'clock a.m. of the following day, Tuesday, January 21, 1930, at which time the hearing was resumed and the following proceedings were had:)

1790 Before the Federal Trade Commission

In the matter of White Pine cases

Docket Nos. 1620–1669, inc.

SPOKANE, WASH., *January 21, 1930.*

Met pursuant to adjournment, 10:00 o'clock a.m.

Before Ellis De Bruler, examiner.

Appearances:

Eugene W. Burr, for the Federal Trade Commission.

Messrs. McCuthen, Oleny, Mannon & Greene (by Mr. Carl I. Wheat) for the respondents.

Examiner DE BRULER. We will now proceed with the hearing in keeping with the adjournment.

I. W. TATE resumed the stand and further testified as follows:

1791 Recross-examination by Mr. WHEAT:

Q. Mr. Tate, just for the purpose of refreshing your recollection with the fact that you were talking about it yesterday, in redirect examination, what is your definition of a virgin forest?

A. A virgin forest is one that still carries the original growth.

Q. In other words, it is one that has not been cut over?

A. It has not been cut.

Q. It may have been destroyed by nature before and regrown; is that true?

Examiner DE BRULER. I might ask how far back are you going?

Mr. WHEAT. I am talking of the forests with which the witness is familiar, of course.

A. I would say that a forest that has been destroyed within the last hundred years and possibly more, and by natural causes, and has grown up again, would be considered a second growth of forest.

Q. What is the average age of your Pinus strobus trees that you are now marketing?

A. I cannot tell you.

Q. If you know.

A. I cannot tell you that. I would guess that they are over a hundred years old.

1792 Q. Now, have you any idea how large a strobus tree in these average conditions grows in a hundred years?

A. I have heard.

Mr. BURR. If the examiner please, I do not believe this gentleman qualifies as an expert. We are going to have experts on the witness stand, I understand.

Mr. WHEAT. All right. I will withdraw that question.

Mr. BURR. We are going into the realms of conjecture.

Mr. WHEAT. No; I am not going into the realms of conjecture. I want to find out if he knows about things.

Mr. BURR. I won't object.

Mr. WHEAT. Q. If you do not know the answer to that question, will you just state so?

A. I do not absolutely know.

Q. Does that mean you have made some investigations of that matter?

A. Not personally.

Q. Well, now, I believe that you said that the word white was first given to certain trees of the pine genus because of the color of the wood?

A. I think I said that I assumed that to be the reason.

Q. Oh, yes.

A. That I thought that the natural reason.

Q. Well, now, that term was applied to some tree or trees of the genus Pinus, when northern white pine was the main
1793 species marketed under that title, was it?

A. Those were the first trees out and therefore they would be the first ones named.

Q. Did you know the name white pine when you first went into the lumber business?

A. Yes.

Q. And you had known that name prior to the time you went into the lumber business, did you?

A. I think not.

Q. You had not heard it before?

A. I do not know that I had.

Q. Have you any idea how long it has been used?

A. I have not.

Q. It has been used for a considerable period; has it not?

A. Yes.

Q. Now, when you went into the lumber business, what two main groups of pine lumber were marketed in the area where you were in business?

A. I was——

Examiner DE BRULER. State where that was.

A. I was in southern Minnesota and practically all of the lumber handled there at that time was either white pine or Norway pine, Minnesota white pine, northern white pine.

Mr. WHEAT. Q. Southern yellow pine had not arrived in that market as yet, had it?

1794 A. No; except on occassional item of vertical flooring.

Mr. BURR. Of what?

A. Edge grain flooring.

Mr. WHEAT. Q. At that time were you thoroughly familiar, or did you become familiar at that time with the general methods of marketing and selling pine species?

A. Well, I bought a great deal of it.

Q. Now, at the time you entered the lumber business, in general were there two main species, two main names used for the pines? Maybe I better reframe the question. Was the main distinction drawn in common terminology in selling pine lumber when you went into the business white pine and the yellow pine?

A. (Pause.) Well, as I said before, practically the only lumber—the two distinctions in our local retail yards were white pine and Norway pine.

Q. Norway pine is what kind of pine?

A. Red pine.

Q. Red pine?

A. Yes, sir.

Q. Do you know how that has been classified by botanists?

A. No.

Q. You do not know whether it has been classified as one of what you have termed white pines?

A. I know it has not.

1795 Q. Now, did Idaho white pine, so called, come on the market in Minnesota in any great quantities at the time you entered the lumber business there?

A. No.

Q. When did you first order or sell Idaho white pine, about what year?

A. (Pause.) I would guess about 1910 was the first time that we bought any quantity.

Q. It began to come on the market, did it?

A. Yes.

Q. In the middle western area?

A. It had been on the market before that.

Q. About when, if you know, did it go on the market in large quantities?

A. I cannot say, but I would guess ten years prior to that.

Q. About 1900?

A. Yes.

Q. And you marketed it under what name?

A. I knew it only as Idaho white pine.

Q. Can you tell us, or let me ask you this. Were you closely connected with the sale of Pinus ponderosa from this area at the time the change in name took place to pondosa?

A. Yes.

Q. Do you know why the manufacturers of the Pinus ponderosa in this area did not change the name when they did to

1796 yellow pine, or to any name containing the word yellow?

A. I do not.

Q. You do not know?

A. No.

Q. Now, I will ask you then as a marketer of that pine whether you have ever marketed that pine under any name which contained the word yellow?

A. No, sir.

Q. Do you believe that the term yellow in connection with the marketing of that wood would be in general a proper designation of it?

A. I think it would be a proper designation but I think it also should carry an additional qualifying name to differentiate it from southern yellow pine.

Q. Why do you not market your ponderosa lumber here under any name which contains the word yellow?

A. Because we have to follow trade practices in order to avoid more confusion.

Q. Did you do so prior to 1925?

A. Did we market any as yellow pine?

Q. No. Did you follow the general trade practice of this area prior to 1926?

A. We did so far as we could and still not use the name white pine.

Q. You did not, then, sell your wood prior to 1925, your
1797 Pinus ponderosa wood under the same name which was being used by the majority of the other producers of Pinus ponderosa in the inland empire?

A. It was being sold by—under a great many trade names. It was impossible to tell which name was the predominant name.

Q. What do you think was the predominant name, aside from your companies?

A. Western white pine.

Q. Now, in your re-direct examination my notes show that you said that the word white now as applied to pine species, in your opinion, refers more to wood characteristics than to mere wood color. That was your statement, was it not?

A. (Pause.) I think that the name white probably came originally from the color of the wood.

Q. Yes.

A. I think in our minds it has become associated through all the years that eastern white pine was sold as white pine, perhaps, with the characteristics of the wood, also. That is purely conjectural.

Q. Well, continuing your conjectures just for the moment, what are those characteristics that you have in mind when you use the word white pine?

A. Even color, a soft, fine texture, easy——

Q. What do you mean by texture, by the way?

A. The hardness or the softness of the wood.

1798 Mr. BURR. Please let him finish his answer. Read the answer before the last.

(Question and answer read:)

A. Easy working qualities is what I was going to say.

Mr. WHEAT. Q. Do you have in mind the uses to which that pine is put?

A. I think not; in that connection.

Q. Merely its mechanical characteristics?

A. Yes.

Q. Do you happen to know—please tell me if you do not, but I am trying to find out if you do, I will find it from another witness if you do not—whether or not the Rock Island Sash & Door Company markets its sash and doors that are made from ponderosa shop lumber bought from you as pondosa sash and doors?

A. I do not.

Q. Are you familiar with the operation of a large remanufacturing plant?

A. Only to a very limited degree.

Q. Now, in connection with the sale of shop lumber, have you visited and gone through large remanufacturing plants?

A. Yes.

Q. Do you know, in general, the processes which they use in cutting up the shop lumber into clear cuttings and then manufacturing them into other products?

1799 A. In an amateur way.

Q. Now, do you know whether or not in these remanufacturing plants it is the practice to mix the shop lumber bought as pondosa and that bought as California white pine, or any other designation, in manufacture?

A. I do not.

Q. I believe you said that if common wood names were to follow the plan which you discussed in your re-direct examination that then your uses of certain woods would change; and I have this statement, that some uses of western white pine it cannot serve under the term pondosa. Was that your statement?

Mr. BURR. Read that question.

(Question read.)

Mr. WHEAT. Q. Some uses of western white pine it cannot serve under the term pondosa. Do you agree with that statement?

A. (Pause.) I presume I was referring to the fact that I believe pondosa was sometimes used in exposed places under the supposition that because it is bought under the white-pine name it is white pine. What I tried——

Q. Is pondosa bought under the white-pine name?

A. It was up until 1925.

Q. Is it not?

1800 A. I think not. What I was trying to testify to in that connection, if I may say so——

Q. I wish you would, Mr. Tate. I want to get the record clear on it.

A. Yes. That I believe there are certain uses which are best served by white pine, certain uses that are best served by ponderosa pine.

Q. Now, let's get your explanation of what those uses are, so that we will be clear on the matter. Let me frame this question: What uses are there to which pondosa wood is now put to which, in your opinion, it should not be put, specific uses?

A. (Pause.) In general, I believe that a genuine white pine has been proven to give better service under severe service than pondosa pine, ponderosa pine.

Q. Let me interrupt you. I am trying to get the specific uses to which pondosa is now put to which you think it should not be put. Now just, first, specific facts.

A. I do not know that there are any uses which it will not serve acceptably, considering the price difference. If a person wants a little cheaper house, and perhaps less endurance, less durability in the exposed portions, they are certainly justified in using ponderosa pine.

Q. Now, have you in mind specific instances of lack of durability in ponderosa pine?

A. Not that I can give accurately.

1801 Q. No specific instances?

Mr. BURR. What do you mean by give accurately?

A. I have heard of cases of the failure of ponderosa pine.

Mr. WHEAT. Q. Of course, we do not want hearsay.

A. I cannot cite any cases that I have actually seen.

Q. Can you, of course, in all the testimony which you have just given, want the testimony considered on the basis of the statement that you have no precise instances which you can cite?

A. Not of my personal knowledge.

Q. I see.

A. I have not been in position where I could see them, or get evidence.

Q. Now, when the Weyerheauser interests—I think I am paraphrasing your statements; if I am not, please correct me—say they want the right wood in the right place, I suppose you mean, do you not, that they want wood put into the uses to which it is naturally and ordinarily adapted because of the nature of the wood?

A. Yes.

Q. Now, I believe you said that the Weyerheauser interests could control the commodity only to the first purchaser and not beyond that?

A. I think that is true of all lumber manufacturers. I should perhaps modify that to the extent of saying that we

1802 have on an experimental basis attempted at times to species mark genuine white pine, with the idea that the mark would carry through to the ultimate consumer and be a protection, if he has specified white pine.

Q. Yes.

A. We have a line of merchandise which we call our four-square line, a package line.

Q. You advertise that quite largely, do you not?

A. Which we advertise and which carries a definite guarantee as to species.

Q. The species is marked on the package, is it?

A. Yes.

Q. Now, those packages go directly through to the ultimate consumer, do they?

A. We cannot be sure of that always.

Q. It is your intention that they will?

A. It is our hope that they will.

Q. And what proportion of your business is the four-square package business?

A. A very small proportion thus far.

Examiner DE BRULER. I do not want to hurry counsel, but it seems like we are rehas'ing what we had yesterday.

Mr. WHEAT. If Your Honor please, we may ask some witnesses that seen similar, but this witness is, in my opinion, the most important witness the Government will have.

1803 Examiner DE BRULER. Well, proceed, but cut it as short as possible.

Mr. WHEAT. I have only a few questions.

Q. What proportion of your sales are the four-square package sales?

A. I do not know.

Q. Is it a large proportion or small part of them?

A. It is a small proportion. It is a constantly increasing proportion.

Q. You are attempting to increase that as much as you can?

A. Yes.

Q. Do you sell any pondosa in that way?

A. Yes, sir.

Q. Where do you market it in that manner?

A. From Seattle to Boston.

Q. And what proportion of your pondosa business is that business?

A. I cannot give you any figures on that.

Q. Is it a large or a small proportion?

A. Small proportion.

Q. Very well, considering your relative pondosa sales?

A. Very small. It is a large amount.

Q. Have you any instance in mind where a person to when you have sold pondosa pine has resold it as white pine?

A. A specific instance which has come under my knowledge?

1804 Q. Exactly.

A. I have not seen the stock or talked with a customer that admits it.

Q. Do you know whether pondosa is ever resold as yellow pine?

A. I do not.

Q. If you should call your—may I put it this way: Irrespective of any name under which you would sell your pondosa lumber in bulk, you could not control, could you, except by packaging and fastening it together, the resale of that wood by a retailer; that is, the name under which it is resold?

A. Not unless we mark the name on each individual piece.

Q. Now, when you sold Pinus ponderosa as western pine, or western soft pine, did you sell it in competition with the sellers of Pinus ponderosa as white pine, western white pine?

A. Yes.

Q. Was there any difference in price then in their favor over your Pinus ponderosa wood?

A. I cannot answer that.

Q. You were sales manager or assistant sales manager of the Weyerheauser interests at that time?

A. Yes.

Q. Do you recall any such differential?

A. We do not have access to the prices of our competitors.

1805 There were always variations. I do not think I could generalize on that so as to reach a conclusion.

Q. Let me ask you this, then: Was there to your knowledge any general differential in their favor at that time?

A. No large differential.

Q. Any differential?

A. I cannot answer that.

Q. Aside from the ordinary variations?

A. At times there was.

Q. At times the differential was in your favor, was it not?

A. Yes.

Q. Now, has there been any change in that relative condition since the change in the name to pondosa—varies up and down, does it?

A. I cannot answer that except to say there has been no large change.

Q. Can you specify any small change?

A. No.

Q. Do you know of any change in the general situation?

A. The whole price structure changes so fast and is based on so many items that it is almost impossible to answer that kind of a question. I cannot do it.

Q. But you have been, over this period of years, quite familiar with the general market conditions?

A. Very familiar.

1806 Q. So your next to the last answer, then, is based on that knowledge of the general market condition?

A. It is based on knowledge.

Q. I believe that you said—my notes show that you said there were instances where purchasers had said to your salesmen, who said to your district representative, who said to you, that they wanted to buy Pinus ponderosa at a price with the word "white" in it?

A. I do not think you have to make it quite that indirect.

Q. Let's make it as direct as you can?

A. I have talked to salesmen who have reported that to me. I have talked to customers who have reported that to me.

Q. Now, will you give, for the purpose of the record, a single instance of such a case?

A. I will not, because I cannot.

Q. I may say that in New York City one of the witnesses did give such an answer.

A. I am familiar with that. I have no personal knowledge.

Q. You have no personal knowledge of any exact instance?

A. Not that I could testify to.

Examiner DE BRULER. As I understood, he knew what the reports were to him. He stopped right there.

Mr. WHEAT. Now, I am asking him further whether he knows anything himself further?

Examiner DE BRULER. Yes; I understood.

1807 Mr. WHEAT. He testified yesterday on direct examination——

Examiner DE BRULER. I let that stand because the report was made to him and the rest of it is a matter for cross-examination.

Mr. WHEAT. Q. Now, I understand you have no instances to report of such reports?

A. I have not.

Q. What record has Idaho white pine for long durability when exposed to the weather?

A. I think you are trying to qualify me as a technical expert in durability, and I am a lumber salesman.

Q. You testified on direct examination that, in your opinion—correct me if I am wrong—Idaho white pine was a more durable wood when exposed to the weather than Pinus ponderosa. Is that correct or not?

A. I think it is correct, and I believe it to be true.

Q. Now, on what basis do you form your belief?

A. On the experience as reported to all of us in the lumber business as to the durability of white pine.

Q. Idaho white pine?

A. Of the white pine.

Q. I am talking now about only the Idaho white pine.

A. Idaho white pine?

Q. Yes.

A. I have no specific instance to report, again.

1808 Q. No instance of long use of Idaho white pine?

A. There has not been the opportunity to accumulate as much evidence on that species.

Q. By the way, how long has it been used in general in a large commercial way?

A. I cannot tell you that. Something like thirty years.

Examiner DE BRULER. Is your answer based on the reputation that the wood has in the lumber trade?

A. Yes; and not elsewhere.

Mr. WHEAT. Q. And not based on your personal knowledge as an instance that you have in mind?

A. No.

Q. What result was there, what result did the drop in price which you made in Idaho white pine in September 1927 have on the quantity of your Idaho white-pine sales?

A. It increased them.

Q. It increased them?

A. Yes.

Q. How long have you had access to the Western Pine Manufacturers' Association price quotations?

A. We had access during the time that we were members of the association.

Q. And that was up until what year?

A. Until February 1928.

Q. So you did have access to these price quotations during
1809 the period when Pinus ponderosa from this area was sold as western white pine?

A. Yes.

Mr. WHEAT. I think that is all.

Redirect examination by Mr. BURR:

Q. Mr. Tate, has the word "white" as used in connection with Pinus strobus acquired a meaning in addition to the meaning of color?

A. I think so.

Q. And those are the characteristics for which Pinus strobus has long been noted, are they?

A. Yes.

Q. Added to the pale texture, the pale color of the wood?

A. Yes.

Q. Has white as part of the term for Pinus strobus an association in the mind of the public with uniformity as well as the characteristics that you have referred to?

Mr. WHEAT. Mr. Examiner——

Examiner DE BRULER. How does that question read?

(Question read.)

Mr. WHEAT. Mr. Examiner——

Examiner DE BRULER. Now, wait a minute. Can you answer that question from any knowledge that you may have in the
1810 trade?

The WITNESS. I can answer it only from the basis of my personal opinion.

Mr. WHEAT. Mr. Examiner, Mr. Burr has objected constantly in these hearings to any witness trying to put words in the mouth of the public and I think I am entitled to the same objection.

Mr. BURR. I think that is merely the question opposing counsel has used. I might just as well have used the word "reputation" in there, and I will if it is better.

Examiner DE BRULER. I was going to say if you use the word "reputation"—ask him about reputation.

Mr. BURR. Strike the question, or the record can show just as it is, if you like. I will substitute this question.

Q. Is uniformity of texture, as well as the qualities that you named in your recross-examination, associated in the public mind as a matter of reputation with the word "white" when used as applicable to Pinus strobus?

Mr. WHEAT. If the witness knows.

Examiner DE BRULER. If you know, you can answer that question.

A. I believe it is, but in a smaller circle of users. I do not think the idea of uniformity would be as universal as the idea of color or durability.

Mr. BURR. Q. That would be more true of the reputation
1811 of the wood among the trade than it would be in the ultimate consumer?

A. Yes.

Q. In your judgment?

A. Yes.

Q. Would that be true as to the reputation of the wood with regard to those who are proposing to use it for remanufacturing purposes and buy it for that purpose?

A. Particularly those.

Q. The reputation of Pinus strobus in that field, then, would include strictly the idea of uniformity, would it?

A. I think so.

Q. Now let me ask you this, is the ponderosa lumber still associated with the word "white" in public reputation more than it would be if the same tree when manufactured and sold as California white pine were not so manufactured and sold?

A. Yes.

Mr. WHEAT. Mr. Examiner, if that is not a matter of reputation and speculation, I have never heard such a question.

Examiner DE BRULER. It seems to me like this matter has been gone into sufficiently.

Mr. BURR. Well, I will drop it then.

Examiner DE BRULER. I think you have gone into it very thoroughly.

By Mr. BURR. Just a moment; I will be through.

1812 Q. Mr. Tate, do you check up personally any criticisms of lumber of your competitors or of your own sales that might come to your company, so that you would have the ultimate facts with regard to the basis for those criticisms?

A. We check complaints.

Q. You personally?

A. I personally at times check complaints on our own shipments.

Q. Well, do you go back to the consumer personally and ascertain what the basis for the complaint was?

A. I have done it.

Q. You have?

A. Yes; many times.

Q. Has that been with regard to the durability of pondosa lumber, have you gone back and checked those complaints, to the ultimate consumer I am referring to now?

A. No; I cannot cite any cases of that kind.

Q. You have these done by subordinates, if they come, do you?

A. I do not—I do not think we as a sales agency would receive complaints of that nature, because our complaints would be on the immediate basis of tally or grade or species, the correct filling of the order.

Q. In other words, those complaints would not come to your company at all, consequently, is that true?

1813 A. I do not think so.

Q. Now, may there be sales resistance through increased volume without there resulting a price differential, a drop in price?

A. I think not.

Q. You think not?

A. No.

Examiner De Bruler. I think that has been gone into fully.

Mr. Burr. Has that been gone into?

Examiner De Bruler. I think so. Carefully.

Mr. Burr. Q. Do you think when there is a customer who goes to another producer, to another dealer, and buys a different variety of wood, that that necessarily means that there will be a drop in the price of the wood that has been discriminated against?

Mr. Wheat. Just a moment before the witness answers that question. I object to that question on the ground that it is speculative, that the quesion as to what some purchaser might do is clearly out of the field.

Examiner De Bruler. Let me ask you, Can you answer that question from anything that you have in mind?

The Witness. I cannot answer it from the standpoint of any one customer. Any general move of that kind would certainly affect the price.

Q. Any general move?

1814 A. Yes.

Mr. Burr. That is all.

Recross-examination by Mr. Wheat:

Q. I will ask one further question on this. We will get through after a while. Mr. Tate, Pinus strobus that is produced in the New England States is a fairly small tree, is it not?

A. I do not know what it was originally.

Q. Well, I mean now?

A. The tree that is cut there now, I presume, is reasonably small.

Q. Does that compete very definitely in the strobus market with your Pinus strobus that you are now selling?

A. Not in the upper grade.

Q. Not in the upper grade. They do not produce many upper grades, do they?

A. I judge the proportion would be small.

Q. And that is because the tree is small, isn't it?

A. I presume so.

Q. What proportion of the upper grade do you produce from the Pinus strobus that you are now cutting?

A. Ten percent or more.

Q. And what proportion of shop lumber?

1815 A. In the strobus?

Q. Yes.

A. Less than five percent.

Q. And the rest is what is known as common grades, is it?

A. Yes.

Mr. WHEAT. I think that is all.

Examiner DE BRULER. This witness may be definitely excused now.

(Witness excused.)

E. G. CHEYNEY was thereupon called as a witness and, having been duly sworn, testified as follows:

Examiner DE BRULER. Let me have your name, please?

A. E. G. Cheyney.

Examiner DE BRULER. Your address?

A. Saint Paul, Minnesota.

1816 Direct examination by Mr. BURR:

Q. Professor Cheyney, what is your profession, sir?

A. I am a forester.

Q. And in what capacity are you now engaged?

A. Professor of forestry at the University of Minnesota.

Q. How long have you been in that position?

A. I have been at the University of Minnesota for twenty-four years.

Q. And will you narrate your various capacities during that period?

A. I was an assistant from 1905 to 1907 and assistant professor from 1907 to 1909 and a professor from 1909 to 1930, the present time.

Q. Now, prior to that time did you have any experience in connection with forestry matters? That is quite a long while back, but did you have anything prior to that?

A. I was with the Government as student assistant for a year and a half, in 1903 and 1904.

Q. And as student assistant, were you in the woods?
A. All the time, practically.
Q. Whereabouts?
A. North Carolina, West Virginia and Texas, South Dakota and Colorado.
Q. What were your duties?
1817 A. We were doing what they call running timber surveys and doing stem analysis work.
Q. I take it that was your first work in forestry lines?
A. That was my first work.
Q. Now, then, since then, at the University of Minnesota, what, if any, occasion have you had to observe the condition of forest trees and also conditions with regard to timber and lumber?
A. Well, of course, the faculty there are also on the experiment-station staff, and we have made various studies of the different species in Minnesota. Among them was a survey of the standing timber in Minnesota; that is, in the coniferous portion of Minnesota.
Q. And did you conduct that, supervise that yourself, personally?
A. Yes.
Q. How much of the time were you in the forest would you estimate?
A. You mean how long a period?
Q. Yes.
A. At that time or on an average?
Q. Well, at that time.
A. At that time I spent six weeks straight on that survey.
Q. And as an average how long have you spent in the forest?
1818 A. I have been in the forest practically from three to four months every year.
Q. Now, how much opportunity do you have to observe the down timber and the lumber?
A. We have very good opportunity to observe the down timber, because I am located for about six to eight weeks of the time in a patch of virgin forest, Nataska Park, where the lumber has never been touched over portions of it.
Q. Now, is your experience largely—referring to the Pinus genus—is it largely in the strobus and the Norway or red pine?
A. Yes.
Q. Those two varieties?
A. Practically all of them.
Q. Are you a technical botanist?
A. In a way; yes.
Q. Have you brought with you that Statistical Bulletin No. 21 of the Department of Agriculture?
A. Yes. I have it here.
Q. Will you be kind enough to produce it, Professor?
A. Yes. [Producing book.]

Q. Will you state whether or not in your judgment as a forester the statistics of the Forestry Service are as comprehensive and as reliable as there are available?

A. I think so.

Q. In your consideration?

1819 A. They have had more experience and have a larger force in the field than anybody else that I know of, and their figures are usually taken as standard by the forester.

Q. They are estimates, of course, rather than actualities, are they not?

A. Any figures on standing timber covering a large area are obliged to be estimates.

Mr. BURR. Now, if the examiner please, I would like to offer the Statistical Bulletin No. 21, and have the entire bulletin marked for identification, and then I would like to have table 9, on page 9, being the estimates of timber stand in the United States by species and regions——

Mr. WHEAT. I will not interpose any objection to the introduction of this whole bulletin, but I will ask that the whole bulletin rather than particular portions be introduced in testimony. I had in mind introducing the same bulletin in San Francisco, and I have no objection to the entire bulletin going in, but I will seriously interpose objection to breaking it up into little parts.

Mr. BURR. If the examiner please, the instructions that we have are to the effect that where documents are offered those portions only be offered instead of the whole document. Now, I have no objection whatever to opposing counsel coming right back and offering any parts that he wants to.

Mr. WHEAT. Under that stipulation I will be glad to stipu-

1820 late that.

Mr. BURR. Now, I want to offer only such parts as I expect the examiner to read. You see, if we offer the whole thing he has to wade through the whole book to see whether there is anything of interest to him.

Mr. WHEAT. Will you stipulate that respondents may offer any portion of Bulletin No. 21 in addition to those portions you offer?

Mr. BURR. Absolutely. I think that is only fair.

Examiner DE BRULER. You will be allowed to do that, certainly. It shortens it up to let it be done that way.

Mr. BURR. I would like to mention for the record those portions I am proposing to read.

Examiner DE BRULER. Go right on.

Mr. BURR. Table 9, page 9, being statistics as to the timber stand. Table 10, pages 10 and 11, being figures as to the timber growth, annual quantity, and so forth, as more fully described. Table 12, page 12, being timber growth present and possible average rate of growth. Table 57, pages 66 and 67, being the lumber production, with particular reference to the column having to do with growth yellow pines (eastern), "western yellow pine", and "sugar pine."

Also table 85, pages 130 and 131, being the lumber production in California.

Mr. WHEAT. Will that show what years it refers to?

Mr. BURR. Oh, yes. Yes, indeed, very fully.

1821 Table 112, pages 184 and 185, being the same for Oregon.

Also table 128, pages 221–223, inclusive, being the production figures for western yellow pine.

And lastly, table 133, being the same data for white pine, on pages 239 to 241, inclusive.

And I may say that the reason for the selection of California and Oregon among the entire roll of States throughout the country, was for the reason that only by reference to these tables as contradistinguished from the production of western yellow pine, so called, by the bulletin, are we able to divide the figures between ponderosa and California sugar pine in that State.

Q. Professor Cheyney, the figures for white pine in this bulletin and the tables that I have mentioned where white pine comes in on a national scale, are Idaho and strobus, Idaho white pine and strobus combined?

A. Yes.

Q. Where is the line of demarcation between Idaho white pine and strobus, or do their habitats overlap?

A. They do not overlap; no.

Q. Are the Dakotas the dividing line?

A. There is neither one of them in the Dakotas.

Q. And the Idahos are further west than the Dakotas?

A. Yes.

Q. And strobus is further east, is that true?

1822 A. True.

Q. Therefore by reference to the States where the production of white pines are given State by State, you can find out what the production of Idaho white pine is byb consulting the States west of the Dakotas, and strobus the States to the east, is that true?

A. Yes.

Q. This sugar pine, do you know or are you not advised of that, occur north of Oregon?

A. It does not.

Mr. BURR. If the examiner please, then, I desire to offer Statistical Bulletin No. 21 as marked for identification, with the tables that I have just mentioned, as Commission's exhibit for the record no. 34, with each page marked as A, B, C, and as far as the letters are needed in order to mention each of these pages.

Examiner DE BRULER. Commission's exhibit no. 34 will be admitted.

(Thereupon said Statistical Bulletin No. 21 was received in evidence as Commission's exhibit no. 34, A to E, admitted.)

Q. Professor Cheyney, have you had prepared under your supervision certain charts based upon any of the statistical material that has been offered as Commission's exhibit for the record no. 34?

1823 A. I had some charts made; yes.

Q. Will you be kind enough to produce a chart with regard to lumber production, if you have any?

Mr. WHEAT. You have copies for us, of course?

Mr. BURR. I have not, but I shall have.

Mr. WHEAT. You will let me have copies?

Mr. BURR. Yes, sir. I will let you have copies.

Mr. WHEAT. About when? I may want to study them.

Mr. BURR. There is no reason why you should not file a receipt for them and take the originals.

A. (Producing chart.) That is the one showing lumber production for the last five years by species.

Mr. BURR. Now, if the examiner please, I would like to have this marked as "Commission's Exhibit No. 35" for identification, if it is not received as I think it will be in a few moments.

(Thereupon said chart was handed to the reporter and marked "Commission's Exhibit No. 35" for identification.)

Mr. WHEAT. What is the full title?

Mr. BURR. The full title of Commission's exhibit for identification, no. 35, is what?

A. Five years of softwood production. Years 1921, '22, '23, '24, '25. Percentage relationship of species, major geographic distance, based on United States Department of Agriculture's Statistical Bulletin No. 21.

1824 Q. Now, that is an average of the five years, isn't it?

A. Yes. It is the aggregate of the five years.

Q. It is the aggregate of the five years giving the proportion to each type of lumber?

A. Yes.

Q. And that is based upon which tables of Bulletin No. 21, Commission's Exhibit 34, if you will be kind enough to state.

A. (Examining exhibit.) On tables 82 to 125, inclusive.

Mr. WHEAT. Are those tables, Mr. Burr, which have been offered by you? May I ask whether the tables mentioned by the witness are among those listed by you as your exhibit no. 34?

The WITNESS. No, they are not; all of them.

Mr. WHEAT. Beg pardon?

The WITNESS. You selected two of them out of it—California and Oregon—those are the only two?

Mr. WHEAT. Then I take it, Mr. Burr, this exhibit is based on material which is not offered for the record?

Mr. BURR. What was your last answer here?

A. That this was based on tables 82 to 125, inclusive.

Mr. BURR. Now, if the examiner please, I am not averse for a moment to offering the rest of the tables. It seems to me, I want to say right here that I think it is unnecessary to offer them, because this graph shows everything that the table would show in a

1825 manner that is easy to carry away, whereas the added statistical matters of the other tables with regard to those other

woods are not of primary interest. This merely shows the importance of each of those pines in the total lumber consumption of the country. Now, then, if opposing counsel wants to have those other tables in the record, I shall not object. It seems to me it is unnecessary encumbering the record.

Mr. WHEAT. I do not think it is, Mr. Burr, unnecessarily encumbering the record to have this little book go in as an exhibit, because if you are taking material out to base your chart on from tables you have not offered, it is going to confuse the examiner, I am confident of that. I think the thing to do is to put the whole thing in and let the witness tell what tables he used to make up his chart.

Mr. BURR. I shall not offer the whole bulletin. I will compromise by offering in addition the other material, if the witness will be kind enough to state what it is, which was used in the compilation of this chart.

Mr. WHEAT. May I suggest, why don't we have him describe all his charts and tell all the tables he used and then stipulate they go in?

Mr. BURR. That is satisfactory.

Examiner DE BRULER. I suggest that the chart be first offered in regular sequence here and then question him about them afterwards.

1826 Mr. BURR. All right.

Q. Now, Professor Cheyney, you have also charts, have you not, which present the present growth of white pine, the growth of white pine and pondosa pine, and the ultimate growth of both of these varieties, as based upon statistical material contained in the bulletin of the Agricultural Department, No. 21, have you?

A. Yes, sir.

Mr. BURR. If the examiner please, I request that those three last-named charts be marked for identification "Commission's Exhibits Nos. 36, 37, and 38", respectively.

Examiner DE BRULER. They may be so marked.

(Thereupon said charts were handed to the reporter and marked "Commission's Exhibits Nos. 36, 37, and 38", respectively.)

(At this time a short recess was taken.)

Mr. BURR. Q. Professor, will you be kind enough to read into the record the titles of exhibits 36, 37, and 38, being Commission's exhibits for the record, respectively?

A. The title of no. 36 in the present annual growth by regions, saw timber material, in millions of feet, board measure.

Q. And that is taken from what tables?

A. Taken from table 10, United States Department of Agriculture, Statistical Bulletin No. 21.

1827 The next one, no. 37, has the title, "Predicted annual growth in 1950, under a crude form of forest management, by regions, saw-timber material, in millions of feet, board measure." Taken also from table 10, Statistical Bulletin No. 21.

No. 38 is titled "Predicted ultimate growth under an intensive form of forest management, by regions, saw-timber material, in mil-

lions of feet, board measure." Taken from table 10, Statistical Bulletin No. 21.

Mr. WHEAT. Now, Mr. Burr, may I have the record show that while we have not objected——

Mr. BURR. Wait until I offer them.

Mr. WHEAT. All right.

Mr. BURR. If the examiner please, I desire to offer for the record the three charts thus identified by the witness as Commission's exhibits, respectively, nos. 36, 37, and 38.

Mr. WHEAT. Before those are received, I would like to have the records show this statement and whatever reply Mr. Burr has to it. We have no objection, Your Honor, to the introduction of statistical figures on actualities obtained from or by the Forest Service, but unless counsel for the Trade Commission intends to produce the witnesses who have made prognostications, we desire to object to the introduction, either in these tables or by means of these charts, of any prophesies which have not been made by the witness on
1828 the stand. We are entitled to examine the man who made those prognostications and ascertain what his bases have been. Now, unless this witness participated in the production of those prognostications, we will object to the introduction of any such purported figures.

Mr. BURR. Q. Professor, you did not participate, did you?

A. I did not.

Mr. BURR. Well, I am inclined to think counsel's objection is well taken. I was prepared to take it at Madison, with regard to the figures there, and I insisted at that time that if we were going to put in Madison figures, we ought to go to Madison and find out how the statistical matter was procured.

Mr. WHEAT. Mr. Examiner, I want it understood that I am not objecting to any statistics as to what the present growth has been, or cut, because I think that the record ought to show these, and I know that the Forest Service figures on these are as good as any that now exist, but as to prognostications I must interpose this objection.

Mr. BURR. Well, I think your objection is well taken, and under these circumstances I am inclined to withdraw——

Mr. WHEAT. That would be 37 and 38.

Mr. BURR. 37 and 38, and rescind my motion to have those received. I will say, however, that as counsel has not objected
1829 to the receipt of the statistical bulletin in its entirety, in fact, urged it, I think his position is quite inconsistent.

Q. Professor Cheyney, there is absolutely no new material in here that is not in the statistical bulletin to which you refer?

A. Not at all.

Mr. BURR. Now, it seems to me that counsel is——

Examiner DE BRULER. Are those charts based upon the statistics that are contained in this bulletin?

The WITNESS. Yes, sir.

Mr. WHEAT. Perhaps I ought to add this; I was unaware from the title of the bulletin or from a brief glance at it that it contained prognostications as to such matters. I now interpose definite objection to the introduction, unless the man who prepared those prognostications or some of them is offered as a witness, in which case I should wish to cross-examine.

Mr. BURR. Yes; certainly. I think counsel is a little overzealous on that matter, for the reason that on their face they are prognostications and estimates, and therefore they are not entitled to anything like the w'ight which anything which is a fact rather than a prognostication is entitled to.

Examiner DE BRULER. I understand that these drawing that you made there simply are based upon the statistics that have
1830 been introduced in evidence?

The WITNESS. They are merely a graph showing the tables in the bulletin there.

Mr. BURR. Q. It is merely a graph?

A. It is merely a graph, an explanation of the table in graph form.

Examiner DE BRULER. Is merely an explanation?

The WITNESS. That is true.

Mr. WHEAT. Your Honor, then, if that is true, it is merely an explanation, then my objection to the charct, which as Mr. Burr has stated in his opinion is good, then, certainly, they cannot get into this record. May I ask the witness, did you have anything to do with the preparation of the statistical table in Bulletin No. 21?

The WITNESS. No; I have not.

Mr. WHEAT. Then I shall object to them. On study of the matter, I may at San Francisco agree with you that it would be perfectly all right to put them in, but I cannot at the present time fail to offer this objection, which I believe is good.

Mr. BURR. I think counsel's objection is good, as a matter of law; I think as a matter of actual principle and damage done him it is not sound, but that is his business and not mine. I think he has a right to press that objection, and I shall not ask the examiner to rule. I will withdraw the offer. I wish, however, the record to show
1831 that I offered them.

Mr. WHEAT. And also the tables upon which they are based?

Mr. BURR. The tables upon which they are based have not yet been offered.

Mr. WHEAT. All right.

Mr. BURR. I will, however, say at this time that in view of the position that has been taken by counsel, that in case he wants to use other portions of the statistical bulletin, I reserve the right to object to prognostications.

Mr. WHEAT. I will stipulate that you may. I will state this, that I will not put anything in the record in the way of prognostications unless I have a witness on the stand who has participated in them.

Mr. BURR. All right. Or unless you have a change of heart in the meantime, which you said you might have.

(Thereupon the graphs heretofore marked "Commission's Exhibits Nos. 37 and 38," for identification, were withdrawn.)

Q. Professor Cheyney, limiting your statement to Commission's exhibits with exception of 37 and 38, will you be kind enough to state for the record what additional tables not already received in evidence have been used in the preparation of Commission's exhibits 35 and 36?

A. Exhibit No. 35 is based upon tables Nos. 82 to 125, inclusive, Statistical Bulletin No. 21.

1832 Mr. BURR. Now, if the examiner please, I would like to have the reporter instructed when he marks the page numbers in Commission's exhibit 34, those pages which the professor just names as also having been used in connection with these two exhibits.

Examiner DE BRULER. They may be noted.

A. Exhibit no. 36 is based on table 10 of Statistical Bulletin No. 21.

Mr. BURR. Q. That has already been offered, has it not?

A. I think so.

Mr. WHEAT. Now, Professor Cheyney, you listed a number of tables when we first offered Statistical Bulletin No. 21, Commission's exhibit no. 34 for identification. Some of those are the tables on which this prognostication is based. I take it that that table is one of those. I will ask that that be withdrawn, that offer, in so far as it contains prognostications. Perhaps I will put it this way, maybe it will be easier if you will state that you do not offer any of these pages for any purpose, the statistics, of prognostication?

Mr. BURR. I think that would be easier, but not very clear.

Mr. WHEAT. That is all too true.

Mr. BURR. Q. Referring to table no. 10 of the same Bulletin No. 21, will you kindly state which parts are in the nature of prognostications?

1833 A. I would say all except the first line.

Q. Marked present in each case?

A. Marked present in each case.

Mr. BURR. I stipulate that it may be ruled that in table no. 10, being part of Commission's exhibit no. 34 for the record, on pages 10 and 11, the material other than present growth be eliminated, under the understanding that prophesy is not to become part of the exhibit. Is that satisfactory?

Mr. WHEAT. Under the understanding, Mr. Burr, that figure in the exhibit which purports to be prophesy are objected to, because prophesies of the witnesses themselves may be perfectly admissible.

Mr. BURR. I am referring to the table only.

Examiner DE BRULER. I think that is clear now, clears up the record.

Mr. BURR. I think so.

Examiner DE BRULER. Let us proceed.

Mr. BURR. Q. Now, Professor, have you any Canadian figures with regard to white pine and Norway pine?

A. Beg pardon; any what kind of figures?

Q. Canadian?

A. Canadian.

Q. Yes?

A. There are some figures given on Canadian production and stumpage in this report of the Department of the Interior of
1834 the Canadian Government.

Q. Did you assist in the preparation of that? You did not, did you?

A. I did not.

Q. Now, will be be kind enough to turn to table 1B with regard to white and red pine?

Examiner DE BRULER. I have had no chance to inspect this document. Inspect it and see if it is regular. If it is regular, it will be received.

Mr. WHEAT. I have not had a chance to inspect it yet. I just want to see it.

Examiner DE BRULER. Let me ask you, where did you get that?

The WITNESS. I got it out of our library. That is published by the Canadian Government Forest Service.

Mr. BURR. What is the last question?

(Question read.)

Now will you be kind enough to turn to table 1B with regard to white and red pine and inform the examiner what figures there are with regard to standing timber of those two species embodied in the table mentioned?

Examiner DE BRULER. Is that a long or short table?

Mr. BURR. Just three or four figures.

Examiner DE BRULER. Just read it into the record.

Mr. BURR. That is what I want him to do.

A. Table 1B is titled "An estimate of the total stand of timber of merchantable size in Canada, by species. In this
1835 table the white-pine saw material is listed as 15 183,300,000 feet. In addition to that, there is small material amounting to 37,883,000 cords.

Mr. WHEAT. By white pine what do they refer to, Pinus strobus?

The WITNESS. Pinus strobus entirely. I think these are the only figures that you are interested in, unless you want red pine.

Mr. BURR. Q. Yes; I would like to have the red pine in, please.

A. The saw material of red pine is listed as 3,690,000,000 board feet. The small material as 13,742,000 cords.

Mr. WHEAT. What is the botanical name for red pine?

The WITNESS. Pinus resinosa.

Mr. WHEAT. Known as Norway?

The WITNESS. Known as Norway, also.

Mr. BURR. Q. Now, are you familiar with the relative stands of Norway and white pine in the Lake States, in a general way?

A. I am, in a general way. I would have no definite figures except those of the surveyor general of logs of the State.

Q. Well, is the Norway pine more or less of a proportion of the total pines in Canada or in the Lake States of the United States?

A. I would say it is practically the same.

Q. Practically the same?

1836 A. Yes.

Q. In other words, the percentage would not vary through that entire forest, do you think, roughly speaking, or very little?

A. It would vary some, but not very much. I' would vary in New England, but not in the Lake States.

Q. How much opportunity have you had to observe the coming growth and the new growth of Pinus strobus in the New England States?

A. I made a very extensive trip through New England in 1917 and had first-hand information or first-hand knowledge of the growth there at that time.

Q. Well, will you describe what you found to be the case there?

A. Practically all of the old fields in New England that have been abandoned have come into a growth of white pine. In addition, there is some that has come in on logged-over areas, but a very large percent of the old field have come in and gives you more white pine in southern New Hampshire and Massachusetts especially, than any place that I know of.

Q. Now, were the forests of white pine cut off in the neighborhood of early settlements at a very early day?

A. Yes. A great many of them were out before 1700, between 1700 and 1800.

Mr. WHEAT. That is in New England you are talking about?

The WITNESS. New England.

1837 Mr. BURR. Q. New England I am talking about. All of those questions may be considered New England for the moment, if you wish, Professor. Now, are there areas in New England that were formerly in agriculture that are now in second growth of white pine?

A. Many of them.

Q. Have you had occasion to observe any of those?

A. Yes.

Q. Will be kind enough to describe what you observed to be the case?

A. You mean a specific instance of it?

Q. Yes; if you can.

A. Well, there was one county in northwestern Connecticut which produced, according to the statistics there, 100,000 pounds of butter, 150,000 pounds of butter a year, a few years ago, or a hundred years ago, and in 1917 there were two milkmen running a route there supplying the country, when I was there. There are no records that I know of to show exactly how much of Connecticut was ever cleared up, but there was a very much larger percentage of it than there is

now. Connecticut after some three hundred years of settlement is still over fifty percent forest, largely through this reversion of farm lands.

Q. And this county in northwestern Connecticut, what county was it, do you recall?

1838 A. It is the county in which Norfolk is located, but I am not sure which it is.

Q. And instead of farm lands, that was forest, was it?

A. Forest; yes.

Q. Was it largely white pine?

A. I could not state just what percentage of white pine, but there is considerable white pine.

Q. Have you any other specific instance in New England?

A. Well, I could cite you a stand of timber near Watertown, New York, in the Adirondack Mountains.

Q. All right. That is not New England, but you might cite that. Do it, please.

A. That was a stand of sixty acres of pure white pine. I measured some of the trees that had been cut there which were twenty-two inches in diameter. It ran four and a half and five log timber. Two of the acres had been measured, one of them running 87,000, the other one 78,000, to the acre. They estimated the stand for the sixty acres at 50,000 feet to the acre, and that had been a wheat field in 1865.

Q. Now, is there any white pine forest growing up—was that white pine, did you say?

A. That was white pine; yes.

Q. Pretty straight stand?

A. Beautiful stuff.

Q. I mean that was pretty straight white pine, was it?

1839 A. Pure white pine.

Q. How about the Lake Champlain district, is there any white pine growing up in that section at the present time?

A. Quite a good deal of it.

Q. Now, going further west, what is the situation with regard to second growth of strobus in the Lake States, if you are familiar with it?

A. There is a great deal of it in Minnesota. I am not familiar with the exact status of it in Wisconsin and Michigan. I know there is some there, but I do not know how much.

Q. Now, inviting your attention once more to Commission's exhibit no. 36, will you state what the reason is for the larger proportion of strobus and northern white pine—Norway pine, I mean—*por*portion of strobus and Norway pine, as compared with the ponderosa pine, taking into consideration the circumstance that is in Commission's exhibit no. 35 the production of the Norway and strobus pines as compared with the ponderosa are relatively much smaller than as shown with regard to the second growth? Can you explain that situation, sir?

A. I think that is due to the fact that in the stands of monticola and the sugar pine, that there is a very large percentage of that is virgin timber, mature timber. In such stands as that there is very little not growth. I mean by not growth that the decay and
1840 deterioration in the forests about equals the growth, so that the not growth is very little there.

Q. It is offset by the——

A. It is offset by the decay and the fires, and so on in the forest. Whereas the strobus area is largely cut-over area with second growth growing on it, growing very much faster than that on the monticola and lambertiana areas.

Q. The growth in such cases is all gain, is it?

A. Practically all. Another point would be that the—in the case of the white pine, of the strobus, it grows in a climate where reproduction is almost sure to come within two or three years after the cutting, whereas in a very large portion of the area of the ponderosa it requires a much longer period, on account of the drier climate, to get a satisfactory reproduction of your species.

Q. Now, is the time coming when strobus will be a more important factor in the market, in your judgment, than it is at the present time, or will it maintain its present purity, or will it depreciate, in your judgment?

Mr. WHEAT. Mr. Examiner, I object that this witness has not been qualified yet on prognostication of such wide character as this.

Examiner DE BRULER. Let's hear the question.

Mr. WHEAT. It is purely a speculative question, even with a witness of this type.

1841 Mr. BURR. I think the objection to the charts was valid because I did not produce the witness. I now think this objection is not valid for I have the witness here to be cross-examined, and I do think that the objection indicates matter that goes to the weight rather than the competency of the evidence.

Examiner DE BRULER. Read the question. I have forgotten just what it is.

(Question read.)

Examiner DE BRULER. You may answer the question, with exception noted.

A. May I refer to some statistics in here, in one of the tables that you have cited?

Examiner DE BRULER. Answer the question in your own way.

Mr. WHEAT. May I ask if those are statistics with reference to any future prognostications, Professor Cheyney?

The WITNESS. No; they are statistics of present growth.

Mr. WHEAT. Well, state what they are.

A. In table 11, which was submitted, I think—or table 12, gives the present growth per acre by different timber types. You will note that under pine in the Northeast the growth there is given as forty cubic feet per acre per year.

Mr. WHEAT. May I ask the witness one question here?

Examiner DE BRULER. Certainly.

Mr. WHEAT. Did you have anything to do with making that
1842 estimate?

The WITNESS. No, sir.

Mr. WHEAT. Well, I think he is basing his answer on hearsay.

Examiner DE BRULER. Go right on.

Mr. WHEAT. May I have an exception noted?

Examiner DE BRULER. Always note an exception to any adverse ruling.

Mr. WHEAT. I understand that is not the practice, and an exception must be noted.

Mr. BURR. It is not our practice. I will be willing to stipulate, if it will do any good, that an exception may be noted to any adverse ruling.

Mr. WHEAT. I should like to do that, but I am afraid in view of my experience in other cases I shall have to ask it.

Examiner DE BRULER. Anyway, the exception will be noted. Go right ahead and answer.

A. Anyway, the growth in the Lake States is eighty-three cubic feet per acre, strobus and resinosa. The western white pine or monticola makes a growth of thirty cubic feet per acre. The western yellow and sugar pine in California make an annual growth of fifteen cubic feet per acre.

Mr. WHEAT. These are mixed, are they?

The WITNESS. These are mixed.

Mr. BURR. Q. The figures are mixed, you mean?

A. The species are mixed in the figures. That is half of
1843 the growth, you will notice, per acre, or less than half the growth per acre of strobus in the Northeast. The growth of western yellow pine, in Oregon, Washington, Idaho, is seventeen cubic feet per acre, less than half that of New England. The growth in the southern Rockies area, including New Mexico, Arizona, Utah, Colorado, and all that region is five cubic feet per acre, or one eighth that of New England, practically. The areas covered by these different woods, you will note that strobus and resinosa cover a very large area, and that combined with this more rapid growth per acre per year is what gives you your high growth per region.

Q. Now, returning to the question that I asked you, from the facts that you have narrated, do you regard strobus as a diminishing or increasing factor in the American lumber market?

Mr. WHEAT. May I ask that this question—that you state the facts that you have narrated, define as to what facts it is based on?

Examiner DE BRULER. Well, that is understood, of course.

Mr. WHEAT. If he has narrated any facts, I have not heard them, and I ask that they be defined.

Examiner DE BRULER. Answer the question, with exception noted.

A. I would say that it is almost inevitable that the amount of white pine should increase as these immature stands come
1844 into maturity.

Mr. BURR. Q. Now, this second growth of Pinus strobus, does that supply any shop lumber?

A. I do not know definitely. I see no reason why it should not.

Mr. WHEAT. Well, I ask that the last end of that answer be stricken out as not responsive. The question called for a statement of fact.

Examiner DE BRULER. He said he did not know definitely.

Mr. WHEAT. Yes; and that he qualified his statement, and I ask that it be stricken from the record.

Examiner DE BRULER. Let the record stand as it is, with exception noted.

Mr. BURR. Q. Have you observed the relative amounts of heart and sap wood in the new growth, second growth of Pinus strobus?

A. Yes.

Q. About how does it run?

A. Of course, the sapwood of almost any wood is variable. Relative it is narrower.

Q. Relative to what? Do you mean to the heart?

A. Relative to some other species it is narrower.

Q. Have you ever been up through New Hampshire at all; with regard to observing the growth of strobus there?

A. You mean a study of the rate of growth?

1845 Q. No. A study of the amount of second-growth strobus that is coming back?

A. I have never made a detailed study of it; no. I have observed it generally.

Q. Is there considerable of it up there that is coming back?

A. There is a great deal of it, in southern New Hampshire especially.

Q. Now, is the firewood and cordwood contained in the tables that we have offered from Statistical Bulletin No. 21?

A. No.

Q. It is lumber entirely, is it?

A. Saw material.

Q. Now, have you had any opportunity to observe the durability of Pinus strobus?

A. Yes, sir. I have seen the New England houses and sheds that have been built out of it.

Q. Do you regard it as an exceptionally durable wood?

A. Yes.

Mr. WHEAT. We offered at the outset of this hearing that it had been in use there for two hundred years, and there are some of those old buildings standing.

Examiner DE BRULER. I think there is no question about that.

Mr. BURR. All right, we have no question about it.

Examiner DE BRULER. It seems to be admitted.

1846 Mr. BURR. Q. Now, in the preservation of wood by painting, is painting of wood an entire practical cure for lack of durability in a species of lumber?

A. It would be if the lumber were dry when the paint was put on and the paint coating first applied; yes, sir.

Q. Well, as a matter of fact, the everyday home owners, do they keep their coat of paint intact so that moisture does not percolate through?

A. Not all of them.

Q. Well, in the question of whether a dwelling shall be repainted, doesn't the question of looks, rather than—appearance rather than the question of the necessity for maintaining—for keeping moisture out, prevail very often?

Mr. WHEAT. That question is very speculative, Mr. Examiner. If the witness is a walking Encyclopedia Brittannica, he could answer it.

Mr. BURR. If the examiner please, there is no greater folly than that. Everybody knows as a matter of common knowledge, and I just want to get it in the record. Everybody knows that paint is not maintained one hundred percent over any building.

Mr. WHEAT. Why don't you argue that?

Mr. BURR. I do not have to argue it. The Commission could take judicial knowledge of a thing which occurs. Also I am asking

1847 the witness to testify to a matter of knowledge. It is not every matter of common knowledge that the court will take into consideration.

Examiner DE BRULER. Read that question that is objected to.

(Question read.)

Mr. WHEAT. This witness is not put on here as an expert on painting or any of these things. He is put on here as a wood technologist. I can see no basis for that question, Mr. Examiner.

Examiner DE BRULER. Can you answer that question?

The WITNESS. Only so far as my own house is concerned.

Examiner DE BRULER. Go ahead and answer.

Mr. BURR. I did not ask it as regards his own house.

Examiner DE BRULER. He says that is the only way he can answer it.

Mr. BURR. Well, I will withdraw the question then.

Q. Have you brought with you, Professor, any maps with regard to the distribution of the various varieties of pine here in interest over the parts of the country?

A. I have an atlas here which shows the distribution of the different species.

Q. Will you be kind enough to produce it?

A. (Producing atlas.)

Q. Which part?

A. The whole thing.

1848 Examiner DE BRULER. Let the opposing counsel see it.

Mr. WHEAT. 1913. It seems to me this is old material. I am perfectly willing to have some maps in. I will have some made, if you want me to?

Mr. BURR. These are offered in evidence.

Mr. WHEAT. They are very old.

The WITNESS. I think this gives only the botanical range.

Mr. WHEAT. I have not any objection then.

Mr. BURR. If the examiner please, I desire to offer in evidence as Commission's exhibit 39-A, 39-B, 39-C, 39-D, and 39-E, respectively, being maps no. 1 of white pine, no. 2 of western white pine, no. 3 of sugar pine, no. 13 of red or Norway pine, and no. 16 of western yellow pine, so-called, in each case, and ask that they be thus marked and received in evidence, with the permission of having the same photostated and the atlas returned to the parties from whom it is borrowed.

Examiner DE BRULER. It may be received with that understanding.

(Thereupon said maps were received in evidence as Commission's exhibits nos. 39-A, 39-B, 39-C, 39-D, and 39-E, admitted.)

(Witness temporarily excused.)

(Thereupon adjournment was taken until 1:30 o'clock p.m. of the same day, Tuesday, January 21, 1930, at which time the hearing was resumed and the following proceedings were had:)

1849 Before the Federal Trade Commission

In the matter of White Pine cases

Docket Nos. 1620-1669, inc.

SPOKANE, WASH., *January 21, 1930.*

Nor pursuant to adjournment, 1:30 o'clock p.m.

Before Ellis De Bruler, examiner.

Appearances:

Eugene W. Burr for the Federal Trade Commission.

Messrs. McCutchen, Olney, Mannon & Greene (By Mr. Carl I. Wheat) for the respondents.

Examiner DE BRULER. You may proceed with the hearing in keeping with the adjournment.

E. C. CHEYNEY resumed the stand and further testified as follows:

1850 Direct examination resumed by Mr. BURR:

Q. Basing your answer on your observation of frame houses, are they painted frequently enough to keep out the moisture?

Mr. WHEAT. Again I want my objection to go to this. This witness has not qualified as an expert on whether houses are painted or not.

Mr. BURR. It seems to me that the question of paint would have the same bearing on one kind of wood as the other. That is the general understanding, that wood is preserved by paint. I presume that the lasting qualities of these woods without paint is really what is in issue here.

Mr. WHEAT. No; I do not think so. I think what is in issue here are the lasting qualities of various varieties of wood in view of their probable use by the public as regards what will normally happen. Very few buildings will remain unpainted in this day and generation entirely, but it seems to me the practical situation is that there might be degrees of protection against the weather which would result in different results in different kinds of woods.

Examiner DE BRULER. If you can, answer the question, with objection noted. Go ahead and answer it.

Mr. WHEAT. I would like to have an opportunity, Mr. Examiner, of stating what my objection is.

Examiner DE BRULER. Yes.

1851 Mr. WHEAT. My objection is that this witness has not qualified as an expert. He has never said he has gone around and counted a hundred houses personally and counted the percentage of those painted, and that is the only competent way to establish this.

Examiner DE BRULER. Read the question, please.

(Question read.)

Mr. WHEAT. My objection, of course, will be noted.

Examiner DE BRULER. Yes. You can answer that, if you can answer it. Exception noted.

A. I have seen many houses which were not painted sufficiently.

Mr. WHEAT. I ask that that answer be stricken as not responsive.

Mr. BURR. Oh, yes; that is responsive.

Examiner DE BRULER. Let the record stand for what it is worth.

Mr. WHEAT. Exception.

Mr. BURR. Q. Is the painting of a house against the entrance of moisture into the wood—is the painting of a house a complete protection against moisture entering the wood?

A. Not always.

Q. Well, under what circumstances would it not be?

A. Where the joints ends are nor perfectly tight, or the pieces of wood coming together do not make a perfectly tight connection,

1852 and where the wearing of the wood, shrinking and swelling up of it will open up the joints.

Q. Well, now, if wood is properly kiln dried, will it shrink?

A. It could not shrink any more if it is kiln dried below the moisture of the air, but it can swell and then shrink.

Q. And does that happen with some of these pine woods to some extent?

A. It happens with practically all of them, unless they are perfectly painted.

Q. Well, are painting jobs under your observation generally jobs of perfect painting?

A. No. I think you would say there are very few of them would be perfect.

Q. Now, where does the moisture enter, if it does enter, into buildings that are painted; is it at the joints, or ends, or sides, or where?

A. It would be at the joints, where the ends of the wood would be exposed to moisture. There is comparitively little moisture would get into the wood from the side.

Q. Now, as a matter of observation, are houses painted enough to make an impervious surface against the elements?

Examiner DE BRULER. Are you qualified to answer that?

Mr. BURR. I asked him for his observations?

A. Not as a general—I can answer one or two specific instances, but I could not say generally.

1853 Examiner DE BRULER. One of two general instances, then; go ahead.

A. I have seen several houses which were not sufficiently painted.

Mr. BURR. Q. Now, as regards the likelihood to shrinkage, is the density of the fibre of the wood, or the wood, or what is the characteristic that results in shrinkage?

A. The general rule is that the heavier a wood is the more it will shrink.

Q. Will you explain that, please?

A. Well, wood is made up of fibres, and it is the shrinking of the fibre which causes the shrinking of the piece. There is water in the wood in three different places. There is water between the cells. There is water inside of the cells and there is water in the cell walls. It is the water in the cell walls which controls the shrinkage. You can take the water out of the inside of the cell, and out of the openings between the walls, without affecting the size; but just as soon as you take the water out of the cell wall it is then you get shrinkage, and the more fibres there are in the wall, the more shrinkage you will get.

Q. How do the fibres of Pinus pondarosa differ from the genuine white pine?

A. I am not qualified to say exactly how they differ.

Q. What relation is there, if any, between fibrous character

1854 and the weight in avoirdupois, if any?

A. Well, the bigger the walls of cells are and the more fibres there are there, the more weight there will b. You take a thin-walled cell and you will have a light wood and the shrinkage will be comparatively slight. You get a heavy-wall cell, the shrinkage is greater.

Q. And the heavier the wood, the greater the shrinkage, is that a set rule?

A. That is the general rule.

Q. Would you say that the hard, heavy woods, then, always shrink more than the light woods?

A. Yes, sir; in general. There may be exceptions, but that is the general rule.

Q. That is the general principle?

A. Yes.

Q. Which are the commercial genuine white pine?

A. There is the strobus, monticola, lambertiana, flexilis, and albicaulis.

Q. It is a correct name of wood to designate a Pinus Ponderosa as a genuine white pine?

Mr. WHEAT. Now, if Your Honor please, we have admitted the botany of Pinus ponderosa. It has been generally classified by botanists as very closely akin to the southern yellow pines, but to ask this witness the question whether it is a proper name comenclature, I think is the very question this Commission has got to determine. Botanically, I will admit for the purposes of the record——

1855

Examiner DE BRULER. He, I think, is an expert, and he may give his opinion of it.

A. To my opinion, it is usually classified as a yellow pine.

Mr. BURR. Q. Do you so classify it?

A. Yes.

Q. Now, the suggestion has been made in the record several times that the so-called "Douglar fir", also known as "Oregon pine", is not a genuine fir. Is that true?

A. That is true.

Q. What is the effect commercially of this misnomer?

Mr. WHEAT. Now, may I ask that I have an opportunity to object to this question? This witness is not qualified, has not qualified, to state any effects commercially of any names. The fact that Douglas fir is not botanically a true fir, of course, this witness is qualified to state; I admit that; but for him to state whether commercially there is a misnomer or there is an effect of that misnomer, or what that is, this witness certainly is not qualified to state.

Examiner DE BRULER. I think that objection is well taken.

Mr. BURR. I shall not press that. I have no doubt it is.

Q. Are all pines botanically divided into a yellow-pine group, a white-pine group, or are there other pines that belong to neither of those?

1856

A. I think there are classes that I think do not belong strictly to those. There are the pinon pine and the foxtail pine.

Q. Professor Cheyney, in your opinion will the heartwood of second-growth strobus endure as long in use as the heartwood of virgin forests of strobus?

Mr. WHEAT. Now, I ask again that this witness be—the witness has stated whether or nor strobus wood has endured, and we have admitted it has. I think there is no foundation laid for the question that is now being asked.

Mr. BURR. I want his views, and I think I am entitled to it, as to the durability comparitively of second growth as contracted with first growth.

Examiner DE BRULER. If he knows, he can answer.

Mr. BURR. I am asking for his opinion as an expert.

Examiner DE BRULER. You may answer.

Mr. WHEAT. Exception.

A. I do not see how there could be any difference between the heart of the second growth or the first growth, because heartwood is dead. When the sapwood changes to heartwood it is no longer live wood, and therefore cannot change very much.

Mr. BURR. That is all.

1857 Cross-examination by Mr. WHEAT:

Q. Professor Cheyney, have you ever been in the woods in the West?

A. No; that is, not beyond Colorado or the Black Hills.

Q. To what extent are you familiar with the wood which is marketed as California white pine?

A. I am not familiar with it.

Q. On what characteristics of a tree do botanists base their classification of trees?

A. Most of them are based on characteristics of the flowers of the tree.

Q. The reproductive organs of the wood?

A. The reproductive organs of the wood.

Q. Of the plant?

A. Yes.

Q. Now, I take it that the bark is also considered at times?

A. They are secondary characteristics; yes.

Q. Needles are considered, are they?

A. Yes.

Q. And what other secondary characteristics are ordinarily considered by botanists?

A. It depends somewhat on how difficult it is to separate these things. They may run it down and use some very small.

1858 I can give you an example, if you want me to, of the very fine distinctions. The genus Crataesus, hawthorn, is one of those. That has been broken up into about one hundred and fifty species, or thereabouts, and they have been forced to take some very minor characteristics as distinguishing them, and one of them is identified by the color of the inner bark of the roots.

Q. Now, in general, the classification is based fundamentally, is it not, on the flowers?

A. On the flower.

Q. How many needles does the Pinus strobus have?

A. Five.

Q. And the Pinus lambertiana?

A. Five.

Q. And the Pinus monticola?

A. Five.

Q. And what is the common name of Pinus flexilis?

A. Flexilis, the limber pine.

Q. And Pinus albicaulis?
A. White bark pine.
Q. How many needles do they have?
A. Five.
Q. That, you say, is a general characteristic of what you term white pine, to have five needles in bundles?
A. Yes; I so considered.
1859 Q. Do you know of any five-needle pines that are not white pines?
A. No.
Q. Do you know what botanists have called Pinus arizonica?
A. That I am not sure. I think it belongs to the foxtail group, but I am not sure.
Q. Do you know how they have classified Pinus toneyana?
A. No.
Q. You do not know whether they are white pines or whether they are five-needle pines?
A. I do not 'hink they are five-needles pines, but I do not know about the classification of them.
Q. How many needles has what is known as "southern yellow pine"?
A. It has three needles, I think.
Q. Some of the yellow pines have two, don't they?
A. Yes.
Q. Do you know any that has one?
A. Monophylla.
Q. Now, do the botanists in making these broad classifications that you have mentioned consider the qualities or characteristics of the wood in classifying the trees?
A. It might come in as secondary, away down the line, like this inner bark of the roots, but it would not be of primary consideration.
1860 Q. Do you know of any instance of the pines where that is true?
A. No.
Q. Now, what are the factors which have been considered in—first, may I ask do all botanists classify Pinus ponderosa as a yellow pine?
A. I could not say whether they all do or not.
Q. What do they mean by yellow pine in that consideration? Is that a technical term or not?
A. I do not know where they got the name. I would say that it was a term that was generally applied to the group for some reason, but I do not know why.
Q. Is the same true as to white and white pine?
A. Yes.
Q. Do you know what the factors are which botanists have considered in classifying Pinus ponderosa, that is, many of them, as you say, in classifying Pinus ponderosa with this general broad group you have mentioned as yellow pine?

A. No; I do not know what the similarity of characteristics are, but I presume that they are similar.

Q. You have not made any particular study of Pinus ponderosa?

A. No, sir.

Q. You are not definitely familiar with it as a tree?

A. Yes; I am familiar with it as a tree, because we made a
1861 good many stem analysis and a study of the ponderosa is the Black Hills and Colorado.

Q. Did you make any study of it in the States west of those?

A. No.

Q. Do you know whether the production of Pinus ponderosa in the States you have mentioned compares in any great extent to the production in the States west of there?

A. It is much less than it is west of there.

Q. Quite small, is it not?

A. Yes.

Q. Now, could it be said, in view of your answers to what yellow pine was, that is what the word was, that the only true technical description of a plant is its Latin botanical name?

A. That is the ultimate.

Q. Now, why are common names adopted by botanists?

A. I do not think they are.

Q. They are not?

A. They are adopted by other people.

Q. Oh, I see. Then, they are really not, technically not correct at all, are they?

A. No.

Q. And when you talked about Douglas fir, that is not a true fir, is it?

1862 A. No, sir.

Q. So the tree that is ordinarily called the Douglas fir, what is its botanical name?

A. It is Pseudotsuga taxifolia.

Q. Will you translate that for the record?

A. Pseudo is false, suga is hemlock, folia is leaves, and taxus is yew.

Q. What is a yew, not a female sheep, is it?

A. Well, it is one of them. This one is a coniferous tree of another genus than pine. The coniferous trees in this country are divided into two generi. One of them is Pinus and the other is Taxus, and the yew is one of the Taxus group.

Q. Is it a commercial tree?

A. No. I do not know about the Pacific coast yew. There is one out there maybe of commercial size, I do not know, but the one in the East is a shrub.

Q. What is the botanical name of the fir?

A. Abies.

Q. Do you know whether or not there are woods commercially purchased and sold in the United States that are true Abies?

A. Yes.
Q. What are those?
A. The white fir of the West.
Q. What is that botanically?
A. Fir, concolor.
1863 Q. What is the other one?
A. The other one—it is not sold as a fir, but it is sold in commercial quantities, is the balsam.
Q. And what is the botanical name of that?
A. Abies falsa noa.
Q. What other firs are there grown in the United States?
A. Oh, that——
Q. I do not want to go to far in this. I am interested in this botanical end, though.
A. There are five or six true firs, one of them is magnifica.
Q. Is that in commercial quantities?
A. It is in commercial quantities, yes; but it is mostly inaccessible at present.
Q. Counsel for the Federal Trade Commission mentioned some wood called Oregon pine. Do you know what that is?
A. That was a name that used to be, I do not know whether it is now or not, commonly applied to the western hemlock.
Q. And what is western hemlock?
A. Tsuga heterophylla.
Q. Would you be surprised, Professor Cheyney, if you were told that in the State of California Pseudotsuga taxifolia is commonly marketed as Oregon pine, and has been for years?
A. I do not know anything about that.
Q. You never heard that?
1864 A. No.
Q. The only Oregon pine with which you were familiar, is a hemlock, is that true?
A. Yes.
Q. Not a false hemlock, but a true hemlock?
A. A true hemlock.
Q. Let me ask you this, what true cedars grow in the United States?
Examiner De Bruler. I think that is outside of the cross-examination.
Mr. Wheat. I admit that is. We went into this matter of Douglas fir. I want to ask about the wood that is marketed from this very State, or Oregon, as Port Oxford cedar. I am testing the gentleman's botanical knowledge.
Examiner De Bruler. Go a little further.
A. If you call the true cedar the genus Cedarus, I do not know of any in the United States.
Mr. Wheat. Q. Do you know of any woods that are marketed as cedar in the United States?

A. Yes, sir. The arbor vitae, both eastern and western, and the Port Oxford cedar which you have mentioned.

Q. What is that botanically, by the way?

A. That is Cupressus, or Chamaceyparis.

Q. It would not be Cedarus, if it were?

A. It might be Cedarus, and it might be Cupressus, or Chaceyparis.

1865 Q. It is not Cedarus, is it?

A. It is not Cedarus.

Q. Where does Cedarus grow?

A. Well, they are reputed to grow in Lebanon, and there are some in the West Indies.

Q. Woods commonly called cedar Lebanon are not cedar at all, are they?

A. I do not know that.

Q. Can it be said, Professor Cheyney, that the value of these technical terms that we have been discussing is that they discuss something known everywhere, a man in Sweden, or Germany or the United States, or South America would understand these technical terms, if he were a trained botanist?

A. Yes.

Q. And these so-called common names which you have mentioned, they are largely confined, are they, to particular countries and districts in comenclature?

A. Most of them.

Q. Even in the technical names, is there not confusion?

A. Yes; there is confusion even in the technical names.

Q. What you *you* call tanbark oak, for instance?

A. Well, I learned it as an oak, but it has since been changed. I do not know what the name of it is, at present. I learned it under the botanical name of quircus, and it is now something else.

1866 Q. Do you know whether any botanists have classified it as a lithocarpus?

A. I am not sure.

Q. Or a pasania?

A. I do not know what the name is.

Q. You know there has been some discussion?

A. I know there has been a change in it.

Q. Some of these common names that are applied by the people to various woods may apply to several different species of woods, may they not, sir, common names?

A. That is in different localities?

Q. Yes.

A. Yes.

Q. Can you think of any woods grown in this country that have common names covering two or three different botanical species?

A. Well, I was down in North Carolina making a study of what is called red oak in the country as a whole. I went to a fellow in the mill, asked him if they were cutting any red oak. They said they were not cutting any. I asked him what this was. It was a turkey

oak. I went over to the next mill and asked if they were cutting any turkey oak. He said they were not cutting any; he said they were cutting gypsy oak. I found five or ten names in ten miles.

Q. These names are not very definite, so that men like
1867 yourself can follow them?

A. Not unless they have long been established by custom.

Q. Can you give me the nature and characteristics of southern yellow pine, for instance?

A. You mean of the tree or the wood?

Q. Oh, of the wood. We are not interested now in the flowers.

A. Well, the wood of the——

Q. Talustris?

A. Of the talustris——

Mr. BURR. I think we have gone far enough testing his knowledge.

Mr. WHEAT. I am now going beyond testing his knowledge. I am now going into whether this wood should simply be called a yellow pine, and this witness has said he would call it yellow pine. I think I am entitled to ask him whether or not it is like the southern yellow pine.

Examiner DE BRULER. Go ahead. Let's hurry it up.

A. Southern yellow pine, or longleaf pine, or talustris is characterized, being very heavy summer or autumn wood, with rather a narrow ring of spring wood, and is very hard, dense, a very large percentage of rosin.

Q. It is a heavy wood, is it not?

A. Very heavy wood.

Q. What is it used for?

1868 A. Used for all heavy construction purposes especially, and also for practically everything else. Used for interior finish and flooring.

Examiner DE BRULER. I know that is cumulative. It has been gone into with the other witnesses.

Mr. WHEAT. It will, if Your Honor please, be gone into by every witness in the case. It is the important question in the case.

Examiner DE BRULER. There seems to be no dispute.

Mr. BURR. If it will shorten this matter I will stipulate that the pines, that the yellow pine in general, characteristics more closely approximates the so-called white pine than does the commercial pines of the South.

Mr. WHEAT. Well, I will join in such a stipulation.

Mr. BURR. I think I have already stated that before in the record.

Mr. WHEAT. I believe you did.

Mr. BURR. And it seems to me it ought to obviate some of this work.

Examiner DE BRULER. Yes; I think that is admitted.

Mr. BURR. And furthermore, I will say to you right now, and you can use it in your brief if you want to, that I personally would not definitely, if I should be called upon to do so, require the ponderosa interests to name their wood yellow in the trade term.

1869 Mr. WHEAT. You stated that before.

Mr. BURR. I think I did. I stated it for the record or in the record, and the Commission, or course, has no jurisdiction to tell them what to name it affirmatively, and therefore it seems to me we ought to be able to eliminate some of this.

Mr. WHEAT. Of course, there is one thing, that you as attorney for the Commmission cannot bind the Commission.

Examiner DE BRULER. This has been gone over so much, it seems to me it ought to be cut short.

Mr. WHEAT. Q. I will ask you whether in your opinion, in view of what counsel has stated and your own experience, you would consider the term yellow pine as a proper term commercially for Pinus ponderosa wood?

A. It seems to me that it has some characteristics anyway which bind it rather closely to the yellow pine. For instance, the western yellow pine is quite a heavy producer of turpentine.

Q. Where is this produced?

A. In the Rocky Mountains. They have experimented with that and found they could get a very good grade of turpentine from this western yellow pine, very much like the turpentine that they got from the yellow pine of the South, and gotten in the same way, and you cannot get it, as far as I know, from the white pines in that same way.

Q. We are going into the selling of wood as lumber?

A. Yes.

1870 Q. I have asked you whether or not yellow pine would be a proper term to apply to this wood in the market?

A. As a wood?

Q. As a wood?

A. Well, I would agree with Mr. Burr, that it is nearer a white pine in appearance and characteristics, probably, than it is to a yellow, but it has this one thing that binds it, in my opinion, to the yellow-pine group.

Q. That is a chemical matter?

A. No; not so much a chemical as the physical location of the rosin and the production of the turpentine.

Q. Do you know how Pinus joffrey is marketed?

A. I do not think very much of it is marketed as lumber. It comes in as mine props and railroad ties on the market, in that way, in small quantities.

Q. You do not know what the common name is?

A. I do not know what the common name is.

Q. You do not know how it is sold?

A. No.

Q. Are you familiar with Bulletin 556 of the United States Department of Agriculture, entitled "Mechanical Properties of Woods Grown in the United States"?

A. Only in a general way. I am not familiar with the details of it at all now.

Q. That bulletin was produced, was it not, by the Madison
1871 Laboratory Service?

A. I do not know that. I do not know what section of the service.

Q. Let me ask you this, whether you know of any scientific tests that have been made to determine or which have determined the relative durability of the various white pines?

A. No. I only know that they have been carrying on a series of tests at Madison, but I do not know what the results are, or anything about them.

Q. You have not made any such tests yourself?

A. No.

Q. Any other tests from a technical point of view?

A. No.

Q. When they cut up a log of Pinus strobus, what do they cut first?

A. You mean off of the log?

Q. What grade of lumber do they cut first?

A. Well, they take off the slab and then they would get a grade of clear lumber; if the tree were large enough and there were no knots and no defects there, they might get clear lumber. It would be wholly sapwood on one side of the board, anyway.

Q. And what is that clear lumber used for very largely?

A. Clear lumber is used mostly for interior finish.

Q. Now, what is this wood they call shop lumber?

1872 A. Shop lumber is the lumber that is used for cutting-up purposes. It has the defects more or less grouped so that clear pieces can be cut between the defects.

Q. Do they obtain clear lumber from small pine trees?

A. No many long boards of clear lumber, but they cut good shop pieces, short pieces.

Q. Would that be any large percentage of so-called shop in the young trees?

A. It would be under—depending somewhat on the conditions of growth that the tree was produced, and it is conceivable that there would be a large percentage in some and small in others.

Q. That type of lumber is all obtained in the part of the logs where there are knots, isn't it?

A. Yes.

Q. And the common lumber comes from inside of that, doesn't it?

A. Yes. It may come from the same place in the trees, where the whorls of the branches are closer together.

Q. What trees do you have in mind of this type?

A. It would be all in the same species. Sometimes these trees grow a certain distance in height, and then there would be a whorl where the branches grew from that point. In case the length of height growth has been short, it will bear those whorls of branches
1873 so close together there would be no possibility of getting shop out of it. If the growth has been under—I saw one batch

of white pine in Connecticut, for instance, where the average annual growth for ten years had been about three feet a year. There you would have a good chance to get shop lumber out of that, of that length.

Q. What kind of shop lumber would that be, sash lumber?

A. I do not know the technical names.

Q. It would not be over three feet?

A. Well, I saw one tree where I could stand one one whorl of branches, and the next one was over my head.

Q. Was that unusual?

A. That was very unusual.

Q. Do you know whether Pinus ponderosa from Southern California has ever been sold commercially?

A. I do not know anything about it.

Q. Under the same name as Pinus ponderosa lumber from the inland empire?

A. No; I am not familiar with the western classification.

Q. Pinus strobus is comparatively high-priced wood, isn't it?

A. Higher grades; yes.

Q. And what about the lower grades?

A. I am not familiar with the comparitive prices, with different things.

Q. Are you very definitely familiar with Pinus monticola
1874. and its nature and growth?

A. No.

Q. Never been in the woods?

A. No.

Q. You have never made a study, have you, of its lumber in particular?

A. No.

Q. And the same is true of Pinus lambertiana?

A. Yes.

Q. I can pass those then. Does the bulletin which you placed in evidence this morning and the tables mentioned in it, do they give the production and stand of all those species?

A. They give the production of all the species by States and species; yes. The stand too, I think.

Q. What subject do you teach at the University of Minnesota?

A. Silviculture.

Q. Does that include, or not, the botany of trees?

A. No.

Q. Do you teach wood technology?

A. No.

Q. You have always been connected with the university, I take it, since about 1905 or so?

A. Yes.

Q. I take it from your direct testimony that you believe that production of white pine in this country will increase?

1875 A. Yes.

Q. Now, let me ask you whether, in connection with your study of silviculture, you have ever seen any of the effects of what is known as the white pine blister rust in the New England States?

A. Yes.

Q. Has that been a serious difficulty?

A. It has been a serious difficulty; yes; in places.

Q. And has that affected any of the Pinus strobus in the Lake States?

A. Yes.

Q. Does that affect any of the other pines?

A. Yes.

Q. What ones?

A. Monticola. I do not know if it has reached lambertiana any yet, but it is found in Idaho.

Q. Is that rather a serious problem?

A. A serious problem unless properly combatted.

Q. Just tell us briefly how serious it is.

A. Well, it is an imported disease, brought into this country. I do not think the date is definitely known. It is a thing which grows in alternate hosts. It grows for part of the year in the currant and gooseberry bushes and part of the year on the white pines.

So that wherever your pine is of sufficient value, they can take
1876 out the currant and gooseberry bushes, and the disease can be eradicated.

Q. How about in this Idaho white pine?

A. I do not know anything about that.

Q. You do not know how it operates there?

A. I do not think it has been there long enough for anybody to know how it operates.

Q. That is a recent development, is it?

A. Yes.

Q. And where it does do harm, what does it do to the tree?

A. It makes—it goes in through the needles and works back down the limbs, and, if it reaches the main stem, it girdles the main stem and you have the tree dying from that point up, sometimes the whole tree killed.

Q. Are there any insects that attack white pine?

A. Yes.

Q. Are they subject to decay in the forests?

A. The insects?

Q. No; the tree.

A. Do you mean, is the white pine subject to decay?

Q. Yes. Are there factors of decay which enter into growing white pine trees?

A. Yes. Red heart.

Q. In other words, there are possible facts, are there not, that enter into any idea of future production?

A. Yes.

1877 Q. And anyone must have those in mind in considering that problem, must they?

A. Yes.

Q. Have you ever seen any second growth of Pinus strobus out?

A. Yes.

Q. How large trees were those?

A. All the way from four inches to twenty-four inches.

Q. Now, how old were the twenty-four inch trees, about?

A. Fifty-seven years old.

Q. Have you ever seen any third growth strobus out?

A. No; I have seen some just ready to cut.

Q. About how big were those trees?

A. Right to fourteen inches.

Q. Would they cut those, cut those small trees?

A. Well, that depends on who owns them. The large percentage of small stuff that is cut now goes into box lumber. They can cut their knots from them. I do not know the percentage, though, that are gotten out.

Q. You do not know that they do, do you?

A. I know that they do, but I do not know the percentage.

Q. What do they cut out of them?

A. They cut shop out of them and they cut common lumber out of them. Except in the larger size they would not get any clears.

1878 Q. Now, would you consider that that cutting of Pinus strobus of those second and third growth small trees is a serious competitor of the large, old, virgin Pinus strobus that you talked about?

A. I do not know that I know enough about the lumber business to say. I could see how it could compete in certain grades, but I do not know how serious that competition would be.

Q. Would it compete in the clears?

A. No; I would not think so.

Q. Nor it would not compete to any great extent with the shop?

A. I am not so sure about that.

Q. It might compete in the common, might it?

A. Yes.

Q. And it would compete in the box trade?

A. Yes.

Q. Now, the stands of strobus you talked about in New England, are they large or small stands?

A. You mean in extent?

Q. In extent.

A. Individually they are rather small, but there are a great many of them.

Q. Now, is it not true from what you have said about the size of those trees that are being cut, that you have seen being cut,

1879 that the owners of this type of lumber cut it off about as fast as they can cash in on it?

A. I think that is probably true in general.

Examiner DE BRULER. That is leading a long ways in this matter, it seems to me.

Mr. WHEAT. I think that is one of the most important questions in the whole outfit, Mr. Examiner.

Examiner DE BRULER. If you will get right down to the point it may be, but it seems to me that you go too far around to catch the point.

Mr. WHEAT. Q. The well manufactured sash, properly protected at the joints from the moisture, ought to last the life of the building, hadn't it, a wooden building?

A. I couldn't say first hand; I should think it ought.

Q. Do I understand, perhaps I did not get this right in my notes, that most of your direct experience in Pinus strobus forests was at Mataska Park?

A. In northern Minnesota. Not all of it at Mataska Park.

Q. How large a stand is that?

A. It is a tract seven miles square. There has part of it been cut over, I do not know just how much timber. I would say there is probably about twenty-five million feet of timber left in it.

Q. Have you had any direct sawmill experience?

A. No.

1880 Q. You have been visting sawmills, have you?

A. Yes.

Q. In the strobus country?

A. Yes.

Q. Do you know whether in sawing and marketing strobus the Pinus resinosa is also out and marketed?

A. It is in certain grades.

Q. What grades?

A. I am not altogether sure. I think it is only the common lumber.

Q. They are mixed, are they?

A. I think so. That is, in your common grades. The northern pine, too.

Q. Are they any leading lumber companies now buying up large tracts of cut-over lands in your State?

A. Not that I know of.

Q. What about the northern peninsula—the southern peninsula of Michigan? Do you know whether there is any large tract of virgin strobus left?

A. I do not know first hand. It is reported that there is only one tract of virgin pine left in Michigan, the crayling pine. That is a small one.

Q. You have given the figures which were contained in this Bulletin No. 21 about average growth?

A. Yes.

1881 Q. Or about the growth per acre of certain particular districts in various pines. What do you think is the average growth per acre of Pinus strobus in the Lake States where you are familiar with it?

Mr. BURR. In board feet?

Mr. WHEAT. Cubic feet per acre; that is what he gave before?

A. Cubic feet?

Q. That is what you gave those other figures in, isn't it?

A. That is what those other figures were; yes (pause). It would be in the neighborhood of forty to sixty cubic feet, I would say, varying very much.

Q. It varies a great deal, does it?

A. Yes.

Q. And the younger tree, would that grow more cubic feet than an older tree?

A. No.

Q. Per year?

A. It grows less.

Q. Does the old tree grow less than the young tree per year?

A. They do up to a certain age. The growth would be represented by a curve something like that, where it would be slow at first, reach a maximum point, and then fall off.

Q. About what age?

A. It starts much more rapid growth around ten years, I
1882 would say, and from there to—it depends on your species. You mean strobus now?

Q. Yes.

A. Strobus would make its most rapid growth probably up to about eighty years and will continue a fairly rapid growth up to a couple of hundred years.

Q. You do not know whether the figures which you gave out of some one of those bulletins as to growth in cubic feet have been attacked in some forestry journals by experts?

A. Not that I know of.

Q. You do not know whether there has been any dispute on the accuracy of those figures?

A. No; I do not.

Q. Or whether all the foresters agree on the production of those various areas?

A. I do not know whether they do or not.

Q. Who prepared Bulletin No. 21 that you put in this morning?

A. The Forest Service, as far as I could trace. I do not know who prepared it.

Q. You did not have anything to do with it yourself?

A. I had nothing to do with it.

Q. You merely accepted the figures in it as correct?

A. That is true.

Q. Do you know of any other figures more accurate than those?

1883 A. No.

Q. Do you think that those figures are fairly accurate?

A. In general, yes.

Q. Have you any particular comments to make on that matter?

A. No; except that estimates of large areas of any kind are nearly always more or less of a guess.

Q. How long does it take for the Pinus strobus in Massachusetts to grow that size of the present average cut that you were speaking about a few minutes ago?

A. What do you mean by the present average cut?

Q. Well, you were talking about the size that it is cut there in Massachusetts?

A. You mean until it would get to that diamotor?

Q. Yes.

A. Well, to cite a specific instance, there was a stand at Lake George, New York, that they were intending to cut in the winter of 1917–18, that was on land which had been clear cut in 1885.

Q. Around thirty years?

A. Yes.

Q. How do you know that sugar pine does not grow north of Oregon? Have you ever been in the woods in Oregon?

A. No. I am stating from general knowledge of botanical range of species.

Q. Usually taken from such documents as those atlases,

1884 and so forth?

A. That, and from Sargeant & Sudworth.

Q. Do you know how the Klamath Falls mill market their cut of Pinus ponderosa?

A. I don't know anything about them.

Q. Now, the figures you have used on the cut of Pinus ponderosa as pondosa, do they include any cut of Pinus ponderosa in the State of Oregon?

A. Let me see. Yes; I think that includes all of the cut of pondersa in Oregon.

Q. Oh, yes.

A. Including the stuff cut at Klamath Falls.

Q. If you are sure of that, I won't ask any further.

A. Yes; that was included in there, I am pretty sure.

Q. All right.

A. I think there is a note on one of those charts to that effect.

Q. Would you say, sir, that you are an expert in the identification of woods?

A. No, sir.

Q. Who prepared this exhibit no. 30, this atlas? I want the record to show just what it is?

A. That is the Forest Service, and I think it is under the direction of Mr. Sudworth.

Q. That was prepared some time ago?

1885 A. 1913 that was published.

Q. Do you know whether turpentine was attempted to be produced in other parts of the Pinus ponderosa range and was a failure?

A. No; I do not know.

Q. You are familiar with the general results of that?

A. No.

Q. You are not familiar with the general results of attempts to produce it?

A. No; only that one instance that I cited. It has been stated several times that would produce a certain quantity of turpentine, which is quite a material quantity.

Q. That is not your own personal knowledge?

A. Not from any personal knowledge.

Q. You did not personally follow that up?

A. The result of Forest Service experiments.

Q. Do you know whether that was a commercial matter?

A. It was not.

Q. Do you know whether turpentine is produced in Pinus jeffroyi?

A. I do not know; no.

Q. Do you know where botanists have classified Pinus joffroyi?

A. No.

1886 Q. You do not know whether it is a white or red or yellow or blue pine?

A. I think it is a yellow pine that was for a long time considered a part of ponderosa and has been split off as a separate species.

Q. But you are not at all familiar with that special species, or whatever it may be?

A. I have never seen it to my knowledge.

Mr. WHEAT. I think that is all.

Redirect examination by Mr. BURR:

Q. You said wood could be protected by painting. That protection will have to be continued by timely repainting, will it not?

A. I could not say.

Q. Beg pardon?

A. I could not say definitely whether it does or not.

Q. In other words, it might last a lifetime even though painted the once, you mean?

A. As far as I know; yes.

Q. I believe you testified they are not buying cutover land that has been growing up in Pinus strobus in Minnesota, very little; is that true?

A. I said I do not know of any instances where they were.

1887 Q. Is there any legislation in your State for the alleviation of tax burden in the case of reforested areas?

A. Yes.

Q. The burden has been alleviated so as to make up the leaving of land in reforested areas, isn't it?

A. That was the purpose of the legislation.

Mr. BURR. That is all.

Recross examination by Mr. WHEAT:

Q. May I ask whether that has proven successful?

A. Not so far.

Mr. BURR. What has not proven successful?

Mr. WHEAT. This taxation system.

Redirect examination by Mr. BURR:

A. That no lands have been put in under that rule as yet that I know of.

Q. Do lands that are naturally reforested have any protection against excessive taxation in your State by legislation?

A. Not unless they are by the owner put under this special tax ruling; that is, only at the option of the county commissioners.

Q. Can the owner avail himself of the law by the procedure you refer to, even though he does not reforest artificially?

1888 A. Yes.

Q. In other words, natural reforestation would come under the law, would it?

A. Yes.

Q. Has that had an effect on promoting the leaving of land for reforestation purposes which might otherwise come under agriculture, has that encouraged it to any extent?

A. I think not, because so far——

Examiner DE BRULER. I think he has fully answered. I think that has gone far enough.

Mr. BURR. All right. That is all.

Examiner DE BRULER. You are excused definitely.

Mr. BURR. As long as these answers are competent, I think I will insist upon their being fully answered.

(Witness excused.)

1889 GUS CARLSON was thereupon called as a witness and, having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Will you state your name?

A. Gus Carlson.

Q. I see you have brought a sample of lumber with you. Will you kindly say what your instructions were in connection with that piece of lumber, if any?

A. Well, they come with the instruction to pick out a piece of Idaho white pine, very soft texture, B select, and better.

Q. And you are working for what company, sir?

A. Rutledge Timber Company.

Q. And where is that located?

A. Coeur d'Alone.

Q. And is that one of the Weyerheaser companies?
A. Yes.
Q. That is a lumber production company, is it?
A. Yes.
Q. Now you were asked to pick out a particularly soft piece of Idaho white pine, were you?
A. Yes; B.
Q. What is your line of work in connection with the company that you work for?
1980 A. Well, I am a lumber grader, and lumber inspector also for the company.
Q. And how long you have held that position?
A. Well, I have been in the lumber business for fifteen years.
Q. And to whom do you report in connection with your lumber grading; who is your chief?
A. Mr. Peterson at the Old National Bank Building, Spokane, Washington.
Q. How many graders are there out here?
A. At the Rutledge?
Q. Yes.
A. Oh, there must be twenty-five.
Q. I see.
A. In that neighborhood. I could not say correct figures, but then in that neighborhood.
Q. You are one of these graders, are you?
A. Yes.
Q. Are you one of the chief graders out there?
A. Yes.
Q. How many men do you have under you in connection with the grading work?
A. Well, I am supposed to look after every one of them.
Q. Now, will you state again what your instructions were in regard to the selection of the piece of lumber which you brought?
1891 A. Bring down a soft piece, soft texture of the Idaho white pine, B select.
Q. About as soft a piece as you can find?
A. Yes.
Q. Would you say that was an average, or softer than the average?
A. Well, it is a little softer than the average.
Q. B select and better is the grade, is it?
A. Yes.
Q. That is the highest type of B select and better that you could find, was it?
A. Yes, sir; it is the highest type.
Q. How long did you have those instructions before you picked out that board?
A. Well, I got it at four o'clock and I picked it up between four and four-thirty and we sent it in to Spokane next morning, and I think it was here before nine.

Q. What day was that?

A. I think it was Monday—let's see. This is Tuesday. No; it was—I cannot recollect exactly the day.

Q. Never mind. It don't make any difference.

Mr. WHEAT. I wondered whether it was yesterday or two years ago.

A. I think it was Friday evening.

Mr. WHEAT. All I wanted to know was whether it was last year.

1892 Examiner DE BRULER. He has the board here. That does not make any difference.

A. I think it was Friday evening.

Mr. BURR. If the examiner please, I ask to offer that in evidence and ask that it be marked "Commission's Exhibit 40."

Mr. WHEAT. No objection.

Examiner DE BRULER. It will be admitted.

(Thereupon said board was received in evidence as Commission's Exhibit No. 40 admitted.)

Mr. BURR. Cross-examine.

Cross-examination by Mr. WHEAT:

Q. By the way, Mr. Carlson, you are quite familiar, are you, with the Idaho white pine which the Rutledge Timber Company produce?

A. Yes. I am.

Q. You have been familiar with that for a good many years?

A. Well, I have been with the Rutledge for practically the last ten years.

Q. Do you ever get Idaho white pine that is harder than this piece?

A. Oh, yes; very much harder.

Q. Does that come generally out of the forest?

Mr. BURR. If the examiner please, this is not proper cross-examination.

1893 A. Yes, sir. It comes——

Mr. BURR. Wait a minute. This is not proper cross-examination. I am not going into those matters of variability and all those things with the witness.

Mr. WHEAT. I will withdraw that last question.

Examiner DE BRULER. What is the last question?

Mr. BURR. If he wants to make the witness his own witness, that is different.

Mr. WHEAT. Q. How do you know that is Idaho white pine?

A. I know it because I have been handling that kind of lumber for years.

Q. You are familiar with that kind of pine, are you?

A. Yes.

Q. You can identify that in the wood; I mean after it is cut out?

A. In the lumber.

Q. Yes; in the lumber?

A. Yes.

Q. And what is there in that piece that makes you think it is Idaho white pine? Hoc do you know it is not Pinus ponderosa?

A. Well, some of the Pinus ponderosa is very much like the white pine, but it has a little different color, and different grain, and there is harder texture in the pondosa.

Q. Can you tell me, Mr. Carlson, what you call this piece
1894 of wood that I now hand you?

A. It looks like white pine on that side. It is soft.

Q. What was the answer?

(Answer read.)

Mr. BURR. I would like to ask the purpose of this question. Is the purpose of the question in order later on to impeach the ability of this witness to detect different types of wood?

Mr. WHEAT. Oh, I think this is a piece of Idaho white pine, without any doubt.

Mr. BURR. Well, then, I am going to object to the question. I would like to ask what the purpose is of questioning the witness with regard to those other samples.

Mr. WHEAT. With your permission, if you want to object to it, of course I would have to hand this gentleman a subpoena, but with your permission I will call him as my own witness. He is one of the best men that has been on the stand for that. I have been waiting for somebody who knew something about those, out of the woods.

Mr. BURR. You can address yourself to the examiner.

Examiner DE BRULER. This witness was called for the purpose of identifying this as white pine, wasn't he?

Mr. BURR. Yes, sir.

Examiner DE BRULER. Then your cross-examination goes to his knowledge of where he got this, and so forth, and that it is
1895 Idaho white pine.

Mr. WHEAT. I have now concluded my cross-examination. I have asked and Mr. Burr has stated he would not object to my making him my witness for the purpose of a few questions.

Mr. BURR. As a defense witness, to have him examined.

Examiner DE BRULER. All right, if you have no objection.

GUS CARLSON, called as a witness, heretofore sworn, testified as follows:

Direct examination by Mr. WHEAT:

Mr. WHEAT. I will ask that this piece of wood be marked for identification as "Respondent's Exhibit No. 23."

(Thereupon a piece of wood was handed to the reporter and marked "Respondents' Exhibit 25" for identification.)

Q. May I ask you, then, Mr. Carlson, on what you base your recognition that this is probably Idaho white pine, what characteristics come to your mind when you look at it?

Mr. BURR. Does he say Idaho white pine or pondosa pine?

The WITNESS. That board is Idaho white pine we cut from Idaho—this board.

1896 Mr. WHEAT. Q. And you said this was Idaho white pine?

A. I do not know whether it is Idaho white pine or not, because I do not know exactly where it comes from. They have other pines very similar to Idaho white pine.

Q. What are they?

A. Well, they have some white pine in the East that is much like the Idaho.

Q. Then, Mr. Carlson, when you said white pine, you meant that as distinguished from pondosa, did you not?

A. Yes.

Q. Now, I hand you another piece of wood.

Mr. WHEAT. I will ask that this piece of wood be marked for identification also.

(Thereupon said piece of wood was handed to the reporter marked "Respondent's Exhibit No. 26" for identification.)

Q. What would you say this wood is in exhibit 26 for identification?

A. It looks very much like pondosa.

Q. Like pondosa?

A. To me; yes.

Q. Now, I show you another piece of wood, and ask that this be marked for identification no. 27.

(Thereupon said piece of wod was handed to the reporter and marked "Respondent's Exhibit No. 27" for identification.)

1897 Mr. WHEAT. Q. And ask you to examine it and tell us what you think that is; whether it is Idaho white pine or pondosa?

A. The best I can say it is Idaho white pine or white pine. I do not know whether it comes from Idaho or not. It looks very like white pine to me.

Q. But it is not pondosa?

A. No; not pondosa to me.

Mr. WHEAT. I ask that this piece of wood be marked "Respondents' Exhibit No. 28."

(Thereupon said piece of wood was handed to the reporter and marked "Respondents' Exhibit No. 28" for identification.)

Q. Just examine that carefully and see what kind of wood you think that is; whether pondosa or Idaho white pine.

A. The nearest I can see it is the hard texture of the white pine.

Q. Hard texture of white pine?

A. Yes.

Q. By white pine what do you mean; Idaho white pine?

A. Well, there is a different texture; not too hard, but soft.

Q. Does Idaho white pine vary in texture between soft and hard?

A. A whole lot.

Q. You get some pieces that are harder than this no. 28?

1898 A. Just about that hard.

A. This is a clear cutting of it, without any knots, is it?

A. Yes.

Mr. WHEAT. I will have these identified as to sources later.

Q. I have one more piece I would like to show you, Mr. Carlson. I will ask to have this marked.

(Thereupon said piece of board was handed to the reporter and marked "Respondents' Exhibit No. 29" for identification.)

Q. First look at this side of this piece of wood and give us an idea of what you think that wood to be.

A. (Examining exhibit.) Well, I don't know for sure, but it seems to me it is very close to Idaho white pine.

Mr. WHEAT. All right. You may take the witness.

Cross-examinaion by Mr. BURR:

Q. When you have said white pine two or three times, do you mean that you would be able to tell the sample which you call white pine from northern white pine, if it should happen to be northern white pine?

A. I do not know. I never been North, so I don't know anything about it.

1899 Mr. BURR. Do I understand correctly that you contend those are all local to this inland empire region?

Mr. WHEAT. I understand so. They came from here.

Mr. BURR. In other words, this strobus matter is not complicated here?

Mr. WHEAT. Not at all.

Mr. BURR. All right. That is all.

(Witness excused.)

Mr. BURR. Now, with regard to commission's exhibit for identification no 40, and also with regard to the sample that I shall next ask to be marked as Commission's Exhibit No. 4, I would say that I am merely asking that they be marked for identification. I am of the opinion that either side can prove almost anything in this case by the introduction of samples, and I rather deplore the idea of introducing large samples of these types of lumber into the records. If, however, as seemed to appear at New York, that opposing counsel desire to offer the samples that they have there offered for identification, I do desire to have such identification made so that those at a later date can be introduced in the record, if I choose.

Mr. WHEAT. I would then ask that they be present physically at the San Francisco hearing.

1900 Mr. BURR. That is entirely satisfactory.

ED BISSON was thereupon called as a witness and, having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. State your name.

A. Ed Bisson.

Q. What is your address?

A. Cloquet, Minnesota.

Q. Mr. Bisson, what is your occupation, sir?

A. Lumber grader.

Q. And for what company?
A. Cloquet Paper Company, lumber division.
Q. Is that a Weyerheauser company?
A. Yes, sir.
Q. And their timber is located where?
A. Cloquet. In Minnesota, most of it.
Q. And how long have you been in that work?
A. About twenty-five years.
Q. And you are a grader there for the company?
A. Yes, sir.
Q. How many graders has the company at that point?
1901 A. Oh, about ten, I guess.
Q. Who is in charge of those graders?
A. Mr. Johnson.
Q. Now, have you brought a piece of lumber with you?
A. Yes, sir.
Q. And did you select that piece?
A. Yes, sir.
Q. What were your instructions at the time of selecting this?
A. To select a piece of B and better, soft texture.
Q. The highest type of B and better?
A. Yes, sir.
Q. And the sample that you have brought is such a piece of board?
A. Yes, sir.
Q. In your judgment?
A. Yes, sir.

Mr. BURR. I ask that the board that the witness has produced be marked for identification "Commission's Exhibit No. 41."

Examiner DE BRULER. It may be so marked.

Mr. WHEAT. You have not suggested what variety of wood it is yet.

Mr. BURR. Q. This is a strobus piece, is it, a piece of white pine?
A. It is a piece of white pine.
1902 Q. Is there any other variety of white pine grows up in those woods?
A. No, sir.

Mr. BURR. I am offering Commission's Exhibit No. 41 for identification. Would you receive it?

Examiner DE BRULER. Oh, yes. It has been received.

(Thereupon said board was handed to the reporter and marked "Commission's Exhibit No. 41" for identification.)

Mr. BURR. Your witness, sir.

Cross-examination by Mr. WHEAT:

Q. You stated that that is a selected piece of B and better, highest type soft texture, Pinus strobus?
A. Yes, sir.

Mr. WHEAT. That is all.
Mr. BURR. That is all.
(Witness excused.)

1903 DON LAWRENCE was thereupon called as a witness, and having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Lawrence, has the reporter got your full name?
A. Don Lawrence.
Q. Your business is what, Mr. Lawrence?
A. I am in the employ of the Weyerheauser Sales Company.
Q. And you have been in the employ how long?
A. Since 1916.
Q. And in what capacity since that time?
A. Part of that period as a district manager, and more recently as assistant general manager.
Q. Of sales in both cases; is that true?
A. Yes, sir.
Q. Where, as district manager, were you located when you served in that capacity?
A. In Spokane most of the time.
Q. Now, in connection with your present work, do you have occasion to spend part of your time away from headquarters in the promotion of sales?
A. Yes; part of the time.
Q. What is the nature of your duties during those times that you are away from headquarters?

1904 A. Usually interviewing and consulting with our district managers, and in some instances with the individual salesmen.
Q. Do you ever wait upon any members of the trade that buy or are prospective buyers from you?
A. Yes; at times.
Q. Now, as a result of your experience, does the use of white in connection with the trade term "California white pine" have an influence upon your sale?
A. Mr. WHEAT. Now, Mr. Examiner, I want the record to show that I here object to that question unless it be limited to specific instances, which I think is a reasonable request.
Examiner DE BRULER. Read that question again.
(Question read.)
Examiner DE BRULER. You may answer that, with an exception noted.
A. Yes. It does.
Mr. BURR. Q. Will you describe what that influence is, please.
A. It is an adverse influence in the sale of both genuine white pine; also what we market as pondosa pine.
Q. Now, referring to genuine white pine, will you describe that more in detail?

A. The species which our companies market as genuine white pine are the so-called northern white pine or Minnesota white pine, and the Idaho white pine, those two.

1905 Q. Yes. And just how does that adverse influence operate?

Mr. WHEAT. My objection, of course, will be noted to this whole line of testimony?

Examiner DE BRULER. Yes; the objection noted, but he may answer that. He is asking just how that operates.

Mr. WHEAT. I understand the examiner's ruling and I want the record to show my objection.

Examiner DE BRULER. The record may show your objection.

Mr. WHEAT. And exception noted.

Examiner DE BRULER. Yes.

A. Well, in the minds of most people familiar with softwood lumber, the term "white" when used with pine, I think—I believe has always signified something that was rather prominent, and when that term is used of a species which is not a true white pine, it is rather difficult, or at least it takes a great deal of time and effort for us to sometimes convince our customers that the true white pine is the true white pine. They have perhaps received shipments of stock billed to them as white pine and have been confused, and it is largely from that contact that we have our trouble.

Q. Now, as regards the difficulty that you encountered as the result of the word white in California white pine, what effect does that have more in detail as regards your sales of pondosa pine? Will you describe that?

1906 A. That is a probem that frequently comes up. We find it necessary to very frequently assure our customers that our so-called pondosa pine is exactly the same species as that marketed as California white pine. The term "white" used in that connection carries to my mind a great amount of prestige, and it is almost, I was going to say daily, at least weekly, a weekly occurrence that we write letters or are in direct contact with our customers, have to go into infinite detail in explaining that point to them.

Q. But you do explain to them that pondosa is from the same species, of tree, do you?

A. Yes; we do.

Q. Have you brought any charts with you, Mr. Lawrence, in connection with the heart and sap constituents of the two varieties of trees?

A. Yes, sir; I have some charts.

Q. Have you those with you now?

A. No, sir. They are in the room, however.

Q. Will you be kind enough to produce them?

A. (Witness leaves stand and produces charts.).

Mr. BURR. Before we proceed, I will ask the examiner to instruct the reporter to mark these two graphs which have been produced numbers 42 and 43 for identification merely, for the time being.

(Thereupon said charts 42 and 43 were handed to the reporter and marked "Commission's———.")

1907 Q. Now handing you Commission's exhibit for identification 42, will be kind enough to state the situation of which this is aimed to be an illustration.

Mr. WHEAT. If Your Honor please, this witness has not qualified as an expert on wood technology. If he desires to produce a chart, from some Government publication or something of that sort, or if he is an expert wood technologist, we have no objection to his explaining these matters, but I must certainly object to a man qualifying as a salesman making any statement regarding any such charts.

Mr. BURR. Well, suppose we proceed a little further.

Examiner DE BRULER. Ask him——

Mr. BURR. Q. Mr. Lawrence, in connection with your work what, if any, opportunity have you had to observe the heart and sapwood content of Pinus ponderosa and Idaho white pine?

A. Well, I have been in the woods in this district, in the district where these two species are produced.

Q. Whereabouts, and during what period?

A. You are speaking now of Pinus ponderosa?

Q. Well, you may speak of Pinus strobus, if you like.

A. I have been in the woods of Minnesota for a period of about six or seven years, perhaps, during which time I scaled a good many million feet of logs.

Q. A good many million feet of logs, did you say?

A. Yes, sir.

1908 Q. Yes.

A. I have scaled logs in the sawmills of Minnesota during that period. I am quite familiar with that species.

Q. Now, handing you Commission's exhibit for identification no. 42, will you be kind enough to state the method of sawing lumber as related to the heart and sapwood content, with particular reference to strobus, which that chart illustrates?

Mr. WHEAT. Now, if Your Honor please, I do not think this witness has qualified as yet as a wood technologist.

Mr. BURR. This is not technology of wood, brother?

Examiner DE BRULER. Objection overruled. Exception noted.

Mr. WHEAT. I have a right, Mr. Examiner, to state my objection.

Examiner DE BRULER. I understand that. There is no doubt about it. I say the objection is overruled, with exception noted.

A. This chart is designed to illustrate the comparative width of the sap, of the proportions of sap and heartwood in Pinus strobus. The chart specifies an average, as I understand it, of an inch and three quarters for the sapwood in strobus. They are based on my knowledge and my recollection of that species as I have seen the logs in the woods and in the mills. It is my judgment that that is perhaps a little heavy. I would say that an inch and a half would be nearer to it, and perhaps that would be a little strong, but a

1909 great many——

Q. You are referring to virgin strobus in that connection, are you, rather than second growth, is that true?

A. I know very little distinction between virgin strobus and second growth. That is, very little.

Q. As regards the width of the sap, you mean?

A. Yes.

Q. I see.

A. Would you care to define just what you mean by virgin?

Q. Well, for the purpose of that question, I mean timber that was growing in a stand which had never been logged off previously.

A. There is very little difference, I believe, in the two.

Q. In the width of the sap ring?

A. In the width of the sap ring.

Q. Yes.

A. Very little, in my experience.

Q. Of course, a narrower sap ring would constitute a greater proportion in a small tree, would it?

A. Sure.

Q. All right. Proceed. I think I interposed there.

Mr. WHEAT. You will let me have copies?

Mr. BURR. I will have them photstated, and furnish you copy.

1910 A. The chart further shows the method of sawing of a log, take, of course, the first out will take off a very small slab. The second will be almost entirely in the sapwood, and very naturally will be clear lumber from this size of log or larger, where there is very likelihood of limb knots. The second cut in a log of this size would carry largely sap, with a percentage of heartwood in the center of the piece. In the next cut, or third cut in a log of this size, the sawyer would be very apt to run into a type of timber from which he can get shop lumber. He would be cutting a few knots, so he would be cutting shop lumber, and there would be a possibility in that log of that size that he would get a second cut. Then he would very quickly run into the heart toward the center of the log, so he would develop a type of common, with a good many knots. That, the radius of that, the diamotor varies. Generally speaking, the defects which produce the common grade comes from the center of the log in varying diamotors. In a log of this diamot'r varies from eight to ten inches. It is very difficult to establish anything like a comparative diamotor there, because the logs like—well, there are no two logs alike, any more than there are any two boards like. There are millions of them but any two are different. That is just a general statement.

1911 Q. Now, how about the point that is marked there edging? There is a piece of waste there that is somewhat at the end of each board, at the end of each cutting, where it protrudes toward the bark and leaves the sap, that is cut off, is there?

A. Yes. There are some edges used for commercial purposes.

Q. How, when you begin to enter the interior part of the heart where the knots are, there is still part of one of those cuttings which is largely shop, is there, or do you turn the log after having taken several cuts from one side and then the log is turned, is it, in order to get the benefit of the clear and shop grades?

A. Well, this is the usual custom; yes. In logs—well, such as white pine and to a very large extent yellow pine——

Q. Pondosa, you mean?

A. Pondosa. The logs are turned so as to get the largest piece of clear lumber.

Q. Yes.

A. And of shop. So that after the sawyer get into the leg to a point where he believed the next cut would run him into common, he would very naturally turn the log, repeat this same process on the other side, and quite likely turn it again and again, so that he would eventually have a square amount, which would be very principally common, and in the center of the log.

Mr. BURR. I offer that in the record.

Mr. WHEAT. Does the chart show the method of cutting Pinus strobus.

Mr. BURR. I offer it for that purpose, and also for the
1912 purpose of showing the relative places of the heart and sap lumber, and the way in which the matter works out. The question of heart and sap, of course, has been very frequently in the record and I think the examiner and Commission will want this chart and an explanation of it, really for the purpose of explaining the record.

Mr. WHEAT. I object that the witness has not been qualified to express the latter statement.

Examiner DE BRULER. Note the objection. And it will be received.

Mr. WHEAT. Exception.

(Thereupon said chart was received in evidence as Commission's exhibit no. 43, admitted.)

Mr. BURR. Q. Handing you Commission's exhibit no. 43, will you kindly explain what that graph represents in the same fashion that you did the other.

Mr. WHEAT. This is subject to the same objection?

Examiner DE BRULER. Yes. Note the objection and exception.

Mr. WHEAT. May I have the further objection, Mr. Examiner, that he has not shown any qualifications whatever for discussing Pinus ponderosa?

Mr. BURR. I think he did.

Examiner DE BRULER. The objection is overruled. Exception noted.

Mr. BURR. Q. Did you not testify that you were familiar
1913 with Pinus ponderosa?

A. I believe I said I was; yes.

Q. I think so.

Examiner DE BRULER. I understood it that way.

Mr. BURR. Q. All right. Will you proceed with your explanation, sir? How wide is the sap ring in that character of tree?

A. This graph, representing the sapwood in Pinus ponderosa, designates an average of three and a half inches for the sapwood in a log of this diameter.

Q. Is that about normal, do you think?

A. Well, in my experience in this district I would say that the normal would be greater than that, considerably greater, perhaps.

Q. It varies a great deal, does it not?

A. Varies a great deal; yes, sir.

Q. Does it vary more as regards the proportion of heart and sap content than the Idaho white pine varies?

A. Yes. Very much more.

Q. All right. Will you proceed?

A. The graph illustrates the method of cutting and sawing the log, exactly as the other graph did, but what would be very evident, what is very evident from the graph, is the fact that a much higher percentage of the lumber, or the cuts carrying clear lumber
1914 upper grades or shop, will be sapwood than heartwood, because of the very much wider sap ring.

Q. Than heart or sap, did you say?

A. Sapwood would carry a very much higher percentage than heartwood.

Q. At the extreme upper end of the graph I see a very small skin, apparently four inches long; is that correct?

A. Yes.

Q. What is this skin; is that a slab?

A. That is a slab.

Q. That is sold for firewood purposes, or something like that, if sold at all; is that true?

A. Well, there is sometimes a little salvage from it. It is immaterial.

Mr. BURR. I will offer that and ask that it be received as commission's exhibit no. 43.

Mr. WHEAT. Subject to the objection.

Examiner DE BRULER. It may be received subject to the objection.

Mr. WHEAT. Exception.

(Thereupon said graph was received in evidence as commission's exhibit no. 43, admitted.)

Mr. WHEAT. My objection goes to the qualification of the witness on this matter, rather than to any particular chart.

Mr. BURR. Q. Now, the little part in both of these graphs, marked "edging", what is done with those?

1915 A. That is usually refuse, sold as wood. It is possible at times to salvage a small amount of that for mouldings and things of that sort.

Q. In other words, it is slab wood, is it?

A. Yes.

Mr. WHEAT. Q. May I ask one question for clarity? What is the size of those trees shown on those charts? You said a tree of this size but the record does not show what size it is, and the copies I will get of these charts will be pho'static copies and reduced in size?

The WITNESS. I believe it is a twenty-two-inch log. Let's confirm that. Will you confirm that, please?

Mr. BURR. I would like to ask a question or two more, if I may.

Q. The graph no. 42, does that relate approximately the same way; would that be applicable to Pinus monticola?

A. In my judgment; yes.

Q. Have you had any experience in the forests in Idaho?

A. Yes, sir.

Q. How much?

A. Several years.

Q. Did you have any of the same grading experience?

A. Yes.

Q. Now, would you say that the width of sap that you testified to as probably too great, would be about applicable
1916 or would it be too great or too little, in your judgment, as regards monticola? Is your testimony the same with regards to strobus, or how would it vary?

A. My testimony would be the same as with regard to strobus.

Q. In other words, that an inch and a half would be—an inch and thre' quarters would be rather high than small, would it?

A. That is my judgment.

Mr. WHEAT. That is for the twenty-one-inch log?

The WITNESS. Is it twenty one? The size of the log does not matter materially.

Mr. BURR. Q. In other words, the sap is about the same size throughout the life of the tree, you think?

A. 5. It is in a white pine; yes.

Mr. BURR. All right. Your witness.

(At this time a short recess was taken.)

Cross-examination by Mr. WHEAT:

Q. How long did you say you had been assistant sales manager of the Weyerheauser companies?

A. About two and a half years.

Q. And prior to that time and from 1916 on, you were one of the district managers, were you?

1917 A. Yes, sir.

Q. And you said you were most of the time at Spokane. Where else were you?

A. I was located in Saint Paul very early in our organization.

Q. About when was this?

A. 1916.

Q. And were you district manager there then?

A. Yes.

Q. And then prior to 1916, what was your lumber experience?

A. Well, immediately prior?

Q. Any time prior to that? I want to know what your experience was. What did you do prior to 1916?

A. Just previous to that I was in the employ of a sales organization.

Q. Of the Weyerheauser group?

A. Weyerheauser group and some other groups in this district, located in Minneapolis. Prior to that I was the sales manager of the Bonners Ferry Lumber Company.

Q. Where is that?

A. In Idaho. Northern Idaho.

Q. Most of your experience, then, has been in the inland empire region?

A. Well, in recent years. Prior to that in Minnesota and Michigan.

Q. Now, I believe in your direct testimony you stated, those
1918 are my notes of what you stated and if I am wrong, please correct me—that the use of the word "white" in the term "California white pine" influences your sales adversely in the sale of both genuine white pine, by which you mean northern white pine and Idaho white pine, and also your pondosa. That statement was made, you will recall, under my objection that you were not being asked for instances of such claimed adverse influence. Now, will you state, please, for this record, any instances which you may have of such adverse influence?

A. I am not in position to give you specific instances.

Q. Why not? I mean let me ask you this: In your work as sales manager, do you or do you not come in contact with the sales in a sufficient manner to know whether there are specific instances?

A. I do. By correspondence largely at the present time.

Q. With whom?

A. With customers, with our own representatives.

Q. Now, there are such instances, are there, of adverse influence?

A. There have been.

Q. When were they?

A. I am not in position to give you specific dates.

Q. Do you know any specific instances?

A. I know that there have been specific instances.

1919 Q. Does your recollection lead you to any specific instance?

A. They are not sufficiently definite so that I can give you dates or names.

Q. Now, you stated on your direct examination, I believe, that some of your customers had received shipments billed as white pine and had been confused. Now, just what did you mean by that, and give me specific instances of that?

A. As I have told you, I cannot give you specific instances. I can tell you, however, what I meant by that, shipments of stock billed as California white pine.

Q. From whom, please?

A. I cannot tell you that. Shipments of stock billed as western white pine.

Q. When was this?

A. In the years past, in the case of western white pine.

Q. And where were these shipments sent to and where from?

A. They were sent from this district, and I assume the California district from the fact of the name, to various eastern destinations.

Q. Specify those destinations, please?

A. I am not in position to give you those specifically.

Q. Does your recollection not run to any specific instance?

A. No; it does not.

Q. Now, you stated in your direct testimony that the use of the word white in reference to ponderosa wood was a problem

1920 which frequently comes up, I believe you said. You stated, I believe, that you have to assume that—you have to assure your customers that pondosa is the same as California white pine. Do you do that?

A. I do.

Q. And how do you do that, by letter or by conversation?

A. Both.

Q. Now you do it by letter, do you?

A. I do.

Q. Have you such letters which you can produce at t[illegible]earing?

A. I have not.

Q. Does your recollection not go to any specific instance of this also?

A. Not at the moment.

Q. Do you think it would if you would refresh it over the evening's intermission?

A. I fear not.

Q. Let me ask you whether your company at one time sold Pinus ponderosa as western pine?

A. Never marketed—oh, as western pine?

Q. Yes, sir; as western pine.

A. Pardon me. I wish to change that answer. Yes.

Q. Did it also sell this wood as western soft pine?

A. Yes, sir.

1921 Q. And at the same time that it was selling this ponderosa wood as western pine or western soft pine, did manufacturers of Pinus ponderosa in the inland empire region, any of them sell their wood as western white pine?

A. I believe that some of them did.

Q. Do you not know that this wood of Pinus ponderosa from the inland empire was for a considerable period of time generally marketed as western white pine?

A. I know that it was to some extent at least marketed under that name.

Q. You do not know whether that was a general practice in this area?

A. No; I could not say that. I think it was.

Q. But in your opinion and from your experience there was a large amount of Pinus ponderosa sold from the inland empire region under the name western white pine, was there not?

A. Yes, sir.

Q. You are familiar with the prices which you obtained for your lumber, are you?

A. Fairly.

Q. Have been over this period of years from 1916 on?

A. Yes.

Q. Do you make a fairly close study of that matter?

A. Fairly close.

Q. It is one of your duties as assistant sales manager of
1922 the Weyerheauser Sales Company to consider a matter of relative price for your lumber and for other competing lumbers?

A. Yes.

Q. Will you state whether or not you have any recollection of any general price differentiation, not specific instances here—I will take those up later—but any general price differential which has ever existed between your ponderosa wood sold as western pine or western soft pine and ponderosa wood from the same inland empire area when it was sold as western white pine?

A. No. I cannot say that I have.

Q. Has your company or the producers for which it acts as a sales agency now, enjoyed any differential in price over the—in the sale of its pondosa lumber, so called, over the producers of so called pondosa lumber who are not connected with your sales agency?

A. I am not sufficiently familiar with the realization of other companies to answer that question intelligently.

Q. Well, from the study of prices that you have made, is it your opinion that your company obtains in general any greatly—any particular differential over or under the other producers of pondosa in this area?

A. No, sir.

Q. And that goes back to your whole experience with Pinus ponderosa in this area, does it?

1923 A. Yes.

Q. May I ask you for what purposes the Pinus ponderosa that you sell as pondosa is used?

A. It is used for most purposes for which soft woods are used, in general terms.

Q. Is it in general to be considered as a shop-type lumber, as compared with other soft woods? May I reframe the question. That is perhaps misleading. Does Pinus ponderosa, as you know it and as you sell it, produce a large quantity of so-called "shop-type" lumber?

Mr. BURR. As compared with what?

Mr. WHEAT. Not at all. A large percentage of it.

A. It produces a considerable percentage.

Q. About what percentage, do you know? If you know, if you do not——

A. No; I could not give you that percentage accurately.

Q. Now, has there been any changes in the uses to which pondosa is put since the name was changed from western white pine, western pine, or western soft pine?

A. Not to my knowledge.

Q. Can you control the manner or the term under which your pondosa will be resold by a retailer?

A. Only to a very limited extent, if at all.

Q. How is it resold?

A. Well, I do not know how the retailers resell it.

1924 Q. Don't you make a study of that?

A. Well, our people have made various attempts at doing that, and to some extent we do it by marketing our lumber with species marked lumber.

Q. I understand that is a small proportion of your lumber, however, isn't it?

A. Yes.

Q. So that would not get into the larger trade, would it?

A. No.

Q. You would not mark a species name on every piece of ten carloads of lumber that you sold to some great Mississippi mill, would you?

A. We might.

Q. Or do you?

A. We do not make a practice of it now.

Q. Well, now, are you not interested in the name under which your pondosa lumber is resold in the trade?

A. Yes.

Q. Will you then state for the purpose of the record how it is resold in the trade, and under what name or names.

A. Well, really the greater percentage of the pondosa pine which we sell to the retailers is resold by them as pondosa pine.

Q. How long has that been the practice.

A. Since the adoption of that name, pondosa pine.

1925 Q. And has that practice grown up gradually, or did it suddenly jump into being when you changed the name?

A. It has been a very gradual process.

Q. And what other names are used by the retailers in reselling your pondosa?

A. Prior to that I believe most of it was sold as western pine or western soft pine, just as we sold it to them.

Q. Well, now, let's take from 1925 on. You say the use of the term pondosa in the retail business has been a gradual increase until now a considerable portion is sold as pondosa in the retail trade?

A. Yes.
Q. Now, how else is it sold in the retail trade?
A. I cannot answer that question.
Q. Don't your studies go to that point?
A. No. I cannot answer that question.
Q. Have you or any of the people under you ever made a study of that matter?
A. Yes, to some extent.
Q. Well, now, what was the extent of that study?
A. We found that most of it was sold as pondosa pine.
Q. And how was the rest of it, what did you find?
A. We have not a hundred percent investigation.
Q. Well, now, in this investigation that you had—let's be frank with each other, Mr. Witness. In the investigation that
1926 you had, what did you find that the other portion of your pondosa was sold at?
A. Well, you asked me to be very frank.
Q. Yes.
A. And I will tell you that we have been careful that some of it was sold as white pine.
Q. Do you know that some of it is sold as white pine.
A. I have no specific instance.
Q. I am not asking for that now, but do you know as a matter of fact by your experience that there is 'ome of it sold as white pine?
A. In my judg'ment, some of it is sold as white pine.
Q. What method have you besides trademarking it, of forcing the cessation of that action?
A. None; excepting by refusing to sell to dealers who misrepresent our product.
Q. By the way, for what uses is it resold as white pine?
A. For any of the many uses for which the wood is used, sold.
Q. You mean the uses for which white pine in general is adapted?
A. All species. Yes.
Q. And when did you first hear the word white in connection with white pine?
A. In connection with white pine?
1927 Q. Yes; in connection with coniferous trees?
A. When I was about five years old.
Q. Where was this?
A. In Michigan.
Q. And what did—did they call the pine there white pine?
A. Yes, sir.
Q. Did they call some of it creek pine?
A. Yes, sir.
Q. Did they call some of it northern white pine?
A. Not to my knowledge.
Q. Where did you first hear the word northern white pine?
A. Minnesota.

Q. Did they call any of it eastern white pine?
A. Not that I recall.
Q. Did you ever hear that term?
A. I have heard that term many times.
Q. All of those names refer to Pinus strobus, do you think?
A. In that connection; yes, sir.
Q. And there were other names under which Pinus strobus is now or has been marketed, are there?
A. Well, there might have been. I am not familiar with them.
Q. Now, when did you first become familiar with the term yellow pine?
A. When I was a boy.
1928 Q. In Michigan?
A. Yes.
Q. What did yellow pine come from; what did they use it for?
A. They used it to designate the southern yellow pine, so called.
Q. And what did they use that for?
A. They used very little of it there then. A small amount for flooring.
Q. What else did they use it for?
A. For nothing that I recall at that time.
Q. Now, have you since that time come in contact at all with what you term southern yellow pine?
A. To a limited extent.
Q. Are you familiar with the so-called southern yellow pine?
A. Only as I have seen it in the general markets, in yards in the East, largely.
Q. Well, that is the extent of your familiarity with it?
A. Yes.
Q. Well, I won't press you with that at all. Have you any idea why the Western White Pine Manufacturers of this area, when they changed their name to pondosa, did not change it to yellow pine or western yellow pine?
A. I am not familiar with that; no, sir.
Q. Well, now, would you, just considering your experience
1929 with those woods, would you say that western yellow pine or yellow pine would be a proper or a good trade name for that wood?
A. I would prefer to answer those two questions separately. You have given me two questions.
Q. Well, all right; answer them separately, sir.
A. It, I believe, would perhaps be a proper name, but it would not be a good trade name.
Q. Why not?
A. Because in the minds of many people the term "yellow", as associated with pine, means a rather hard-textured species.
Q. Heavy, pitchy wood, does it?
A. Yes, sir.

Q. Structural wood, largely; is that the thought, then?

A. That seems to be the thought that many people might have.

Q. Do you come in contact with the large Weyerheauser concerns to whom some of your lumber is sold, such as the Reek Island Sash and Door?

A. I do not come in contact with the lumber; no, sir.

Q. Do you come in contact with the manager of that corporation, or with his purchasing agent?

A. To some extent.

Q. Let's see, the manager of that is Mr. Estlund, as stated in this record?

A. I believe so.

1930 Q. What are his initials? I shall perhaps want to call him in the East.

A. I cannot tell you.

Q. What is the other, Mr. Hanson?

A. Hanson.

Q. Is the purchasing agent. What are his initials?

A. C. A., I believe.

Q. Do they buy much pondosa from you?

A. They buy considerable.

Q. Have you any idea of how much Idaho white-pine shop lumber they buy from you in a year?

A. Not without checking the record; no.

Q. Well, is it a large quantity or a small quantity?

A. Well, comparatively, it is a rather small quantity.

Q. They buy more pondosa, do they not?

A. Yes.

Mr. WHEAT. I am picking this out, may I say, Mr. Examiner, because it is owned by the same group that owns the company for which the witness is assistant sales manager.

Q. May I ask you this: Do you know more about the actual operation of any other sash and door company than the Reek Island Sash and Door Company?

Mr. BURR. Do you know anything about any of them?

Mr. WHEAT. Q. Yes, sir. Do you know anything about any of them?

1931 A. I know very little about the operation of any sash and door factory.

Mr. BURR. Then I object to the question.

Mr. WHEAT. Q. All right. Then I won't go any further than to ask you if you do know that the pondosa which you sell to the Ock Island Sash and Door Company is resold as pondosa sash or pondosa doors?

A. I do not.

Q. You do not know?

A. No, sir.

Q. You would be surprised if it were so sold?

A. What?

Q. You would be surprised if it were sold as pondosa sash or doors?

A. I do not know.

Mr. BURR. I object to that.

Examiner DE BRULER. That is a little far-fetched.

Mr. WHEAT. Q. Did you ever know of any sash and doors being resold by a remanufacturing plant as pondosa sash or pondosa doors?

A. Yes, sir.

Q. Whereabouts?

A. In Spokane.

Q. Let's take the Mississippi Valley plants. Did you ever hear of that?

1932 A. I am not familiar with Mississippi Valley plants.

Q. From what part of the tree do you get the nicest, softest wood?

A. The—that is two questions.

Q. The nicest wood, then, and then I will ask the softest.

Mr. BURR. What do you mean by the nicest?

Mr. WHEAT. Q. Well, the best-textured wood.

A. For what purpose, please?

Q. Well, what is the highest-priced wood that you get out of the tree?

A. The clear.

Q. If you know, where do you get that, what part of the log?

A. What kind of a log, please?

Q. Pinus strobus.

A. A good part of that will come from the heart of Pinus strobus.

Q. Clear lumber?

A. Yes, sir; the heartwood.

Q. Pardon me?

A. From the heartwood.

Q. Will you take a look at plaintiff's exhibit 41 and tell me if that is a piece, in your opinion, of Pinus strobus; is it sap or heartwood?

A. I would not care to express an opinion as to that.

Q. Well, is it sap or heartwood?

1933 A. You are speaking of——

Q. This one over there. Don't mix it up with Idaho.

A. You cannot tell them apart. That is a piece of heartwood.

Mr. BURR. A piece of heartwood, did you say?

The WITNESS. A piece of heart; some sap in it.

Mr. WHEAT. Q. Where is the sap at?

A. It runs out here.

Q. Looking at it from the side on which the reporter's stamp is located, looking at it in that direction, where is the sapwood and where is the heartwood on this piece?

A. Examining that closely, you cannot see. It is impossible to see any distinction there between heart and sap.

Q. Is there heart and sap both on that?

A. No; I think not.

Q. What is it?

Mr. BURR. You think it is what?

Mr. WHEAT. Q. Can you state definitely whether it is heart or sap wood?

Mr. BURR. Let him answer.

A. I would say that it is a piece of heartwood.

Mr. WHEAT. Q. And you wish to withdraw, do you, your statement that there is sapwood in that piece?

A. I see nothing now—I noticed on the edge there—I see nothing there now; no.

1934 Q. You stated on your examination——

Mr. BURR. Did you get the number of that exhibit in?

Mr. WHEAT. Yes. I asked about that first; Commission's exhibit no. 41.

Q. I now ask you, do you wish to state that that is, in your opinion, all heartwood?

A. Yes.

Mr. BURR. Wait a minute. You say you do? You say yes, do you?

A. Whether I wish to state that this piece was all heartwood? That was your question, wasn't it?

Mr. WHEAT. Q. In your opinion?

A. Yes, yes. I would say that is all heartwood.

Q. Now, take Commission's exhibit 40, which purports to be a piece of Idaho white pine, soft texture; tell me whether in your opinion that is heartwood or sapwood?

A. Yes; I would say that is heartwood.

Q. That is all heartwood, in your opinion, is it?

A. Yes.

Q. It is possible then, is it, to get nice, clear pieces out of the heart of both of these trees?

A. Yes.

Q. Is it not possible to get nice clear pieces out of the heart of Pinus ponderosa?

A. It is possible.

1935 Q. Don't you ever sell those little strips that are marked here as edging, that are cut after you cut your edge? Don't you ever cut mouldings out of them of fairly good lengths?

A. Very infrequently.

Q. What are those mouldings used for when you do cut them?

A. Any of the purposes for which mouldings are used.

Q. Is the sapwood of Pinus strobus any softer in texture than the heartwood of Pinus strobus?

A. Very little difference, in my opinion.

Q. Would that same answer apply to Idaho white pine?

A. It, I think, as a rule sapwood, it is softer than hardwood.

Mr. BURR. In both of those species, you mean?

The WITNESS. Yes, sir. In all species.

Mr. WHEAT. Q. Is it all species of the Pinus, Pinus that you are familiar with?

A. A trifle.

Q. Now, who made those charts which been introduced as Commission's exhibits 42 and 43?

A. I cannot tell you.

Q. You did not make them?

A. I did not.

Q. When did you first see them?

A. A few days ago.

Q. Where did they come from? Are they taken from some book?

1936 A. I cannot answer that question.

Q. May I ask whether they grew out of nothing; that is, where did you get them? You have presented them as charts, and I notice that you have stated, as you have understood it, they purport to show certain things. I want to know who make them.

Mr. BURR. If the examiner please, I do not think that is a fair question, for the reason he stated there is nothing in here that is based on any information except the information that he got as a manufacturer of lumber—that is, as a man who is familiar with the manufacture of lumber—and he did state this, that in the sap cutting, the width of one was probably a little greater than average, and the width of the other was less than average.

Mr. WHEAT. Q. Let me ask you, you do not know where you got them, except that they were handed to you?

A. I do not know.

Mr. WHEAT. That is the only reason for which you are offering them?

Mr. BURR. I am offering them, together with his testimony, to show the manner in which the heart and sap contents of these two species of lumber vary in the way in which it actually comes out in the commercial manner.

Examiner DE BRULER. That was my understanding.

Mr. WHEAT. Q. By the way, do you get clear lumber out of

1937 sapwood?

A. Yes.

Q. What proportion of your sapwood is clear lumber?

A. Depending entirely on the size of the log and what part of the tree it came from. A good part of the sapwood is clear lumber.

Q. Do you get any clears out of the hearts; that is, I am talking about your good, long, wide beards?

A. Yes.

Q. What proportion in the Pinus strobus of B and better come from the heartwood?

A. I cannot give you a definite percentage on that.

Q. Small, is it?

A. Fairly good percentage.

Q. What proportion of B and better are all sap?

A. A small percentage of it that was all sap, in white pine.

Q. That is, one side of it would have some heartwood in it; is that true?

A. Yes; usually.

Mr. WHEAT. I think that is all.

Redirect examination by Mr. BURR:

Q. Now, is the inner core of the heartwood, which you refer
1938 to as knotty and as being used for box purposes and low-grade purposes, is that greater in percentage in the genuine white pines or in the ponderosa? Is my question clear?

A. Yes. In my opinion, the percentage of that type of heartwood is greater in the pondosa pine than in the genuine white pine.

Q. Now, do you ever stop the solicitation of dealers who you find call the pondosa pine which you sell them white pine when they resell it?

Mr. WHEAT. Now, may I ask, in view of the witness' statement that he can recall no instance of any such thing——

Mr. BURR. I think you asked him if he was able to tell.

Examiner DE BRULER. I think that is a proper question. He can answer that, if he can, certainly.

Mr. WHEAT. Exception.

A. I believe I testified that we were fearful that that was the case, but with no specific instance to offer.

Examiner DE BRULER. That is my recollection.

Mr. BURR. Q. Well, now, while you do not remember the specific instance, have there been occasions where you have stopped soliciting their custom in the case of dealers who are found to be reselling as white pine your pondosa material?

Mr. WHEAT. Now, if Your Honor please, there again counsel for the Federal Trade Commission is going far beyond even the question to which I objected before. He says even though
1939 you do not remember any specific instances, do you or do you not do this. This man either does or does not do it, and this man says he cannot remember any specific instance. I say we are entitled to have the specific instances in order to know whether this man's testimony is true or not.

Examiner DE BRULER. Do you recall whether that is the fact or not?

The WITNESS. Yes, sir; I believe it is. Mr. Examiner, I understand you are asking me whether I am certain in my mind?

Examiner DE BRULER. Yes.

The WITNESS. Yes. Whether some of the pondosa might have been marketed as white pine?

Mr. BURR. Q. That was the question on cross-examination you were asked.

A. Yes. I believe that is true.

Q. And you said you were fearful on some occasions that was true?

A. Yes.

Q. Now, on occasions of that kind that have taken place, has there been a dropping off of your solicitation of that trade, or do you go right on soliciting that as though they were selling pondosa pine that material which you would to them as pondosa?

1940 A. Well, our representatives use their best efforts to discourage that practice.

Q. Now, is the variation between the softness of the sapwood and the heartwood of white pine greater or less than the variation between the softness of sapwood and heartwood of pondosa?

A. Much less.

Mr. BURR. That is all.

Recross-examination by Mr. WHEAT:

Q. There is one thing we have not gotten from any of those witnesses on Idaho white pine, and I think that the record ought to show. What is the nature of the knot defects of Idaho white pine, are they usually small, tight knots?

A. Well, the percentage of that kind of knots in white pine is much greater than in pondosa. They are a different kind of knot, a different type.

Q. What is the type of knot defect in the Idaho white pine?

A. Well, the predominating type is a small, round knot.

Q. Tight and sound?

A. Not necessarily tight.

Q. Usually sound knots, are they?

A. Yes; a good part of them.

Q. Are *are* they fairly well scattered through the tree?

A. Yes.

1941 Q. And what about the knot defect in a pondosa pine?

A. It is coarser, larger knots.

Q. And are they more widely separated?

A. [Pause.]

Q. Let me put my question this way: Do you get a better percentage of large shop cuttings out of, say, your no. 2 shop pondosa than you do out of your no. 2 shop Idaho?

A. They are graded on the same rule. A no. 2 shop plank is a no. 2 shop plank, whether it is mahogany or white pine.

Q. That means you get that amount of clear cuttings out of it?

A. Yes.

Q. In general, in shop lumber, do you get more clear cuttings out of pondosa than you do out of Idaho?

A. Not grade for grade.

Q. Not grade for grade; I am not talking about that, but in general, in shop grade?

Mr. BURR. Can that be answered that way?

Mr. WHEAT. He told me that way.

Q. Just answer the best you can, if you answer it. If you cannot——

A. I do not understand the question, Mr. Wheat.

Mr. WHEAT. I will bring it out in some other way, by some other witness. That is all.

(Witness excused.)

1942 C. A. ROGERS was thereupon called as a witness, and having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Has the reporter got your full name?

A. C. A. Rogers.

Q. Mr. Rogers, you are in the lumber business, are you?

A. Yes, sir.

Q. What company?

A. Here in Spokane, the Idaho White Pine Company. In Saint Maries, Idaho, the Rogers Lumber Company.

Q. What is your capacity with each of these companies?

A. We handle about ten or twelve million a year with the Idaho White Pine Company, and around twenty, twenty-five million a year, Saint Maries.

Q. Is most of your product Idaho white?

A. A very large percentage.

Q. What is your relation to the company, to these companies?

A. I am the principal owner and president of both companies.

Q. And how long have you been in that business?

A. Well, more or less ever since I was a small boy. Started in about twelve years old.

Q. Now, have you ever been in the wholesale business?

A. Yes, sir.

1943 Q. Where was that?

A. In Spokane.

Q. Have you ever been a manufacturer of ponderosa?

A. Well, only to a small extent.

Q. Now, are you familiar with the Idaho white and the ponderosa trees?

A. Yes.

Q. Are you familiar with the northern pine of the Minnesota and Lake States?

A. Well, I was as a boy but that is quite a while ago.

Q. Now, referring to the amount of heart and sap in the Idaho white and the pondosa, which has the greater sap and which the greater heart?

A. Ponderosa has the greater sap?

Q. Has the greater sap?

A. Yes.

Q. Now, then, is there a wide variation between different ponderosa trees as regards a proportion of heart and sap?

A. Very great properties; yes, sir.

Q. Is there more variation than there is between the heart and sap of the Idaho white?

A. Very much.

Q. Now, is there a greater variation between heart and sap in the two woods; in other words, is one wood more nearly uniform
1944 as regards the difference between heart and sap than the other?

A. The Idaho is very much more uniform.

Q. Now, have you called upon customers, come in contact with customers of yours in your selling of the lumber in these two companies, or either of them?

A. Yes.

Q. How often did that take place?

A. Oh, I usually get back East once or twice a year, and a great many eastern customers get out here from time to time, quite a number of them during the year.

Q. Do you travel salesmen?

A. No.

Q. How do you get your orders, through wholesalers and jobbers?

A. Through wholesalers, yes.

Q. And it is these wholesalers that you call upon when you go East, is it?

A. Yes.

Q. Do you deal with brokers?

A. Just what do you mean by brokers?

Q. By broker, I do not know whether I am correct in business parlance in the lumber business, but I would describe a broker as different from a wholesaler in that a wholesaler takes title to it, whereas a broker is the manufacturer's representative.

1945 A. No. We call those commission men.

Q. Do you deal with commission men as well as wholesalers?

A. To a small extent, we do.

Q. Your great bulk of your business is with wholesalers?

A. Yes, sir.

Q. Selling to them outright?

A. Yes, sir.

Q. And do you call upon commission men?

A. No; but they call on me here.

Q. Now, in connection with the experience which you just outlined, do you find that there is a sales resistance to your product as the result of the use of the word white pine by manufacturers of so-called California and Arizona and New Mexico white pine?

Mr. WHEAT. Now, Mr. Examiner, my objection, of course.

Examiner DE BRULER. Same objection. Same ruling, exception noted.

Mr. BURR. Q. I assume that you come in competition with California white pine, do you?

A. We do.

Q. Now, then, will you kindly answer the former question, if you have it in mind, as to sales resistance?

A. Why, my experience is that there is a sales resistance because of the fact that that name is used, California white pine.

1946 Q. Can you describe in detail, or can you give any actual instances?

A. Only in a general way. These matters usually come up for discussion when you are talking with a man.

Q. Yes.

A. That sells your lumber, and it is a matter of accumulative experience over a long period of years.

Q. You could not describe any specific instances now, the individual man, or could you? We would be glad to have you, if you can describe any individual case, with the time?

A. Why, if I were just stating a general conversation, I would say yes, I could, but to actually prove such a case, swear to it on the witness stand, I cannot name a specific instance, no.

Q. Well, now, just how does that operate when you try to market your Idaho white pine?

Mr. WHEAT. Well, now Mr. Examiner, the gentleman has just now said——

Examiner DE BRULER. Just state the facts.

Mr. WHEAT. May I finish, sir?

Examiner DE BRULER. Yes.

Mr. WHEAT. He has stated that he cannot on the witness stand swear what he has stated.

Mr. BURR. He did not state that.

Mr. WHEAT. I would like to have the answer read and see

1947 what he did say.

Mr. BURR. All right.

Examiner DE BRULER. Read the answer.

Mr. BURR. All he said is that he cannot name a specific instance.

Examiner DE BRULER. I understand that.

Mr. BURR. All right. What is my last question?

(Question read.)

Mr. BURR. I will withdraw the question a moment.

Q. Have you constantly since you have been marketing Idaho white pine held a price differential as regards the ponderosa? In other words, it is at a higher price, is it?

A. Usually it is a higher price; yes. There have been instances when——

Q. There have been some sporadic instances?

A. When certain sizes and grades sold for even less in Idaho.

Q. Would that be the common grades? Is that what you refer to?

A. No. That has happened in select grades, too, but that is unusual.

Q. Now, then, taking into consideration the normal price differential between the two types of lumber, will you state how the sales resistance that you say you encounter, how it operates?

1948 Mr. WHEAT. Of course my objection goes to this whole line of testimony.

Mr. BURR. The whole line; yes, sir.

Examiner DE BRULER. Objection overruled. Exception allowed.

A. It leads to confusion on the part of buyers, especially the buyers in the eastern territory, where the bulk of the Idaho white pine is sold. They are not sure just what they are buying. We claim ours is a genuine white pine, and here is some other article that is also sold as a white pine at a considerably less price. It naturally is a hindrance to our sale.

Mr. BURR. You may cross-examine.

Cross-examination by Mr. WHEAT:

Q. What is a genuine white pine?

A. You mean botanically or commercially?

Q. No. I asked what is a genuine white pine? That is the term you used.

A. Why, commercially, there are three genuine white pines—Pinus strobus, Pinus monticola, and the sugar pine. I guess that is lambertiana.

Q. By genuine white pine do you mean botanically white pine?

1949 A. I mean botanically a white pine, and largely commercially a white pine, too.

Q. What do you mean, commercially a white pine?

A. Sold as a white pine.

Q. Oh.

A. Pinus strobus, Idaho white pine, are sold as white pines.

Q. And they are classified by some botanists as white pine, are they?

A. So I take it.

Q. I take it you are not a botanist?

A. I am not a botanist; no.

Q. Now, then, commercially what is a genuine white pine?

A. Pinus strobus, pinus monticola——

Q. No. I want to know what it is, its characteristics. What is a genuine white pine in your mind? I am getting away from botany.

A. I see. Well, it is a soft wood, having the characteristics of either strobus or monticola; that is, it is soft, light, not very strong, easily worked, takes paint well, straight grained.

Q. Used for what purposes ordinarily?

A. Used for building purposes.

Q. What parts of the building?

A. I did not get that.

Q. What parts of the building is it used for, the timbers?

1950 A. Well, white pine is not used for timbers, now; no.

Q. All right. What is it used for?

A. Well, it is used for sheathing, shiplap, roofing. The better grades are used for interior and exterior finish.

Q. Is any of it cut up in what is known as shop lumber?
A. Yes; a small proportion.
Q. A small proportion?
A. Not so much as pondosa.
Q. What properties of Idaho white pine that you sell from your mill is shop grade, so-called?
A. Well, I should say not over four or five percent.
Q. What properties is what is known as clear lumber; what you specify as clear lumber? Tell me what grades those are. Is it B and better?
A. Our select grade would be B and better—A, B, C, D.
Q. What properties is that of your white pine?
A. Ten percent, sometimes fifteen percent, according to the locality.
Q. Sometimes lower than ten?
A. Yes, sir.
Q. Averages around twelve?
A. I should say so.
Q. Is there a grade called C select?
A. Yes.
Q. That is a shop grade?
1951 A. Not in this territory. It is in California.
Q. C grade is a clear grade?
A. Yes. That is a finish.
Q. It does not contain any defects?
A. It has defects to a limited extent.
Q. Shop lumber contains knot defects?
A. Yes, sir.
Q. But there are clear cuttings between the knots?
A. Yes.
Q. Is there more of that type of lumber where there are clear cuttings between the knots to be obtained from the average ponderosa tree than from the average Idaho white pine tree?
A. Do you mean we get a greater percentage of shop lumber?
Q. Yes.
A. From the pondosa you get a greater percent.
Q. When you talk about sales resistance, just what do you mean by that term? That is a term that has been used generally?
A. Why, we simply mean that it makes it harder to sell a certain item.
Q. Well, give us an example of what you mean by that?
A. Well, if I tried to sell you a certain item of Idaho white pine and asked $60.00 for it delivered at your yard, if you had a
1952 yard, and the customer would come back and say, "I can buy white pine from California at $50.00", then you would——
Q. Does he say white pine from California, or does he say California white pine?
A. He might say either, although I believe California white pine is the term it is sold under.

Q. You have known that term for a long time, have you?
A. Yes.
Q. How long have you been familiar with that term?
A. Oh, I should say twenty, twenty-five years.
Q. That is not anything new in the lumber business, is it?
A. No.
Q. Did not suddenly come into being some few years ago, did it?
A. No.
Q. It has grown up for years, has it not, and been used in the lumber trade as you knew it?
A. Yes, sir.
Q. I think we were discussing what you meant by sales resistance?
A. Yes.
Q. And then we had come to the point where you said you had known the term "California white pine" for a good many years?
A. Yes.

1953 Q. I do not think I asked you when it was you first heard that term, if you remember?
A. I could not say exactly.
Q. About when?
A. I believe I said I had heard of it for around twenty years, to the best of my knowledge.
Q. Is it a well-known name in the lumber trade?
A. Yes.
Mr. BURR. We concede it has been used for about thirty years.
Mr. WHEAT. I want to know whether this witness, who has been marketing other woods, concedes it is a well-known name in the lumber trade?
A. I do.
Mr. BURR. We concede it.
Mr. WHEAT. Q. Let me ask you whether or not ponderosa produces a good and useful lumber for the uses to which it is generally put?
A. Certainly it does.
Q. Does ponderosa lumber appear different in any manner from the California white pine?
A. You mean as to the characteristics of the wood?
Q. Yes; texture, any other way.
Mr. BURR. You mean as an average?
Mr. WHEAT. Yes.

1954 A. Well, I am not qualified to testify on that because my knowledge of the California white pine is very limited, but my understanding is that the average of the California white pine is as good as the best we have here.
Mr. BURR. The average is as good as your best?
The WITNESS. I should say so, although I say I am not qualified to testify there.
Mr. WHEAT. Q. Well, but that is your understanding from your experience as a lumberman over many years, is it?

A. Yes; that it is a good type of pondosa, or ponderosa rather.

Q. Yes; and that the average of that wood is equal to the best of the pondosa you have here?

A. Did I say the average there is as good as the best here?

Q. Yes.

Mr. BURR. That is the way you testified.

A. I would like to change that. I cannot say as to the average, but what I have come in contact with was as good as we have here.

Mr. WHEAT. Q. But on the average what you have come in contact with, grade for grade, does it run slightly wider than yours here?

A. Yes, it does; what I have come in contact with.

Q. Why is that? Because it comes from a slightly larger tree on the average?

A. I presume so.

1955 Q. By the way, does wider lumber sold from California command a slightly higher price than the narrower?

A. Do you mean in the common, or shop?

Q. Let's put it in all of them. You can tell us what it does.

A. A twelve inch usually brings a higher price than the narrower.

Q. How about the thirteen?

A. We sell that as thirteen and larger, and that——

Q. Do you know whether or not California produces a considerable quantity of thirteen or fourteen and wider?

A. I do in the shop lumber.

Q. Does it in the shop lumber?

A. It does in the shop lumber.

Q. Does your lumber produce a considerable quantity of thirteen and wider?

A. It does in the shop.

Q. In the shop?

A. Yes, sir.

Q. As much as the California white pine?

Mr. BURR. I doubt if the witness is qualified to answer that question.

Mr. WHEAT. I am asking if he knows. He is in the lumber business.

Mr. BURR. Yes; but he has testified he does not know much 1956 about the California wood.

Mr. WHEAT. Q. Now, did you market any Pinus ponderosa as western white pine?

A. I do not think so.

Q. When did you market Pinus ponderosa?

A. Well, we have marketed it more or less since I came West in the spring of 1907.

Q. How did you sell that Pinus ponderosa?

A. Why, as I remember, we sold it as western pine for a good many years, simply as western pine.

Q. And that continued up until about when?

A. Now, that continued until—oh, twenty-five or '26, when the name pondosa began to be used.

Q. Who began to use that, sir?

A. The manufacturers in this district began it.

Q. And when did you adopt that name, if you did? Do you manufacture any of that now?

A. Yes; we sell it as pondosa. We have since '26 or '27, I think.

Q. By the way, did you note any particular price change when you changed the name?

A. Because of the change of name?

Q. No. When you changed the name.

A. I do not recall any.

Q. There has a great deal of advertising been done of this
1957 name pondosa?

A. I have noticed a gread deal; yes.

Q. Have you participated in any of it?

A. No.

Q. Would you say that the lumber trade in general with which you deal is better acquainted with this wood under the name pondosa than it was under the old titles under which it went into the trade?

A. I would say that it was, because there were so many different names used in the earlier days.

Q. And could perhaps this additional knowledge that you may have come largely from this advertising?

A. Oh, that would impress it on the public, of course.

Q. And you think it has done so?

A. Yes.

Q. That is, the lumber trade in general?

A. Yes.

Q. By the way, this question I do not think I have asked of anyone. Did any of the Idaho producers of Pinus ponderosa ever market any of that lumber as Idaho white pine, do you know?

A. Not to my knowledge.

Q. You have been in that business how long in Idaho?

A. Oh, between twenty-five and thirty years.

Q. Pretty generally thoroughly——
1958 A. Do you mean in the State of Idaho?

Q. Yes.

A. Well, let's see; I have not operated—you mean have I produced lumber in the State of Idaho?

Q. No. How long have you been in the Idaho white pine business?

A. Oh, I have been in that since about 1908.

Q. Now, does your Idaho white pine compete to any great extent in any of its grades with the southern white pine, and if so in what grades and for what uses?

A. There is not much competition between the two woods.

Q. Why not?

A. Because the Idaho white pine sells for so much more money than the southern pine that there are certain fields in which the southern pine is used.

Q. What are they?

A. They are structural purposes, roofers, and things of that kind.

Q. Is Idaho white pine used extensively for those purposes?

A. No.

Q. Well, now, did the pondosa pine that you have sold under different names, under whatever name you have sold it, does that come into competition to any great extent with southern yellow pine?

A. More so; yes.

1959 Q. In what uses?

A. Well, in sheathing, roofing.

Q. What do you use your common Idaho white pine for?

A. For general building purposes.

Q. Sheathing?

A. Yes; we use it for sheathing.

Q. This pondosa, is pondosa used for structural purposes?

A. Not to any large extent, I do not think.

Q. What are the general uses of pondosa as a lumber in the trade?

A. Why, it is used—it is used in building, but not for structural timbers.

Q. What uses is it put to in building?

A. It is used for sheathing. It is used for finish, it is used for roof boards.

Q. Yes. Now, take the clears and the shop lumber, what are they used for?

A. Well, the shop lumber goes largely into sash and frame cuttings. Not so much doors.

Q. And what does clear lumber go into?

A. Mostly finish.

Q. We are talking about pondosa now?

A. Yes.

Q. Is that same true through the various grades of California white pine, as far as you know?

1960 A. Why, as far as I know it is.

Q. Have there been any important changes in those uses since you adopted the new name pondosa?

A. I do not recall any.

Q. Do you know whether or not there is now a price differential, grade for grade, on the average, of course forgetting particular fluctuations, but on the average between some grades of California white pine and pondosa pine?

A. Well, from actual experience I cannot say that I do.

Q. You do not know?

A. I do not know.

Q. Now, what would be the effect on your sale of pondosa, in your opinion, if Pinus ponderosa from California and southern

Oregon were marketed instead of as California white pine as Pondosa pine, would that increase your competition?

A. Why, I rather think it would decrease our competition.

Q. It would decrease your competition, you would not have as much to compete with in the same type of wood, is that true?

A. If I get your question correctly, it was what would be the effect if the name of California white pine was changed?

Q. Let's put it this way: What, in your opinion, would be the effect on relative prices of those lumbers if the name California white pine were changed to pondosa pine?

1961 A. The same as we use?

Q. Yes.

A. Well, I think that there would be a tendency to make the two sell on more even terms.

Q. Suppose that instead of calling it pondosa pine the California white pine people would call it western yellow pine?

A. Well, that would not be so good.

Q. In what way?

A. It would make it a little harder to sell, because immediately in the minds of the eastern consumers they would associate it with the southern yellow pine.

Q. You would think that would have an effect on the comparative price, then?

A. Yes; I do.

Q. Depress the price of California white pine?

A. It would have a tendency to do so.

Q. And suppose the California producers, instead of adopting the name pondosa, were to call their wood California pine; would that have any effect on relative prices?

Mr. BURR. I think this is getting rather speculative.

Mr. WHEAT. Well, I am now coming right into the exact point that we discussed yesterday, that this witness has claimed was a hindrance to his business.

Examiner DE BRÜLER. Go ahead and answer it. Answer it

1962 the best you can.

A. May I have the question again, please?

Mr. WHEAT. Read the question.

(Question read.)

Mr. BURR. If he knows.

Mr. WHEAT. Q. Yes; if you have any knowledge.

A. Well, of course, I can only answer it from what I would reason out to be the effect only.

Q. Yes. Well, what is that?

A. Well, there would, of course, be less confusion in the minds of the eastern purchasers if the same name were used in both cases. As I understand it, both woods are ponderosa pine, and if the same name, say, pondosa, were used there would be less confusion in the minds of the eastern customers and that would, of course, have a tendency to equalize prices.

Q. From their present differential?

A. If there is one.

Q. Would that be true of the name California pine? We will now come into that. You are speaking about pondosa?

A. Yes. Well, California—if you use the term California pine, that will give you a different name than we use for the same wood.

Q. Yes.

A. And naturally there would be more confusion.

1963 Q. Have these woods ever sold by the same name?

A. I do not think so. I do not recall if they ever have.

Q. Do you think there would be a confusion of some type if this lumber were to be called California soft pine?

Mr. BURR. I think, Mr. Examiner, that is speculative.

Examiner DE BRULER. I think——

Mr. WHEAT. I will conclude that examination with this one question.

Examiner DE BRULER. All right.

Mr. WHEAT. Q. State what your ideas are on California soft pine. What would be the effect, in your opinion, on relative prices and sales resistance if the term California soft pine were used?

Mr. BURR. And the pondosa people keeping their present name?

Mr. WHEAT. Of course.

A. The effect would be a great deal the same as though you were using California pine, because you are still using a different *name* and it simplifies *things* the less terms that you use, if you use the same name for the same wood wherever it is found naturally.

Q. What would be the effect, if you will answer the question rather than to go on a side issue as you have, on the relative prices

1964 and the sales resistance, if they were to adopt that name?

A. Adopt what name?

Q. California soft pine.

A. Well, I think if they adopted the name California soft pine there would be less resistance than there is in using the present name, the California white pine.

Q. Are you familiar——

Examiner DE BRULER. I think that relative matter has gone far enough. I will have to rule out any further questions along that line.

Mr. WHEAT. I was not going to ask any other question along that line, Mr. Examiner, except that I would like to ask this question:

Q. Are you familiar with sugar pine?

A. No.

Q. Not at all?

A. Just by general reputation is all.

Q. Does the wood that you market, if any, ever come into any competition with sugar pine?

A. Yes, sir.

Q. Now, I would like to ask this one more question. I think it is pertinent. In your opinion, would the term California soft pine and California sugar pine be confusing?

A. Yes; I think they would.

Q. That will be all along that line. How many logs per
1965 thousand feet do you get out of your Pinus monticola?

A. It varies a great deal. It runs from two or three a thousand to twenty a thousand.

Q. What is the average, in your estimation?

A. I would say an average would be eight or ten to the thousand.

Q. And is sap considered a defect in grading Idaho white pine?

Mr. BURR. If the examiner please, this matter of grading rules is something we had come up and there is no reference to it.

Examiner DE BRULER. I would say this is merely cumulative and not cross-examination of this witness.

Mr. BURR. This matter of grading rules is a highly technical matter and I do not think there is any necessity for injecting the grading rules and the technicalities of grading into this discussion, and the examiner so rules, and I think opposing counsel have heretofore acquiesced in cooperating with me in keeping those technical matters out.

Mr. WHEAT. I will agree. May I say this, Mr. Examiner: I expect to be able to prove that Pinus strobus up to relatively a few years ago was graded with sapwood as a defect, and that I must state the purpose of my questioning, that the reputation of Pinus strobus as a fine, long-lived lumber, grew up under rules
1966 which ruled out sap. Now, under that, which I think is very pertinent to this question, Mr. Burr has taken a great deal of time on this question of sapwood and heartwood. I am entitled to ask this witness whether in Idaho white pine, this lumber which he designates to be like Pinus strobus, sapwood is considered a defect in its grading rules?

Examiner DE BRULER. Ask him that.

Mr. BURR. Go ahead and answer that.

A. To the best of my knowledge it is not.

Mr. WHEAT. Q. By the way, is this price differential between Idaho white pine and the ponderosa pine grown in this area something new?

A. Something?

Q. New?

A. No.

Q. It has always sold, grade for grade, for more money, has it?

A. I would not say always, but that is usually the case.

Q. On the whole?

A. Yes.

Q. And that is just as true, is it, five years ago as it is today?

A. Well, my experience only goes back to 1908 or thereabouts in Idaho white pine, and as I remember it we had a differential at that time, but not so great a differential.

1967 Q. Not so great as you have today?
A. No.

Q. And when did you get this large differential, about, or has it been a gradual increase?

A. Well, the differential was greatest prior to the fall of 1927, when there was a pretty severe cut in Idaho white pine prices.

Q. But at the present time it is a greater differential than it used to be in the old days, is it?

A. Yes. It is greater in dollars and cents, and I rather think greater in proportion, too.

Mr. WHEAT. I think that is all.

Examiner DE BUTLER. That is all.

Redirect examination by Mr. BURR:

Q. Just one question I would ask. If the producers of the present California white pine were to revise their name to California pine or California soft pine, or some other term which would leave out the word white, would that relieve the confusion as regards California white pine and Idaho white pine?

A. I should say it would lessen it somewhat, but it would not relieve it.

Q. It would not relieve it entirely?

1968 A. No.

Q. In other words, the word soft would apply, so far as the application of the term to the wood in concerned, equally well if not better, to Idaho white pine than to the ponderosa produced in California, is that not true?

A. Yes. The term soft is one of the greatest characteristics of the Idaho white pine.

Q. It is better known to be a characteristic of Idaho white than it is of pondosa, is it not?

A. Very much more so.

Q. The term California white pine would be more distinguishing between ponderosa produced in California and Idaho white pine than California soft pine, would it, or western soft pine?

A. Yes; because it would not emphasize that quality.

Mr. BURR. That is all.

Recross-examination by Mr. WHEAT:

Q. Let me ask you, then, whether you consider the term soft as applied to pine to be similar to the term white as applied to pine, it is something that should be maintained for the white pine?

A. There is a very close association between the two terms, yes, sir.

1969 Q. Do you consider that the term soft pine should not be applied to Pinus ponderosa?

A. Not to the same degree that it is to Idaho.

Q. Do you say that Idaho soft pine is softer than pondosa?

A. It is generally accepted as so; yes.

Q. Are you familiar with the Government tests of that matter at the Madison Laboratory?

A. Well, you mean, then, by softness, you take that to mean a technical term?

Q. I am talking about whatever you mean by soft.

A. I am not familiar with any test at the Madison Laboratory on that particular quality of softness; no.

Q. I see.

A. No; I am not.

Mr. WHEAT. That is all.

Mr. BURR. That is all.

(Witness excused.)

(Thereupon an adjournment was taken until 10:00 o'clock a.m. of the following day, Wednesday, January 22, 1930, at which time the hearing was resumed and the following proceedings were had:)

1970 Before the Federal Trade Commission

In the matter of White Pine cases

Docket Nos. 1620–1669, inc.

SPOKANE, WASH., *January 22, 1930.*

Met pursuant to adjournment, 10:00 o'clock a.m.

Before: Ellis De Bruler, examiner.

Appearances:

Eugene W. Burr, for the Federal Trade Commission.

Messrs. McCutchen, Olney, Manson & Greene (by Mr. Carl I. Wheat), for the respondents.

Examiner DE BRULER. We will now proceed with the hearing, in keeping with the adjournment.

1971 W. C. GEDDES was thereupon called as a witness, and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR.

Q. Mr. Geddes, has the reporter got your name?

A. W. C. Geddes.

Q. You are in the lumber business are you, Mr. Geddes?

A. Yes, sir.

Q. How long have you been a lumberman?

A. Since boyhood.

Q. And your company is of what name?

A. Craig Mountain Lumber Company.

Q. There is a Craig Mountain?

A. Yes, sir.

Q. Craigmont Lumber Company, that is another concern, isn't it?

A. Craig Mountain.

Q. You are not a respondent in this case, are you?
A. No, sir.
Q. You are not a party to this matter?
A. No, sir.
Q. Where are your headquarters?
A. Winchester, Idaho.

Q. And the lumber that you cut is where; your stand of
1972 timber is where?

A. At Winchester.
Q. Just right there?
A. Yes; in that vicinity.
Q. And your capacity with that company is president, is it?
A. Yes, sir. President and general manager.
Q. How long have you been president and general manager of this concern?
A. I have been general manager since 1923. President since last year, since our president died.
Q. Now, in connection with your product—first, let me ask you, is it pondosa pine or Idaho white, or both?
A. Pondosa pine exclusively in the pine.
Q. Mr. Geddes, were you a member of a committee in connection with the trade-name problem at any time, a committee of the pine manufacturers of this inland empire?

Mr. WHEAT. Now, before the witness answers, if Your Honor please, the fact that this witness might have been a member of a committee with reference to pine manufacture in this area, I submit has nothing to do with the question as to the term California white pine.

Examiner DE BRULER. I presume this is preliminary?
Mr. BURR. Yes, sir.

Examiner DE BRULER. Note the objection and exception.

1973 Mr. WHEAT. I object to any questions relating to any committee or anything like that with reference to this area. I ask that that objection be noted and an exception.

Examiner DE BRULER. Note the objection and the exception.
Mr. WHEAT. Also, Mr. Reporter, will you please note the examiner's ruling overruling the objection.
Examiner DE BRULER. Yes, sir.
(Question read.)

Mr. BURR. Q. Have you been a member of a committee with regard to the nomenclature of and advertising of any trade name in connection with the pine species of the inland empire?
A. Yes, sir.
Q. What association was that committee appointed by?
A. Western Pine Manufacturers' Association.
Q. And that concern is made up of manufacturers of Idaho white and pondosa both, is it?
A. Yes, sir.

Q. What is the name called, pondosa?
A. Yes, sir.
Q. Now, were you a member of such committee in 1924 and 1925?
A. Yes, sir.
Q. Will you relate what lead up to the appointment of that committee and what that committee did?

Mr. BURR. And, if the examiner please, I would like to
1974 state that there is a clause in the complaint with reference to the change in the trade name in the inland empire.

Examiner DE BRULER. I recall that.
Mr. BURR. And the adoption of the word pondosa.
Examiner DE BRULER. I recall that.
Mr. WHEAT. May it also appear in the record that we have no objection to any questions dealing with the fact of the question of this change of trade name. We want that thoroughly understood. We have an objection to any testimony of any sort dealing with any reasons for that change, on the grounds which I stated for the record previously, and also on the further ground that the complaint contains nothing as to the reasons for this change. You will recall at that time that it was stated by counsel for the Trade Commission that the complaint contained this allegation. I have studied the complaint very carefully since then for one allegation as to the reasons for that change. Now, those reasons, I take it, are absolutely immaterial to the case against the respondents, and the fact that these people may have changed their name, as a fact we have no objection to, but the reasons we will object to.
Mr. BURR. If the examiner please——
Examiner DE BRULER. The objection is noted, overruled, and exception allowed.

Mr. BURR. Q. Will you proceed with the question. Is it
1975 still clear to you?
A. You better repeat it.
Q. All right. Mr. Reporter, read it.
(Question read.)
A. In August, at our semiannual meeting, 1923, there was a committee appointed to like into the matter of advertising our wood, our products. I would like to ask if I may explain who that committee was?
Examiner DE BRULER. You may give the names.
A. The committee consisted of R. E. Irwin, J. F. Hennessey, and myself.
Mr. BURR. Q. Irwin is connected with what concern?
A. Irwin?
Q. Yes.
A. With the Potlatch Lumber Company.
Q. And Mr. Hennessey?
A. With the Shevlin-Carpenter-Clark Companies of Minneapolis.
Q. It was, then, the Shevlin-Hickson?
A. Yes, sir.

Q. All right, sir; proceed.

A. This committee was instructed to get in touch with the California association and try and device some way or means of——

Mr. WHEAT. Before the witness goes further, I have here
1976 an objection which will go to the merits of this whole controversy, as far as the California manufacturers are concerned. The association, whatever it may be, in California, is not a party to this case. The California White & Sugar Pine Manufacturers' Association is, I take it, the one the witness refers to. Is that so, sir?

The WITNESS. Yes, sir. I would understand that so.

Mr. WHEAT. That association is not a party to this case. Certain respondents are members of that association, and certain of them are not members of that association. Certain other manufacturers are members of that association. Now, anything that that association may have done or not done I submit is wholly immaterial to the sole question before the Commission in this case, whether there is any deceit or fraud or misleading in the trade name now and for many years used by the California producers of Pinus ponderosa.

Mr. BURR. I think the objection is exceedingly technical, for the reason that practically every important manufacturer of California white pine in that region is a member of that association, and the only way in which they can jointly act or jointly negotiate merely is through that association, and the condition of relationship is so close that I think the evidence should be received for what it is worth.

Examiner DE BRULER. I will let your evidence go in with
1977 the objections noted and exceptions. Lead right up to it; do not go into detail, but just state what happened.

Mr. BURR. I would like a fairly comprehensive narration.

Examiner DE BRULER. That is right.

Mr. BURR. Make it as brief as you can.

Examiner DE BRULER. As brief as you can.

A. There was so much of it, it is pretty hard, unless I give some detail.

Mr. BURR. Well, go ahead.

Examiner DE BRULER. Go ahead.

Mr. WHEAT. I ask also that it be limited to the respondents in this case. I think that is not a technical objection. I think this whole line of questioning should be limited to the respondents now before the Federal Trade Commission.

Examiner DE BRULER. The objection is overruled. Exception noted.

A. This committee had negotiations with California members who appointed a committee to meet with us, and after the negotiations or correspondence had been carried on for a few months, we could not decide on just what was best to do. In February of 1924, at our annual meeting, this same committee was given $25,000.00 to start

an advertising campaign. We arranged a meeting with Harold Martenson and John Spaulding.

Examiner DE BRULER. Who are they?

1978 The WITNESS. Of California.

Mr. BURR. Q. What was Martenson's concern?

A. Tillacum Bay Lumber Company.

Q. That is at Klamath Falls?

A. That is at Klamath Falls.

Q. And Mr. Spaulding's company is what?

A. I do not know. I think Pickering at that time. I am not positive.

Mr. BURR. Can you help us?

Mr. WHEAT. I cannot now. I do not know where Mr. Spaulding was at that time. It is material, however, whether he was representing some respondent.

The WITNESS. I could not answer that.

A. (continuing). The result of that meeting was the California association agreed to a certain sum——

Mr. WHEAT. Well, now, if the examiner please, what the California association may have agreed to or not agreed to certainly is immaterial in this case. I assume, Your Honor, that you are trying——

Examiner DE BRULER. Yes.

Mr. WHEAT. May I make my objection, sir, for the record? I assume that you are trying these respondents before this Commission. You are not trying in any sense the California association, whatever that may be. That is not before Your Honor, and what it may

1979 have done or not done is immaterial in every sense before the Commission at this time.

Mr. BURR. If Your Honor please, here is an association of which these are all members, and the negotiators, at least one and in all probability both, are respondents here. The only way these respondents can act collectively is through their association, and that is the way they did act. Of course, there are a few small respondents who were perhaps not members of that association. I supposed they all were, but I take counsel's suggestion as correct; but they are the smaller——

Examiner DE BRULER. I will overrule the objection and let the objection go in for what it is worth.

Mr. WHEAT. May it be understood, Mr. Examiner, that my objection goes to any question relating to the California association?

Examiner DE BRULER. That is understood.

Mr. BURR. I will stipulate that.

Mr. WHEAT. And that an exception may be allowed.

Examiner DE BRULER. Yes, sir. Now, let us proceed.

Mr. BURR. Q. Don't go into any more details than necessary. Lead up to what you did.

A. The question again before the committee, the main question, was how we could advertise a wood that was marketed under so many

different names. We submitted to this California committee
1980 that we would accept for our association any name that they saw fit to submit to us, so long as it did not contain the word white in it.

Q. Referring to the ponderosa lumber?

A. Pondosa lumber.

Q. Ponderosa at that time.

A. It was a multitude of names at that time.

Q. But it is the ponderosa species of lumber?

A. Exactly.

Q. All right; proceed.

A. They submitted a name which was agreeable to us, and we——

Examiner DE BRULER. What was that name?

A. That name was Pacific soft pines. We returned, reported to our association our action. We heard nothing from California until after they had started their advertising campaign. We were left with twenty-five thousand dollars to spend and fifteen or sixteen different names to advertise the pondosa pine under, or the ponderosa pine under.

Mr. BURR. Q. Had that many names been used by different manufacturers in the inland empire?

A. Some fifteen or sixteen. We were in a maze, and in order—in our endeavor to decide upon a name, we hit upon the name pondosa, and started our advertising campaign under that name. That, in brief, is the history of how the name came into existence.

1981 Q. And you have been advertising it under that name cooperatively ever since, have you?

A. Yes, sir.

Q. As an association?

A. Yes, sir.

Q. Have you conducted a national campaign in the magazines, and so forth?

A. Yes, sir.

Q. As regards that name?

A. Yes, sir.

Q. What became of the suggested name, Pacific pines, or Pacific soft pines, which was it?

A. Pacific soft pines was the name they submitted to us.

Mr. WHEAT. You said Pacific soft pine before.

The WITNESS. No. Pines.

Mr. BURR. He said pines before.

Q. Pines?

A. Pacific soft pines.

Q. What became of that name?

A. I do not know. It was never used by us.

Q. That was the name that the California people offered to you, was it?

A. Yes, sir.

Q. Do you encounter sales resistance from the use of the word white by competitors manufacturing California white pine, so
1982 called?

Mr. WHEAT. My objection to this line of testimony will, of course, be noted, will it not?

Examiner DE BRULER. Yes; note the objection to that. Objection overruled. Exception allowed.

A. Please state that question again.

Mr. BURR. Will you read the question, Mr. Reporter?

(Question read.)

A. No.

Q. You did not?

A. No.

Q. Why is that?

A. My reason for that is that we did not come in contact directly with the trade east of the Middle West, so called. Our product is sold through the wholesaler in the eastern territory and we only have two men in what we term the Middle West, and consequently we do not come in contact or conflict, apparently, with the name white in that territory. Apparently they do not care in that Middle West territory.

Q. Did you say your association adopted the name that was submitted by the California association of Pacific pines, or Pacific soft pine?

A. This committee had authority to accept any name that might be submitted that in their judgment would represent the pines, providing the word "white" was left out.

1983 Q. And did you act upon the name you proposed?

A. Yes, sir.

Q. Accepted it, did you?

A. We accepted it, with the understanding that they would follow suit.

Q. I see. Then what happened? They did not follow suit; is that it?

A. They did not follow suit.

Q. They have never adopted that name that was suggested to you?

A. Not to my knowledge.

Q. Well, you do know as a matter of fact that the respondent companies are—that the California ponderosa producers are calling their wood white pine, do you not?

A. Yes, sir.

Mr. WHEAT. That is admitted.

Examiner DE BRULER. I do not suppose there is any question about that.

Mr. BURR. Q. Now, did you report that to your association, the name Pacific soft pine?

A. Yes.

Q. As part of your report?

A. As part of our report.

Q. Just what territory do your salesmen cover who are
1984 located in the Middle West? They are located in Milwaukee and Kansas City, are they, their headquarters?

A. One in Milwaukee that handles our shop lumber almost exclusive. The one in Kansas City handles our lower grades.

Q. And how wide do they circulate out of those towns?

A. From the western boundary of Kansas to St. Louis, the Kansas City man covers.

Q. How far does the Milwaukee salesman cover?

A. The Milwaukee salesman does not go east of Milwaukee, and as far north as Green Bay, Wis., and to Davenport, Iowa, down the river points.

Q. That is his western terminus, is it, practically?

A. Yes; that is his western terminus. He has just got a strip up and down that territory.

Mr. BURR. I think that is all, sir.

Cross-examination by Mr. WHEAT:

Q. Now, Mr. Geddes, you have been a producer of pondosa pine for a good many years, have you?

A. All my life.

Q. How long have you been in that business, sir?

A. Since I was twelve years old. That would make it about '93.

Q. And from 1893 to the present day have you been ex-
1985 clusively in the lumber business?

A. Yes, sir.

Q. Have you always been in the manufacturing end?

A. Not altogether.

Q. What other experience have you had, sir?

A. I had charge of sales and in other positions at different periods.

Q. Sales for what companies?

A. The Oregon Lumber Company, the Southard Grand Ronde Lumber Companies.

Q. And where did they cut their wood?

A. In eastern Oregon, Baker district.

Q. What type of wood was it that they cut?

A. Pondosa.

Q. Have you had any experience with Idaho white pine?

A. None whatever.

Q. Your total lumber experience has been in the production and sale of Pinus ponderosa in Oregon and Washington and Idaho; is that true?

A. Oregon and Idaho. Never in Washington.

Q. Oregon and Idaho?

A. Yes, sir.

Q. Now, what is the Potlatch Lumber Company, with what organization, if any, is it connected?

A. I understand it belongs to the Weyerhaeuser group.

1986 Mr. WHEAT. I wonder if that might not be stipulated, Mr. Burr, if you know?

Mr. BURR. We will stipulate.

Mr. WHEAT. Q. And where is the headquarters of the Shevlin-Carpenter-Clark Company?

A. At Minneapolis.

Q. And in what other lumber business, if any, are they?

A. They are in the northern pine.

Q. By that you refer to Pinus strobus?

A. Yes; I presume so. I am not a botanist.

Mr. BURR. You mean northern white pine, not Norway, don't you?

The WITNESS. Northern white pine. I do not know what species they manufacture in their northern plants.

Mr. WHEAT. Q. Where is their plant?

A. Ft. Frances.

Q. Minnesota?

A. Yes. And Bemidji. Ft. Frances is in Ontario, and Bemidji, and now at Blind River. Bemidji, Minnesota, and now at Blind River in Ontario.

Q. Now, in the West, where do they operate?

A. At Bend, Oregon, and McGlond, California.

Q. How long have they been operating at McCloud, do you know?

A. I do not know.

Q. Do you know whether that is recent?

1987 A. I do not know.

Q. Do you know whether that is recent?

A. No; it is quite a considerable length of time.

Q. And they have been known under various names, haven't they? Were they once known, I understand, as the Shevlin-Hixen Company?

A. Yes; and is still so known at Bend.

Q. And they are the same interests; Mr. Hennessey represented both groups, did he?

A. He is vice president of both groups, as I understand.

Q. Now, with what respondents in this case before the Federal Trade Commission did you deal in this trade name matter, as to which you testified on your direct examination?

A. Well, I do not know that I know the respondents.

Mr. BURR. There are some fifty of them. I hardly think he knows them all.

Mr. WHEAT. I wanted to see whether the witness does know who the respondents are in this case.

Mr. BURR. I think it is immaterial.

Mr. WHEAT. Q. You do not know, do you?

A. I do not know all of them. I know some of them.

Q. What ones do you know?

A. That would be Shevlin-Hixen Company, at Bend.

Q. Are they respondents in this case, do you know?

A. That is my understanding. And the Grand Ronde Company.

1988 Q. The which?
A. Grand Ronde.
Q. Where was that?
A. At Pony, Oregon, or La Grande, Oregon.
Q. Are they respondents in this case?
A. Yes, sir.
Q. Do you know?
A. Yes, sir.
Q. And who else?
A. If my memory serves me right, I think McCauley was.
Mr. BURR. You mean respondents in this case, or respondents years ago in other cases?
A. Well, years ago in the other case. As I stated, I do not know who the respondents in this are.
Q. I am asking you who you dealt with in connection with this committee you testified to, who are respondents in this case?
A. I could not answer that. I do not know.
Examiner DE BRULER. As I understand it, he gave the name of the parties he did deal with, and the record will show who the respondents in this case are.
Mr. WHEAT. Yes, Your Honor, I understand that, but I want to know how much he knows about the respondents in this case.
Q. Now, you said the question you had to determine involved the advertising of this wood made from Pinus ponderosa under
1989 a number of different names. Will you state for the record all these names that you can now remember, taking first the inland empire region, so called?
A. Yes.
Q. From Bend, Oregon north, and the western portion of Washington, east into Idaho and Montana?
A. It was called Des Chutes pine, Des Chutes white pine, Oregon white pine, silver pine, Sumpter Valley soft pine, lookingglass pine, Blue Mountain pine, western pine, western soft pine, Mont pine.
Q. Did you include western white pine?
A. Not yet.
Examiner DE BRULER. He has not mentioned it. I understand.
Mr. WHEAT. I did not hear it.
A. And western white pine.
Q. What did you sell it as?
A. From our present company?
Q. Yes.
A. It was sold as Craig Mountain cork pine.
Q. Craig Mountain cork pine?
A. Craig Mountain cork pine.
Q. Were there some names under which it was sold that you do not at the moment recollect?
A. There might have been. There were fifteen or sixteen.
Q. All from this inland empire?
1990 A. All from this inland empire and eastern Oregon.

Q. Well, when you started your committee work in reference to the problem of how to spend your $25,000.00 which you were given for advertising I take it that was for advertising this pine in the inland empire?

A. Yes.

Q. Now, did you ever do any of this advertising of this pine in the inland empire with any of that money prior to your change of name to pondosa?

A. No.

Q. Will you tell me whether or not you found that your chief problem in connection with that advertising campaign was this large number of names under which the pine was then being marketed?

A. Our first—yes. I will answer the question; yes.

Q. Now, what did this proposed name Pacific soft pines include?

A. It includes the sugar pine, so called, of California, the California white pine, the different pines of this country, and the Idaho white pine. He would have two bases of figures or two bases of products today, figuring that the pondosa pine or ponderosa pine would come under one head and the other would come under the other head.

Q. Did you feel that the term soft could properly be applied to ponderosa pine?

1991 A. I do.

Q. You still do?

A. Absolutely.

Q. We will go into that matter a little later. Now, how was this proposal that you mentioned from Messrs. Martenson and Spaulding given to you, was it given to you in writing?

A. No, in person.

Q. Where?

A. At Portland.

Q. At a meeting of your committee?

A. Yes.

Q. Now, in what way was it offered to you?

A. We submitted to them our problem of the number of names and we had found that it would be impossible to properly spend the money of the association and advertise each individual operator's under his pet name, consequently our problem was to find a common name under which we could advertise it.

Q. And that was what you were trying to do when you arrived at the term pondosa, I take it?

A. Exactly.

Q. By the way, where did you get that term pondosa?

A. Really——

Q. What does it come from?

A. It comes from a mispronunciation by me of ponderosa.

Q. It does not come from any botanical term, does it?

1992 A. No. It is a shortening up of it.

Q. Well, it is not a botanical term, is it?

A. It is not.
Q. Is it a common term which had ever been used for this lumber?
A. Never before.
Q. Had you ever heard that name before?
A. No.
Q. Can you state positively that it never was used in the marketing of this lumber before your committee took it up?
A. To my knowledge it never was.
Q. And you have had very wide experience with the sale of this wood, have you not?
A. Yes, sir; over a period of years.
Q. Now, were you willing—let me say this first: Were the members of your association who produced Idaho white pine willing to sell their Idaho white pine under the same trade name as the members who were producing ponderosa pine?
A. They could not. No.
Q. Now, will you explain how the term Pacific soft pines would be applied to Idaho white pine?
A. That detail was never worked out. We were willing to accept anything to get on a common basis for advertising.
Q. When you say we, you include, do you, the producers of Idaho white pine who were on your committee?
1993 A. Yes.
Q. Did any producers of sugar pine ever tell you that the sugar pine manufacturers would accept the term Pacific soft pines?
A. They did not. We assumed that that committee had the same authority that we had.
Q. Did you ever see what authority that committee had?
A. I did not.
Q. Do you know that it had any authority whatever to bind members of the California white and sugar pine manufacturers' association?
A. Only by intimation.
Q. Yes. You do not know, do you?
A. I do not know.
Q. Now, do you know whether any member of your committee knows that?
A. I could not say.
Q. Your intimation did not come from some member of your committee?
A. Not at all. It is my own intimation.
Q. Now, has anyone ever sold any of these western pine woods under the name Pacific soft pines?
A. Not to my knowledge.
Q. By the way, was wood known as Oregon pine included in these Pacific soft pines?
1994 A. Oregon pine?
Q. Yes, sir.
A. No.

Q. It was not?
A. Oregon pine is known as fir.
Q. What is Oregon pine?
A. Oregon pine in the export trade is known as fir, here as fir.
Q. Oregon pine is fir?
A. In the export trade; yes, sir.
Q. What is it in the inland trade—in the United States?
A. I do not know of any being marketed as Oregon pine unless the word white, or Sumpter Valley, or Blue Mountain, or something of that sort is attached to it.
Q. Are you familiar with the trade name of Oregon pine?
A. Yes.
Q. Now, tell us to what lumber that refers in the United States trade?
A. I am not familiar in the United States of it being marketed under Oregon pine, but it——
Q. You do not know about that?
A. I am not sure of any being marketed under the name Oregon pine.
Q. Do you happen to know whether or not the lumber commonly marketed in the United States as Douglas fir is what has been
1995 known as Oregon pine?
A. In export trade only.
Q. In export trade only?
A. Yes.
Q. And when you have mentioned Oregon pine and stated it was a fir, you referred, did you, to the lumber marketed in the export trade as Douglas fir?
A. I did.
Q. Do you cut any fir at your mill?
A. Yes.
Q. What kind of fir is that?
A. It is a Douglas-fir type, known often as Mountain fir.
Q. Mountain fir?
A. Yes. Red fir.
Q. Do you know what its botany is?
A. Douglas fir; well—no; I do not.
Q. Do you know its botanical name?
A. No.
Q. Well, it is, in your estimation, what is commonly marketed as Douglas fir, is it?
A. Yes.
Q. Do you cut any lumber that is commonly known as Douglas fir?
A. No, sir.
Q. Do you cut any lodgepole pine?
1996 A. Oh, maybe get a tree occasionally; not much.
Q. How do you market that; do you sell it as lodgepole pine?
A. We cut so little of it we do not pay any attention to it.

Q. How do you sell it?
A. Of course——
Q. Under what name?
A. Well, it would be marketed under pondosa pine.
Q. And prior to the adoption of the term pondosa pine was it marketed under all of the various trade names that you have mentioned?
A. From our own point of view, I would say yes. I do not know what others did.
Q. You did sell what you find of it in your cutting as Craig Mountain cork pine, did you?
A. Yes, sir.
Q. Now, have you been a member of any other committee of your association in dealing with offers of various types with other associations?
A. I believe on grades and things of that sort.
Q. Were you ever a member of any other committee of your association that failed to obtain complete agreement with the committee of anu other association on these matters?
A. I do not think they have ever been brought to a conclusion.
1997 Q. I see.
A. They are still controversies.
Q. Then you have not arrived at a complete meeting of the minds as to your other controversies?
A. No.
Q. Now, were the only people you dealt with in connection with this matter that you have testified to Messrs. Martenson and Spaulding?
A. Directly; yes.
Q. I see. Now, who did you deal with indirectly?
A. Just through conversation only. There was no business dealing.
Q. With whom, sir?
A. Ray Danher.
Q. Now, what does Ray Danher produce and what company is he connected with?
A. I do not know what he produces, but he is connected with the California, or Michigan-California.
Q. You are not familiar with the type of wood that was produced by this company?
A. No; only through understanding.
Q. And what is your understanding?
A. I understand it is largely sugar pine.
Q. And who else did you have correspondence dealing with?
A. I do not recall anyone.
1998 Q. Then the only people you dealt with in connection with this proposed renaming of Pinus ponderosa and Idaho white

pine and sugar pine were Messrs. Martenson, Spaulding, and by correspondence with Mr. Danher?

A. Correspondence and personal interviews.

Q. Mr. Danher was not a member of this committee of the California association, was he?

A. He did not meet with this committee. I do not know who the committee was positively, but we met with Martenson and Spaulding.

Q. You do not know whether he was a member of that committee?

A. I do not.

Q. Now, you say that they submitted the name Pacific soft pine. Just what did they say about it? Did they say, "We will accept and market sugar pine or Pinus ponderosa produced in Oregon and California as Pacific soft pines"?

A. They did not say anything of the kind. It was a matter of working out a common name, the details to be worked out later.

Q. You say they submitted the name and offered it to you?

A. Yes. They said we could join in the joint advertising providing we could agree upon a common name under which we marketed and advertised our product.

Q. Well, as a matter of fact, after your first conversation about Pacific soft pine the matter went no further, is that it?

1999 A. It went no further with that committee.

Q. Then the sum and substance of your testimony about this Pacific soft pine is that you had some conversations with two members of the California white and sugar pine manufacturers, at which that name was discussed, and it was not adopted?

Mr. BURR. That is not fair.

Mr. WHEAT. I am asking whether or not that is his testimony.

A. It was adopted so far as we were concerned.

Q. I am asking whether or not it was adopted. It was not adopted, was it?

A. Finally, no.

Q. Then your committee did not arrive at the conclusion that you started out to procure?

A. I do not understand your question.

Q. You did not, then, come to a conclusion as to a single name under which Pinus ponderosa, Pinus lambertiana, and Pinus monticola throughout this western territory would be marketed?

Examiner DE BRULER. I think he has answered that at least three or four times.

A. The joint committee, no.

Mr. BURR. Beg pardon.

A. The joint committee never.

Mr. WHEAT. Q. Now, you say you heard nothing more from California. Do you mean that no one from the California

2000 Manufacturers' Association ever said anything more to you about the name Pacific soft pine?

A. Not to me directly; no.

Q. To your committee?

A. I was chairman of the committee, and I assume I would have gotten it had they said anything.

Q. And so you never heard anything more about it?

A. Until their advertising started on their campaign.

Q. How did they advertise their wood?

A. California white pine.

Q. And California sugar pine?

A. Well, I was not interested in that phase of it. I do not know.

Q. You do not know about that?

A. No.

Q. Now, is the lumber business a rather individual type of business; are lumbermen in general individualists?

A. Highly.

Q. Highly?

A. Yes, sir.

Examiner DE BRULER. I think that——

Mr. WHEAT. It is very important, Your Honor. I want to ask one further question.

Q. May I ask you this: Whether in your opinion Messrs. Martensen and Spaulding, or any two men in the lumber business
2001 spread over such an area as the California white pine and sugar production, could bind everyone producing in those areas?

Mr. BURR. I think that is speculative.

Examiner DE BRULER. It is cross-examination. You can answer if you know.

A. I could not answer for them, but I could answer for ourselves.

Mr. WHEAT. Q. You had definite authority?

A. Absolutely.

Q. To bind?

A. We could have called it Pullman mahogany and they would have to have accepted.

Q. So your company was invested with exceptional authority for such a committee?

A. Yes, sir.

Q. Now, let's go to your advertising campaign. When did you first start your advertising of Pinus ponderosa, and did that include Idaho white pine also under the new name?

A. Yes, under Idaho white pine.

Mr. BURR. Beg pardon?

A. We advertise—the joint campaign carried pondosa pine and Idaho white pine and fir and larch.

Mr. WHEAT. Q. Yes. Then you did not adopt—you said you adopted the name Pacific soft pines, but as a matter of fact.
2002 you did not adopt that, did you?

A. I said we had the authority to adopt it but the details had never been worked out.

Q. Yes, and therefore it was not adopted finally, is that true?
A. Absolutely.
Q. And you did adopt the name pondosa?
A. Absolutely.
Q. And that included only Pinus ponderosa?
A. That included only Pinus ponderosa.
Q. And includes only Pinus ponderosa from the inland empire regions?
A. And central Oregon.
Q. And that included bond?
A. That includes bond.
Q. When did you start this advertising campaign?
A. I cannot recall the exact date, but I think it was some time in '25.
Q. And are you still a member of the advertising committee?
A. Yes, sir.
Q. Have you been continuously since that time?
A. Yes, sir.
Q. Do you know whether or not a fairly large sum of money has been spent to advertise pondosa pine?
A. Yes, sir.
2003 Q. And has that been a successful advertising campaign?
A. We think so, as a committee.
Q. You think that the name pondosa is pretty generally known, do you, in the lumber trade in this country?
A. Yes, sir.
Q. And that pine is being sold generally as pondosa pine?
A. Yes, sir.
Q. Are you continuing your advertising?
A. Yes, sir.
Q. Can you give us an idea of anything about how much has been spent in that advertising to date?
A. Oh, I could not give you that. You might figure it back on the basis of about $50,000.00 a year.
Q. That is about six years, is it?
A. Yes.
Q. It would be about $300,000.00 practically, you think?
A. Approximately.
Q. And do you plan to continue your advertising campaign on about that basis?
A. If we can get the money, we are.
Q. Now, why do you call—why do you say that you believe that Pinus ponderosa can properly be marketed under a trade name including the word soft?
A. Will you read the question, Mr. Reporter?
(Question read.)
2004 A. Because it is soft.
Q. That is one of its general characteristics, is it?
A. Yes, sir.

Q. And is it a wood of good texture?

A. Yes, sir.

Q. Do you believe that it is a good product, a good wood——

A. I would not be——

Q. Just let me finish my sentence—for the general uses in which it is now used?

Mr. BURR. If the examiner please, let the record show that this gentleman now becomes a witness of respondents. I did not examine along these lines at all, and I think I have been very patient indeed, but it certainly is not cross-examination.

Examiner DE BRULER. He did not ask him any questions about that.

Mr. BURR. I object to it as not cross-examination.

Mr. WHEAT. This gentleman was qualified as an expert on pondosa, that he had handled pondosa for many years.

Mr. BURR. I am not objecting on that ground. I am objecting it is not proper cross-examination. If he wants to make the witness his own witness, very good.

Mr. WHEAT. All right. I will make him my own.

Mr. BURR. If the examiner will entertain that motion.

Examiner DE BRULER. You can ask him a few more ques-
2005 tions along that line, about what it was used for, but I think other witnesses did testify to the same matter you have gone into. We will let it go in.

Mr. WHEAT. Q. Now, when you cut your pondosa logs from your area, about how many legs did you put out per thousand board feet?

Mr. BURR. I object as not proper cross-examination. That is another line still.

Mr. WHEAT. All right. Let's have it understood. I will take the witness.

Examiner DE BRULER. You may.

Mr. WHEAT. All right.

Mr. BURR. Let the record show this is defense testimony.

Mr. WHEAT. That is perfectly agreeable to me.

W. C. GEDDES was thereupon called as a witness and, having been heretofore sworn, testified as follows:

Direct examination by Mr. WHEAT:

Q. About how many logs per thousand board feet do you cut?

2006 A. Our logs will run about five to the thousand.

Q. And are you about the average of the ponderosa used now marketed as pondosa?

A. Well, they might be slightly higher; they might be slightly larger.

Q. Your logs are slightly larger?

A. I would say so.

Q. And about what, in your opinion, is the average number of logs per thousand feet on the general average of those marketed as pondosa?

A. That is a question I could not answer.
Q. You could not answer that?
A. No. Nobody can.
Q. You think they are slightly smaller than yours?
A. Yes. I think so.
Q. But do you cut a particularly good grade of pondosa lumber?
A. We think so.
Q. You cut your clear lumber from the outside of the log, do you?
A. The center, if we could get it.
Q. But do you cut it from the center?
A. Sometimes.
Q. Yes.
A. Occasionally.
2007 Q. That is unusual, is it not?
A. Yes.
Q. Now, where does your shop lumber come from, does it come from the part of the log that has knots in it?
A. Yes, sir.
Q. And it is shop lumber because there are clear cuttings between the knots, is that the idea?
A. Yes, sir.
Q. And what is your common lumber? Are the knots more scattered over the log so that you cannot get these clear cuttings?
A. Yes, sir.
Q. Now, if you know, I wish you would tell me whether or not there is any general or average difference between the wood marketed generally as pondosa and that which is marketed as California white pine.
A. There is not any difference except the California tree, perhaps, is larger. You get a wider type.
Q. And what are the general uses of this pondosa lumber?
A. General utility wood.
Q. Well, now, what do you use the clears for?
A. Well, interior finish, siding.
Q. What do you use the shop lumber for?
A. It is used in sash, door, cut up.
Q. The common lumber, I suppose, is used for sheathing?
2008 A. Sheathing.
Q. Cut up, and boxes, and so forth?
A. Yes, sir.
Q. In your opinion, is pondosa lumber as you market it, a valuable wood for the uses to which it is properly put?
A. If properly put; yes.
Q. And do you think it sells upon its merits for the uses for which it is most fitted, by its appearance, quality, and utility?
A. I do.
Q. Yes?
A. I think you could sell it, it don't make any difference under what name. It does not need to usurp a name to sell it.

Q. What material change in the uses of ponderosa lumber has there been from the inland empire since you have changed to the name pondosa?

A. I do not know of any.

Q. It is used for the same purposes as it was before it was changed under that name?

A. So far as I know.

Q. Then I take it that you do not feel that you were prejudiced in the market when you changed your name to pondosa?

A. Repeat that question. I do not understand it.

2009 Q. I say, you do not feel that you were prejudiced in the market when you changed your name to pondosa?

A. No, I do not think so, individually.

Q. And do you think that this particular lumber is better known to the trade in general that uses it under the term pondosa than it was under the many terms before used?

A. Yes, sir.

Q. Is the sale of pondosa increasing or decreasing?

A. It has been decreasing the last——

Q. I am not talking about the present slump in the lumber business, but in general over a period of five years, we will say?

A. I can speak only for our own company and general knowledge. I do not think that it has decreased.

Q. Does your pondosa lumber compete directly to any great extent with southern yellow pine?

A. No.

Q. Do you find that Idaho white pine competes with the pondosa lumber?

A. In a very limited way in the lower grades.

Q. I see. Why is that?

A. Because it is used for cheap crating, or something of that sort.

Q. And Idaho white pine enjoys a differential in price, grade for grade, over your pondosa lumber, does it?

2010 A. Yes, generally speaking.

Q. Has that been true for a great many years?

A. As long as I have known it.

Q. Do you find any great competition with northern white pine?

A. No; except in the lower grades again, when we meet their markets.

Q. Now, why is it that you do not find a competition with that pine?

A. I do not know. We do not have contact enough in the trade here. Too much of our stock is sold through the wholesaler and we have not the direct contact to know these things.

Q. Do you know how your pondosa pine is resold by the people to whom you sell it?

A. I do not.

Q. Have you ever investigated that matter?

A. No.

Q. As a member of this committee who adopted this name, are you interested in having that name used to the ultimate consumer?

A. Yes, sir.

Q. What efforts have you made, if any, to have that name used to the ultimate consumer?

A. By species marking it. We adopted a species mark for
2011 our wood.

Q. And what is that mark?

A. I might draw it for you?

Q. Just describe it.

A. Two P's is what it is supposed to be. When we come to register that there was another mark used by Dupont, that they prohibited us from using two P's, so we drew a tree representing a pine tree, as near as we could, but separated by two distinct marks. I could show you in a second.

Q. Your description is sufficient. How do you use that mark?

A. We stamp it on the end or edge; we did until we were stopped from the use of a machine.

Q. I see. You do not do that.

A. Only by hand work.

Q. Is it done on a large proportion of your lumber?

A. Not on a large proportion of our lumber. I do not know what others are doing. We are advertising that species marked lumber. Pick up any magazines and you will find it.

Q. But a very small proportion is species marked?

A. In our plant.

Q. Who adopted this species marking, as you call it?

A. The Western Pine Manufacturers' Association.

Q. You are a member of that association, are you not?

A. Yes, sir.

2012 Q. You do not know, do you, whether this lumber that you market as pondosa is still sold in the trade under some name containing the word white?

A. I do not know, by not having contact with the trade, with the retail trade.

Q. It is the same lumber in general as was sold under various names including the word white prior to the adoption of the word pondosa, is it not?

A. Yes, sir.

Q. Yes.

A. The tree has not changed any.

Q. Now, is your pondosa, grade for grade, cheaper than Northern white pine?

A. I am not familiar with the price of it, but I assume it is.

Q. Do you know whether or not there is a price differential between certain grades of so-called California white pine and certain grades of so-called pondosa pine in the markets where you deal?

A. Read that question.

(Question read.)

A. It varies; that is, a dollar or two.

Q. What is that differential in general? Give me a description of it?

A. Well, you would have to decide on some specific grade.

2013 Q. We will take no. 1 shop.

A. There is usually from one to two dollars a thousand.

Q. In favor of yours?

A. In favor of California.

Q. And why is that?

A. I think largely because they are able to ship—or will ship—straight grades. The stock perhaps is a little wider and they get a little better cutting value. I do not know as to that, except I have always figured it was because of their being able to ship straight grades in one car, where we dislike to do that.

Q. Has that existed during your whole experience?

A. Yes.

Q. With the ponderosa wood?

A. Yes.

Q. Then, throughout your experience in cutting and manufacturing Pinus ponderosa, and in your experience with the Western Pine Manufacturers' Association, have the relative price levels of these various woods, Idaho white pine, and wood now marketed as pondosa, and the wood marketed as California white pine, been approximately the same; I say the relative price levels?

A. Oh, I should not answer that directly, because it——

Q. Idaho white pine has always enjoyed a differential over the other, has it?

A. In nearly all instances. There has been times when it

2014 has not.

Q. Well, excluding the unusual instances?

A. Yes, sir.

Q. In general?

A. In general, yes.

Q. And, in general, what you stated about the California white pine, does that apply over a period of years.

A. That would apply over a period of years on the grade that we discussed, of shop.

Q. Take, for instance, C select, does that apply to that?

A. No, not by any means.

Q. Tell us why not?

A. For the simple reason that when California gets a quantity of C selects or any of their selects they go out and dump them under our price.

Q. Tell me what you mean?

A. Dump, I mean, unload. They sell them at their own price and if we got any business we have to meet it or cut under them.

Q. Do you ever cut under them?

A. Yes, at times.

Q. Is that a general matter?
A. Not as a general matter.
Q. How about the other select grades, the clears, so called?
A. What do you mean by clears? C select is practically clear.

2015 Q. B and better. Do ponderosa and California white pine sell on a parity on the eastern markets?
A. On these grades?
Q. Yes?
A. In the retail trade; yes.
Q. Now, in the wholesale trade they do not?
A. What I mean by the retail trade, you better let me explain.
Q. Yes; sure.
A. The yards, the small yards, but when they come into the industrial plants that parity may not exist.
Q. You say it may not exist?
A. Well, it does not exist.
Q. What is the situation in industrial business?
A. In the industrial business the pondosa operator in this section does not get as much clears as California.
Q. Why is that?
A. Because of the size of the tree.
Q. A smaller tree in general, isn't it?
A. Yes.

Examiner DE BRULER: Hasn't that been gone over at least a half a dozen times?

Mr. BURR. Yes.

Mr. WHEAT. I want to be certain that is covered completely in the record.

2016 Q. Well, now, in the common grades I understand, or am I correct in understanding, that the wood marketed as pondosa obtains as good even a better price than California white pine in general?
A. Yes.
Q. Grade for grade?
A. Yes.
Q. And the reason of that, is it, sir, that the knots are closer together and tighter and sounder?
A. Do you want me to——
Q. I wish you would, please, Mr. Geddes.
A. The simple reason is that they do not know how to manufacture it down there.
Q. You obtain, do you, what you consider to be a better grade of common lumber?
A. Yes.
Q. Grade for grade?
A. Well, if it is put up grade for grade to sell under our grades, it would be practically the same.

Q. Now, would it sell for about the same price?

A. About the same prices; yes.

Q. And these price relationships have existed, have they, all through your experience in the lumber business in general?

A. So far as California was making their common lumbers,
2017 it has. They have just recently awakened to the fact that there was some value to common lumber.

Q. Now, on the other grades, have these general price differentials and levels that you have mentioned existed for many years?

A. Yes.

Q. By the way, how long have you been familiar with the trade name "California white pine"?

A. I do not know. Years.

Q. Years.

A. Yes.

Q. I want to get straight on one thing about this sap over heartwood, I am still at a loss on it. If counsel will permit me, I want to ask this witness if the amount of sapwood is greater in a Pinus ponderosa log equal in size to a Pinus moticola log, does it *d*ollow that in the total mill run of the lumber, due to the difference in the average size of those logs, the sap lumber that you get out is about the same?

A. I have never manufacured any Pinus monticola, and I could not answer that question.

Q. Well, I will get that from someone else then. By the way, what does the word "white" to you in white pine signify?

A. What does it signify?

Q. Yes; what does the word mean?

2018 A. Why, naturally, it would mean soft.

Q. Soft?

A. Soft. Light.

Q. Good texture?

A. Good texture.

Q. Workable?

A. Workable.

Q. Do you run a mill—by the way a remanufacture mill?

A. No.

Q. Oh, you do not?

A. Thank God.

Q. Now, how long have you been familiar with the word "white" in connection with pine and lumber?

A. I think since I had anything to do with selling.

Q. That is a good many years, is it not?

A. Yes, sir.

Q. And when you first began to sell that lumber did it signify—what wood did it signify in the tree?

A. To me it signified Oregon white pine.

Q. Now, just what does it signify to you, I mean under the new name here?

A. Today known as pondosa pine.

Q. Oh, I see. That is the first time you heard the word "white" in connection with pine?

Examiner DE BRULER. It seems to me that is immaterial.

2019 That has been gone into.

Mr. BURR. This is a new question.

Examiner DE BRULER. It is encumbering the record with matters that certainly amount to nothing in this case.

Mr. WHEAT. Do you wish, Mr. Examiner, to have that statement remain in the record that it amounts to nothing in this case?

Examiner DE BRULER. For the reason that it has been gone into so much.

Mr. WHEAT. I want that statement.

Examiner DE BRULER. What I mean to say, it has been gone over and over so much. It does seem to me like it has been gone over too much.

Mr. BURR. I would like to unite in counsel's motion, if he wants to get into this Oregon white pine.

Examiner DE BRULER. All right. Let's be brief about it.

Mr. WHEAT. Q. What was the next time you heard the word "white" in connection with lumber?

A. I cannot remember when it was.

Q. Well, that was the general thing as you first knew it?

A. Why, yes; because that was the first——

Q. Did you ever manufacture or sell lumber as Oregon white pine?

A. Yes.

Q. And that was Pinus ponderosa lumber?

A. Yes.

2020 Q. When was this?

A. That was up until the association adopted the name western white pine for Pinus ponderosa.

Q. By the way, that is a matter that I really did not want to go into. When did the Western Pine Manufacturers' Association adopt the name western white pine for Pinus ponderosa?

A. I cannot tell you the date.

Q. About when?

A. Oh, along about 1915 or '16, or somewhere along there. I do not remember the date.

Q. Then, was the wood used fairly generally, that name, throughout the inland empire region?

A. No; I would not say fairly general.

Q. Well, didn't the wood marketed as western white pine have a differential in price over the wood marketed under those names that you have mentioned?

A. I——

Q. In general?

A. I could not answer that question in general. I do not know what the others got for their product.

Q. You do not know of any such differential in price?
A. No.
Q. In its flavor?
A. No.
Q. Do you think that the name had anything to do with the
2021 price they got for the product in this area?
A. I do not know whether it did or not.
Mr. WHEAT. I think that is all.
Mr. BURR. I have one question on redirect and then I would like to go to cross.

Redirect examination by Mr. BURR:

Q. On redirect examination I would like to ask you this; Lodgepole pine, as sold by you under the term "pondosa", is merely with the common-lumber grades for box purposes and the like, on Pinus ponderosa, is it?
A. Yes; and we would not get five thousand feet of lodgepole pine in the manufacture of forty million feet annually, I do not believe.
Mr. BURR. Now, may the record show that my examination from here on is in the nature of cross-examination?
Examiner DE BRULER. All right. I hope you will make it as brief as possible.
Mr. BURR. I shall make it as brief as possible.

Cross-examination by Mr. BURR:

Q. Now, Mr. Geddes, turning to cross-examination now, did the Weyerhaeuser interests employ the name western white pine for
their ponderosa products in or about 1916, as you have
2022 testified that the association adopted it?
A. I do not think they ever adopted it or used it.
Q. Were they members of the association?
A. Yes, sir.
Q. And that time?
A. They were.
Q. Just they did not go in with the rest on the adoption of that name?
A. They and others.
Q. They and others stood out?
A. Yes, sir.
Q. Were you present at any time when their reason was expressed at any meeting of the association for not going in on that?
A. Yes. I could not give the dates.
Q. What reason did they give for not joining?
Mr. WHEAT. I want the record to show my objection to the reasons for the Weyerhaeusers not joining them on the same grounds I have many times stated.
Examiner DE BRULER. I understand. Be brief about it. You can answer.
Mr. WHEAT. Exception.
A. Repeat your question.

Mr. BURR. Q. What reason did they give for not joining?

A. Because they believed that the word western white pine
2023 was a misnomer, or not a proper name for the wood.

Q. On account of the word "white", was it?

A. I do not know all of their reasons, but I know that the Government called Idaho white pine western white pine.

Q. Now, is there a wide difference in the characteristics of pondosa lumber, or ponderosa species of lumber, ranging in different parts of the territory where it grows?

A. Yes.

Q. Is that a wider range than the Idaho white pine range?

A. A wider range than the Idaho white pine range?

Q. Yes.

A. Yes; it grows in a wider area.

Mr. WHEAT. If Your Honor please, I have not asked any questions on variability. If Mr. Burr desires to take the witness back, I will agree with him.

Mr. BURR. He has been asked questions with regard to characteristics of the timber, and the lumber, and the sap, and various things, and the variability would be part of the characteristics.

Mr. WHEAT. Go ahead.

Examiner DE BRULER. Read the the question.

Mr. BURR. He has already answered, and counsel has withdrawn his objection.

Examiner DE BRULER. All right, go ahead.

Mr. BURR. Q. Now, you testified with regard to the price
2024 differential. Is that due to smaller natural defects, that is, the preference of white pines in the market, is that due to the smaller natural defects in the wood?

Mr. WHEAT. Which wood do you refer to, Mr. Burr, now?

Mr. BURR. I am referring to both woods now. I am trying to.

Mr. WHEAT. Either of them?

A. I could not answer as to the Idaho white pine or monticola, because I have not marketed any of it.

Mr. BURR. Q. Now, does the word "white pine" in California white pine help to enable the California white pine products to sell at a higher price than the pondosa pine?

Mr. WHEAT. Now, if Your Honor please, this is certainly not cross-examination. If Mr. Burr desires to take the witness——

Examiner DE BRULER. I think that has been gone into pretty much.

Mr. BURR. I know; but this is a question of preponderance, if Your Honor please. We do not know how many score of witnesses this gentleman is going to bring down there in San Francisco.

Mr. WHEAT. Several.

Examiner DE BRULER. What is the question?

(Question read.)

Examiner DE BRULER. If you know.

Mr. WHEAT. Just a moment. The witness on direct examination by Mr. Burr answered that question once before. Now, if Mr. Burr desires to impeach his own witness, he must take him on direct again. It is not cross-examination.

Mr. BURR. That question was not asked on direct examination.

Examiner DE BRULER. If you know, you can answer that. Your objection is overruled.

Mr. WHEAT. I want an exception note.

A. Read the question.

Mr. BURR. Read the question to him.

(Question read.)

A. I do not know.

Mr. BURR. That is all.

(Witness excused.)

Mr. WHEAT. Does this conclude your witnesses at this hearing, sir?

Mr. BURR. This concludes my witnesses in the inland empire hearing, as far as I know.

Mr. WHEAT. I wish to call Mr. Wychoff.

Mr. BURR. I might have something in rebuttal, and I should prefer to put it on new rather than come back.

STEPHEN N. WYCHOFF was thereupon called as a witness, and, having been duly sworn, testified as follows:

Direct examination by Mr. WHEAT:

Q. What are your initials, Mr. Wychoff, and how do you spell your name?

A. Stephen N. Wychoff.

Q. Mr. Wychoff, where do you reside?

A. Spokane.

Q. And you appeared at this hearing on subpoena by the respondents in the case now in hearing?

A. Yes, sir.

Q. Now, what is your business here in Spokane, sir?

A. In the employ of the United States Department of Agriculture, and I am in charge of an office located at Spokane, charge of working on the control of a disease known as the white-pine blister rust.

Q. And what is the nature of this disease that you mention?

A. It is a fungus disease which attacks the white pines and has an alternate host, the group of plants, the currant and gooseberries, wild and cultivated.

Q. And are you alone in this office, or have you assistants?

A. I have assistants.

Q. Will you state how many men are in your employ in the summer and winter here?

A. We have a permanent organization of about thirty men, most of whom are located in Spokane and some at other towns in the West. We have a summer or temporary organization varying from one hundred and fifty to two hundred.

Q. And are they scattered throughout the western territory?
A. Yes, sir.
Q. In the territory of what lumbering operations?
A. Montana, Idaho, Washington, Oregon, and California.
Q. With what particular species of trees do you deal in this work?
A. Well, our work thus far has centered around the western white pine, or Pinus monticola, and the sugar pine, Pinus lambertiana.
Q. Has the white-pine blister rust attacked Pinus lambertiana yet?
A. Not to the best of our knowledge.
Q. That includes both the stands of lambertiana in California and Oregon?
A. Yes, sir.
Q. Do the stands of so-called penuine white pine, Pinus monticola, overlap the stands of Pinus lambertiana?
A. You mean do they grow in the——
Q. Yes; do they grow in the same forests?
A. Yes, sir.
2028 Q. And has this white-pine blister rust grown in its attacks in any of these trees in the last few years?
A. I do not understand you.
Q. Has it been a more serious problem, year by year?
A. It has, for the reason that it is a disease of foreign origin which is spreading now through this western pine.
Q. When did it first attack Pinus monticola?
A. It first attacked Pinus monticola in its native State very shortly after it entered the western part of North America in 1910, at Vancouver, B.C.
Q. Now, has it attacked Pinus strobus, to your knowledge?
A. Yes, sir.
Q. And you have made a study of that, too, have you?
A. I have seen it years back on Pinus strobus.
Q. Has it constituted a serious problem in connection with Pinus strobus?
A. It has constituted a serious—a difficulty which is now being overcome by control methods which have been adopted.
Q. The control methods consist in the killing of the alternate hosts, do they?
A. Yes, sir.
Q. Those are methods which must be pursued constantly in order to maintain the control?
A. The forests have to be kept at constantly.
Q. Is that the method of control in this area?
2029 A. That is the method which we are adopting for this area.
Q. Do you know whether or not the white pine blister rust is spreading elsewhere in the stands of Idaho white pine, in through Oregon and towards the stands of Pinus lambertiana?
A. Yes, sir.

Q. Does that constitute a serious menace to Pinus lambertiana?

A. We think it will constitute a serious menace unless these control operations are put into effect.

Q. How does that white pine blister rust operate?

A. It attacks the needle of the pine and the fungus grows down through the needle into the twig and on down into the branch and in many cases gets into the tank of the tree, and there the action is a circling action and when it finally grows all the way around the trunk or branch the tree is killed.

Q. Is that because it has attacked the live portion of the tree just under the bark?

A. Yes, sir. The cambium.

Q. Now, Mr. Wychoff, does the Federal Government assist in a monetary way in that work of fighting the white pine blister rust in this area?

A. The Federal Government has a direct interest in the fighting of white pine blister rust in the Western United States, for the
2030 reason that a great—well, a good deal of the white pine timber which is more likely going to be attacked in the national forests. It also recognizes a responsibility in working out methods of control for the lands which are not in Federal ownership.

Q. Has the Federal Government contributed any money toward this control?

A. You mean on private lands?

Q. On any lands?

A. Yes, sir.

Q. Can you tell us how much it has contributed, say contributed last year?

A. I have some figures here. Can I refer to them?

Q. Yes. Refresh your memory.

A. They are rather numerous.

Q. Just give it to us in general. We do not want any details. About what did the Government spend last year in this effort.

A. Under the terms of agreements or understandings which we have with the five Western States which I have mentioned, the Federal Government spent approximately $103,000.00 and the States spent approximately $87,000.00 on this work.

Q. Did any private lumber interests contribute toward the support of your work?

A. They contributed toward the support of the work on their own land.

2031 Q. And about how much did they put in, if you know?

A. There was about $20,000.00 in north Idaho for actual work, field work.

Q. And some of the States have contributed services as well as money, have they?

A. Yes, sir.

Q. Does that run into a considerable number of men?

A. Yes, but not for a full-time use of their men.

Q. I see.

A. Those men are doing certain types of work. It is while they are doing their duties for the State.

Q. Now, do you know, by the way, if your studies have carried you thus far, whether this blister rust attacks all five-needle pines?

A. To the best of my knowledge it attacks all species of pines which bear their needles in groups of five, with the exception of two species.

Q. What are they?

A. The teney pine.

Q. What is that botanically?

A. Pinus teneyana.

Q. And the Pinas arizonica.

Mr. WHEAT. That is all.

2032 Cross-examination by Mr. BURR:

Q. Now, the teney pine and the arizonica, they are in territories that have not yet been reached, are they, by this blister rust?

A. Yes, sir.

Q. Do you feel sure that they won't attack the teney and the arizonica, the blister rust insects, or whatever they are?

A. That has been the subject of special study in the laboratories of the Department of Agriculture in Washington, D.C. They have there repeatedly endeavored to inoculate these species of pines with this disease and have not been successful.

Q. Have they tried to inoculate the lambertiana with it?

A. Yes, sir.

Q. And it works fine?

A. Yes, sir.

Q. That is, lambertiana is subject to this disease, is it?

A. Yes, sir.

Q. How about the Pinus ponderosa, did they ever try that?

A. Yes, sir.

Q. How does it work with them?

2033 A. Not susceptible.

Q. Not susceptible at all?

A. Yes, sir.

Q. They are immune, are they, without ever having recovered from the disease?

A. Yes, sir.

Q. Now, what reason, if you know—do the botanical studies of your Department indicate, that makes the so-called "genuine white pines" susceptible——

Mr. WHEAT. If Your Honor please, he has used the predicate genuine white pine.

Mr. BURR. Q. The monticola, lambertiana, and strobus are genuine white pines, aren't they?

Mr. WHEAT. This gentleman has not made use of any such terms.

Mr. BURR. He is an expert along this line, and everybody has said that they are.

Mr. WHEAT. I have not called him as such.

Examiner DE BRULER. It seems to me this is merely for the purpose of paving the way to another question.

Mr. WHEAT. Mr. Examiner, I have not qualified him as such an expert, nor do I admit that there is any such thing as genuine white pine. We used the term roughly in this case, but I will not admit that.

Mr. BURR. It has been used by all witnesses in this case.

2034 Mr. WHEAT. Yes; it has been used roughly.

Mr. BURR. Yes. I am using it roughly.

Examiner DE BRULER. These technical matters, I do not believe the Commission is interested in as much as what this man——

Mr. BURR. Are you a botanist at all, sir?

A. To a limited extent.

Q. Well, the Pinus strobus is recognized by botanists to conform such view as a genuine white pine, is it not?

A. I do not know exactly what you mean by genuine white pine.

Q. All right, I will withdraw the question, if you do not know what genuine white pines are. Now, what is there in the quality or characteristics of the various types of lumber, or of the tree, I should say, that you have testified to as being subject to blister rust, what is there which makes these trees susceptible to this disease and the others immune, if you know?

Mr. WHEAT. Yes; I was going to add if he knows?

Mr. BURR. I know. I put that in here instead of your belief.

A. I wish very much that we knew, but we do not.

Q. Has the Department made a special study to ascertain what variation of tree it is that makes it immune or subject to that disease?

A. Not to my knowledge.

2035 Q. You have certainly not, at any rate?

A. No, sir.

Q. Is that true?

A. Yes.

Q. Now, how close must the alternate hosts be to the pine tree that is susceptible in order to have the disease progress?

A. The currant or gooseberry—under eastern conditions the maxium distance of spread from currant or gooseberry to white pine is nine hundred feet.

Q. I see.

A. In the West it is very likely somewhat further, a maximum of one mile.

Q. Now, the only alternate host, then, is the wild or domesticated currant and gooseberry bush; is that true?

A. Yes, sir.

Q. And these are perennial plants, are they not?

A. Yes, sir.

Q. This disease has not reached the lambertiana forests as yet; do I understand you correctly?

A. It has been on the alternate host at the extreme northern range of the Pinus lambertiana in Oregon but no Pinus lambertiana trees have there yet been found infected.

Q. You feel sure from your experiments that they are subject to it, or do you not?

A. The Pinus lambertiana has been observed in Europe in
2036 parks and has there been found infected.

Q. Have you got any data as to the percentage of deaths from infection? Is it a fatal disease necessarily, or do they recover?

A. It is very, very seldom that a tree ever recovers from an attack in this district.

Q. Does it continue to live for a long period after becoming impregnated with the disease?

A. That depends almost entirely upon the size of the tree which is attacked.

Q. Have you developed any curative methods?

A. No, sir.

Q. No curative methods have been developed?

A. No, sir.

Q. How long have you been studying that at your Department?

A. Since approximately 1916, in the eastern United States.

Mr. BURR. That is all.

Redirect examination by Mr. WHEAT:

Q. Does this blister rust attack young as well as old trees?

A. Yes, sir.

Q. Is it more liable to be fatal to young trees than old trees?

2037 A. I do not think it is any more liable to be fatal. It will kill a younger tree in a much shorter time than an old tree.

Q. And that is true in both east and west areas, is it?

A. Yes, sir.

Q. You stated the distances from the gooseberry to the pine which would enable infection to pass. How far in the other direction, from the tree back to the gooseberry, will this infection pass?

A. We believe a maximum of 180 miles.

Mr. WHEAT. That is all.

Recross-examination by Mr. BURR:

Q. But it has got to pass both directions in order to keep going, has it not?

A. Both types of plants are necessary for the life cycle of the disease?

Q. For it to continue?

A. Yes, sir.

Redirect examination by Mr. WHEAT:

Q. If at say one hundred miles away, it should infect a
2038 gooseberry, that gooseberry could infect pines if they were grown within the area mentioned by you around that gooseberry?

A. Yes, sir.
Mr. WHEAT. That is all.
Mr. BURR. That is all.
Examiner DE BRULER. You are excused.
(Witness excused.)
(Thereupon an adjournment was taken until 2:00 o'clock p.m. of the same day, Wednesday, January 22, 1930, at which time the hearing was resumed, and the following proceedings were had:)

2039 Before the Federal Trade Commission

In the matter of White Pine cases

Docket Nos. 1620–1669, inc.

SPOKANE, WASH., *January 22, 1930.*

Met pursuant to adjournment, 2:00 o'clock p.m.
Before Ellis De Bruler, examiner.
Appearances: Eugene W. Burr, for the Federal Trade Commission.
Messrs. McCutcheon, Olney, Mannon & Greene (by Mr. Carl I. Wheat) for the respondents.

Examiner DE BRULER. We will now proceed with the hearing in keeping with the adjournment.

2040 HENRY C. KLOPP was thereupon called as a witness, and, having been duly sworn, testified as follows:

Direct examination by Mr. WHEAT:

Q. State your name?
A. Henry G. Klopp.
Q. You reside in Spokane?
A. Yes, sir.
Q. You are here under subpoena on behalf of the respondents, are you, sir?
A. Yes, sir.
Q. What is your business, Mr. Klopp?
A. I am what is commonly known as a sash and door manufacturer.
Q. Here in Spokane?
A. Yes.
Q. What is the name of your company?
A. White Pine Sash Company.
Q. And what is your position with that company?
A. I am the manager of it.
Q. And have you been in that business for years?
A. Yes, sir.

Q. How long?

A. Well, I started selling millwork on the road in 1893
2041 and went to work in an office in the factory in 1895.

Q. Where were those early experiences?

A. The first concern that I sold with was located in Chicago, and the factory that I afterwards became connected with was located at Minneapolis.

Q. And how long were you in that work there?

A. I was eleven years at Minneapolis.

Q. And after that where did you go?

A. I went to Portland.

Q. And were you in the lumber business there?

A. Yes. I operated factories at Seaside, Oregon, and at Astoria.

Q. Those were manufacture plants, were they?

A. Yes; the part that I operated were remanufacture plants, this same line of work.

Q. Manufacturing what type of product?

A. At Seaside, Oregon, we manufactured out of spruce and hemlock, and at Seaside, Oregon, spruce, hemlock, cedar, and fir.

Q. And while you were in Minneapolis what was the product?

A. Northern white pine.

Q. And in all these remanufacture plants that you mention you are making sash and doors; is that true?

A. Not in all of them. We do not manufacture doors to
extent in the present plant, and at Minneapolis we did not
2042 manufacture doors.

Q. What did you manufacture?

A. Well, at Minneapolis we manufactured sash, mouldings, and frames principally.

Q. And at the plant at Spokane what do you manufacture?

A. The same items.

Q. And out of what woods?

A. We manufacture those out of pondosa pine and Idaho white pine.

Q. Can you approximate the number of sash a day that your factory manufactures?

A. Well, at full capacity——

Q. Pairs—pairs of sash—that is, windows?

A. At full capacity we make eighty-five hundred pair of sash a day. At the present time we are running about four thousand. That is not alone in this factory; we also have a factory over in Missoula, Montana. The two factories produce those amounts.

Q. And the reason for the drop at the present time is because of the particular condition in the lumber market at this time, is it?

A. Yes. The lack of demand.

Q. About how many ash would you say, in your opinion, have been manufactured under your management in the last twenty years?

A. Well, over twenty million.

2043 Q. Do you find that there is any general demand for Pinus ponderosa wood for sash and door purposes?

A. Yes, sir.

Q. Is it a large demand?

A. Yes, sir.

Q. A general demand?

A. Yes, sir.

Q. Do you find and have you found in your experience that that use is a natural use of the Pinus ponderosa lumber?

A. Yes, sir.

Q. Why is that, sir?

A. Because Pinus ponderosa produces a large amount of what is sometimes termed factory plank, more commonly termed shop lumber.

Q. Just what is shop lumber?

A. Shop lumber is a type of lumber that has usually large knots, or defects of some character that are large, that would weaken it for construction purposes for the use of the piece as a whole, but it has clear cuttings in between the knots which are suitable for working up into general millwork, such as sash and doors, and frames.

Q. Now, while we are right on that point, does the Idaho white pine that you are familiar with produce as great a proportion of this so-called "shop lumber" as the Pinus ponderosa?

A. No; it does not.

2044 Q. Why not?

A. Because of the character of the knots and the amount of them. Idaho white pine, as cut on the average, has a large amount of small knots scattered through it, so that a good many of the cuttings that you would take out would be all right for millwork as far as the actual practical use is concerned are not wanted, because the trade has become accustomed to clear wood to be used.

Q. Now, do you have any knowledge of the approximate—whether or not this old Pinus strobus, so-called "northern white pine," produces shop lumber in a large degree?

A. Well, it did in days gone by, but as they got those forests cut over most of the stands that had the large trees in them were cut off, so that the production, the percentage relationship of the shop lumber to the whole cut, was much smaller.

Q. Is that true today; do you know?

A. Yes.

Q. Now, if only northern white pine as it now exists, Idaho white pine, and sugar pine were used for sash and doors, what, in your opinion, would happen to the supply of those woods?

Mr. BURR. Wait a minute. I do not think you have qualified him along the line of the entire amount of lumber available.

Examiner DE BRULER. He may answer.

Mr. WHEAT. Q. All right. If you know.

2045 Mr. BURR. Wait a minute. I object, on the ground this witness is not qualified to answer.

Examiner DE BRULER. Objection overruled. Exception noted.

A. Well, as to Northern white pine and Idaho white pine, there is not nearly enough cuttings coming on. I really do not know about the quantity of sugar pine available.

Q. Well, now, when you say there are not nearly enough cuttings coming on, do you mean—you mean to supply the demand for shop lumber?

A. Yes. There is not enough shop lumber produced in Northern white pine and Idaho white pine by—a very large percentage, to supply the amount of such lumber needed, such grades of lumber needed to produce the sash and doors that are wanted for building purposes today.

Q. And you are not directly familiar with sugar pine?

A. I am not.

Q. Now, in your opinion, must Pinus ponderosa enter this so-called "shop trade?"

A. Yes.

Q. And do you feel that it is a wood well fitted for these uses?

A. I do.

Q. Are you in competition with sash and doors produced from Pinus ponderosa marketed as California white pine?

A. Yes, sir.

2046 Q. Do you find in your business that you suffer from what is generally termed sales resistance because of the use of the term "white" in the trade name California white pine?

A. No.

Q. Do you feel that you are hampered in your business by the fact that the California manufacturers have retained their old trade name California white pine?

A. No.

Q. Has there been any change in the general price relationships between California white pine and what is now marketed as pondosa since the change to that name here?

A. No. Not generally.

Q. Now, I wish you would describe to the record what those price relationships have been during your experience.

A. Well, going back some years, California while pine shop lumber always sold at higher prices on the average than the pondosa pine, I will put it, as describing the shop lumber from this district. The reason for that being that the trees in California on an average grow larger, producing larger logs, and comparatively older and larger trees, so that they have more of the old-growth type, and consequently produced larger shop plank, and the situation of just the human situation of when you have a large amount of anything you are not struggling to get it, you would naturally furnish a bet-

2047 ter grade than a concern that only had a small amount of shop lumber coming out of its logs and had to hustle pretty hard to get an amount to satisfy their trade in proportion to the other items that they would produce from the logs.

Q. Now, just how has that been material in the general price relationships?

A. Well, a nominal grade such as no. 2 shop in California white pine, for the reasons I have given, will produce a bigger percentage of sash and door cuttings than the same nominal grade of pondosa pine and cut in the Spokane district.

Q. And for that reason it has commanded a slightly higher price, has it?

A. Yes.

Q. Has that relationship been changed at all since the change of name to pondosa, and if so, has the name anything to do with it, in your opinion?

Mr. BURR. Wait a minute. One question at a time.

Mr. WHEAT. Q. All right. I will ask whether there has been any change?

A. The only change has been the reverse, due to the fact that a large number of woodworking factories come into the Spokane district within a relatively short period and created competition for pondosa pine lumber, so that for a period of from three to five years the shop lumber in the immediate territory surrounding Spokane for a distance of two hundred and fifty miles was higher priced
2048 than California white pine at the mill in this same time, but that was due to a business condition of supply and demand. You see the factories in the Spokane district has what is known as a milling and transmit basis that they work on in connection with their freight rates, the point being that they get a reduction of a certain portion of their inbound freight for shipments where the product is destined for shipment East. Now, the limit that you can bring lumber into Spokane is two hundred and fifty miles, so that, of course, the factories in Spokane only have the product of the sawmills located within two hundred and fifty mile circle, and this increase in factory production in this particular district caused that advance in the price of shop lumber in this district.

Q. Yes. Now, over the country in general, do you know whether there has been any particular difference in the price differentials that you have mentioned?

A. No; not that I know of. I would say in general probably not.

Q. Do you know of any price differential which has been caused, in your opinion, by the use of any particular name for Pinus ponderosa wood?

A. No.

Q. Do you know, or may I ask you this, of any sales resistance that you meet in selling your product, in your opinion has any
2049 portion of it been caused by the name used for any other products of Pinus ponderosa?

A. I do not think so. No.

Q. Are you selling your windows, now, in your opinion, with as little sales resistance as when this wood now known as ponderosa was sold generally as white pine?

A. No, no more.

Q. It was generally sold as western white pine, was it, at one time, fairly generally?

A. Yes.

Q. Were these certain companies that did not sell it as western white pine?

A. Oh, yes; many of them.

Q. Do you know, if you do not know, of course state it, whether or not the companies which sold under some other name than western white pine and under some other name which did not include the word white, suffered generally from any trade differential against them, grade for grade?

Mr. BURR. Excuse me——

A. I do not know.

Mr. BURR. He says he don't know. We will agree on that.

Mr. WHEAT. Q. Is it, in your opinion, a question of supply and demand that fixes the price rather than the name which is applied to the lumber?

A. Yes.

2050 Q. Now, I will ask you whether or not Idaho white pine has during your experience, in your judgment, a differential in price, grade for grade, ordinarily, over the wood. marketed now as pondosa?

A. Yes, it has.

Q. That has continued for many years, has it?

A. Yes.

Q. Continues today, does it?

A. Yes.

Q. May I ask you whether or not there has been any change in that differential since the change in name to pondosa?

A. Yes.

Q. Now, will you explain what that has been?

A. Well, one of the large factors in the business saw fit to reduce the differential some time ago with the statement that the old talk about white pine becoming extinct was used so much that the trade was coming to a point or not relying on it any more and buying other woods, and in order to put white pine back on the market, as they stated, they reduced the price of it and built up to a larger volume in proportion to pondosa pine, and then after having the volume built up some, the demand came on stronger and there was a natural raising of the price again.

Q. The differential is now greater, is it?

A. It is now greater than it was, yes.

2051 Q. Now, when you say a large factor in the production of Idaho white pine, do you refer to certain of the Weyerhaeuser interests, so called?

A. Yes; I do.

Q. And are you connected with the Weyerhaeuser interests?

A. No, sir.

Q. In marketing your Idaho white pine, did you find it necessary to follow the reduction in price which was made by this group, to any extent?

A. Well, we naturally followed the lumber market in making our market price, although, of course, there are other factors that enter into it. If we got a big demand and might buy our lumber real cheap, we probably might take advantage of the demand and get as much as we could out of our articles.

Q. Yes; but, in general, did the price you got for Idaho white pine follow rather closely the price fixed at the time of this reduction you mentioned?

A. Yes; other things being equal we would follow the matter of cost in our selling price, whether it comes from raw material or labor, or other items.

Q. But at the present time you are getting more for your Idaho white pine, then, and for your pondosa than you were seven or eight years ago?

A. Yes, sir.

Q. By the way, was that a reduction in 1927, if you remember?

A. I do not know.

2052 Q. But it was within a comparatively recent period, was it not?

A. Yes.

Q. May I ask you this, too: Are the differences in general in the price of Idaho white pine and pondosa pine, under whichever name it has been marketed, in your experience do you think they are also in general caused by the law of supply and demand, rather than the name under which the lumber is marketed?

Mr. BURR. Wait a minute. This man has not qualified as an economic expert, and familiar with the law of supply and demand.

Mr. WHEAT. I will withdraw the question, then.

Q. I will ask you whether or not, in your opinion, the question of supply and demand for lumber of Idaho white pine and pondosa, respectively, causes the general price relationships, rather than more names?

A. Yes; I think it does.

Q. Well, let me ask you whether, in your opinion, you are put to any greater expense in marketing your Idaho white-pine products because of the use of the word "white" in the trade name of California white pine?

A. No; I do not think so.

Q. Have there been any changes in the uses to which ponderosa pine is put since the inland empire producers of that lumber

2053 changed the name to pondosa?

A. No; not of any consequence that I know of.

Q. Are the uses to which it is generally put at the present time, in your opinion, the natural uses of that wood?

A. Yes, sir.

Q. Do you think—in your opinion, and based on your experience, is this wood fitted for those uses?

A. Yes, sir.

Q. Does it satisfactorily meet those wants?

Mr. BURR. Counsel is leading his witness in every question.

Mr. WHEAT. Q. All right. I will ask you, does it satisfactorily meet those uses?

A. From our experience, it does.

Mr. BURR. *Peg* pardon?

A. From our experience, it does. We have been selling it for twenty years.

Mr. WHEAT. Q. I will ask you whether or not, in your opinion, if the California white-pine producers were to drop the word "white" from their trade name, would the uses to which Pinus ponderosa from California is now put be changed?

A. Why, I could not see that they would.

Q. Must this wood, in your opinion, go into the trade for the uses to which it is now put?

A. Yes.

Q. Are they its natural uses?

2054 Mr. BURR. Every question is suggestive.

Mr. WHEAT. I submit, Your Honor, that that is not a leading question.

Q. Are they in natural uses?

A. We think they are, or we would not have established a factory to manufacture these articles from this lumber.

Q. Do you know of any effort made by the pondosa manufacturers to force the retailers to stop using the word "white" in reselling that pine?

A. No.

Q. Do you know whether Pinus ponderosa wood has ever been marketed as yellow pine?

A. It has not, to my knowledge, as far as lumber or millwork is concerned.

Q. Are you in general familiar with the uses of southern yellow pine?

A. In a general way; yes.

Q. Are they the same or different uses from those to which Pinus ponderosa is put?

A. They are different.

Mr. BURR. We concede that.

Mr. WHEAT. We want the record to show it.

Mr. BURR. Well, it does show it.

Mr. WHEAT. Q. Let me ask you whether or not in your opinion the lumber produced from Pinus ponderosa as you know it is

2055 more nearer like, in its uses, in its general uses, the old northern white pine than the southern yellow pine?

Mr. WHEAT. Do you concede that, too?

Mr. BURR. Then it is to the southern yellow pine?

Mr. WHEAT. Yes.

Mr. BURR. Oh, yes; I concede it. I think the complaint concedes it.

Mr. WHEAT. I doubt it.

Mr. BURR. The complainant concedes that it differs more than it does from the yellow pine and white pine of the North. I think it concedes that. At any rate I will concede it for the record. I have asked witnesses that very question expecting that very answer and gotten that very answer several times. Will you read that question and let me make sure I have gotten that question correct when I say that?

(Question read.)

Mr. BURR. Then does southern yellow pine, then I interprosed and said I concede that.

Mr. WHEAT. Q. Going to the subject of marketability, Mr. Klopp, do you find that the wood marketed as ponderosa works up well in remanufacturing?

A. Yes, sir.

Q. Is it easy to work?

A. Yes.

Q. And easy to tool?

2056 A. Yes.

Q. Is it easier to work than Idaho white pine, to tool?

A. It is easier.

Q. Did you ever use it in your business for pattern making?

A. Pinus ponderosa?

Q. Yes.

A. Yes; we do.

Q. And just explain what your experience has been in that line.

A. Well, we only build patterns for machines we make for use in our own factory, but we have built quite a number of machines, varying in size from small machines two feet square and two or three feet high to machines that weigh five or six ton, and we have always used Pinus ponderosa for making patterns for those machines.

Q. Does your pattern maker ever use Idaho white pine?

A. Well, he has never used it in any particular quantity. He might use it if it is the first piece of wood he comes to if it looks as suitable, but the pine that he starts with when he is looking for a piece is Pinus ponderosa.

Q. You find it works satisfactorily for that purpose, do you?

A. Yes. It works easier than Idaho white pine.

Q. Is it as soft as Idaho white pine?

2057 A. Well, that particular part of it is possibly a little softer than we use in patterns.

Q. Have you recently come in contact with a frame taken from an old building in this city?

A. Yes, sir.

Q. Have you it in your office?

A. I have a piece of it in the office, a sill.

Q. Now, is it Pinus ponderosa?

A. Yes, sir.

Q. Where did it come from?

A. It came from a house formerly located in Brown's addition, which is in the west end of town here, one of the old residential districts, and I asked two people about the house that had reason to know how old it was——

Mr. BURR. Wait a minute. I am going to object as hearsay.

Mr. WHEAT. Yes. I think that is true, if that is hearsay.

Q. Have you made any investigation on the age of it, or from your own knowledge of the section could you say about what age it is?

Mr. BURR. The section, you say?

Mr. WHEAT. Well, of the place where it came from?

A. I was not here when the house was built, so I could not say. It is the oldest residence district in the city of any consequence, and the majority of the houses down there were built a long time ago.

2058 Examiner DE BRULER. About how long ago?

The WITNESS. Thirty, thirty-five years. One man said over thirty years, and the other one over thirty-five years, this particular house.

Mr. WHEAT. That may go in under that objection. I believe that is hearsay.

Q. But what kind of nails are in this piece of wood that you got?

A. The old time cut nails.

Q. Have you any knowledge, from your own knowledge, how long ago they ceased to use those nails in this community?

A. No. I would not be able to remember how long ago they ceased using those nails in this community, because there was more or less a smattering of the two when wire nails came in, cut nails were used for quite a while afterwards. It don't all change at one time.

Q. Now, is there any decay in this frame that you mention?

A. No; it is a very sound piece of wood. It is wet stained a little at one end, but apparently no decay.

Q. Does it appear to have been in place for a considerable period of years?

A. Yes.

Q. Let me ask you whether if properly manufactured, installed, and painted, in your opinion, pondosa lumber will last as long as the building in general?

2059 A. Yes, sir. I think it will.

Q. And this is your opinion, is it, notwithstanding the fact that you may have heard of certain failures of this wood?

A. I have seen failures of the wood.

Q. Have you ever heard of failures in other woods?

A. Yes, sir; I have.

Q. Now, properly made and protected, is it your opinion that one wood will last as long as another in a building?

A. Yes. I think that any wood that is dry before it is installed and then is painted, manufactured also in tight joints, and painted so well that the moisture cannot get into it, that it is bound to keep from rotting indefinitely.

Q. Would that apply to woods also that have—that are softer and lighter than Pinus ponderosa?

A. Yes, sir. That would apply to any wood at all. If you keep the paint on it, or the surface sealed so that the moisture could not get inside of it, there would be no tendency to rot, as far as I understand it.

Q. Now, are you familiar with the Anderson Frame Company, and its products?

A. Yes.

Q. Do you know whether or not that company uses Pinus ponderosa for any portion of its frames?

A. Yes; it does.

Mr. WHEAT. Mr. Burr, I believe the record states that—
2060 I believe that Mr. Anderson stated when he was on the stand that he used Pinus ponderosa for pulley sticks?

Mr. BURR. I am not able to say. I have not read the record since.

Mr. WHEAT. I will ask the witness whether he knows that.

Q. Do you know for what portion of the frames made by the Anderson Frame Company they used Pinus ponderosa?

A. They do. We have used Pinus ponderosa in the pulley styles and they used in the Anderson Frame Company. I have seen their frames.

Q. In your opinion, what is the most exposed part to decay of the frame?

A. Either the pulley styles or the sill where they come together. The junction would be the place where it is most exposed to moisture conditions.

Q. Is there a groove there of some sort, ordinarily?

A. The sill is dadoed into the pulley style, or in the door case, the sill is grooved, and the pulley style dadoed into it.

Mr. BURR. Is what?

The WITNESS. Dadoed is the term we use for this groove, and the term we use of dadoeing one thing into another really is not strictly proper.

Mr. BURR. What is it, a dovetail?

The WITNESS. No. It is just a groove, just like we put
2061 a groove half an inch wide down in this table and put a piece into it. It is done in shelving. It is a very common method of shelving. Now, if that joint was not painted at all, the paint was not applied so that moisture could get in there when it rained, water naturally lodges on a flat surface, and the sill is a sloping sill, but it has somewhat of a flat surface, water hitting in there unless the wind is blowing absolutely at right angles to the window, it will hit one side or the other of the window frame, consequently it is driven

right to that joint, and what water gets in there on ordinarily constructed frames has no way of getting out except by evaporation.

Q. This is the joint that you mentioned between the pulley style and what other piece?

A. An the sill.

Q. Have you ever had any experience as to the replacement of sash made of Pinus ponderosa?

A. Well, we have had some complaint of sash rotting at the bottom rail joint, where the bottom rail enters into the style.

Q. About what proportion of the sash that you have supplied has that been?

A. Well, it would be so small you could not figure it; but I would say—I would put it into figures of what the total amount have been—

I would say less than five hundred windows.

2062 Q. In how many million?

A. Twenty million.

Q. Now, is there very much young growth in the Idaho white-pine forests that you are familiar with, in general?

Mr. BURR. Wait a minute. Was he up there?

Mr. WHEAT. Q. I will ask you, Have you had any experience in the Idaho white-pine forests?

A. Yes.

Q. What has that experience been?

A. Well, I operated a sawmill in the Clearwater Forest at one time.

Q. And does your company now have any timber?

A. We have no timber in white pine in that particular forest. We have a little white pine in connection with some of our other operations.

Q. Where?

A. We have a plant out here at Milan that has some white pine in connection with it, Idaho white pine.

Q. Have you had experience in the Idaho white-pine forest?

A. Yes.

Q. And do you know whether or not in that forest there is any considerable proportion of what might be called young growth?

A. Well, what I would term young growth would not be large enough for, say, timber. We have what we call second growth and old growth.

2063 Q. Just explain that, please.

A. I am not a technical man on this, but what is penerally conceded amongst the ordinary lumberjacks and practical men that work around the woods is a second-growth tree is one that has small branches sticking out of it close to the ground, and an old-growth tree is one that has shed these branches and it has all been healed over for a considerable distance from the ground, I would say, offhand, thirty to fifty feet, there are no limbs appearing, the bark is all smooth. We term that type of three surface clear up to a certain distance.

Q. Well, now, is there any considerable proportion of this so-called second growth in the Idaho white-pine forest?

A. Very large proportion.

Q. And do these trees when cut out produce any particular proportion of clears?

A. No; they do not produce a large proportion of clears.

Q. Do they produce much of the upper grades of shop lumber?

A. No.

Q. What do they produce mostly?

A. A large amount of high-grade common, no. 1 and no. 2 common.

Q. Well, now, are you able to state what your experience has been as to the average number of Idaho white-pine logs per

2064 thousand feet?

Mr. BURR. Of this new stuff?

Mr. WHEAT. I am talking of the average run, the way the forest comes.

A. Well, what we cut in the Clearwater Forest ran pretty large for Idaho white-pine logs. They ran something like seven or eight to the thousand, but still it was second-growth timber and yielded this sound-knotted common that I speak of. That size there is much larger than the average in, for instance, the Coeur d'Alone district, the territory tributary to Lake Coeur d'Alone, although you will—you will go up one creek and find that—for instance, some creeks tributary to the Coeur d'Alone will have all pretty big timber on it. I think they are more or less of the old-growth type.

Q. Now, let's get back to this point: What average, from your experience with Idaho white pine, would you put as the number of logs to the thousand board feet?

A. Oh, I would say probably around fifteen, upon the Coeur d'Alone property.

Mr. BURR. That is the virgin stuff and second growth both, is it, averaging it up?

The WITNESS. Yes; of what is put into the Coeur d'Alone Lake territory.

Mr. BURR. What goes into the sawmills there?

The WITNESS. Yes.

2065 Mr. WHEAT. Q. Well, now, in the majority of Idaho white pine that is now produced, about what proportion would you say there is of shop lumber?

A. Well, I would not know. It would be pretty small, probably——

Mr. WHEAT. I think the record shows. I withdraw that, I do not want him to guess it.

Q. Now, from your experience in selling pondosa lumber, or pondosa sash and doors, does the lumber trade that you come in contact with generally understand that pondosa is the same wood formerly largely marketed as western white pine?

A. Yes.

Q. And in general, and forgetting for the moment any present price or sales slump just at the present time, will you say that the sale of pondosa is increasing or decreasing?

A. Well, taking into calculation the present lack of the demand due to the slackening up of building operations, the use of pondosa is increasing.

Q. How long have you been familiar, by the way, with the term "California white pine"?

A. Well, prior to 1907. I do not know——.

Mr. BURR. We concede longer than that, why ask this question. We have proved it is thirty years old ourselves.

Mr. WHEAT. I will follow that up then with this statement.

Q. Has that term been generally used in the lumber trade
2066 for a good many years?

A. Yes.

Q. Has it been advertised in the trade journals for many years?

A. Yes.

Q. Do you think it is a well known trade term in the lumber trade?

A. Yes.

Q. By the way, I would like to have you tell for the record what in your opinion are the qualities of what you understand to be a good commercial white pine. Qualities of the wood, of course?

A. The qualities?

Q. Yes.

A. Well, it would be a pine that would work easily with tools, form well, and would take paint well.

Q. Can you tell me whether or not the Pinus ponderosa with which you have been familiar takes paint well?

A. It does.

Mr. WHEAT. That is all.

Cross-examination by Mr. BURR:

Q. Is there a good deal of diversity in the Pinus ponderosa as regards its qualities and characteristics as lumber?

2067 A. Yes, sir.

Q. In different parts of the grain?

A. Yes, sir.

Q. Is there a good deal of diversity in the Idaho Pinus ponderosa with which you are most familiar, among different trees, I mean?

A. Not a great deal. There is some, however.

Q. Is there more or less diversity in the Idaho white pine?

A. There is more in ponderosa than there is in white pine.

Q. And that is in regard to color, is it, and softness, and amount of pitch, and various characteristics?

A. Yes; the general characteristics would be different.

Q. Now, there are some sections where it is very materially heavier and denser and darker in color, isn't that true, than in others?

A. Well, you say sections. Of course, I do not know what area you mean by section. If you mean a very largely extended area,

I would say no, but if you took a little valley or draw, as we would term it in the timber business——

Q. Yes.

A. I would say yes. As compared—it depends somewhat on the soil, on the moisture in the ground largely, and the altitude.

Q. Pinus ponderosa adapts itself and manages to live over a great diversity of different conditions of soil and climate
2068 and altitude and rainfall than Idaho white pine, isn't that true?

A. Well, it is—I do not know that that is true; no. I would say that it is grown over a larger area of the country than Pinus monticola, or Idaho white pine, but you have it growing over through the Cascades, grows down in California.

Q. Which?

A. Grows over in Montana. So-called Idaho white pine.

Q. The Idaho white pine grows down into California?

A. Yes, sir.

Mr. WHEAT. It shows on your map.

Mr. BURR. It is very scattering down there, is it not?

A. It is very scattering anywhere, just outside of this district surrounding Idaho. It grows in Washington and it grows over in Montana, but Idaho seems to be about the center of it.

Q. Does it grow over in the Puget Sound country?

A. Yes, sir. There is a mill in Vancouver, B.C., that saws nothing else.

Q. Now, are you skilled in the detection of woods? If you were offered various pieces of wood could you, without any doubt, tell which was Idaho white pine and which was ponderosa white pine?

A. In that size piece?

Q. Well, say a piece a foot and a half long, or something
2069 like that?

A. No. I do not believe that the man lives that could tell without chemical inspection or——

Q. Microscopic inspection?

A. Microscopic or something of that kind. From my experience in it, I would say so.

Q. Well, now, that is true of the lumber whether it is seasoned and has been in use some time, or whether it is a fresh piece, freshly cut; is that true?

A. Well, I think you probably could tell quicker in green lumber than you could——

Q. In the dry?

A. In dry, because I do not happen to have the faculty very well developed, or the senses very well developed, but a good many people can tell by the odor. I have lived in this cold climate so long that my sense of smell is not very good.

Q. Are you sure that that sill you testified to was Pinus ponderosa, or white pine?

A. I am sure it is Pinus ponderosa.

Q. I wonder if you could send——

Mr. WHEAT. Wait a minute. Let him answer the question. You say, it is Pinus ponderosa?

A. Yes, sir.

Mr. BURR. Q. Just how do you tell Pinus ponderosa?

2670 A. Well, by the looks of the examination of it for one thing, and the color of the wood for another.

Q. I thought you testified that you could not tell a piece of wood, particularly if it was one that had been cut for a long time and had been in use?

A. Now, you put the question to me on the basis that I could tell any piece of wood that was handed to me, as an expert. Now, I can tell you—I can pick up pieces two inches long and tell you for sure, but when it comes to picking out the difference in picked samples, I say the man don't live that can pick them out without chemical or microscopic analysis.

Q. What are the reasons for believing this to be a Pinus ponderosa piece?

A. There are some pieces that are well marked, that anybody can tell that has had any experience in lumber, but there are other pieces that you cannot tell. I have sent pieces of cedar posts to the laboratory at Madison and have it come back and say it was pine, from a small district in which they said it was not grown, just to see how much they knew about it. That is just—that is just trick stuff, you know. You get a little piece of lumber the size of your hand, six inches long, and just cut it so. You pick a specimen looks more like another wood than it does its general variety, and you would fool most anybody with it.

Q. I believe you said that properly painted, that any

2071 variety of wood, in your judgment, would last indefinitely, sir?

A. Yes, sir.

Q. That has not only got to be originally properly painted, but you have got to have the paint repainted just as soon as it begins to reach the point where moisture might penetrate; isn't that true?

A. Yes, sir. The way I attempted to state it, if all the moisture was taken out in the first place and then you kept it preserved, kept the moisture out of it, that you would have no rotting.

Q. As a matter of fact, we house owners do not always paint as we should, do we?

Mr. WHEAT. Now we are getting to a point ruled out.

Mr. BURR. This is cross-examination, and I think I am entitled to ask that question.

Q. That is the general rule?

A. Well, some people never paint their houses and some people do not paint them often enough and some paint them often.

Examiner DE BRULER. I think that is a matter of common knowledge.

Mr. BURR. Yes.

Q. And the majority of them do not paint as often as they should to keep out all evidence of moisture?

A. Well, I do not know about the majority. I am not in
2072 the paint business. I probably could tell you if I was.

Q. Do you paint your own house as often as there is any slight chance of entrance of moisture?

A. Well, now, that slight chance is putting it very fine-haired; but I paint my house as often as I think it should be, and I have no rotting conditions in any house that I own.

Examiner DE BRULER. I think that is rather far-fetched cross-examination.

Mr. BURR. All right.

Q. Now, I believe you testified to making patterns from Pinus ponderosa?

A. Yes, sir.

Q. At one time you were selling lumber, selling lumber that your company was manufacturing; is that true?

A. Yes.

Q. I mean aside from the millwork, you were selling lumber?

A. Yes, sir.

Q. Were you selling lumber for pattern purposes?

A. No; I have never sold lumber for pattern purposes—oh, yes. Yes; I have, too. I sold northern white pine for pattern purposes in the days when I was in Minneapolis.

Q. Is that a better wood for pattern purposes than Pinus ponderosa, in your judgment?

A. Well, I do not know that it is any better. I think prob-
ably it would be generally considered by pattern makers as
2073 being much better.

Q. I see. Why?

A. Well pattern makers are sort of a peculiar type of their own. Ypu cannot get the average pattern maker to use shop lumber. He would rather pay $150.00 a thousand for a piece of lumber sixteen feet long, all clear, although he is only going to cut it up into two-foot pieces, than he would $25.00 or $50.00 a thousand for a piece that had a few knots in it.

Q. It has got to have pretty uniform texture, and it has got to be workable?

A. That is it; yes.

Q. And the knots are not so workable as the clear lumber, are they?

A. I would not expect a pattern maker to use knots in making patterns. I would expect him to cut between, the same as we do for sash and door stock, but he uses such a small amount compared to the labor that he does not pay so much attention to the price on this, very small proportion of the product he is going to make.

Q. Now, the Pinus strobus and the sugar pine are the leading woods, are they, among the pattern makers of this country?

A. I think they are so sold today. I think Idaho white pine is also sold for that purpose.

Q. And is more sold for that purpose than ponderosa, is it not?

2074

A. I think it is.

Q. You are not at the present time cutting any timber at all, are you?

A. No, sir.

Q. You are buying all of your stock?

A. Yes, sir.

Q. And it runs about fifteen to twenty percent Idaho white and the balance ponderosa, does it not?

A. Oh, somewheres thereabouts.

Q. Now, I believe you said you were not making doors?

A. Not in any considerable quantity. We probably make a thousand, two thousand doors a year.

Q. And do you ever get orders for white-pine sash?

A. Yes.

Q. And you then furnish that?

A. If we get an order for white-pine sash from a concern that we have been selling to for ten or fifteen years, they would use just the initials M.P., and we would furnish Pinus ponderosa, Pinus pondosa. If we get an inquiry from a concern we never had heard of, or never done any business with before, and asked us for a price on white-pine sash, being located in Spokane, we would ask them a question before we quoted them, or quote them on both Idaho and pondosa.

Q. Such an order from a strange concern you would not regard as very clear, you would have to get more information as to what they wanted, is that true?

2075

A. Yes; I rather think so, from a strange concern. There have been some cases of firms furnishing pondosa pine on an order for white-pine sash and in certain territory due to unknown causes, but there are good reasons for believing that the situation was somewhat stirred up; they have been rejected after they were delivered on the job, because they were not made from Pinus strobus or Pinus monticola.

Q. Now, the name of your concern is what?

A. White Pine Sash Company.

Q. White Pine Sash Company?

A. Yes, sir.

Q. And about fifty-eight percent of your sash are made from Pinus ponderosa, did I understand you right?

A. Yes, sir.

Q. Now, when these sash are resold, what does a white-pine sash in the trade mean, does it mean——

A. It means California white pine or pondosa white pine.

Q. White-pine sash means that?

A. Yes, sir.

Q. In your judgment?
A. Yes, sir.
Q. Now, then, if the buyer wants a white-pine sash made from strobus, he has got to specify northern white pine or
2076 strobus, has he, in order to get it?
A. There has been a custom in the office for quite a few years back, in a few territories——
Q. Can you answer my question yes or no, and then explain your answer?
A. I can.
Q. Read the question, please?
(Question read.)
A. I would say "no", because you have not given all of the different——
Q. Possibilities——
A. Prefixes that are used in ordering what you are going to term probably as genuine white pine.
Q. All right. Will you give me the other prefixes?
A. I started to explain.
Q. I want it explained.
A. I would say, generally speaking, the answer would be "yes".
Q. Yes.
A. Now, it has been the custom in the trade for some time past, and is not so well defined at the present time, but certain territories where they really prefer northern white pine as against California white pine or any other pine or pondosa pine, to specify Wisconsin white pine, Michigan white pine. As a matter of fact, the
2077 word "northern" has been very little used in that connection.
Q. In the Middle West?
A. In the territory where they want it.
Q. I see.
A. The Middle West is rather a scattered territory, but Ohio would be one of the territories that they would not use that term.
Q. Then, if a man wanted to get a strobus sash he would have to specify, perhaps, strobus or northern white pine, or Michigan white pine, or Minnesota white pine, or one of those designations of the territory where the so-called "Pinus strobus" grows; is that true?
A. Yes, sir.
Q. And then, according to your testimony, if he merely said he wanted white pine he would almost invariably get California white-pine or pondosa sash; is that true?
A. He would, if he inquired generally in the trade, but I explained if he was a new customer, we had not heard from him before and he inquired about white-pine sash, we would explain to him.
Q. Now, a stranger ordering from your company named as it is and advertising its name, if he were ordering from a district where white-pine sash still meant northern white pine, he would expect to get a northern white-pine sash from you, wouldn't he?

2078 A. I do not know of any district where white-pine sash means northern white-pine sash today. I would like to make a little further explanation in connection with that answer. The question is, I take it, as to the name of our concern?

Q. Yes.

A. The reason that we named our company the White Pine Sash Company is that we were going to manufacture what is commonly known to the trade as white-pine sash, when we manufactured it.

Q. What was commonly known as "white-pine sash"?

A. Pondosa-pine sash.

Q. When was this?

A. In 1910.

Q. And you still think that white-pine sash means ponderosa sash, do you?

A. In the trade; yes.

Q. In the trade?

A. In the trade that handles volumes of goods; yes, sir.

Q. By the trade you mean the wholesalers? Who do you mean, the wholesalers?

A. Yes, sir.

Q. You do not mean the consumer by that, do you?

A. No. I do not think the consumer knows.

Q. No.

2079 A. Of course, there is one thing I would like to state, if I may. You have been using the term "genuine white pine."

Q. Yes, sir.

Q. It has been used in advertising, by some people.

Q. Yes.

A. Now, I do not quite agree with the term "granite white pine" as applied to the few varieties named, such as strobus, lambertiana, and monticola.

Q. You think it ought to be applied equally to ponderosa pine?

A. Any pine that is white.

Q. Now, the California—the heartwood in many sections is not white, is it?

A. No.

Q. And that you would not allow to be sold as white pine, if it is dark-colored wood; is that true?

A. The parts of it that is dark—you could throw out certain parts of strobus that are not white—if you want to do that.

Q. It is very small, isn't it, in strobus?

A. Yes; very small.

Q. In other words, the knots are not white?

A. Oh, the wood of Pinus strobus is not white.

Q. It is a yellowish color?

A. No; it is not a yellowish color.

Q. There is not very much that is not pale?

A. Oh, it is lighter colored, generally speaking; yes.

2080 Q. Do you know of any concerns that are discarding the darker-colored heartwood in their white-pine products?

A. No.

Q. Perhaps you do that yourself?

A. No.

Q. You do not do that yourself?

A. If we attempted to discard, we would discard all but the white sap part on the basis of that argument, but the rot-resisting conditions, we would put the heartwood into the part of the millwork where it is mostly exposed to moisture conditions.

Q. Then you would not make the criterion that of color, would you, as to whether or not it was proper to call it white pine?

A. Well, if you are going—if you are just going to call it something, and it is a pine, and it is white, I do not know why you cannot call it white pine. I do not know upon what authority you can call strobus white pine, other than that it is a pine and it is white.

Q. Now, on the market strobus has a reputation for various characteristics and qualities, does it not?

A. Yes, sir.

Q. And it has been known for a long period in the eastern market and has been known to an extent throughout the country, hasn't it?

A. Yes, sir.

2081 Q. Will you tell me whether strobus enjoys a high reputation for its character and utility?

A. Yes, sir; quite high, I would say.

Q. Now, the word "white pine" is associated with the strobus lumber, isn't it?

A. It has been associated with that longer than it has been with Pinus ponderosa; sure.

Q. Yes; and longer than it has with Idaho white pine, too?

A. Yes, sir.

Q. That is true? Now, then, the term "white pine", then, is associated in the public mind with other characteristics besides the pale color of the Pinus strobus; isn't that true?

A. Yes, sir.

Q. In other words, the softness and uniformity?

A. Yes, sir.

Q. And the good texture and likeness—lightness in shade and weight both; that is true, isn't it?

A. Well, I would think that I would say yes, but I would want to explain, but I think that the reason that it is associated with, or is associated with the lightness in color, possibly, or probably and the texture, and the workability with tools.

Q. Yes. In other words, there is association in the public mind not only of color of the white pine, but also these other characteristics you have testified to?

2082 A. Yes.

Q. Now, let me return to that pattern matter for a moment. Isn't the reason that the pattern makers like selects for their pattern work, that the shop has cross grain and the selects is a straight-grain proposition?

A. That is one of the reasons that they give, but we cut up door sills seven feet long that are perfectly straight-grained cut of shop lumber, and the pattern maker would not want to get a piece three foot long cut of it.

Q. Seven feet long, did you say?

A. Yes.

Q. How wide?

A. Five inches wide. Seven feet long, five inches wide, and four and seven eighths inches thick.

Q. Lumber that long, wouldn't it go into the selects rather than the shop?

A. No. It is in the shop. That is where we get our door cutting; that is the size of our door cutting.

Q. Can you tell how much in board feet, approximately, the total shop cut of lumber from northern white pine or strobus is annually today?

A. No.

Q. In this country?

A. No.

Q. You could not give me a fair estimate on that?

2083 A. None at all. I have not followed it up in years.

Q. How about Idaho white pine; could you give me an estimate on that?

A. No, sir; I could not, in Idaho.

Q. Could you give me an estimate as to how much the board footage that goes into sash and frames and door and millwork in the course of a year is; have you got those figures?

A. Well, I could give you an estimate, idea.

Q. All right. Suppose we have it.

A. In sash, for instance, we make about thirteen percent of the windows made by the stock factories in the United States.

Q. On sash, about thirteen percent of the total output?

A. Of stock factories.

Q. Of stock factories?

A. Now a planing mill, or little factory that builds a full house, that mill is not classed as a stock factory. A stock factory would be a concern that would manufacture carload stuff principally and ship to lumber yards and dealers.

Q. You call yourself a shop factory, do you?

A. A stock.

Q. I mean a stock factory.

A. Yes, sir. We use for windows about twenty million foot per annum.

Q. Beg pardon. How much?

2084 A. We use for windows on an average about twenty million feet per annum of shop lumber. You would multiply that by eight to get the amount that is used for windows. Doors we are not manufacturing, so I am not versed in it. I just volunteer that figure as giving you some idea.

Q. Millwork as a whole belongs to what class—sash and door and frames, and what else?

A. Store work, kitchen cabinetwork, all the interior finish of a house that would not be ordinarily manufactured by a concern having just a planing mill.

Q. Well, now, when you testified a while ago on direct examination that the total amount of shop lumber produced in the country in Pinus strobus and monticola together would not be enough for the millwork, was it the millwork business of the country?

A. Yes.

Q. You included those terms that you have just now enumerated, have you?

A. Yes.

Q. The stock that you manufacture is only for sash and frames and a few doors; is that right?

A. Yes, sir. Mouldings.

Q. So that multiplying by eight would only give the amount in the country, you estimate that amount in the country for those particular items?

2085 A. That is used for just sash.

Q. I see. So it would have to be much bigger for all this interior work?

A. Well, the doors——

Q. A tremendous item, must be?

A. Yes.

Q. Well, do I understand then, when you say yours is a stock factory, you are making the finished product, aren't you?

A. Yes; some cases. Some cases partly finished.

Q. Are you also engaged in selling your stock to those who manufacture?

A. Very little.

Q. Most of it you take care of yourself?

A. Yes. On account of not manufacturing doors, we usually sell all the door stock we accumulate to door factories.

Q. With regard to paintability, the texture of the wood has a good deal to do with the ability of the wood to take paint and hold it, doesn't it?

A. Yes, sir.

Q. And you would say that the denser and harder the wood, the more resistance it interposes to the entering of paint and the absorption of paint?

A. Yes, sir.

2086 Mr. BURR. That is all.

Redirect examination by Mr. WHEAT:

Q. When you said that the wood of ponderosa was white, you meant in general, didn't you?

A. Yes.

Q. You did not mean any particular piece?

A. I meant first the sapwood is whiter than most any part you would find in Pinus strobus or Pinus monticola, and then the wood inside varies in color, sometimes a light pink, sometimes a light yellow, would probably average up white for a ways in. Some trees would be white and some trees after you get inside a ways would be almost brown.

Q. As a matter of fact in strobus the heartwood is almost pink, is it not?

A. In strobus?

Q. Yes.

A. Yes; there is a pink color to that too.

Q. There is a pink tinge to it often, isn't there?

A. Yes.

Q. Now, in your opinion, I take it, Mr. Klopp, the term "white" has applied to pine wood and has been broadened in practice over the years from any pristine significance it may have had applying to only Pinus strobus; is that true?

2087 A. Yes.

Q. Have you in your experience found Pinus ponderosa to be a satisfactory wood from the standpoint of enduring qualities?

Mr. BURR. He has not had any experience.

Mr. WHEAT. He has made twenty million sash in twenty years.

Mr. BURR. Is it not proper redirect anyway. I have not gone into that with him; only got it on his direct examination.

Mr. WHEAT. All right. I will eliminate it.

Q. Let me ask whether these pieces of wood Mr. Burr asked you whether you could tell apart, these pieces that you say would take an expert to tell apart, are exceptional pieces, are they not?

A. Yes.

Q. In general, you can tell the difference between the woods, can you?

A. I think most any lumberman that has had any experience of consequence can tell any difference of a sixteen-foot board.

Mr. BURR. This was not a sixteen-foot board. This was a little piece of sash or sill. Was this as sixteen-foot sill?

The WITNESS. No; it is three feet six inches long.

Mr. WHEAT. Just a moment, Mr. Burr.

Mr. BURR. I beg pardon.

Mr. WHEAT. Q. I will ask you that question. How large 2088 is this piece of sill that you mentioned getting out of a frame?

A. It is a two by four, three feet six inches long.

Mr. WHEAT. Mr. Examiner, I am frankly embarrassed that piece is not down here.

Mr. BURR. If he will mail you a cutting that he says is from that piece, and you say it is the piece that he mailed you, it will be all right with me.

Mr. WHEAT. All right. We will get an expert to miscroscopically examine it.

Q. Will you cut off a piece of that frame and send to me in San Francisco?

A. I would rather mail or express the whole piece, then you can judge more fairly.

Mr. BURR. That will be all right.

Mr. WHEAT. Q. Then will you add in your letter that that is the piece talked about in your testimony.

A. Yes, sir. You give me the address to send that to you.

Mr. WHEAT. I think that is all, Mr. Klopp.

Redirect examination resumed by Mr. WHEAT:

Q. Just what do you mean by stock factories?

A. By a stock factory is meant one that produces goods in
2089 large quantities and sell to wholesale jobbers or dealers of various kinds in the business, and does not ordinarily supply a complete house, built to architect's specifications.

Q. Now, are there other types of millworking plants in the United States making sash and doors?

A. Yes.

Q. What are they?

A. Well, they are the type that are known to the ordinary layman as planing mills, or they are sash and door factories which manufacture a wide variety of millwork, usually furnishing all of the millwork required for any one house, and usually purveying those goods within a short distance of the factory.

Mr. BURR. Locally?

The WITNESS. Yes.

Mr. WHEAT. Q. Now, when you said that your concern produced thirteen percent of the sash produced in stock factories in the United States, you did not mean, did you, thirteen percent of all the sash produced in the United States?

A. No; I did not.

Q. That would be a very much larger number, would it?

A. Yes.

Q. Have you any figures on which you could approximate that?

2090 A. No.

Mr. WHEAT. I think that is all.

Mr. BURR. That is all.

(Witness excused.)

(The taking of testimony at Spokane, Washington, was completed at 3:20 o'clock in the afternoon of January 22, 1930, and the hearing continued until 10:00 o'clock a.m., January 23, 1930, at room 303, U.S. Patent Office Building, at Portland, Oregon.)

2091 Docket Nos. 1620–1669, inclusive

PORTLAND, OREGON, *January 23, 1930.*

Met pursuant to adjournment from Spokane, Washington, 10:30 o'clock a.m., in Room 303 U.S. Postoffice Building, Portland, Oregon.

Before Ellis De Bruler, examiner.

Appearances:

Mr. Eugene W. Burr for the Commission.

Messrs. McCutchen, Olney, Mannon & Greene, San Francisco, California (by Mr. Carl I. Wheat), representing respondents named in transcript of Boston hearing.

Mr. WHEAT. Mr. Cowlin, will you take the stand, please? This is out of order, but I just want to put him on so he can get away.

Mr. BURR. Let the record show that this is a defense witness.

Mr. WHEAT. Yes.

ROBERT W. COWLIN was thereupon called as a witness, and having been duly sworn, testified as follows:

Direct examination by Mr. WHEAT:

2092 Q. What is your name, please?

A. Robert W. Cowlin.

Q. Where do you reside?

A. At Portland, Oregon.

Q. Are you now employed by the United States Forest Service?

A. Yes, sir.

Q. Is that a recent employment?

A. Yes.

Q. Prior to that time and during the calendar year 1929, were you at certain times employed by the respondents represented by the firm of McCutchen, Olney, Mannon & Greene, in San Francisco?

A. Yes, sir.

Q. In connection with that employment did you make a study of certain advertisements which have appeared in the periodical known as the "American Lumberman"?

A. Yes, sir.

Q. Just briefly state what the study consisted of?

A. The study consisted of a study of advertisements of the California Pine Producers, dating from the year 1900 to approximately 1907.

Q. Why did you start at 1900?

A. It was the earliest issue available of the American Lumberman.

Q. Where were these magazines?

A. The magazines were in the library of the University of
2093 California at Berkeley.

Q. Did you make a tabulation showing the date, the issue, and the page number of how these pines were advertised?

A. I did.

Q. I will hand you this document and ask you if that is a copy of the study that you made.

A. It is.

Mr. WHEAT. This is the same document a copy of which I handed to you, Mr. Burr.

Q. And just what does this purport to show, Mr. Cowlin?

A. This shows the manner in which Pinus ponderosa is advertised by these various companies in the manner described.

Q. All the advertisements listed in this document were actually seen and inspected by you, and this document lists the advertisements which you looked over?

A. It does.

Q. And will you tell me the reason why you didn't go beyond about 1907?

A. The advertising pages were removed prior to binding after 1907.

Mr. WHEAT. Mr. Burr, I think the record will show that you and I have stipulated, anyway, that this has been advertised as such for a long time as California white pine, but I merely want to ask that this be received as an exhibit on behalf of the respondents

2094 as a study of that advertising in that early period.

Mr. BURR. I am entirely agreeable to stipulating that, and let it be so received, on the understanding that I had with counsel that I may in return offer excerpts from advertising a little further on to show how the advertising was conducted.

Mr. WHEAT. That is perfectly agreeable. And in that case the respondents, Your Honor, may desire to submit photostatic copies of some of these advertisements. I don't think now we will do that.

Mr. BURR. No objection to that.

Mr. WHEAT. That is all.

Mr. BURR. I would like to ask the witness a few questions.

Mr. WHEAT. I would like to have this marked as an exhibit.

Examiner DE BRULER. It may be marked, certainly.

Mr. BURR. The exhibit that you are offering is a duplicate of the one that you gave me, with the exception of this first page that is now rewritten, this substitute first page?

Mr. WHEAT. That is a substitute first page. There was a typographical error on the part of my stenographer in San Francisco.

(Said tabulated lists, entitled "Advertising in American Lumberman", pages numbered 1 to 45, inclusive, was thereupon received in evidence and marked "Respondent's Exhibit no. 30, witness Cowlin", and is forwarded herewith.)

2095 Cross-examination by Mr. BURR:

Q. Referring now to respondent's exhibit no. 30, will you be kind enough to state whether you paid any attention to anything in connection with the ad except the use of the term under which it was advertised?

A. Why, I read the advertisement through.

Q. Yes?

A. I noted the contents of the advertisement.

Q. Did you notice cases where in the body of the advertisement the word "white pine" was used without the word "California"?

A. Why, in cases where it was used it is noted in the advertisements.

Q. It is noted in the exhibit?

A. In the exhibit.

Q. Can you turn to any page where that was done by you in your exhibit? It may save time.

(Witness indicates on exhibit.)

Examiner DE BRULER. Excuse me; if there is a page you had better give it to the stenographer. You probably want the stenographer to take the page.

The WITNESS. Yes; page 24, and continuing——

Q. (By Mr. BURR.) You call my attention to pages 23, 24, and also 25 of the exhibit——

Examiner DE BRULER. Respondent's exhibit no. 30.

2096 Mr. BURR. Yes; the exhibit referred to.

Q. And the same is true of page 29, is it not, and of several other pages at different points?

A. There are one or two other cases in there.

Mr. WHEAT. Mr. Burr, may I ask whether you refer to any persons who are respondents in this case?

Mr. BURR. I was just going to ask him that very thing.

Q. Have you confined yourself in this compilation, respondents' exhibit 30, to respondent companies?

A. No; I didn't. I took all the companies that were advertising——

Q. That were advertising what?

A. Ponderosa pine; Pinus ponderosa.

Q. How did you determine whether they were advertising Pinus ponderosa or whether they were not?

A. Principally familiarity with the region and with the companies, and also their manner of describing it.

Q. You used your editorial ability and your general knowledge to determine whether or not in your judgment they were advertising ponderosa pine?

A. Yes.

Q. What is your association with the lumber business?

A. Well, it has been a matter of some five or six years in California.

Q. In what capacity?

2097 A. In various capacities; with several pine operators, with a lumber company some time ago, and also study through the University of California. I am a graduate of the Forestry School of the University of California.

Mr. WHEAT. I don't think this is material here, but if you want to ask him, it is perfectly agreeable. I don't want to burden this examination.

Mr. BURR. Well, I am not going to burden this examination, although it seems to me it might be rather difficult for a man who is not especially qualified to divine by intuition whether they were advertising ponderosa pine or something else.

Mr. WHEAT. Let me qualify the witness on that.

Mr. BURR. Well, I am qualifying him.

Mr. WHEAT. All right; go to it.

By Mr. BURR:

Q. All right. Did you pay any attention to those who were advertising western white pine?

A. There were none that I knew of that were advertising western white pine in California. These are all California producers.

Q. Simply California producers?

A. Yes, sir.

Q. No southern Oregon producers?

A. There were some Klamath Falls producers.

Q. Then it wasn't confined to California. It was confined to the Klamath Falls region and California; is that right?

A. I would like to refresh my memory to see if there are

2098 any Klamath Falls producers in there.

Well, I won't take the time—I won't take the time. It is not material.

A. I don't think there are any Klamath Falls producers in there, but there may be one.

Q. Now, what I want to get at is this: Where there is a notation here made by you of some concern that has used the word "California" white pine, are you able to testify positively that, after having said, perhaps, in the heading of the ad——

A. Yes.

Q. Among the products that they sell California white pine, do they later on in the ad, so far as you noticed, at times also refer to the same product as "white pine" without the word "California"?

Mr. WHEAT. If he knows any particular instance.

Mr. BURR. No; let him testify generally.

A. I didn't notice it.

Mr. BURR. A particular instance might have flown from his memory.

A. I didn't notice any case where they referred——

Q. Did you read it?

A. In practically all cases. Some of the ads are standard; the same ad appears in issue after issue. I merely glanced through those. I didn't read it word for word, but I read most of the ads where a new ad appeared, a change of form.

2099 Q. Now, did you notice any advertising that referred to California white pine, and then talked about the qualities

of white pine in general, and the stand that they have, and the reputation and good will attached to white pine?

A. No; I didn't notice that.

Q. Did you read them carefully enough to have noticed that?

A. I think I did.

Q. Now, are there any respondents in here? Do you know who the respondents are in these cases?

A. In a general way I know the names of the larger ones. There are some of the names—I don't know the total list of them.

Mr. WHEAT. Well, I assume that the record will show whether there are respondents in there, Mr. Burr.

Mr. BURR. Yes; I know. I don't see any except this Hobart Mills; that is a respondent. That is the Hobart estate.

Mr. WHEAT. That is now the Hobart estate; yes.

Q. Did you pay any attention to Arizona and New Mexico advertising?

A. Yes; in the ad there were several advertisements of the American Lumber Company, I believe it is. It is Navajo white pine. That is listed there.

Mr. WHEAT. May I ask this question: You were requested, in making this study, to include any Arizona mills that you found, were you not?

A. Yes, sir; and also include advertisements of Wuichet, who represented Arizona mills.

2100 By Mr. WHEAT:

Q. Where is he located?

A. He is located in Chicago, Illinois.

Q. Do you know how to spell that name?

A. W-u-i-c-h-e-t.

Q. Then you were instructed to get the Arizona, New Mexico, California, and Klamath Falls district mills, so far as you could supply them?

A. Yes.

Mr. WHEAT. I think that is all.

(Witness excused.)

W. B. GREELEY was thereupon called as a witness and, having been duly sworn, testified as follows:

Examiner DE BRULER. Mr. Greeley, you reside at Portland?

A. Seattle.

Examiner DE BRULER. What is your Seattle address—business address?

A. West Coast Lumbermen's Association.

Direct examination by Mr. BURR:

Q. You were formerly chief forester of the United States Forest Reserves, were you?

A. Yes, sir.

Q. At what period?

A. From April 1st, 1920, until May 1st, 1928.

2101 Q. About approximately eight or nine years; is that true, sir?

A. Yes, sir.

Q. And prior to that what relation did you have to the forestry business and study?

A. I took the course in forestry at the Yale Forestry School, entered the Federal Forest Service in July 1904, and remained there in various capacities until 1928, with the exception of two years of military service during the war.

Q. What was your capacity immediately preceding your becoming chief forester?

A. The first year was spent in investigative work on eastern hardwoods. In 1905 I was assigned as timber sales inspector to the California district, and spent that year in organizing and initiating timber sales on national forests in various parts of that State. In 1906, '07, and '08 I was supervisor of the Sequoia National Forest, in the southern portion of the Sierra Nevada Mountains. In 1909, '10, and '11 I was district forester in charge of the national forests of Montana and northern Idaho. From 1911 until the war I was in Washington as head of the branch of forest management for the service, which embraced the administration of timber sales on all of the national forests, timber cruises, and timber planting. In that capacity I covered most of the national forests in the country on inspection visits. Then that position was resumed after the war until 1920, when I was made head of the Forest Service.

2102 Q. Now, what have you been doing since then? You resigned from the position of chief forester?

A. I accepted work with the West Coast Lumbermen's Association as secretary and manager, with headquarters in Seattle.

Q. And you have held that position since, have you, sir?

A. Yes, sir.

Q. And that association is composed of the manufacturers of what kind of lumber?

A. The so-called "west coast" woods, western Oregon and Washington, British Columbia, and Alaska; chiefly Douglas fir; also west-coast hemlock, Sitka spruce, and western red cedar.

Q. Now, your member lumber manufacturers do not handle commercially Pinus ponderosa, do they?

A. No, sir.

Q. How about Idaho white pine?

A. Only in very negligible quantities.

Q. How about Pinus strobus? Of course, there is none of that among any of your membership, is there?

A. No, sir.

Q. You have written on this subject of forestry, I presume, from time to time?

A. Occasional articles; yes, sir.

Q. Now, you are familiar with the Pinus ponderosa in various parts of the country; are you, sir?

A. Yes, sir; I have seen a good deal of it over most of its
2103 range, from Arizona and New Mexico up into northern Washington.

Q. And clear over into Montana, I take it?

A. Yes, and in Montana and Idaho.

Q. Yes. And also California, of course?

A. Yes.

Q. You have seen it both standing and cut, have you?

A. Yes, sir.

Q. You have seen it in the course of manufacture of lumber; is that true?

A. Yes.

Q. Now which do you regard as the commercial species of genuine white pine?

Mr. WHEAT. Now, may I ask, Mr. Burr, whether he is using the term "genuine" white pine to mean some particular botanical phrase?

Mr. BURR. Well, I think that ought to be comprehended within the witness' answer. I think it is a proper subject for cross-examination. I would like to let the question stand, if I may.

Examiner DE BRULER. Do you understand the question?

Mr. BURR. Shall he read it?

A. I regard the species of genuine white pine as limited to three of commercial importance—namely, eastern white pine, or "strobus", as the botanists call it, the Idaho white pine, or "monticola",
2104 as the botanists call it; and the California sugar pine, "lambertiana." There are several other species of genuine white pine, but of relatively slight commercial significance.

Q. Now is Pinus ponderosa, in your judgment, a genuine white pine?

A. No, sir.

Q. By the by, the Forest Service has been designating Idaho white pine, or monticola, as a western white pine, has it not?

A. Yes.

Q. And the Forest Service has designated in its publications and in its forest signs and so forth, the ponderosa tree as western yellow pine, has it not?

A. Yes.

Q. That has been true for quite a number of years?

A. Yes.

Mr. WHEAT. We will stipulate that that is true. We will stipulate that the Forest Service has, for a number of years, I don't know how long, called Pinus ponderosa in its timber sales and in its publications western yellow pine.

Mr. BURR. Very good; very good.

Q. Now, will you be kind enough to contrast the texture of the genuine white pines that you mentioned and Pinus ponderosa?

A. Viewing the range of lumber products of the two species, the average commercial run of lumber, and not attempting to deal with this from the standpoint of any individual board, or the
2105 product of any individual tree, the so-called genuine white pines are softer woods, they have a more uniform texture, there is less of a contrast between the spring wood and the summer wood, which, together, make up the annual ring, so that the texture throughout the annual growth is more uniform. The woods of the genuine white pines are less resinous than the woods of the ponderosa pine. The difference between the sap and heartwood of the genuine white pine is usually less marked than in the case of ponderosa pine. Now those differences in texture will vary as between the samples you select. But speaking of the average product of the two species of timber, in my judgment those distinctions hold; the woods of the genuine white pine are softer, the texture is more even, they are somewhat less resinous, and there is less difference between the sap and heartwood portions of the tree.

Q. Nevertheless, would the Pinus ponderosa approach in those respects more nearly the genuine white pines than it approaches the southern pines of the South—the yellow pines of the South?

A. Your question comparing the averages, the lumber of Pinus ponderosa would approach those qualities of the genuine white pine more closely than the yellow pines of the South.

Mr. WHEAT. Than it does the yellow pines of the South, or than the yellow pines of the South do?

A. Than the yellow pines of the South approach the qualities of the genuine white pine. The wood of Pinus ponderosa is
2106 more variable from different portions of its range and from the different kinds of trees, or different ages and characteristics of trees from which the lumber is manufactured, than is the case of the true white pine. Pinus ponderosa occurs in many locations near the border line, the tree growth is fixed by climate, where the wood is coarse grained, brittle, harsh, tending to be hard in texture. On the other hand, you can select wood of Pinus ponderosa from the area where the tree attains its best growth, the largest size, where its texture will quite closely approach that of the genuine white pine. One of the difficulties in an exact comparison between the woods is because of the marked difference between the characteristics of the ponderosa lumber in the different portions of its range.

Q. Does Pinus ponderosa differ in the same locality to a greater extent than the genuine white pines in a given locality?

A. If you mean by the same locality in an extended area, like taking a section of the Sierra-Nevada Mountains, for example, from the lower elevations where Pinus ponderosa first appears in the forest, up to the highest elevations where it disappears from the forest, I would say yes. There is a greater variation in the texture and qualities of the wood than you would ordinarily find in the case of true white pine. Of course, texture of other woods also varies some-

what, depending upon the soil and climatic conditions where the individual trees grow.

2107 Q. Now, if I understand you correctly, then, the Pinus ponderosa occupies a ground between the yellow pines to the south, which are harder and denser, and the genuine white pines. Let me ask you this further question——

Mr. WHEAT. Mr. Burr, that, of course, is a leading question. I am not objecting on that ground, but I would like to have the witness answer that. You asked him a question and then started another one.

Mr. BURR. Strike the whole thing, then. I think he has answered the question, but I will ask it again.

Q. Does Pinus ponderosa occupy, with regard to its characteristics that you have named, in which it differs from the genuine white pines, a ground somewhere between the genuine white pines and the hard southern pines?

A. Yes, sir.

Q. Now, then, let me ask you this, which is what I intended to ask a minute ago: Does Pinus ponderosa, as an average, approach more nearly in the characteristics that you have outlined the white pines, or does it approach more nearly the hard pines of the South?

A. On the average it approaches more nearly the white pines.

Q. I see. Now, then, you are familiar with the Arkansas soft pine?

A. Yes.

Q. Is it, in its characteristics, nearer to the Arkansas soft pine or to the white pine of the North?

2108 A. If you select the Arkansas soft pine by itself as distinct from the general run of southern hard pines, I would say that the wood of the ponderosa approaches the Arkansas soft pines very closely.

Q. Those two then are more or less interconnected between the hard genuine yellow pines, regularly called the yellow pines of the South, and the genuine northern white pines and the Pinus lambertiana; is that true?

A. Yes.

Q. Now, generally speaking, is the sapwood of Pinus ponderosa distinctly thicker than the sapwood of the genuine white pines that you have referred to?

A. In old-growth stumpage I think that is true in the average.

Q. Have you noted whether white pines grow in as great a variety of soil, irrespective now of climatic considerations, greater variety of soil conditions and rock conditions, and so forth, than the Pinus ponderosa?

A. The genuine white pines are more limited in their soil requirements, or in the combination of soil and climatic requirements. They are more exacting trees in their soil and climate and drainage requirements than the Pinus ponderosa; that is, you don't find a widespread distribution of the white pines throughout the forest

areas where they are found to the same degree that you do in the case of Pinus ponderosa.

Q. Those differences in soil as well as climatic conditions
2109 lead to diversity in the tree, do they?

A. In the case of Pinus ponderosa?

Q. Yes.

A. They lead to diversity in the characteristics of both tree and the lumber.

Q. Yes. Now, then, does that result in a greater diversity in a given stand with regard to the particular conditions of soil than might exist in variations in the same stand and in the same locality?

A. Well, if by the same stand you take in an area having a considerable range in soil and climate, you may select extensive areas of Pinus ponderosa timber where the timber and the lumber——

Q. Run uniform?

A. Runs very uniform. On the other hand, you go beyond those particular slopes or benches having a uniform soil, rainfall, and other conditions, and go to the upper and lower limits and you will find a greater variation, because Pinus ponderosa is a hardier tree than the white pines. It will subsist under conditions of soil and climate where the white pines cannot.

Q. Have you ever had occasion to notice any indications of durability in down timber and the stumps of logged-off timber as regards the contrast, if any, between the genuine white pines and Pinus ponderosa?

A. No; nothing that would give any dependable results.

Q. Have you yourself ever made any study on the question
2110 of comparative durability?

A. No, sir.

Q. Now, is there any difference between the average ability of the so-called genuine white pines and Pinus ponderosa as regards staying in place—that is, shrinkage and warping, and characteristics of that kind?

A. Well, I really cannot answer that question from my own knowledge. I am not a wood technologist. I do not wish to assume such qualifications. I will answer in this way: That from my contacts with lumber users, with the investigations made at the Forest Products Laboratory and elsewhere——

Mr. WHEAT. Mr. Examiner, if the gentleman states that he is not a technologist, he cannot answer a question on shrinkage. Therefore I must object to him making some general statement on the matter.

Mr. BURR. I wish you would finish your statement so far as you can, but without characterizing a wood in that respect until counsel has an opportunity further to object. Will you read the answer as far as he had gone?

(Answer read.)

The WITNESS. I believe that——

By Mr. BURR:

Q. Have you any other sources of information besides those you have just stated?

A. And material about woods that I have read?

Q. Yes.

2111 A. I believe it is true——

Mr. WHEAT. Now; if the examiner please, he is now about to make a statement. I object to any statement based upon such general matters.

Mr. BURR. Let me ask you another question or two.

Examiner DE BRULER. I think he can answer that for what it is worth. Let him go on and finish that. Let's see what he was going to say.

Mr. WHEAT. I reserve the right, of course, to move to strike. I don't want to be held down on the ground that I have not been timely on the objection.

Mr. BURR. There will be no objection that your motion is not timely.

The WITNESS. I believe it is true that the woods of the genuine white pine are regarded by the trade——

Mr. WHEAT. I will ask that any such statement be not received, Mr. Examiner, because it is not responsive to the question. The question was on this matter of shrinkage.

By Mr. BURR:

Q. Well, now, in view of your experience and your exceptional means of ascertaining the facts which you have outlined, which you obtained in your official position and other experience, will you state what the reputation of genuine white pines for durability is as contrasted with the reputation of Pinus ponderosa for durability?

Mr. WHEAT. Now, Mr. Examiner, this is an entirely new

2112 question. He is now talking about durability. Have you eliminated your question on shrinkage? Your question was one of shrinkage.

Mr. BURR. Fix that last question and put "shrinkage" in place of "durability."

Examiner DE BRULER. Now you may state your objection.

Mr. WHEAT. Well, I have stated my objection.

Examiner DE BRULER. The objection is noted and an exception allowed. The witness may answer. Read the question as it is now.

(The last question was read, as follows: "Well, now, in view of your experience and your exceptional means of ascertaining the facts which you have outlined, which you obtained in your official position and other experience, will you state what the reputation of genuine white pine for shrinkage is as contrasted with the reputation of Pinus ponderosa for shrinkage?")

A. The genuine white pines have the reputation of holding shape and form in service more closely than lumber of Pinus ponderosa.

By Mr. BURR:

Q. As an average?

A. As the average.

Q. Now, as a matter of common repute and reputation, what is the comparative position of Pinus ponderosa and the genuine white pines as to durability?

Mr. WHEAT. Now, if the examiner please, the witness has
2113 just made a statement previous to this matter of shrinkage, which I have taken down, to the effect that he has not made any study or comparison whatsoever.

Mr. BURR. I am now asking him common repute.

Examiner DE BRULER. The objection is overruled and exception noted. You may answer. You may answer now as to the reputation.

A. The genuine white pines have the reputation for greater durability in uses exposed to the weather. That would not apply to interior uses protected from the weather.

Q. (By Mr. BURR.) Now, upon the ground of the differences and reputed differences in these woods used as lumber, is there a public interest in the protection of the genuine white pines from the use of the word "white" in connection with Pinus ponderosa products?

Mr. WHEAT. Now, if Your Honor please, we are getting on a point which is the exact question which this Commission must determine. That is the question on which Your Honor must make your finding, and to ask any witness to make a statement exactly on that, not to ask him the facts on which that is based only, I think, is going far beyond what the Federal Trade Commission or any court would ever allow.

Mr. BURR. If the examiner please, I would like to say just a word on that subject: Prior to the decision of the Supreme
2114 Court in the "Shape Shop" case, which came up from the District of Columbia, as you may recall, Your Honor, prior to that decision I did not ask questions with regard to public interest except insofar as the defense went into those topics, but inasmuch as the Supreme Court has now held that the findings of public interest by the Commission is not a final determination, but must be reconsidered by the Commission on evidence and must furthermore be reviewed by the courts if it come to the courts, it seems to me that we have a right to prove the matter of public interest here, and perhaps the language of my complaint, or my question, was not as——

Examiner DE BRULER. I am familiar with that decision.

Mr. BURR. Careful, perhaps, as it should have been, but it seems to me that the objection is rather captious, because I can make four or five questions that lead up to this——

Mr. WHEAT. I will ask, Mr. Examiner, that these questions be asked, because the gentleman is now asked for the conclusion which the Commission must make, and from every basis of law and every decision, including the "Shade Shop" decision, which I am also familiar, certainly, with, it is held in that decision to be a final conclusion on which the Commission must make its finding.

Examiner DE BRULER. Will you read the question, please?

Mr. BURR. I think, strictly speaking, counsel is correct. I don't object to the expenditure of time that may be taken.

Examiner DE BRULER. Go back and read the question.

2115 Mr. BURR. It will probably put me in a stronger position myself. Please don't trouble to rule differently on that question. In other words, I don't press the question at this time.

Q: Have you given consideration, Colonel, to the effect upon the ultimate consumer of the use of the word "white" in connection with Pinus ponderosa products?

A. Yes, sir.

Mr. WHEAT. If Your Honor please, this witness has not stated that he knows anything about the use of——

Examiner DE BRULER. Objection overruled; exception noted.

Mr. WHEAT. I have not completed my objection, Your Honor. Certainly I have the right to make my objection.

Examiner DE BRULER. Yes; go ahead.

Mr. WHEAT. I will now make the objection that the witness has not stated as yet if he knows, and what the extent of his knowledge is, as to the use of the word "white" on products of Pinus ponderosa. I think that ought to be shown before he is asked this. I have no doubt he is qualified on the matter.

Mr. BURR. I will show that.

Q. Colonel, have you observed that Pinus ponderosa products are being sold on the market as California white pine, Arizona white pine, New Mexico white pine, or any one of those three?

A. Yes.

Q. Is that term "California white pine" reasonably widely known among lumber circles?

2116 A. Yes.

Q. How long has that been the case, sir? How long have you had personal knowledge of it, perhaps, I should say?

A. For at least twenty years.

Q. Those products are marketed in a large area under the trade name "California white pine", and the others that I have mentioned, are they?

A. Yes.

Mr. BURR. Now, Mr. Reporter, can we go back to that last question that I asked?

(The record was read as follows: "Have you given consideration, Colonel, to the effect upon the ultimate consumer of the use of the word 'white' in connection with Pinus ponderosa products?—A. Yes, sir.")

Mr. WHEAT. Of course, the witness has already answered the question, but I desire to object to the question as to whether he has considered the effect on the ultimate consumer, because there has been no foundation as to whether he knows whether there is any effect on the ultimate consumer, or what he considers to be the ultimate consumer, and that is exactly one of the other questions on

which the Commission, as a matter of law, must make its finding in this case.

Mr. BURR. Well, I will lay the foundation still further. I think counsel is getting a little bit captious, but I will waive the present question.

2117 Q. Colonel, is the question of trade names an important one in the lumber industry? Is nomenclature a negligible matter or is it an important one?

A. It is important.

Q. In what respects is it important?

A. It is important from a number of respects, among which is that of accurate identification of the product that is being offered to the trade.

Q. Now is that an element of importance of any weight to the ultimate consumer of woods?

A. Yes, sir.

Q. Now, in what respect does it affect the ultimate consumer?

A. The ultimate consumer should have assurance in commercial practices that he is actually obtaining the species and grades of lumber which he desires to obtain.

Q. Now, in view of the reputation of Pinus strobus in various parts of the country, do you have experience and knowledge sufficient to say whether or not white pine is ordered by consumers with the purpose of obtaining Pinus strobus?

Mr. WHEAT. If the witness knows.

Mr. BURR. Yes; I said in his experience.

A. I have been advised——

Mr. WHEAT. Now, I object to any hearsay testimony.

A. In individual cases by consumers. That is the only way I can answer your question.

2118 Mr. WHEAT. I shall object to his answer on the ground it is entirely hearsay.

Examiner DE BRULER. He may answer the question. He is stating it as a fact that he has been advised——

Mr. WHEAT. Well, now, if Your Honor please——

Examiner DE BRULER. By the consumers. He says he has been advised by the consumers.

By Mr. BURR:

Q. That is a customary matter, is it not?

A. What is?

Q. That is a customary matter, for architects to order white pine, isn't it?—specify white pine?

A. In many instances; yes.

Q. The reputation in the architect's trade of white pine, as well as the ultimate consumer, is well known, isn't it?

A. Yes.

Mr. WHEAT. I object to any further questions on architects, because this witness has not qualified as an architect. He has not stated that he ever has been an architect.

Examiner DE BRULER. The objection is overruled and exception noted.

Q. (By Mr. BURR.) Now, as a result of your experience, can you say whether or not the trade term "white pine", as used for Pinus ponderosa products, has a capacity and tendency to confuse the ultimate consumer?

Mr. WHEAT. Now, before that is answered, I shall refer to
2119 page——

Mr. BURR. I will concede it is in the complaint.

Mr. WHEAT. No, Mr. Burr; page 1028 of this record. It was ruled by the examiner that a question as to a tendency to mislead the consumer could not be asked in this case, and that having been a ruling in this case, I assume that we must follow it.

Mr. BURR. I think the other examiner, if he were present, has the power to revoke the ruling, just as the Supreme Court said——

Examiner DE BRULER. How does that question read?

Mr. BURR. I think that this examiner may properly rule or overrule as he pleases.

Mr. WHEAT. Have you a copy of that transcript with you, sir?

Mr. BURR. I have it in my trunk, which is on the way to San Francisco.

Mr. WHEAT. Now, I will again refer to page 1028 of that record, at which point the examiner hearing this case stated that this question of tendency to mislead was, in his opinion, the precise question which the Commission must ultimately determine, and that it was not a proper question to be asked of any witness.

Examiner DE BRULER. I didn't get this question. Will the reporter read the question?

2120 (The last question was read.)

Examiner DE BRULER. Have you any facts, any knowledge, upon which to answer that as a fact?

A. Only information given me by lumber dealers and consumers.

Mr. WHEAT. Your Honor, I renew my objection on the ground that it is also hearsay.

The WITNESS. I have never individually ordered white pine and received Pinus ponderosa. My information on this is necessarily what I have derived from people who have done so.

Mr. BURR. If the examiner please, the circuit court of appeals has twice in a New York district ruled that the Commission may receive evidence which is subject to a strict objection in courts of law.

Examiner DE BRULER. I understand that.

Mr. BURR. And the courts have held the same thing with regard to the Interstate Commerce Commission, and it seems to me that inasmuch as this is information from a man who has had an exceptional opportunity to find out just exactly what the situation is from his eight years in the chief forestry position in the country, it seems to be that this is the very kind of thing to which the New York Circuit Court of Appeals referred when it said that the Commission may take into consideration matters that will influence business men

and upon which business men might base their conclusions and spend their capital.

2121 Mr. WHEAT. Will you cite that case, please, sir?

Mr. BURR. I cannot cite it right now, but there is such a case, sir.

Mr. WHEAT. Will you furnish me the citation?

Mr. BURR. I will be glad to furnish you with the citation when I get back to Washington and brief this thing, but I am not going to do it on this trip.

Examiner DE BRULER. Has anyone ever spoken to you that had been misled in regard to the purchase of this lumber?

A. Not individually misled; no, sir. The dealers and others have told me what their judgment was of the effect of the name upon the consumer.

Examiner DE BRULER. We won't go any further with this, then. We won't go any further with this. Let it stand for what his statement is worth.

Mr. WHEAT. He has not answered the question yet.

By Mr. BURR:

Q. Does white pine in the former strobus-producing States mean something definite? Is there a definite concept in the public mind with regard to the characteristics and qualities of Pinus strobus?

A. Yes.

Q. And those are the qualities, in general, roughly speaking, that you outlined at the beginning of your testimony, or substantially the beginning; is that true?

A. Yes. The qualities are: Very soft, easily worked, easily

2122 machined wood.

Q. Does the consumer, in ordering white pine, in your judgment and as a result of your experience, believe that he is getting genuine white pine?

Mr. WHEAT. Now, if the examiner please, that goes even farther than the other question.

Examiner DE BRULER. Objection sustained.

Mr. BURR. All right.

Q. Now, have the genuine white pines a high degree, compared with Pinus ponderosa, of adaptability to high-priced specialty use, particularly where exposed to the weather?

A. Yes.

Q. Will you explain what that situation is in that respect?

A. Such uses as very high-grade millwork, door entrances, high-grade cornices, where the lumber or the fabricated lumber must be of uniform texture, easily worked, and hold its shape and form after fabrication, is one example.

Q. How about pattern work?

A. Pattern work?

Q. Yes.

A. The old-growth white pine has a very high reputation for pattern work, because of its uniform soft texture, ease in working, and ability to hold the pattern after it is cut.

Q. Is sugar pine in that class?

A. Sugar pine?

2123 Q. Yes, sir. Is Pinus ponderosa a good wood for pattern purposes?

A. The best product of Pinus ponderosa is used for that purpose to some extent but is not as highly regarded for it as the genuine white pine.

Q. Now, for such purposes, in your judgment, should the term "white pine" be protected for genuine white pine lumber?

Mr. WHEAT. Now, if the examiner please, I object to that. The ground of my objection is that which was stated to the former question—first, that that is the ultimate fact, the ultimate question, on which a finding must be made by the examiner and the Commission; and second, that it is purely heresay.

Examiner DE BRULER. Objection sustained.

Q. (By Mr. BURR.) In what way, Colonel Greeley, in your opinion, can the ultimate purchaser of these specialty products to which you have referred be protected when he desires genuine white pine for those purposes?

A. I believe he should be protected by——

Examiner DE BRULER. He asked you how he can be protected.

A. Well, he can be protected by limiting the use of the word "white" to lumber products of the genuine white pine. That is one method, and the most obvious method.

By Mr BURR:

Q. Is he protected at the present time, in view of the wide sale of ponderosa pine as various descriptions of white pine, including the term "California white pine"?

2124 A. No; not completely, at least.

Q. If you were in need of lumber and placed an order for white pine, what product would you expect to receive?

Mr. WHEAT. Now, if the examiner please, what product he would expect to receive——

Q. (By Mr. BURR.) What kind of lumber would you expect to receive?

Mr. BURR. I think your objection was captious.

Mr. WHEAT. I am not intending to make any captious objections in this case. There are very important matters, in which a large industry is involved.

Examiner DE BRULER. You may answer the question.

A. I would expect to receive lumber from a genuine species of white pine.

By Mr. BURR:

Q. You would expect to hold the contractor up to that level, would you?

A. Yes.

Q. Now, I wish you would turn to the question of reforestation. Has there been a widespread reforestation, so far as you know, in Pinus strobus—or first let me ask you what opportunities to observe you have availed yourself of, if any, of reforestation matters, in various varieties of lumber, if you would kindly state that briefly.

A. During my last fifteen years in the Forest Service, I was quite closely in touch with reforestation work, both of the
2125 Federal Government and of the various States who were so engaged, and to a considerable extent on the part of private forest owners.

Q. Did you actually go out and observe this line of work?

A. In a great many instances.

Q. And a great deal of it was conducted under your administration with the Forest Service; is that true?

A. As far as national forests were concerned; yes.

Q. That is what I mean.

A. The Government was also cooperating financially with some thirty States in the maintenance of State nurseries and the distribution of planting stock, and it was part of my duty to keep in touch with that.

Q. And did you have a special division or branch of your Bureau that was in charge of that work and under your supervision?

A. Yes, sir.

Q. How many men, approximately, would you say were under you in that capacity?

A. On the national forests approximately twenty-five men were employed primarily in nursery work and timber planting. In addition to that we had some three or four inspectors of the cooperative work with the States who kept in touch with the State nurseries and planting.

Q. Now, did you spend considerable time in the field supervising this work and seeing what the results were, and so forth?

2126 A. Quite a good deal.

Q. Now, about Pinus strobus, is that being reforested to a considerable extent by these various agencies you have described?

A. Pinus strobus has been planted more extensively than any other species in the Northern and Northeastern States.

Q. How far west would you call northern and northeastern?

A. Including Minnesota. In the national forest plantings in my former district of Idaho and Montana, the Idaho white pine, or western white pine, was more extensively planted than any other species.

Q. Now, could you be a little more specific in some fashion—I don't know whether it is a fair question—but can you give us an idea, roughly, or as accurately as possible, of the acreage or the number of trees, something to tie this with more definiteness; square miles, or something?

A. I made an estimate in 1926 that the extent of annual tree planting at that time amounted to about forty million trees a year, of which probably sixty percent represented species of genuine white pine. The planting projects of such large States as New York, Pennsylvania, Massachusetts, Vermont, and so on, to a considerable extent in the Lake States, use white pine more largely than any other species.

Q. Now, when you speak of millions of trees, could that be translated into acreage? How many to an acre would that represent?

A. Approximately a thousand trees to the acre.

2127 Q. Have you given any study to this disease of genuine white pine known as blister rust?

A. Yes.

Q. Do you regard that as an agency that is going to destroy these white-pine forests?

A. No.

Q. You think it can be controlled, then, do you?

A. Yes.

Q. Is it in process of being controlled at the present time?

A. It is under pretty fair degree of control in the Northeast, where its presence has been known for the longest time and the controlling operations have been most active. I personally examined a number of areas in New England where the blister rust has been present for years, where I believe that while some damage will be caused, some timber will be destroyed, in all probability it will be fairly well controlled. In the West the situation is much less definitely known. The disease has but lately been found in the western white-pine areas, and it is a serious menace and a question, but in my judgment it will be controlled.

Q. And that control is by virtue of the destruction of certain vegetation, is it?

A. One of the methods is to destroy the alternate host plants of the Ribes family, gooseberries and currants, apparently the most successful method of controlling the disease.

Q. Now, those plants are alternate hosts, are they?

2128 A. Yes.

Q. By the by, is that rust vegetable or animal?

A. It is a fungus; it is a vegetable organism.

Q. After a part of the white-pine forest has been infected, then the destruction of the alternate hosts will not stay the pestilence?

A. Yes.

Q. It will or will not?

A. It will. The pest can only extend from tree to tree through the alternate host. Once a tree becomes infected, that tree is doomed to probable slow death; but before other trees can be affected the pest must find the alternate host on which to repropogate itself and redistribute itself.

Q. In other words, pine tree B cannot catch the disease from pine tree A?

A. No, sir.

Q. It has got to have the gooseberry or the currant in order to catch it from the other tree through an intermediary; is that true?

A. That is the information that the experts have given us.

Q. Now, returning again to the question of pattern stock, what are the characteristics and qualities required for pattern stock beside those that you mentioned? Is uniformity of texture one?

A. Uniformity of texture, softness, clearness from any defect or blemish, and ability to hold the pattern after cutting.

2129 Q. Uniform workability throughout?

A. Uniform texture throughout.

Examiner DE BRULER. Do you mean by that lack of shrinking?

A. Lack of shrinkage, lack of warping. Patterns are often of considerable width; and if the boards should warp or twist, why, of course, the value of the pattern is destroyed.

Q. (By Mr. BURR.) Do you think there is any relation, Colonel, between the good will of the public toward the lumber industry and the use of proper nomenclature in the sale of lumber?

Mr. WHEAT. Now, if the examiner please, this is going very far afield. I submit it is entirely immaterial to the present issue as to whether the name "California white pine" in and of itself does work a misleading of the public.

Mr. BURR. If the examiner please, that is a part of the public interest. I am not asking him now as to public interest. I am asking him a specific question, and it goes directly to the public interest.

Examiner DE BRULER. Let me get that exact, please.

Mr. BURR. If there is not a public interest in the welfare of the lumber industry, I am very much disappointed.

Examiner DE BRULER. Let me get that exact, please.

Mr. WHEAT. We submit there is a public interest in the welfare of the lumber industry, Mr. Burr.

Examiner DE BRULER. Will you read the question?

2130 (Last question read.)

Examiner DE BRULER. Are you in a position to answer that?

A. I can only express my opinion, sir.

Examiner DE BRULER. Give your opinion as an expert.

A. Yes, sir.

By Mr. BURR:

Q. What is that relation, please?

A. I believe the good will of the public toward the lumber industry will be strengthened if the public is assured of an exact identification of the woods which it purchases.

Q. Are you familiar with the tree from which the so-called Douglas fir is manufactured?

A. Yes.

Q. What is that tree?

A. Do you mean the botanical——

Q. Well, botanical or the common designation, either or both.

A. The common name for it is Douglas fir.

Q. And that botanically is not a genuine member of the Abies variety of tree, is it?

A. That is correct.

Q. It is, you say?

A. It is not a true fir.

Q. Abies is the genuine fir, is it?

A. Yes; fir and balsam.

Q. Are you a trained specialist in the technique of botany?

A. No, sir.

2131 Q. You don't claim to be an expert on that subject?

A. No, sir.

Q. Now, is the so-called Douglas fir sometimes called Oregon pine in the trade?

A. Yes, sir.

Q. That is more in the export trade, isn't it?

A. That is the old name for it, the original name under which it was put on the market.

Q. Now, applying common terms, strictly speaking, that is a false hemlock rather than a real fir, is it?

A. Well, the botanical name Pseudotsuga is built up on a combination of Latin terms that may be interpreted as meaning "false hemlock", but it has no botanical relationship to the hemlock. It is simply a distinct species of its own. It is neither a true fir nor is it a balsam; it is a distinct species of its own, with its own characteristics.

Q. In other words, it belongs to a separate genus, does it, rather than a species of some other genus?

A. Yes.

Q. Now do you regard that naming of the tree that you have described as a fir when it is not a fir as one that is deceptive to the public?

Mr. WHEAT. Now before that question is answered, this question applies to matters not at issue in this case, and is far afield

2132 from anything that is in issue in this case, and appears to us to be an attempt to throw some other wood in the case. I believe it is totally immaterial and should not be allowed weight.

Mr. BURR. If the examiner please, I think counsel is correct, with this one qualification: Counsel himself has injected this tree into the record when Professor Record, of Yale, was on the stand. He has brought this thing—dragged this thing—into the record without any particular excuse, so far as I could see. I am going to settle the thing now.

Examiner DE BRULER. I remember that, and I remember it was not objected to. I will let it go in.

Mr. BURR. I objected to it that one time it was offered. Now he turns around and objects to it. I think I was right in the beginning.

Mr. WHEAT. I think I shall have to now state the purpose of any questions we asked as to Pseudotsuga taxifolio: that in the lumber business it has not been the custom in general, in the making of common names for lumber, to follow purely botanical distinctions. Now we have no purpose beyond that, and we don't believe that the question of the proper name of Douglas fir can be brought into this case, nor do we wish to bring it in this case. We don't believe it is proper in this case, and we assume that the Commission could make no findings on that point in this case. Therefore, it is purely immaterial to this case.

2133 Mr. BURR. May I say just one word before the examiner rules. I want to show here the distinction between the misnaming of this wood and the misnaming of the woods that are here in interest. That will take the entire relevancy out of the matter entirely.

Examiner DE BRULER. All right; you show it.

Mr. WHEAT. Just a moment.

Examiner DE BRULER. The objection is noted. The objection is noted and overruled.

Mr. WHEAT. Save an exception.

Mr. DE BRULER. Exception allowed. You may answer that question.

Mr. BURR. Now does he know anything about what the question is about?

(Last question read.)

A. No; it is not.

Q. (By Mr. Burr.) Will you state why? What is the distinction between the naming of ponderosa as and for white pine and the naming of this particular species as fir when it is not a fir? What is the practical difference between those two misnomers?

Mr. WHEAT. Now, Mr. Burr, do you refer to your word, "deceptive" that you used in your other question?

Mr. BURR. Beg pardon?

Mr. WHEAT. Do you refer to your word "deceptive" that you used in your other question?

2134 Mr. BURR. I think the question is able to stand on its own feet and is clear. I will stand on that question.

Mr. WHEAT. Then, if the examiner please, I want the record to show very definitely that any question which involves a conclusion of deception on the part of this or any other witness in this case is objected to on the grounds which have been maintained by the Trade Commission in innumerable cases; that that is the final question which the Commission must determine. Now, the question of deception certainly cannot be proved by asking the witness whether there is a deception.

Examiner DE BRULER. Do you recall the question? I don't recall just the question.

(Last question read.)

Examiner DE BRULER. The objection is noted and overruled; exception allowed. You may answer the question, if you can.

A. The practical difference in this case, in the case of ponderosa pine, the wood which, in my judgment, at least, is not equal in quality to the long-established woods known as white pine, has used the term "white" in its common nomenclature. In the case of Douglas fir the shoe is on the other foot. Douglas fir has commercial qualities very distinct from the true firs, and for all ordinary uses of lumber superior to those of the true firs. To the extent there may have been any confusion in name between the Douglas firs and the true firs, that confusion has run to the injury of the lumber-
2135 men and not of the consumer. As a matter of fact, Douglas fir, having such distinctive qualities and such large-scale production, has, as far as I know, very seldom carried any conception to the user as being a true fir; but we have had some situations where users objected to Douglas fir, thinking that it was white fir, where the injury, if there was one, was to the lumber business producing Douglas fir rather than to the consumer that is buying it.

Q. Do you know of any misnomer that is confusing to the buyer other than the one as to which you have testified heretofore as to the white-pine situation?

Mr. WHEAT. Now, if Your Honor please, certainly this is going far beyond even the last question.

Examiner DE BRULER. You object to that, do you?

Mr. WHEAT. Yes; I certainly do.

Mr. BURR. May I say, before the examiner rules, opposing counsel has asked Professor Record and other witnesses with regard to the juniper situation and the cedar situation, and—I don't know—one or two others, certain matters that I did not know about and have not borne in mind; and it seems to me that without going into each one of these situations, I may ask the witness whether he knows of a misnomer in the lumber trade that is comparable to this misnomer of the white- and yellow-pine situation, or the white pine and the ponderosa situation, I should say, so that we may have an offset for the questions that this gentleman has already asked of my
2136 witnesses and presumably will when he has his own botanical expert on the stand.

Mr. WHEAT. Now, if the examiner please, this certainly is opening the jackpot; and I now state that I will offer—if this question is sustained—I certainly will offer a very large amount of evidence as to all types of misnomers in the lumber business, and I assume that those questions go into this record from now on.

Mr. BURR. If the examiner please, what I am doing is to make irrelevant all this immaterial matter. I am now eliminating the necessity to try all of these cases. He has injected this in here, and I must answer pro tanto, and no further, and my desire is here not to try all these other misnomers, but to show that there are no such misnomers as would affect this situation. If I am wrong, why, I will withdraw the question.

Examiner DE BRULER. I think we are going outside the record, in my judgment.

Mr. BURR. I will withdraw the question, then. I don't want to be a particeps criminis in trying other cases. I think counsel has been at fault in that respect.

Mr. WHEAT. I warn counsel now that I certainly shall expect, under the ruling of the examiner as to Douglas fir and going into it in the way you have, I shall certainly offer testimony going into the complete lumber business as to this matter. You have opened the jackpot, and I certainly shall continue it.

Mr. BURR. I want to make an offer to stipulate right now,
2137 which it seems to me will cover this whole situation. My questions here have been protective merely; they have been in the nature of rebuttal in order to, in turn, cover this question. I have put them in, perhaps, out of order. I want to say right now that I will stipulate to withdraw this question and this answer, anything relating to Douglas fir, if counsel will admit that his questions with regard to Douglas fir and regarding these other misnomers having nothing to do with the white-pine situation may be withdrawn.

Mr. WHEAT. I don't want to stipulate to anything of that character.

Mr. BURR. Of course, you don't. You are the one that wants to go into this. That is your proposition here. He has not been sincere with the commission.

Mr. WHEAT. I ask that the last statement of counsel be expunged from the record, Your Honor. I would ask that the reporter read it.

Mr. BURR. If counsel is sincere in bringing these questions in, I will ask to remove it.

Mr. WHEAT. He is making that statement for the record.

Examiner DE BRULER. Just wait a minute.

Mr. BURR. I withdraw my consent to expunging it and ask that it be left in the record, sir.

Mr. WHEAT. Fine, sir.

Mr. BURR. I want my statement there a moment ago in the record.

2138 Mr. WHEAT. All right; I want it in, too.

Mr. BURR. We are all satisfied. Now, let us go forward. Now, is my offer to stipulate in the record?

The REPORTER. Yes, sir.

Mr. BURR. That is all, sir. You may cross-examine.

(Short recess.)

Mr. WHEAT. I assume, Mr. Burr, that we probably cannot complete the cross-examination of Colonel Greeley prior to the noon recess.

(Discussion off the record.)

FRED W. ROBLIN was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. WHEAT:

Q. Now, Mr. Roblin, where do you reside?

A. I reside eight miles from Portland.

Q. But you are in business in Portland, are you?

A. In Portland.

Q. What is your business, sir?

A. I am the manager of the pine department of the Morrill & Sturgeon Lumber Company.

Mr. BURR. What lumber company?

A. Morrill & Sturgeon.

2139 By Mr. WHEAT:

Q. Are they wholesalers or retailers, or what end of the lumber business are they in, sir?

A. We are wholesalers and manufacturers, both.

Q. Do you produce lumber?

A. We produce lumber; yes, sir.

Q. In the State of Oregon?

A. In the State of Oregon.

Q. In other States?

A. No.

Q. Where do you market your lumber, not only that which you produce but which you wholesale?

A. In practically every State in the United States and some in Canada and foreign countries.

Q. Taking into consideration only the pines, what species of pines do you market?

A. Pondosa pine, Idaho white pine, coast white pine, sugar pine, California white pine, and the allied species, like fir and larch.

Q. Yes; but I am speaking only of pine for the moment.

A. Those are the pines.

Q. Do you know whether or not the so-called, what we have called, coast white pine is the same botanical species as any other of those mentioned by you?

A. I do.

Q. What is it allied to?

2140 A. Pinus monticola.

Q. And that is the same botanical tree which is also called Idaho white pine, is it?

A. It is.

Q. The Pinus monticola, which is called Idaho white pine and grown in the inland empire region, is it?

A. Yes, sir.

Q. And that which is grown on the coast, here on the Pacific coast, is called coast white pine, is it?

A. Coast white pine.

Q. That is a trade term for it?

A. A trade term.

Q. Speaking now, botanically again, are there any other words that you would use which refer to the same botanical species. Take

the word "pondosa"; does that refer to the same botanical species as any of the other words you have mentioned?

A. No; it does not refer to either of those that I have mentioned.

Q. But does it refer to any one of the other pine names you mentioned?

A. It does.

Q. What is it?

A. California white pine.

Q. Those two are the same botanical species?

A. They are the same botanical species.

2141 Q. If you know, what is the botanical name for that species?

A. Pinus ponderosa.

Q. Now, how long have you been selling Pinus ponderosa lumber?

A. Do you mean as Pinus ponderosa?

Q. No; lumber produced from the tree Pinus ponderosa under whatever name.

A. Twenty-six years.

Q. Has that experience taken you, yourself, into the eastern markets?

A. It has.

Q. And you have also been connected with it, have you, in the western end?

A. Yes, sir.

Q. Have you both bought and sold lumber produced from Pinus ponderosa?

A. Yes, sir.

Q. Do you sell Pinus ponderosa extensively under the name "California white pine"?

A. We have done so.

Q. Do you sell it extensively under the name "pondosa pine"?

A. To some extent.

Q. How long have you been using that term, sir?

A. About two years.

Q. I see. Did you adopt that term when it was adopted by the Western Pine Manufacturers' Association?

2142 A. Shortly after that.

Q. Now let me ask you whether or not in marketing your pondosa pine in the general markets which you serve you find yourself hampered by the use of the trade name "California white pine" by producers of lumber from Pinus ponderosa in California?

A. I am afraid that I didn't quite get the question.

Q. I will reframe it then. Do you find in selling the so-called "pondosa lumber" you meet with any sales resistance because of the use of the term "white" in the trade name "California white pine"?

A. No.

Q. That covers your entire experience in selling this lumber, does it?

A. Practically ninety-nine percent of it.

Q. Now in marketing your Idaho white pine, do you find that there is any sales resistance—do you meet with any sales resistance—because of the use of the word "white" in the trade term "California white pine"?

A. I don't confuse those two words in my sales.

Q. All right.

A. I cannot recall now of having had anything that I would call sales resistance.

Q. How long have you been familiar with the term California white pine?

A. Well, I would say, off-hand, twenty-five or twenty-six
2143 years; possibly longer than that.

Q. Now, when you get an order for white pine what do you ship ordinarily and what is the custom in this area?

A. Pondos pine.

Q. Is that generally understood in the trade with which you deal?

A. With the trade that I deal with; yes.

Q. Have you ever had any complaints as to that? If so will you state what they have been as to the use of that?

A. I have had no complaints as to the question of "white" in my sales.

Q. In your opinion and from the customers with which you have deal in your sales—or let me reframe that: Do your customers ask you botanical names of species?

A. Not as a rule.

Q. And when they do, do you explain the botanical names?

A. I try to.

Q. Do you explain them along the lines that you have testified to this morning?

A. Yes.

Q. Have you found that your customers in general are interested in the botany or the number of needles on a tree?

A. No.

Q. Are they interested primarily in the quality and utility of the lumber produced from that tree?

A. Yes.

2144 Q. Now can you approximate the volume of business that you had in a year in California white pine, pondosa, and Idaho white pine—just approximately?

A. Well, it has varied so greatly that it is hard for me to say. My sales on those woods have decreased considerably and I kept a record for a long time, and I found in 1917 and '18 that I sold nearly eight thousand cars of lumber in that twelve months, and I have had years since when I was lucky if I sold twelve hundred cars. It has varied according to business conditions, and it is pretty hard to say. I am selling lumber every day, and I would like to sell much more than I am.

Q. Just forgetting the present slump in the lumber business, of course, has your sales of pondosa and California white pine been growing?

A. No; it has not been growing.

Q. And is that due to general lumber conditions?

A. I think so.

Q. Have you had any experience with the remanufacturing of these products?

A. I have.

Q. Will you tell the Commission which lumber, in your opinion, and on the average, works better in the machines generally used for remanufacturing purposes, Idaho white pine or the Pinus ponderosa?

A. Pinus ponderosa.

2145 Mr. BURR. May I ask that that question be read?

(Last question read.)

By Mr. WHEAT:

Q. Have you noted any particular changes in uses to which pondosa pine is put in the general market since its name was changed from western white pine to pondosa?

A. Not in my own business.

Q. Do you believe that Pinus ponderosa lumber which is of a grade useful for those purposes is suitable for high-grade machine work?

A. I do.

Q. Is it, in your opinion, suitable for such high-grade millwork as cornice work?

A. It is.

Q. And other high-grade mill and specialty work?

A. It is.

Q. Did you ever have any complaints to the effect that grades of that wood suitable in general for such uses were not suitable because they were Pinus ponderosa?

A. No.

Mr. WHEAT. I think that is all, sir. You may cross-examine.

Cross-examination by Mr. BURR:

Q. Mr. Roblin, is your concern actively engaged in selling and manufacturing all of the four varieties that you refer to in

2146 your testimony, the coast white pine, the pondosa pine, Idaho white, and the California white?

A. No.

Q. Which of them are you now engaged in actually logging off the land?

A. We are actually manufacturing at the present time pondosa pine. In that pondosa pine we occasionally come across some Pinus monticola.

Q. That is your coast white pine, is it?

A. Or Idaho white pine.

Q. Yes. In other words, the monticola that you refer to is by you in this section designated "coast white pine." Is that right, now? Am I correct?

A. If it grows in this section; yes; if it grows here.

Q. You are talking about what grows in this section as being the lumber of that description that you are yourself engaged in manufacturing, or do you have some mills out in the Idaho white-pine section proper?

A. Well, the mill that we are operating in our pine now happens to be in eastern Oregon, very close to the Idaho line.

Q. And there it is known as "Idaho white" rather than "coast white", isn't it?

A. It is known as "Idaho white."

Q. Where are you getting your coast white pine?

A. Well, we get it from points in British Columbia, points
2147 around Tacoma, points around Grays Harbor; also around Dallas, Oreg.

Q. Well, you are jobbing them, are you not; that is, hunting up purchasers?

A. Yes; we are buying it.

Q. Now, you are actually yourselves cutting and manufacturing the pondosa pine. Are you manufacturing any of the California white pine, cutting that yourselves?

A. No.

Q. I see. You are then jobbing all but the pondosa; is that true?

A. Yes, sir.

Q. Do you job some of your pondosa, too?

A. Much more than we cut ourselves.

Q. And your jobbing operations are much larger than your manufacturing operations at the present time?

A. Yes, sir.

Q. Now, your customers are retailers entirely, are they?

A. No, sir.

Q. Retailers and jobbers?

A. They are retailers and jobbers, sash and door factories, planing mills, and industrials of that nature.

Q. Now, do you get orders for white pine occasionally without any further designation?

A. Almost every day.

2148 Q. And what do you send them when they want white pine and don't say what kind of white pine they want?

A. Pinus ponderosa.

Q. For how long has that been your custom?

A. For a good many years.

Q. Where do you get that Pinus ponderosa that you sell them when they ask for white pine?

A. From northern California, southern Oregon, eastern Oregon.

Q. Now, wait a minute. What do you mean by southern Oregon? Klamath Falls, or Bend, or what?

A. Klamath Falls—well, from Grants Pass south.

Q. Now, what do you mean by eastern Oregon?

A. From The Dalles east.

Q. Now, if they want Idaho white they have got to say "Idaho white pine" instead of saying "white pine", have they?

A. Or indicate on their order certain sizes or details.

Q. Now, is that true of your customers in all parts of the country, that you sell them in that fashion?

A. No; it would not be every place, because I have sold lumber to certain people for fifteen or twenty years, and I know exactly what they expect from me. They oftentimes don't even put the word "pine" on the order in any form or shape, they just——

Q. Ask for carloads?

A. No; they ask for one to five cars of six-quarter no. 1 shop.

Q. And then you, from your long experience, know what
2149 they want and send it to them?

A. I know what that particular customer has been using.

Q. But ordinarily an order for white pine would bring either California white pine or pondosa pine; is that true? Do you sell pondosa pine on orders for white pine just as you do California white pine, or not quite so freely?

A. Well, the trade is gradually being educated to the name pondosa pine, and a good many of them use that, although I believe that fully fifty percent of my customers just use the initial W.P.

Q. In their orders?

A. On their order.

Q. And then you would be more apt to send them California white pine than you would the pondosa; is that true?

A. I do not differentiate between those two species.

Q. You don't differentiate between those two species?

A. It is according to the supplies in my mills.

Q. Is there much difference in quality between pondosa and California white? You say you don't differentiate that?

A. A lumberman's practical difference in it—for instance, California white pine is a big tree.

Q. They are a little wider width, is that true?

A. They are a little wider, grade for grade; a larger percentage of cuttings than there would be, grade for grade, in what we term "pondosa pine."

2150 Mr. Burr. That will be all.

Mr. Wheat. Just one moment. I have a few questions.

Redirect examination by Mr. Wheat:

Q. Have you found that there is considerable variability in the wood of the Pinus monticola from the forest regions in which it grows?

A. There are decided characteristics in the wood.

Q. Will you just explain briefly what they are, how wood varies over its range?

A. The Idaho white pine, growing in the State of Idaho and in the Coeur d'Alene district, stretching down to, perhaps, Lewiston, Idaho, is a smaller tree than the Pinus monticola growing on the coast. The common type, what we call the common type in lumber, being knot-defected wood, is smaller; it is embedded into the grain of the fiber of the wood and much more pronounced in the Idaho white pine than in the coast white pine. The coast white pine is a larger tree and produces—is a very much larger tree as a rule, and produces some black knot. I have never seen any cherry red knot in it. They have told me that it existed in it, but I have never seen it. It is a larger knot. The coast white pine for shop purposes would be, in my opinion, better than the Idaho white pine. The Idaho white pine, however, would be better for structural purposes, or boxes, or something like that, than the coast pine.

2151 Q. What is the color of the heartwood of the Pinus monticola, if you know?

A. Well, it is just a little darker in color.

Q. Than what?

A. Than the sap, than the outside.

Q. Now, has this usage that you mentioned of selling Pinus ponderosa wood on orders for white pine been well understood in the trade that you deal with for a number of years?

Mr. BURR. Will you please give me that question?

Mr. WHEAT. Will you read the question?

(Last question read.)

A. I can answer that; yes. I would like to qualify just a little.

Q. I wish you would, sir.

A. One of my customers—I will mention his name, the Huttig Manufacturing Company, at Muscatine, Iowa; Roy Richards, their purchasing agent and manager, knows probably as much about pine as anybody in the industry. Everyone of his orders come out for white pine, or they come out "W. P.", or they come out without any name on it. He has never sent me an order in which he has put pondosa pine on it. Consequently, I have never felt that I was taking any advantage of my customer in any way. In fact, I thought that the wood that I shipped him as pondosa pine or California white pine was what he wanted, what he expected, and what he bought.

Q. And you have never had any complaint from him, have you?

2152 A. Never have.

Q. Now, in certain grades of wood there has been, has there, for a number of years in general, and eleminating particular market difficulties, a price differential between pendosa and California white pine? Just explain if there has been, and what it is.

A. There has been for many years approximately a two dollar a thousand difference, an average two dollar a thousand difference between the shop prices, shop grade prices of California white pine

and what we used to term western white pine, or what is called pondosa pine now.

Q. Has there been any change in that general differential since western white pine has been called pondosa pine?

A. No, sir.

Q. Now proceed. I interrupted you.

A. My trade has told me that in shop grades, factory grades——

Mr. BURR. I think I will object to what his trade has told him.

Examiner DE BRULER. Now, that would be proper in stating a fact that they had told him. Let it go in.

By Mr. WHEAT:

Q. Just state your experience as to the——

A. I found in selling California white pine that I can obtain a better price than I can for pondosa pine in shop grades.

Q. And that applied also, did it, before the name was changed to pondosa pine?

2153. A. It has always applied.

Q. Have you ever noted that there was any difference because of that change in name?

A. Not in my sales.

Q. In your opinion has the name under which the lumber is sold anything to do with that difference in price?

A. None.

Q. Do you sell any white fir?

A. Yes, sir.

Q. What is that used for?

A. Generally for structural purposes in erecting houses.

Q. And do you know whether it is also used for butter boxes and food containers?

A. Lower grades are used for that.

Q. In what way is it a good wood for that purpose?

A. It is supposed to be fairly tasteless and odorless, and has a lot of resin or pitch in it that would make it good for that.

Q. Are you familiar with a wood which is sold commonly in the market as Douglas fir?

A. Yes, sir.

Q. Do you know whether for those purposes you have mentioned Douglas fir is superior or inferior to white fir?

Mr. BURR. Wait just a moment. I am going to object to all those questions with regard to the fir proposition upon the ground
2154 that it was ruled out this morning and incompetent and irrelevant.

Examiner DE BRULER. I think that has gone far enough.

Mr. WHEAT. Your Honor, this jackpot has been opened by Mr. Burr.

Examiner DE BRULER. The jackpot has not been open. We will not go into it further. You may ask this witness that one question.

Mr. BURR. I object to that right now.

Examiner DE BRULER. It may go in over your objection. I want it understood no further questions will be gone into except that. Now, you finish up on that.

Mr. WHEAT. No further misnomers.

Examiner DE BRULER. He may answer that question.

Mr. WHEAT. Can you answer that question, sir?

A. For the purpose that you have spoken of it would be dangerous to ship Douglas fir. It would not be suitable.

Q. Why is that?

A. Well, because of pitch and because of a certain taste and odor to the wood.

Mr. WHEAT. I think that is all.

Examiner DE BRULER. That is wholly immaterial; but that is on the record, and I have let that in because I let it in this morning, and I think perhaps I should not have done so. It was in the record before, and I let it go that far.

2155 Recross-examination by Mr. BURR:

Q. Now, has eastern white pine a high reputation in the market?

Mr. WHEAT. If Your Honor please, I didn't ask this gentleman anything about eastern white pine.

Mr. BURR. If the examiner please, this gentleman has gone into matters on supposed redirect which were not proper redirect. I was very patient, and I didn't object upon that ground, because I know Your Honor would allow him to return to direct if he chose, but he has gone into a lot of matters that were not proper redirect. Now, I have got a right in my recross-examination to go into the same things he has gone into, this matter of the white pine situation, from a different aspect, and it seems to me I am laying a foundation question.

Examiner DE BRULER. What was that question?

Mr. BURR. Read the question, please.

(Last question read.)

Examiner DE BRULER. Oh, you may answer that, if you know.

A. Yes.

By Mr. BURR:

Q. Northern white pine has a high reputation, does it not, on the market?

Mr. WHEAT. We admit that, Mr. Burr.

By Mr. BURR:

Q. Now, I think you said that your trade are retailers in part?

A. Yes, sir.

2156 Q. Now, retailers are selling to a public not so well informed, of course, with regard to lumber matters as the retailer himself is, is that true?

A. Yes, I would think so.

Q. Now, do you believe that the trade that you sell to are informed as to the identity of Pinus ponderosa and California white pine as being from the same tree, or don't you think so? I am not sure what you testified.

A. Oh, I think they think it is the same tree.

Q. Now, in reselling that lumber, and bearing in mind, please, the high reputation of northern white pine, don't you think there would be some advantage to the retailer in being able to call his product California white pine, call it white pine to the trade as contrasted with pondosa?

A. It would in certain States.

Q. Which States would you say?

A. In particular, Iowa.

Mr. WHEAT. Now, just a moment. May I have the record show whether this witness retails lumber in Iowa?

Mr. BURR. He said in all parts of the country.

Mr. WHEAT. He didn't say he retailed.

Examiner DE BRULER. I think he is qualified. You can answer if you can.

Q. (By Mr. BURR.) You have got retail customers in Iowa, have you?

2157 A. I have them; yes, sir.

Mr. BURR. All right, that qualifies him, I think.

Examiner DE BRULER. You may answer.

A. In Iowa, because the German trade there come in and ask for white pine. They are given fir, hemlock, old growth yellow fir, pondosa yellow pine; anything that is a light colored wood and not a shaky wood has come to be known by the average German buyer in those towns as white pine.

Q. Now how about New England? Isn't it an advantage to the retailer to be able to sell California white pine with the word "white" in it in filling orders for white pine in New England?

Examiner DE BRULER. If you are qualified to state that.

A. I don't think they sell it as California white pine.

By Mr. BURR:

Q. Beg pardon?

A. I don't think they sell it as California white pine.

Q. In New England?

A. In New England.

Q. They sell it as white pine?

A. You mean to the customer?

Q. To the customer.

A. Yes.

Q. When they sell it as white pine, then they order it as white pine?

A. When the customer comes in for white pine, that is, when a consuming customer comes in for white pine, he will probably

2158 get more times pondosa pine than he will genuine white pine.

Q. By pondosa pine you include California white pine, too, do you?

A. It is the same tree.

Q. Yes. And if there was a complaint on the part of the customer that he was not getting white pine, if it was California white pine you sold him the retailer would be able to say, "Here, it is California white pine", better than if it was pondosa pine, would he not, that he had sold him?

A. Well, I don't believe that the average Easterner coming into the yard would ask that. I think that would be asking a technical question that would be asked by an architect or somebody like that.

Q. Well, the architect represents the consumer. Now, isn't it an advantage to the retailer when he has orders for white pine to be stocked up with California white pine with the word "white" in it than to be stocked up with pondosa pine, which he has not bought as white pine but has bought as pondosa?

A. Only for certain purposes, I would think.

Q. You would think so for certain purposes?

A. I would think so for certain purposes.

Q. What purposes would you say those were?

A. Well, the most pronounced that I could think of would be pattern lumber.

Q. I see. Well, now, how about outside finish?

2159 A. I don't think it would make any difference.

Q. Our records already shows that a good many ask for white pine for exterior finish. Now, if a man was stocked with pondosa and with California white pine, which would he be more apt to sell to the customer?

A. It would be simply a matter of price, in my opinion.

Q. Well, if they were practically the same price, if he was stocked with California white pine and with pondosa pine, and he is asked for white pine, he would be more apt to sell him California white pine, would he not?

Mr. WHEAT. Now, are you making that as a statement to the witness?

Mr. BURR. "Would he not" is a question. I have a right to lead, as you know well.

A. My answer to that would be from my own small amount of retail experience, that if I had a pile in my yard that was white pine and a pile in my yard that was pondosa pine, and the pondosa pine had cost me $40.00 a thousand and the pile of white pine had cost me $50.00 a thousand, I would want to get the $50.00 a thousand lumber out quicker than I would the forty, because I would be reducing my investment and probably be making more profit on it.

Q. Yes. Well, now, there is no thought of a differential, as a matter of fact, is there, of ten dollars?

A. In the retail yards; yes.

2160 Q. I see. Now, if the customer came to you and asked for white pine and you had something that you could say was

California white pine, would you or would you not be more apt to sell him California white pine than you would pondosa pine?

A. Well, the trouble is——

Q. Can you answer "yes" or "no" and then explain why you would do so?

A. The trouble is that I don't think that the yards carry a stock of lumber in their yard as—now retail yards, I am speaking of retail yards—as a rule as California white pine. I don't believe they carry it under that name.

Q. Then if he came in asked for white pine he would get California white pine if he happened to be best stocked in that variety; is that true?

A. That is true.

Q. I see. Now, do you think that a retailer who has called for white pine would prefer to stock with California white pine over the pondosa?

A. With the retailer it would be purely and simply, in my opinion, a question of price.

Q. You think it would be purely a question of price?

A. I think so.

Q. You think that the retailer with calls constantly coming to him for white pine would stock either with pondosa or with California white pine, irrespective of that name "white" and pay

2161 no attention to it, when he has calls for white pine constantly?

A. Well, that would depend upon the territory in which he was retailing his stuff.

Q. Now, in territories like New England, where there is a call for white pine and where the old northern white pine has the reputation that it has, now which would you prefer, California white pine with the word "white" in there, or pondosa pine, when he is going to sell on orders for white pine?

A. Well, I will tell you; ninety percent of the time the customer would probably be getting from the New England retailers spruce.

Q. Spruce?

A. That would be the best answer I could give you to that.

Q. Now, suppose architects install spruce, the risk of the retailer in that condition is very great, isn't it, when he is giving him something he is not buying at all?

A. I don't think so in the retail trade. That is, for house purposes—now you are speaking of the retail dealer, are you talking to me for residence purposes?

Q. For residence purposes; yes.

A. Now, I am a salesman.

Q. Yes.

A. And I sell all woods.

Q. Yes.

A. All soft woods that are out here, and I figure and realize

2162 that they are all very good woods, that it is a lot of bunk when——

Mr. BURR. I object to this. It is not responsive. What is the question, please?

Mr. WHEAT. I ask that the witness be allowed to finish his answer.

Examiner DE BRULER. This witness is being asked about matters in New England. Are you familiar with sales there?

A. Well, I have lived in New England.

By Mr. BURR:

Q. Where did you live in New England?

A. I lived in Boston and Brooklin, both.

Mr. BURR. I see. Now will you please read the last question, Mr. Reporter?

(Last question read.)

Mr. BURR. Now, I don't want a lot of evidence here about "all bunk." I want an answer to that question. This witness can be specific, and then he can answer and give us the reason why, explain why, he has answered "yes" or "no."

Examiner DE BRULER. Can you answer that question? Have you a sufficient knowledge to answer that question? If you have, go on and answer it.

A. Well, Your Honor, I tell you it is a little bit difficult to answer that question, because it all depends upon what the customer comes in the yard for.

By Mr. BURR:

Q. He comes into the yard for pine, for white pine, and asks
2163 for white pine. Now then, which is the more risky, for him to sell to the customer California white pine with the word "white" in it or pondosa pine?

A. I don't think there is any risk involved in either wood.

Q. He is liable if he puts in the wrong wood on an order for white pine, isn't he?

A. I don't think so; not for the particular purpose that it is wanted. If it was wanted for some purpose that I don't exactly understand now, for instance, if a man came in for a mud sill and asked the retail dealer for white pine, the retail dealer would probably say to him, "Well now, I will give you redwood or cedar, which will be much better."

Q. Oh, if he tells him, it is all right.

Examiner DE BRULER. It seems to me the question is what wood would he give if he came in and asked for one thing.

Mr. WHEAT. That has been asked and answered three times. That has been asked and answered over and over again.

Examiner DE BRULER. You are asking about the risk?

Mr. BURR. We are talking about the retailer knowing that there is a risk in selling the wrong thing. Now, it is thoroughly pertinent here, thoroughly pertinent.

Q. Now, Mr. Witness, here is the proposition: A retailer is in a locality like New England, where he has many calls for white pine—that is true in New England, isn't it?

A. Yes, sir.

Q. The old northern white pine has a high reputation in New England for its high qualities including durability where ex-

2164 posed to the weather, isn't that true?

A. Yes.

Q. Yes.

Q. Now then, here is a dealer—furthermore there is a differential in price between old northern white pine, or old strobus, and ponderosa, whether sold as pondosa or whether sold as California white pine, there is a differential in price that the retailer has to pay for it, isn't there? Isn't that true?

A. I suppose there is; yes.

Q. Now then, if the retailer stocks with pondosa and supplies it without telling him that it is not northern white pine on orders for white pine, he has not supplied an article that comes to him marked as white pine, has he, if he supplies him pondosa?

Mr. WHEAT. Let us have that question read.

(Last question read.)

Mr. WHEAT. I submit that is a speculative question.

Mr. BURR. That is true, isn't it? I am laying the foundation here. I have got a right to the answer.

A. Would your prospective customer come to the yard and ask for northern white pine?

By Mr. BURR:

Q. He comes and asks for white pine. If the man supplies him with pondosa pine, he is not supplying him with something that comes to him marked as white pine, of course, is he?

A. No.

Q. Now then, if he supplies him California white pine on

2165 an order for white pine, he is then supplying him something that comes to him with the name "white" in it, isn't he?

A. Yes, sir.

Q. Now then, the retailer receiving those orders constantly, would he or would he not prefer to stock with wood that has the word "white" in it?

A. I don't think that he would care about the name of the wood. It is the wood that he gets that he wants, not the name. He don't care anything about it.

Q. He is selling him something that the man has not ordered when he sells him——

Mr. WHEAT. Are you making that statement for the record?

Examiner DE BRULER. He has answered it.

Mr. BURR. I am doing it in just such a manner as is necessary with this witness.

Mr. WHEAT. All I am saying is, I ask that that statement be taken out of the record. Just a moment, I want a ruling on that last point, if Mr. Burr's statement is left in the record——

Examiner DE BRULER. The things Mr. Burr said is in answer to what the witness said.

Mr. WHEAT. And may it go out? And may that statement then go out?

Examiner DE BRULER. I don't know that there is any statement in there that he made.

Mr. WHEAT. Read it.

2166 (The record was read, as follows: "He is selling him something that the man has not ordered when he sells him——")

Mr. BURR. Is he not?

Mr. Wheat. Is that a question?

Examiner DE BRULER. Is that a question?

Mr. BURR. Is he not?

The WITNESS. You have got me. I was thinking about something else entirely.

Mr. BURR. We will start again.

The WITNESS. I don't know what your question is.

Mr. BURR. I am going to get an answer to this thing. I have a right to.

Examiner DE BRULER. Well, proceed.

Mr. BURR. Well, I will proceed, if I am permitted to do so.

Q. Now, Mr. Roblin, here is a retail trade; this retail trade in New England has called for northern white pine, and the northern white pine is asked for under the simple term "white pine", is it not, in very many instances? A customer believes that he is asking for northern white pine and expresses it "white pine"? Isn't that true?

A. I presume it is in that locality.

Q. Now, then, here is a retailer. Will that retailer in many instances prefer to have in stock for this trade that is asking for white pine a wood which is marked and comes to the retailer with the word "white" in it, then, to have the same wood which is

2167 not coming to him as white pine but is coming to him as pondosa?

A. Well, now, do you mean that there would be on the lumber itself the word "white pine"?

Q. No; it is invoiced to him.

A. Or pondosa pine?

Q. No; it is invoiced to him.

A. I don't think it would make any difference.

Q. Now, if there is a flareback to the retailer on the part of the architect or upon the part of the customer because he didn't get northern white pine, do you not believe that the retailer is in better shape to be able to say to him, "Well, it came to me marked California white pine, invoiced to me", I should say, "as California white pine", as contrasted with the situation where it came to him marked as pondosa pine? Now, is that clear?

Examiner DE BRULER. Now, answer that.

A. I think that the retailer——

Mr. BURR. I want a "yes" or a "no" answer.

A. I cannot answer it "yes" or "no."

Mr. BURR. Read the question, please.

Examiner DE BRULER. He says he cannot answer it "yes" or "no."

Mr. BURR. Well, he can with an explanation. I want a "yes" or "no" first and the explanation afterwards.

Examiner DE BRULER. Can you answer that "yes" or "no"?

A. No; I cannot answer.

2168 Mr. BURR. Read the question, please.

Mr. WHEAT. Now, I ask the examiner to advise the witness that if he cannot answer it "yes" or "no" he is not forced to answer it "yes" or "no."

Mr. BURR. Let me have the question read.

(Last question read.)

By Mr. BURR:

Q. Now, you can answer that "yes" or "no" and then explain afterwards, can't you?

A. I cannot answer that question. I am not going to tell you why, but you could have asked it in a different way and I could have answered it.

Q. You could have answered it if it was asked in a different way?

A. I think so.

Q. Yes. Well, now, I will try again.

Examiner DE BRULER. Can't you answer that by "yes" or "no"?

A. No, I cannot.

By Mr. BURR:

Q. Can you answer it at all?

Examiner DE BRULER. Can you answer it at all?

A. Not in the form it is in there.

By Mr. BURR:

Q. Now, suppose a retailer with these calls for white pine sells California white pine, do you not think that it will appear to the retailer as putting him in a safer position in case of a question

2169 being raised afterwards then if he had sold him something which did not have the words "white pine" in it?

Examiner DE BRULER. You can answer that, can't you?

Mr. WHEAT. I will ask that the examiner explain to the witness that he may make any explanation he desires after he has answered.

Mr. BURR. Certainly; after he has answered it he can make an explanation.

A. Yes; I think it would make a difference.

Examiner DE BRULER. Go ahead and explain it.

By Mr. BURR:

Q. Now, what difference would it make?

A. If the customer of the retailer came in and asked for California white pine——

Q. You mean for white pine? I didn't say California white pine. I said for white pine.

Mr. WHEAT. In the first question you said northern white pine and changed to California white pine.

Examiner DE BRULER. Read the question to him again.

(Last question read.)

Examiner DE BRULER. I understood your answer to that would be "yes." Was that right?

A. That is right.

Examiner DE BRULER. Now, you explain why.

A. As I say, if the customer came in and asked for California white pine——

Examiner DE BRULER. No; he didn't say that. He asked if
2170 the customer came in and asked for white pine.

A. I cannot answer that one either exactly the way I want to.

By Mr. BURR:

Q. Why can't you answer it the way you want to?

A. Because I don't understand it exactly the way that you are asking it.

Examiner DE BRULER. Read the question again. I think you can get that question. You should get it. Hurry matters up.

(Last question re-read.)

Examiner DE BRULER. That seems a simple question.

A. Well, I would like to explain to you why it is not an easy question for me.

Examiner DE BRULER. All right.

A. If the question had read "white pine" and then said that the retailer sold white pine, instead of putting California white pine in there, then I could answer your question.

By Mr. BURR:

Q. Now let me get that a little bit clearer. Here is a retailer that knows that there are orders coming in to him for white pine, not California white pine, these orders are for white pine. Now, then, if he is going to sell something that is made from ponderosa pine on those orders for white pine, don't you think it will appeal to the retailer as safer for him to sell something that has the word "white" in it than pondosa pine which has not the word "white" in it at all?

Mr. WHEAT. Now, if Your Honor please, the question as now put I will object to on the ground that whether it will ap-
2171 peal to a retailer as safer for him is not a question pertinent to the issue in this case.

Mr. BURR. Why, it certainly is.

Examiner DE BRULER. Objection overruled. You can answer that now, I think.

Mr. WHEAT. I will ask for an exception.

Examiner DE BRULER. Exception noted.

By Mr. BURR:

Q. Now, Mr. Witness, I am entitled to a bona fide straight answer to that. Won't you please give your attention to it?

Examiner DE BRULER. Read the question.

Mr. WHEAT. I will ask that Mr. Burr's statement that he is entitled to a bona fide answer—of course he is—I ask that that be expunged from this record. That has no part in this record, Mr. Burr.

Mr. BURR. I have a right to admonish the witness, of course. Everybody knows that.

Mr. WHEAT. The examiner is the man who ought to admonish witnesses.

Mr. BURR. I have a perfect right to warn the witness that he is under oath.

(Last question read.)

A. Yes.

Mr. BURR. That is all.

2172 Redirect examination by Mr. WHEAT:

Q. I would like to ask you to explain fully the reasons for your last answer.

A. If the man knows enough about wood to come in and ask for white pine and knows the true characteristics of white pine, the retailer would feel better in handing to him a piece of wood that had "W.P." on it, or "C.W.P.", or something like that.

Q. Does this wood have those letters on it?

A. California white pine is stamped "C.W.P." as a rule, where they grade and mark it.

Q. Who does that, sir?

A. Oh, I don't know, now; I would not say. In the last year or so that may have been changed, but such mills as McCloud and Red River and Pickering, people like that, put "C.W.P." on it.

Q. Do they do that now?

A. I know that some of them do it. I don't know positively that any of those that I have named do it.

Q. When have you seen this on any wood?

A. Well, I have seen "C.W.P." on wood within the past year.

Q. Well, now, the name of California white pine is well known, isn't it, in the trade?

A. Yes.

2173 Q. Throughout the country?

A. Yes.

Q. Has been known for many years?

A. Yes.

Q. And the term "C.W.P." stands for what?

A. California white pine.

Q. Now I will ask you whether or not in your opinion the term "white pine", as such in the retail trade, has come to mean something different today from what it meant forty years ago?

A. Yes; it has.

Q. Now, will you explain what that difference is?

A. Forty years ago—well, I can't say forty years ago from my own knowledge, but I can say thirty years ago.

Q. Yes. State of your own knowledge.

A. Thirty years ago there was large stands of northern white pine, cork white pine, as you call it. It was stocked all over in the—where I was living, anyway.

Q. And where was that?

A. Well, Bay City, Michigan; later in Boston.

Mr. BURR. Does this question relate to northern white pine or California white pine?

Mr. WHEAT. The question relates, Mr. Burr, to the term "white pine."

Examiner DE BRULER. Yes; go ahead.

A. And white pine was readily available in all grades and stocked by a number of yards. Nowadays it is impossible but for a
2174 few yards to obtain white pine in the sizes and grades.

Q. And by "white pine" you are now referring to northern white pine?

A. Northern white pine, that they cut thirty years ago. And there has been a change in the general handling of the lumber business due to the rapid reduction in the amount of white pine available, genuine northern white pine.

Q. Now, during that period of years, what in your experience, has been the change in the meaning in the trade of the term "white pine"?

A. "White pine" has been made more general, I think, in the ideas of most of us in the lumber business, to embrace soft woods that are yellow or whitish in color, and to get away from the southern yellow pine—we called the yellow pine out here white pine to get away from the southern yellow pine.

Q. And does the Pinus ponderosa from this section differ markedly in its characteristics from the southern yellow pine?

A. Very much, I think. Arkansas soft pine comes much nearer to being like some pondosa grown up here, but you take southern yellow pine grown in North Carolina, South Carolina, Georgia, and in through there, it is very much different. Even the layman can see the difference.

Q. In general, are the uses to which this Pinus ponderosa is put the uses which you would consider white pine uses?

A. Yes; my trade tells me that—my factory trade tells me
2175 that they work up readily and satisfactory to them Pinus ponderosa or California white pine into sash and doors; that they are not buying white—that is, Idaho white pine species for that purpose.

Q. Why not?

A. They cannot get it when they want it, principally.

Q. I see. In your opinion can they get the old northern white pine in quantities when they want it?

A. I do not handle northern white pine, but I understand it is very hard to get it in any quantity.

Q. Now, in your opinion does the term "white pine" as used in the lumber trade today signify any particular botanical tree?

A. No.

Q. Or any particular group of botanical species?

A. No.

Q. Now, is Pinus ponderosa a satisfactory wood for its present uses?

A. It is to my trade.

Q. Yes. Now, when a customer comes in and asks for white pine in New England, does he, in your opinion; come in and ask for some particular botanical species, or, in general, does he come in and want a board?

A. Generally comes in and wants a board.

Q. Do you know any instances where, if a man came in and asked for northern white pine, he has been given other species of wood?

A. Do I know of instances?

Q. Yes.

2176 A. I cannot say that I do.

Q. But under any name which might be given to it, would Pinus ponderosa be as easily substituted on account of its appearance and color, and so forth, on an order for northern white pine, as under the name California white pine?

A. It would be just the same thing.

Mr. WHEAT. I think that is all, sir.

Recross-examination by Mr. BURR:

Q. You are not in the retail business in Boston at present, are you?

A. No, sir.

Q. You would not know much about what a man would get when he came in and asked for a board, would you, of your own knowledge?

A. Except for what my customers tell me.

Q. All hearsay with you, then, is it?

A. It would be.

Q. Yes. Now, northern white pine is still being advertised in the trade journals, isn't it?

A. To some extent.

Q. And Idaho white pine is being advertised in the trade journals, isn't it?

A. More than northern white pine.

Q. If you write to these sources, you get a price list on
2177 northern white pine and Idaho white pine, don't you?

A. On some items; not on all items.

Q. I see. And if from the items that you find they list you order northern white pine or Idaho white pine you get what you order, do you?

A. Not in all cases.

Q. It is a question of price now, isn't it? Isn't it a question of price? If you want northern white pine and are willing to pay for it you get it in the sizes and descriptions that they advertise?

A. Quite so, except that over in the northern white-pine region many of them are using Norway, and they are not getting northern white pine.

Q. Well, Norway is red pine, isn't it?

A. Well, not reddish; that is, a layman would not want to call it reddish pine.

Q. Norway pine is a variety that is interspersed with northern white pine, isn't it?

A. Yes.

Q. In the stand?

A. Yes.

Q. And it is only a small part of the total stand, isn't it?

A. Well, I don't know how it would be now.

Q. But those forests are being cut right off. Norway is getting scarce just as fast as the northern white pine, isn't it?

A. Yes; but there is more Norway available in certain
2178 sizes, in building sizes, than in northern white pine, in my opinion.

Q. You are not so sure of that?

A. I would think so from the lists that I receive.

Q. Well, then, northern white pine and Idaho white pine are in the market constantly if you are willing to pay the price, aren't they?

A. Not in all sizes.

Q. But in some sizes they are constantly?

A. Yes.

Q. And there is a price differential, of course, as contrasted with pondosa?

A. Not always.

Q. Isn't it higher than pondosa, except in the very commonest grades?

A. Well, in the very commonest grades it would be some.

Mr. BURR. I see. That is all.

Mr. WHEAT. That is all.

(Witness excused.)

(Thereupon a recess was taken until 2:30 o'clock p.m. of this day, January 23, 1930.)

AFTER RECESS

3:00 O'CLOCK P.M.

W. B. GREELEY resumed the stand, and further testified as follows:

2179 Direct examination (continued) by Mr. BURR:

Q. Colonel Greeley, there is just one question that I would like to ask to clear up a matter that I am in doubt about. Are the members of the association of which you are the secretary-manager—is that correct?

A. Yes.

Q. Of which you are secretary-manager, are some of the manufacturers of certain pine lumbers, and as such members also of some of the pine manufacturing associations?

A. You have got to break your question down into parts.

Q. Well, please give me the facts.

A. First, several firms which are members of the West Coast Lumbermen's Association as to their fir mills are also manufacturers of western pines, both the ponderosa and monticola, at other mills. That is true specifically of the Weyerhaeuser Timber Company. They don't happen to be members of the pine associations, although they are extensive manufacturers of pine. In the case of the Long Bell Lumber Company, their fir mills are in the West Coast Lumbermen's Association and their pine mill in northern California is in the California Pine Association. We have one member in southern Oregon who manufactures both pine and fir at the same mill, and he is a member of both the West Coast and the California association.

Examiner DE BRULER. What mill is that?

A. That is the mill of the Owen-Oregon Lumber Company
2180 at Medford, Oregon.

Q. Then when they are members of your association they are such in their capacity as manufacturers of fir?

A. Only on their fir production.

Mr. BURR. I think that clears it up. You may cross-examine, sir.

Cross-examination by Mr. WHEAT:

Q. I just want to get that cleared up in this way: Your association has to do largely, does it, with the production of statistics of cut and stand and of the grading and handling or grading and inspecting of lumber? Just what in general do you do?

A. It has four main divisions. First, is the statistical work, collection of statistics on production, sales, shipments, stocks, and market information. The second is the grading department, which maintains standard grades for West Coast lumber, provides mill supervision of grading practices and inspection service, either to the mills or to buyers. Our third department is traffic, dealing with rates; and our fourth department trade promotion, advertising, and market extension for the lumber produced by our member mills.

Q. And you have only to do with what is known commonly as Douglas fir?

A. Douglas fir, and its related West Coast woods, hemlock,
2181 cedar, and spruce.

Q. All right.

A. I might add, 20 or 30 of our member mills produce small quantities of Pinus monticola, named this morning west coast pine; but we have not attempted any trade promotion work in behalf of that product regarding it as the province of the pine associations.

Q. Are those mills also members of the Western Pine Manufacturers' Association?

A. Well, in one or two cases I think they are not.

Q. But one mill can just as well be a member of several organizations such as yours and not have the matters overlap?

A. Certainly.

Q. I see. Now, has Pinus ponderosa a well-defined place in the lumber trade of the United States?

A. Yes, sir.

Q. It is a well-known wood, is it, sir?

A. Yes.

Q. And has been known in the lumber trade for a good many years?

A. Yes.

Q. It enters the trade in almost all regions in the United States, does it?

A. It is very widely distributed.

Q. And over the years in which it has been going into the market throughout the United States it has been sold, has it not, under a number of trade names?

2182 A. Yes.

Q. Do you know whether it has ever been sold as yellow pine?

A. I think that small quantities have. It is my recollection that the production of this species from the Black Hills——

Q. That is in Dakota?

A. South Dakota—was marketed as western yellow pine.

Q. When was this?

A. I was in that territory in—several times from 1915 to 1917, but that would be a small percentage of the total production of the wood.

Q. Almost negligible, would it not?

A. A very small percentage.

Q. Is there much being cut there now?

A. Just very limited amounts.

Q. Is it still marketed as yellow pine?

A. I could not say as to that.

Q. Do you know of any other instance where Pinus ponderosa has been marketed as yellow pine?

A. No.

Q. I will ask you whether or not you think that would be a satisfactory and proper trade name for the wood to go into the markets of the country?

A. I think it would be an entirely proper trade name and a satisfactory one if the qualities of the wood were adequately advertised.

2183 Q. Do you think that it would cause any confusion in the lumber trade for the wood now marketed as California white pine to be marketed as yellow pine?

A. It might cause a little confusion in comparison with the yellow pine of the South, but I doubt if that would have been a serious factor.

Q. I am talking about it now.

A. It is speculative.

Q. We are talking about it now. You say you doubt whether that would have been.

A. Or would now be.

Q. Or would now be?

A. Please don't understand me as saying that I regard western yellow pine as the most desirable trade name for ponderosa.

Q. You have certain reasons why you believe it not to be the most desirable trade name, haven't you?

A. I can readily see, from the standpoint of the manufacturer and the standpoint of the trade, logical commercial reasons for making clear that the lumber of ponderosa is in no wise confused with lumber of the southern yellow pine.

Q. And does that also go to the standpoint of the consumer?

A. Yes.

Q. I see. Now, what are the uses to which Pinus ponderosa has been put in the general lumber markets of the United States?

A. It has gone largely into the manufacture of millwork and similar factory products. A good deal of it is shipped to the

2184 millwork factories of the Middle West for manufacture into sash and doors and other millwork products. The select or clear grades are manufactured to a considerable extent into siding and finished items. The lower grades are manufactured——

Q. Right there, may I ask you whether or not it is in your opinion a good wood for these high-grade uses that you have just mentioned for which clears are used?

A. Yes.

Q. May I ask you, when you say the remanufacturers and big mills in the Middle West, you mean remanufacturing mills which make sash and doors? I think you said that, but I want to be sure.

A. Sash and doors and other millwork products, moldings, balusters, and all of that type of millwork.

Q. Do you consider that a natural use of this wood?

A. Yes.

Q. Now tell us about the common lumber.

A. Well, the common lumber goes very extensively into the manufacture of box shook, and then portions of the common product are used for sheathing, subflooring, and similar forms of rough construction.

Q. This applies, does it, both to Pinus ponderosa marketed as pondosa and marketed as California white pine, trade names, as are now in use?

A. Yes. Then it also, in portions of the West, has been used quite extensively for the manufacture of railroad ties.

2185 Q. Has that been a very large use of this wood, where it has had to be shipped any distance?

A. No; particularly true in the Southwest.

Q. The reason for the use of this wood for railway ties in that region is what, sir?

A. It is the most available wood for that purpose.

Q. I see. In the eastern part of the United States, what is used mostly for railroad ties?

A. In the eastern part of the United States?

Q. Yes.

A. The standard tie is probably still oak. A great deal of southern pine is used.

Q. Is that longleaf or the short leaf?

A. Both.

Q. And a good deal of Douglas fir is now being used?

A. The development of the treating process has widely extended the species available for ties. The so-called "poor groups" of hardwoods are now being used extensively for ties after treatment.

Q. And that treatment is for what purpose, sir?

A. Preserving the life of the tie.

Q. Now what are the common and usual uses of southern yellow pine, both longleaf and short leaf?

A. Those woods produce a very large volume of boards, common boards, small dimensions, two-inch dimension sizes, entering

2186 very largely into the construction of small buildings, small timbers up to six by six; and particularly in the case of longleaf pine there has been a large production of the large structural timbers, railroad and bridge stringers and the like. They also manufactue a good deal of flooring, particularly from the longleaf pine, ceiling finish and siding. They are all-purpose woods permitting a very wide variety of products.

Q. In general are they used to any great extent except merely in the locality of growth for large millwork operations?

Mr. BURR. Southern pine?

Mr. WHEAT. Southern mill products?

Mr. BURR. I think we are going into these species that are not of interest here in greater length than necessary.

Mr. WHEAT. This is called western yellow pine, if the examiner please, by the Forest Service and I want to, as I have done with many witnesses before, show through this expert that has been produced by the Government what the general uses are for the southern yellow pine.

Examiner DE BRULER. What wood is that? I didn't catch it.

Mr. WHEAT. Southern yellow pine. I think it is perfectly proper.

Mr. BURR. What was the last question?

(Last question read.)

A. You mean millwork in the sense refabricated in the
2187 machine?

Q. That is correct; yes.

A. No; not to a large extent with the outside of local requirements, and with an exception in the instance of the so-called "Arkansas soft pine."

Q. Can you give us any approximation of the amount of Arkansas soft pine which is cut, sir?

A. Well, my recollection is that the production amounts to, perhaps, eight hundred million feet a year.

Q. Well, is that what is known as shortleaf pine?

A. It is a shortleaf pine that for climate and soil reasons apparently has an exceptionally soft texture for the southern pines.

Q. What is the botanical name of that species?

A. Pinus taeda.

Q. Now, is there any Pinus taeda, do you know, which is marketed in longleaf pine?

A. Which is marketed as longleaf pine?

Q. Yes.

A. It is very generally suspected that that has been done to a considerable degree. I am unable to answer on my own information, however.

Q. May I ask you whether Pinus palustris is the name of what you call longleaf pine?

A. Pinus palustris.

2188 Q. Longleaf pine is the common name for that?

A. Yes.

Q. Is there any Pinus palustris that is marketed as shortleaf pine?

A. Probably not.

Mr. BURR. It seems to me we are filling up the record with a lot of material that is not pertinent.

Examiner DE BRULER. I think it is not all material, but as long as it is kept within the pines I don't like——

Mr. BURR. I don't think the southern pines have anything to do with it.

The WITNESS. I consider that Pinus ponderosa is closer to the white pines than it is to the southern pine in its uses and characteristics.

Mr. BURR. Why should we go into these theories with every witness? I don't think it is justified.

Mr. WHEAT. It seems to me it is, if Your Honor please, but we will pass now to another subject.

Examiner DE BRULER. I think it has gone far enough.

Mr. WHEAT. All right.

Q. Now, you spoke this morning of pattern lumber. Was your statement based on the mere reputation of the woods for pattern lumber or any personal test that you made?

A. I cannot say that I have made any personal tests of pattern lumber except in a very limited way in domestic carpentry
2189 and cabinet work. My statement was based primarily on the information received from manufacturers of the woods.

Q. General reputation which you have obtained in your various capacities?

A. Yes.

Q. Let me ask you whether this is a good definition of the word "texture", and, if it is not, I wish you would give us one for the record here—it has been mentioned a good many times—"Texture is the size and arrangement of the structural elements in a wood considering the fibers, medullary rays, and such wood items."

A. That is all right as a technical morphological definition. It doesn't mean very much to me, because it does not tell what we have in mind, commercially speaking, by texture.

Q. Well now, what do you have in mind, commercially speaking, of texture?

A. I have in mind the qualities of a wood that determine the uniformity, regularity of the structure, the evenness and smoothness of it.

Q. Does that have anything to do with what is technically known as "grain"?

A. Yes.

Q. Now what do you mean by grain?

A. By grain we mean the element in the wood structure created by the processes of growth, the distinct annual growth and the division of that growth between the spring wood and the
2190 summer wood. Grain, in my judgment, enters into texture.

Q. I see. But you might have a wood that was fine grained and of coarse texture, might you not?

A. Yes; you might.

Q. And vice versa.

A. But a fine grained wood tends to be of fine texture, even, uniform texture. A coarse-grained wood tends to be coarser and brashier, less uniform.

Q. Now, I believe you stated that in your opinion trade names are important in the lumber industry. Do you believe that they should follow to any great extent the botany of the trees?

A. It is not necessary that they should follow botanical distinctions exactly or technically. The main point is that they should be distinctive and not subject to confusion.

Q. And if lumber were to be marketed on botanical nomenclature, would or would not the manufacturer of lumber from the species Abies have a botanical claim to the word "fir"?

Mr. BURR. Wait a minute, Your Honor. I think we are trying some possible misnomer in some other line of lumber, which is outside entirely the scope of this complaint and has nothing whatsoever to do with the possible misnomer in the pines, which is here alleged and which is here to be proved, and it seems to me, therefore, that we are, without having had any possible respondent here to defend itself, merely taking something which is of no value to us in
2191 the case and which might be detrimental to somebody in some other case.

Mr. WHEAT. Now just a moment, Mr. Examiner, before you make any ruling on this. My notes disclose that Mr. Burr on his direct examination of this witness asked a great many questions about Douglas fir and about the name under which it is sold, whether it is sometimes called Oregon pine, whether it is sold as hemlock, all about its species, and a great deal more about the sale of this wood. Now I am entitled, irrespective of any—and this was done over my serious objection, as I have in my notes—and I am entitled on cross-examination to go into these matters and to test this witness' knowledge and his opinions on these matters, and I may say that for our purposes these respondents believe that these questions are exceedingly material in this particular case. Irrespective of that, as to this particular witness I have, of course, a right to go into the matter on cross-examination. I will stand upon my rights.

Mr. BURR. Now, if the examiner please, opposing counsel and myself this morning agreed, it seemed to me, that there was nothing in the fir business or the misnaming of Oregon pine, or any other misnaming that had anything to do here, and I therefore renew my offer.

Mr. WHEAT. I did not agree to that, sir.

Mr. BURR. You objected upon that very ground. You objected upon that very ground to a question asked of this very
2192 witness, and I then made an offer that both sides stipulate in accordance with what I understood to be counsel's express view in the matter, namely, that the testimony heretofore shall be stricken, not physically, it is too late for that, but shall be agreed to be stricken; whatever of my examination of this witness was immaterial could be removed, and also——

Mr. WHEAT. One thing I want the record to show. You asked the witness a question whether he thought the naming of a tree as a fir which is not a fir tree was deceptive to the public, and I objected seriously to that and my objection was overruled. There is where I objected, sir, as to your examination. And I stand on my right to cross-examine this witness on the question of the naming of Douglas fir in every degree to which I have a right to cross-examine, sir, and I take it that this Commission will sustain me in that.

Mr. BURR. Well, if the examiner please, my original objection——

Examiner DE BRULER. Do you want all this to go in the record?

Mr. BURR. Yes; I do. My original objection in New York, when this matter came in with Mr. Lindsey and the Weyerhaeuser interests, when Professor Record, if my memory serves me correctly, went on the stand—my original objection was sweeping and was overruled. The matter went in, and it was at the instance of coun-
2193 sel and during his examination that it went in. Now this morning he indicated the fact that he thought it was immaterial when this witness was on the stand, and I put it in as defensive matter. I now say that if he is correct there I am correct in agreeing with him that this whole matter ought to be stricken out.

Examiner DE BRULER. You have stated that three or four times.

Mr. BURR. I move to strike——

Examiner DE BRULER. I want to hear what he has to say.

Mr. WHEAT. I consider this very material. We considered it so in New York, and it was ruled that we might ask these questions. This matter has been brought up; I want to go into all matters which on cross-examination are proper as to questions asked this witness on direct examination about this matter of Douglas fir and other misnomers.

Examiner DE BRULER. What was that last question? Let us go back to the last question.

(Last question read.)

Examiner DE BRULER. Objection sustained. I am not going to let that go in.

Mr. WHEAT. I shall ask a reference of this matter be taken to the Commission. We consider this to be most important, and I desire to have——

Mr. BURR. Just this witness, do you want to cross-examine—
2194 Mr. WHEAT. Mr. Burr, I am now stating what I desire to do.

Mr. BURR. Very good; pardon me; go ahead and state it. I won't interpose.

Mr. WHEAT. Now, what I want to do, if the examiner please, is to cross-question this witness regardless of anything else which might be ruled either way on any question of this sort, material or immaterial as we may consider it as to any other witness. I stand on my right to cross-examine this witness to as large a degree as may be material in this case on the matters on which he was questioned on direct examination. I shall desire to cross-examine him to some considerable degree on this point.

Mr. BURR. Just a minute, Mr. Examiner, I want to be heard on this thing. Now, then, I think the situation is this: Counsel has definitely stated that he proposes by this witness and by other witnesses——

Examiner DE BRULER. There is no other witness.

Mr. BURR. If the examiner please, I want to be heard on the subject.

Examiner DE BRULER. Well, I know, but I say there is no other witness before him.

Mr. BURR. I know, but the policy of this thing, as to whether it shall be appealed to Washington, is before this Commission.

2195 Examiner DE BRULER. All right.

Mr. BURR. All right, and I want to be heard on it. You are now setting a precedent one way or the other, Mr. Examiner, upon this entire matter, and counsel has just stated to you that he proposes to examine this witness ad libitum and introduce other witnesses with regard not only to this proposed——

Mr. WHEAT. Other witnesses are out.

Mr. BURR. Don't interpose. I just gave you a clear field and I want the same courtesy.

Mr. WHEAT. I will be courteous to you, sir.

Examiner DE BRULER. Go on.

Mr. BURR. Not only with regard to this misnaming, but also to the various other mismamings throughout the industry, and I now say that if that is to be gone into, without other manufacturers of other types of lumber being present by counsel and being heard through their witnesses, I say that there is a grave chance of the Commission in this series of hearings entering into something which are public records which the Commission has no business whatever in morals or in law to trespass upon, and that rather than have that kind of thing gone into and this record lengthened out by thousands of pages, I have a right to ask for an adjournment to find out about this.

Examiner DE BRULER. If you will let me make a ruling on that I can shorten it.

2196 Mr. WHEAT. May I just add one more word, sir? This witness also was questioned very largely on the botanical nomenclature and on the necessity for nomenclature of that type. I have long notes on this matter, and I shall stand on my right to cross examine him on all of those matters to as large a degree as may seem material, sir.

Mr. BURR. I now wish to make a motion to strike, if the Examiner please, which I want to have heard at the same time this other motion is heard.

Examiner DE BRULER. A motion to strike what?

Mr. BURR. I am outlining my motion. I wish now to strike from the record the matters which have been injected into this record over my protests and over my serious objection including in addition matters which were testified to by this witness this morning which I put in as defensive matters to the other matters which were introduced into the record over my objection. I now move to strike all of the matters which have related to the Douglas fir supposed misnomer and other misnomers in the record, and ask that that motion be granted.

Mr. WHEAT. Will you add, Mr. Burr, that the motion to strike include all testimony in this record upon your part with reference to the use of botanical names for wood species?

Mr. BURR. No, not when it relates to the use of botanical names, which we have set up in our complaint.

Mr. WHEAT. Then, if the examiner please, I shall oppose
2197 this motion to strike.

Examiner DE BRULER. Gentlemen, I have made up my mind what I am going to do. I am going to permit this witness to be cross-examined on the matter that was asked him in regard to Douglas fir this morning, but I am not going to—frankly, now, if you want to appeal to the Commission—I am not going to allow anything further here, but he may cross-examine this one witness and there the matter ends. That is my ruling.

Mr. WHEAT. And if the matter may come up on any other witness, when it comes what is your ruling?

Examiner DE BRULER. I shall overrule it from this time on. You may appeal to the Commission.

Mr. WHEAT. Then I shall have to go into it very fully with this witness.

Examiner DE BRULER. You can appeal to the Commission.

Mr. WHEAT. If it is necessary.

Examiner DE BRULER. I say, if you desire. Answer the question.

Mr. WHEAT. And my exception, please.

Examiner DE BRULER. Exception, of course.

Mr. BURR. Did you definitely rule on my motion to strike?

Examiner DE BRULER. I deny that motion.

Mr. BURR. All right.

(Last question read.)

Examiner DE BRULER. You can answer that "yes" or "no".

2198 A. Yes.

By Mr. WHEAT:

Q. Now is the lumber cut by any of the members of your association known in the trade at all as red fir?

A. I think not. There is a certain local variety of Douglas fir that is often called red fir in the log and in the timber because of certain characteristics of the grain and wood of that class of timber. It is a younger growth than the old so-called "yellow fir". The terms "yellow fir", "red fir", "bastard fir", and "second-growth fir" are used here locally in the industry, but in the marketing of lumber I think that the term "Douglas fir" is almost universally employed except where the old name of Oregon pine still persists.

Q. And where does that persist?

A. That is very common still in California.

Q. And where else?

A. I don't know of any other place where it is still common.

Q. It is used, is it not, quite largely in the export trade?

A. I presume it is in portions of the export market.

Q. Now, was or was not the wood known as "balsam fir lumber" in the trade before Douglas fir came into the trade in large quantities?

A. Meaning the same tree?

A. No; balsam fir; what has been known in the trade as balsam fir?

A. Not in this section. Balsam fir has been known to the
2199 trade of the northeastern States for many years.

Q. When did Douglas fir begin to be cut out here in large quantities and shipped East?

A. Well, the eastern shipments, the eastern shipments really began with the completion of the Northern Pacific Railroad in the late eighties.

Q. What is the wood known in the trade as white fir?

A. White fir is an entirely distinct species. It is one of the Abies family; several varieties of the Abies are known as "white fir".

Q. I will ask you perhaps this way and shorten the examination: Is that superior to Douglas fir for many uses, such as pulp, butter boxes, or any other place where a lighter colored or lighter weight wood is required?

A. It thus far has superior pulping qualities to Douglas fir, and in a very limited number of uses, where the imparting of taste or odor is an important commercial quality, it would be superior. For the great mass of lumber uses it is inferior.

Q. I think you said on direct examination that some of your members produce cedar. What is the common name of this, if it is cedar?

A. *Western red cedar.*

Q. And where is it produced?

A. It is cut throughout the West coast timber district, Oregon, up into British Columbia and cut to some extent in northern
2200 Idaho and western Montana.

Q. Does that name western red cedar conform to its botany, sir?

A. No.

Q. Do you know whether or not it is botanically known as "Thuja plicata"?

A. Yes.

Q. Is there any cedar that is cut by any of your member mills that is botanically cedar?

A. The Port Orford cedar, the white cedar, is manufactured to a limited extent.

Q. Will you tell me whether botanically that is a cedar?

A. That is botanically a cypress.

Q. Is the botanical name of that wood Chamaocyparis lawsoniana?

A. Yes.

Q. Now, Colonel Greely, do you know—and say "no" if you don't, of course—but do you know whether any true cedars botanically are produced in the United States or grown in the United States?

A. No; not to any commercial importance.

Q. Do you know whether any——

A. Let me qualify that. The term "cedar" is a term that has been broadly used to cover a considerable number of woods having common characteristics as to color and durability, and to a considerable extent, odor. Now, just which are botanically cedars and botanically not cedars I am unable to say.

2201 Q. You don't know whether any of the species of the genus Cedrus grow in the United States, do you?

A. I think there are one or two limited representatives of that genus in the country.

Q. But they are not commercially——

A. Not of commercial importance.

Q. Now, on direct examination——

A. And whether California cedar, Librocedrus decurrens, is botanically cedar or not I am not sure.

Q. Now, on direct examination, Colonel Greeley, you were asked whether or not there was in your opinion any misnomer in the lumber trade as bad—I think that was the word that was used—as the calling of California white pine by a trade name including the word "white." May I ask you to tell us, for the record, what other misnomers, botanical misnomers, you had in mind when you answered the question of counsel for the Federal Trade Commission which I have mentioned? I would like to have you list them and tell us what they were.

A. I don't recall any other misnomers.

Q. At all?

A. That, in my judgment, are serious from the standpoint of——

Q. Colonel Greeley, I am not asking you the same question that counsel for the Trade Commission asked you. I am asking you what misnomers, regardless of how you considered them, you had in mind when you answered the question put to you by coun-

2202 sel for the Federal Trade Commission. I want you to list those misnomers for me.

A. Well, there have been a very considerable number of instances where the oaks of the black oak family, of the inferior black oaks, have been sold as red oak because of the trade——

Q. I don't care; you may explain later why it was. Just list down for me the names which did not follow the botany that you had in mind in replying to the question of the Trade Commission's counsel.

A. The eastern timber sold as red cedar is a juniper.

Q. Did you have any others in mind, sir?

A. I don't recall any—of course, you could list a long string of names where the trade name is not technically in conformity with the botanical name, but I am thinking of misnomer from the standpoint of confusing the trade, failing to identify the wood properly to the trade.

Q. All right. Now, what other misnomers, according to your definition, did you have in mind when you answered the counsel for the Trade Commission?

A. Those are all.

Q. Did you have in mind, by any chance, the trade name gumwood for various botanical species?

A. I wasn't thinking of that at the time.

Q. Will you tell us now what species are marketed as gumwood?

A. The botanical tupelo is sold both as gum and in some
2203 cases as tupelo; red gum and sweet gum are sold as gum.

Q. Do these differ in qualities and characteristics?

A. To some extent.

Q. Now, the Forest Service has published, has it not, a document known as a "Check List of the Forest Trees of the United States?"

A. Yes.

Q. That document shows the Forest Service official the common name for each botanical species, doesn't it?

A. Yes.

Q. And does it show anything else for each of those species?

A. It gives a list of all the known names by which the wood or the tree is designated.

Mr. BURR. Common names?

Mr. WHEAT. And trade names?

A. And trade names.

Q. Now, you are thoroughly familiar with that volume, are you not, sir?

A. Well, I could fail to answer a good many questions on it.

Q. Let me ask you this: You had something to do with the preparation of it, did you not, of the revision of that volume?

A. Yes.

Q. That is known as "Sudworth's Check List", is it not, ordinarily?

A. Yes.

Q. In that volume are there many instances to be found
2204 where trade names do not conform either to the botanical name or to the accepted Forest Service official name?

Mr. BURR. If the examiner please, it is understood my objection goes to all of this.

Examiner DE BRULER. Of course.

A. There are many instances——

By Mr. WHEAT:

Q. You may answer that "yes" or "no" and then explain, please.

A. Yes.

Q. Now you may explain.

A. There are many instances where ten or a dozen different names have been in use for the same tree in various portions of the country, many of which names never had any connection with the botanical characteristics of the tree. Take bull pine; that is a name that has been very commonly used for ponderosa. The same term is used in the South, in portions of the South. You will hear it, I have heard it, in New England applied to the red pine or Norway pine. There are many of those common terms, lumberjack terms, local country

terms, that have been used in various parts of the country there indiscriminately. All sorts of odd and curious names got into circulation, became more or less established, many of which had absolutely no relation to the botanical characteristics of the tree.

Q. Some of those have persisted to a marked degree, have they not, sir?

2205 A. Yes. The most striking illustration of that is the common name Norway pine.

Q. And that is Pinus resinosa, is it?

A. Yes.

Q. That is pine which occurs in conjunction with and throughout the range of Pinus strobus, is it not?

A. To a considerable extent. That name came into circulation—perhaps this should not go on the record.

Q. Go ahead and explain it.

A. That name came into circulation because a shrewd Yankee in the State of Maine living at a little village called Norway saw a chance to put his home pine on the market with a name that would carry with it Norway iron, for example, so he put it on the market as Norway pine. It got into the trade in that form, and that name has stuck to the present time.

Q. That is a well-known name in the trade, isn't it?

A. Yes.

Q. Known all over the country, isn't it, wherever that is marketed?

A. Generally known wherever the wood is marketed.

Q. If one ordered Norway pine, one would know that they were getting the pine which you just mentioned?

A. Yes.

Q. Now, on what characteristics have botanists laid stress in separating the pine trees into the various classes which they have made, such as white pines as against yellow pines?

2206 A. You mean strictly botanical classifications?

Q. Exactly, yes.

A. Oh, there is a long string of botanical characteristics.

Q. Yes.

A. And botanical differences, ranging from the—beginning with the structure of the wood and running even into the chemical contents of the wood and the various secretions typical of different trees, character of the bark, character of the form of the tree, and the foliage, the blossoms, fruit, seed characteristics.

Q. Yes. Would you say that in botanical classifications the most important element is the reproductive organs in blossoms?

A. One of them.

Q. Now in making botanical classifications is lumber as lumber produced from the tree considered?

A. No, I think not. But the structure of the wood, the formation of the cells, the typical wood structure forms, which in turn

affect the character of the lumber, those things have entered extensively into botanical classifications.

Q. Do you know the number of needles in a bunch of Pinus strobus?

A. They usually run five needles to the bunch.

Q. But then there are some white pines that are not five-needle pines, are there?

A. As far as I know the white pines are all five-needle pines.

Q. You are not familiar with the Pinus monophylla, are you?

2207 A. Yes, I have seen it.

Q. Is it a white pine?

A. I would not call it white pine.

Q. Are you familiar with Pinus quadrifolia?

A. I have seen it.

Q. Would you call that a white pine?

Mr. BURR. I don't think this gentleman is qualified. Ask him whether he knows.

Examiner DE BRULER. He may answer.

Mr. WHEAT. This gentleman is one of the greatest experts in these matters in this country.

Mr. BURR. I asked him on direct examination if he was a strict technical botanist and he said no. He had gleaned a lot about it, a hundred times more than we have, perhaps, but at the same time I don't suppose he sets himself out to be a technical botanist. I think you can ask him a lot of freak questions——

Examiner DE BRULER. I am satisfied——

Mr. WHEAT. I haven't asked any freak questions.

Examiner DE BRULER. I am satisfied that this witness will only answer about things he knows, so you can proceed with the cross-examination.

By Mr. WHEAT:

Q. Let me follow this matter up just a little bit. Are there five-needle pines that you ever heard of that are not white pines?

A. You mean white pines from the standpoint of produc-

2208 ing white lumber?

Q. Oh, I don't——

A. Or botanical classifications?

Q. Colonel Greeley, when I use the term "white pine" I am using it in this cross examination, and for that purpose solely, to mean exactly what you meant, whatever you meant by it in your direct examination.

A. Well, I think there are some five needle pines that are not classed botanically as white pines because of other differences from the characteristics of the white-pine family.

Q. I see. Now, do you know of any two-needle pine grown in the western area?

A. In the West?

Q. Yes.

A. No.

Q. You are not familiar with what is commonly known as lodgepole pine?

A. Well, I will have to admit I overlooked that. That is a two-needle pine.

Q. That is grown in the western area; is it not?

A. Oh, yes.

Q. How is it marketed?

A. Marketed?

Q. Yes.

A. As far as I know lodgepole pine, or mountain pine—

2209 it is often called mountain pine.

Q. Does this blister rust that you mentioned attack all five-needle pines?

A. I don't think anyone knows yet whether it will attack all of them. We know that it will attack strobus and monticola. Whether it will actually attack the sugar pine I don't think has yet been proven, though it has been assumed and feared that it would, because of the similar twig and bark characteristics.

Q. Do you know whether any tests have been made in the laboratory to infect Pinus lambertiana with blister rust?

A. I do not know whether they have been made.

Q. You are not familiar with that?

A. No.

Q. Now, you spoke on direct examination of the matter of reforestation. Are there any other hazards of planted stock, let us say with what we have termed white pines, aside from this blister rust, that attack planted stock?

A. Yes.

Q. What are they, sir?

A. There are various hazards. Of course, the greatest hazard to all planted stock, probably, is fire.

Q. Yes.

A. Then there are various insect hazards; the pine weevil has done some damage in pine plantations.

2210 Q. Drouth, does that do any damage?

A. Occasionally.

Q. Frost, does that do any damage?

A. Occasionally.

Q. Have you noted what is commonly known as sun scald?

A. That at times does damage.

Q. Grazing on reforested areas, does that do any damage?

A. If it is very severe it may.

Q. Have you ever had any experience with direct seeding of pines for the purpose of reforestation?

A. Yes.

Q. Has it been successful?

A. Very seldom.

Q. That was while you were in the forest service, was it not?
A. Yes.
Q. It was tried to a considerable degree, was it not, sir?
A. Tried to a considerable extent.
Q. Yes. Now, take planted stock, what proportion, what percentage of survival has been your experience, planted stock that will come to maturity? Take them a thousand to an acre.
A. Well, of course, you appreciate that the conditions in that respect are variable; also that you plant a thousand or twelve hundred trees per acre desiring only to mature three or four hundred.
Q. Yes.
2211 A. The rest you expect to drop out through a process of natural thinning, so that if your losses are distributed so as not to impair a fairly uniform stand of say three hundred and fifty trees per acre, your plantation has been one hundred percent a success.
Q. What percentage of cases will produce one hundred percent success?
A. Well, there are a good many of the older plantations of white pine in New England, New York, and Pennsylvania which range from eighty-five percent up in sections. We haven't a very large number of plantations that have yet attained maturity, and in making the statement I just did I should qualify it by saying that I included plantations which have become sufficiently established to be past all the infant causes of mortality and be on the highroad of success, barring some catastrophe like a forest fire.
Q. Then there are a number of hazards that affect the reforestation of cut-over lands?
A. Just the same as pertain to any other living thing. There is nothing in the world that nature produces that is not subject to some hazards.
Q. Yes. And is reforestation subject in general to a considerable group of hazards?
A. No more serious than the hazards that a[redacted] growing crops, agricultural crops, orchard crops.
2212 Q. What would you say would be a fair [redacted] percentage of survival of planted stock that will come to [redacted]urity on a thousand-to-an-acre basis? I want to know the [redacted]
A. I cannot give you a single answer to that question, because the success of reforestation has differed materially in different sections of the country, and reforestation by planting has been attempted at various times in the past in regions where it was later decided that the climatic difficulties were too serious. But if you will take the regions where experience has shown tree planting to be practicable, take the Northeastern States, take our inland empire, take our Cascade region, I think that the average result to date would show a survival of seventy-five percent or more of the original plantation, the thousand or twelve hundred trees per acre.

Q. And that is at about what age?

A. Various ages, depending upon the date of the plantations; from more recent plantations up to those that are now fifteen, eighteen, and twenty years of age.

Q. Take Pinus strobus now, for example; how old do those trees have to be before they are at present conditions now commonly marketed?

A. Well, in the New England conditions they are cutting pine growth out from thirty-five to forty years of age, from there on up.

Q. About how many logs to the thousand board feet would
2213 those thirty-five to forty-year-old strobus produce?

A. They produce, of course, only small logs and practically only box lumber.

Q. Well, about how many logs per thousand?

A. Oh, about twenty or twenty-five logs to the thousand board feet; from that on up, depending upon the purpose of the owner. He may hold his plantation for thirty years where he can get a small yield of better grades. He may hold it for one hundred years and increase his yield of better grades, entirely a matter of individual choice.

Q. Is that being done to a large degree, however, in New England?

A. Not to a very large degree; no.

Q. Now, Colonel Greeley, do you know the average number of logs per thousand, or would you hazard an opinion as to the average number of logs per thousand board feet which are commonly used at the present time to produce lumber marketed as California white pine?

A. It would be a very wide guess.

Q. I see. Then I won't ask you that. When did you begin your first lumber experience, Colonel Greeley?

A. You understand I have never been in the lumber industry.

Q. I understand that; yes. When did you first begin your study of woods?

A. My—aside from forest-school training my work began in
2214 investigations of lumbering in 1905.

Q. Yes. Can you tell us whether or not the word "white" as applied to pine lumber meant in the general trade any different then from what it does today, talking about the general trade with which you are familiar?

A. That is, has it meant anything different to the trade?

Q. Yes.

A. No; I think the trade understanding of the term has remained about the same.

Q. Just about the same all these years, has it?

A. As far as I can answer your question.

Q. What are the qualities of the wood to which you have applied the term genuine white pine? We had, you recall, on direct examination, certain qualities as to which you said it differed in some

manner from the yellow pine. Now what are the qualities of the wood which you applied to the wood that you called genuine white pine?

A. The qualities of very uniform grain, smooth, uniform texture, softness of the wood, and ease of working, hand working or machine working.

Q. Do you include weight?

A. Yes; white pines are very light woods.

Q. It is those qualities that you have in mind, is it, when you speak of the qualities of genuine white pines?

A. I have in mind that those qualities reach their highest
2215 stage of natural development in the genuine white pines.

Q. Well, those are the qualities, are they, which you have in mind when you use the term, genuine white pine?

A. Yes.

Q. I see. Now when you are ordering lumber for your own use, Colonel Greeley, do you ever go in and ask for lumber at a retail yard by the botanical Latin name?

A. I have ordered it in a few cases on the basis of eastern white pine.

Q. I am talking about your own practice, not the Forest Service practice, but your own.

A. No; not by botanical name.

Q. Did you ever go into any lumber yard, for instance, and say, "Give me some two by fours of Pseudotsuga taxifolia?"

A. No.

Q. You would not think of doing that, would you, sir?

A. No, sir.

Q. Did you ever go in and ask for any Pinus ponderosa?

A. No.

Q. Did you ever ask for any Pinus monticola? Do you recall any instance where, as a practical matter, you yourself, in buying lumber, ever went in and asked for it under at Latin botanical name?

A. No.

Q. All right.

2216 A. That doesn't mean that I haven't laid down specifications that meant the same thing.

Q. Exactly; you have at times——

A. But I would not talk a language that the other fellow completely misunderstood.

Q. Now, when you were particular about what you wanted you have often, have you, specified wood by botanical name?

A. Not by botanical name; no.

Q. How have you specified it, then, when you have been particular in what you wanted?

A. By the common name plus the region of manufacture.

Q. I see. In other words——

A. Please understand I am no large consumer of lumber.

Q. No; I am talking about you as the ordinary Tom, Dick, or Harry who wants some lumber.

A. But being interested in woods and knowing a little of their qualities, when I wanted a particular wood I have drawn up specifications for it that I knew would bring me that identical species.

Q. If an architect desired to be certain that in a building for which he was preparing specifications any particular wood would be used, would he, in your opinion take the same precautions which you have mentioned regarding your own specifications?

A. Yes.

Q. I see. Now, is the lumber industry with which you are
2217 familiar coming into conflict or competition with anything not lumber, used for general purposes, for which lumber is used?

A. In some respects, yes; in some uses.

Q. Is that a serious problem?

A. Yes; it is.

Q. Is that in your mind—I am trying to shorten this, you can tell me if I am wrong—does that include composition boards, cement, steel sash, insulating materials, metal furniture, and the like?

A. Yes.

Q. Now, when you said that the good will of the public would be in your opinion strengthened if it were assured of exact identification of lumber, you didn't mean botanical identification, did you?

A. Not necessarily by botanical names.

Q. Or botanical identification, did you?

A. But by a common name that meant the same in all cases.

Q. I see. Now, is there much variability in Douglas fir throughout its range of growth?

A. Yes.

Q. It varies, does it not, from the soft yellow fir—I will ask you whether it varies from what is known as soft yellow fir, which almost approaches white pine in softness, to a very hard, flinty, red fir which almost approaches in surfaces and in strength the finest palustris of the South?

2218 A. Yes.

Mr. BURR. Hadn't the witness better testify as to whether they do or not?

Mr. WHEAT. I asked if it varies.

A. I would like to claim that our soft yellow fir approaches white pine in softness, but unfortunately it would not be true, and there is a wide range between the old-growth yellow fir, which is primarily a finish lumber and what we call the red-fir type of harder, flintier grain, which is primaily of the structural timber type.

Q. Have you considered that variation in Douglas fir to be a detriment to that wood, to the consumer or to the manufacturer?

A. It is a variation that should not be a detriment to the wood if the grades for different purposes and uses are properly selected. There are some purposes for which the hard-grain type is superior

to the soft yellow fir type, and vice versa. We are endeavoring to take care of that by the specifications in our grading rules.

Q. Yes. I was just going to ask you. Are you really developing a method of taking care of it?

A. We are doing it in part.

Q. And is that something which is, in your opinion, an important matter in connection with any variable wood?

A. Yes.

Q. Have you gone far in the grading of your Douglas fir as
2219 soft and hard, respectively, or how do you do it?

A. We haven't gone the complete distance. We have carried out that principle in a number of our grades, specifically in our timber grades by a close-grain specification, also a dense-grain specification.

Q. Density is the basis of——

A. Strength.

Q. And density is also the basis of differential between commercial longleaf and commercial short-leaf pine, is it not, in the South?

A. Yes.

Q. And in a variable wood such methods as you are attempting to put into force in the Douglas fir region you would think would be of value?

A. Yes.

Q. Would they eliminate to a great degree any detriment to the consuming public which now exists in Douglas fir?

A. They would remedy very largely conditions where the consumer does not get exactly the type of lumber that he desires or that he has undertaken to order. Since you are dealing with a natural product, structure is variable because it is a natural product. It is not possible to eliminate those differences altogether, but our theory in the merchandising of Douglas fir is to develop the specifications as definitely as possible for each grade, and more and more to
2220 build those specifications around the characteristic uses of that grade, and do more and more grading on a basis of use and not on general description.

Q. And as you are able to effect that method of grading, do you feel, Colonel Greeley, that that will eliminate the deteriments which this variability which you have mentioned gives to the consumer?

A. Reduce it.

Mr. WHEAT. I think that is all.

Redirect examination by Mr. BURR:

Q Just a moment. You described for counsel during your cross-examination certain characteristics and qualities that have become associated, as I understood you, with the concept of white pine. Now, among them would you include durability where exposed to weather conditions, among those characteristics that have been established in the public mind?

A. Yes.

Q. Now, do you consider—I think you did testify that you considered the calling of Pinus ponderosa as California white pine, or white pine with any other designation a misnomer. Am I correct?

A. May I ask that the question be read?

(Last question read.)

2221 A. I regard that name as confusing to the trade and as not a sufficiently exact, clear-cut, and distinct term for the wood. If that means a misnomer, why, well and good. That is my reasoning.

Q. Do you regard the public mind in connection with the word "white pine" as having associated certain species with that term?

Mr. WHEAT. Now, just a minute before that is answered. I would like to object to counsel going into the public mind in this matter.

Mr. BURR. I will make the question the repute. That is what I have in mind.

Mr. WHEAT. It is a question of whether or not he knows, himself.

Q. (By Mr. Burr.) Is there any public repute and association of the term "white pine" with characteristics and the identity of lumber made from the white-pine species?

A. Yes.

Mr. WHEAT. Just a moment. That is a double question. You said "with characteristics and the identity." I would be very glad to have those questions asked separately. I have no objection.

Mr. BURR. I am agreeable.

Q. Is there an association in the public mind of the characteristics that you have named as those of the white pines with

2222 certain species of white-pine lumber?

A. Yes.

Q. Which species are those?

A. The public conception of white pine is primarily based upon Pinus strobus, which was the ruling soft pine of this country for many years, and upon which our industries, millwork, factories, and carpentry were developed. Now, that is the conception on which the term "white pine" is based. It is the experience of our people for generations with eastern white pine.

Q. Now, secondarily, is it associated with any other genuine white pine, or any other white pine that is not a genuine white pine?

A. Well, if I may, I would like to answer this question, the purport of this question without trying to conform to too many of these technical rules.

Examiner DE BRULER. Have it your own way.

By Mr. BURR:

Q. All right. Pursue your own policy.

A. My viewpoint of the proposition is this: The term "white pine" became established through years of experience and use with the eastern white pine, white pine in New England, Pennsylvania, and the Lake States. It was our universal soft pine for a very long period of time. And the term "white pine" commercially meant to

people who bought it and used it that eastern white pine. Now, that is still standard white pine as established in the public mind.
2223 Now, when you extend the term "white" to other woods the question arises how properly do the characteristics of the wood merit that same term which has been built around the white pine of the East? Now, it is my judgment that the extension of the term "white" to these western trees of very similar characteristics, not identically the same, but very similar, like the sugar pine, Idaho white pine, is correct commercial terminology.

Q. Well, is it correct——

A. When you go beyond those trees of very similar commercial characteristics you certainly reach a point somewhere where it becomes incorrect, and I think you have reached that when you go beyond the sugar pine and Idaho white pine.

Mr. WHEAT. May I interpose a question here, Mr. Burr?

Mr. BURR. Yes; I think so.

By Mr. WHEAT:

Q. Do you base, then, your testimony on this trade name "California white pine" on the concept that you have just expressed in the answer to the previous question?

A. Yes; that is primarily my viewpoint of it.

By Mr. BURR:

Q. Now, when you go beyond, if I understand you correctly, extend the term "white pine" to any variations of Pinus ponderosa, you would say it has become incorrect rather than a correct and sound extension, would you?

A. Yes.

Q. Now, I believe you used the word, in answer to opposing counsel's last question, "primarily." Now, would a secondary
2224 consideration be the botanical relationship of the genuine white pines other than Pinus strobus to Pinus strobus? Would that be given any consideration in your mind as regards the degree of extension of the term "white pine" to other woods than Pinus strobus?

A. Botanical characteristics to the extent they were reflected in physical similarities.

Q. I see. Now do you regard the misnaming of other woods from a botanical standpoint, as to which you were examined on cross examination, do you regard them as equally flagrant, or equally undesirable, from a public standpoint, as the misnaming of California white pine?

Examiner DE BRULER. I think he answered that once.

Mr. WHEAT. Before the question is answered, of course, I want to interpose the same objection that I did before as to the degree of flagrancy from this witness.

Examiner DE BRULER. Yes; I think he answered that once, Mr. Burr.

Mr. BURR. I don't think so on direct examination.

Examiner DE BRULER. It is one of the questions that was answered on direct examination. Answer that if you can. Read the question.

Mr. WHEAT. Of course, that is going to open the door to me now on recross.

Mr. BURR. If the court please, I didn't open the door.

2225 Mr. WHEAT. Yes, it is opening the door. I did my best to close this door.

Examiner DE BRULER. Read that question once. Let us just see what it is.

Mr. WHEAT. I would be remiss if I didn't run this down further.

Examiner DE BRULER. Put it in the record.

Mr. WHEAT. Before the question is read, could I just have the record show this, Your Honor: this again goes to the precise question of law and also the precise finding of fact which this Commission will have to determine in the issues of this case, and of course questions involving the determination cannot be asked of any witness.

Examiner DE BRULER. What was that question? I don't recall it.

(Last question read.)

Examiner DE BRULER. Wait a minute. That question refers to things mentioned in the cross-examination. You may answer.

Mr. WHEAT. Let the record show that the question as to whether or not this is a flagrant misnomer, or any kind of a misnomer as to which this Commission will take cognizance, is the precise and only question as to which this Commission may or can make a finding in this case.

Examiner DE BRULER. You may answer that question, if you can.

2226 Mr. WHEAT. There has been an exception noted as to that, sir?

Examiner DE BRULER. An exception is allowed, of course.

A. I regard the use of the term "white" as applied to the lumber of Pinus ponderosa as ~~the~~ most serious instance of confusion to the buying public that now exists.

Q. In the lumber industry?

A. In the merchandising of American woods.

Q. Now, does the pine weevil, as to which you testified, attack all pine trees, so far as you know?

A. To the best of my recollection it does.

Q. It attacks pines belonging botanically to the yellow pine group as well as the white pine group, does it?

A. I think so. That is a very unexpert reply, however; you should have an entomologist to answer that question.

Q. Do you know whether blister rust attacks any of the pine trees outside of the white pine group?

A. So far as known it only attacks the white pines.

Q. Has it ever been known to attack Pinus ponderosa in this country?

A. Not to my knowledge.

Q. Have you any opinion as to whether the cell structure difference between genuine white pines and genuine yellow pines has anything to do with the susceptibility of the one and the
2227 immunity of the other?

A. It is a question of the character of the—apparently of the character of the protective bark on the small twigs.

Mr. BURR. I see. That is enough. Thank you, sir.

The WITNESS. Of course, you appreciate the precise reasons why certain pests will thrive on certain hosts and not on others is a very complicated biological question, and probably no one as yet knows the entire answer, but we only know from experience to date.

Mr. BURR. We are all beyond our depth on that topic.

The WITNESS. In regions where the blister rust is at work it so far has only attacked the five-needle pines.

Mr. BURR. That is all.

Recross-examination by Mr. WHEAT:

Q. I have just one question to clear some matters up. Did I understand you, then, Colonel Greeley, to state that in your opinion physical similarity of mechanical characteristics is more important in your opinion in connection with the use of the term "white" in referrng to pine lumber than mere botanical relationships?

A. Yes; I think so. I think that the actual characteristics and similarities of the wood is a more important factor in commercial practice than potalical distinctions.

2227a Mr. WHEAT. That is all, sir.

Mr. BURR. That is all.

(Witness excused.)

(The taking of testimony at Portland, Oregon, was completed in the afternoon of January 23, 1930, and the hearing adjourned to continue at San Francisco, California, on January 28, 1930, at room 326, U.S. Post-office Building and Courthouse.)

2228 Docket No. 1620 to 1669, inc.

SAN FRANCISCO, CALIFORNIA, *January 28, 1930.*

Met pursuant to adjournment, 10:35 o'clock a.m.

Before: Ellis De Bruler, examiner.

Appearances:

Eugene W. Burr, for the Commission.

McCutchen, Olney, Mannon & Greene (by Mr. Allen P. Matthew and Carl I. Wheat) for the respondents.

Chandler M. Wood (Albuquerque, New Mexico) for Cady Lumber Corporation, George E. Breece Lumber Company, White Pine Lumber Company, respondents.

Examiner DE BRULER. If the parties are ready, we will proceed with the hearing.

Mr. BURR. I will call Mr. Hill.

CARY LEROY HILL was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Hill, what is your profession, please, sir?

A. Forester.

2229 Q. And what is your present position in that line of work?

A. I am in charge of the office of forest products in the California forest experiment station of the United States Forest Service.

Q. And that is located where?

A. 113 Hilgard Hall, University of California, Berkeley.

Q. How long have you been engaged in forestry pursuits?

A. Twenty-four years.

Q. And where have you been as regards that experience? Is that all in California?

A. No, I came to California in 1912.

Q. And where else were you engaged in forestry work?

A. Washington, D.C., the Southern States, Denver, Colorado, and my stations.

Q. How long were you in Denver, Colorado?

A. A little over two years.

Q. Were you in field work there?

A. Yes.

Q. Will you state the nature of it, please?

A. It was products work similar——

Q. (Interrupting.) What kind?

A. Forest products work in the utilization end, largely then in lumber statistics only.

Q. How much work have you done in connection with the actual study of the forests of the standing trees?

2230 A. I was for three years in charge of timber survey, out in the woods constantly here in California, and since my present connection in forest products work I get into the woods more or less.

Q. How wide has been your opportunity to observe the sugar pine, and the so-called California white pine, in the State of California?

A. In the woods?

Q. Yes, sir.

A. As they grow?

Q. Yes, sir.

A. Pretty wide. I am familiar with them. I am in the woods every summer, off and on.

Q. Is that throughout the State?

A. Rather largely; some parts of the State I haven't been in, but

A. All through the central Sierras.

Q. What?

A. All through the central Sierras.

Q. You have been?

A. Yes, sir.

Q. Will you state whether the Pinus ponderosa is a more diverse type of tree, and a more diverse type of lumber, than is the sugar pine?

Mr. MATTHEW. Would you mind breaking that question up?

2231 By Mr. BURR:

Q. Will you answer first as to the diversity of the two woods as regards the trees?

A. Pinus ponderosa shows more diversity than the sugar pine inasmuch as it will stand greater variation in conditions and still live and grow. When conditions are not happy for the sugar pine it quits.

Q. What diversity of conditions do you refer to in your last answer?

A. In the form of the tree and its habit of growth, I was thinking chiefly.

Q. I am referring to the natural conditions under which you say Pinus ponderosa is able to live as contrasted with the comparative uniformity of conditions which are required, if I understand your answer, by the sugar pine. What are the variations and conditions to which you refer when you say the Pinus ponderosa can stand variations?

A. Chiefly temperature and moisture.

Q. Will you explain that more fully, please? Does Pinus ponderosa live in conditions where it is too moist for the sugar pine, or what is the situation?

A. The variation is the other way. They occur together, but Pinus ponderosa grows under conditions of dryness and heat that sugar pine cannot endure.

A. Are there variations, as to altitude, contrasting Pinus
2232 ponderosa and sugar pine?

A. Somewhat.

Q. Will you describe that, please?

A. In the central Sierras Pinus ponderosa begins to appear as you go up towards the mountains, or into the mountains in the lower foothills say at an altitude of, in the region of which I am thinking, approximately 2,000 feet. Sugar pine does not appear until 3,000 to 3,500 feet.

Q. Then as you go up toward the higher altitudes of the range of sugar pine, does that disappear sooner, or at a later elevation, higher elevation, than does the other tree?

A. They both disappear almost simultaneously.

Q. How about diversity as regards the conditions of soil? Is there greater diversity which the sugar pine will adapt itself to, or the Pinus ponderosa?

A. I don't know that I can make any clear statement on that.

Q. Now, will you turn to the type of lumber that is produced by the sugar pine and the Pinus ponderosa. Do these variations, which you have testified about, have a reflection in a variation in the lumber that is produced by these respective varieties of trees?

A. There is a parallel difference in the range of variations of the lumber.

Q. Which has the greater variations?

A. Pinus ponderosa.

2233 Q. In what respects does it vary more than sugar pine varies, referring now to the lumber?

A. In the difference in texture.

Q. Beg pardon?

A. Difference in texture between the spring wood and the summer wood of the annual ring.

Q. Is there a difference in texture between—a greater difference in texture between the spring and summer wood in one tree than in the other? If so, which has the greater?

A. It is greater in the ponderosa.

Q. Now, what is the difference in texture in the Pinus ponderosa rings as between spring and summer wood?

A. The spring wood is always softer than the summer wood.

Q. Now, is there——

A. (Interrupting.) That is true in any tree.

Q. Yes. But it is true to a more marked extent, is it, in the Pinus ponderosa than in sugar pine?

A. In some localities ponderosa approaches lambertiana in that quality—very small summer wood, very little difference, very even texture. In other localities there is a marked difference between the summer wood and spring wood.

Q. Now, is there a greater range as regards the resinous content of ponderosa lumber than there is in the resinous content of sugar pine?

A. That would need rather careful definition. Sugar pine
2234 shows a type of resin which occasionally ponderosa does not. As to the occurrence of what is commonly called the pitch in the lumber industry, it occurs quite commonly in both species, but it is more prevalent in ponderosa.

Q. Well, now, is there a greater variation in the amount of resinous substances in Pinus ponderosa, from its freest type to its most resinous type, than there is between the freest type and the most resinous type of sugar pine?

A. I should say that there was.

Q. Which of the trees average is the largest?

A. Sugar pine.

Q. Is that noticeably so; is that quite a marked difference in the average of the two trees?

A. There is a noticeable difference in the size of the average trees.

Q. Have you had occasion to notice the merchantable character of sugar pine, where the lumber is already down before the timber is sold, as contrasted with the same situation as regards the Pinus ponderosa? Is my question clear?

A. In what respect?

Q. That is, as to its remaining merchantable, the durability of its merchantable character as wood?

A. One finds many more evidently ancient sugar pine logs, or portions of trees, in the forest than you do yellow pine, ponderosa.

2235 Q. You are referring to down trees, are you?

A. Down trees; yes.

Q. After how long a time would you estimate is a Pinus ponderosa tree merchantable after it has been lying on the ground?

Mr. MATTHEW. Is the witness qualified to answer that question? I understood you qualified him as to lumber operations.

By Mr. BURR:

Q. Do you have anything to do with the sale of the timber on the forest reservation?

A. Nothing officially.

Q. Have you had opportunity to observe the soundness of the lumber content of down trees of the Pinus ponderosa trees?

A. That is a thing which I habitually notice in the woods.

Q. For how long a period is the Pinus ponderosa tree, after it is down, how long does it remain sound and free from rot?

Mr. MATTHEW. Now, Mr. Examiner, it seems to me that that question is vague. It all depends on whether the tree which is fallen is a rotten tree or whether it is a tree that may be perfectly sound that has fallen as a result of a storm.

Mr. BURR. I think the witness can define that in his answer.

Examiner DE BRULER. With the qualifications that have been stated by the attorney for the respondents—you have that in mind—can you answer that question?

Mr. MATTHEW. I think the question should be defined

2236 more clearly by counsel.

Examiner DE BRULER. Answer the question if you can.

A. I would hesitate to specify any particular number of years for the reason that it depends to a considerable extent, even though the log is sound, or the tree is sound, when it goes down. It also depends upon where it falls, the amount of moisture in the location, to a considerable extent.

By Mr. BURR:

Q. Can't you average those conditions and made an estimate as to how long a sound tree, for example, is down, felled, or otherwise, how long, under average conditions, would such a log remain sound in character?

Mr. MATTHEW. I object to the question.

Examiner DE BRULER. Have you ever observed that in the woods? Have you had any knowledge along that line?

The WITNESS. Why, I am not so well qualified to testify on that point as a pathologist would be by considerable. That is their main business.

Examiner DE BRULER. What has been your observation along that line?

The WITNESS. Well, I have observed that in the woods.

Examiner DE BRULER. I mean how long back have you noticed that? Has it gone to any extent? In other words, that is a question that involves time.

The WITNESS. The difficulty in answering that question
2237 from my standpoint, is that one seldom knows when a tree came down.

Mr. MATTHEW. I object to the question and——

Mr. BURR. I will withdraw the question.

By Mr. BURR:

Q. Which heart wood lasts the longer on down logs, as a result of your observation and experience, the sugar pine or the Pinus ponderosa?

Mr. MATTHEW. I don't think the witness is qualified to answer that question.

Mr. BURR. He has given a lifetime to it.

Examiner DE BRULER. I will let him answer that subject to examination to decide whether or not it is based on insufficient knowledge. You may answer that.

A. My judgment would be that sugar pine will last the longer.

By Mr. BURR:

Q. Is that by a large margin longer?

A. By quite a large margin.

Mr. BURR. You may cross-examine.

Cross-examination by Mr. MATTHEW:

Q. Have you made any tests for the purpose of determining the relative life of heartwood of sugar pine and Pinus ponderosa, respectively?

2238 A. I have not.

Q. Do you know that the director of the United States Forest Products Laboratory, at Madison, Wisconsin, has testified in this proceeding that he does not know, and cannot express any opinion, as to whether the heartwood of these different species of pine varies as to durability?

Mr. BURR. I don't think he did so testify.

A. I am familiar with the work at the forest products laboratory. I do not know what has been testified to in these proceedings.

By Mr. MATTHEW:

Q. You have made no test yourself and the opinions which you have expressed, as I understand it, proceed from impressions?

A. Yes.

Q. The decay of lumber depends upon a great many conditions, such as the moisture conditions, contact with the soil, and perhaps the relative heat and cold, does it not?

A. It does.

Q. And before arriving at a scientific conclusion, or a conclusion which you think would be scientifically correct, you would naturally expect to make some rather extensive tests, I assume?

A. I would. I set this up for nothing beyond impressions.

Q. I understand. You have referred to the resin content of these two trees, and I am not sure that I got your statement as to the resinous character of sugar pine. Did you have in mind the
2239 conditions which are sometimes characterized as pitch pocket conditions?

A. Partly; yes.

Q. And what else?

A. Well, I never saw in sugar pine anything like the common Australian grade of ponderosa.

Q. What do you mean by Australian grade of ponderosa?

A. A pitchy clear.

Q. How does it come by the name of Australian grade?

A. Because that is the chief market in which they have disposed of it.

Q. That is rather an inferior type of lumber, is it?

A. Inferior for many purposes, yes; but not necessarily for certain construction use.

Q. But it is not the type of lumber which is used for shop, fine shop work?

A. Absolutely not.

Q. Or for the manufacture of sash and door and interior trim?

A. No, sir.

Q. Of course, you know the California white pine lumber is very largely used for the purposes which I have just enumerated?

A. Yes.

Q. Now, have you understood that the sugar pine lumber has frequently been found unsatisfactory for such use, because of the little bubbles of pitch or sugar, as they are sometimes termed,
2240 which come out in the wood?

Mr. BURR. I object to that, as this relates to the use, and I do not think the witness has been qualified as yet as to the uses of lumber.

Examiner DE BRULER. I think he may answer that question, if he can.

A. Why, I would not. I have had considerable acquaintance with that and I would not say that sugar pine is frequently unuseable or undesirable on that account. That is a thing which sometimes appears.

By Mr. MATTHEW:

Q. It is rather common, is it not, a common ground for complaint against the use of the wood for interior trim?

Mr. BURR. I object. I don't think he is qualified to answer. He has never been in the trade and never sold any, as far as his experience goes, and I do not think he has been qualified to testify as to the

commercial characteristics and the commercial complaints against this type of lumber.

Examiner DE BRULER. I think that is very vital. I think he is able to decide whether he can testify or not.

Mr. BURR. I object further on the ground that this is not proper cross-examination. I didn't go into the wood from the commercial standpoint on direct.

Mr. MATTHEW. I am not going into it from the commercial standpoint; I am talking about the resin content.

2241 Examiner DE BRULER. The objection is overruled.

Mr. BURR. May I have the question read?

(Whereupon the question referred to was read by the reporter.)

Examiner DE BRULER. You may answer that if you can.

A. I would not. As far as I know I would not call it a common ground.

By Mr. MATTHEW:

Q. Let me put it this way: These little bubbles, or flecks, or bags of sugar—call them what you may—appear as commonly on the California white pine as upon the sugar pine lumber?

A. No.

Mr. MATTHEW. That is all.

Redirect examination by Mr. BURR:

Q. Mr. Hill, when you spoke about the observations that you made, or rather the characteristics of the trees as being based upon impressions—I think that was the word that counsel used in which you acquiesced—those impressions of yours are based upon observations over a long period of years, are they not?

A. I would like to qualify that if I may.

Q. I wish you would.

A. To the extent—I acquiesced in the use of the word impression with respect to the durability of the wood of the tree in down logs.

2242 Q. Yes.

A. As to the variation in the appearance and characteristics of the tree and in the quality of the wood. That is my professional business and I know.

Mr. MATTHEW. I asked no question as to the subject you covered.

By Mr. BURR:

Q. With regard to the down timber, you have had opportunity to observe the characteristics of the logs after they had fallen or been felled?

A. Yes.

Q. Have you not?

A. Yes.

Q. And your testimony as to the durability is based upon your long experience and observations, is it?

A. Yes.

Mr. MATTHEW. May I ask, are you familiar with the sugar pine of the Klamath basin?

The WITNESS. Klamath basin—I am not much familiar with it.

Mr. MATTHEW. You are not familiar with the white pine of that basin either?

The WITNESS. No.

By Mr. BURR:

Q. It is out of your jurisdiction?

2243 A. No, it is within the jurisdiction of our station.

Q. The Klamath basin is—on the Oregon side?

A. No. I beg your pardon—not on the Oregon side. We have a Klamath National Forest just this side of the line and I was thinking of that.

Q. That is the part that comes in Modoc County, California?

A. Yes, sir.

Mr. MATTHEW. Have you ever been in a position to contrast the characteristics of the lumber yielded by the sugar pine of the Klamath basin in southern Oregon with lumber produced from sugar pine in California?

The WITNESS. No.

By Mr. BURR:

Q. You have had an opportunity to contrast the sugar pine with the ponderosa pine from Alturas and Modoc County sections, have you?

A. I have not been into the Modoc——

Q. (interrupting.) Beg pardon?

A. I have not been into the Warner Mountains.

Q. What mountains?

A. The Warner Mountains.

Q. How about the neighborhood of Mt. Lassen, are you familiar with the Pinus ponderosa there?

A. Yes, sir.

Mr. BURR. That is all.

2244 (Witness excused.)

Mr. BURR. Call Mr. Elliott, please.

JOSEPH C. ELLIOTT was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Elliott, what is your line of work, sir?

A. I am at present with the Government, inspector of timber sales.

Q. That is with the Forestry Service of the Agricul'ural Department, is it?

A. Yes, sir.

Q. And you are located, have your headquarters, where?

A. In the Ferry Building here in the city.

Q. How long have you been in that employ?
A. I started in in 1908.
Q. And you have been there continuously ever since?
A. Yes, sir.
Q. What is the nature of your duties?
A. Well, looking after the timber sales, seeing that the contract requirements are fulfilled, and checking up the log scale.

2245 Q. How much do you have to do with the buyer; that is, do you get to see him and negotiate matters?
A. Yes; quite frequently I see the purchaser of the timber.
Q. Who does the actual work of cruising to ascertain how much standing timber should be charged for by the Government in the sale?
A. Mr. Evans' timber-survey party.
Q. You don't do that?
A. No, sir.
Q. Do you go along with him?
A. I haven't recently; I used to cruise quite a lot of timber.
Q. Prior to 1908 what were you doing?
A. I was for five years with the Department of the Interior in Minnesota in the Indian reservations and assistant superintendent of logging there. Previous to that I worked for lumber companies.
Q. What kind of logs did you have your experience with in Minnesota?
A. Norway and white pine.
Q. How much have you had to do with lumbering operations as regards the manufacturing end?
A. Why, very little.
Q. Yours relates to merely the forest end of it?
A. Yes.
Q. Together with the actual logging off of the lands—do you have to do with that?
A. Yes, sir.

2246 Q. Now, did you ever have any experience in the inland empire, so called?
A. No, sir.
Q. What is the common designation for name used for the ponderosa tree by the California residents where it grows?
A. Yellow pine.
Q. Do they ever refer to it, as far as your experience goes, as California white pine?
A. Well, the lumber manufacturers do.
Q. I am talking about the residents, the local people.
A. No; I think—I don't think I ever—I don't recall now of the local people calling it white pine.
Q. What do the loggers, the men actually felling the trees, what do they call it?
A. Yellow pine; and some of them call it bull pine.

Q. Do you ever hear them refer to it as "this is a white pine tree and that is a sugar-pine tree" in what kind of way?

A. I might have, but I don't recall it now.

Q. Have you had any opportuinty to observe whether the Pinus ponderosa tree, that is the yellow pine, as you have called it, whether that varies more in various parts of California than the sugar pine does?

A. I suspect probably it does.

Q. In what respects?

A. Why, in the size of the trees and somewhat in the tex-
2247 ture of the wood.

Q. What is the difference in the texture of the wood?

A. Well, the wood on the east slope of the Sierras, what we call the east side, is a better quality of yellow pine than we get on the west side. Where you get clear lumber out of it, it is a better lumber than the yellow pine clear on the west slope.

Q. Better in what respects?

A. Well, it hasn't got that hard grain in it so much, don't have so much of that hard, flinty grain, as it does on the west side; it is more uniform in texture.

Q. Now, have you had any opportunity to observe any difference between the sugar pine and the ponderosa tree as regard durability where standing as dead timber?

A. Yes, sir.

Q. Will you relate what your experience is? What chance do you have to reach a view as to the comparative durability of those two things?

A. Well, in the last instance that I recall now, up on the Lassen forest out from Susanville, we had a forest fire there that killed quite a lot of timber, mixed, both yellow and sugar pine and furs.

Examiner De Bruler. What year was that?

The Witness. In 1924.

By Mr. Burr:

Q. Did you have opportunity to observe later to ascertain
2248 which trees remained sound and which didn't?

A. Well, I presume both decayed about alike; that is, the sapwood, but the heartwood of the sugar pine, after it was dead three or four years, was still good enough for them to log.

Q. They did log it three or four years later?

A. Yes, sir; the sugar pine.

Q. How about the heartwood of the ponderosa tree at the same period?

A. I suspect it was sound, but somewhat checked with the drying out of the tree.

Q. Was that actually sold and charged for?

A. Yes, sir.

Q. Was the yellow pine charged for; was the heartwood charged for?

A. It was checked with cracks, dried out.

Q. Well, did the Government actually require the contractor, the buyer, to pay for that wood?

A. No, sir; the contract requires that they shall log and pay for any timber or logs that are 33⅓% sound, merchantable. There would not be a third in the yellow pine on account of the heavy sapwood. The lighter sapped sugar pine was still sound and could be utilized.

Q. The lighter sapped sugar pine?

A. Yes, sir.

Q. You don't mean that the Government makes them pay
2249 100% when there is only 33⅓%?

A. They pay 33⅓% of the volume of the log.

Q. And if there is less than 33⅓% that is sound, they get it for nothing, if they can use it?

A. They don't usually handle it at all; they are not required to.

Q. Did you observe the difference in the condition of the heartwood of each of those species as regards its durability, aside from its checking?

A. Oh, yes.

Q. Which was the more durable after that period of time, which was more in the sounder condition, I would say, after that period of time, the heartwood of sugar pine or the heartwood of ponderosa?

A. Well, I don't think there was any difference, excepting that the heartwood of the ponderosa was so small that it didn't amount to anything.

Q. Have you had an opportunity to observe the lasting qualities of the two species of trees that we have been referring to, where the timber is down over a period of years?

A. Yes, sir.

Q. Will you relate what opportunity you have had to observe that?

A. Well, I came to California about 21 or 22 years ago and was up in the Sierras working and there was a great deal of shake trees that shake makers had fallen years before that, long enough
2250 before so that the sapwood was gone off the outside, rotted.

Q. That was sugar pine, was it?

A. Yes, sir, sugar pine; and the heartwood was just the same as it always had been.

Q. When did you observe that last?

A. Well, we observe it every year now as we go into fresh cutting.

Q. Are those logs still lying there?

A. Yes, sir.

Q. What is their condition now?

A. They are all right. We log them and make lumber of them.

Q. They are still sound, you mean?

A. Yes, sir.

Q. Now, have you had an opportunity to observe correspondingly as regards the yellow pine?

A. Well, the shake makers didn't fall yellow pine. Of course, there are lots of windfalls and trees burned off. They don't last nearly so long as the sugar pine.

Mr. MATTHEW. I move that last answer be stricken out.

Examiner DE BRULER. Has that been from your observation?

The WITNESS. Yes, sir.

Mr. MATTHEW. He asked if he had had an opportunity to observe it.

Examiner DE BRULER. I think it may stand.

By Mr. BURR:

Q. How about the heartwood of ponderosa, does that last as
2251 well where the log is down, as the heartwood of sugar pine?

A. No; it will not because the seasoning of it opens up cracks in it and lets the moisture in there and when it gets moist, and then dries out, it rots faster.

Q. What differential do you make between sugar pine and yellow pine to the buyer per thousand?

A. We sell stumpage altogether and the difference in the price is from $1 to $1.50 in different localities.

Examiner DE BRULER. In favor of which wood?

The WITNESS. In favor of the sugar pine.

By Mr. BURR:

Q. That is the higher price?

A. Yes.

Q. Now, do you recall the time when the buyers objected to paying for dead and down, and dead and standing sugar pine trees?

A. We do that yet. That is part of the contract.

Q. I say, do you recall a time when the buyers objected to doing that, to paying?

A. Oh, yes. In the beginning they objected to the dead timber. They said that it was not as good as the live timber.

Q. Do they still object?

A. Oh, no; they don't object any more.

Q. Have you observed any diversity between the spring and summer wood of the Pinus ponderosa tree?

A. Yes.

2252 Q. Is it more marked than the difference between spring and summer wood in the sugar pine?

A. Much more; yes, sir.

Q. Do you find any differences in the quality of the Pinus ponderosa due to altitude—elevation?

A. I don't think so. I don't think the elevation has much to do with the quality of the wood, but it has with the size of the timber.

Q. I see. How great is the difference in the thickness of the sapwood, as an average, as near as you can reach it, of the sugar pine and the yellow pine?

Mr. MATTHEW. Are you dealing with trees or logs with equal diameter?

By Mr. BURR:

Q. Yes; of even diameter. That is a fair question. Which has the greater ring of sapwood?

A. I think it would be, in fact I know it would be, about 2 to 1; it would average 2 to 1.

Q. Which is the greater?

A. Yellow pine.

Q. Has it greater sap, you say?

A. Oh, yes.

Mr. MATTHEW. Are you talking about the depth of the sapwood in inches?

Q. (By Mr. BURR.) You are talking about the width of the
2253 sap ring in point of inches, are you?

A. Yes, sir.

Mr. BURR. You may cross-examine.

Cross-examination by Mr. MATTHEW:

Q. Is it not a fact, Mr. Elliott, that the Pinus ponderosa logs, when on the ground in the forest, are subject to the attack of a certain fungus which results in their acquiring a blue stain?

A. Yes, sir.

Q. That is quite a common thing, is it not?

A. Yes, sir.

Q. The sugar pine logs are not subject to the attack of that particular fungus, are they?

A. Yes, sir.

Q. Do they become blue in the same way?

A. Yes, sir.

Q. And just as quickly?

A. I think so; yes, sir; about the same.

Q. And is that one of the reasons why the lumber manufacturers have not always desired to take the down timber, as you described it?

A. I think so. The reason they objected to it in the beginning was on account of having to handle so much log for the small amount of scale or lumber they got out of it.

2254 Q. But that blue stain is regarded as an objection from the lumberman's point of view, is it not?

A. Oh, yes. It reduces the price and also reduces the grade the lumber goes into.

Q. You gave us an instance where some sugar-pine trees had been felled by some manufacturers of shakes, I think you said?

A. Yes, sir.

Q. And the heart of those logs, you say, is still sound?

A. Yes, sir.

Q. I think you also said, in response to a question from counsel, that yellow-pine logs had been felled in the same fashion?

A. I have never taken notice of the yellow-pine logs being used for shakes.

Q. Then you haven't a direct comparison between logs handled in a similar condition?

A. No, sir.

Mr. MATTHEW. That is all.

Redirect examination by Mr. BURR:

Q. Did I understand you to say that sugar pine is as quickly and as fully susceptible to blue stain as the Pinus ponderosa?

A. Yes, sir. You take in hot weather, in the summer, if it is down about six weeks, it starts to stain at the saw cuts in the end, the logs.

2255 Q. Does that interfere with the marketability?

A. With what?

Q. With its marketability, saleability?

A. No; they sell that blue stain until it starts to break down with rot.

Q. Does the blue stain start to break down with rot as soon in the sugar pine as it does in the ponderosa?

A. Yes; I suspect it would.

Q. Then I don't understand your testimony with regard to durability, and your comparison of durability, of the two types of down timber.

A. The blue stain only affects the sapwood of the log.

Q. I see. Does that blue stain go through into the heartwood of either species?

A. No, sir.

Mr. BURR. That is all.

Examiner DE BRULER. Any further questions by counsel for respondents?

Mr. MATTHEW. No.

(Witness excused.)

Mr. BURR. Call Mr. Kelham, please.

GEORGE W. KELHAM was thereupon called as a witness and, having been first duly sworn, testified as follows:

2256 Direct examination by Mr. BURR:

Q. You are an architect, are you, sir?

A. Yes.

Q. How long have you been practicing that profession?

A. About 30 years.

Q. Are you located in San Francisco?

A. Yes, sir.

Q. Have you been during that period, that entire period?

A. No; for 21 years—22 years, I believe.

Q. 22 years here, you say?

A. Yes.

Q. Do you have occasion to order sash for buildings upon which your professional services are engaged at various times?

A. Yes.

Q. What variety of wood do you specify for sash?
A. Not always the same.
Q. Well, please particularize a little more.
A. It is sugar pine or cedar.
Q. Do you ever specify California white pine?
A. No, sir.
Q. And why is that the case?
A. We don't think it is as good lumber for the purpose.
Q. In what respects do you regard it as inferior for that purpose?
A. We don't think it has the same strength; we don't think
2257 it has the same ability to what we call stand up in weather conditions, and it has, in our opinion, more pitch.
Q. Do you ever order ponderosa for pine doors for exterior purposes?
A. I never do.
Q. What is the reputation among your profession in the city of San Francisco of ponderosa lumber and sugar pine for purposes where the wood is to be exposed to the weather?
Mr. MATTHEW. I object to that, Mr. Examiner. I think counsel should confine himself to the facts instead of asking generally about the reputation here.
Mr. BURR. If the examiner please, witnesses for both sides in this case have been asked, and have testified, as regards the repute, particularly in Boston, witnesses for the Government particularly, testified at considerable length as to the repute of white pine there for durability, and the question was allowed, and I think objection has been made from time to time, and I trust it will be allowed here.
Mr. MATTHEW. That was predicated, Mr. Burr, as you will recall, upon the fact that there were a great many old buildings in New England made of northern white pine.
Mr. BURR. That goes to the length of time rather than the principle involved here.
Examiner DE BRULER. Are you acquainted—he used the word "reputation"—are you acquainted with that? Do you know
2258 the reputation?
The WITNESS. I can't testify to the general reputation as to what other people think. I can only testify as to what I think.
Examiner DE BRULER. That is what I want to find out.
The WITNESS. That would be merely hearsay opinion.
Mr. BURR. If the examiner please, I would like to instruct the witness as to whether or not it is hearsay; it is for the examiner to decide.

By Mr. BURR:

Q. Let me ask you again: Do you know the repute among your profession of the ability of sugar pine to stand up where exposed to the weather? Is it good or bad?
A. Good.

Q. Now, do you know the repute of western yellow pine, Pinus ponderosa, among your profession as to its ability to stand up when exposed to the weather? Is it as good as sugar pine or not?

Mr. MATTHEW. You have two questions there.

Examiner DE BRULER. I think you should first ask him if he knows the repute and let him answer, yes or no.

By Mr. BURR:

Q. Do you know the repute of western yellow pine amongst the members of your profession, of Pinus ponderosa, as to durability where exposed to the weather?

2259 A. I know what I think it is. I can't say I know the opinion of another person. Do you want to know my general belief, what my opinion is; if so, I can state that.

Q. All right, let's have that.

Mr. MATTHEW. I object to that question being answered. If you want to give any specific instances, I have no objection. He said in the first place, he doesn't know the repute. Therefore, he is not qualified to answer that question.

Mr. BURR. I think he does know the repute.

Examiner DE BRULER. Go back and ask that question that I asked to be answered by yes or no.

By Mr. BURR:

Q. Do you know the repute amongst your profession of Pinus ponderosa lumber for purposes where it is exposed to the weather?

A. I can only give you, as I have already stated, my opinion of that repute. You cannot say you know another man's opinion. I can give you the opinion of my office; I can give you my belief in the general repute. If you want that answered, I can answer that.

Mr. MATTHEW. I object to the question being answered. It has been made clear that he doesn't know the general repute.

The WITNESS. I know my opinion of the general repute.

Mr. BURR. It is only your opinion that I can ask for.

The WITNESS. I can't state facts for other people, as counsel knows.

2260 Mr. MATTHEW. I desire to press my objection. The witness is not in position to say he knows the general repute. He is not qualified.

Mr. BURR. I think the witness is conservative. He has shown by his testimony that he is able to answer the question.

Examiner DE BRULER. Do you know the general reputation of the wood among your profession?

The WITNESS. I think I do.

Examiner DE BRULER. Then you can answer what the reputation is. State what it is, if you know.

The WITNESS. What is the question?

(Whereupon the question referred to was read by the reporter.)

Examiner DE BRULER. You said you knew, so now state what the answer is.

A. My answer is: it is unsatisfactory under those conditions, and that would be the general opinion of the architects that I know.

By Mr. BURR:

Q. And for what reason is it unsatisfactory?

A. It doesn't, in our opinion, last well. It decays more rapidly than other wood.

Q. Were you the architect for the Russ Building here in town?

A. Yes, sir.

Q. That is one of the largest in the city, is it?

A. I think so.

2261 Q. What variety of sash did you use in that building?

A. I cannot tell you. It's sugar pine or cedar. I would have to check that up. We had estimates for both woods and I am not positive which was taken. It was a question of price.

Mr. BURR. That is all. You may cross-examine.

Cross-examination by Mr. MATTHEW:

Q. Where you speak of cedar, what wood do you mean?

A. Well, we mean what is called in our business Port Orford cedar.

Q. Do you specify it as cedar or as Port Orford cedar?

A. I couldn't answer that question. We might specify it both ways. I am not sure. It is a question I would have to refer to the specifications before I could answer it. I think it is referred to as Port Orford cedar.

Q. But is it sometimes found in orders, architects' specifications, simply as cedar?

A. That I cannot tell; it might be.

Q. Does the term "cedar" cover that for your office means?

A. In our office, it does.

Q. Is that the general practice among architects. or do you know?

A. That depends entirely on the class of work which is being specified. You will understand in our profession everything is

2262 specified, from good timber to chewing gum, and depends on the class of work entirely as to what wood we specify. I would say, generally. it would mean Port Orford cedar.

Q. You don't know, I assume, whether Port Orford cedar is botanically a true cedar or not?

A. No, sir; I don't.

Q. You are not interested in the botanical nomenclature of woods in any event?

A. No, sir.

Q. Your interest is solely in their quality and utility for specified uses?

A. Entirely in their results. In our work that is the only interest we have in them.

Q. You stated that you quite commonly, you said, almost uniformly, specified either sugar pine or cedar for the construction of window sash?

A. Yes.

Q. You have never specified California white pine?

A. No, sir.

Q. Then you are not personally familiar with California white pine; that is, with respect to its adequacy or sufficiency for this purpose?

A. I have used it in some small pieces.

Q. And specified it for that purpose?

A. No, never specified it, but have taken it under questions of price.

2263 Q. How long since?

A. It would be so long ago—it has been a matter of some years since we have used any.

Q. Ten years?

A. I can't remember.

Q. Fifteen years, approximately?

A. I don't suppose there has been a piece used out of our office for ten years.

Q. Then your personal familiarity with the use of California white pine for sash and door purposes has been very limited?

A. Very limited.

Q. And when you testified as to its repute you were simply expressing what you understand to be the general consensus of opinion, and not undertaking to convey an impression based upon specific instances?

A. Well, in my estimation of the wood, and my knowledge of its general action, that has been my personal conclusion that I didn't care to use it for that purpose.

Q. Where has that experience been?

A. In various instances, in various mills, and in examining various grades of it, and the finished products of it.

Q. Do you know that California white pine is very commonly used in this territory for sash and door purposes?

A. Yes, sir. And I know it is commonly used where sugar pine is specified also.

2264 Mr. MATTHEW. I move to strike out the latter part of that answer.

Examiner DE BRULER. You needn't answer that.

By Mr. MATTHEW:

Q. Do you know whether the relative use of California white pine is increasing?

A. I have no idea.

Q. Have you had any experience with these little pitch pockets, or sugar pockets, in the sugar pine when used for sash and door purposes, or interior trim?

A. We have used very, very little sugar pine for doors or interior trim.

Q. What do you use for doors and interior trim?

A. Cedar. In some instances, Oregon pine, on a cheap grade of wood, and in some instances redwood.

Q. By Oregon pine, you really mean Douglas fir.
A. Yes.
Q. Do you know it is not a pine tree?
Mr. BURR. I object to the question and——
A. (Interrupting.) I make no pretense of technical knowledge.
Mr. BURR. May I interpose an objection first. I object to the question with regard to the supposed misnaming of Oregon pine on the ground that it is immaterial to this issue.

Examiner DE BRULER. That would be true, but in this ques-
2265 tion, as I understand his answer, it was a certain kind of a pine.

Mr. BURR. I want to object to the introduction of the answer. I want to move that it be stricken. I tried to make my objection timely and I now make a motion, which I believe is timely, that that be stricken from the record.

Mr. MATTHEW. I cannot see the basis for the motion.

Examiner DE BRULER. We are not going into the confusion of the other woods. That has been ruled out. It is the pine that we are going to consider and I think it may stand as to that extent.

Mr. BURR. But that has nothing to do with this case. I desire to strike the answer.

May we hear the answer read?

(Whereupon the answer referred to was read by the reporter.)

Mr. BURR. I will withdraw the motion.

By Mr. MATTHEW:

Q. I assume that you are not familiar with governmental reports which reflect the results of tests of various pine lumbers?
A. No.
Q. I have in mind such a bulletin as "Monthly Bulletin No. 556 of the Department of Agriculture."
A. No.
Q. Now, Mr. Kelham, I don't want to press you to the point of seeming to be annoying, but I wish you would give your com-
2266 plete personal experience with California white pine, if you will, because you stated that you had accepted some of it in particular instances, but that in recent years you had not specified it, and that you have used it to a verly little extent. Could you give your complete experience with it?
A. No; that is impossible. I used California white pine on a house which I built for myself at Lake Tahoe some four or five years ago. I used white pine to some extent throughout that house. That is the only specific instance that I recall now of having used it for many years; that is, any white pine, so-called California white pine lumber.

To go back over a period of years, in a practice like mine, and tell you when I actually used a sash, and what kind of lumber was used—it couldn't be done.

Q. That is the only instance which you can specifically recall now where you have used California white pine?

A. Yes, sir. As I stated, we do not use it in our office.

Mr. MATTHEW. That is all.

Redirect examination by Mr. BURR:

Q. That California white pine, in the place at Tahoe, was that used for interior purposes?

A. Yes.

Q. Did you use it for exterior work?

2267 A. No, sir.

Q. Now, is California white pine used where sugar pine is specified, on occasions here in San Francisco?

A. I don't wish to make that as a positive statement, but it is a popular belief among all of us that it is.

Examiner DE BRULER. That wouldn't be proper evidence.

Mr. MATTHEW. I move it be stricken.

Examiner DE BRULER. It may be stricken. There is no use to encumber the record with something that is of no use in this issue.

By Mr. BURR:

Q. Have you at any time specified sugar pine and had California white pine delivered on the job for you?

A. From my own knowledge, I cannot say.

Q. Beg pardon?

A. Of my own personal knowledge, I cannot state that we have.

Q. Referring to the work that your firm has done?

A. It has been reported to our office that that had occurred, and it had been rejected, but of my own personal knowledge I cannot say.

Q. Was that report made to you in the scope of the business of some employee of your office?

A. Yes; it was.

Mr. BURR. That is all.

Mr. MATTHEW. That is all.

2268 Examiner DE BRULER. That is all. You may be excused.

(Witness excused.)

Mr. BURR. Call Mr. Taylor, please.

Examiner DE BRULER. Is Mr. Charles L. Taylor here?

(No response.)

Mr. BURR. I though he was here. I don't know him when I see him.

It is my error. He is called for the 29th.

Call Mr. Hughes.

WILLIAM HUGHES was thereupon called as a witness and, having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Hughes, when did you come to California?

A. July '59.

Q. Have you been here ever since?

A. I have.

Q. What part of the State do you live in?

A. Just a moment—from '13 to '18 I was in the cow business in Arizona. I moved back to Madera to my home in the fall of '18. Outside of those five years I have been here ever since.

I was a "covered wagon baby." I was born in February
2269 '58 and arrived here in '59.

Q. You were born en route out here?

A. No; born in February and started in March.

Q. Well, now, in what part of the State have you lived in?

A. I have lived in Fresno from '79 to '93; and I have lived in Madera ever since, with the exception of five years when I was in the cow business in Arizona.

Q. Now, have you had any opportunity to observe the forests in that length of time? Just what contacts have you had?

A. If everybody loved the forests like I do, there wouldn't be anybody in the city and on the plains.

Q. Are you familiar with the so-called ponderosa tree?

A. That is the sugar pine, is it?

Q. No; that is the tree. Do you know a tree known as the yellow pine here?

A. Yes, sir.

Q. Do you know also a tree known as sugar pine?

A. Yes, sir. I don't know the botanical names.

Q. You don't care about botanical names?

A. No.

Q. Do you know how the yellow pine has sold, what they call it in the form of lumber?

A. Yes, sir.

Q. What is it?

A. What is it called?

2269a Q. Yes, sir.

A. They call it yellow pine down in my country.

Q. Well, when it is lumber is it sold as California white pine, if you know?

A. Sold as California white pine?

Q. Yes, sir.

A. I never heard of that term used for it.

Mr. MATTHEW. There is a part of his answer that isn't responsive and it should be stricken out.

Mr. BURR. Which part?

Mr. MATTHEW. His last answer is not responsive.

Mr. BURR. I won't object to the objection. Let it go.

By Mr. BURR:

Q. Have you had any opportunity to observe the durability of sugar pine when used for building purposes?

Mr. MATTHEW. I don't think this witness has been qualified yet for an answer of that kind.

Mr. BURR. I think it is a qualifying question.

Examiner DE BRULER. He is asking if he had any opportunity.

Mr. BURR. Then I am going to ask—I will qualify him before I am done.

Examiner DE BRULER. I think that is all right. Answer the question.

2270 A. About 47 years.

By Mr. BURR:

Q. You have had opportunity?

A. I have.

Q. What is that opportunity, what chance have you had to know whether it lasts well?

A. About 47 years of building. I have built three homes. My father and I built the Hughes Hotel at Fresno, the Hughes block, quite a structure, and seven or eight other store buildings there. We used all kinds of lumber in those buildings, and especially sugar pine for finishing and casings and door casings, window casings; and especially if they were strip casings and moldings, and that sort of thing, we used sugar pine.

Q. Have you had an opportunity to observe how those buildings lasted from the time they were erected down to the present time?

A. I am living in my home now. That was built in the early '80's—I think it was '81. Those strip casings are just as perfect as when put in.

Examiner DE BRULER. What kind of wood was that?

The WITNESS. Sugar pine. The rustic was made out of sugar pine, and the northwest side is exposed to the afternoon sun. Three years ago the underpinning rotted out, the upper part where it rests on the two mud sills, and it settled about an inch and a quarter, or a half. You can see, by looking around the rustic, that the

2271 outside covering of the house that is made of sugar pine, when I had it jacked up and put in position, that sugar-pine rustic came right back into position without a crack or split in it, without marring the paint even.

By Mr. BURR:

Q. That sill, you say, had rotted?

A. What?

Q. The mud sill.

A. The mud sills, they were of redwood.

Q. And they rotted out, had they?

A. The uprights from the mud sill to the frame was mixed sugar pine and yellow pine; four of the yellow pine pieces had rotted out about four feet apart, and that allowed the building to settle. Rotted out at the bottom, I suppose, and they settled about an inch and a quarter. Those were removed by myself, with two of my sons to help me.

Q. How much of that had been exposed to water?

A. The underpinning on the north side was exposed to water just once. My daughter allowed the hose to run and flood the mud sill,

let it run all night; and the building is well ventilated underneath, but the underpinning never had been wet before, I don't think, in the whole 50 years it has been built, but it got wet that time and the yellow pine studding uprights rotted off at the bottom. The sugar pine didn't.

Q. Those were put in at the same time when the house was originally built?

2272 A. Yes, sir.

There is a house that was built by the first sheriff of Madera County before he was sheriff.

Q. You are county treasurer out there?

A. Yes, sir.

Q. How long have you held that position?

A. Since March '24.

Q. Have you had any chance to observe the durability of sugar pine from a warehouse that you have constructed there? I think you mentioned such a building.

A. I have a picture in my pocket that was taken of a little warehouse on my daughter's property four or five days ago.

Q. When was that warehouse constructed?

A. That building was built by Mr. Thurman, the first sheriff of Madera County, when he was manager for either the California Lumber Company, or the first manager of the Madera Flume and Trading Company—I don't know which—but it was built in the early '80's. I know it was built before '88 because that is the year I went operating in real estate in Madera and put on the Hughes and Chapman colony, and the Hughes addition. The courthouse stands on the Hughes addition.

Q. How carefully was that painted?

A. Beg your pardon?

Q. How carefully was that warehouse painted?

A. It never had any paint.

2273 Q. No paint at all?

A. No; never had.

Q. What is the condition of it today?

A. Good.

Q. Is it constructed entirely of sugar pine, or only in part?

A. I know the roof is sugar pine split shake. The walls, I am satisfied, are sugar pine no. 3 common rough. That was sold in those days for no. 3 common rough.

Q. You say you have some pictures of that warehouse?

A. I have.

Q. Will you be kind enough to produce them?

A. Yes, sir. [Witness produces two photographs.]

Q. Did you take these photographs?

A. I had them taken.

Q. And you know those to be photographs of the warehouse you referred to.

A. Absolutely. There is one hole there that one of my boys punched through to kill an owl about fifteen years ago.

Q. That is toward the right-hand side of the picture?

A. Yes, sir. Last week I made an estimate of what the cost would be to repair that roof. Seven shingles would make it good to last 25 years longer.

Q. There are a few of the shingles that are showing signs of decay, are there?

A. Yes, sir.

2274 Q. What are the shingles, what are they made out of?

A. Sugar pine.

Mr. BURR. If the examiner please, I desire to offer these two photographs as Commission's exhibits for the record and ask that they be received.

Examiner DE BRULER. They will be received as Commission's exhibit no. 44-A and 44-B.

(Whereupon the two photographs referred to were thereupon received in evidence and marked "Commission's Exhibit No. 44-A and 44-B.")

By Mr. BURR:

Q. Have you had an opportunity to observe any other sugar pine structures up in that neighborhood?

A. I have; yes, sir.

Q. Will you name some of them?

A. The Chowchilla Warehouse right by the side of the Golden State Highway at Chowchilla, built in the early '80's.

Q. Is the exterior of sugar pine?

A. The roof is all sugar pine shingles.

Q. Do you have any snowfall up in that country?

A. We had some a few days ago.

Q. Do you have quite a good deal of snow?

A. No, sir; not in the valley.

Q. Not much?

A. No, sir.

2275 Q. Do you happen to know what the rainfall there is in inches?

A. It averages along from 10 to 14 inches a year.

Q. What sort of condition is this building in that you last mentioned?

A. It is in very good condition.

Q. Is that a painted building?

A. No, sir.

Q. Unpainted?

A. Never has been painted.

Q. Do you know of any other building of long standing made of sugar pine there?

A. There are a number of other buildings there. I could drive out in my machine and in 20 minutes find 40 buildings, but I can't remember any that I would testify that I have known that long.

Q. Have you had a chance to notice whether the yellow pine or the sugar pine, when it is down in the forests will last longer?

A. That is the down timber in the forest?

Q. Yes.

A. Oh, Lord, yes. I have had a lot of experience in that line.

Q. Will you outline that for the examiner, please, as to your experience?

A. The yellow pine, fir, falls to pieces and rots and sugar pine stays solid.

Q. Will you go into particulars a little more and tell how
2276 you happen to have reached that view, what experience have you had that leads you to that testimony?

A. I have been camping up through the mountains, taking a pack horse and putting blankets on and a cooking outfit, and travel through the mountains. That has been my experience. I know sugar pine, I know fir, and I know yellow pine, and I know cedar, and I know Sequoia gigantica, the Big Trees. It is one of the pleasures of my life to get into those hills and study those things.

When I want to fish for big trout that long [indicating] I go to a fir log and kick it apart and take out a grub worm. If I can't find a fir log I will find a yellow pine log, but I never look for sugar pine when I want to get a grub worm for fishing.

Mr. MATTHEW. Just a moment: I dislike to interrupt the witness, for obvious reasons, but I don't think the witness should be allowed to go on in this fashion.

Mr. BURR. If the examiner please——

Mr. MATTHEW. Let me enter my objection. We are getting nothing that is definite, nothing upon which the examiner could possibly predicate findings, and I move to strike out the witness' answer.

Examiner DE BRULER. I want to make this statement to the witness: Don't say anything about any other wood except the wood in issue here.

2277 Mr. BURR. Then, Mr. Hughes, will you be kind enough to omit references to fir, cedar, or other woods than the two pines that we are interested in here. We are not trying to prove anything with regard to any other type of lumber.

The WITNESS. I am not trying to degrade any of those.

Mr. BURR. Not at all, sir.

The WITNESS. I don't want to.

Mr. MATTHEW. May it be understood I don't want to be in position to be required to make a timely objection——

Examiner DE BRULER (interrupting). As to what?

Mr. MATTHEW. I want to preserve my objection and motion to strike out this witness' testimony without being in the position of being required to making a timely objection each time.

Mr. BURR. I have not been unreasonable on that, and I shan't here.

Examiner DE BRULER. Very well.

The WITNESS. I will give you time to object before I answer.

By Mr. BURR:

Q. Have you had an opportunity to observe the lasting qualities of timber that has been killed while standing and was not down?

A. To observe any particular kind or all kinds?

Q. Yes; referring to the pine timber.

A. To the pine timber?

Q. Sometimes it is killed by fire or some other reason, is it not, and still stands?

2278

A. Yes.

Q. Have you noticed any difference in the durability of the sugar pine and the yellow pine when standing but not living?

A. I have.

Q. Will you state what experience you have had along that line?

A. Forty-odd years' travel in pretty near every year in the sugar-pine and yellow-pine belts, camping among those trees and observing the logging crews taking out standing and felled dead timber, observing whether or not the yellow pine and fir was decayed.

Q. Never mind the fir.

Examiner DE BRULER. That can be stricken out.

The WITNESS. Am I to mention sugar pine? You asked the question about sugar pine.

By Mr. BURR:

Q. Sugar and yellow pine only.

A. Observing whether there was more of the sugar pine in good condition and logged out after being dead or more of the yellow pine.

Q. Will you tell which has the greater durability, in your experience, under those circumstances?

Mr. MATTHEW. I object on the ground that the witness hasn't been qualified. This isn't the nature of a test; merely going to the forest and getting an impression of certain standing timber and thus determine whether one variety has greater durability than the other. I think it is not possible.

2279

Mr. BURR. If the examiner please, the use of the word "impression" begs the question. The man has had many years of experience on that and it seems to me that the fact that he isn't able to give exact figures merely goes to the weight of the proposition.

Mr. MATTHEW. If the examiner please, how could anybody intelligently make a finding upon such testimony? The testimony we have in this record already, the testimony of the scientific men of the Forestry Department admit they don't know the relative durability of these woods.

Mr. BURR. They don't know the relative durability of the woods, but one testified in Madison as to which wood, in his opinion, was the more durable. It is not going to rest solely upon the experience

of experts. The practical man in the woods who knows the forest is just about as well qualified and as competent as the Forestry people, and they haven't got exact figures. Then we, therefore, must rely on the testimony of practical men.

Examiner DE BRULER. Let me ask the witness one question: Do you recall any forest where the timber was all dead about the same time that you can make a comparison by?

The WITNESS. Yes, sir.

Examiner DE BRULER. Go ahead, if you can name the
2280 forest where it was.

Mr. MATTHEW. How can the witness know that the timber of different trees, or the different trees, died at the same time? It is a speculative element.

Mr. BURR. It might have been a fire that kills the forest all at once.

Examiner DE BRULER. That is what I mean, if he knows they died at about the same time. Do you know of such instances?

The WITNESS. I can go further than that.

Examiner DE BRULER. Go ahead; let's see.

Mr. MATTHEW. I want the record to show that I object to this whole line of testimony on the ground that it is speculative, indefinite, and unreliable.

Examiner DE BRULER. Very well.

The WITNESS. I was an employee of the Minarets & Western Railroad Company when building the line into the Fresno Sugar Pine Company's mill at Central Camp. There was a great acreage there that had been burned over before. I was taking care of the I.W.W. situation in the strike there and——

Mr. BURR (interrupting). Never mind that.

The WITNESS. And I got a good idea of the ratio of sugar pine and yellow pine logged that was taken in after a fire and formed my opinion as to whether or not the timbers were equal or unequal.

Examiner DE BRULER. How did you get that impression?
2281 On what did you base it?

The WITNESS. By the rotten logs laying on the ground left and the other logs taken off.

Mr. MATTHEW. The question has to do with standing timber.

By Mr. BURR:

Q. Was there sugar pine and yellow pine both among those logs?
A. Yes, sir.
Q. Which of them was in the better condition as regards decay?
Mr. MATTHEW. You are talking about standing timber?
Mr. BURR. I am talking about the logs.
Examiner DE BRULER. The dead timber, I suppose.
Mr. BURR. Yes; he testified it is dead.

By Mr. BURR:

Q. Now, which was in the better condition as regards the decay?
A. Sugar pine.

Q. The sugar pine was not so much decayed?
A. No.
Q. Now, what kind of condition were the yellow-pine logs in?
A. As compared to the sugar pine?
Q. Yes.
A. Rotten.
Q. Down?
A. Not all of them.

Q. Do you know how long a period had elapsed?

2282 A. I camped at that camp in '77. That burn hadn't went through there then, and it was in '24—yes, '24; the early part of '24, that this ground was logged over—and I mean it was logged. Everything was taken.

Q. Beg pardon?

A. I mean that was logged. Everything that was solid was taken off that ground.

Q. Now, returning to the standing timber, standing but dead, can you give any experience specifically with regard to the durability under such conditions of those two types of pine?

A. The standing timber——

Mr. MATTHEW (interrupting). The examiner understands that my objection runs through all this testimony on the ground that it is speculative.

Examiner DE BRULER. Yes; and the exception allowed.

A. The standing timber that is dead I would consider of the same ratio, of destroyed from rotting, that I would if it was down.

By Mr. BURR. Q. It wouldn't rot as fast?

Mr. MATTHEW. I move to strike the answer out as not responsive. He said that it would be his opinion. That isn't responsive.

Examiner DE BRULER. That may be restricted. Was that your observation?

2283 The WITNESS. That is my observation.

Examiner DE BRULER. That is a different question—a different answer.

By Mr. BURR:

Q. Can you mention any specific instance where you have had a chance to observe standing dead timber as to the durability of those two species?

Examiner DE BRULER. I think he has just gone into that and answered the question.

The WITNESS. My answer to these previous questions has been based on one specific burn on the White and Friant lumber tract in Madera County.

By Mr. BURR:

Q. In that case it was both down timber and standing timber?
A. Yes; both down and standing.
Mr. BURR. That is all.

(Whereupon followed remarks off the record.)

Examiner DE BRULER. We will take an adjournment now until 2:00 o'clock.

(Whereupon, at 12:20 o'clock p.m., a recess was taken until 2:00 o'clock p.m.)

2284 AFTER RECESS

2:00 P.M.

Examiner DE BRULER. The witness may take the chair again.

WILLIAM HUGHES resumed the stand, and further testified as follows:

Cross-examination by Mr. MATTHEW:

Q. What is your business, Mr. Hughes?

A. County treasurer of Madera County, California.

Q. Have you at any time been in the employ of any of these lumber companies?

A. Beg pardon?

Q. Have you at any time been in the employ of any of these lumber companies in the Madera section or elsewhere?

A. For a very short time; yes.

Q. An employee of what company?

A. Employee of the Fresno Sugar Pine Company and the Madera Sugar Pine Company at the same time.

Q. During what period?

A. The early part of '24.

Q. And what was the nature of your employment?

A. I was deputy sheriff, taking care of a strike situation up there on the Minarets & Western Railroad, that runs up to the
2285 central camp of the Fresno Sugar Pine Company. There was a strike of about 2,800 or 2,900 I.W.W.

Q. And that is the same employment which you referred to on your direct examination?

A. That was the employment I spoke of in the direct examination.

Q. You recall that you referred to employment by the Minarets & Western Railway?

A. Right at that time I did some work for the Madera Sugar Pine Company in my capacity as deputy sheriff.

Q. And that is your sole connection with the lumber industry?

A. Absolutely.

Q. And you are not financially interested in the lumber industry at all, I take it?

A. No; I am not.

Q. To make this clear, then, when you stated in your direct examination that you were employed by the Minarets & Western Railway Company you had in mind an employment by these two sugar-pine companies in connection with the strike situation?

A. Perhaps I am wrong. I should have said the contractor that was building the railroad, doing the work for the Minarets & Western.

Q. The Minarets & Western Railway is controlled by one of these sugar-pine companies?

A. I understand that it is; that is, from a certain point up in the mountains, not the whole railroad.

2286 Q. Upon whose request did you take the photographs of that barn which you offered in evidence here?

A. Mr. Hemphill.

Q. Mr. Hemphill, of what company?

A. Of the Madera Sugar Pine Company.

Q. Do you have any difficulty in distinguishing between sugar-pine lumber and California white-pine lumber, or yellow-pine lumber, as you term it?

A. Do I have what?

Q. Do you have any difficulty in distinguishing between these two lumbers?

A. No, sir.

Q. Irrespective of age or condition, you can readily determine whether a given piece of lumber is sugar pine or yellow pine?

A. I never have.

Q. You have no difficulty?

A. No difficulty; but, at the same time, I never had a critic determine whether I was right at all times or not.

Q. You simply satisfied yourself that you knew the difference?

A. Yes.

Q. You referred to your home, which I think you said was built in 1881?

A. In the early '80's.

Q. And you stated that a portion of the underpinning had decayed?

A. Yes, sir.

2287 Q. In recent years?

A. Yes.

Q. And you added that some four pieces, which you said were of yellow pine, had decayed?

A. Yes.

Q. How did you determine whether or not those pieces were yellow pine or sugar pine?

A. By the thick, flinty yearly growths on yellow pine which doesn't occur in sugar pine.

Q. How many pieces of yellow pine were there in this underpinning in your house?

A. I think four or five; that is, on the north side.

Q. And all the rest were of sugar pine?

A. No; I didn't say that.

Q. I am asking you now.

A. The balance on that side was sugar pine.

Q. All of the balance on that side were of sugar pine?
A. Yes, sir.
Q. You are certain of that?
A. I think I am certain of that.
Q. Did you inspect each one?
A. Well, I couldn't say that I have inspected the corner pole, because the corner post was in the corner, and it is kind of dark, but they were intact and solid. They may have been some other kind besides sugar pine, but I know that two underpinnings
2288 that was solid next to those that had decayed and sank down were sugar pine.
Q. Then you inspected closely only six pieces of this underpinning?
A. Eight. Six pieces had decayed, and five or six have two sections to it.
Q. I thought you said only four had decayed. Am I wrong in that?
A. I wouldn't say for sure whether it was four or six. It took across a stretch of about 24 feet in the building and it settled down. I wouldn't say positive whether it was four or not. I think there were more than four; I don't think there was any more than six. That has been three years ago.
Q. Three years ago?
A. Yes.
Q. And you don't know to what extent the remainder of underpinning of this house is a sugar pine, and to what extent it is of yellow pine?
A. I have removed several of the pieces of yellow pine on the south side; I think four or five pieces.
Q. Any pieces of sugar pine?
A. I haven't removed any sugar pine.
Q. They just appear at random in the structure?
A. Yes; at random in the structure, yellow and sugar pine.
Q. Are they of sapwood or of heartwood?
2289 A. Well, some of them would be of sapwood, I suppose, and some of heartwood.
Q. Did you notice particularly?
A. No; I noticed for decay, for the decay only.
Q. You didn't notice whether the sugar pine was all of heartwood or not?
A. No; I didn't.
Q. And you didn't notice whether the yellow pine was all of heartwood or part sapwood?
A. No.
Q. You stated, Mr. Hughes, that the sapwood ring on the yellow pine trees is ordinarily considerably thicker than the sapwood ring of sugar pine trees?
A. Yes.

Q. Can you give me the approximate width of the sapwood rings of the two varieties of trees, taking logs of corresponding size?

A. No; I couldn't. That is, the rings are of such a small dimension that I couldn't give you the thickness of it, but of the sugar pine there is sometimes merely a mere trace, a yellow trace, and sometimes you don't see the sap, the rings at all, the same color the whole board.

Q. Let's get your best impression though, and let's take a log, if you will, that is 24 inches in diameter. Can you tell me what would be the approximate width of the sap ring on the sugar pine log of that size?

2290 A. No; I could not. They don't cut 24-inch logs down there.

Q. What size do they cut?

A. Four feet.

Q. Let's take a representative log. Would 36 inches be fair, or 40 inches?

A. I couldn't give the thickness of those rings. Some of them were as thick as that blotting paper [indicating blotter] and some thicker.

Q. Can't you give your best judgment of what is representative?

A. That is my best judgment; that is, the thickness of that blotting paper.

Examiner DE BRULER. Tell the reporter how thick the blotting paper is in order to get that in the record.

Mr. BURR. Are you talking about annual rings or sap rings?

The WITNESS. I am talking of the sap ring, or the flinty rings.

By Mr. MATTHEW:

Q. My question had to do with the depth, or width of the sap ring. I understood you to say——

A. (Interrupting.) The sap ring is thicker than that; the flinty ring is sometimes as thick as the blotting paper there [indicating blotter] and sometimes thicker.

Examiner DE BRULER. Tell the reported, for the record, how thick the blotting paper is. Tell the reporter how wide the

2291 blotting paper is.

Mr. MATTHEW. I am going to move to strike out the witness' answer as to this flinty ring, because it is not responsive to the question.

Mr. BURR. I think the witness is talking about a part of the annual ring and the question has to do with the width of the sap.

Examiner DE BRULER. He moved to strike out the answer about the flinty ring. I don't think it amounts to anything and it can go out.

By Mr. MATTHEW:

Q. I understood you to say, on your direct examination, that the width of the ring of sapwood as in the sugar pine tree is somewhat less than the width of the ring of sapwood on a yellow pine tree?

A. That is all wrong.

Q. Let's get it straight.

A. My idea was to describe the flinty, hard part of the wood, instead of the sap or soft part of the wood.

Q. Then you were talking about the annual ring?

A. Yes; the annual ring.

Q. Then, we are not to understand that you have given any testimony as to the relative width of the quantity of sapwood in these trees?

A. If what you mean by sapwood is the soft fibrous part of
2292 it, for I have been trying to describe the hard, flinty part. If you have misunderstood me I don't want you to.

Q. I think counsel for the Commission misunderstood you. You understand the difference, of course, between sapwood and heartwood of the tree?

A. Yes, sir. The sap I consider the soft part of it, and the flinty part is the heart part. The ring I have always considered it as the hard part, the yearly ring.

Q. Let's forget the yearly ring. In the center of the tree we find ordinarily the heartwood, that is true, is it not?

A. Yes.

Q. And ordinarily the outer portion of the tree we find the sapwood, is that true?

A. Yes.

Q. And is there ordinarily a marked difference between the appearance, and likewise the texture, of the heartwood and the sapwood?

Mr. BURR. Which tree; any tree?

Mr. MATTHEW. Either.

The WITNESS. I would like to understand what you mean by the heartwood. Is it the yearly ring?

By Mr. MATTHEW:

Q. No.

A. Is it the hard part or the soft part?

Q. I have tried to make it clear, I am not talking about the
2293 yearly ring at all. I am talking about the entire tree. You and I agreed a moment ago that there is a heart of the tree, and likewise we have the sapwood around the heartwood. Is that right?

A. Well, the flinty part commences at the middle of the tree and works out. I never have distinguished any difference between the heart of the tree growing out and any other part of the tree.

Q. Then you don't make any distinction between the heartwood and the sapwood in the way that I have described it?

A. If it is a Sequoia it is easy enough for me to distinguish between the heart of the tree and the sap of the tree, but in sugar pine and yellow pine I don't know where you commence, where the heart

of the tree begins and when the sap begins. My idea is that it commences at the center and runs to the outside.

Q. All right. That is your conception of it?

A. Yes, sir.

Q. I think the record ought to be a little clearer about the climatic conditions in Madera County. Now, Mr. Hughes, you didn't intend to convey the impression that snow conditions are characteristic of the climate of Madera?

A. No, sir.

Q. In fact, snowfall is a rare thing in Madera?

A. It is in the mountains every year.

Q. I am talking about the community of Madera.

A. Of Madera City?

Q. Yes.

2294 A. Very, very rare.

Q. In fact, Madera has the characteristic climate of the San Joaquin Valley, being quite hot in the summertime and dry?

A. Just comfortably warm.

Q. Rather dry?

A. Rather dry.

Q. The best climate in the State, of course, but rather a hot, dry climate?

A. Yes. It is the geographic center of the State.

Q. And the best climate, but rather hot and dry in the summer?

A. It is real hot in the San Joaquin Valley.

Q. And in the wintertime it is characterized by an average rainfall of from 10 to 15 inches?

A. Yes, sir.

Q. The altitude is 200 or 300 feet, the elevation above sea?

A. 196 feet, I believe is on our depot there.

Mr. MATTHEW. That is all. Thank you.

Mr. BURR. That is all.

Examiner DE BRULER. That is all.

(Witness excused.)

Mr. BURR. Call Mr. Cox, please.

E. H. Cox was thereupon called as a witness and, having been first duly sworn, testified as follows:

2295 Direct examination by Mr. BURR:

Q. Now, Mr. Cox, your business is what, sir?

A. Well, among other things I am a manufacturer of lumber.

Q. And what lumber company are you in?

A. Madera Sugar Pine Company, as wholesalers and manufacturers.

Q. How long have you been connected with that company?

A. I built the plant in 1899.

Q. And you have been connected with it ever since?

A. Yes, sir.

Q. You have been president of that company ever since?
A. Not ever since, but I am now.
Q. Are you the largest stockholder in that concern, Mr. Cox?
A. What?
Q. Are you the principal stockholder in that concern?
A. No, sir; I am not.
Q. You are the largest?
A. Largest individual.
Q. Now, you happen to be director of the Federal Reserve bank, do you?
A. Yes, sir; I am director of the Federal Reserve Bank of San Francisco.
Q. Have you been connected with a building committee of that organization?
A. Yes, sir; I have been chairman of the building committee.
2296 Q. What other lumber companies have you been connected with besides the Madera Sugar Pine Company?
A. Quite a number. I directed the operation of the Weed Lumber Company for seven years.
Examiner DE BRULER. How long ago?
The WITNESS. I guess I got through there perhaps eight or nine years ago.

By Mr. BURR:

Q. Is that the concern which is now the Long-Bell Lumber Company?
A. Yes; that is part of the Long-Bell operation. It is merged with the Long-Bell.
Q. And you have been connected with the manufacture of California white pine, so called, and sugar pine for 45 years, have you?
A. Yes, sir; for 44 years, or approximately that—since I was a boy.
Q. Now, how much experience have you had in the actual study of these two types of timber in the woods themselves; right in the forest?
A. Well, I don't know how to describe that fully. I know the woods, at least I think I know the woods, from the timber out. I have directed and managed and operated every department of the manufacture of sugar and yellow pine.
Q. And how long have you been, rather, how widely have you been familiar with these two types of timber in the State of California?
A. Well, I bought timber from one end of the State to the
2297 other. I bought most of the timber that the Weed Lumber Company bought, which is largely a ponderosa, or yellow pine. I bought all of the timber that the Yosemite Lumber Company is operating on for the owners and sold it to the Yosemite Lumber Company. I bought all the privately owned timber for the Sugar Pine Lumber Company at Fresno, which is the largest pine manu-

facturing plant, I think, in California. I bought 87,000 acres of ponderosa pine for the Long-Bell Company in eastern Oregon. I bought 14,000 acres that is owned by the Weyerhaeuser people near Klamath Falls.

Q. For the Weyerhaeuser interests you say?

A. No; I bought that from the Western Pacific Lumber Company, and that is now owned and operated by the Weyerhaeuser people. I made the selection for the Long-Bell plant at Longview. I bought from the Weyerhaeuser Timber Company, and bought the first three billion five hundred million feet from them. In fact, I have been in this lumber game from Mexico to British Columbia. Year before last I sold to Bloedel, Stewart & Welch, I sold them one half million dollars worth of timber from private owners.

And then there are a lot of other little tracts that came in, but those are the largest.

Examiner DE BRULER. That was pine timber?

The WITNESS. Pine and fir both.

Examined DE BRULER. We are only engaged in considering pine timber now.

2298 The WITNESS. He asked what my general experience was.

By Mr. BURR:

Q. That was pine in that transaction, you say?

A. What?

Q. There was pine timber in that transaction?

A. Not in the last transaction. There was some white pine in the tracts, but——

Q. (interrupting.) What do you regard as genuine white pine?

A. The eastern pine and sugar pine.

Mr. MATTHEW. Would you mind if I had the last few questions and answers read?

Mr. BURR. No, indeed.

(Whereupon the last three questions and answers were read by the reporter.)

By Mr. BURR:

Q. You referred a moment ago, Mr. Cox, to a transaction which was partly pine and partly fir; did you not?

A. Yes.

Q. What transaction was that?

A. The last one referred to was on Vancouver Island—Bloedel, Stewart & Welch.

Q. Will you state whether or not there is a diversity in the characteristics of the timber of the western yellow pine, or Pinus ponderosa, in different parts of its range, which is greater than the characteristics of the sugar pine?

2299 A. Yes, sir; I am sure of that.

Q. Well, in what respect does Pinus ponderosa differ?

A. I think the Pinus pondosa——

Q. (Interrupting.) You mean you are referring now to ponderosa?

A. Well, yellow pine—the ponderosa is a very much more—it varies very much more than the sugar pine in that it grows at different elevations, elevations that are impossible for sugar pine. In the lower hills we call it a bull pine. And in the south, we will say south of Sacramento, and the further you get south the poorer it gets. The further you get north, with exceptions, the better it seems to grow. For instance, the ponderosa at Klamath Falls is a very much better quality than what grows at Madera. The same thing holds at McCloud and eastern Oregon. The knot defects are less apparent; they are solid in that country.

In our sugar pine, only it doesn't vary so much as you go north—it is a sugar pine just the same—there is a difference in the texture. The Government says that the finest sugar pine grows in Tuolumne and Mariposa and Madera, and a part of Fresno County. There is a more uniform weight wherever it grows.

Q. In what wood, the sugar pine?

A. Yes; the sugar pine weighs more evenly. I recall an examination that I made for some eastern people at La Moine, that yellow pine, or ponderosa, weighed as much as the fir in the north, weighed over 3,000 pounds.

2300 Q. How much over?

A. That is that tract right there in that old district—that box shook and everything they made.

Q. Do you remember the average figure it reached for weight?

A. Did I have that?

Q. Do you know how much over 3,000 pounds it weighed?

A. It weighed over 3,000 pounds, because fir in the rough weighed 3,300.

Examiner De Bruler. We are not making a comparison with fir wood. It is between the two woods in question.

Mr. Burr. He is trying to identify what it did weigh. He said it weighed more than fir, and I asked him how much the fir weighed, and so I don't think that is an objectionable method of ascertaining the weight.

The Witness. It is an unusual weight, but I mention it to show that the variation, the weight is greater in that than it is in sugar pine.

By Mr. Burr:

Q. Was that green or dry weight?

A. That was shipping weight.

Q. After drying?

A. Well, it might not have been 100% dry, but it was in shipping condition.

Q. Well, it weighed over 3,300 pounds?

A. About 3,000 pounds.

2301 Q. About 3,000 pounds?

A. Yes, sir.

Q. Now, then, did you observe the weight of the ponderosa anywhere else in that same general vicinity?

A. Well, I know what it weighed north of there of my own experience.

Q. What does it weigh there?

A. About 2,250 or 2,400.

Q. For a dry shipping weight?

A. Under similar conditions.

Q. Are you familiar with the reputation of sugar pine for durability?

A. For what work?

Q. Reputation for durability of sugar pine.

A. Durability?

Q. Yes, sir.

A. I think so, sir; yes, sir.

Q. What is that reputation?

A. I would hardly know how to say that, to describe that.

Q. Is it a durable wood?

A. It is. I believe it to be the most durable of all pine.

Q. You think it is more durable than the old northern white pine?

A. I think the hearts are.

Q. You do?

A. Yes, sir.

2302 Q. Now, are you familiar with the reputation of Pinus ponderosa for durability where exposed to the weather?

A. Yes; it doesn't——

Mr. MATTHEW. I think the answer should not go beyond the question.

By Mr. BURR:

Q. You said you were familiar with it?

A. I said I am.

Q. What is that reputation, sir, for durability where exposed to the weather?

A. You are speaking now relatively?

Q. Yes; relatively to sugar pine.

A. It hasn't the durability that sugar pine has.

Q. That is, the reputation that sugar pine has for durability?

A. No; it has not.

Q. Have you any experience as to the durability of those two woods individually, any experience from which you can compare the durability of the two?

A. Yes. You take it in the woods the logs themselves——

Q. All right, compare them.

A. For durability——

Mr. MATTHEW (interrupting). Perhaps you will allow me, before you continue, to make a rather belated objection in the record.

Mr. BURR. I am not objecting.

2303 Mr. MATTHEW. I think counsel will recall that earlier in the proceedings I offered a general objection to testimony as to

relative durability of woods, and it was understood that that objection would continue throughout the proceedings. The objection that I made was overruled, but I don't want to repeat it.

Mr. BURR. It is agreeable, let the record so show. I think it is only fair.

Examiner DE BRULER. I think the questions of that kind should be asked of the witness as to whether or not the trees died about the same time; that is, what his knowledge is as to that.

By Mr. BURR:

Q. Will you compare the logs of the two species as to durability, based upon your experience?

A. Certainly. The yellow pine will be of small, or of little value in five or six years from the time that it is down. And I have taken sugar-pine logs that have been partly used for shake timbers and brought them in and cut them up in the mill, that were cut a long time before we owned the timber, and that is more than 30 years.

Q. What kind of condition were they in?

A. They were in merchantable condition. The sap would be gone, just the outer ring would be gone, but all the balance of the log would be perfect.

Q. How about the yellow pine under the same conditions; will the heartwood of that last?

2304 A. You don't find it—it is gone by that time.

Q. Is sugar pine good for pattern purposes?

A. It is, sir.

Q. Is it preferable for pattern purposes to ponderosa?

A. Very much so, sir.

Q. What characteristics of the sugar pine is it that makes it better than ponderosa for those purposes?

A. It has less shrinkage and less warp; it is softer and easier worked.

Q. Is it more uniform in texture?

A. Yes; it is.

Q. Is that important for pattern purposes?

A. Very.

Q. Which of the two woods, two varieties of lumber, I should say, is preferable for sash work?

A. Both are used.

Q. Which is preferable?

A. Sugar pine is preferable.

Q. For what reason?

A. For the same reason that I replied in the pattern lumber, that it has less shrinkage, it holds the shape better, and less pull and twist to it.

Q. Is it more desirable on account of its superiority in durability where exposed to the weather?

Mr. MATTHEW. I suggest the question is leading.

2305 Mr. BURR. I think it is leading.

Examiner DE BRULER. You may answer if you know.

Mr. MATTHEW. I think counsel knows it is leading.

Mr. BURR. I think it is leading. I think the question is subject to objection. I will put it another way.

By Mr. BURR:

Q. Do you regard the question of durability as one of importance as regards sash where exposed to the weather?

A. Well, it is important, but I don't think it is taken into consideration.

Q. You don't think it is?

A. No. But if you asked a customer, "Would you prefer sugar or ponderosa?" it is almost a sure thing he would say "sugar pine", but there is very little of that cut into sash on account of higher value.

Q. Higher value?

A. Yes.

Q. Well, now, as a matter of fact, do you know whether there are architects who order white-pine sash?

A. That will order that?

Q. Or don't you know as to that?

A. I know they order white-pine sash, but I don't——

Mr. MATTHEW. I object to the witness volunteering.

By Mr. BURR:

Q. You say you know there are architects that order white
2306 pine sash, do you?

A. Well, they make white-pine sash all through the East there in the white-pine country. I suppose the question is general?

Q. Yes. Now, in ordering white-pine sash, there are certain varieties of pine that are known as white pine, are there not?

A. Yes, sir.

Q. Which are they?

A. Well, for instance, you see when they make sash they make it generally in connection with the making of doors. Just to make sash itself, it can't be made at a profit. To go into a plank and cut out sash, it can be made at a profit. As I said, they make doors out of ponderosa, and the side cutting into sash, and then they fill out, match it up, by taking other lumber to match it up. That is the way sash is made in this country.

Q. In this country?

A. Yes, sir.

Q. Are you familiar with the practice in Iowa in that respect, in the Central States, and Iowa and districts there?

A. I was familiar with conditions in Michigan when I went there every year, but I don't know what it is nowadays.

Q. Well, do you know whether or not there are, or are not, concerns that specialize on white-pine sash?

A. I know that there have been specifications for sugar-pine sash that called distinctly for sugar pine.

Q. You don't know as to the other?

2307 A. No; only in sending in an order for sash, they don't say whether it is sugar pine or white pine, or what it is. The mills that make sash and doors get their orders and they fill it out of the material that they make that they produce.

Q. But there are certain millwork people that specialize on certain varieties of sash and door, are there not?

A. Yes; there are people that use very little other than sugar pine in the manufacture of door frames, door and window frames.

Mr. MATTHEW. I am going to suggest again that counsel is leading. I don't like to interrupt you, but I don't think you ought to suggest the answer to the witness.

By Mr. BURR:

Q. Is the type of sash made from sugar pine a higher priced article, if you know, than the sash made from the ponderosa?

A. Yes, sir.

Q. Does it have a higher standing on the markets for sale purposes?

A. Yes, sir. I will say that I only know of one institution that has sugar pine that can make sash, but I made sash and doors a few years ago, and we differentiated between sugar pine and ponderosa.

Q. You sold sash of both kinds?

A. Yes, sir.

Q. Did you have orders and specifications for white pine or sugar pine sash?

2308 A. We would sell it that way, quote it that way.

Q. And you called those sugar-pine sash, did you?

A. Yes, sir; sugar-pine sash, or billing it otherwise as white-pine sash, which was the name in vogue.

Q. Which did you sell as white-pine sash, the California white pine or sugar pine?

A. The California white pine, so-called.

Q. That was sold by you as white-pine sash, was it?

A. Yes, sir.

Q. How were orders received for sugar sash, as sugar pine?

A. That would be on quotation. You would quote and they would order whether they wanted the sugar pine or the other.

Q. And you invoiced your sugar-pine sash as sugar-pine sash, did you?

A. Yes, sir; we billed it that way for many years.

Q. What are you designating your ponderosa products at the present time, how are you designating them for invoicing and advertising purposes?

A. The difference in price?

Q. No. What do you call your stock? Are you calling it California white pine at the present time?

A. No; we have changed that.

Q. What are you calling it now?

A. Pondosa—I think that is it.

Q. And the change was made when?

2309 A. Yes.

Q. When was it made?

A. Well, it was made when we began using our efforts to get all others to adopt the true name.

Mr. MATTHEW. I move the answer be stricken.

Mr. BURR. I shan't object to the motion.

Examiner DE BRULER. It may be stricken.

By Mr. BURR:

Q. Can you tell me approximately how long ago that change was made?

A. It must have been above about three years ago, I think, when we started it.

Q. About three years ago, you say?

A. About three years ago.

Q. And did you make that decision for the Madera Sugar Pine Company?

A. Yes; we talked it over and we decided that it was the true name of the wood and we have been hurting our sugar pine.

Q. Let me ask another question: For what reason did you make the change in name?

A. Because it was hurting the sale of sugar pine.

Mr. MATTHEW. I object to that as immaterial.

Examiner DE BRULER. You may answer that.

A. (Continuing.) We changed because we believed that the use of white pine was hurting the sale of sugar pine.

By Mr. BURR:

Q. In what respect?

2310 A. In that manufacturers of white pine had been not overly careful in representing their pine. They had sold it to pattern manufacturers for pattern purposes when, in our judgment, it was unsuited for it. That had been going on for a considerable number of years, from the reports of our sales managers, and we felt it time to adopt the true name, so we adopted it.

Mr. MATTHEW. I don't want to interrupt the witness continuously, but I am going to object to hearsay and I shall move to strike out that part of the witness' answer which relates to reports received from the sales managers.

Mr. BURR. If the examiner please, that is a means of knowing the facts underlying a man's business and if he testifies as to what an individual salesman at some time or other says to him I think it is objectionable, but his knowledge, his information as to this business, is based upon the pulse of the trade, and his arms are the salesmen and the various other people who are connected with the business, and it seems to me that what he knows as the result of reports of salesmen, and contacts that he has made of that kind, is not subject to the hearsay rule.

Examiner DE BRULER. Let me hear the question.

Mr. BURR. It is the answer.

Mr. MATTHEW. I have no objection to him giving his information, but I don't think that I should be in a position of having to accept testimony as to what his salesmen report to him, unless I asked on cross.

2311 Mr. BURR. He said he knew partly as the results of the reports made. He didn't say what they were, but he said his experience and information was such.

Mr. MATTHEW. I shall object to that.

Examiner DE BRULER. The objection is noted and exception allowed.

Please confine the matters to things you know as nearly as possible. I like to grant latitude, but not too much, in these matters.

(Whereupon followed remarks off the record.)

By Mr. BURR:

Q. Now, Mr. Cox, a moment ago you testified that one of the reasons why you made the change in the name of the Pinus ponderosa products of your company was that the white-pine manufacturers had not been as careful as they should be, in your judgment, as to the way in which they had advertised their products. Will you tell me something about the so-called "California white pine" manufacturers?

Mr. MATTHEW. I don't believe he said anything about advertising his products. As I understand it, he testified that they had sold California white pine for pattern purposes. I don't think there is anything about advertising.

By Mr. BURR:

Q. You said "representing", did you not?

A. What?

2312 Q. You said they had not been overly careful in representing their goods?

A. Yes.

Q. You meant by advertising, and other ways, did you?

Mr. MATTHEW. I object to that question.

Examiner DE BRULER. How did you mean that?

The WITNESS. Well, I meant that——

Mr. MATTHEW. (Interrupting.) I object to that question.

Examiner DE BRULER. Let us hear what he has to say.

The WITNESS. I meant we found from our representatives' reports that pattern makers had purchased California white pine for pattern purposes thinking it was sugar pine, and my own experience of a good many years ago in that connection was that I went into a pattern maker's shop and he said he didn't want any more of our wood; that it wasn't suitable for pattern purposes.

Examiner DE BRULER. Where was that?

The WITNESS. That was back in Cleveland when I was quite young in the business, many years ago, and our lumber was just commenc-

ing to go on there. And I went out and looked at that lumber with the pattern maker and I found it was white pine, ponderosa, and not the sugar pine.

I have heard that complaint many times from our representatives.

By Mr. BURR:

Q. What is the effect upon sugar pine, if you know, of sell-
2313 ing Pinus ponderosa as California or other white pine?

A. Misrepresentation certainly don't do the sugar pine business any good.

Mr. MATTHEW. May I have the question read?

The WITNESS. My judgment is that——

Examiner DE BRULER (interrupting). Wait a minute!

(Whereupon the question referred to was read by the reporter.)

Mr. BURR. I think that was a good question.

Examiner DE BRULER. You may answer.

A. If white pine is sold for pattern purposes, a purpose for which it is not useful, it certainly injures sugar pine, which is the proper wood for that purpose.

By Mr. BURR:

Q. Are there certain woods that are known on the market as genuine white pine?

A. Yes, sir.

Q. Which are they?

A. That is the Michigan pines and sugar pine.

Q. Is the Idaho white pine known as a genuine white pine?

A. What?

Q. Is the Idaho white pine known as a genuine white pine?

A. There are some, there are portions of Idaho that have genuine white pine.

Q. Well, now, are the white pines in general good for pat-
2314 tern purposes, would you say?

A. The Idaho pine is, and the Michigan pines are; those northern pines are the genuine white pine. Any genuine white pine is good for pattern purposes.

Q. Well, now, the advertising of California white pine under that name, including the words "white pine", what effect, in your judgment, has that had upon the use of genuine white pine for pattern purposes?

A. It is misleading and if it follows it discredits the sugar pine.

Mr. MATTHEW. I object and I move to strike out the first part of that answer. He said it is misleading, and that is not responsive.

Mr. BURR. That is thoroughly responsive, if Your Honor please.

Mr. MATTHEW. I would like to have the answer read.

Mr. BURR. I asked what the effect was, and he said it was misleading.

Mr. MATTHEW. That isn't the effect; the effect came later. The rest of his answer is responsive. I have no objection to that.

Mr. BURR. I think counsel is getting a little captious.

Mr. MATTHEW. No; I am not.

Examiner DE BRULER. Let it stand, and you can cross-examine on that.

2315 Mr. MATTHEW. Very well.

By Mr. BURR:

Q. Now, I think you testified a moment ago, while the examiner was asking you a question or two, as to one instance of that character. Have you had any others in your experience as to the misleading character of that trade term for pattern purposes?

A. I don't understand that question.

Q. You testified a little while ago as to one particular case that you narrated to the examiner, when he asked you, and I was wondering if there were any other cases of that kind in the pattern trade that you would actually come in contact with yourself.

A. I only know from reports we get.

Q. I see.

A. Reports from our sales managers.

Q. That is the only instance that you have come in contact with personally?

A. That is my personal experience.

Q. Has the same thing occurred to you on other occasions?

A. Beg pardon?

Q. Without asking you for specific instances any further, has the same thing occurred to you on several occasions when you called on pattern men?

A. Not when I personally called; only through reports that come to headquarters.

2316 Mr. BURR. That is all. You may cross-examine.

Cross-examination by Mr. MATTHEW:

Q. Mr. Cox, when did you first become familiar with the term "California white pine"?

A. In 1899.

Q. Has the term been used substantially continuously since that date to characterize the lumber manufactured from the Pinus ponderosa tree?

A. In California?

Q. Yes.

A. Yes.

Q. When did your company first employ the term "California white pine" to describe this lumber?

A. When the plant was built, in 1899 and 1900.

Q. Where did you get the name?

A. Well, as I recall it, at a meeting of manufacturers at that time the name was adopted to show the difference between—you asked when and how—to show the difference between southern pine and this, the ponderosa, because there were certain characteristics of ponderosa that were very difficult to distinguish from southern pine.

Q. That represents, roughly, relatively a small proportion of the total cut of ponderosa in California?

2317 A. I think that depends altogether where it comes from.

Q. Well, it represents the cut around in the Madera section quite largely, does it not?

A. The southern section and the lower foothills.

Q. And that is relatively a minor part of the total cut of ponderosa lumber in California?

A. It is at this time. At that time there was no other manufacturers excepting in that section of the country.

Q. At that time you were with the Madera Sugar Pine Company?

A. I was what?

Q. You were at that time connected with the Madera Sugar Pine Company?

A. Yes; I was connected with them as general manager.

Q. You stated you had been in the lumber business for 45 years?

A. Forty-odd years; yes, sir.

Q. Prior to 1899 with what companies were you identified?

A. I was with the Madera Flume and Trading Company quite a number of years.

Q. Any others?

A. Yes; I bought lumber up in the Sierras for various people and handled cuts of small mills up in Fresno and Tulare Counties.

Q. In general, was your employment with companies which were interested in the lumber industry around in the Madera section, ordinarily termed "the southern Sierra section"?

A. Yes; up to that time; recently it has been other than that.

2318 Q. The first time that you recall using the term "California white pine" was in the year 1899?

A. Yes.

Q. And the term was adopted in part to distinguish this lumber from the southern yellow pine?

A. Yes; that was my memory.

Q. And you participated in the discussions which led to the adoption of that term?

A. Yes, sir.

Q. And your company has used it continuously from 1899 to about 1927?

A. About that time; yes, sir.

Q. During that period you advertised your lumber and offered it to the trade as California white pine?

A. Yes, sir.

Q. At the present time is the bulk of your cut sugar pine or ponderosa pine?

A. At the present time, sugar pine.

Q. Has that always been the case?

A. Well, it would be pretty close to an even division on several occasions, according to the country we were logging in.

Q. In your particular period of your operation was the majority of your cut California white pine or ponderosa pine?

A. What?

(Whereupon the question was read by the reporter.)

2319 A. I said that it was on a few occasions; it was about equal.

Q. That was occasionally?

A. Yes.

Q. For the most part your cut has been predominately sugar pine, and is today?

A. Yes, sir.

Q. How long have you been familiar with the term sugar pine, or California sugar pine, to represent the lumber obtained from Pinus lambertiana, if you please?

A. I would think about 1885 or 1886.

Q. That is approximately the time when you entered the lumber industry?

A. That is the first time that I ever went into the woods; that is what it was called then, and it has been called that ever since.

Q. That has been the name for this lumber in the market during this entire period of 45 years?

A. Sugar pine.

Q. Has it ever been marketed under the name of California white pine, to your knowledge?

A. Sugar pine?

Q. Yes.

A. No.

Q. Your company has never offered it to the trade under the name of California white pine?

A. Sugar pine?

2320 Q. Yes.

A. Not to my knowledge.

Q. I assume that you have no desire to market sugar pine under the name California white pine?

A. No, sir; none whatever.

I have done this way: That when I was operating the Weed plant we would get an occasional sugar pine tree that would come in, and didn't pay us to separate the woods, and we run it in with the other.

Q. When you ran the sugar pine in with the other how did you classify or name the lumber which came from the mill?

A. It was called white pine for what we called and sold—it wasn't called anything—the footage went in with the white pine.

Q. At the present time what name do you use in marketing your common grades of lumber?

A. Marketing the what?

Q. Common grades of lumber?

A. You don't unless you get an order. It is called common; that is all. We don't bill it common sugar pine unless it is a special order.

for a sugar pine. We bill it common lumber, and we bill white fir the same way that comes along with the timber.

Q. Do you mix your fir with the sugar pine?

A. In the common grades, yes; we do to a certain extent, a certain percentage.

Q. And the ponderosa pine as well?

2321 A. Surely, it all goes into the same pot of common lumber.

Q. So you have the three varieties of wood?

A. In the common.

Q. You have the three varieties of wood obtained from the ponderosa tree, the lambertiana tree, and from the fir, which are thrown together into common grades?

A. Yes.

Q. Is the product sold as pine lumber, or as fir lumber, or as what?

A. Sold as common lumber.

Q. You don't use the word pine or fir?

A. We don't bill it that way, unless you get some special order for sugar pine boards, or sugar pine this or that or the other thing, and then you give them that, but they pay more for the separation.

Q. Do you ever get an order for California white pine common?

A. No, I don't recall them ordering that way; they order common.

Q. And you think an order never comes in for California white pine common?

A. An order will come in for a car of so and so of common; they take it for granted that it is pine. It is the only stuff you will ship.

Q. Even in that instance, whenever an order comes in for pine common, you feel justified in supplying lumber which includes some white fir?

2322 A. No, we wouldn't do that because the trade don't take it. We use it locally and in smaller quantities, mix the fir in with the pines.

Q. Do you throw any other variety of lumber into your commons?

A. Cedar—incense cedar.

Q. How about red fir?

A. We don't have that in the Madera forests.

Q. Silver fir?

A. The silver fir is what I am talking about—white fir.

Q. You throw the cedar into the common grades as well?

A. Just occasionally.

Q. Do you sell any lumber as box lumber?

A. Yes.

Q. That is represented by the common grades?

A. Box grade.

Q. Under what name is it sold?

A. Box lumber. In certain places we get more for our sugar pine than we do for the ponderosa.

Mr. MATTHEW. I move to strike out the last sentence. I am asking——

Examiner DE BRULER (interrupting). Let the answer be responsive to the question.

By Mr. MATTHEW:

Q. In selling your pine box lumber do you include any of the cedar in it?

2323 A. No, sir.

Q. By cedar, by the way, you mean the incense cedar?

A. What?

Q. By cedar you mean the incense cedar of the Sierras?

A. Yes.

Q. When did you first learn the botanical name for sugar pine?

A. I couldn't tell you.

Q. When did you first hear of the ponderosa pine by that name?

Mr. BURR. I object.

Examiner DE BRULER. I think he can answer that if he can.

Mr. MATTHEW. You went into that on direct.

A. I don't remember when.

By Mr. MATTHEW:

Q. Recently?

A. Some time ago.

Q. In 1899 when you participated in selecting the name California white pine, did you know anything about the term ponderosa pine?

A. No; or sugar pine either, Pinus lambertiana either.

Q. You weren't told until a good many years after that when you heard of the botanical nomenclature, is that true?

A. Yes.

Q. You simply knew the trees by their conventional local names?

A. Yes, sir.

Q. And when did you first hear of the term pondosa pine?

2324 A. I think I saw it advertised in one of the trade journals from the Idaho district.

Q. My question was when.

A. I don't know when.

Q. Just a few years back, is it not?

A. It might be.

Q. Well, you know that that is the name which has been coined as a trade name within the last few years, from the botanical name Pinus ponderosa?

A. I know that it has been coined. It isn't the true name of it; it isn't generally used.

Q. Then you never heard of it until the last four or five years?

A. I think that is about it; it is a name not in general use.

Q. It certainly didn't exist in 1899?

A. No.

Q. You have testified, Mr. Cox, that in that portion of the Sierra Nevada Range extending southerly from Sacramento the ponderosa lumber is poorer than from lumber obtained in areas lying to the north. Do you recall your testimony to that effect?

A. As a general rule that is true; there are exceptions.

Q. Of course, but generally speaking, that has been your observation?

A. Yes, sir.

Q. I think you said that the further south you get the poorer it gets, generally speaking?

2325 A. Yes, sir.

Q. And the further north, the better it gets, for some distance; is that right?

A. Yes; but there are some exceptions.

Q. You include the Klamath Falls Basin of southern Oregon within the area of which the superior type of California white pine is obtained, do you not?

A. Yes.

Q. Generally speaking, the Pinus ponderosa lumber obtained in the vicinity of Madera is harder and flintier than the lumber obtained in the Klamath Falls area, and likewise in the Westwood section?

A. You take the production as a whole; yes. There are exceptions, of course.

Q. Well, we will have exceptions to all of these cases, Mr. Cox. Now, you testified that you have changed your name to pondosa pine, and that that change was made about 1927. Is that what you said?

A. Yes, sir.

Q. Do you think there is any significance in the circumstance that the lumber which is yielded in the Madera section——

A. What?

Q. Yielded in the Madera section from the ponderosa tree is generally inferior to the lumber produced from the same tree in the northern part of the Sierra Nevada Range?

2326 A. Yes; I would regard it as quite as good. It is the same species.

Q. Isn't it quite probably, Mr. Cox, that if you were obtaining as high a grade of lumber from your ponderosa pine as is obtained in the Klamath Basin, or in the Westwood area, that you would still be enthusiastic about the name California white pine?

Mr. BURR. I think that is objectionable.

Examiner DE BRULER. It is cross-examination. He may answer that if he can.

A. I certainly would not.

By Mr. MATTHEW:

Q. You think it is not a fair inference that you have changed the name of your lumber because of the rather inferior grade which you generally obtain?

A. No, sir.

Q. From ponderosa?

A. No, sir.

Q. It comes from circumstances other than the relative inferior grade of your lumber?

A. Yes, sir.

Q. You spoke of the relatively heavy weight of the lumber from the yellow pine, or ponderosa pine, in the vicinity of La Moine, somewhat in excess of 3,000 pounds per thousand feet. That, you say, was determined with reference to shipping weight?

A. Yes, sir.

2327 Q. Could you tell us the character of that lumber; whether it is surface or rough-dry lumber, or what it was?

A. As I recall it, that is the weight the manager gave me for his average shipments.

Q. That is, shipments made from La Moine?

A. Yes, sir.

Q. And the lumber obtained in that immediate area is grown at a relatively low elevation, is it not?

A. No; that is not a low elevation.

Q. La Moine itself is less than 2,000 feet in elevation, is it not?

A. Less than what?

Q. 2,000 feet.

A. I don't think so. I don't know what the elevation is there, but back of the town of La Moine there is a very considerable mountain, of which these logs were coming from—a very rough mountainous country.

Q. You couldn't tell the average elevation that the lumber was obtained?

A. These logs were coming from near the top of this ridge.

Q. You can't give the average elevation?

A. No. Might I explain that?

Q. I don't care to have you do so. I am satisfied with your answer.

A. I want to show that the location wasn't all in connection
2328 with that. In other words, that that is—let me see—that would be about 400 miles, I guess—300—it would be about 400 miles north of us, and that stuff wasn't as good as ours. The mere fact that it is further north didn't make it good.

Q. That was in the lower reaches of the Sacramento River Canyon, is it not?

A. Yes.

Q. Now, the superior grades of California white-pine lumber, as you have known it for at least 31 years, comes from the Klamath Basin and from the upper reaches of the Sierra and what we term the Westwood region, and perhaps around the Lake Tahoe section?

A. The best of it, I think, comes from Oregon.

Q. That is the Klamath Basin?

A. Yes.

Q. Southern Oregon?

A. Yes, sir.

Q. And they likewise obtain a very high grade of lumber from the area around Westwood, do they not?

A. A high grade of lumber.

Q. A very high grade of California white-pine lumber, as you have known it for over 31 years?

A. I would say a high-grade lumber.

Q. Are you familiar with the lumber that is obtained upon the eastern flank of the Sierras?

A. What?

2329 Q. The eastern flank of the Sierras, around Truckee, the Hobart Mills lumber, as an illustration?

A. When I talk about the superior quality of that—there are logs that come out from that district producing nothing but common lumber, absolutely nothing else but common lumber, and it is sold as common lumber, or box lumber, but the type is that the knots are small and they are hard and they finish good into common lumber. They may have a very, very small, or practically no percentage, produce no percentage of lumber better than common.

Q. Let's not deal with the exceptions. Let's deal with the general grade.

A. I am saying that the percentage of shopping, better lumber, in that district is very small.

Q. You are referring now to the Truckee section?

A. About the Klamath Falls section.

Q. I thought you testified a moment ago that in your opinion the highest grade of California white-pine lumber comes from the Klamath Basin?

A. Yes; I did, but I don't—I mean this way: I mean by that that it is a better relative grade. Their common is better than our common.

Q. That was my understanding of your testimony.

A. Their common lumber is better than our common, but their percentage of clear is very small, relatively, to what ours is.

2330 Q. How is it in the area around in Plumas County and in western Lassen and Modoc?

A. They have some very fine sugar pine in Plumas County.

Q. I am talking about California white pine—I move to strike out the answer about the sugar pine—I am asking about California white pine.

A. I don't think that in that country they would not produce the sound knotted common they do further up north, but they would produce a higher and better quality of clears, shops, and better.

Mr. BURR. That is Modoc County, around Alturas?

The WITNESS. Yes; I am speaking south of the Klamath Basin and Plumas County.

By Mr. MATTHEW:

Q. My question related to Plumas, western Lassen, and Modoc. I have been talking about common grades heretofore in dealing with these comparisons of lumber.

A. Yes; that is what I have been talking about.

Q. Let's get into the clears. We find that the clear lumber produced in this territory, in the Sierra Nevada Range lying north from Sacramento, is generally better than the clears produced in the territory lying southerly from Sacramento, and particularly in the Madera region?

A. Yes.

Q. Is that likewise true as to the shop lumber?

A. Well, there is less difference in the clears, but there is
2331 more difference in the shops.

Q. Has there been something of a price differential in favor of the Klamath lumber against the Madera lumber of equal grades?

A. There would be if they went into the same market, I think.

Q. What?

A. If they went into the same market that we go into they would, but we pick out the best of our stuff that compares with theirs in the north, and we ship that east in competition with them and the poorer stuff we market locally where they are not used to the other grade.

Q. Then is the greater proportion of your product marketed locally?

A. Locally?

Q. Yes.

A. Yes; I would say that it would be.

Mr. BURR. Referring only to Pinus ponderosa?

The WITNESS. About 46%, I think.

Mr. BURR. Ask him that.

By Mr. MATTHEW:

Q. Of your ponderosa pine?

A. Yes; about 40%, about like that.

Mr. BURR. You are not referring to sugar pine now are you?

The WITNESS. No; I am speaking of ponderosa, selling it locally.

2332 By Mr. MATTHEW:

Q. Does the same proportion hold good for your sugar pine?

A. I couldn't tell you offhand; it varies, you know.

Q. I am not sure whether this was covered in your direct examination or not. If not, counsel can stop me, of course. Did you testify that there has been ordinarily a price differential between the California white pine and the sugar pine, of corresponding grades?

A. Yes; I said that there had been.

A. And did that price differential persist throughout a long period of time?

A. We have always tried to make it so in certain grades where we have had to compete.

Q. Now, in what grades has sugar pine normally enjoyed a price differential above California white pine?

A. Well, from B select and better. There has been times when we have had to meet the ponderosa pine on our shops.

Q. I don't quite get the meaning of your answer. Explain a little more fully what you mean by grades you have had to compete with.

A. With competition.

Q. You mean on equality of price?

A. Yes; meet price at times.

Q. For example, in marketing your product at the Mississippi River mills?

A. We have marketed there.

2333 Q. When you said that there are times when you have had to meet the California white pine in the equality of price, did you refer, for example, to Mississippi River mills?

A. Never; if we could move it at any other place.

Q. Why?

A. We don't meet that price ever if there is a market of lesser resistance.

Q. Have you usually enjoyed a price differential above California white pine in the shop grades at the Mississippi River mills?

A. That is generally so.

Q. You say ordinarily you try to market your sugar pine elsewhere than the Mississippi River mills. Did I get that impression?

A. No.

Q. I understood you to say that you tried to avoid marketing your sugar pine to the Mississippi River mills?

A. I didn't say that.

Q. I didn't get your answer.

A. I say that we wouldn't meet the competition of yellow pine if we could find a market of lesser resistance.

Q. In other words, you try to reach a market where your price differential is more favorable to you when it comes to that?

A. Always.

Q. Now, when you changed the market name of your product from the ponderosa pine tree to pondosa pine, was there any change in your price differential?

2334 A. Was there any change, you say?

Q. Yes.

A. Not that I know of. We changed as they changed. We endeavor to keep a spread between the two woods and we keep that spread as long as we can until such time as the pondosa people force us to meet that price and not until.

Q. Then I understand that you try at all times to get a higher price for your sugar pine than for the ponderosa pine?

A. Yes.

Q. You say you keep that as long as you can until the pondosa people compel you to change. What do you mean by that?

A. I mean by that that our lumber don't move against theirs, or we haven't a surplus that we can't find, for which we can't find a market of lesser resistance.

Q. Then the market conditions sometimes compel you to accept a parity of prices; is that it?

A. Not very often, but that has been done.

Q. Then, as I understand it, your change in trade name, to ponderosa pine, was not reflected in the change in price or in price differential?

A. No. I believe this: That if the white pine men——

Q. (Interrupting.) Just a moment—I think you are not answering my question.

Mr. BURR. Read the question.

(Whereupon the question referred to was read by the
2335 reporter.)

The WITNESS. I would like to explain about that.

Mr. MATTHEW. You answer the question first and then if you want to explain to make it clear I have no objection.

A. The mere change at that time didn't influence it, because the great majority of them were using the word white pine.

By Mr. MATTHEW:

Q. And still are?

A. I presume.

Q. And about the only companies that have made a change to ponderosa pine are those which have a predominating interest in sugar pine; isn't that true?

A. I wouldn't say that; probably that is the case, but the mere fact that we have sugar pine isn't the influencing factor. The influencing factor is that the white pine people are misrepresenting that wood and attempting to sell it for sugar pine.

Mr. MATTHEW. I move the answer be stricken out as not responsive.

Mr. BURR. That is responsive. You invited him to make an explanation, because he couldn't answer yes or no without an explanation, and when the explanation comes you object to it.

Mr. MATTHEW. It hasn't the remotest bearing upon my question.

Examiner DE BRULER. Read the question and answer.

(Whereupon the question and answer referred to were read
2336 by the reporter.)

Examiner DE BRULER. That last part of the answer may be stricken.

Mr. BURR. Can't I be heard? Wait a minute! The whole purpose of this question is to show that the reason why this witness changed the name was because he was interested in a competitive product; namely, the sugar pine. Now, if he isn't privileged, as part of his answer, to show why he did change, it seems to me it is a very peculiar ruling and I think that that question and answer should stand as they are presented.

Mr. MATTHEW. If the examiner please, if I may in turn be heard.

(Whereupon followed remarks off the record.)

Mr. MATTHEW. As I understand it, counsel's statement is on the record?

Examiner DE BRULER. Yes.

Mr. MATTHEW. I want to ask a simple question: Is it not a fact that the only lumber companies which have changed this name to

pondosa pine are those predominately interested in sugar pine? And that calls for a simple and direct answer, either yes or no. There is no possible occasion for anything being introduced of an argumentative character as to whether this name is misleading or otherwise. Finally, that is the question for the Commission, the ultimate question involved. It is a fact, which we may get
2337 before the Commission, that the companies which have made the change are those interested in the sugar pine predominately.

Mr. BURR. The question was directed to the reason for the change.

Mr. MATTHEW. Not at all.

Mr. BURR. I submit that it was.

(Whereupon followed remarks off the record.)

Examiner DE BRULER. The answer may stand.

Mr. MATTHEW. May I have my exception noted on the ground that obviously that part of the answer is in no respect responsive to my question and purely argumentative?

Examiner DE BRULER. Exception allowed.

By Mr. MATTHEW:

Q. Has your ponderosa lumber, which you now market under the name pondosa pine gone into the same uses and into the same trade which it entered when you sold it under the name of California white pine?

A. Of my own knowledge, I don't know.

Q. As far as you know there has been no change in its uses or in the method of its introduction to the trade?

A. I know nothing about that at all. I couldn't answer that.

Q. Aren't you interested at all in the marketing of your pondosa lumber?

A. Yes, sir; but not particularly in the direction of which it goes, so long as it goes.

2338 Q. And have you continued shipping to markets outside of the State?

A. Yes, sir.

Q. Do you market your commons in area lying outside of the State to any extent?

A. Very little.

Q. Most all your shop grades and clears, is it not?

A. Shop and better; yes, sir.

Q. And the bulk of that is evidently shop lumber, is it not?

A. Shop lumber.

Q. The bulk of your eastern shipments is represented by shop lumber?

A. Yes; probably it is.

Q. And you are still shipping shop lumber under the name pondosa pine?

A. Where we ship it, yes, sir; we ship it as pondosa pine.

Q. You are not conscious of any change in practice or condition?
A. Not conscious of any change——
Q. (interrupting). Let me state that again. You still ship to remanufacturers, do you not, in the Central States and in the East?
A. Yes.
Q. You ship to manufacturers of sash and doors?
A. No; we ship to wholesalers generally; occasionally we ship to manufacturers of sash and doors.

2339 Q. Now, when you do ship to manufacturers of sash and doors, you have no doubt that it is manufactured into sash and doors, have you?
A. We bill it just as it is.
Q. Would you mind answering the question?
(Whereupon the question referred to was read by the reported.)
A. I don't know anything about that.
Q. You haven't any impression or conception of what may happen to it?
A. No.
Q. What other use could be made of it by the sash and door manufacturers?
A. Put into molding boxes.
Q. Do the sash and door manufacturers, to a large extent, make boxes?
A. Some of them do. We have made it and Pickering makes it in large quantities.
Q. You understand that I am talking about your purchasers in the East, sash and door manufacturers.
A. I don't know at all.
Q. What is your best impression?
A. I don't come in contact with them; I haven't come in contact with them in years; I don't know what they do.

2340 Q. Then you can't enlighten the examiner at all as to whether or not your lumber of the shop grades, shipped to the sash and door manufacturers in the Central States and the East, is used for the manufacture of sash and doors?
A. You are speaking now of ponderosa?
Q. Yes.
A. Yes; I presume that it is.
Q. You presume likewise that prior to 1927, when you changed the trade name of your product, it was used for the same purposes?
A. Yes, sir.
Q. Does the lumber which you market as pondosa pine compete with lumber which is marketed as California white pine?
A. Yes, sir.
Q. Do you ever receive any orders for California white pine under that term?
A. I don't know.

Q. For what uses is California white pine, as you have known it for these many years, best adapted?

A. It depends upon the grade—common lumber for building and local purposes, for manufacture of box shook, for sash and doors, finish—it is like any other wood, they are all used for the same purpose. Fir is used that way, too.

Q. Northern white pine is used for about the same purposes?

A. Absolutely, yes; and so is Oregon pine, and so is fir.

Q. What is Oregon pine?

A. What?

2341 Q. What is Oregon pine?

A. I am speaking about red and yellow fir. They are used for the same purpose.

Q. What are red and yellow fir?

A. The difference in the age of the trees.

Examiner DE BRULER. I wish the witness would not go into anything excepting the pine trees in his answers. Confine your answers to the pines.

By Mr. MATTHEW:

Q. When you referred to Oregon pine, you had in mind just the trade name for lumber that comes from Douglas fir?

A. Yes.

Q. Douglas fir, you know, is not a true botanical name of the tree, do you?

A. Yes.

Q. You said northern white pine is used generally for the same purposes as California white pine?

A. Yes.

Q. And is Idaho white pine used generally for the same purposes as well?

A. I think so.

Q. Are the southern yellow pines used generally for the same purposes?

A. Not generally.

Q. The southern yellow pine is more particularly a struc-

2342 tural timber, is it not?

A. Yes.

Q. Then the competitive pines, the direct competitive pines are more approximately the California white pine, as we have termed it, northern white, Idaho white, and sugar pine.

A. Yes, they are; yes, that is all the pines.

Q. Those four pines are quite directly in competition and, to a large extent, used for similar purposes?

A. Yes.

Q. They are all used in sash and door trade, are they not?

A. Not confined to that alone.

Q. I mean, for example?

A. Well, for building purposes too.

Q. But not for structural timber?

A. No.

Q. All used for interior trim?

A. In a small way for structural timber.

Q. Let's again rule out the exceptions and let's take their primary uses. They are used for sash and door manufacturing purposes, used for interior trim, and to some extent for outside trim; is that true?

A. Yes.

Q. Now, in your direct examination you referred to the manufacturing processes in the sash and door plants, and pointed out that the pieces which are used in making sash are, in a sense, the
2343 by-product of the manufacture of doors?

A. Yes.

Q. Have I stated it about right?

A. That is about it.

Q. Now, in manufacturing doors and sash in these big plants, do you know whether or not the sugar pine, California white pine, and perhaps other woods, are employed indiscriminately in making a door, or even a sash?

A. A door-and-sash maker buys what he can sell. Ad if he buys white pine he cuts it up into door stock and that portion of the stock that he buys that wouldn't go into doors, he cuts up into sash, or if it is a long board he makes a molding strip out of it.

Q. I doubt if you got my question, Mr. Cox. Perhaps I can make it a little clearer.

Let us take one of the larger operators at any point, we will say some Mississippi River town, such as Dubuque, if you will: You would expect such a manufacturer to have in stock California white pine, sugar pine, perhaps Idaho white pine, and also some lumber purchased under the name of pondosa pine?

A. Yes.

Q. Now, in the manufacturing process, is it customary to make a door out of a single variety of lumber, or will we find in the same door pieces of sugar pine, pieces of California white pine, and pieces of Idaho white pine, for example?

2344 Mr. BURR. I don't think the witness is qualified on processes.

Examiner DE BRULER. If he isn't, he can state so. I think that is a legitimate question.

Mr. BURR. I object to it on the ground that no foundation has been laid.

Examiner DE BRULER. Objection is overruled.

A. I don't know what they do.

By Mr. MATTHEW:

Q. You don't know whether the varieties of wood are mixed up in the manufacturing processes or not?

A. No; I don't know. I don't know what they are buying and what they use.

Q. Do you know whether any doors are made of straight northern white pine, for example?

A. A door made out of northern white pine is a better door than made of pondosa.

Mr. MATTHEW. I move the answer be stricken out.

Examiner DE BRULER. It may be stricken.

By Mr. MATTHEW:

Q. I asked you if you know of any doors that are straight northern white pine?

A. Sure.

Q. That is the common thing?

A. No; right now it is very scarce, but I have seen them
2345 made for years and years.

Q. I don't doubt that, Mr. Cox, but at the present time?

A. I don't know anything about it.

Q. So you don't know whether there are any doors at the present time made of straight northern white pine?

A. No, sir; I don't know anything about it. I haven't been there and haven't seen it.

Q. During the period of some 28 years in which you offered your ponderosa pine lumber to the trade as California white pine, I take it you felt it was an appropriate name?

A. It was the competitive name.

Q. Well, I take it you felt that it was an appropriate name, or you wouldn't have adopted it?

A. Yes, sir.

Examiner DE BRULER. We will take a five-minute recess.

(Whereupon a five-minute recess was taken.)

Examiner DE BRULER. We will proceed, if the parties are ready.

By Mr. MATTHEW:

Q. Now, Mr. Cox, if you will pardon one or two more questions about the origin of the term California white pine, have you no knowledge of the use of that term prior to 1899?

A. No; I haven't.

Q. As I understand it, you participated in the conference of lumber manufacturers at which that term was adopted?

2346 A. That is my memory.

Q. In what year did you definitely determine to abandon the term California white pine?

A. I think three years ago.

Q. Was that decision influenced at all by the fate of the Sugar Pine Sales Company?

A. By what?—I didn't get you.

Q. By the fate of the Sugar Pine Sales Company?

A. No; I don't think so.

Q. Was your company a member of that organization?

A. Yes, sir.

Q. When was it formed?
A. I think possibly four years ago.
Q. Wasn't the firm formed in the latter part of 1926 or early in 1927?
A. I think something about that time. I don't recall definitely.
Q. And your company withdrew about November of 1927?
A. We withdrew when they all went out.
Q. You think it was a general withdrawal?
A. Yes, sir.
Q. You don't recall whether your company was the first to announce its withdrawal?
A. It was not.
Q. Which company was the first to announce its withdrawal, do you recall?

2347 A. I don't recall.

Q. Wasn't it after the break-up of the Sugar Pine Sales Company that you decided to change the name of California white pine to pondosa pine, as far as your company is concerned?
A. I think so.
Q. Does any lumber producer in California, at the present time, sell ponderosa pine lumber under the name of yellow pine?
A. I don't know.
Q. Have you had a grade of lumber which you market locally in the San Joaquin Valley under the name of mountain pine?
A. Of what?
Q. Mountain pine?
A. That is a term used for all grades of common lumber.
Q. That is used by your company?
A. Yes, sir; used by other manufacturers.
Q. In the Madera district.
A. Yes.
Q And this common lumber is the common lumber which you previously described as including the ponderosa pine, sugar pine, and white fir, and even some cedar?
A. Yes, sir. We ship that as mountain pine.
Q. And you invoice it as such?
A. Mountain pine, yes.
Q Are there any complaints from your trade as to the use of the term mountain pine to describe that lumber?

2348 A. That term has been used for, I guess, 30 years.

Q. Any complaint from your trade about the use of that term?
A. What?
Q. Any complaint from your trade as to the use of that term?
A. No; the grade is different and the lumber was different and the trade was educated to what that meant.
Q. The trade has been educated for about 30 years as to what that name means?

A. The companies—they come one after the other.

Mr. MATTHEW. That is all.

Redirect examination by Mr. BURR:

Q. Is there such an organization as the Mountain Pine Sales Agency; do you know?

A. What?

Q. Is there such an organization as the Mountain Pine Sales Agency?

A. Yes, sir.

Q. What is that?

A. Just a selling agency.

Q. Are there certain concerns that are members of that agency, or employ that agency, or how does it work?

A. This sales agency sells the lumber for others, distributes it through the valley.

Q. And how many concerns are there that distribute their
2349 common grades through that sales agency, do you know?

A. Yes, sir; there are five altogether.

Q. How long have they been distributing in that fashion?

A. More than 15 years, I guess.

Q. Is that distribution local or——

A. Local entirely.

Q. It isn't shipped outside of the State; is that right?

A. No.

Q. Now, that is only in the common grades, did you testify?

A. That is all; yes.

Q. What are those common grades used for in this local distribution?

A. For building material.

Q. What kind of building material?

A. What?

Q. What kind of building material?

A. Common building material like form stock for a concrete work and rafters and studding, and floor joists, plates, siding.

Q. Is it used for box material at all?

A. Yes; but they don't handle that.

Q. Now, I believe you testified on cross-examination that you were in attendance at certain of these conferences when the name California white pine was decided upon?

A. Yes.

Q. Where were those conferences held, if you recall?

2350 A. In San Francisco, as I recall.

Q. Now, was one of the reasons for the adoption of the word California white pine that those who conferred desired to indicate to the public that their product resembled the white pine to the east?

A. Well——

Mr. MATTHEW. I object to leading questions from counsel.

Examiner DE BRULER. Let him state the reason of the change.

By Mr. BURR:

Q. What were the reasons for the change?

A. The name was adopted to distinguish it from southern pine or yellow pine.

Q. Yes.

A. It wasn't called yellow pine because it was different. If we called it yellow pine, we thought that it would be mixed or be confused with the product of the South.

Q. Well, why call it white?

A. I don't know—just because it was whiter than yellow pine; that was all.

Q. Well, the northern white pine has a high reputation for various characteristics and qualities, does it not?

Mr. MATTHEW. I object to the question as leading and suggestive.

2351 Examiner DE BRULER. The objection is sustained. Let him state the reasons.

By Mr. BURR:

Q. Are you sure that in that debate there was no other reason given for the use of the word "white" in connection with it?

A. That is my memory.

Q. Are there certain purposes for which genuine white pine is more suitable than Pinus ponderosa?

A. Yes, sir.

Q. What are those purposes, briefly?

A. I think the wood is superior for any purpose that ponderosa is used for, for any and every purpose.

Q. You think it is superior for inside-finish work?

A. Yes. I would say that certain pine is superior for any uses for which ponderosa can be used for.

Mr. BURR. That is all.

Recross-examination by Mr. MATTHEW:

Q. Would you mind naming the different mills who are members of this Mountain Pine Sales Agency?

A. There is the Pickering Lumber Company, representing the Standard and the West Side Lumber Company; there is the Yosemite Lumber Company, the Sugar Pine Lumber Company, the Madera Sugar Pine Company.

2352 Q. How are the sales distributed among the mills when an order is obtained by the Mountain Pine Sales Agency?

A. How are they distributed?

Mr. BURR. I think that is immaterial.

Mr. MATTHEW. I will withdraw that. I don't think it is material.

Examiner DE BRULER. Is that all, Mr. Matthew?

Mr. MATTHEW. Yes.

Examiner DE BRULER. You may be excused.

(Witness excused.)

Mr. BURR. Call Mr. Stevens, please.

JOHN W. STEVENS was thereupon called as a witness and, having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Stevens, what is your line of work, occupation?

A. I am supervising the grading and the shipping of the Madera Sugar Pine Company.

Q. How long have you held that position?

A. About five years.

Q. What were you doing prior to that?

A. I was about nine years, or ten years, with the California
2353 White and Sugar Pine Manufacturers Association as inspector and chief inspector.

Q. Did you have men under you as chief inspector?

A. Yes, sir.

Q. How many?

A. I think about the time I left there were six or seven.

Q. Have you men under you in your present line of work?

A. Yes, sir.

Q. How many men have you there?

A. About 10 or 12; something like that.

Q. They are engaged in grading and estimating, are they?

A. In grading the lumber; yes.

Q. Before you were chief inspector of the California White Pine and Sugar Pine Manufacturers Association what was your line of work?

A. I was inspecting lumber.

Q. For whom?

A. Well, that was before I came to this country, in the East, in the Great Lakes region, in the pine region.

Q. How long were you back there?

A. Fifteen or seventeen years; something like that.

Q. Have you been asked to furnish a couple of samples of sugar pine and ponderosa of the softest texture and highest type to be selected and better?

A. Yes, sir.

Q. Were those to be absolutely clear?

A. Yes, sir.

2354 Q. Will you produce them here in the court room?

A. Yes. (Witness produces samples as indicated.)

Q. Those are the two pieces, are they?

A. Yes.

Q. One is sugar pine and the other is——

A. (Interrupting.) One is ponderosa pine and the other is sugar pine.

Q. Will you kindly pick out the sugar-pine piece?

A. There is the sugar pine. [Indicating.]

Mr. BURR. I request that the one referred to as sugar pine be marked for identification merely as "Commission exhibit for the record no. 45."

I will ask that the other exhibit, which he has stated to be of Pinus ponderosa be marked as "Commission's Exhibit for the record No. 46" for identification.

Examiner DE BRULER. They may be so marked for identification.

(Whereupon the two samples of pine were thereupon marked as "Commission's Exhibit No. 45 and 46, Respectively", for identification.)

By Mr. BURR:

Q. Would you say those are typical pieces, or better than typical pieces?

A. I would say they are better than typical.

Q. Referring to Commission's exhibit no. 46 for identification?

2355 A. Particularly in our region; yes.

Q. Particularly in your region?

A. Yes.

Q. There are regions in the State of California where the so-called California white pine, or ponderosa, is of softer texture?

A. Yes.

Q. Than in the stand you are engaged in cutting?

A. I would say it is softer in some regions than it is in our region.

Q. Now, in connection with your inspection work for the California White and Sugar Pine Manufacturers Association, did you have occasion to travel over the State of California considerably?

A. Yes, sir.

Q. And study the forest products and the timber?

A. I had nothing whatever to do with the timber.

Q. Pardon?

A. I had nothing to do with the timber.

Q. Did you have an opportunity to observe the sugar pine and the Pinus ponderosa as regards the character of lumber?

A. Yes, sir.

Q. Did you have experience in the State of Oregon in that connection?

A. Southern Oregon; yes.

Q. What part?

A. Klamath Falls region.

2356 Q. Have you any experience in studying lumber that is produced by these two species, or, rather, by the Pinus ponderosa in Arizona and New Mexico?

A. No, sir.

Q. None down there?

A. No, sir.

Q. Will you state which type of lumber varies in characteristics and qualities the more of those two?

A. I would say Pinus ponderosa.

Q. Is that a markedly greater variation?

A. Yes, sir.

Q. In what respects is that variation greater than the sugar pine?
A. Mostly in texture.
Q. Well, will you describe that, please?
A. Well, in some regions, of course, it is a good deal softer than others. In the Klamath Falls region, over in the region east of the east slope of the Sierras, it is much softer than it is on the west slope.
Q. Do you think of any other variations in different localities?
A. Not insofar as texture is concerned. Of course, that includes, when we are speaking of the east slope, that means over on clear up into Oregon.
Q. Does altitude have any effect upon the character of lumber produced by the Pinus ponderosa tree?
2357 A. Well, they say it has; but I can't prove it.
Q. How about the character of soil; does that have an effect on the softness and the texture, as far as your experience goes?
A. I am not prepared to verify that.
Q. How about the northern white pine; have you had an opportunity to observe that, did you say?
A. You mean the eastern pine?
Q. Yes; the northern white pine, the Michigan pine.
A. Yes; I worked in it many years.
Q. Where did you work?
A. All the way from Duluth over into through Michigan, Wisconsin, and over into Canada, over in Ontario, Canada.
Q. How about that in diversity and variability; is that more variable or less variable than the Pinus ponderosa?
A. In texture it doesn't vary so much.
Q. Is there any difference in the percentages of heart and sapwood between Pinus ponderosa and the sugar pine?
A. Yes, sir; there is.
Q. Will you describe that, please, sir?
A. Well, I couldn't very well tell you; as far as the percentage is concerned, I couldn't say as to that.
Q. Pardon?
A. I couldn't say what the percentage is between the heart and sap.
Q. Is there a marked difference between the heart content
2358 of the two woods, would you say?
A. Yes; there is.
Q. Which is the greater?
A. There is more heartwood in the sugar pine.
Q. Would that be true of timber of the same size of the two trees?
A. Yes; I think so.
Q. Referring to Commission's exhibit no. 45, for identification merely, will you state whether it is heartwood or sapwood, please, sir?
A. That is sapwood [indicating]. This is heartwood [indicating].

Q. That is exhibit no. 45?

A. This [indicating] is sugar pine. This [indicating] is heartwood. That [indicating] is sapwood.

Q. Referring now to Commission's exhibit no. 45, marked for identification, you say it is which?

A. It is sapwood.

Q. Then, referring to Commission's exhibit for identification no. 46, what is that?

A. I said that is heartwood.

Mr. MATTHEW. Now you have said it both ways.

Examiner DE BRULER. Let's get it straight for the record.

By Mr. BURR:

Q. I think the record is confused now.

2359 Mr. Stevens, I am handing you Commission's exhibit no. 45 for identification and will you kindly state whether it is heartwood or sapwood?

A. That is heartwood.

Q. Then referring to Commission's exhibit no. 46 for identification, would you state whether that is heartwood or sapwood?

A. That is sapwood.

Q. Is there any difference between the two types of lumber, the ponderosa and the sugar pine, as regards the variability in the pitch, or resinous content of the two woods?

A. Yes; I think there is.

Q. Well, which varies the most?

A. Well, I think there is more pitch on the whole in the ponderosa.

Q. Which varies the most?

Mr. MATTHEW. I think the last answer should be stricken as not responsive.

Mr. BURR. I think that is true, technically speaking. I deny the motion that it be stricken for the purpose of getting along.

By Mr. BURR:

Q. What I am trying to ask you, Mr. Stevens—perhaps I am not quite clear, but will try to make it so—which varies the most? I am not asking you which has the most pitch, but which varies the most between the extreme of freedom from pitch on the one

2360 hand and greater pitch content on the other hand, which has the greatest durability?

A. Do you mean by that the difference between the amount of wood that has no sap and pitch?

Q. Which varies the most as to how much pitch is to be found?

A. That would be hard to say.

Q. Is there some of the Pinus ponderosa that is quite free from pitch, would you say; is that true?

A. Yes, sir.

Q. Are there certain specimens of ponderosa that are quite pitchy, or wouldn't you say that?

A. Yes, sir.

Q. Is the same thing true of sugar pine, or isn't there so wide a range in the resinous content of the two?

A. That practically applies to both woods.

Q. Then, on the average, which has the more resinous content, the ponderosa or the sugar pine; is that question clear?

A. Yes. On the whole, I would say there is more pitch in the ponderosa.

Q. How about the grain? Which, on the average, has the softer grain?

A. Well, as a whole, sugar pine.

Q. Which varies most as to grain?

A. Ponderosa.

Q. Do you know anything about the Australian grade, so called?

2361 A. I know what they call it; yes, sir.

Q. What is that?

A. Well, as a rule, it is made up of a hard, flinty, pitchy grain type of lumber.

Q. Which has the most of the Australian grade, ponderosa or sugar pine?

A. Ponderosa.

Q. Is there any sugar pine in that grade?

A. I have heard of cases where they made it, but I don't know—we never made it.

Q. Which varies most in color, the ponderosa or the sugar pine?

A. I think there is more in ponderosa.

Q. Is that true generally or nearly in your part of the country, of the State?

A. In our section.

Q. Well, is that true generally?

A. Well, I guess it is. I would say it is generally true.

Q. Is there more difference in color between the heartwood and the sapwood of ponderosa than there is between the heartwood and sapwood of sugar pine?

A. Yes, sir; as a rule.

Examiner DE BRULER. Which carries the greatest difference?

The WITNESS. What is that?

Examiner DE BRULER. Which carries the greatest difference

2362 between the two woods, between the heart and the sap?

The WITNESS. I would say ponderosa.

By Mr. BURR:

Q. Which is the darker of the ponderosa, the sap or the heart?

A. The heartwood is the darker.

Q. Is there a marked difference in color?

A. In some cases, and in other cases there is no great difference.

Q. Are you familiar with the southern pines of the South?

A. Not very familiar; no, sir.

Q. How much have you been down there?

A. What is that?

Q. How much have you been in that part of the country observing?

A. I have never worked there; I have been through the country, but I have come in contact with it around in various distributing centers.

Mr. BURR. You may cross examine.

Cross examination by Mr. MATTHEW:

Q. Mr. Stevens, referring to your samples of lumber marked for identification Commission's exhibit no. 45 and no. 46, may I ask you whether either of these samples have been sandpapered?

A. No, sir.

Q. Are you quite sure?

A. Not that I know of; not to my knowledge.

2363 Q. Did you select them?

A. Yes.

Q. Where?

A. At the Madera Sugar Pine Company.

Q. Could you tell on inspection whether either of these samples has been sandpapered or not?

A. No; I couldn't.

Q. Looking at them in the light of the window?

A. I couldn't tell.

Q. You couldn't observe the marks of sandpaper on either one of these exhibits?

A. There are some peculiar marks, but I don't know whether they are sandpaper marks or what it is.

Q. Isn't it quite clear, looking at this exhibit no. 45 in the light, that it has been sandpapered?

A. No. The lumber that is properly surfaced is always as smooth as that is.

Q. I am not referring to smoothness. I am referring to marks which apparently indicate the results of sandpapering.

A. Well, I say there are some peculiar marks on there, but I don't know what they are.

Q. As far as you know neither was sandpapered?

A. Not to my knowledge.

Q. Do you ever have any difficulty in distinguishing between the sugar pine and ponderosa pine?

2364 A. Yes, sir.

Q. You find some boards hard to identify, do you not?

A. Yes, sir.

Q. Some pieces of ponderosa lumber very closely resemble the sugar-pine lumber?

A. Particularly where it is in the sapwood.

Q. And sometimes you find it difficult to distinguish between certain pieces of heartwood of the two varieties, do you not?

A. I have seen cases of that kind too; yes, sir.

Q. I think you stated that better and softer texter ponderosa lumber comes from the Klamath Falls section of southern Oregon and from what you termed eastern slope of the Sierras?

A. Yes, sir.

Q. Would you identify a little more definitely the boundaries of the region which you have in mind? We will take the Klamath Basin on the north for a starting point, and will you describe the remaining boundaries of that section?

A. Well, we will start in the south part of the State here, and when I speak about the east slope, that is on the other side of the highest point of the mountain. All the white ponderosa pine growing in that section is all softer and, you might say, that extends up into Oregon.

Q. Let's take it in a commercial way, because I understand there is a relatively small production on the east slope of the southern Sierras; that is true, is it not?

2365 A. Yes, sir.

Q. Let's take the lumber-producing areas on a substantial scale. Will you give us the boundaries of this soft-textured ponderosa belt, just roughly?

A. Well, I don't exactly know where it begins. In fact, for that matter, that belt runs the whole length of California up into Oregon.

Q. As far as the quality of the lumber is concerned?

A. Yes, sir; I think so.

Q. Is there any substantial lumbering operation on the east slope of the Sierra Nevadas southerly from Lake Tahoe?

A. Southerly?

Q. Yes.

A. Not that I know of, not on the east slope.

Q. Then the substantial lumbering operations, as far as the east slopes are concerned, are situated from Lake Tahoe to the north?

A. Yes, sir.

Q. Then may we take Lake Tahoe perhaps as marking the southerly limits of this area?

A. Yes, sir.

Q. And the northerly end of the Klamath Basin as marking the northern limit?

A. Yes, sir.

Q. And this will include, of course, such mills as the Hobart mills in the vicinity of Truckee?

A. Yes, sir.

2366 Q. And mills in the upper Feather River Canyon section?

A. Yes, sir.

Q. And around Westwood?

A. Yes, sir.

Q. And extending up to Klamath Falls?

A. Yes, sir.

Q. We have approximately defined the belt from which we obtain this softer-textured ponderosa pine lumber.

A. Yes, sir.

Q. And is it from this section that is shipped the bulk of the ponderosa-pine lumber which is marketed outside the State of California under the name of California white pine?

A. Yes, sir.

Q. You stated, Mr. Stevens, upon your direct examination that the northern white pine of the East, or Middle Western States, does not vary much in texture throughout its range?

A. Yes, sir.

Q. Does it vary in other respects?

A. Yes.

Q. What?

A. In some respects; yes.

Q. What are those respects?

A. In some sections of the country the conditions under which it grows are different. The result is that some sections they get more shake; the shake is a serious defect in that timber. Some sections get more black knots and those are the principal
2367 variations. Those are the principal causes for variation, either shake or black knots.

Q. Do you think of any other particular elements of variation throughout the range?

A. No; I can't think of anything.

Q. Do you know in general whether the northern pine lumber which is now obtained in the East or Northern States, is smaller as to size of boards?

Mr. BURR. I object to that question. I would like to know what he means by northern pine. Are you talking about it in the narrow way, or not? Are you talking about northern white pine?

Mr. MATTHEW. Yes.

Mr. BURR. Let's have it so designated in the question and not talk about northern pine.

Mr. MATTHEW. I think the question is perfectly clear. If I inadvertently left out the word "white" I will be very glad to accommodate counsel by interpolating that.

Mr. BURR. All right; that is all I asked for. Why so many words?

By Mr. MATTHEW:

Q. The witness understands I was talking about northern white pine; did you not?

A. Yes, sir.

Q. Exactly; and so did I and I think everybody else in the room did.

2368 Are there any other elements that you have in mind with respect to which Pinus strobus varies materially throughout its range?

A. I can't think of any.

Q. Does it differ much as to the size of the board which is cut from the timber in particular areas?

A. I can't answer that. It has been ten or fifteen years since I have seen much of that lumber, but there was a considerable variation in the time I was in that section of the country.

Q. In general, the boards were getting smaller?

A. In some sections the timber was smaller than in other sections.

Q. Some second growth was being cut?

A. Not in my time; no, sir.

Q. Do you know now whether any second growth is being cut?

A. I understand so, but I don't know anything about it.

Q. Do you know whether sap was regarded as a defect in the grading rules for northern white pine when you were familiar with the industry in that territory?

A. Yes, sir.

Mr. BURR. I object. That is not proper cross-examination, going into the grades of northern white pine.

Examiner DE BRULER. He may answer if he knows.

By Mr. MATTHEW:

Q. Do you know whether it is so regarded now?

A. I can't answer as to what it is at the present time.

2369 Q. You stated that there is relatively more heartwood in sugar pine than in the ponderosa pine trees?

A. Yes, sir.

Q. Let us take a typical log, both sugar pine and ponderosa pine trees, and can you state what the approximate depth of that log would be?

A. No; I could not.

Q. Would a typical log about 30 inches, could we take that as representative?

A. How many inches?

Q. 30 inches or 36 inches.

A. Yes, sir; that is all right.

Q. A typical log?

A. That is all right.

Q. Would you accept 36 inches?

A. Yes.

Q. As typical?

A. Yes.

Q. What is the ordinary width of the sap ring of a sugar-pine log of that size?

A. Well, that is pretty hard to say; that varies.

Q. Let's get something that is typical, and we will take a ponderosa log which you——

A. (Interrupting.) You are talking about ponderosa?

Q. Both; I want to contrast the two.

2370 A. Well, about eight inches.

Q. That is the width of the sap ring for the sugar pine or ponderosa?

A. That is ponderosa.

Q. All right.
A. That is only approximate; I wouldn't go any further.
Q. Leaving about 24 inches for the heartwood?
A. Yes.
Mr. BURR. That isn't fair. How big is the width?
Mr. MATTHEW. Thirty-six inches.
Mr. BURR. The sap appears on both ends of the diameter—let's straighten that out.

By Mr. MATTHEW:

Q. Leaving 20 inches for the distance through the heartwood section?
Examiner DE BRULER. Is that your answer?
The WITNESS. You mean there would be 20 inches of heartwood. I said in 36 inches that perhaps it would be about 8 inches of sap ring.

By Mr. MATTHEW:

Q. Exactly. Which means, of course, on each side, leaving 20 inches of heartwood?
A. Yes, sir.
Q. Let's take a sugar-pine log of the same dimensions and give us the figures of the width of the sap ring?
2371 A. I don't think it would be over 4 or 5 inches.
Q. Which, what is your best judgment?
A. One is as close as another.
Q. Well, we will take 4½ inches—is that fair?
A. Yes.
Q. Leaving then about 27 inches as the width of the heartwood of that section of log?
A. Yes.
Q. Those figures, you think, are typical?
A. As near as I can remember it.
Q. You were asked about the grain of these different varieties of lumber. What did you mean by grain?
A. Grain?
Q. Yes. I understand counsel to speak of grain. Am I right?
Mr. BURR. Yes, he testified as to grain, if I understood him correctly.
The WITNESS. I had reference to texture.
Mr. BURR. I think that is it.

By Mr. MATTHEW:

Q. You mean relative softness or hardness?
A. Yes, sir.
Mr. MATTHEW. I think that that is all.

Redirect examination by Mr. BURR:

Q. Mr. Stevens, have your got any sander in your mill?
2372 A. No, sir.
Q. A sander is a machine for what purpose?

A. For smoothing off the lumber, smoothing off where it is rough.

Q. These samples that you referred in your testimony, Commission's exhibits for identification nos. 45 and 46, where have they been since they were cut?

A. Well, they were left with a couple of men to nail up and put into a package and box them up.

Q. When were they cut?

A. Well, I don't know, but it is nearly a week ago, I guess, about a week ago.

Q. And when were they boxed?

A. About the same day, probably a day or so afterwards.

Q. Where were they during the interval?

A. Stored in a shed.

Q. Would there be any way to sandpaper those by hand?

A. Oh, yes.

Q. It could be done?

A. Yes, with a piece of sandpaper.

Q. Did you give any instructions with regard to sandpapering them?

A. No, sir. I haven't paid any attention to it. In fact, I didn't consider it was necessary to sand them.

Q. Your instructions weren't to have either or both of them sanded?

2373 A. No, sir.

Q. I think you testified in your cross-examination, and also in your direct examination, to certain questions where the average of the ponderosa is of a softer texture as contrasted with other sections?

A. Yes.

Q. Are there variations in those same localities where the softer texture of ponderosa is found?

A. Yes, sir; there is in all pine lumber.

Q. There is in all pine?

A. Apparently.

Q. Is there a greater variation in these sections in the Pinus ponderosa belt—that is, the highest type you have testified to—is there a greater variation than there is in the sugar pine in those sections?

A. No; I don't believe there is.

Q. You don't believe there is?

A. No.

Q. Is a 36-inch-in-diameter sugar pine a typical one in your section? What is the size in diameter of the sugar pine in your section?

A. Why, I think in the sugar pine it would average larger than that.

Q. How much would it average?

A. Well, probably it would average 40 inches, anyway.

2374 Q. Forty inches?

A. Forty or forty-two inches.

Q. Have you noticed as to whether the depth or width of sap ring is greater in the larger logs than in those of smaller size?

A. Yes, sir.

Q. How is it?

A. As a rule it is greater in a smaller size.

Q. In the smaller size?

A. Yes, sir.

Q. You mean a greater percentage of what?

A. Greater percentage of sapwood in the smaller log.

Q. How about the percentage of sapwood in a smaller ponderosa log, is it greater or less than the larger one?

A. I would say it is greater.

Q. Is 36 inches a typical ponderosa log in your territory; is it larger or smaller than the average, I mean?

A. Well, it strikes me that it runs—I think 36 or 38 inches would be a fair average.

Mr. BURR. That is all, sir.

Recross-examination by Mr. MATTHEW:

Q. Mr. Stevens, does the width of the sap ring in inches vary with the size of the log?

A. In the log you mean?

2375 Q. Yes; for example, to make it clear, you said in answer to a question of counsel that the percentage relation between the sapwood and heartwood varied with the side of the log, which would seem to be obvious, and I am asking whether the actual width of the sap ring varies materially with the size of the log?

A. Well, that would be pretty hard to answer. I know the sap ring varies all right, but as to how much the size of the log would have to do with it, I am not prepared to say.

Q. You have no impression then as to whether there is a difference?

A. No.

Q. You have no impression as to whether there is a difference in the size of the sap ring which varies with the size of the log?

A. No.

Mr. MATTHEW. That is all.

Mr. BURR. That is all.

(Witness excused.)

Mr. BURR. I move we adjourn until 10:00 o'clock tomorrow morning.

(Whereupon followed remarks off the record.)

Examiner DE BRULER. We will take an adjournment until

2376 10:00 o'clock tomorrow morning, which will be January 29, 1930.

(Whereupon, at 5:05 o'clock p.m., an adjournment was taken until Wednesday, January 29, 1930, at 10:00 o'clock a.m.)

2377 Docket No. 1620 to 1689, inc.

SAN FRANCISCO, CALIFORNIA, *January 29, 1930.*

Met pursuant to adjournment, 10:00 a.m.

Before Ellis De Bruler, examiner.

Appearances:

Eugene W. Burr, for the Commission.

McCutchen, Olney, Mannon & Greene (by Mr. Allen P. Matthew and Carl I. Wheat) for the respondents.

Chandler M. Wood (Albuquerque, New Mexico) for Cady Lumber Corporation, George E. Breece Lumber Company, White Pine Lumber Company, respondents.

Examiner DE BRULER. If the parties are ready we might as well begin the hearing.

Mr. BURR. I will call Mr. E. M. Prescott.

E. M. PRESCOTT was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Prescott, your business is what, sir?

A. I am in the retail lumber business at Sanger, California.

Q. And how long have you been in that business?

2378 A. Two years, at that particular point, and for twenty-five years preceding that at another point.

Q. Have you ever been in the wholesaling of lumber?

A. Yes, sir.

Q. Where and when was that?

A. I operated a mill at Basin, Fresno, California, for eight years; and during the past season I also operated a mill at Hume, California.

Q. Hume is in what county?

A. Fresno County.

Q. Have you ever had any experience in the manufacture of lumber?

A. Yes, sir.

Q. And when was that?

A. I worked in the woods in the spring of 1900 for the Pine Ridge Lumber Company. I was in their employ for two years. Subsequent to that I entered business for myself and have been continuously connected with the lumber industries.

Q. Have you been continuously connected with the manufacture?

A. No, sir; I have been in and out of the manufacture.

Q. When was your last experience in the manufacture of lumber?

A. During the past season.

Q. And how much lumber did you manufacture at that time?

A. Four million feet.

Q. What class of lumber was that?

A. I bought four million feet of logs in the pond at Hume
2379 from the Sanger Lumber Company. They were, roughly, two million feet of redwood, Sequoia gigantia, and the balance that they brought equally divided in sugar and Pinus ponderosa, white pine.

Q. How long had that lumber been in the pond?

A. The logs in the pond had been there continuously since the season of 1918; some of them many years prior to that.

Q. Now, what kind of condition were the sugar-pine logs in as regards their soundness?

Mr. MATTHEW. It is understood, Mr. Examiner, that my objection runs to all of this line of testimony.

Examiner DE BRULER. I understand that, and the exception is allowed.

The WITNESS. Shall I answer the question?

Examiner DE BRULER. Yes.

A. The sugar-pine logs were in very good condition, fit for manufacture into lumber.

By Mr. BURR:

Q. Had the sapwood disappeared—the outside disappeared from those logs?

A. No, sir; the sugar-pine sap was in good condition, excepting a little stain—a blue stain.

Q. What was the condition of the ponderosa logs?

A. The sap was rotten and the hearts were in fair condition for manufacture into common lumber.

Q. Did you say you had experience in the retail business anywhere else than at Sanger?

2380 A. Yes, sir. I had connections with retail business in Visalia and also at Fresno.

Q. Now, in your experience as a retailer, did you find that your purchasers were well informed as to the difference between the "California white pine", so called, and the sugar pine?

Mr. MATTHEW. May I ask if counsel is dealing with interstate transactions now?

Mr. BURR. If the examiner please, it seems that evidence of confusion ought not be confined necessarily to interstate transactions. It seems to me part of the case as regards the public knowledge of these varieties of wood. We are not now talking about the sale in interstate commerce; we are talking about the public state of information.

Mr. MATTHEW. I think it must be so confined, under the law, as interstate matter.

Examiner DE BRULER. I think, when it comes to a matter of confusion, it may be shown in any State. Objection overruled and exception allowed.

Mr. BURR. Read the question.

(Whereupon the question referred to was read by the reporter.)

A. No, sir. Nearly all of our customers are recently from the East, and their idea of white pine is based on their experience in the eastern markets of the northern white pine.

By Mr. BURR:

2381 Q. Did you have customers, in connection with your retail sales, who were managers of power projects in any case?

A. Yes, sir. In our operation at Basin we sold a very large amount of lumber to the Southern California Edison Company and to the San Joaquin Light & Power Corporation.

Q. Now, what types or grades of lumber went to those purchasers?

A. Largely common lumber.

Q. Was that sugar pine or so-called "California white pine"?

A. That was so-called "California white pine."

Q. Have you had occasion to observe the characteristics of either of these two types of wood as regards dam construction work by power projects or by any other projects?

A. Yes, sir.

Q. Where was that?

A. Well, more recently I had charge of the Sequoia Lake Dam in Fresno County, or on the Fresno County-Tulare County line, wherein the face of that dam, a rubbled dam, was faced with sugar-pine planking. This planking required attention in the fall of 1928; and, as chairman of the Sequoia Camp of the Y.M.C.A., I was charged with the reconstruction of that dam, and it gave me a very good opportunity to look into the lasting qualities of sugar pine.

Q. When had that dam been constructed?

A. In 1888.

Q. When was your first personal knowledge of it?

A. In the 90's, sometime.

2382 Q. In the 90's?

A. Yes, sir.

Q. Can you designate about when the first lumber came, as a result of that dam, to the town of Sanger?

A. Yes, sir; in 1889 the first lumber was flumed from Sequoia Lake, or Millwood, to Sanger.

Q. Did your knowledge go back to that extent, to the year 1889?

A. Yes, sir; it does.

Q. Now, when you were called upon to do some repair work on that dam, had it begun to leak?

A. Yes, sir.

Q. Just what did you find to be the situation there?

A. Well, I called on my friend, Harold B. Fox, chief engineer of the San Joaquin Light & Power Corporation. We went up and inspected the dam. The dam, as I said, was a rubbled dam, faced with wood decking, two layers of 3 by 12, laid on 6 by 6 purlines about 3 or 4 feet apart. This dam had been subject to a change in water level varying probably 25 to 30 feet. The water would be up

and then down, up and down; and over that period of years above the average water line rot had taken place. We found spots where probably the float of the lake—the lake was used for logging purposes in or about '90 for 2 or 3 years, and the chute came out of the lake about 100 feet north of the dam, and very likely, or, the action of the logs could be traced on the face of the dam.

2383 We removed the decking in order to find the spots where the rot was causing the trouble. We took off about 30 feet of the decking from the top of the dam down and across the face, and found that the timber was absolutely sound below the average water line. We made our joint there, put in new purlines and new sugar-pine decking over the entire face.

Examiner DE BRULER. What was the character of the wood that had rotted?

The WITNESS. Sugar pine. I would say that the entire purlines and decking were sugar pine.

By Mr. BURR:

Q. Did you leave any part of that structure intact?

A. Yes, sir; the lower half is just as it was put in in '88.

Q. What kind of wood did you use for your repair?

A. No. 1 common sugar pine surface side and edge 2 by 12.

Q. Do you know when that began to leak?

A. Yes, sir; it began to leak in along in '27, and in '28 it increased.

Q. How general over the space exposed to the water was that condition of rot?

A. Well, the face of the dam is approximately 400 feet horizontally, and there were probably half a dozen spots as large as the table you are sitting at, that showed considerable signs of rot decay.

Q. How long a dam was that, approximately? What are the dimensions of that dam?

A. I said approximately 400 feet along the top, and a maximum depth of 55 feet.

2384 Q. Have you had any similar tests under conditions of alternate wet and dry in the case of ponderosa pine?

A. Yes, sir. My experience at Basin, California, was not satisfactory to Pinus ponderosa.

Q. Narrate what has been your information and experience at Basin.

A. When we started that plant we moved into a virgin forest. That was, I might say, an almost pure stand of Pinus ponderosa that I was operating then. We cut our construction material, as the mill was built, our pile bottoms——

Examiner DE BRULER. (Interrupting.) About what year was that?

The WITNESS. I started operations there in the spring of 1916. And proceeding with our construction work it was necessary to build pile bottoms and we paid no attention to what we picked. We picked the wood that we had, which was white pine, or Pinus

ponderosa, and built our foundations in the usual manner of a piece of 2 by 12 blocking about 18 inches long, crossed by a piece of 2 by 6 and 4 by 4 posts thereon in the usual manner of constructing pile bottoms. Two years later we had two or three piles fall down, and on investigation we found that the yellow-pine foundation planks were entirely rotted and we had to put in new foundations under the entire yard the following winter.

By Mr. BURR:

Q. What was the condition as to moisture coming in contact with the Pinus ponderosa, to which you have testified? Was that
2385 a condition of alternate wetting and drying?

A. Yes, sir; it was.

Q. Was any of that submerged during the entire time?

A. No, sir.

Q. Is it a situation of wetting and drying alternately?

A. Yes, sir. Some of the foundations were in a little creek that ran part of the season.

Q. Do you regard a condition of submergence in water, or a condition of alternate dry and wet [illegible]s, as the more trying to lumber in the matter of durability? Is that clear?

A. You are asking my knowledge as from experience, are you?

Q. Yes; which is harder on lumber, to be wet all the while, submerged all the while in water, or be alternately submerged and then dry out?

A. During the past season——

Mr. MATTHEW. (Interrupting.) Now, just answer the question.

By Mr. BURR:

Q. Can you answer yes or no?

The WITNESS. Read the question.

(Whereupon the reporter read the question referred to.)

Examiner DE BRULER. Answer the question yes or no.

Mr. BURR. He can't.

Examiner DE BRULER. I thought that was a request.

2386 Mr. BURR. That was my request, and we were both wrong, and it can't be answered that way.

Examiner DE BRULER. I see.

By Mr. BURR:

Q. Make a categorical answer and then explain it, if you can.

A. Wood that is entirely submerged in water is hermetically sealed and will last indefinitely.

Q. Will you contrast with that the test that wood is put to by having an alternative condition of drying out and then being wet again and then drying out, etc.? Is that a hard test for lumber as regards its decay resistance?

A. I think it would be conceded the hardest test known.

Q. Did this dam feed a flume, or what was the purpose of it?

A. It feed the original Sanger Lumber Company's flume used for transporting lumber from Millwood to Sanger.

Q. Was that flume in use certain hours of the day or in use continuously day and night?

A. Yes, sir; used for six to ten hours a day.

Q. When not in use was the water being stored or wasted?

A. It was being stored.

Q. Would the dam be rising during that period of storage?

A. Yes, sir; that is, the water level in the dam would be rising.

Q. Now, do you know whether that was sugar pine, of your own knowledge?

A. Yes, sir.

Q. How do you know?

2387 A. Well, I have handled it for thirty years, and to the best of my knowledge and belief it is sugar pine.

Q. Have you had an opportunity to observe how both logs last when submerged in water, as Pinus ponderosa and sugar pine contrasted?

A. Yes, sir.

Q. Where was that?

A. At Hume, Fresno County, California.

Q. How long ago?

A. During the past season.

Q. Will you describe what you found the condition to be as regards those two types of lumber?

A. The logs that I cut, or largely the logs that I cut last summer, were logs that had been put in the pond prior to 1918. In that vicinity there are a large amount of the sugar pine that are sinkers—that is, they have a greater specific gravity than water and they sink when they hit the lake. My predecessors never made any effort to raise the sinkers or bring them out. Last summer I bought that timber and went in and cut it into lumber. I found the condition of the sinkers that had been submerged to be absolutely perfect in every way. They were sound; they were free absolutely from any blue stain or rot.

Q. Were they Pinus ponderosa or sugar pine?

A. Sugar pine. Pinus ponderosa doesn't sink.

Q. Pinus ponderosa has no sinkers; is that right?

A. Very nearly, sir; yes, sir.

2388 Q. Were any of these logs of lighter specific gravity, so they floated?

A. The Pinus ponderosa were; yes, sir.

Q. Did any of the sugar pine logs float?

A. Sir?

Q. Did any of the sugar pine logs float?

A. Oh, yes.

Q. Some of the sugar pine and all of the Pinus ponderosa floated; is that true?

A. Yes, sir; very nearly true; there might have been an exceptional sinker in the yellow pine, but very, very seldom does it sink in that locality.

Q. Now, what was your observation as to the condition of the sugar pine logs that were floaters rather than sinkers?

A. The sugar pine logs that were floaters were in good condition, with the exception that the sap rings carried some blue stain. The heart of the sugar pine floaters was entirely white and sound.

Q. Was any of the sapwood of the sugar pine merchantable?

A. Yes, sir.

Q. Would you say that fifty percent of it was merchantable, or what?

Mr. MATTHEW. I object to that question.

Examiner DE BRULER. Ask him what percentage.

Mr. BURR. I don't know what he was going to say.

Q. What percentage do you estimate of the sapwood of the
2389 sugar pine floaters was merchantable?

A. Practically all of it, sir.

Q. In other words, the blue stain didn't damage it much; is that true?

A. Not for common lumber construction grades.

Q. What was the condition of the floaters of the Pinus ponderosa?

A. The sapwood was rotten.

Q. How was the heartwood?

A. In rather poor condition.

Q. Well, just what had happened?

A. Well, some of the larger Pinus ponderosa logs, after we got them into the mill, they were entirely rotten and went into the slab burner at once.

Q. Now, have you recently had any occasion to cut Pinus ponderosa and sugar pine lumber from old slashings?

A. Yes.

Q. When were those slashings made?

A. In 1918 my predecessor cut some timber land belonging to one Anderson and became involved in litigation, and the court stopped the proceedings and there was a large amount of logs lying on the ground and considerable spar trees, known in the vernacular of the woods, standing in this area. I bought that lumber and cut about 600,000 feet of it.

Q. Before you go further will you be kind enough to explain for the Commission what you mean by slashing?

A. Why the Sanger Lumber Company had gone into a
2390 virgin forest and had felled and bucked, crosscut—excuse me—about 400,000 feet; and probably as much as two or three hundred thousand feet had simply been felled and not limbed, and not crosscut or bucked.

Q. What was the species of timber?

A. Well, it was an average sugar- and yellow-pine stand.

Q. Will you describe what kind of condition you found the felled sugar pine to be in?

A. We brought in all the felled sugar pine and it made good lumber. We brought in—did you want——

Q. (Interrupting.) I wanted to ask you this: Did the sapwood still make good lumber, or was the sapwood largely gone?

A. The sapwood was stained on the sugar pine but was still sound. It made good common lumber.

Q. Merchantable as such, was it?

A. Yes, sir.

Q. Now, what was the condition of the ponderosa down timber?

A. The logs looked pretty good where they were laying, and I had about twenty of them taken into the mill. We sawed, I think, a dozen of them, and they were so nearly all rotten that we didn't bring in any more. There was such a small portion of the heartwood that was suitable for the manufacture of common lumber that we didn't bring in any more yellow pine.

Q. Now, referring to the standing timber, I think you referred to some of them, perhaps all of them, as being spar timber as left standing. What do you mean, briefly, by spar timber?

2391 A. Well, a spar tree is used for high lead logging.

Examiner DE BRULER. What is that?

The WITNESS. In this case, Mr. Commissioner, they go into the forest and pick out a tree located at an advantageous point in the area, where the donkey is going to be located for pulling the logs in, and they limb this tree up anywhere from 100 to 160 feet high, take off all the limbs, and cut off the top. Naturally that kills the tree. There were several of those trees in the area.

By Mr. BURR:

Q. What variety of timber were those trees?

A. They were sugar pine.

Q. Were any of them Pinus ponderosa at all?

A. Yes, sir.

Q. The condition of the spar timbers you found to be what, did you use those?

A. Perfect, perfect.

Q. You mean to say the sap was still in good condition?

A. Absolutely, as bright as any that we cut.

Q. You say that cutting was made in what year? I mean the cutting of the forest surrounding these spar timbers.

A. In 1918, possibly a little in 1919, but none after that.

Q. Have you had the opportunity to observe the variability of ponderosa and sugar pine as to the range over which their characteristic quality as lumber varies?

2392 A. Yes, sir.

Q. How did you get that experience?

A. Well, as I told you, I manufactured there for about eight years in practically a pure stand of yellow pine; and that area varied in elevation from about 3,300 feet to approximately 4,500 feet, and on that area there was a very great diversion in the quality of the yellow pine.

Q. In what respects do the qualities of yellow pine, ponderosa, vary?

The WITNESS. Read the question.

(Whereupon the reporter read the question referred to.)

By Mr. BURR:

Q. What characteristics are you referring to when you say there is a variation in this wood?

A. Well, as to the texture and as to the weight there is a great variation.

Q. Referring to weight, what variation have you found as regards weight?

A. Our shipments of yellow pine, shop and better, that went out of Basin, averaged around 2,200 pounds to the thousand. I shipped three carloads of Australian clear, which is a grade of yellow pine, to this city, and it was exported to Australia, that weighed 3,300 pounds to the thousand. So you can see there is a great difference in the weight. This was on dry lumber in shipping condition.

2393 Q. What content in the wood is it that gives it greater or less weight?

A. Well, I am not a scientist, but I would say it is the pitch.

Q. The more pitch the lighter the wood, or the heavier the wood?

A. The more pitch the heavier; absence of pitch tends to lighten it.

Q. Have you had opportunity to observe, in various parts of the State, the Pinus ponderosa and the sugar pine?

A. I have been in a large number of the operations from Fresno north to Klamath Falls.

Q. Including both ends of that territory, including Klamath Falls also?

A. Yes, sir.

Q. Is there diversity in the weight and characteristics of ponderosa timber and ponderosa lumber over that area?

A. Yes, sir.

Q. Will you describe that a little in detail as to what your experience and observation has been?

A. Well, I purchased lumber from Klamath Falls that was very light lumber; and I have also had some shipments from Klamath Falls that were heavy, pitchy content.

Q. Now, any other localities with which you are familiar?

A. Yes, sir; I bought some lumber from Col. Cox at Weed when he was up there.

Q. Was that sugar pine or ponderosa?

2394 A. Ponderosa.

Q. Well, now, was that uniform or was that diverse in its character?

A. You ought to ask the Colonel.

Examiner DE BRULER. Answer if you know.

A. Yes, sir.

By Mr. BURR:

Q. It was which—diverse or uniform?

A. Both.

Q. Parts of it were uniform and parts were diverse; is that the idea?

A. Yes, sir.

Q. Well, now, that was bought at what point, did you say?

A. It came from Weed.

Q. That is in the northern end of California, is it?

A. Yes, sir.

Q. Have you bought on the west side?

A. Sir?

Q. Have you bought on the west side of the Sierras?

A. Well, that is all the westerly slope; I have bought lumber from the Yosemite Lumber Company and from the Pickering people, and some from the Michigan people.

Q. Michigan, California Sugar Pine Company?

A. Yes; Michigan-California people.

2395 Q. Will you state whether there is a diversity in each given locality or, if not, what is the situation in the Pinus ponderosa lumber?

A. Well, from my observation, yellow pine diverges in its natural condition entirely due upon the land upon which it grows. Now, there may be in the stand, in a pure stand of Pinus ponderosa, trees that are growing on hard, rocky points or on wind-exposed positions, and those trees will be hard and flinty and pitchy. It seems as if it is the nature of the tree to protect itself and to strengthen itself against the elements.

Q. Is that true in various localities or are you referring to just certain localities only?

A. I would say that that was a general condition.

Q. What is the condition as to variability of sugar pine, in contrast with the testimony you have just given as to ponderosa?

A. From observation I would say that sugar pine grows naturally on the best lands. It is generally found in the best soil. It is not as hardy a tree as the yellow-pine tree, and therefore it is naturally—that is, naturally it grows in the protected or better-soil conditions in the forest.

Q. What result does that have upon uniformity or lack of uniformity of the type of lumber produced by sugar pine?

A. Well, that result would naturally follow, sir, that trees growing in better soil and better conditions would naturally have a softer, evener grain.

2396 Mr. MATTHEW. I don't want to appear to be captious at all, but I think the witness ought to confine himself to his observation as to trees and lumbers, and not speculate as to soil conditions, as he is not qualified to speak as a dendrologist.

Examiner DE BRULER. I think he stated that had been his observation.

Mr. MATTHEW. I have no objection, but I think he ought not speculate as to what makes the tree pitchy or makes it soft. I don't think he is qualified along that line.

Mr. BURR. I think he is thoroughly qualified.

Mr. MATTHEW. He is not qualified scientifically at all.

Mr. BURR. I think his observations are as good as those of an expert.

Mr. MATTHEW. As to his observation; yes.

Mr. BURR. That is what I asked him for.

Mr. MATTHEW. I am talking about his answer. I think he ought not go into the discussion of soil conditions.

Examiner DE BRULER. State what your experience has been, what you have observed.

By Mr. BURR:

Q. State what your experience has been in retailing of Pinus ponderosa lumber.

A. Why, I have had a great deal of experience in retailing lumber.

2397 Q. Which type of lumber do you find the more desirable to move through your retail establishment rapidly—Pinus ponderosa or sugar pine?

Mr. MATTHEW. I don't understand that question. Will you clarify it a little bit?

Mr. BURR. Read the question.

(Whereupon the reporter read the question referred to.)

Mr. MATTHEW. Desirable for what reason?

Mr. BURR. From the standpoint of profit to the retail lumberman's office. He is not in business for his health, of course.

Mr. MATTHEW. Never mind, go ahead.

A. Sugar pine in the retail establishment stands well, and white pine is better kept in the shade and sold quickly.

By Mr. BURR:

Q. What do you mean by white pine?

A. Pondosa pine.

Q. Why do you say if kept in the shade and sold quickly?

A. The yellow pine board, if it is exposed to the sun, immediately starts back to the stump from which it came. It will curl up and twist and become wholly unfit for the purpose for which it was manufactured.

Q. Is heartwood or sapwood the typically California white pine lumber?

Mr. MATTHEW. The question is leading.

2398 By Mr. BURR:

Q. Which is the typical form of the so-called "California white pine" lumber; is it heartwood or sapwood?

A. Sapwood.

Mr. MATTHEW. Just a moment, please! I want to object to the question and move that the answer be stricken out. The question isn't clear. What does he mean by "typical form"?

Mr. BURR. I don't know of any better choice of English than "typical form."

Examiner DE BRULER. I think you can bring that out on cross-examination.

Mr. MATTHEW. I can't see how the witness can say heartwood or sapwood is typical. Sapwood is typical of sapwood and heartwood is typical of heartwood.

The WITNESS. Are you talking about the upper grades?

By Mr. BURR:

Q. I was talking about lumber in general. If the differentiation should be made, let's talk about the upper grades first and the common afterwards. Which is the typical upper-grade piece of lumber? Is it the heartwood or sapwood, or what is it?

A. In the Pinus ponderosa the upper grades are largely sapwood.

Q. And by upper grades you are referring to what grades technically?

A. From B select up.

Q. What is the typical grade of common lumber of ponderosa?

2399 A. Well, the commons are generally the heartwood. There is considerable shop in yellow pine hearts.

Q. Which is the greater in shop lumber on an average—heartwood or sapwood in the case of ponderosa?

A. Sapwood.

Q. Now, then, I wish you would state what the situation is as regards the upper grades of the sugar pine; are they typical heartwood or typical sapwood?

A. The sap ring on a sugar pine tree is much less on the same sized log than that of a Pinus ponderosa.

Mr. MATTHEW. He has not answered the question yet.

By Mr. BURR:

Q. That is not quite responsive. After the slab is taken off, is there an edging that is taken off also?

A. Yes, sir.

Q. Now, the edging of the sugar pine—is that heart or sap?

A. Sap.

Q. Then, after the slab is taken off and the edging is taken off, the grades of B select and better, are they largely heartwood or sapwood in the case of sugar pine?

A. Well, your sawmill training and mine are a little different. I don't get your idea.

Q. Well, I am afraid my education is a little deficient. Do the better grades of sugar pine come from the heart or sap?

A. The sap generally yields more clear than the heart, but

2400 often sugar pine logs will yield clear almost to the heart of the log. Is that your question?

Mr. BURR. I think so.

You may cross-examine.

Cross-examination by Mr. MATTHEW:

Q. Mr. Prescott, you have been in the retail lumber business for how many years?

A. Actively more than twenty-five years.

Q. What varieties of lumber do you carry in your retail yard?

A. Sugar pine and Pinus ponderosa.

Q. Anything else?

A. Yes.

Q. What?

A. Redwood, Douglas fir, white fur, cedar, and hardwoods of all descriptions.

Q. Do you carry a miscellaneous stock of lumber of various kinds?

A. Yes, sir.

Q. You spoke of Douglas fir. Do you sell it as Douglas fir?

Mr. BURR. I object to that line of questioning.

Mr. MATTHEW. I stand upon my right to——

Examiner DE BRULER (interrupting). Did he speak of Douglas fir?

Mr. BURR. He said he carries it in his yard.

Examiner DE BRULER. What was the next question?

2401 (Whereupon the question referred to was read by the reporter.)

Examiner DE BBULER. I don't think we should go into any other woods except the pines.

Mr. MATTHEW. You have to go into other woods if we have an intelligent picture of it. May I suggest to the examiner that there isn't a jury here that is going to be confused or misled by any question or answer that goes into the record.

Mr. BURR. May I ask counsel what this is leading up to? I have no great objection to this particular answer, or this question, but I think it is leading up to an effort on the part of counsel to show that there are other misnomers in this trade and that has been ruled on.

Examiner DE BRULER. If that is the intention, I would rule it out.

Mr. MATTHEW. I think I shouldn't always be required to expose the purpose of the questions on cross-examination.

Examiner DE BRULER. Go ahead and let's see what it leads to.

Mr. BURR. I withdraw my objection if it doesn't lead further, but if it does, and I think it is so intended, I shall object.

Examiner DE BRULER. Go ahead.

Mr. BURR. Read the last question.

2402 (Whereupon the question referred to was read by the reporter.)

A. No, sir.

By Mr. MATTHEW:

Q. Under what name do you sell it?

A. Oregon pine, a trade name.

Q. You have sold it under that name continuously?

A. Yes, sir.

Q. For what period have you been familiar with the term "California white pine"?

Mr. BURR. Read the question.

(Whereupon the reporter read the question referred to.)

A. About fifteen years.

By Mr. MATTHEW:

Q. Do you sell Pinus ponderosa lumber under the name of California white pine?

A. No, sir.

Q. Have you ever sold it under the name of California white pine?

A. Yes, sir.

Q. During what period?

A. During—I would like to withdraw that answer; it is not strictly true.

Examiner DE BRULER. All right; you may answer any way you like.

A. The previous question you asked me was whether I had ever sold it as white pine?

2403 By Mr. MATTHEW:

Q. As California white pine?

A. My sales, when I operated a white-pine mill at Basin, were handled by a broker in San Francisco by the name of Frank B. Doe, who came to the plant and bought the upper grades, and he attended to the billing. I don't know.

Q. Pardon me, I am inquiring as to your present retail operations.

A. I answered that question; we don't in the retail business differentiate as to California white pine.

Q. Well, let's get this clear. Under what name do you sell at retail the lumber which is yielded by the Pinus ponderosa?

A. Yellow pine.

Q. And have you always sold it under the name of yellow pine?

A. I can't answer that; I don't recall.

Q. Then, so far as your recollection serves you, you think you have always sold Pinus ponderosa lumber under the name of yellow pine?

A. Yes; or clear mountain pine.

Q. Well, which?

A. Well, I would say about 50-50 each way. Years ago it was generally on our price list as clear mountain pine. That is a localism peculiar to the vicinity of Fresno, I believe.

Q. Are you referring to clear lumber only?

A. Yes, sir; that is, B select and better.

Q. Now, you sold it originally as clear mountain pine?

2404 A. That was the old list, my earliest remembrance.

Q. When was that term replaced by the tenm "yellow pine", or is it yellow pine or California yellow pine, which?

A. Well, our customers began to specify sugar pine and yellow pine, oh, some ten or fifteen years ago.

Q. Then am I to conclude that commencing some ten or fifteen years ago you discontinued the use of the term "mountain pine" for Pinus ponderosa lumber, and commenced to sell it as yellow pine, and have sold it under the name of yellow pine ever since?

The WITNESS. Read that again.

(Whereupon the question referred to was read by the reporter.)

A. I can't answer that question yes or no.

By Mr. MATTHEW:

Q. Well, can you give me the facts?

A. In our retail yard we have our bins, or storage bins, plainly numbered and lettered as to the contents therein. And in the bins marked "yellow pine" we buy and put in yellow-pine lumber, or Pinus ponderosa. In the bins marked "sugar pine" we put in sugar pine, and we sell it to the trade just as it comes from our bins.

Q. The bins that contain yellow pine have the letters "Y.P." upon them; is that it?

A. They are typed out "yellow pine."

2405 Q. All right. When were the words "yellow pine" placed upon your bins?

A. Well, at Sanger we put them on a year ago last April when we built the yard, and at the other yards I can't tell you when they were put on.

Q. Recently, or something that took place ten or fifteen years ago? I am sure you can tell me that.

A. Well, as a retailer, that is not a paramount matter, and it is not firmly fixed in my mind. I couldn't answer.

Q. Whether it is paramount or not, the Commission will determine. I am trying now to get your best recollection as to when you began to put the words "yellow pine" upon your bins.

Examiner DE BRULER. Tell the facts as you remember.

A. Oh, I would say that it has been within the last ten years.

By Mr. MATTHEW:

Q. Has it been within the last two or three years, as a matter of fact, Mr. Prescott?

A. No, sir.

Q. Then it is your best judgment that as long ago as ten years back you placed the words "yellow pine" upon the bins in your retail yards to indicate the lumber yielded by the Pinus ponderosa tree?

A. Yes, sir; we have made a practice for probably ten years of branding our stuff just what we buy.

Q. Would you mind answering the question? Did you put that name upon your bins as long ago as ten years ago?

2406 The WITNESS. Read the question.

(Whereupon the question referred to was read by the reporter.)

A. I think I answered that.

By Mr. MATTHEW:

Q. Did you put the words "yellow pine" upon your bins as long as ten years ago?

A. Do you want to know if I personally went out and nailed the tag on the bins?

Q. I don't care whether you or anybody else did, but have the words been on your bins for ten years continuously?

A. I said approximately ten years; yes, sir.

Q. Did you buy the lumber under the name of yellow pine or California yellow pine?

A. I think it was probably purchased as white pine, the term being similar in our system.

Q. You mean as California white pine?

A. White pine and yellow pine being synonymous terms to our idea.

Q. That is, California white pine has been the common trade name?

A. For yellow pine; yes, sir.

Q. For the lumber which is manufactured from the Pinus ponderosa tree; that is true, is it not?

A. Yes, sir.

Q. The term "California white pine" is still used in that territory to describe this lumber?

A. Yes, sir; wholesale, it is used extensively.

2407 Q. And always has been during your entire period of familiarity with the industry, has it not?

A. Yes, sir.

Q. And you have known, during all of that time, that when you purchased California white pine you were purchasing lumber manufactured from the Pinus ponderosa trees?

A. Yes, sir.

Q. Has it usually been invoiced to you as California white pine until very recently?

A. I presume that it is still invoiced as white pine. I couldn't tell you that particular point.

Q. From what companies do you buy this lumber?

A. The Yosemite Lumber Company, the Missouri Sugar Pine Company, the Sugar Pine Company of Pinedale, the West Side Lumber Company—wherever we happen to place the order.

Q. So far as you know, all of those mills bill their lumber to you as California white pine?

The WITNESS. Mr. Commissioner, I don't handle the invoices. We have a purchasing agent who places the orders, and those things go through him. As to my taking an oath as to what actually is on those manifests, I haven't personally examined a manifest for probably the last year. I couldn't say exactly what they are. The counsel asked me a question. How can I answer it?

Examiner DE BRULER. What was the question? Read the
2408 question.

(Whereupon the reporter read the question referred to.)

Examiner DE BRULER. What is your best knowledge of it?

The WITNESS. I haven't seen those particular documents. I couldn't swear about it.

Examiner DE BRULER. If you don't know or you can't answer it.

The WITNESS. I can't answer it.

By Mr. MATTHEW:

Q. You haven't any impression at all as to whether those mills bill the lumber to you under one name or another?

A. Well, I am not swearing to my impressions.

Q. You don't care to give your best impression?

Mr. BURR. I think that counsel is pressing the matter too far. The witness is under no obligation to give it.

Examiner DE BRULER. He can bring out the question.

Mr. BURR. He can say he doesn't know.

Examiner DE BRULER. I think so, too, if he doesn't.

The WITNESS. I don't know.

By Mr. MATTHEW:

Q. Do you know under what name the Sugar Pine Lumber Company invoices the Pinus ponderosa lumber to you? I am dealing now with a particular company. You may happen to know as to that one.

A. I do not.

2409 Q. Do you know whether or not within the last two or three years the Sugar Pine Lumber Company changed its name for Pinus ponderosa lumber from California white pine to some other name?

A. I do not.

Q. Have you heard of any other changes recently made by any of the lumber companies which you have mentioned in the name under which they offer this lumber to the trade?

A. No, sir; I have not.

Q. You have heard of the term pondosa pine?

A. Yes, sir.

Q. Do you know of any company which uses that name under which to sell its lumber?

A. No, sir; I do not.

Q. As far as you know, none of the lumber companies operating in the vicinity of the Fresno-Sanger territory use the name pondosa pine?

A. They might, but not to my personal knowledge; I am not so advised.

Q. I am asking as to your knowledge. Do you carry the term California white pine on your own invoices to your customers?

A. That term doesn't appear on our price list.

Q. Did it ever appear on your price list?

A. Not to my knowledge—I am speaking as a retailer.

Q. I am asking you as a retailer.

A. Yes, sir.

Q. Now, that rather confuses me for this reason: Mr.
2410 Prescott, you testified that for some years you did sell this lumber to your customers as California white pine. Am I right in so recalling your testimony?

A. No, sir.

Q. Then you never did? Maybe I am wrong. You stated you sold it as mountain pine, I believe. Am I right?

A. I didn't so state.

Q. Then what did you state?

A. I referred to our uppers from Basin that we sold at the mill to the Frank B. Doe Lumber Company, San Francisco.

Q. Let's get it straight. We will start all over. I understand that you are a retail dealer in lumber?

A. Yes.

Q. And that you have been a retail dealer in lumber for approximately twenty-five years?

A. No; you are wrong.

Q. Let's get it straight.

A. I have been actively operating a yard at Sanger for the past two years.

Q. Yes?

A. And during the past season I operated a sawmill at Hume. Preceding that time I was interested in retail yards at Visalia and Fresno, but not in an active salesman or executive position.

Q. How many years of experience have you had in the retail lumber industry?

2411 A. Where I have been actively connected, I would say about five years.

Q. That means two years at Sanger?

A. Two years at Sanger. Three years with the Valley Lumber Company at Fresno many years ago.

Q. How many years ago?

A. Many years ago.

Q. During the time you were with the Valley Lumber Company at Fresno, were you selling any lumber under the name of California white pine?

A. That was in 1903, 1904, and 1905, and instead of multiplicity of grades and terms——

Mr. MATTHEW (interrupting). I move to strike out the witness' answer. I asked him a simple question to be answered by yes or no.

The WITNESS. Read the question.

(Whereupon the reporter read the question referred to.)

Examiner DE BRULER. Answer that yes or no.

A. No, sir.

By Mr. MATTHEW:

Q. Under what name did you sell lumber which was produced from Pinus ponderosa trees?

A. I think the term "mountain pine" was used.

Q. For what period have you been familiar with sugar-pine lumber as such, Mr. Prescott?

A. Thirty years.

2412 Q. Have you always known it as sugar pine?

A. Yes, sir.

Q. Never by any other name?

A. No, sir.

Q. Do you know whether or not any of your customers at Sanger ever inquired for California white pine?

A. I have never heard one.

Q. Under what name do they ask for Pinus ponderosa lumber?

A. I have never had them inquire for Pinus ponderosa lumber.

Q. Do you mean you don't sell Pinus ponderosa lumber?

A. Yes, sir; we sell it.

Q. Well, what inquiries are made, which precede a sale of that lumber?

A. Well, the customer wants sugar pine, or he wants clear lumber, clear pine. If he demands sugar pine, we have it; if he wants clear pine he gets Pinus ponderosa or possibly apple pine.

Q. What is apple pine?

A. There are local woods there and that is the local pine.

Q. Do you know what it is botanically?

A. No, sir; I don't.

Q. Do you know whether it comes from the Pinus ponderosa tree or not?

A. No, sir; it is a different tree.

Q. Is it lumber which is produced Sierra Nevada mountains?

A. Yes, sir.

Q. At a high elevation or low elevation?

2413–14 A. High elevation.

Q. Do you happen to know whether it comes from Jeffrey pine?

A. No, sir; it is not Jeffrey pine.

Q. Are you familiar with the Jeffrey pine?

A. No, sir.

Q. You don't know that tree?

A. No, sir.

Q. You referred to customers who want clear lumber. Did you use that expression?

A. Yes; finished.

Q. I am not quite sure I understand how you determine whether you are to furnish sugar pine or Pinus ponderosa lumber in response to such an inquiry.

A. On our price list, clear finished is prescribed. If they want sugar pine it costs more money. Sugar pine is definitely defined.

Q. Well, is your other lumber definitely defined?

A. So far as in our power.

Q. I know, but how do you do it on your price list? You speak of clear finish, with sugar pine definitely defined. How do you definitely define this other lumber as Pinus ponderosa?

The WITNESS. Read the question again.

(Whereupon the question referred to was read by the reporter.)

A. Clear finish.

2415 By Mr. MATTHEW:

Q. Well, is it clear-finish yellow pine, or is it clear-finish something else?

A. It might be.

Q. Which is it? You do recall definitely that you have the words "sugar pine" definitely defined in your price lists?

A. Yes, sir.

Q. Can't you tell me what term you have on your price lists?

A. Clear pine.

Q. Then when you use the words "clear pine", you mean pine that is yielded by the Pinus ponderosa tree?

A. Yes; and what other timber goes into the same grade.

Q. Any fir in that grade?

A. No, sir.

Q. Any cedar?

A. No, sir.

Q. Just merely pine?

A. Yes, sir.

Q. But no sugar pine?

A. No sugar pine.

Q. Then you are not selling any lumber as yellow pine under that name; am I right in that conclusion?

A. We are selling yellow pine under the name of yellow pine, also clear yellow-pine finish.

Q. Now, did you have the words "clear yellow-pine finish"

2416 in your price list?

A. Yes, sir.

Q. That is what I have been trying to find out.

A. Pardon my dumbness.

Q. Then, you have sugar pine and clear yellow pine on your price list?

A. Yes, sir.

Q. And have you always had the term "clear yellow pine" on your price list from the commencement of your operations?

A. At Sanger, yes, sir; 2 years.

Q. Now let's get into commons. Do you sell any sugar pine commons?

A. Yes, sir.

Q. Under what name?

A. Sugar pine.

Q. Do you sell any yellow pine common?
A. Yes, sir.
Q. Under what name?
A. Yellow pine, or common pine boards.
Q. What are common pine boards?
A. Well, it is largely yellow pine with possibly a sprinkling of apple pine in it.
Q. Some sugar pine?
A. Yes, sir; some sugar pine.
Q. All thrown together in the common grades?

A. It might be, but where we specify clear sugar pine—
2417 that is, common sugar pine—we get sugar pine.

Q. When a customer simply asks for common lumber you give him what may be a mixture of sugar pine and yellow pine and apple pine, as you term it?
A. That is correct.
Q. Now, in the opening part of your testimony, if I understood you, Mr. Prescott, I think you stated that your customers are confused by the term "California white pine", and you added specifically, as I recall it, that many of them are recently from the East and that that circumstance tends to increase their confusion.
Mr. BURR. I object to that statement of his testimony. I don't think he said his customers were, but that the retail trade were confused.
Examiner DE BRULER. Objection overruled.
Mr. BURR. I think he has misstated the evidence.
Mr. MATTHEW. The witness has a right to correct me.
Examiner DE BRULER. Your objection is overruled.
Mr. BURR. I have a right to object if your statements aren't fair.
Mr. MATTHEW. I asked if I correctly stated the testimony.
The WITNESS. No, sir; you didn't state it.

By Mr. MATTHEW:

Q. Will you correct me on that and tell me what you did testify in that respect?

2418 A. Counsel asked me if my customers knew what white pine was, or that is the gist of what he asked me, and I answered him that in their minds white pine was a grade that held over from their acquaintanceship and use in the eastern part of the United States, and that when they called for white pine they thought they were getting that northern white pine, which is a very different wood from the so-called trade name, white pine of California.

Q. Now, I thought you also said, in response to my question, that your customers do not call for California white pine by that name. Am I wrong in so recalling your statement?
A. Do you want what I tried to convey to you?
Q. I want this point cleared up.
The WITNESS. Read the question.
(Whereupon the question referred to was read by the reporter.)

Examiner DE BRULER. That is fair.

A. No, sir; they don't ask for California white pine. They ask for white pine, or did.

By Mr. MATTHEW:

Q. Then they do ask for white pine?

A. Occasionally.

Q. That is only occasionally, is it?

A. In the course of business; yes.

Q. When a customer asks for white pine in your yard what does he get? What is sold?

2419 A. My salesmen are instructed to explain what he can get and show him the material.

Q. That is all that you meant to convey, then, by your testimony in direct examination as to confusion in the customer's mind?

A. Yes, sir; we try to sell a man what he calls for.

Q. I assume you think you succeed in doing it, do you not?

A. I don't know—I am here.

Q. You do sell the Pinus ponderosa lumber to quite an extent, do you not?

A. Yes; we sell it.

Q. You sell more of it than of the sugar pine?

A. No; not in our retail yard at Sanger.

Q. In fact, the Sanger-Fresno district happens to be a particularly favorable sugar pine market, is it not?

A. Well, they are pretty well educated to the benefits of sugar pine.

Q. The best sugar pine stands are in the near vicinity of the Sanger-Fresno area, is it not?

A. No; the best sugar stand is north of Fresno, north of the Fresno area.

Q. How far north?

A. I think the Forest Service specifies that the best stands are found in Madera, Mariposa, and Tuolumne Counties.

Q. I didn't intend to confine you too strictly to the territory immediately opposite Fresno. It is in the southern section of

2420 the Sierras generally that you find that the larger and more important stands of sugar pine, is it not?

A. Well, yes; Fresno claims all those places.

Mr. MATTHEW. May I suggest that that be stricken out—that is, the last part.

Examiner DE BRULER. You may strike that out.

By Mr. MATTHEW:

Q. Let me come back once more to the way your lumber is packed in bins in your retail yard. Your clears are both sugar and yellow pine, as you term it—are put in bins which are marked "sugar pine" and "yellow pine." That is true?

The WITNESS. What is the question?

(Whereupon the question referred to was read by the reporter.)

Examiner DE BRULER. You can answer that yes or no.

A. No, sir. You asked if this material was put in bins and branded "yellow pine" and "sugar pine." In lumber that wouldn't go.

By Mr. MATTHEW:

Q. I asked if the bins were labeled "sugar pine" and "yellow pine", respectively.

A. The bins for the storage of the lumber in question have a little card right on the side of them, and if the bin contains yellow pine, or clear pine finish, or sugar pine, the same is noted on the card indicating the bin that it is in.

2421 Examiner DE BRULER. Let me ask what is in the clear pine finish—what kind of timber is put in that bin? You spoke of clear pine finish; what kind of timber goes into that?

The WITNESS. In our yard—I am answering as to what it is in my yard—in that bin branded "clear pine finish" would be yellow pine, apple pine, and some other of the local pines that might not be—I couldn't classify. It is a general trade name, Mr. Commissioner—clear pine.

Examiner DE BRULER. What would you have under yellow pine? What would you have in that bin?

The WITNESS. There is a grade of finish called "clear yellow pine finish" that we sell and that is what I am trying to explain to counsel, that in my yard these things are designated that way.

By Mr. MATTHEW:

Q. Now, I so understand; that is, I think I understand. When you have this clear yellow pine finish in a particular bin there is a card on the bin that shows that it is there?

A. That is my instructions; yes, sir.

Q. That is done in fact, isn't it?

A. Yes, sir.

Q. And you deal similarly with your sugar pine clear finish?

A. Yes, sir.

Q. How do you label the common?

A. The common dimensions are branded 1, 2, or 3 mountain

2422 pine—1, 2, or 3 pine, or 4. We handle some no. 4 in pine. Now, that pine contains largely yellow pine; it may contain some sugar pine.

Then, in another series of bins, we have sugar pine boards—1, 2, 3, and 4 sugar pine boards.

Q. Then you still carry and market lumber known as mountain pine?

A. We do; yes, sir.

Q. Does your mountain pine at the present time include such lumber as cedar and fir?

A. It does; yes, sir; that is, in some grades. In other grades it does not.

Q. In some of the grades mountain pine which you sell, it does contain cedar and white fir?

A. In the boards only.

Q. What do you mean by the boards?

A. One inch by six, eight, ten, or twelve inches in width.

Q. How is your lumber graded—in accordance with any particular grading rules of an association of lumbermen?

A. Yes, sir.

Q. What grading rules do you follow?

A. Well, the California Sugar and White Pine Association rules.

Q. Then, these terms and these grades, concerning which you have been testifying, have been taken from the grading rules of the Californing White and Sugar Pine Manufacturers Association?

A. Yes, sir.

Q. Do you find the term "mountain pine" there?

2423 A. Yes, sir—well—the term "mountain pine" occurs on the price lists, I am certain. I wouldn't swear that it is on the California White and Sugar Pine price lists.

Q. I didn't ask you what price lists, I asked you about grading rules.

A. Grading rules, instead of price lists—pardon me.

Q. You didn't find the term "yellow pine" in the grading rules of the California White and Sugar Pine Manufacturers Association, did you?

A. I don't remember. To the best of my knowledge and belief it is there.

Q. You think it is there?

A. Yes, sir; I think it is.

Q. Does your no. 2 common correspond to the no. 2 common as specified by the grading rules of the California White and Sugar Pine Manufacturers Association?

A. The so-called "mountain pine mills", consisting of Pickering, the Yosemite, the Madera Sugar Pine, and the Sugar Pine Company of Pinedale, use what is known as a San Joaquin Valley grade, and that is what we buy and what is furnished.

Q. Exactly. Then you are following the San Joaquin Valley grades, and not following the grades of the California White and Sugar Pine Manufacturers Association, are you?

A. I would say that those grades are so interwoven that it would be impossible for an average man to divide them up.

2424 Q. Let's concede that, but which grades are you following?

A. We are following the grades which we buy.

Q. Then you are following the grades of the San Joaquin Valley Association, to which you referred?

A. I don't know of any association—they are known as the "mountain pine mills."

Q. Then you are following the grading rules of these mountain pine mills; isn't that it?

A. As applied to our locality; yes, sir.

Q. I am asking you about your locality entirely. All of my questions are about your locality. May we have that understood? I take it that is the common practice in the Fresno-Sanger district?

A. It is my practice.

Q. Do you know whether it is the common practice in the trade?

A. I think it is; yes, sir.

Q. Will you tell me whether or not you were requested, by any of the manufacturers of lumber, to use the name "yellow pine" to describe this Pinus ponderosa lumber?

A. I never have been approached on that subject.

Q. Never has been discussed between you and any wholesalers or manufacturers of lumber?

A. No, sir.

Q. You told us, Mr. Prescott, about a purchase of logs in 1918, and I think you said you got them from the Sanger Lumber Company at Hume?

2425 A. I didn't tell you that.

Q. Well, I guess my notes are in error. My notes say you bought four million feet of logs in a pond from the Sanger Lumber Company at Hume.

A. Yes, sir; I did.

Q. In what respect was my statement in error?

A. You said I bought them in 1918. I bought them during the past season, 1929.

Q. Beg pardon. You bought them in 1929?

A. Yes, sir.

Q. They have been in the pond since 1918.

A. Prior to 1918; yes, sir.

Q. What year were the logs put into the pond?

A. I said prior to 1918.

Q. I asked you now what year?

A. I didn't put them there.

Q. Do you know?

A. I do not; no, sir.

Q. Do you know whether the sugar-pine logs were placed in that pond before the ponderosa logs were placed there?

A. Some of them were; yes, sir.

Q. What do you know about it?

A. There were some sugar-pine logs at the bottom of the dump there that I took out that were buried ten deep. That dump had been dragged over numerous times, so I am positive that some of those sugar-pine logs had been there probably from the in-

2426 ception of the operation.

Q. But you don't know of your own knowledge when they were put in the pond?

A. I do not.

Q. I think you stated that in your particular territory, with which you are familiar, there are more sinkers relatively among the sugar-pine logs than among the ponderosa logs; is that right?

A. Correct.

Q. To what do you ascribe that circumstance; why should there be more sinkers in the sugar-pine logs than in the ponderosa-pine logs?

A. Well, they are heavier.

Q. Why are they heavier?

A. They contain more sap, more sap liquid.

Q. Than the sugar pine?

A. I assume so; yes, sir.

Q. I——

A. (Interrupting.) Wait a minute. You are asking me a question silviculture that I am not capable of answering.

Q. The answer is you don't know?

A. I don't know.

Q. And similarly you don't know what makes ponderosa logs heavier or lighter?

A. I don't know.

Q. Do you ever have any difficulty in distinguishing sugar-pine lumber from ponderosa-pine lumber?

A. Yes, sir.

2427 Q. Some pieces are almost indistinguishable?

A. Yes, sir.

Q. When did you first become acquainted with the term Pinus ponderosa?

A. I think in 1915, in reading Bryant's book on logging.

Q. I suppose about the same time you became familiar with the botanical name of sugar pine?

A. I did; yes, sir.

Q. In testifying as to the condition of logs in this pond and elsewhere, Mr. Prescott, you called attention to the fact, as I recall it, that the sapwood decays more quickly than the heartwood. Is that correct? That is my inference from your testimony. Am I right?

A. In the Pinus ponderosa.

Q. Well, how about the sugar pine; would the sapwood decay more quickly than the heartwood in sugar pine?

A. What my testimony was?

Q. I am asking your judgment now.

A. It depends on conditions.

Q. Any conditions. We will take just sugar-pine lumber, some sap and some heart, and I ask which will decay the more quickly under identical conditions.

A. Sap.

Q. Did you notice whether the timber which required replacement in the Sequoia Lake Dam was sapwood or heartwood?

A. It was impossible to tell at that date.

2428 Q. You spoke of using some Pinus ponderosa lumber to construct pile bottoms for foundations at your basin operation?

A. Yes, sir.

Q. And in two or three years the foundation planks rotted?

A. Yes, sir.

Q. These planks were sawn lumber?

A. Sawn lumber.

Q. Sapwood or heartwood?

A. Both.

Q. About the most severe test to which any wood can be put, as I recall your testimony, is to alternate wetting and drying?

A. I think authorities agree on that.

Q. That is a condition, according to your observation, that is most favorable to rapid decay?

A. Yes, sir.

Q. In general, have you found that the Pinus ponderosa lumber which you obtained from the northern areas, say the Klamath Falls Basin, is lighter in texture and softer than the Pinus ponderosa lumber obtained from the vicinity of Sanger, or in the southern Sierras generally?

A. You ask if the Pinus ponderosa that I bought from Klamath Falls was softer than that of our vicinity?

Q. Exactly.

A. Yes, sir.

2429 Q. I want to be sure, Mr. Prescott, that I got the intent of your testimony as to the relative amounts of sapwood and heartwood in the sugar-pine and yellow-pine clears. Do you recall testimony in that regard?

A. I don't know what you got.

Q. You recall testifying on that point, do you not?

A. Yes, sir.

Q. I want to find out what I got. Do I understand you to state that it is the common thing to get a very large proportion of clear lumber from the heartwood of the sugar pine?

A. I testified as to the relative proportion; there is a greater proportion of clear lumber of sugar-pine heartwood than as compared with yellow-pine heartwood.

Q. Then, may we put it this way, and have a fair summary of your testimony, or at least your information: That the sugar-pine clears are more than 50 percent of sapwood?

A. No, sir; I wouldn't agree to anything on a percentage basis.

Q. You wouldn't express an opinion on it?

A. I would not; no, sir.

Q. The most you can say is that the substantial proportion of sugar-pine clears would be of sapwood?

A. A substantial proportion; yes, sir.

Q. I assume you have no interest at the present time in any lumber-manufacturing company?

A. I have no interests in any manufacturing concern.

Mr. MATTHEW. I think that is all.

2430 Redirect examination by Mr. BURR:

Q. Mr. Prescott, in your part of the State how do the local residents, in your experience, refer to the ponderosa trees? Do they call it white pine or yellow pine, or how do they refer to it?

A. Yellow pine.

Q. That is the common name, is it?

A. Yes, sir.

Q. How is it among the loggers, the actual fellows that take it, that do the work in the forests; do they call it yellow pine or California white pine?

A. The loggers have various terms. Some of them I don't think would do in this inquiry. They generally refer to it as yellow pine.

Mr. BURR. That is all.

Recross-examination by Mr. MATTHEW:

Q. Has it ever occurred to you that this common name of yellow pine may have been suggested by the color of the bark of the tree?

A. Well, that same color goes all through it.

Q. Would you mind answering the question now?

A. Yes.

Mr. MATTHEW. That is all.

Mr. BURR. That is all.

2431 Examiner DE BRULER. That is all. You may be excused.

(Witness excused.)

Mr. BURR. Call Mr. Berry, please.

SWIFT BERRY was thereupon called as a witness on behalf of the Commission and, having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Berry, your business is lumber, is it?

A. Yes, sir.

Q. And what concern are you associated with?

A. The Michigan, California Lumber Company.

Q. How long have you been connected with that concern?

A. Six years.

Q. They are located where?

A. At Camino, El Dorado County, California.

Q. And have been located there ever since you have been connected with them, have they?

A. Yes, sir.

Q. Now, Mr. Berry, I wish you would say when you first began to have experience in forestry matters, and more or less sketch your experience.

2432 A. I began in 1903 in the Black Hills, South Dakota. I worked there three seasons in the woods, during high-schools vacations; I worked eight months in the Black Hills of South Dakota as a ranger in the Forest Service. I spent the best part of two years in North Carolina in the forest school, and also cruised timber in North Carolina, West Virginia, Georgia; and I then entered the

Forest Service, was in Colorado for two years, and then I came to California. I was nine years connected with the district office of the Forest Service here in San Francisco, where my work was first on timber sales as an inspector of timber sales work, and logging engineer for the Forest Service.

Then I was two years in France in the forest engineers, and since then in timberwork, and one year as secretary of the California Forest Protective Association before going with the Michigan, California Lumber Company.

Q. Now, in connection with your work for the Forestry Service, what were your duties?

A. Check scaling and inspection on timber sales—that is, sales of timber made to purchasers of national forests—and later as logging engineer. I appraised prices for sales of Government timber, during which work I visited practically all of the lumber operations in California pine, both the mills and the woods, getting information on costs for the purpose of appraising costs of operation.

2433 Q. What is your company at the present time designating for sales purposes its ponderosa lumber?

A. We get out our stock sheets and price lists as pondosa pine.

Q. How long have you been calling it pondosa pine?

A. Since July 1927.

Q. Can you tell me what induced the company to make that change?

A. The company felt that——

Mr. MATTHEW (interrupting). Pardon me a moment. This matter was the subject of detailed and extensive testimony on the part of Mr. Danaher, who, I understand, is the president of this same company, at the New York hearing. I think that it is purely accumulative. In fact, it is worse than accumulative; it is a restatement by another officer of the same company of the same facts, and I object to it going in the record again. And if that objection isn't followed, I desire to offer another.

Mr. BURR. I think I will withdraw the question.

Examiner DE BRULER. If that is the case, I think it shouldn't go in.

Mr. BURR. I have no desire to offer anything to rebutt that part of Mr. Danaher's testimony.

Mr. MATTHEW. I don't think you have a right to put on a number of witnesses to testify to the same identical state of facts.

Mr. BURR. I don't agree with counsel. Nevertheless, I will withdraw that question.

2434 Q. Now, Mr. Berry, have you had, in connection with your experience, an opportunity to know as to the relative durability of ponderosa- and sugar-pine logs after being felled and left on the ground; have you had experience of that kind? First, tell us what your experience is; and second, what you found to be the situation as regards comparative durability.

A. I have had that experience.

Q. Now, just state in general how you have had opportunities to observe that situation.

A. My observations have been that sugar-pine logs lying on the ground, either in the entire tree or bucked, are more durable than pondosa-pine logs. Pondosa-pine logs felled in the summertime, left with the ends lying together, start to blue-staining the sapwood within three weeks. That doesn't occur nearly so soon in sugar pine. We never leave sugar-pine logs over winter.

Q. Sugar-pine logs?

A. Pardon me; we never leave pondosa-pine logs over winter, because the sapwood entirely blues. We do leave sugar-pine logs sometimes, because they don't blue nearly so much; that is, the sapwood. The heartwood doesn't blue over winter.

Q. Of either variety?

A. Yes. In the summer of 1926 we logged timber that has been owned by our company over twenty years, where trees had been felled for shake timber thirty-five years ago but didn't split
2435 and had been left on the ground. The bark of these logs has entirely disappeared; the sapwood has rotted; but the heartwood was perfectly sound, and we took them all to the mill, and they made good lumber.

In 1927 we built our logging railroad south of camp 9 and felled ponderosa pine on the right of way. These logs were left until September 1929; at that time they were so stained and had the advance of brown rot to such an extent that we did not log them.

Q. Now, have you had any opportunity to observe the durability of dead but standing timber?

A. Yes, sir.

Q. Has that included the varieties of ponderosa and sugar pine, that experience?

A. Yes, sir.

Q. Can you describe any instances of that character so that you can tell which are the more durable?

A. We commonly fell dead sugar-pine trees on our logging operations. In connection with the timber sale this year we felled all the dead trees. The sapwood of ponderosa pine, of standing dead ponderosa pine, begins to stain and decay sooner than the sapwood of sugar pine. The heartwood of ponderosa pine becomes unmerchantable sooner than the heartwood of sugar pine.

We fell and log sugar-pine dead trees that have been
2436 standing a great many years. Ponderosa-pine dead trees that have been standing over one summer season we do not log.

Q. Why is that?

A. The sapwood has become so stained and soggy with the advance rot that it isn't really merchantable, of good merchantability.

Q. The sapwood, you say?

A. Yes, sir.

Q. How about the heartwood; don't you log that?

A. The heartwood would be sound, but it makes up a less proportion of the tree. It is not enough to pay to log it.

Also, the standing ponderosa-pine tree checks more—at least it checks to a greater extent—and also bores enter the ponderosa-pine tree more than the sugar-pine tree.

Q. Can you contrast the El Dorado County ponderosa as to texture and quality, etc., with the Plumas County as to cutting values and proportions of sap?

A. Yes.

Q. Will you be kind enough to do so?

A. The timber in El Dorado County, as a rule, is larger, produces in the factory grades wider lumber, longer distance between knots, and has a greater cutting value. It varies more between localities; that is, growing conditions of certain types in El Dorado County permit a long growing season, which makes more summer
2437 wood and therefore a greater difference between the spring wood and the summer wood, which makes a greater difference in texture of the lumber. There are other localities in El Dorado County where growing conditions are very satisfactory for ponderosa pine. The growing season doesn't last quite so long; the summer wood is less in proportion; and the texture quality of the factory lumber compares very well with that in Plumas County or other counties further north.

My experience and observation of the lumber produced in the upper Feather River is that the ponderosa pine varies between localities there and not so great as it does on the west slope, but to a considerable extent.

I have noticed that due to the difference between the heartwood and the sapwood in ponderosa pine, in Plumas County, that there is a good deal of warping and also checking.

Q. Now, have you noticed the proportion of sap in the shop grades of the El Dorado County and Plumas County in contrast? I don't think you covered that point. I would like you to state what you have noticed as to the proportions of sap and heart in the shop grades in those two sections.

A. I don't think I can answer that.

Q. All right, sir. Now, taking Pinus ponderosa as an average, as nearly as you can, will you compare the proportion of sap with the proportion of sap in sugar pine?

A. In our country, in our locality, by volume the proportion
2438 of sapwood in the ponderosa pine is about double that of the sugar pine.

Q. You say in your locality?

A. Yes, sir.

Q. Yes?

A. I think the same thing holds for the rest of the west slope of the Sierras, at least, probably throughout the range of sugar pine.

Q. That would be the result of your experience, is it?

A. Yes, sir; also measurements which I have made.

Q. Now, in the factory, or shop grades, of sugar pine, which predominates, the heart or the sapwood?

A. The heartwood.

Q. Well, what would be the percentage of sap, would you say, as an average proposition of those grades—shop grades?

A. I wouldn't want to put it into percentage, but the heartwood predominates to a very considerable extent.

Q. What is the designation of the selects and clears, insofar as they come from the sappy part of the sugar pine; for what purposes are they used?

A. We manufacture our sap sugar pine into four-quarter or five-quarter lumber. That is the thinner lumber, because it is easier to dry or season it. Those grades go for quality use, interior finish, to some extent, piano-key manufacture.

Q. What?

2439 A. Piano-key manufacture, pipe-organ manufacture, and high quality uses of that sort.

Q. They don't go on the outside of the building, do you say?

A. I don't think so.

Q. Which has the greater amount of sapwood in the shop grades, sugar pine or ponderosa?

A. Ponderosa pine.

Q. Which has the greater diversity of texture, the heartwood of sugar pine or the heartwood of ponderosa?

A. The heartwood of ponderosa pine differs more from the sapwood than the heartwood of sugar pine.

Q. In what respects?

A. In color and, I think, hardness perhaps.

Q. Do you find that the heartwood of either of these varieties of trees is ever so small as not to have a scale value?

A. Yes; both of them.

Q. Both of them?

A. Yes.

Q. In which variety does it happen more often?

A. In the ponderosa.

Q. Up to what sized tree would that occur in the sugar pine?

A. Rapidly growing young trees; it might occur up to 24 to 30 inches in both trees.

Q. Might it occur to a larger diameter in one variety than in the other?

2440 A. Yes. I don't recall any great difference in both rapidly growing trees, but at the lower elevations we find many more trees of that type of ponderosa than we do of the sugar pine.

Q. Is there a difference between the ability of sugar pine and ponderosa to stay in place in the yard and to keep its shape in the yard?

A. Yes.

Q. Which is the more subject to warping in the yard?

A. Ponderosa pine.

Q. Do you sell a larger amount of either of these varieties of lumber for pattern purposes?

A. Yes, sir.

Q. Which is the more sought for that purpose?

A. Sugar pine.

Q. What are the characteristics that make sugar pine more usable for pattern purposes than ponderosa?

A. The uniformity of its texture, which makes for easy working, and also it will stay in place after it is made into patterns. It doesn't warp or check.

Q. I wish you would define the word "check" for the benefit of the Commission. What do you mean by check?

A. Check is a split, a small split that occurs in lumber, due usually to the difference in texture between the heart and sap, or the summer and spring wood. In drying, giving off moisture in dry-
2441 ing—I will change that—in giving off moisture in drying, the spring wood may dry out a little faster, and it shrinks faster, and that causes it to check.

Q. What are the characteristics that are required of lumber on the part of manufacturers of pipe organs and piano keys?

A. I should say it was primarily a soft lumber that will stay in place after it is manufactured—seasoned and manufactured.

Q. Did you testify that sap is used, of the sugar pine, on occasions for those purposes?

A. Both heart and sap are. I am not sure about piano keys; I wouldn't say.

Q. Do you sell ponderosa lumber for those purposes?

A. We do not.

Q. Beg pardon?

A. We do not.

Q. Are you familiar with the rules of the Forestry Service with regard to lumber sales in relation to dead and down timber?

A. Yes, sir.

Q. What are those rules? Can you state them in substance?

A. Their contracts provide that all standing, and dead timber standing, and down dead timber that is merchantable will be taken under the contract.

Q. Is the clause practically the same for various varieties of lumber, irrespective of species?

A. It provides that a merchantable log for sugar pine and western yellow pine, ponderosa pine, will be considered merchantable
2442 if 33⅓ percent is sound. And that logs of Douglas fir, white fir——

Q. (Interrupting.) I don't believe we will go into that part.

Examiner DE BRULER. Keep within the pines.

By Mr. BURR:

Q. Did you finish your answer?

A. Yes, sir.

Q. Except for the other varieties?

A. Yes, sir.

Examiner DE BRULER. The reason why I said that is if we go into all timber we will never get through with this hearing.

By Mr. BURR:

Q. Now, the rule is the same, is it, in its language, as to both sugar pine and ponderosa; is that true?

A. To the best of my recollection.

Q. Now, do you know what the common name, among the residents of the forested parts of the country, is for ponderosa, the common, ordinary name in use?

A. Yes, sir.

Q. What is it?

A. It is yellow pine.

Examiner DE BRULER. I didn't get the answer.

The WITNESS. Yellow pine.

By Mr. BURR:

Q. What is the common local name of sugar pine?

2443 A. Sugar pine.

Q. Is the same true for the lumberjacks in California, so far as you have had experience?

A. Yes; particularly with our operation they call it yellow pine; they call the logs yellow pine.

Q. Do you cut grades of all heart sugar pine for the markets, Mr. Berry?

A. Yes, sir.

Q. You get orders for that kind of material?

A. We get orders for thick material which, in order to season, must be cut all heart, such as 2½ inches, 3 inches, and 4-inch stuff. During the past season we cut 6-inch lumber—lumber 6 inches thick—clear heart sugar pine.

Q. To what classes of purchasers does that type of clear heart go?

A. Principally to pattern users and to retail yards where they require thick pieces for special purposes, perhaps mantlepieces—I don't know just where it does go.

Q. Now, your shop lumber is not clear heart; am I right on that? Or is it clear heart?

A. It is not entirely clear heart; there are sapwood corners on some of our shop lumber, but it is largely heart lumber in the sugar pine.

Q. Will you state what are the characteristic qualities of sugar pine very briefly, the character and qualities of that type of lumber?

2444 A. Of the tree or the lumber?

Q. Of the lumber.

Examiner DE BRULER. As to its texture.

By Mr. BURR:

Q. In general, if you please.

A. It comes from trees of large size. It produces a high-quality lumber of good texture, good cutting quality, and a large proportion of clear and select lumber.

Q. Available in wide or narrow widths?

A. Available in wide widths.

Q. Which is the largest variety of pine in the country, if you know?

A. Sugar pine.

Q. Would you say that is true as an average?

A. Yes; as an average, and as the maximum size of the trees.

Q. In the characteristics that you have referred to, do you regard sugar pine as notable among the pines for those characteristics?

A. Yes, sir.

Q. Are you a graduate of the forestry school?

A. Yes, sir.

Q. Where?

A. At the Biltmore Forest School at Ashville, North Carolina.

Q. Are there certain qualities that are known as characteristic of so-called genuine white pines?

2445 A. I am not familiar with the timber of northern white pine or Idaho white pine.

Mr. BURR. That is all.

Cross-examination by Mr. MATTHEW:

Q. Mr. Berry, has the common or popular name of sugar pine been sugar pine throughout the entire period of your familiarity with the tree?

A. Yes, sir.

Q. Your lumberjacks always refer to it as sugar pine?

A. Yes, sir.

Q. You never heard them refer to it as white pine?

A. No, sir.

Q. Do you know that botanically it is classified in the white-pine group?

A. Yes, sir; it is a five-needle white pine.

Q. Has it ever occurred to you that the popular name of yellow pine was given Pinus ponderosa because of the color of the bark?

A. I think it comes from the color of the bark and also the general appearance of the tree, which has a yellow-pine appearance, such as a short-leaf yellow pine.

Q. You naturally expect that any ordinary layman going through the forest and seeing the tree with the yellow trunk will say, "That is a yellow pine"?

A. Yes, sir; the bark is yellow; it has the appearance of yellow pine.

2446 Q. You referred to the suitability of sugar pine for pattern purposes. Do you know whether or not the United States Navy Department has ever disapproved of sugar pine for pattern uses?

A. Why, we have sold considerable sugar pine that went to the navy yard at Vallejo up until two or three years ago. We have lost that business. It has gone to other distributors. As far as I know, personally, I don't know whether the Navy Department has made any ruling on the sugar pine or not.

Q. You don't know whether the Navy Department has disapproved of the sugar pine for pattern purposes?

A. No, sir.

Q. You never heard of any action taken by the Navy Department on that matter?

A. I have heard that——

Mr. BURR (interrupting). I don't think we want hearsay.

Examiner DE BRULER. He can ask him that. I wouldn't be so particular about that.

Mr. MATTHEW. I am testing the validity of this statement.

Mr. BURR. Go ahead.

The WITNESS. Shall I answer?

Examiner DE BRULER. Yes.

A. I have heard that, yes; that they have made some ruling. I am not familiar with it.

By Mr. MATTHEW:

Q. Disapproving of it?

A. An unfavorable ruling; yes, sir.

2447 Q. Mr. Berry, do you intend to convey the impression that there is any marked difference between the average size of the ponderosa trees and of the sugar-pine trees, respectively, which are used for lumber purposes in California?

A. Yes, sir; the sugar-pine trees throughout the larger portion of the range of sugar pine average larger than the yellow-pine tree. The sapwood on them is less.

Q. I am not asking about the sapwood. Is there a marked difference in the average size of the sugar-pine trees and the ponderosa trees in California? I am talking now about the merchantable trees.

A. Yes, sir. I should say the sugar-pine trees would average perhaps ten inches to a foot in diameter more than the ponderosa-pine trees.

Q. Can you give me the average number of logs to a thousand feet, from your observation?

A. No; I can't exactly.

Q. Could you approximate it?

A. They average, the pines average, 2 to 3 logs to the thousand and——

Mr. BURR. Which pine?

The WITNESS. The pines.

By Mr. MATTHEW:

Q. I am asking about sugar pines.

A. I think they both run between 2 and 3, but the average for sugar pine would be less; that is, nearer two than the pon-
2448 derosa pine would be.

Q. That is as closely as you can approximate it?

A. Yes, sir.

Q. You stated, Mr. Berry, that it is your opinion that the sapwood of sugar pine is not going to exterior use. How can you be certain of that?

A. That is my opinion; I can't be certain.

Q. All you know is, you sell your lumber to the trade; do you not?

A. Yes, sir; I am not—I haven't experience in distributing lumber.

Q. You have no knowledge at all as to whether or not sugar-pine sapwood may not be used for exterior purposes?

A. I know that most of our product is not used for that.

Q. But you don't know whether or not——

Mr. BURR (interrupting). Let him finish his answer.

Mr. MATTHEW. I thought he had finished.

A. I was going to say that I couldn't swear that none of it was used for that. I don't think it is.

By Mr. MATTHEW:

Q. That is not based on any information?

A. That is getting out of my knowledge—the distribution of lumber.

Q. Does the period of year in which trees are felled have anything to do with their susceptibility to decay?

2449 A. I do not know.

Q. That is, as far as you know it makes no difference whether the tree is felled when it is in the sap or otherwise?

A. A tree felled with the sap down will not stain as quickly as one with the sap up, but I don't know about the actual rotting.

Q. By stain you are referring to the blue stain?

A. The blue stain.

Q. The blue stain is not a symptom of decay, is it?

A. Not necessarily.

Q. You may have blue logs which are not decayed at all?

A. Yes; we have stained lumber that is not decayed at all. It is sound.

Q. Is the sugar pine ordinarily cut to greater thickness than your ponderosa pine?

A. Ordinarily, although it is becoming a custom to cut some thick ponderosa pine. We have cut some thick ponderosa pine the past season.

Q. The thicker boards are less likely to warp, cup, and twist, are they not?

A. In sugar pine; yes, sir; it is more difficult to season the ponderosa pine.

Q. I mean the thicker boards are less likely to warp, cup, and twist than the thinner boards of the same species?

A. Yes, sir.

2450 Q. It is your custom, when your sugar-pine lumber is sawed, to pile it, cover it with great care, paint the ends, see that they are sun-shaded?

A. Yes; we pile our sugar-pine lumber carefully in most of the yards for air-drying. We cover the piles well; we paint the ends of the lumber 2½ inches and thicker, but not 2-inch lumber or any lumber thinner.

Q. Do you follow the same practice with your ponderosa lumber?

A. We dry-kiln most of our ponderosa lumber, especially the upper grades, and we dry-kiln a small part of our sugar-pine lumber.

Q. You do not dry-kiln all of your ponderosa?

A. All that the kiln capacity will take care of. Some of the lower grades the kiln won't handle, and we pile it in the yard for air-drying.

Q. That that you pile in the yard, is it treated as your sugar pine?

A. It is treated, as well as sugar pine, in the same way.

Q. I assume that when you paint the ends of your lumber in the yard, covered, protect them from the sun, at least for the purpose of discouraging any checking or warping?

A. It discourages any small insects that might occur.

Mr. MATTHEW. That is all.

2451 Redirect examination by Mr. BURR:

Q. The kiln-drying process, is that as easy in the two types of lumber, the ponderosa and the sugar pine?

A. We find it easier to kiln dry ponderosa pine lumber.

Q. The kiln-drying process, has that been found successful up until recently in the sugar pine?

A. Yes; I think some concerns have kiln-dried sugar pine for some time. We kiln dried sugar-pine lumber successfully this season by giving it longer time and more careful treatment. The danger in kiln drying sugar-pine lumber is you get it too hot and burn it. We kiln dried 3-inch sugar pine this season.

Mr. BURR. That is all.

Examiner DE BRULER. Are there any further question to ask?

Mr. MATTHEW. That is all.

(Here followed remarks off the record.)

Examiner DE BRULER. We will take a recess until two o'clock this afternoon.

(Whereupon, at 12:35 o'clock p.m. a recess was taken until 2:00 o'clock p.m.)

2452 AFTER RECESS

2:00 P.M.

Examiner DE BRULER. We will proceed with the hearing if the parties are ready.

Mr. BURR. Call Mr. Andrew D. Ferguson.

ANDREW D. FERGUSON was thereupon called as a witness and, having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Ferguson, your line of occupation is what, sir?

A. I am the founder and principal owner of the Summer Home Town in the General Grant National Park of this State.

Q. How long have you lived in this State?

A. 62 years.

Q. That is, all of your life, is it, sir?

A. Beg pardon?

Q. You were born here, were you?

A. Yes, sir.

Q. And you have lived in Orrosi all this time?

A. No, sir; my ranch is in Orrosi, my principal business is in General Grant National Park. I have a vineyard in Orrosi.

Q. Are you running any kind of a mill at the present time?

2453 A. I have a planing mill in connection with my lumberyard at Wilsonia.

Q. You are retailing lumber, are you?

A. Yes, sir.

Q. Now, have you been familiar as a user of lumber with the various types of the lumber produced in your section of the State?

A. Yes, sir.

Q. For how long a period?

A. My first experience with this was probably 35 years ago, when I used to haul it from the mills in the mountains into the valley.

Q. How long have you been a retailer?

A. Ten years about.

Q. Do you run that establishment yourself?

A. Yes, sir.

Q. Do you know of certain logs that were bought by Edwin Prescott which were kept in Hume Lake up to about a year or so ago?

A. Yes, sir.

Q. Did you examine the sugar-pine logs in that lake after it was drained?

A. Yes, sir; some of them at any rate.

Q. What did you find their condition to be?

A. I found them to be in perfect condition as far as I could see.

Q. Are you familiar with the distinction between heart and sap lumber, or part of the timber?

A. Yes, sir.

2454 Q. Did you notice whether the sap portion of these sugar-pine logs was sound or not?

A. Apparently it was.

Q. Have you any knowledge as to how long those logs had been cut?

A. Yes, sir.

Q. Will you please state what knowledge you have?

A. The logs had been in the lake not less than six years, for the reason that the mill shut down six years before I examined these logs; how much longer I couldn't tell, because you understand in logging operations where they dump them into a large lake they keep ahead of the mill, and some of them might have been in several years before the mill was shut down. They were there at least six years, which would be seven years last year.

Q. Did you have occasion to notice any ponderosa logs in that mill-lake bottom?

A. Frankly, I used to be quite familiar with the botanical names of all logs, but I would rather you designate them by the terms I am familiar with now.

Q. Do you know what is known as the western yellow pine?

A. Yes, sir.

Q. Did you notice any yellow-pine logs, western yellow-pine logs in that lake bottom?

A. There were yellow-pine logs there. I didn't examine them closely.

Q. Why didn't you examine them?

2455 A. I was examining the location, in company with Mr. McGee, who was caretaker. He took me over to show me how well preserved the sugar pine was, and that is why I was looking at them. Incidentally, I was looking at them for the purpose of trying to buy some of those sugar-pine logs to make shakes of for my construction work in Wilsonia. That is the particular reason I examined sugar pine.

Q. Have you had occasion to buy lumber for any buildings in recent years?

A. Yes, sir.

Q. What occasion was that?

A. I have been buying it for ten years, but in 1928 I bought probably half a million feet in one lump.

Q. For what purpose were you buying?

A. General construction work in my summer town.

Q. Do you do the construction work for persons who buy lots from you out at your summer colony?

A. I would explain it this way: A large part of that construction work is my own buildings. In the meantime, for the convenience of my people, I buy lumber, all grades, and resell it to those people. So in that way everything in Wilsonia practically has gone through my hands.

Q. Now, have you had an opportunity, in connection with these repurchases, to observe the durability of sugar pine and yellow pine in contrast?

A. I have.

2456 Q. I wish you would state what the circumstances were.

A. I mentioned that I bought about half a million feet at Hume from the Hume Lumber Company, who were then proprietors of that whole tract and outfit there. This lumber was in piles, piled, what we call tight piling; that is, there is no sticks between the different layers of lumber. I bought the stuff as a lump and had occasion to move it. In that way I was able to tell the difference in the keeping qualities between sugar and yellow pine.

Q. Is tight piling a greater strain upon the durability of the wood than piling with sticks between the boards?

A. Unquestionably; yes.

Q. Why is that true?

A. Because, being piled tight, the moisture not only accumulates but there is no chance for the air to dry out the lumber; it will stay moist the year round.

Q. Now, was part of this lumber western yellow pine and part sugar pine?

A. Yes, sir.

Q. Now, what was the condition of the sugar pine that was piled tight or close?

A. It was in good condition.

Q. Was it blue stained?

A. Oh, naturally, weather stained some, of course; yes, sir; but the material was in good condition.

2457 Q. What was the condition of the yellow pine piled close?

A. A very large percent was in bad condition.

Q. What do you mean by bad condition?

A. I mean that rot had set in, had commenced to go to pieces, and occasionally a piece had completely gone, so far as building was concerned.

Q. What are the qualities and characteristics of sugar pine as contrasted with yellow pine?

A. You mean as a building material?

Q. Yes; in quality.

A. For any purpose that I have ever had occasion to use it the sugar pine is preferable to yellow pine. The reason, in the first place, it does not check, doesn't have a tendency to split, it doesn't warp under any conditions that I ever met with. It is easy to handle, easily sawed, and it will take nails. For instance, you can nail a sugar pine, drive a 12-penny nail within a quarter of an inch of the end of a board without splitting. That is not true of yellow pine. It is easier worked, as I say, in every manner, and stands the weather better, inside or outside conditions better.

Q. Are you familiar with the reputation of sugar pine for durability in your part of the State?

A. Yes, sir.

Q. What is it?

A. We consider it the most durable of all the pines.

2458 Q. Of all the pines?

A. Yes, sir.

Q. Are you familiar with the reputation in your part of the State of yellow pine for durability?

A. Yes, sir.

Q. What is the reputation of yellow pine for durability when exposed to the weather?

A. It is inferior to sugar pine.

Mr. BURR. You may cross-examine.

Cross-examination by Mr. MATTHEW:

Q. Mr. Ferguson, would you recommend the use of sugar pine for outside work where it would be in contact with the ground and subject to alternate drying and dampening?

A. I would; I use it that way.

Q. Would you recommend the sapwood of sugar pine for such purposes?

A. The same answer. I don't hesitate to use it that way. Don't misunderstand me—there might be some other form of wood that would be better, but between sugar pine and what we have been talking about I prefer the sugar pine.

Q. I haven't asked you whether you preferred sugar pine to yellow pine.

A. I didn't mean to run ahead of the question.

Q. I am asking you whether you recommend sugar pine for

2459 exterior use where it would be in contact with the ground and subject to wetting and drying alternately.

A. I do; I have used it.

Q. You recommend it for that use?

A. Yes, sir.

Q. Would you recommend the sapwood of sugar pine for such use?

A. Yes, sir—the sapwood?

Q. Yes.

A. Beg pardon. No; I wouldn't recommend sapwood of any kind for that use.

Q. Why wouldn't you recommend the sapwood of sugar pine for such use?

A. For the simple reason that sapwood of any wood is not as durable as the heartwood.

Q. I take it that you would prefer, in any event, not to use sugar pine for such purposes as I have just described where it will be in contact with the ground and be wet and dry alternately.

A. Let me understand the question. Do you speak now of sapwood or heartwood?

Q. Well, take heartwood; would you recommend it for that use, or does it tend to decay if it is in that position?

A. I would recommend it.

Q. There is no wood you would recommend in preference to it?

A. Redwood, but not any of the pines.

Q. Pardon?

A. Redwood would be more durable, but none of the pines.

2460 Q. Would you recommend cypress in preference to pines?

A. Pardon?

Q. Would you recommend cypress in preference to pines for such purpose?

A. I have never handled cypress. I don't know anything about it.

Q. Or cedar?

A. If it were good, sound heart cedar, it would be equal to sugar pine, and possibly a trifle better.

Q. Yellow-pine lumber is largely used for shop purposes, is it not, Mr. Ferguson?

A. Used for what purposes?

Q. Shop; as shop lumber?

Mr. BURR. I object to the question. I don't think it is fair.

Examiner DE BRULER. The objection is overruled.

Mr. BURR. This witness is not familiar with the manufacture of lumber. He has never been a manufacturer of lumber.

Mr. MATTHEW. It doesn't require a manufacturer of lumber to answer that.

Examiner DE BRULER. If he knows, he can answer.

Mr. BURR. You are asking an expert question of a man who has not been a manufacturer.

Examiner DE BRULER. If he can't answer, he wouldn't answer. He can answer if he can.

The WITNESS. By the term shop lumber, what am I to

2461 understand by that?

By Mr. MATTHEW:

Q. You are not familiar with that expression, shop lumber?

A. No, sir.

Mr. BURR. I object to this line of questioning. The witness isn't qualified to answer. Besides it isn't proper cross-examination.

Mr. MATTHEW. The examiner will recall that upon direct examination counsel asked him a very broad question as to the qualities and the uses.

Examiner DE BRULER. Oh, yes; he may answer the question if he can. I think we can get along faster to let him answer the question.

The WITNESS. If he will explain the term, I will answer it if I can.

By Mr. MATTHEW:

Q. For what purposes, in your opinion, is the yellow-pine lumber best adapted?

A. Well——

Q. I will withdraw that question.

Is yellow-pine lumber used at any time for interior trim?

A. Yes, sir; I use it.

Q. You find it satisfactory for that purpose?

A. I use it. It is satisfactory, sure. That is, it does for my purposes.

2462 Q. Do you use it at all in the manufacture of doors which are to be hung in the interior of houses?

A. Well, I don't manufacture doors. We make our own as we go. I never use it at all that way.

Q. You prefer the sugar pine?

A. Yes, sir.

Q. For that purpose?

A. Yes, sir.

Q. Now, is there any other use which you have in mind which yellow pine is quite commonly employed for?

A. I use it for studs, particularly in heavy construction. I use considerable of it for rafters. I use it in the 1x12 stuff for barns, outhouses, things of that sort. In other words, I use it in my rough construction.

Q. That is common lumber?

A. Common lumber; yes, sir.

Q. Do you use sugar pine in the common grades as well?

A. I do when I can get it. As a rule, you get very little sugar pine in the common grades.

Q. Do you know whether the sugar pine and yellow pine are mixed in the common grades?

A. There would be some mixture in my experience, but a very small percentage of sugar pine.

Mr. MATTHEW. I think that is all.

Examiner DE BRULER. That is all.

(Witness excused.)

2463 Mr. BURR. Call Mr. Benedict, please.

M. A. BENEDICT was thereupon called as a witness and, having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Benedict, your occupation is what, sir?

A. I am forest supervisor of the Sierra National Forest.

Q. How long have you been in the Forest Service?

A. Since 1908.

Q. I wish you would trace your various positions and name the forests that you have been working in in connection with your experience in the United States Forest Service.

A. I was ranger for two years on the Plumas Forest and deputy supervisor for four years on the Sierra and supervisor of the California Forest for two years. The California Forest, that is an individual forest unit. And supervisor of the Sierra Forest since 1916, 13 years, I guess it is.

Q. Have you had to do with the scaling of timber logs?

A. Yes.

Q. Will you describe about that experience, for how long a period, and where?

A. Well, personally, as to scaling, of course, I haven't done very much of that, only as incidental checking or something like that, for a good many years. But that is one of the jobs that is under my direct supervision.

2464 Q. And you did do it yourself for a period, did you, when you first joined the Service?

A. Yes; when I first went in the Service.

Q. For how long a period did you continue to do that with fair regularity?

A. Well, I have been in it—more or less contact with it—ever since I have been in the Service, off and on.

Q. How long have you had to do, if any, with the selling of timber on forest reservations?

A. Well, ever since I have been in it, of course, the different grades that you are in you have different authorization. As a ranger you can sell a small amount, and the different supervisor jobs you can fell varying amounts, depending upon the size of the business. My present authorization is around 20 million feet.

Q. Have you had opportunity to observe the lasting qualities of dead and down timber?

A. Yes, sir.

Q. Of what species of pine?

A. Well, the yellow pine, the jeffrey pine, the sugar pine.

Q. Will you describe what kind of opportunities you had to get experience and making observations on dead and down timber?

A. Well, besides general observation that any forester would make in connection with his job, in our contracts with the operators

2465 who manufacture, log and manufacture the forest products from the national forests, we require in these contracts certain utilization standards. Those standards are based on the merchantability of the different species in both green and dead condition. Our contracts are based on the experience of the locality in which the operation is situated, on the condition of the dead and down timber for that particular locality and species.

Q. Well, now, do you have regulations or contract provisions which relate specifically to varieties of pine, or are these general in their terms?

A. They are general in terms. The pines, for instance, are specified as 33⅓ percent of net content of the log. If there is that much in it it is a merchantable log. In practice, that is, we go on the general practice of the locality which depends upon utilization practice and possibly utilization in the particular species of timber involved.

Q. And the clause is general, rather than specifying the variety of pines; is that true? In other words, the clause doesn't specify sugar pine or western yellow pine by species?

A. No.

Q. In your experience, which do you find lasts longer when dead and down, the ponderosa or the sugar pine log?

A. Sugar pine.

Q. Well, I wish you would explain what the results of your observation and experience have been?

2466 A. Well, the sugar pine logs will stand up, at least the heart will stand up a long time. I know of particular instances of logs over twenty years, because I have known of the logs for twenty years, that are being taken out of woods by the operator, required by us to be taken out, and there is no complaint. That is more or less true in the stands that have been killed by either fire or bug infestations. Those logs, exclusive of sap, are in pretty good shape and are merchantable, while the yellow pine log, after a year's wetting or exposure, is usually not in shape to bring in. We don't require it.

Q. Well, when you say you don't require it, I wish you would clear that up. Is it a case of merchantability?

A. Absolutely.

Q. In other words——

A. (Interrupting.) If they were merchantable, we would make them bring it in.

Q. In other words, you ascertain the merchantability and require, or not require; is that the case?

A. That is it, but it must always be judged largely on the individual log or tree, or whatever it is. The man in charge of the sale has certain latitude based on his best judgment, but, generally speaking, we don't look for merchantability in a yellow pine log or tree that has laid out for a year, because it has started to rot and it checks so bad that it is no longer merchantable within the terms of the contract.

Q. The supervisor is the judge, isn't he, as to merchantability?

2467 A. Well, he is called upon to judge; he isn't often in charge of the sale itself.

Q. Who is the judge, unless there is some complaint?

A. The man in charge of the sale.

Q. You mean the forestry man?

A. Yes.

Q. What is his title, ranger?

A. Well, he may be a lumberman, or a scaler, or whatever particular job he is connected with.

Q. Do those people report to the supervisors?

A. Yes.

Q. When you say lumberman, do you have——

A. (Interrupting.) That is a particular title of a man.

Q. A title in your service?

A. Yes; a title in our service.

Q. There has been some testimony here with regard to bull pine. Is that a term that is recognized by your service?

A. No.

Q. What is bull pine from the lumberman's point of view, or rather what does bull pine mean in your connection with this work?

A. Well, it is a yellow pine that has certain characteristics.

Q. Is it a ponderosa pine?

A. Yes.

Q. What characteristics does the bull pine have?

2468 A. Well, in general terms there are two definite characteristic trees of bull pine. Either it is a tree that is growing off by itself, and rough, at a low elevation. It is not a very good tree, but a pretty rough individual. Or it may be a young tree that hasn't developed into a very high percentage of good material. I mean high-grade clears, or anything like that.

Q. In what localities do you find the bull pine, that variety of yellow pine, which I describe as sometimes known as bull pine?

A. Well, I think it is over the entire range of the species, as far as I have ever observed. You will hear individuals, the logger or anybody connected with the woods, say "There is a bull pine, it don't amount to much", but it is a yellow pine just the same.

Q. What are your requirements as to the paying for bull pine in the sales that you make of yellow pine in the forest?

A. It is still a yellow pine and the contract says you pay so much for yellow pine per thousand feet. It doesn't make much difference to us whether he is a high-grade individual or a low one, he gets paid for just the same as yellow pine.

Q. If there is a large amount of that kind of wood in the stand that you are selling, will or will not that affect the amount that is bid?

A. Well, it affects our appraisal. We appraise the timber on its value and its value is largely based on the percentage of

2469 uppers that it will cover, taking into consideration accessibility, and other logging factors, and manufacturing factors, but grade is largely the determining factor in price.

Q. Your appraisal constitutes the minimum, does it?

A. Yes.

Q. Have you observed whether these so-called "bull" pines are actually cut by the purchasers?

A. They are cut whenever they are marked for cutting for us, and we mark them with the same regularity if they are within the marking rules that we set up for the particular area.

Q. Have you had an opportunity to observe in the State of Oregon at all?

A. State of Oregon?

Q. Yes.

A. Just a ride through it is all.

Q. Have you noticed whether there is any bull pine in the Klamath Falls section?

A. I have never been right in the Klamath Falls section. I have been in eastern Oregon a little bit.

Q. Have you found it south of the State line on the east slopes of the Sierras?

A. Well, everywhere from Plumas south, that I have been, bull pine is wherever there is—there are individuals that should be classed as bull pine wherever yellow pine occur.

Q. Are there individuals that can be classed as bull pine, of both the two kinds of bull pine that you described, both the
2470 young and the ones unfortunately located, are both those classes at present wherever you have been?

A. Yes.

Q. Have you had an opportunity to observe how the percentage of sapwood and heartwood runs in the bull pine? About how would you say it would average?

A. Well, there is a percentage in yellow pine which is generally a good deal higher than in any other pine.

Q. Pardon?

A. The percentage of sapwood is a good deal higher than in sugar pine. For instance——

Mr. MATTHEW (interrupting). I move that be stricken out as not responsive.

Mr. BURR. I will ask that question then.

Mr. MATTHEW. Is the motion granted?

Examiner DE BRULER. The motion is granted. He will ask another question.

By Mr. BURR:

Q. Is the percentage of sapwood in yellow pine different from the percentage in sugar pine?

A. Yes.

Q. Is it higher or lower?

A. It is higher.

Q. Is it markedly higher or just a shade higher?

A. It is a good deal higher.

2471 Q. How about the percentage of sapwood in bull pine as contrasted with the percentage of sapwood in the average yellow pine?

A. Well, you can't answer that question definitely one way or the other because you have got two types of individuals in what I would consider as bull pine. You have the old scrubby individual, and the percentage wouldn't be so high as it would in the bull pine that is a young individual, and you get those two different types. I don't know whether I can explain it, but being around the woods——

Q. (Interrupting.) I think that is very clear. How is the percentage in the type of bull pine which you have described as the old and scrubby variety, compared with the average of western yellow pine generally?

A. It is about the same.

Q. How is the percentage of sapwood in the young variety of bull pine as contrasted with the percentage in the average of western yellow pine?

A. Well, it is larger, of course, because it is younger.
Q. You are referring to sapwood, are you?
A. Yes.
Mr. MATTHEW. Would you pardon a question for the sake of clarity? Do you suggest any difference between the percentage of sap in this young type of bull pine and other yellow pines of about the same age?
The WITNESS. I wouldn't say there was any difference.

2472 By Mr. BURR:
Q. How would it compare with the young sugar pine?
A. Well, the percentage is not so—there isn't a wide variation in the young trees in the yellow pine as there is in the old trees.
Q. Is there any corresponding scrubby variety of sugar pine corresponding, I mean, with the variety of bull pine of that character that you have described?
A. No.
Q. In your judgment, for what reason is that the case?
A. Why I think the range of yellow pine is wider than the range of—I mean the elevational and climatic range of yellow pine is greater than the range of sugar pine. At least that is my own theory in the matter.
Q. How does sugar pine compare in uniformity of character and texture with the ponderosa in the same respect?
A. Its character, both as to texture and everything, is confined to a narrower boundary than yellow pine. There is a greater variation in yellow pine than there is in sugar pine.
Mr. BURR. You may cross-examine.

Cross-examination by Mr. MATTHEW:
Q. Are you a graduate of any forestry school, Mr. Benedict?
A. Yes.
Q. What is the school?
2473 A. University of Nebraska.
Q. In what year?
A. '06 is my graduating year.
Q. Shortly after leaving Nebraska, I take it, you entered the Forestry Service?
A. Yes.
Q. And came to California?
A. Yes. I tried to mine for a couple of years.
Q. Is there any large proportion of this so-called "bull pine" in the Sierra National Forest?
A. No.
Q. How about the Plumas National Forest?
A. I should judge—I thought you meant in the whole Sierras.
Q. Well, take the whole Sierras.
A. I wouldn't say what percentage, but there are individuals scattered all through.

Q. Just the occasional tree, is it not?

A. Well, in the lower reaches of the lower part of the range, elevational range, it is pretty frequent. In the upper, merging into the yellow pine and sugar pine, it is less frequent.

Q. From the point of view of merchantability, comparatively little bull pine finds it way into the lumber yards; is that so?

A. I couldn't say what percentage.

Q. Comparatively a minor item, is it not?

2474 A. I wouldn't say, because I don't know how much has been cut of these lower reaches of the range, what percentage was cut. I would say wherever it is cut in the lower reaches of the range why that percentage would go into the markets. As far as I know, it is going into the same market.

Q. There isn't much of it, is there? Is that a large factor in the lumber market?

A. I don't know.

Q. You have no impression about that?

A. No; I wouldn't.

Q. Did you ever hear of apple pine?

A. Yes.

Q. What is apple pine?

A. Jeffrey pine.

Q. Jeffrey pine is found characteristically towards the eastern slope of the Sierras and in the higher elevations?

A. It all depends on where you are in the Sierras. In my particular locality it is around 6,500 to 6,000 feet, about. Of course, the altitude has some effect on it in different localities, but above the range of the normal yellow pine, western yellow pine, sometimes there is a mixture, but very seldom.

Q. Are the trees quite readily distinguishable from the ponderosa trees?

A. Yes.

Q. It is always easy to distinguish the Jeffrey pine from ponderosa?

2475 A. I say it because I have lived with it and it is for me. It is a redder bark.

Q. The scientifically trained forestry man can make the distinction, differentiate, but is it easy for the practical lumberman to distinguish the trees?

A. Oh, yes.

Q. Can you readily distinguish the lumber that is manufactured from Jeffrey pine and that which is manufactured from ponderosa pine?

A. Not so easy, except when it is being manufactured you can smell it.

Q. That is, the Jeffrey pine lumber has quite a distinct fragrance; is that it?

A. Yes.

Q. After it is seasoned, is it difficult to distinguish Jeffrey pine lumber from ponderosa pine lumber; is that true?

A. As far as I know.

Q. Is it customary to mix the lumber from the Jeffrey and ponderosa pine trees?

A. I don't know when it goes into the yard—my guess would be yes.

Q. Well, you have had quite a bit of experience in connection with the manufacture of lumber; have you not?

A. Well, it is this way: They go through the mill and they go down to the yards in the valleys, and we don't pay much attention to it after that, and the practices there are not so well known.

2476

Q. Take it from the sawmill itself, is it customary at the end of the grader to segregate the Jeffrey pine lumber from the ponderosa pine lumber?

A. I don't know. Our mills, the large mills that operate, send their product right to the valley before it goes into the yards, and I wouldn't—I have never checked that up at all. I don't know.

Q. You have been in these larger mills in the course of operation?

A. Yes.

Q. Have you ever noticed any effort there to segregate the Jeffrey pine lumber from the ponderosa pine lumber?

A. No; I never have.

Q. Isn't it your best information that no effort is made to segregate those lumbers from the two types of trees?

A. As far as I know, they don't; they may.

Q. Are you certain that the Forestry Service usually, or does require the cutting of the bull pine type of tree?

A. If it is a young tree it usually would not be marked for cutting.

Q. Usually would be?

A. Would not. In some particular cases the young trees are marked. The other type of bull pine is almost always cut, unless we need it in that particular situation for a seed tree, but as far as its age and condition is concerned, why it is better to get it out of the State.

2477

Q. That is the type that is more rare than the younger type of bull pine, is it not?

A. Yes; sure.

Mr. MATTHEW. That is all.

Mr. BURR. That is all.

Examiner DE BRULER. You are excused.

(Witness excused.)

Examiner DE BRULER. We will take a recess for five minutes.

(Whereupon a five-minute recess was taken.)

Mr. BURR. Call Mr. Weyerhaeuser.

F. E. WEYERHAEUSER was thereupon called as a witness and, having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Weyerhaeuser, your business is what, sir?

A. Lumber.

Q. And you are interested in a number of lumbering corporations, are you, that are known roughly speaking as the Weyerhaeuser companies?

A. Yes, sir.

2478 Q. How long have you been interested in lumbering operations?

A. 33 or 34 years.

Q. Will you state what your experience has been, Mr. Weyerhaeuser, in the forests in so far as you have had forest experience, just briefly?

A. I have traveled back and forth through the logging camps of Wisconsin, Minnesota, Idaho, and Montana, particularly.

Q. In that connection have you had opportunity to observe the various varieties of timber that was being cut and logged, and logs that were being milled?

A. I have.

Q. What relation do you hold to the Weyerhaeuser Sales Corporation?

A. I have no official connection with it.

Q. Did you organize that company?

A. Yes, sir.

Q. Now, the interests known as the Weyerhaeuser interests, have they been engaged in the cutting and manufacture of northern white pine from the Pinus strobus tree?

A. Yes.

Q. In the early part of your experience where were they engaged in cutting northern white pine?

A. In northern Wisconsin and Minnesota.

Q. Are they still engaged in doing so in Minnesota?

A. They are in Minnesota; yes.

2479 Q. About what time did you begin to supplement your northern white pine from the lake States by means of cutting and the manufacture of Idaho white pine, or monticola?

A. About 1900. I am not sure of the exact date.

Q. For how long a time, then—you have been cutting monticola since about that time?

A. Approximately 30 years.

Q. Can you tell me about how large the annual cutting of the Weyerhaeuser companies as a total is from northern white pine at the present time?

A. Somewhere between 50 million and 60 million feet per year.

Q. And how large is it in Idaho white pine?

A. About 275 million.

Q. Are you cutting any ponderosa at the present time?
A. They are.
Q. About how much of that are you cutting?
A. We manufactured about 175 million last year.
Q. Have you had made, under your direction, any estimate of the standing timber since Mr. Lindsay was on the stand in October?
A. Yes; I have.
Q. Will you be kind enough to give me your best judgment as to the amount of standing timber that you have at the present time, merchantable, in northern white pine?
Mr. MATTHEW. That is, belonging to this company?

2480 By Mr. BURR:
Q. Belonging to this company—I mean this group of companies.
A. It is approximately 300 million.
Q. How much have you of the Idaho white pine belonging to these manufacturing Weyerhaeuser companies?
A. It is considerably over 4 billion.
Q. And about how much of the ponderosa is the estimate?
A. It is about 9 billion, something over that.
Q. Are you buyers of strobus at all?
A. Yes.
Q. Where are you buying that from?
A. In Cook County, Minnesota.
Q. That is aside from the stand that is owned by your company; is that true?
A. Yes.
Q. Have you ever bought any yet in Canada?
A. We don't own any in Canada now; we have owned some in the past.
Q. But have disposed of it, or cut it?
A. Disposed of it.
Q. Did you say that you had bought in Cook County, Minnesota?
A. Yes.
Q. Was that a large tract?
A. No; it is a small tract.
Q. How long ago did you buy that?

2481 A. Well, we are buying whenever any is offered.
Q. Do you understand that there is a considerable body of northern white pine available in Canada at the present time?
Mr. MATTHEW. I suggest the question is leading.
Examiner DE BRULER. Just state what you know about it.
The WITNESS. I don't understand the question.
Examiner DE BRULER. Read the question.
(Whereupon the question referred to was read by the reporter.)
Mr. MATTHEW. The question is undoubtedly leading. And it is too general.
Examiner DE BRULER. You may answer it to the best of your ability.

A. I know there is a large quantity of northern-pine timber, strobus timber, in Canada.

Examiner De Bruler. What do you mean by a large quantity, in a general way?

By Mr. Burr:

Q. Would it run into billions or what?

A. Yes; it will run into the billions.

Q. Have you had any opportunity to observe the northern white pine in New England localities?

A. I have.

Q. Has your observation along that line been of recent period?

A. Yes.

2482 Q. I wish you would state what the result of your observation is.

A. Well, I have motored through New England, more or less, during the last ten or fifteen years and have seen large quantities of second, or, perhaps, third growth of strobus timber.

Q. Is it marketable, any of it?

A. It is.

Q. Is any of it being cut?

A. It is.

Q. Have you noticed sawmills cutting it?

A. I have.

Q. About how many would you saw you have noticed?

Mr. Matthew. The number of sawmills?

Mr. Burr. Yes.

A. Well, I spent one summer at Rye Beach some years ago. In motoring about Boston I saw a large number of small mills. My estimate at the time was about 30, but I didn't count them. I didn't make an exact figure, but my impression is there were about 30 sawmills within a short motor distance of the city of Boston.

Q. I believe you testified that a number of years ago you began to supplement your strobus supply with Idaho white pine; is that true?

A. Yes.

Q. Now, did you consider at that time what trade name

2483 you would give your monticola, or Idaho white pine, in the market?

A. When we first began buying monticola we thought it was exactly the same as strobus, and it wasn't until we came to manufacture it, according to the best of my memory, that we came to an appreciation that there was some difference between it and the so-called northern white pine.

Q. Well, you gave it the name of Idaho white pine, or was that the common name before on the part of all the manufacturers?

A. I am not very clear on that particular subject, but I think the history was something like this: We began manufacturing it as white pine, and selling it to our customers and they began to refer

to it as white pine from Idaho. I think that was the origin of the term "Idaho white pine", but I am not very clear on that point.

Q. Now, by the by, do you know whether Idaho white pine was being taken out in large quantities before the Weyerhaeusers began to ship it?

A. No, it was not in large quantities.

Q. Is the ponderosa tree to be found in the same forests in Idaho where you have your stands of Idaho white pine?

A. They don't grow largely intermingled in the same definite area, but they are close together and so in our logging operations we take out both yellow pine and Idaho white pine.

Q. Now, did you begin to cut the ponderosa about the same time that you began to cut the Idaho white pine?

2484 A. Not long afterward. I am not sure as to the exact time.

Q. Are the two varieties milled in the same mill?

A. They are.

Q. What name was given to the ponderosa at about the origin of your manufacture and sale of that variety?

A. We called it western soft pine.

Q. Were others manufacturing it about the same time?

A. I am not sure—I didn't catch the question.

Q. Were others manufacturing it at about that same time?

A. Yes.

Q. What induced you to give it the name that you gave it?

A. We thought it was desirable to give it a name different from the yellow pine of the South, as it was a softwood.

Q. Did the manufacturers in that locality at an early date begin to give it a name which included the word "white", or several names including the word "white"?

A. Yes, but I am not sure as to the exact dates.

Q. I am not asking you for exact dates. Why did not the Weyerhaeuser interests use the word "white" in connection with other ponderosa?

A. There were a number of reasons why they didn't.

Q. Will you describe those reasons, if you please, sir?

A. In the first place, as I have already stated, we were manufacturing large quantities of white pine in Wisconsin and Minne-

2485 sota and selling it through our own sales organization. We later began to manufacture what we called Idaho white pine. We thought it would be a serious mistake for us to adopt a name that would be misleading as to yellow pine in our merchandising of it from Idaho.

Q. Why would that be a mistake?

A. In other words, we would send out a salesman to sell white pine from—had we adopted that policy we would have had to send out a salesman to sell white pine from Minnesota, Idaho white pine from Idaho, and at the same time another white pine, which we would have had to describe as a yellow pine, because it was not a white pine and we knew it was not a white pine. Therefore we

knew it would be misleading to the trade. We had a reputation of many years standing of furnishing our customers with the type of lumber that we sold them, and we did not wish to jeopardize our reputation by selling them or offering to sell them, under the trade name "white pine", what was really yellow pine. They would——

Mr. MATTHEW (interrupting). Just a moment, please. It seems to me, Mr. Examiner, that the witness is going far beyond the question asked by counsel.

Mr. BURR. I think that is within the question. I will ask another question, to which counsel may object if he deems fit.

Q. Mr. Weyerhaeuser, in connection with the reason that you have just outlined, did you regard the naming of pondosa lumber as a variety of white pine, had you named it a variety of white
2486 pine, did you regard that as detrimental to the eastern or northern and the Idaho white pine?

A. Yes; we would have.

Q. Now, did you regard that detriment as a market detriment in part?

A. A market detriment.

Q. Would it have been a market detriment?

A. Yes.

Q. In what respect?

Mr. MATTHEW. It seems we are getting into the realm of mere speculation quite far afield from the issues of the case.

Examiner DE BRULER. What are the differences in the wood that caused you to give it different names?

The WITNESS. One was yellow——

Mr. BURR (interrupting). If the examiner please, I would like to bring that out under a different topic.

Examiner DE BRULER. That last query, I think, is pertinent and rather important.

By Mr. BURR:

Q. Will you describe just how far, in your judgment, it would have been a market disadvantage to the genuine white pine to have called pondosa a white as part of this trade name?

Mr. MATTHEW. I assume the witness is going into facts and not the mere speculation.

Examiner DE BRULER. Yes; just deal with the facts and do not go into speculation.

A. Well, the term "white pine" has come to mean something very definite to our trade. The term "white pine" was one that
2487 had been used for centuries.

Examiner DE BRULER. A certain wood, I suppose?

The WITNESS. For a certain wood, Pinus strobus, and we wished to maintain the value of that name. We didn't wish to have the characteristics peculiar to white pine confused with woods of another species.

By Mr. BURR:

Q. What effects, if any, upon the marketability of pondosa itself would have resulted, in your judgment, from designating pondosa as white pine, western white pine, or something containing the words white pine?

A. Well, in our judgment it would have been a mistake to do so.

Q. I am now talking from the standpoint of marketability of pondosa, and you understand that?

A. Yes.

Q. Wherein would it have been a mistake?

A. I don't quite get your question.

Q. Let me state the question again: I am now talking about the marketability of pondosa itself, resulting from the use of the word white, had you adopted it, as part of the trade name for pondosa. Is that clear?

Mr. MATTHEW. That question is not responsive to any issue in this case. There is no claim that the marketing of pondosa lumber is being inhibited by the term California white pine.

2488 Mr. BURR. Exactly so.

Mr. MATTHEW. I don't recall any such allegation.

Mr. BURR. The allegation is in the complaint that the use of the word "white pine" is a detriment to the timber that is being marketed as pondosa.

Mr. MATTHEW. Pondosa?

Mr. BURR. Yes. This gentleman is now using the word "pondosa."

Examiner DE BRULER. As long as you confine yourself to the pines, go ahead.

Mr. MATTHEW. I thought you used the word "ponderosa" in your question?

Mr. BURR. That is where the two terms verge one another.

Examiner DE BRULER. Go ahead.

A. We had a very high regard for pondosa pine. It has many excellent uses. It is a fine wood, but it is not suitable for all the uses to which white pine is put, or to which it had been put. Therefore, we thought it would be a serious mistake to sell pondosa pine under a white-pine trade name, with the result that someone would buy it and use it as he had been accustomed to using true white pine and have a complete failure in the use of his lumber. Therefore, you would acquire a prejudice against pondosa, which should not attach against it, because it is an excellent wood in its proper place.

2489 By Mr. BURR:

Q. What do you regard as its proper place?

A. Certainly any place where it is not exposed to the weather.

Q. Would you say for pattern purposes?

A. No.

Q. Well, it is not exposed to the weather for pattern purposes. Would you change that answer a little under those circumstances?

A. I mis-spoke; yes, sir.

Q. Is it a good wood for interior trim?

A. Yes.

Q. Is it a good wood for organ pipes?

A. You are getting into a technical field there. All I can say is that I think not. I don't know.

Q. Was there another consideration, aside from the detriment to which you have testified, which might ensue to the genuine white pine, and also the detriment that might ensue to ponderosa pine in the market—was there any other consideration that led you not to use the word white pine for the trade name for pondosa?

A. Yes.

Q. What other consideration did you have in mind at that time?

A. We think there is involved an economic waste in using any wood where some other wood will give better service.

Q. Is there any influence that nomenclature has upon that situation?

2490 A. Yes.

Q. What is it?

A. The sapwood of yellow pine, or, rather, lumber made from the sapwood of yellow pine, is the lumber that most nearly resembles the heartwood of white pine. I think I might say that it requires almost an expert to tell the difference merely from appearance; and when a sapwood piece of yellow pine is used, where it is exposed to the weather, instead of the heartwood, under ordinary conditions the service given by that wood would not be satisfactory; it would fail.

Q. I wish you would tell me whether or not the use of accurate nomenclature has its influence on the public employment of lumber for the purposes for which each species is best adapted?

A. Certainly it is desirable not to have any confusion in nomenclature. Architects frequently have asked me why we didn't do something to clarify the situation as to nomenclature of the pines.

Q. Referring particularly to what?

Mr. MATTHEW. Just a moment! I move to strike out that last answer, as to what architects told the witness, as not responsive to the question.

Examiner DE BRULER. I think he has answered that as a fact, as to what he has been told.

Mr. MATTHEW. It is hearsay, too.

Examiner DE BRULER. It is, but we will let it go.

2491 By Mr. BURR:

Q. Do you know whether architects are in the state of confusion as to the qualities of pine and the nomenclature applicable to them?

Examiner DE BRULER. Answer that yes or no.

Mr. MATTHEW. I think that is objectionable. The witness hasn't shown he is qualified to testify as to architects' state of mind of this matter.

Mr. BURR. I think the witness knows better than the architects themselves.

Examiner DE BRULER. Read the question.

(Whereupon the question referred to was read by the reporter.)

Examiner DE BRULER. Answer that yes or no.

Mr. MATTHEW. I think that is objectionable. He shouldn't testify as to the state of mind of architects.

Examiner DE BRULER. He asked if he knew. He can answer that yes or no.

Mr. BURR. That isn't a state of mind; that is a matter of knowledge.

Examiner DE BRULER. Answer the question yes or no.

A. I would have to say no.

Examiner DE BRULER. That answers the question.

Mr. MATTHEW. I withdraw my objection.

By Mr. BURR:

Q. What effect on the industry has wrong nomenclature in
2492 the pine business?

Examiner DE BRULER. I think that has been gone over enough.

Mr. MATTHEW. It is speculative and argumentative.

Examiner DE BRULER. We have gone over it so often that there is no need going into it any further. That is a conclusion anyway, as a matter of fact.

Mr. BURR. If the examiner please, if anybody knows about this, it is the gentleman we have on the stand.

Examiner DE BRULER. That is a conclusion.

Mr. BURR. This man is an expert if there is one.

Examiner DE BRULER. What is the question?

(Whereupon the question referred to was read by the reporter.)

Examiner DE BRULER. You can answer that if you know.

Mr. MATTHEW. If the examiner please, that is a general question not addressed to this particular lumber at all.

Examiner DE BRULER. It must be to this particular lumber.

Mr. MATTHEW. It is argumentative, and I submit it is improper.

Examiner DE BRULER. It must be confined to this particular lumber.

2493 By Mr. BURR:

Q. What effect has that wrong nomenclature——

Mr. MATTHEW (interrupting). Possibly we can save time, so I will withdraw my objection to your prior question.

Mr. BURR. I think I can do better. I think you will make the testimony stronger if you keep on.

Mr. MATTHEW. Perhaps I can, too.

Mr. BURR. Possibly so.

Q. Do you regard the calling of ponderosa pine as California white pine, or as western white pine, an accurate piece of nomenclature?

A. I do not.

Q. Why?

A. Because it is not white pine.

Q. In what respects is it not white pine?

A. It is a different species.

Q. Different species, you say?

A. Yes.

Q. Is it different in the characteristics of lumber produced by the species?

A. It is.

Q. In what respects, if you please, sir?

A. It contains a very much higher percentage of sapwood. It is a different character of knot and a different fibre of heartwood.

2494 Q. Has it a different texture?

A. Different texture.

Q. In what respects?

A. It is harder, it is more difficult to work, and does not hold its place as true white pine does.

Q. Is it equal in point of paintability, so called?

A. It is not.

Q. Does it differ in color?

A. It does, aside from the sapwood.

Q. Does it differ in reputation from genuine white pine?

A. It does.

Q. Now, then, what effect does the naming of ponderosa, with the word white pine contained in the trade name, have upon the adaptation of the genuine white pines and the ponderosa by the public to the various uses to which these types of lumber are best adapted? Is that a clear question?

Mr. MATTHEW. It is not to me.

The WITNESS. I would like to have the question read.

(Whereupon the question referred to was read by the reporter.)

A. There results confusion, and the ordinary consumer of lumber in buying a wood which is called white pine is quite likely to be misled.

By Mr. BURR:

Q. Is he less or more likely, on account of that misnaming that you have described to use these varieties of pine for the

2495 purposes for which these varieties are best adapted?

Mr. MATTHEW. I object again, Mr. Examiner, as it is purely speculative and indefinite. If counsel for the Commission cares to undertake to bring out any specific instances of fraud or deception or confusion, within the allegations of the complaint, I cannot possibly object. But to have the general questions put, it seems to me, it is unfair, as well as speculative and argumentative, and I think it is improper.

Mr. BURR. This man is an expert along these particular lines, at the head of one of the largest——

Examiner DE BRULER (interrupting). I understand. You can answer that question if you can. I think you have gone far enough along that line.

Read the question.

(Whereupon the question referred to was read by the reporter.)

Examiner DE BRULER. Can you answer that?

A. They are less apt to use them.

By Mr. BURR:

Q. Well, why?

A. Because of the confusion in the nomenclature.

Examiner DE BRULER. I think that has been gone into sufficiently.

By Mr. BURR:

Q. Now, does the error in nomenclature that you have described have any effect as regards the conservation of lumber products?

2496

A. I have already stated that it is our policy to try to have used that particular wood which will give the best service, and where there is a failure in so doing there is an economic waste.

Examiner DE BRULER. He stated that in answer to a question some time back.

Mr. MATTHEW. I don't think the answer is responsive to the inquiry as to conservation.

Mr. BURR. Waste and conservation is the same problem precisely.

Q. Now, does this nomenclature, if properly made, prevent waste?

A. It certainly tends to prevent waste?

Q. Now, is there any effect that nomenclature has upon preventing lumber markets, having in view the competition that lumber has with lumber substitutes?

Mr. MATTHEW. Now, Mr. Examiner, I think that——

Examiner DE BRULER (interrupting). Is that covered in the complaint?

Mr. BURR. If the examiner please, this whole question of public service is important in all of these Federal Trade Commission cases.

Examiner DE BRULER. I understand that.

Mr. BURR. It seems to me—I don't want to indicate what testimony I am expecting, but I will say this, because it is hardly fair to opposing counsel, but I will say this: That it seems to me that if it can be shown that nomenclature has a direct effect upon keeping for lumber its proper field in the economic system, that there is a point of public service that is important to consider in this case, along with other considerations.

2497

Examiner DE BRULER. He has answered that twice.

Mr. BURR. He has answered the question of waste, but he hasn't answered this question, it seems to me, as far as I recall, as regards the effect upon the lumber industry of having it used for something that is not——

Examiner DE BRULER (interrupting). Wait a second.

Mr. BURR. Yes, sir.

(Here followed remarks off the record.)

Mr. MATTHEW. I suggest my remarks be taken down tentatively.

This is somewhat of a reversal of the usual order, because the moment I attempt to make an objection counsel proceeds to make an argument as to the propriety of my proposed objection. So I have not yet been heard in support of my objection and he has been heard in support of the objection to my objection.

If I understand this complaint, these several respondents are charged with attempts to defraud and deceive and confuse the public. They are charged specifically under a provision of the statute which condemns unfair practices. Now, insofar as testimony is to
2498 be elicited in support of the allegations of this complaint, proper testimony, I can offer not the slightest objection, but an attempt to go into the whole realm of economic theory and ask this witness to speculate as to what the effects of our calling this lumber one name or another may have upon economic waste or the conservation of natural resources seems to be far beyond the proper scope of examination.

Mr. BURR. I am not talking now about economics. I am——

Examiner DE BRULER (interrupting). Let's go back to the question. Read the question.

(Whereupon the question referred to was read by the reporter.)

Examiner DE BRULER. I am going to let him answer that the best he can.

A. Yes.

By Mr. BURR:

Q. Will you describe how?

A. I believe that the most deep-seated source of trouble in the lumber business has been the failure of lumber manufacturers to consider the real interests of the consumer of lumber. We believe that we should do everything in our power to make it possible——

Examiner DE BRULER (interrupting). You need not go into what you believe. State what the facts are, what the result is.

A. The result of a confusion in nomenclature is the failure
2499 of a consumer to be able to get exactly what he wants, or get the material which will best suit his needs, and the result of which is, where failures occur, this same consumer naturally will turn to substitutes for lumber, with the result that lumber is gradually losing its volume over the United States.

Examiner DE BRULER. I don't think we will go into that part of it. We will let it stand, but that is far enough to go along that line of questioning.

By Mr. BURR:

Q. Is your manufacture of ponderosa increasing?

A. Yes; very much.

Q. What do you expect it to be within a short time?
A. Approximately 4 million feet per year.
Q. You are opening up a large mill at one point, are you?
A. Yes.
Q. Where?
A. At Klamath Falls.
Q. Has any manufacturer of so-called California white pine informed you that the use of the word "white" in the trade name for ponderosa pine has a monetary value?
Mr. MATTHEW. I object to that question.
Mr. BURR. If the examiner please——
Examiner DE BRULER (interrupting). You can answer that by yes or no.
A. Yes.
2500 Mr. MATTHEW. I was trying to make an objection. I would like to ask counsel on what theory he deems such question to be proper.
Mr. BURR. I will bring it out.
Mr. MATTHEW. I object on the ground that it is immaterial in any event.
Mr. BURR. He doesn't know who the respondents are and he will have to ask.
Q. Who was it, if you please, sir?
A. It is either Mr. Nelson or Mr. Tennent, of the Long Bell Lumber Company.
Q. Are those gentlemen both of the Long Bell Company?
A. Yes. I am not sure which it was.
Q. How long ago was that?
A. It is within two years.
Q. What monetary value did you place upon the use of the word "white"?
Mr. MATTHEW. That is leading, of course.
Mr. BURR. I don't think it is.
Examiner DE BRULER. He may answer; that is, assuming that he did put a monetary value on it.
Mr. MATTHEW. You could reframe the question in any event, so go ahead.
A. I stated it was worth two dollars a thousand.

By Mr. BURR:

Q. Do you remember where and when that was, as nearly as
2501 you can say?
A. It is merely an impression.
Q. You can't say where and when it was?
A. No.
Q. Within how long a period, or did you say that?
A. I said within two years.
Mr. BURR. That is all.
Examiner DE BRULER. We will take a five-minute recess.

(Whereupon a five-minute recess was taken.)

Examiner DE BRULER. If the parties are ready, we will proceed.

Cross-examination by Mr. MATTHEW:

Q. Mr. Weyerhaeuser, when did you first become familiar with the term California white pine?

A. I can't answer that. I don't know.

Q. Can you tell me approximately the number of years during which you are reasonably certain that you have known it?

A. I think I heard it very early in our Idaho operations, but I can't fix any date.

Q. You don't know about when you first encountered a movement of California white pine into the Middle Western States, say, into the Chicago territory and to the Mississippi River?

A. My recollection is that there was some movement of so-
2502 called California white pine when we started our Idaho operations.

Q. That was about 1900, I think you stated?

A. That is the best of my memory.

Q. Then, may we assume that you have been familiar with the term California white pine for approximately thirty years?

A. I think I have.

Q. And during all that time that term has been employed to refer to lumber manufactured from a tree known botanically as Pinus ponderosa?

A. Yes, sir.

Q. Has lumber been marketed under that name throughout the Middle West during all that period, as far as you can recall?

A. I think so.

Q. Is the name quite well known to the lumber trade in the Middle West.

A. At the present time, do you mean?

Q. Yes.

A. I think it is.

Q. And it has been well known for a considerable number of years back, at least, has it not?

A. I think so.

Q. Have you any reason to doubt that the remanufacturers of lumber, such as the manufacturers of sash and doors, understand fully that they are getting a lumber, under the name of Cali-
2503 fornia white pine, which is yielded from the ponderosa pine tree?

A. I think they understand it.

Q. When you first resorted to Idaho for additional supply of pine lumber, I think you stated that you began to introduce it to your trade under the name of white pine. Am I correct in so recalling your testimony?

A. I stated that I wasn't very sure about the early history of the term "Idaho white pine."

Q. I recall your saying that, but I think you likewise stated that it is your best recollection that you were offering the lumber as white pine?

A. Yes.

Q. And that some of your customers, knowing that it came from Idaho, referred to it as white pine from Idaho?

A. Yes.

Q. And that accordingly the name "Idaho white pine" then developed; is that about a correct statement?

A. Yes; that is as I remember it.

Q. So then, according to your best recollection, you first offered the lumber under the name of white pine?

A. We offered it as a white pine. I am not sure as to whether we used merely white pine—that I can't say.

Q. And as of that time were you selling your strobus pine lumber as white pine?

A. Yes.

2504 Q. And it is your best recollection that you commenced to sell Idaho white pine lumber just as white pine as well?

A. Yes.

Q. Would you feel free to offer Idaho white pine to the trade at the present time under the name of white pine, without the word "Idaho" prefixed?

A. We would, if there were no confusion of nomenclature.

Q. Would there, in your opinion, be any confusion in nomenclature if you did offer it as white pine, without the term "Idaho" included in it?

A. I think so.

Mr. BURR. You do think so?

The WITNESS. Yes.

By Mr. MATTHEW:

Q. Then if you received an order for white pine from any customer, or were asked to bid upon lumber under specifications calling for white pine, without any qualifying term, you would not feel free to offer Idaho white pine?

A. We would feel free to offer white pine, Idaho white pine, but we would first ask whether it was so-called "California white pine" they wished, or true white pine, in order to make an intelligent quotation.

Q. I am asking now as to Idaho, Mr. Weyerhaeuser, if you please, and I am putting the case where you are asked to furnish white pine, or where there are architects' specifications calling for

2505 white pine?

A. Yes.

Q. And I asked you whether you would feel free to furnish Idaho white pine?

A. Yes.

Q. Upon those specifications?

A. Yes.

Q. Even though Idaho white pine were not specifically named in in the specifications?

A. Yes.

Q. To your mind, that does not result in any confusion?

A. No.

Q. Then, you think it is perfectly appropriate to furnish Idaho white pine in response to specifications calling for white pine?

A. Yes.

Q. Would it be equally proper to furnish California sugar pine upon specifications calling for white pine?

A. I know practically nothing about sugar pine.

Q. Well, you know that sugar pine is classified botanically as a true white pine?

A. Yes; I know that.

Q. Recognizing it as a true white pine, is it, then, your opinion that California sugar pine can, with propriety, be furnished upon specifications calling for white pine?

A. I think so, with the qualification that I know nothing
2506 about, have had no experience with sugar pine.

Q. I so understand. But your answer, then, goes to this: That it is your view that specifications calling for white pine may reasonably be satisfied by furnishing lumber coming from any one of the trees recognized botanically as a true white pine?

A. Yes.

Q. You make botanical nomenclature an essential criterion; is that correct?

A. I didn't catch the question.

Q. You make botanical nomenclature the essential criterion, as I understand it?

A. Not necessarily.

Q. You have by virtue of that answer, have you not?

A. I wouldn't say so.

Q. You have stated, Mr. Weyerhaeuser, that, in your opinion, it is proper to furnish lumber yielded by any one of the trees recognized botanically as a true white pine in response to specifications calling for white pine. You have so stated, have you not?

A. I so stated as to strobus and monticola; yes.

Q. And as to sugar pine?

Q. Well, I confess that I have never had anything to do with sugar pines.

Q. But you said that, adding the qualification that you are not particularly familiar with sugar pine, you saw no objection
2507 to furnishing sugar pine in response to an order for white pine, did you not?

A. Subject to my knowledge of sugar pine.

Q. Then, did you not also say, in response to a very specific question which I put, that you thought it appropriate to furnish lumber yielded by any one of the true white pine trees upon specifications calling for white pine?

A. I think there are other white pines that I know nothing about, so I couldn't answer that.

Q. You don't recall giving me an answer to that very question?

A. Well, if I so stated I am mistaken.

Q. Then you are not prepared to say that it would be appropriate to furnish lumber from any one of the true white pine trees in response to specifications calling for a white pine?

A. No; I don't think it would necessarily be.

Q. And you are doubtful in the case of sugar pine?

Mr. BURR. That is unfair. He doesn't know anything about sugar pine.

Mr. MATTHEW. I think I am within the proper scope of cross-examination.

Examiner DE BRULER. Go ahead and answer the best you can.

By Mr. MATTHEW:

Q. You are doubtful in the case of sugar pine?

A. I am, because I don't know the wood.

2508 Q. And even though you know that sugar pine comes from a tree which is a true white pine, botanically speaking, you are not prepared to say that it would be proper to furnish sugar pine lumber upon specifications calling for white pine?

A. No; I don't think it is necessarily so.

Q. Do I understand from that that you are doubtful on the point?

A. Yes.

Q. Then it reduces itself to this: That you are certain only that it is proper to furnish either strobus pine lumber, or monticola pine lumber upon orders calling for white pine; that is as far as you can go?

A. That is.

Q And it happens that your companies are very largely interested in the production and marketing of both the strobus pine and the monticola pine of Idaho?

A. Yes.

Q. Would you see any objection to the marketing of California sugar pine under the name of California white pine?

A. I would personally see no objection to it as far as my knowledge of the subject goes.

Q. Then you would think that if the Federal Trade Commission should prevail in these proceedings, and the respondents were compelled to discontinue the use of the term California white pine, it would be quite appropriate for the producers of California sugar pine to offer their product, namely, sugar pine, to the

2509 trade as California white pine?

A. Yes; as far as my knowledge of the subject goes.

Q. And that strikes you as being entirely fair, both among producers and to the public, to offer California sugar pine to a trade which, for at least thirty years, has known that California white pine means a wood of an entirely different character?

A. As far as my knowledge of sugar pine is concerned, I see no objection to it.

Q. Isn't it quite obvious from that last answer of yours, Mr. Weyerhaeuser, that you are making botanical nomenclature the essential criterion for the market nomenclature, if you please?

A. No, sir.

Mr. BURR. You say it is not true?

The WITNESS. No.

By Mr. MATTHEW:

Q. Well, your justification for a possible offering of California sugar pine to the public under the name of California white pine is predicated upon botanical nomenclature, is it not?

A. No.

Q. What can be the justification?

A. The term white pine over the centuries means something very definite and monticola and strobus answer perfectly. I assume that sugar pine does, but I don't know.

2510 Q. Well, if we assumed that the sugar pine answers the purposes of the trade as satisfactorily as Idaho white pine, or the northern white pine in the monticola and strobus, respectively, then you think it appropriate to offer sugar pine to the trade as California white pine?

A. Yes; if it has the necessary qualities.

Q. Must the qualities and the botanical nomenclature concur?

A. Yes.

Q. Then if sugar pine is not as well suited to a particular trade as the strobus pine or the monticola pine, you think it would not be proper to offer sugar pine to the trade as California white pine?

A. Not as white pine; no.

Q. The mere fact that it is recognized as a true white pine would not justify an offer?

A. Not necessarily.

Q. How long have you been familiar with the term "California white pine", or sugar pine, if you please?

A. Oh, thirty years or more.

Q. That name again is well known to the lumber trade throughout the United States, is it not?

A. I think it is.

Q. Have you ever known California sugar pine to be marketed under the name of California white pine, or under any other name with the word "white" in it?

A. No; I haven't.

2511 Q. Your company is extensively engaged in the production and marketing of a lumber known as Douglas fir?

A. Yes.

Q. Do you market it under the name of Douglas fir?

Mr. BURR. If the examiner please, I object to the proposition of Douglas fir being introduced here. He is trying to raise here a

different nomenclature and contends that his misnaming of California white pine is not as bad, perhaps, or not as gross, or something, as the other nomenclature, and I think that I am entitled to object to it, and I want to press that objection. It don't think it has a thing to do with the case.

Mr. MATTHEW. The gate is wide open now. Counsel was allowed, over a certain objection, to ask for the witness' views on the whole question of the alleged misnaming of lumber. It wasn't confined to ponderosa.

Mr. BURR. As this Court knows, and as opposing counsel knows——

(Here followed remarks off the record.)

Examiner DE BRULER. I don't think we ought to go into anything but pine timber.

Mr. MATTHEW. This is for the record. I must, with deference, insist on what I think are the rights of my clients in this respect.

The whole question of the proper nomenclature of lumber is
2512 involved in this case, is opened up by counsel himself, and Your Honor will recall that——

Mr. BURR (interrupting). Is this on the record?

Mr. MATTHEW. Yes; I have the right to have it made of record.

Mr. BURR. I want my speech on the record too, then.

Mr. MATTHEW. I don't propose to make a lengthy statement.

Certainly there are some rights which these respondents may ask to have recognized.

Mr. BURR. If I can be heard on the record I have no objection to his being heard briefly.

Examiner DE BRULER. Make it brief, make your statements brief for the record.

Mr. BURR. If he is making it for an appeal, let's have his statement in good shape.

Mr. MATTHEW. Whatever "appeal" may mean.

The Examiner will recall that in the course of the cross-examination of Col. Greeley, at the Portland hearing, I believe, the ruling was finally made that we might appropriately go into the question of the nomenclature for the various woods, contrasting the market names if you please, or identifying them with botanical nomenclature, and certainly it has been one of the threads of the case put on by counsel for the Federal Trade Commission here that our wood

comes from a tree which is not a true white pine. I think
2513 that probably at least twenty times today counsel has referred either to genuine white pine or true white pines. Now he has used that in a botanical sense. He could not have used it in any other sense, and when he is allowed upon the examination of this witness in chief, to go into various questions of the broadest character as to the effect of the alleged misnaming of the woods—you will recall his express use of the word "misnomer" in a question that was put here—it certainly is within the proper field of cross-examination for me to go into the question of nomenclature

of various woods. If I have any conception at all of the proper scope of cross-examination, I am within my rights, and I must insist that I be allowed to examine this witness along these lines.

Mr. BURR. I would like to make a statement. I will make it as brief as I can.

The distinction between the questions which counsel has just referred to, and the scope of the examination as to nomenclature, the distinction between those and the questions of nomenclature which counsel now desires to go into, is this: The nomenclature that I asked about is a nomenclature described in this complaint. It is an issue here. These other nomenclatures are not in issue here, and counsel is here asking that varieties of fir lumber shall be put upon trial as to whether they are misnamed and, as a corollary, whether there is any offense to the public as the result of the misnomer of firs and if he follows the line of questioning that

2514 he has before as to whether the misnaming of certain varieties of cedar as such, when they are as a matter of fact botanically, according to the line of questions that he has already propounded in this case, actually junipers, what has that to do with that complaint? Not a thing in the World!

Examiner DE BRULER. I am ready to rule on that question. The objection will be sustained.

Mr. MATTHEW. If the examiner please, may I ask that you withhold that ruling for a moment, for one reason?

Examiner DE BRULER. I will withhold the ruling until you give your reason.

Mr. MATTHEW. Of course, your ruling is not in harmony with the ruling you made at the Portland hearing. Counsel made the same objection.

Examiner DE BRULER. At the Portland hearing my recollection is that I allowed the cross-examination to go to the limit with the statement then that that matter should not be gone into any further by any other witnesses, that that had nothing to do with the issues in this case.

Mr. BURR. That is correct.

Mr. MATTHEW. If Your Honor please, the examiner has allowed counsel for the Federal Trade Commission, in his direct examination of this witness, to ask the generic question——

Examiner DE BRULER (interrupting). This witness?

2515 Mr. MATTHEW. This very witness—to ask the generic question as to the effect of alleged misnomers upon the marketing of woods, upon economic waste, upon conservation. Your Honor will recall my objections are put in timely fashion. They were all overruled. You allowed the general line of inquiries. Now there is only one way to get a general answer to a general question and that is by directing my cross-examination to this specifically. It is a fundamental characteristic of cross-examination uniformly followed.

Examiner DE BRULER. I understand that, but I understand these questions related only to the pine woods.

Mr. BURR. That is exactly it. We proved a misnomer, and we proved the effect of misnomers.

Examiner DE BRULER. That is my understanding.

Mr. BURR. The witness on the stand proffered it was detrimental to the public, and then I asked him what effect that had upon lumber as contrasted with lumber substitutes. That doesn't open the thing to the fir or cedar industry.

Mr. MATTHEW. If Your Honor please, he asked the general question as to the effect of misnomers upon the lumber industry, and he was allowed to say that as a result of these misnomers there was not only this confusion in the minds of the public but that people turned to lumber substitutes. It was a general question and a general answer.

Mr. BURR. Based upon the foundation that we proved a misnomer here.

2516 Mr. MATTHEW. It makes no difference what the foundation may be, I have a right to test that testimony.

Examiner DE BRULER. My understanding was it went to the pine lumber only, and I have ruled several times today we would not be permitted to go outside of that one question, so the objection is sustained.

Mr. MATTHEW. Will the examiner allow me an exception?

Examiner DE BRULER. Certainly; exception allowed.

Mr. MATTHEW. And if I desire, a reference to the Commission on this point?

Examiner DE BRULER. Certainly.

(Here followed remarks off the record.)

By Mr. MATTHEW:

Q. Do you market any lumber as pine which is not produced from a tree which is botanically a pine?

A. I think not.

Mr. BURR. Your operations are confined solely to pine; is that right?

Examiner DE BRULER. Proceed with the cross-examination now.

Mr. BURR. Never mind, I have it.

By Mr. MATTHEW:

Q. Have you ever sold any lumber under the name of Oregon pine?

Mr. BURR. There again, this Oregon pine is a fir.

Examiner DE BRULER. Objection overruled. Go ahead.

2517 Mr. BURR. The record shows that Oregon pine is a fir, and may I ask why counsel is bringing this matter in? He is again trespassing.

Examiner DE BRULER. I think that question may be answered.

Mr. MATTHEW. The witness may not know it is a fir.

The WITNESS. May I have the question read?

(Whereupon the question referred to was read by the reporter.)

A. Not that I know of.

By Mr. MATTHEW:

Q. You have heard of the term "Oregon pine", have you not?

A. Yes.

Q. Do you know what lumber is meant by the term "Oregon pine"?

Mr. BURR. One moment, if the examiner please; I object.

Examiner DE BRULER. Objection overruled, as long as he is asking about pines.

Mr. BURR. Oregon pine is not a pine.

Mr. MATTHEW. We are trying to find out. I am asking that question.

Examiner DE BRULER. Objection overruled.

The WITNESS. What is the question?

Mr. BURR. This is again designed to prove a supposed misnomer in some other species than pine.

Examiner DE BRULER. As long as he asks about anything
2518 called pine I think it is proper.

A. I have. It is so-called "fir" lumber.

Mr. BURR. I move to strike out on the grounds it is intended to show again a supposed misnomer in the fir industry and not in the pine industry.

Examiner DE BRULER. That answer may stand.

By Mr. MATTHEW:

Q. Why did you say "so-called fir"?

Mr. BURR. I object. It is proved this is not a pine.

Examiner DE BRULER. Objection overruled.

By Mr. MATTHEW:

Q. Why did you use the words "so called" in your answer?

A. I have heard it stated that the fir lumber is not a true fir.

Mr. BURR. If the examiner please, I move to strike upon the ground that this other misnomer, or supposed misnomer, has nothing to do with this case. I think it is consistent with the examiner's former ruling that this be stricken.

Mr. MATTHEW. I think it is not.

Examiner DE BRULER. We will let that answer stand.

Mr. BURR. I would like to have an exception specially noted on both these last two answers with regard to the overruling of my objection.

Examiner DE BRULER. Very well.

By Mr. MATTHEW:

Q. I am not sure whether you stated on your direct exami-
2519 nation whether your company produced and marketed Norway pine or not?

A. I think no reference was made to Norway pine.

Q. Do you produce Norway pine?

A. Yes, sir.
Q. Is it offered to the trade as Norway pine?
A. Norway pine, or northern pine sometimes.
Q. Or northern pine?
A. Yes.
Q. Just what is meant in the trade by the term northern pine, does it mean Norway pine only?
A. In general, yes, although at times some white pine is shipped with Norway in an order for northern pine lumber.
Q. Was that a common practice of your company to mix some northern white pine with Norway pine and ship it as northern pine?
A. I think probably in some of the very low items of very low grade.
Q. Does your price lists quote northern pine of that name?
A. I don't believe I can answer. I haven't been very close with the issuing of price lists, and I might be mistaken.
Q. Do you know whether your grading rules provide for a mixture of Norway pine and white pine?
A. I don't know whether they do or not; I think not.
Q. Norway pine is essentially a structural wood, is it not?
A. Yes.
2520 Q. It is more definitely a structural wood than the strobus pine, for example, is it not?
A. Well, it is more commonly used for that purpose, yes.
Q. Well, it is harder wood?
A. Yes.
Q. Generally speaking?
A. Yes.
Q. And is not a true white pine?
A. It is not a white pine.
Q. Are you familiar with the lodgepole pine?
A. Not as timber; I have seen it in the tree, but not as lumber.
Q. You don't know whether any of your companies engage in the manufacture of lumber from the lodgepole-pine tree?
A. I have never seen any lodgepole pine lumber in any of our yards.
Q. Did you ever see any lumber invoiced by any one of your companies as lodgepole-pine lumber.
A. I never have.
Q. Do you know whether there is any commerce of lodgepole-pine lumber in the territories in which your companies operate?
A. I know of none.
Q. In your answers to my questions respecting the northern white pine, the Idaho white pine and California sugar pine, in the early part of my cross-examination, you stated that you did not regard botanical nomenclature as the only criterion, but that the uses
2521 the wood had had some bearing upon the matter. Was that your expression?

A. I think I stated that the term white pine had a very definite meaning which it carried over for centuries.

Q. I recall that. But you remember I understood to ask you if you were not making botanical nomenclature the sole criterion and you said not the sole criterion, and you thought the uses of the lumber for particular purposes should likewise be considered. Do you recall testifying to about that effect?

A. No; I think rather—the term white pine has a definite meaning over the year; it became something quite definite.

Q. And what is that meaning?

A. There are certain definite qualities that are inherent in the Pinus strubus which have given it a reputation and a character over all the years, and it is that reputation which I have in mind, the service which it renders, the qualities that are inherent in it, the texture of the wood, the quality of the knot, and all the other items that go into it to make up the usefulness of that wood.

Q. Then the qualities of the wood, and the uses to which it is best adapted, constitute in your opinion the governing criterion.

A. That isn't what I have tried to say.

Q. That is exactly the conclusion that I drew from your testimony. Now, as I understand it, Mr. Weyerhaeuser, and please don't
2522 get the impression that I mean to be irritating or unduly persistent in this, but you have been unwilling to say that you regard botanical nomenclature as the final criterion.

A. I wouldn't say that it was.

Q. And then I understood you to say, quite definitely, the term white pine has come to mean certain qualities and uses for which the northern white pine was especially suited. Is that about right?

A. Well, it has come to mean something in the public minds; yes.

Q. As to quality and use, isn't that what you mean?

A. Yes.

Q. Well, I am trying to correctly state what you have put to me. Your justification for marketing pine from the Pinus monticola, as Idaho white pine, is found primarily in the circumstance that you think that the quality and uses of the lumber make it quite a fair substitute for the northern white pine, or a fair alternate for it, if you will. Am I right?

A. Yes; together with the fact that it is a true white pine.

Q. And if California sugar pine has the same or almost the same quality and uses and is a true white pine, you will admit that the propriety of offering that wood as white pine, as I understand you?

A. Yes; I think I should admit it.

Q. Now, suppose we found a tree which yielded lumber, which had quality and utility on a par with the northern white pine, or with the Idaho white pine, would you recognize the propriety
2523 of offering it to the trade as white pine?

A. Not if it were not a true white pine.

Q. In other words, it has to be finally a true white pine, botanically speaking, before you would recognize the propriety of offering it to the trade as white pine?

A. Yes.

Q. Then it must pass the botanical test finally?

A. Yes.

Q. Exactly. Do you deal at all in any of the southern pine lumbers?

A. Yes.

Q. I take it that you deal in shortleaf and in longleaf?

A. Well, we have interests in longleaf, but I have nothing to do with the management of the companies which own longleaf timber.

Q. Do you handle the longleaf timber in a wholesale way?

A. Why, I think so. I can't answer that definitely.

Q. You produce and deal in short-leaf southern pine lumber as well?

A. Yes.

Q. Are you familiar with the grading rules for short-leaf and long-leaf yellow pine lumber?

A. No; I am not.

Q. Do you know whether or not commercial longleaf southern pine lumber is identical with the botanical longleaf yellow pine lumber?

A. I don't get the meaning of it—no; I don't know.

2524 Q. Is it your understanding that all of the longleaf pine lumber, commercially speaking, comes out of trees which are botanically longleafed pine trees?

A. I really know nothing about the subject.

Q. And I take it you are similarly uninformed as to short-leaf pine lumber?

A. Well, I have seen more of short-leaf lumber manufactured, but I don't anything about its botanical name.

Q. I am not asking particularly about the botanical name, but do you know whether the short-leaf pine lumber, as it is known to commerce, comes out of the short-leaf pine tree entirely?

A. I assume so; I don't know.

Q. You have never heard, then, that the short-leaf pine lumber may come either out of the longleaf tree or a short-leaf tree?

A. I have never so heard.

Q. Do you see any impropriety in grading lumber coming out of shortleaf pine trees and longleaf pine trees indiscriminately with request to quality and apparent utility?

A. Yes; I would.

Q. Why?

A. The character of the two trees is quite different and the service it will give in different fields is quite different.

Q. Then you think that the proper course to follow, as far as the merchandising end of southern pine lumber is concerned, is to market

as short-leaf pine lumber only that lumber which comes out of the short-leaf pine trees?

2525 A. Yes.

Q. And similarly to market as longleaf-pine lumber only that which comes out of the longleaf-pine tree?

A. Yes.

Q. What led your company, or companies, to resort to Idaho for a supply of pine lumber?

A. My recollection is that the Northern Pacific, through its land grant, had white-pine timber in Idaho and wished to sell it and offered it to us for purchase.

Q. And were you anticipating a decline in the production of northern white-pine lumber?

A. Not at that time. It was merely a natural expansion of our business.

Q. Now, there has been a decline in the production of the northern white-pine lumber during the past thirty years?

A. Yes.

Q. Rather a marked decline?

A. Yes.

Q. And, as I recall your direct testimony, your company now owns some 300 million feet of merchantable strobus pine lumber in the Great Lakes States?

A. It is approximately that amount.

Q. Your annual cut is 50 to 60 million feet?

A. Yes; of strobus.

Q. I am talking about strobus.

2526 A. Yes.

Q. And that would mean that the available supply left to you would meet your needs for only some five or six years?

A. No.

Q. How can you maintain a rate of cutting of 50 to 60 million feet a year without shortly exhausting or practically exhausting 300 million feet?

A. Because our timber lies in National and State forest reserves, the State particularly, and the Government is selling this timber from time to time, and so that we are able to extend the life of operation by purchases from those sources and from individuals who still own claims and small tracts of timber in that territory.

Q. Do you expect to be able to maintain an ample cut of as great as 60 million feet indefinitely?

A. The manager of the company does, but I don't think—it scarcely seems probable to me that we can maintain it indefinitely, but I hope we can for a period of twenty years at least, or approximately twenty years.

Q. After that you expect a decline?

A. A probable decline in the amount of strobus that we manufacture; yes.

Q. I am asking about strobus. For the present time you are cutting a great deal more of Idaho white pine than of the strobus?

A. Oh, yes.

2527 Q. And that is largely replacing the market which you formerly filled with strobus pine?

A. Yes.

Q. Is your ponderosa pine likewise entering into some extent the market which you formerly supplied with strobus pine?

A. I think so; yes.

Q. For what purpose is your pondosa pine being used primarily?

A. It is rather difficult for me to answer that question. Of course, in a general way I know it is used for sash and doors and interior trim and various items.

Q. I suppose that during the years of your early experience in the lumber business the sash-and-door manufacturers in the Middle West largely obtained their stock from the northern white-pine mills; am I right in so understanding?

A. Yes; they used a considerable amount of white pine at that time, of true white pine.

Q. That is, of the northern white pine?

A. Yes.

Q. Strobus?

A. Yes.

Q. And that condition has gradually changed so that they are no longer supplied primarily with that particular lumber?

A. Some factories are; others are not.

Q. Now, do not the larger factories obtain the bulk of their lumber material from the Pacific Slope States?

2528 A. Yes.

Q. Are your companies interested in the Rock Island Sash and Door Company?

A. Yes.

Q. That plant is located at Rock Island, Illinois?

A. Yes.

Q. Can you tell us what particular variety of lumber is primarily used in that plant?

A. It is very largely western yellow pine.

Q. Some of it, I take it, is supplied by your own companies operating in Idaho, or Oregon, or Washington?

A. Yes.

Q. Does it purchase any lumber from California or Oregon mills under the name of California white pine?

A. I can't tell you that we purchase from California and Oregon mills, but I think I have never seen one of their invoices.

Q. You obtain lumber from the Klamath Basin?

A. I am not sure.

Q. Now, does your Rock Island plant likewise use strobus pine in its operation?

A. A very small amount.

Q. Why is the amount relatively so small?

A. I presume because the trade that buys from them demands a cheaper item and it can be made at less cost from western yellow pine.

Q. Then there has been a natural economic replacement of
2529 the strobus pine lumber very largely with what you term the western pine?

A. Yes.

Q. Does your Rock Island plant use any considerable quantities of Idaho white pine?

A. I don't think they do; a very small amount if any.

Q. Can you tell us why they use so little, if any, of your Idaho white pine?

A. For the same reason that I have just given.

Q. That is, it is too expensive?

A. Too expensive.

Q. Is it not also a fact, Mr. Weyerhaeuser, that the Idaho white pine yields comparatively a small amount of lumber of the shop types?

A. Yes.

Q. Ponderosa pine, ordinarily speaking, yields a very much larger proportion of lumber of the shop type?

A. Yes.

Q. Then it is quite natural that the ponderosa pine lumber should supply the needs of the remanufacturers in the Middle West engaged in making sash and doors and other materials from shop lumber?

A. Yes.

(Here followed remarks off the record.)

Examiner DE BRULER. We will continue this hearing until tomorrow morning, January 30, at 10:00 a.m.

2530 (Whereupon, at 4:45 p.m., an adjournment was taken until Thursday, January 30, 1930, at 10:00 o'clock a.m.)

2531 Docket No. 1620 to 1689, inc.

SAN FRANCISCO, CALIFORNIA, *January 30, 1930.*

Met pursuant to adjournment, 10:00 a.m.

Before Ellis De Bruler, examiner.

Appearances:

Eugene W. Burr, for the Commission.

McCutchen, Olney, Mannon & Greene (by Mr. Allen P. Matthew and Carl I. Wheat) for the respondents.

Examiner DE BRULER. We will proceed with the hearing if the parties are ready.

(Here followed remarks off the record.)

Examiner DE BRULER. Mr. Weyerhaeuser will take the stand for further cross-examination.

Mr. MATTHEW. Mr. Examiner, I have the consent of counsel to make a further tender of certain testimony through this witness, Mr. Weyerhaeuser, on this question of the alleged misnomer of lumber. As I recall it, I did interrogate the witness to some extent, or undertook to interrogate him, respecting Douglas fir.

I desire now to offer to prove by this witness, Mr. Weyerhaeuser,
2532 that lumber manufactured from a tree commonly known as Douglas fir, but which is not botanically a fir tree, is offered to the trade in interstate commerce and in foreign commerce, not only as Douglas fir, but as Oregon pine, and that those names are known to the trade.

Mr. BURR. I wish to object on the ground, briefly stated, that that would put the Government upon its proof to show the distinction in the matter of public effect of those other supposed misnomers as contrasted with the misnomer in this case, which would be to try a number of questions of importance without the parties in interest manufacturing these other varieties of lumber brought into court or examined as parties in any fashion. I therefore object.

Mr. MATTHEW. My reply to that is that we are not undertaking to try other woods, rather alleged misnomers, but we are undertaking to test by a specific illustration the validity of the witness' general statement as to the effect of alleged misnomer of lumber upon the lumber industry.

Examiner DE BRULER. In my judgment, such testimony is going outside the issues in this case, and for that reason the objection to the offer of such testimony is sustained.

Mr. MATTHEW. The examiner, as I understand it, will allow me an exception.

Examiner DE BRULER. An exception is allowed.

Mr. MATTHEW. Exception is allowed and a reference to the Commission?

Examiner DE BRULER. Yes; certainly.

2533 Mr. MATTHEW. I offer similarly to prove by this witness, Mr. Weyerhaeuser, that lumber which is marketed in interstate commerce under the name of western red cedar is yielded by a tree which is not botanically a cedar tree.

Mr. BURR. I object to that same question on the grounds stated.

Examiner DE BRULER. The objection is sustained.

Mr. MATTHEW. And exception reserved?

Examiner DE BRULER. Exception allowed.

Mr. MATTHEW. I offer again to show that lumber which is marketed under the name Alaska cypress is obtained from a tree which is not botanically a cypress tree.

Mr. BURR. Same objection.

Examiner DE BRULER. Same ruling.

Mr. MATTHEW. I offer to show that lumber which is manufactured from a tree which is botanically a juniper is commonly marketed under the name of cedar.

Mr. BURR. Same objection.

Examiner DE BRULER. Same ruling.

Mr. MATTHEW. And I assume, Mr. Examiner, that similar tenders which I might offer at this time along the same lines respecting other lumbers commonly known and offered to the trade under names which differ either from the botanical name of the tree or the common, popular name of the tree would likewise be made, that the same objection and ruling would be made?

2534 Mr. BURR. I should interpose the same objections.

Examiner DE BRULER. The same ruling would be made for the same reason that I stated, that it does not come within the issues of this complaint.

Mr. MATTHEW. It may be understood that I have made my offer to go into this general subject specifically as to various kinds and types of lumber and trees, and that in each instance the examiner has ruled adversely to my offer?

Examiner DE BRULER. That is correct.

Mr. BURR. I now wish to make an offer to this effect: That if, on perusal of this witness' testimony, it is found by opposing counsel that he is correct in his supposition, that this witness made the statement with regard to misnomers in the lumber industry generally, which is not confined to this misnomer here in court, that I shall not oppose a motion to strike on his part that part of the answer, or at least confine the answer to this misnomer here alleged.

Mr. MATTHEW. Obviously, the testimony throughout the hearing has gone too far to make that appropriate from my point of view. I will continue with a few questions.

F. E. WEYERHAEUSER resumed the stand and further testified as follows:

2535 Cross-examination (continued) by Mr. MATTHEW:

Q. As I recall your testimony yesterday, Mr. Weyerhaeuser, you agreed that the lumber obtained from the Pinus ponderosa tree is used generally for the same purposes for which the northern white pine has commonly been used?

A. Yes.

Q. And it is also a fact, is it not, that the lumber yielded by the ponderosa tree is not, for the most part, used for the same purposes for which the southern yellow-pine lumber is used? I am again speaking generally and recognizing that there are exceptions.

A. If you refer to the item of shop lumber, I think, probably, you are correct.

Q. I am talking about the general use of the ponderosa pine. In general, it is not a structural lumber that southern yellow-pine lumber predominately is?

A. Do you include what is commonly called shortleaf?

Q. Let's put it this way—either shortleaf or longleaf?

A. My impression is that shortleaf is very much like western yellow pine and serves very much the same uses.

Q. You think the ponderosa-pine lumber of the Western States is used commonly for the same purposes as the shortleaf yellow pine?

A. I think so.

Q. Is it the longleaf pine lumber of the South which repre-
2536 sents the bulk of the production?

A. Yes.

Q. I think you also stated that in appearance and general quality and use the ponderosa pine timber is quite closely analogous to the lumber yielded by Idaho white pine and the northern white pine.

The WITNESS. Read the question.

(Whreupon the question referred to was read by the reporter.)

Mr. BURR. I think there are two questions there. Can't you divide the question?

Mr. MATTHEW. I will withdraw the question.

Examiner DE BRULER. Very well.

By Mr. MATTHEW:

Q. If the lumber which is here in issue, the California white-pine lumber as it is known to the trade in a very large section of California and southern Oregon at least, is to be considered with respect to quality and primary use, entirely disregarding botanical names, would you say that it comes more appropriately within the group of white-pine lumbers, or in the group of yellow-pine lumbers?

A. Yellow-pine lumbers.

Q. And what is the basis for that answer?

A. My knowledge of western yellow pine and my knowledge of short leaf yellow pine.

Q. Now, in the quality of relative hardness, does it more
2537 nearly approximate the northern pine and Idaho white pine, or the southern yellow pine?

A. Merely as to hardness?

Q. Yes.

A. I think it approaches nearer true white pine than it does the longleaf, certainly.

Q. And does it not more nearly approach the northern white pine than the short leaf yellow pine in the South in the quality of hardness?

A. I am not so sure about that. I have seen a great deal of short leaf yellow pine that I couldn't distinguish from western yellow pine.

Q. If——

A. (Interrupting.) I think there is a little wider range in short leaf than there is in pondosa in that respect.

Q. Have you examined the governmental data showing the results of tests as to hardness, resistance to pressure, and other physical characteristics of various pine lumbers?

A. Only very superficially. I know practically nothing about the subject.

Q. Then your answers are predicated on your observation and not particularly upon the analysis or familiarity with tests?

A. No; my answer is based upon our experience.

Q. And not at all upon a comparative analysis of the results of tests?

A. I don't know that I can say that absolutely—in general, yes.

2538 Q. I am talking about tests of a scientific character. Your answer is yes?

A. In general, yes.

Q. I am not certain, Mr. Weyerhaeuser, whether I asked you as to the relative yield of shop lumber from Idaho white pine and ponderosa pine. If I did not, may I ask you now?

A. The western yellow pine produces more shop lumber.

Q. Can you give us the approximate percentage of shop lumber that is yielded by typical Idaho white pine?

A. No; I cannot you the percentage.

Q. Is the Idaho white shop lumber relatively a small factor in the shop trade at the present time?

A. Yes; I should say so.

Q. I think you testified that the mill which is owned by the Weyerhaeuser interests at Rock Island, Illino's, draws its raw material very largely from ponderosa pine mills?

A. Yes.

Q. And that mill is engaged largely in the manufacture of sash and doors and similar products?

A. Yes.

Q. Do you know whether or not the sash and doors and other manufactured products of that mill, are offered to the trade under the name of pondosa pine?

A. In answering that question I must make the statement that our business is large and varied and I cannot be supposed to

2539 follow every detail of invoices. The only answer I can make definitely is that the last catalog which I happened to see of the Rock Island Sash and Door Works referred to used the term "western pine." But that was some time ago, and I don't know what the present practice is.

Q. You understand, Mr. Weyerhaeuser, I recognize that you may not be familiar with the details with many of these operations. I appreciate that you are entirely candid in your answers, but so far as you know the product of that factory is not offered to the trade under the pondosa pine name?

A. I can't answer that. I don't know that it is, nor that it is not.

Q. Well, do you know of any sash and door, manufactured anywhere in the Middle West, offered to the trade under the pondosa pine name?

A. I have no knowledge of any other factory than our own.

Q. Then if I should broaden the question, if I may, and ask whether you know of any sash and doors anywhere offered to the trade as pondosa pine, do you know of any?

A. No; I do not.

Q. Irrespective of the name which may be employed to identify the lumber which is manufactured from the Pinus ponderosa trees, do you expect that the bulk of the shop trade will in the future be supplied, as now, with ponderosa pine lumber?

A. Yes; except as coast fir may make inroads on it.

2540 Q. Subject to that qualification, you expect ponderosa pine lumber to supply the bulk of the needs of shop trade?

A. Yes.

Q. You testified briefly yesterday respecting certain small mills in New England engaged in cutting strobus pine or second or even third growth. May I ask you whether you made any particular observations as to the quality of the lumber which is being turned out by those mills?

A. No; I did not.

Q. Did you note the trees and, therefore, the logs are quite small in diameter?

A. Yes.

Q. Perhaps ten or twelve inches?

A. Some of them were larger than that. I didn't measure them so I am scarcely able to say what the diameters of those logs are.

Q. From your observation, would you say the average diameter would be more than ten or twelve inches?

Mr. BURR. Are you referring to second growth?

Mr. MATTHEW. As to all the mills he noted around New England which he testified to on direct examination.

A. My impression is that some of the logs were larger and some were smaller than twelve or fourteen inches.

By Mr. MATTHEW:

Q. You couldn't approximate an average?

A. It wouldn't mean anything if I did; I didn't scale any

2541 of the logs.

Q. Did they appear to be on the average smaller in diameter of the logs which are being put through your mills in northern Minnesota at the present time?

A. Yes; I said it was either second or third growth timber, which implies that it is not old growth timber at least.

Q. Have you told us the average diameter of the logs which are being milled on your properties in northern Minnesota now?

A. No; I do not know.

Q. Do you happen to know how many logs, on the average, are required in order to make 1,000 feet of commercial lumber at your Minnesota mills?

A. It varies so much from year to year that I could not give you—make a statement of the situation at this time.

Q. Couldn't you approximate it? Would it be ten or eleven logs of sixteen-foot lengths?

A. The difficulty with that question is this: Our averages of logs include not only white pine, but Norway pine, poplar and spruce,

and tamarack, and any other wood we happen to manufacture, and so I cannot tell you what the average of the white pine logs would be, and I assume that it is the strobus that you are interested in.

Q. Yes; I am asking about the strobus. Coming back for a moment to these New England mills, working in second or third growth timber, will you state, please, whether or not the
2542 percentage of sap in lumber yielded by those trees would not be relatively very high?

A. The sap on a white-pine tree does not increase very much with the growth of the tree, so naturally the smaller the tree the greater the percentage of sap.

Q. I take it that most of the lumber that is being manufactured in New England at these mills to which you referred is of rather inferior type and was marketed ordinarily as common lumber?

A. I think that is probably correct, although the surface indication of the trees indicated a rather smooth type.

Q. Would you expect any lumber of the factory grades to come out of those milling operations?

A. By factory grades, you mean shop type?

Q. Yes.

A. Very little.

Q. These mills for the most part were very small, I think you said.

A. Yes.

Q. Could you approximate their annual capacity?

A. For the most part they were single-saw mills.

Q. They were simply small portable mills?

A. Some of them were portable mills; some were a little more—I think on the whole you would call them portable mills.

Q. Operating with circular saws, I assume?

A. Yes.

2543 Q. Did any change take place in the price differential between ponderosa-pine lumber and Idaho white-pine lumber following the change in your name from western white pine, or western pine, to pondosa pine?

A. We never called our wood western white.

Q. Let me make it a little clearer.

As I understand it, before you adopted the name pondosa pine as a trade name, the lumber which was manufactured from ponderosa-pine trees was offered to the trade by you under the name of western pine?

A. Western soft pine.

Q. Yes. And there were different practices in the territory and some of the mills were selling that lumber as western white pine; that is, some of your competitors?

A. I assume so, but I cannot say that I know that to be a fact.

Q. Now, I assume, of course, that the Idaho white pine commanded something of a premium over your western soft pine, grade for grade?

A. In every grade except the very lowest, possibly.

Q. Let's except the lowest grades for a moment. There was a price differential, and they referred to a premium, a price differential?

A. Yes.

Q. I am asking you whether you observed any change in that price differential after you adopted the term western soft pine
2544 and replaced it with the term pondosa pine?

A. If there was any change in the differential, I don't remember it.

Q. So far as you know, the relative price level remained just as before?

A. So far as I know; yes.

Q. And did you notice any change in the manner in which the ponderosa pine lumber entered the trade? By that I mean did it go into the trade for the same uses generally for which it was used theretofore?

A. I think so.

Q. Is there a price differential between Idaho white pine and northern pine, grade for grade?

A. The prices are not uniform. I am not well enough posted to tell you exactly what the differentials are.

Mr. BURR. Did you refer to northern white pine?

Mr. MATTHEW. Yes.

Mr. BURR. Read the question.

(Whereupon the question referred to was read by the reporter.)

Mr. BURR. I beg your pardon.

The WITNESS. Perhaps I should add that the term differential wouldn't apply there. There are differences in the prices of the different grades, but it doesn't become fixed as the term differential might imply.

2545 By Mr. MATTHEW:

Q. I don't mean to suggest that there is a constant and exact relationship in price levels, but what I wanted to determine is whether or not your northern white pine lumber customarily sells upon a different price level from the price level at which Idaho white-pine lumber sells.

A. Grade for grade there is not very much difference.

Q. Take your B selects, is there a typical—may we take that as an illustrative grade for the moment?

A. No; it wouldn't be.

Q. Can you give us a representative grade which we may take as a barometer of prices?

A. Most any than B selects.

Q. Take any one you suggest.

A. I am not familiar enough with prices today to answer that question.

Q. You have in general followed the price levels of northern white pine and Idaho white, have you not?

A. Yes.

Q. Has not the northern white pine ordinarily commanded a somewhat higher price than Idaho white pine, grade for grade, in the Chicago market, for example?

A. I think not.

Q. They have sold about on a parity, have they, those grades?

A. Approximately so.

2546 Q. Does the trade, so far as you know it, seem to as willing to accept Idaho white pine as northern white pine, grade for grade, at the equality of price?

A. Some buyers prefer one and some prefer the other.

Q. Does that mean, for different purposes or for the same purposes?

A. For the same purposes.

Q. Do you know whether your companies feel free to furnish Idaho white pine upon orders calling for white pine only?

A. Which companies?

Q. The Weyerhaeuser Companies; we will say the Weyerhaeuser Sales Corporation, if that is the name.

A. If it was shipped from Choquet [Cloquet], they would accept it without exception; if an order of that kind came to our sales company, there would immediately be some doubt in their mind as to what was meant, unless they knew the customer who sent the order.

Q. Then, do you know whether or not Idaho white pine is ever supplied on an order calling for white pine only?

A. I can't say that I know from actual experience; I suspect it would be.

Q. You would feel free to furnish either lumber interchangeably if you felt that that was in accordance with the customer's desire or requirements?

A. Our salesmen ordinarily are required to sell, to place, to accept an order from a given stock sheet.

2547 Q. What?

A. Stock sheet. In other words, they must know that the stock of lumber that they are selling is in existence in some particular yard. Therefore, an order comes designated for a certain mill. So that ordinarily the question does not arise.

Q. Then, so far as you are personally concerned, or so far as your personal information goes, you do not know whether orders for white pine, coming to your company, are sometimes filled with Idaho white pine?

A. Why, I don't know that. I haven't actually seen such an order, but I am very sure that it would be if they knew that true white pine was meant by the order.

Q. That is, they would feel free to furnish Idaho white pine, if they felt that was what the customer desired or needed?

A. Yes, sir.

Q. May I ask you whether your companies have ever sold lumber yielded by the ponderosa pine tree under the name of yellow pine or under a name which included the term "yellow"?

A. I don't know.

Q. So far as you information goes, you have employed the two terms to describe this lumber, the first term being western soft pine, and the next term being pondosa pine?

A. So far as I know, but I may be mistaken.

Q. Well, will you tell me why the word "yellow" was avoided when the names western soft pine and pondosa pine were selected?

2548 A. I think it was probably an effort to differentiate between an Idaho yellow pine and a southern yellow pine.

Q. For that reason you decided to leave the word "yellow" out of the trade name for this lumber?

A. I don't know that that is the reason. I can only make a guess as to that.

Mr. MATTHEW. That is all.

Redirect examination by Mr. BURR:

Q. Is the short leaf pine, or Arkansas soft, used for sash and door in some instances, as far as you know?

A. Yes.

Q. The Rock Island Sash and Door Company—does that use Arkansas soft, do you know?

A. It does at times.

Q. It has at times?

A. Yes.

Q. Now, I believe you testified that your company holds even larger stumpage in ponderosa than it does in Idaho white, did you not?

A. Yes.

Q. You expect to market that timber from time to time in the form of lumber, do you?

A. We do.

Q. Now, does the Rock Island Sash and Door Company make more than one type of sash, make it out of more than one variety of lumber?

2549 A. They have at times. I am not very familiar with the operation.

Q. Do you know whether they make a genuine white pine sash?

A. I don't think they do as a stock item; they would make it on special order.

Q. Does the Rock Island Sash and Door Company have competition in that line?

A. In which line?

Q. Sash and door, their product?

A. Yes.

Q. And that competition comes from what, the makers of what variety of lumber?

A. Very largely from so-called California white pine and pondosa.

Q. They meet those people in the markets, do they?

A. Everywhere; yes.

Q. Do you know whether the sash or door made by their competitors are designated California white pine sash or doors?

Mr. MATTHEW. I think that is not within the scope of redirect examination.

Mr. BURR. I do, if the examiner please. He went into the sash and door business with a good deal of care, I thought.

Mr. MATTHEW. Not for the question of the names of other companies.

Mr. BURR. I wasn't asking for the name of other companies.

2550 Mr. MATTHEW. I don't think I made any inquiry as to the names used by other sash and door companies.

Mr. BURR. I think that is probably true, but it is proper to find out what aspect this sash and door business has upon this controversy.

Mr. MATTHEW. I object on the ground that it is not proper redirect examination.

Examiner DE BRULER. Objection sustained. I think that line of questioning has gone far enough.

Mr. BURR. Pardon?

Examiner DE BRULER. Objection sustained. The line of questioning has gone far enough.

Mr. BURR. If the examiner please, I offer to prove right now that this is a volume competitive business and that these people meet California white pine, and sash and door, on the markets and that they are accordingly obliged to meet the price, except to the extent that they have a high grade specialty custom which recognizes the difference between genuine white pine and California white pine sash and door.

Examiner DE BRULER. Is that the object of the question?

Mr. BURR. Yes; that is the object of the question to lead up to——

Examiner DE BRULER (interrupting). Go ahead. You may proceed, but make it as short as possible, please.

2551 The WITNESS. I can't say that I know how other sash and door factories invoice their products.

By Mr. BURR:

Q. You don't know whether the sash and door on the market is designated as California white pine sash and door; is that true?

A. I do not know.

Q. Do you regard a sash made from Pinus strobus, or Pinus monticola as a superior sash or a superior door, where exposed to the weather, as contrasted with a ponderosa sash or door exposed to the weather?

Mr. MATTHEW. That is not proper redirect examination. I object to it on that ground.

Mr. BURR. If the examiner please, that is made under a part of the offer that I made a moment ago. It seems to me that inasmuch as counsel has endeavored to show by this witness that this company is manufacturing a ponderosa product, it seems to me that the competitive condition is——

Examiner DE BRULER (interrupting). He can answer that one question. It should have been gone into on direct examination.

A. I do.

Mr. BURR. Will you read the question? I don't know what "I do" refers to.

(Whereupon the question referred to was read by the reporter.)

By Mr. BURR:

Q. Is it a higher priced product?

2552 A. It is.

Q. I think you testified with regard to the product of the New England mills, mills which you have observed in traveling about that part of the country, is that true?

A. Yes.

Q. On cross-examination you testified as to the character of the wood. Is that lumber that is being cut there, does it belong to the strobus species, is that what is known as second growth, to a large extent, or wholly?

A. I would say second growth; yes.

Q. Is that a small knotted type?

A. I didn't examine enough of the lumber really to be qualified to answer as to the type of knot.

Q. On lumber of the size that you described will large knots occur in those young trees?

A. Ordinarily not.

Q. Then would you say that that is a small knotted type?

A. I would.

Q. Without observing that, would that naturally be the case?

A. I think so.

Q. Is it possible to use a small knotted type in factory work?

A. Yes; if the knot is sound.

Q. Would that small knotted type, then, for a trade asking for genuine white pine, would that be available for factory purposes, or would it not?

A. It might be available for sash and it would be available

2553 for moulding and various items of exterior trim, I think, not qualified under the term of factory plank.

Q. When an order comes in for white pine to the Weyerhaeuser Sales Corporation, is it ever possible to know whether or not the customer is a northern white pine or Idaho white pine customer?

A. Some of our customers ordinarily order northern white pine; others ordinarily order Idaho white pine. The territory has something to do with that. At times we would know, but at other times we wouldn't.

Q. Would that knowledge have any bearing upon what you would furnish on an order for white pine simply?

A. If you refer to pure white pine, no; I think not.

Q. Well, I am referring to pure white pine. I am referring to this order that comes in for white pine. Would the knowledge of what the customer was in the habit of getting—that is to say, whether Idaho white pine or northern white pine—affect the decision to ship one or the other of those varieties?

A. Well, it might. For instance, some of our own yards might order white pine and we would know what they intended.

Q. I am not referring to interyard shipments.

A. These are not interyard shipments; they are independent corporations, do their own buying independently. In such an instance we would know that white pine meant white pine. If an order
2554 came from some other individual, we might not know whether it meant true white pine or whether it meant pondosa, and the result would be we would have to send back to our salesman to inquire, if it weren't explicit on the order, and it all tends to confusion and delay.

Mr. MATTHEW. I move to strike out the last sentence of the witness' answer on the ground that it is not responsive to the question.

Examiner DE BRULER. That is the result of it, is it?

The WITNESS. Yes, sir.

Mr. MATTHEW. He wasn't asked about that.

Examiner DE BRULER. Let it stand. I think we ought to proceed more rapidly.

By Mr. BURR:

Q. When you get an order from the outside and it comes in for white pine the question as to what should be shipped under that order, is that ever determined by a knowledge of what his customer has purchased previously?

A. I think it would in certain instances; in others it wouldn't.

Q. When you get orders for white pine what are the possibilities that that customer may be asking for?

A. He may be asking for Idaho white pine, or he may be asking for so-called California white pine.

Q. May he be asking for northern white pine?

A. Yes.

Mr. BURR. That is all.

2555 Re-cross-examination by Mr. MATTHEW:

Q. When a customer asks for white pine, did you ever get the impression that he means sugar pine?

A. No; because we never handle sugar pine, and I know nothing about it.

Q. What did you mean by the expression "pure white pine"?

A. I want to keep it very definite that I don't mean so-called California white pine.

Q. You didn't mean to exclude Idaho white pine when you referred to purity?

A. No; I did not.

Q. When you purchase Arkansas soft pine for use in your Rock Island plant do you obtain selected stock or just mill-run stock?

A. You are asking a question of detail that I am not qualified to answer.

Q. That may be. I don't know whether you were advised on that or not. You may not be advised on this next question, but I want to ask it in any event.

Is the Arkansas soft pine used for the purpose of making a straight run of sash or doors, of Arkansas soft pine, or is it intermingled with the woods of other species in making an assembled door, for example?

A. It is used exclusively in making a given door, or I assume
2556 it may be mixed. I have no knowledge of that.

Q. What I meant to determine particularly is whether you turn out at that plant doors which are made entirely of Arkansas soft pine and other doors that are entirely made of Idaho white pine, and others entirely of ponderosa pine, or of other varieties, or whether the common practice is not to cut up the stock and feed it through the plant with the result that you get in a single door three or four varieties of lumber?

A. I never saw true white pine mixed with pondosa, or short leaf. As to whether short leaf and pondosa are mixed, I can't say.

Q. You don't know whether the doors which you market under the name of western pine may include some Arkansas soft pine?

A. That I cannot answer.

Q. Do you know whether any of the New England pine now being cut is actually manufactured into sash or doors?

A. I do not know.

Q. Is it the practice to use knotted stock in making sash or doors?

A. Some grades of doors. I didn't refer particularly to doors in knotted stock. I referred rather to exterior trim, cornices, and mouldings, etc.

Q. Exterior trim or interior?

A. Exterior.

Q. Ordinarily the knotted stock would not be deemed to be
2557 especially suitable for the manufacture of either sash or doors, or for interior trim?

A. Not for doors; it might be used for sash because it would be cut up in short lengths.

Q. What percentage of the small knotted stock goes to the sash and doors; have you any impression?

A. I have none; no, sir.

Q. And you haven't any impression as to the percentage of sash and doors which have small knots in them, some one inch, up to one inch in diameter?

A. It would be very limited.

Mr. MATTHEW. That is all.
Examiner DE BRULER. That is all.
(Witness excused.)
Mr. BURR. I will call Mr. Taylor for a few moments.
(Here followed remarks off the record.)

CHARLES L. TAYLOR was thereupon called as a witness, and having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Taylor, your business is what, sir, if you please?
A. Building construction.
Q. How long have you been in that line of work?
2558 A. Personally I have been in the building business since 1906. The firm of which I am now a member has been in business for ten years and a half.
Q. Pardon?
A. Has been in business for ten and a half years.
Q. During how long a period have you been in the business in that city; all that time?
A. Yes.
Q. What is the line of your contracting work?
A. Particularly what we call frame construction, residential work, clubhouse work, that would be of frame construction.
Q. Are you familiar with the reputation of sugar pine for exterior uses in frame buildings?
A. I can't say that I am.
Q. You don't use sugar pine for exterior work?
A. We do not use sugar pine for exterior work.
Q. Are you familiar with the reputation of sugar pine for exterior sash and door?
A. Yes; particularly for sash.
Q. What is that reputation as regards durability?
A. First class; high class.
Q. Are you familiar with the reputation of ponderosa sash, or California white-pine sash, so-called, for durability?
A. I am not.
Q. You are not?
2559 A. No.
Q. How general is the use of sugar pine for window sash in this community?
A. On all of the better class of work sugar pine has quite a preponderance of the call. California white pine is used sometimes in the lighter sizes of sash and where the job is one of keen competition.
Q. By keen competition what do you mean—price or quality competition?
A. Price.
Q. Is there a differential between the price of California white pine sash and sugar-pine sash in price?

A. A slight differential; yes.
Q. Which is the higher in price?
A. Sugar pine.
Q. Which is considered more durable?
Mr. MATTHEW. Just a moment. He testified that he didn't know as to the reputation of California white pine for durability.
Examiner DE BRULER. My recollection is that he stated that.
The WITNESS. I couldn't answer that.
Mr. BURR. That is all.

Cross-examination by Mr. MATTHEW:

Q. Have you been familiar with the term sugar pine during your entire experience in the building industry?
2560 A. Yes.
Q. And likewise with the term California white pine?
A. I have not been as familiar with the California white pine as I have with sugar pine.
Q. About how long have you been familiar with the term California white pine, if you recall?
A. I haven't had any great familiarity with it at all. We haven't had occasion to use it.
Q. For the most part you have used the sugar pine, as I understand it?
A. For sash, yes, some portions of interior work.
Mr. MATTHEW. I think that is all.
Examiner DE BRULER. That is all.
(Witness excused.)
Mr. BURR. Call Mr. Ivory, please.
E. P. IVORY was thereupon called as a witness and, having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Ivory, your business is what, sir, at the present time?
A. I am employed by the Charles Nelson Company as sales manager, handling redwood, Douglas fir, and California pines, box
2561 shook, and other commodities that we sell both in wholesale and retail.
Q. How long have you been with the Charles Nelson Company?
A. A little over three years.
Q. And they are located here in San Francisco, are they?
A. The main office is here.
Q. You are sales manager, did you say?
A. Yes; handling certain commodities.
Q. Before you became associated with the Charles Nelson Company, I wish you would sketch your experience as regards forestry matters, beginning when you first became familiar with forestry affairs.
A. Well, I studied forestry in college, graduating from the New York State College of Forestry in 1916. After that I was employed in the lumber industry by the Great Southern Lumber Company

at Bogalusa, Louisiana, and my work there was terminated by entrance into the Army at the outbreak of the war.

After being discharged from the Army I was employed for about two years in New York City as a salesman, selling largely southern yellow pine and some other woods.

My next important work in that connection was with the Forest Products Laboratory of Madison, Wisconsin. I went there in 1921 and was employed for about two and one half years on research work, particularly in the project of standardization of American lumber as to grades, sizes, and nomenclature. In that capacity I traveled throughout the United States, made investigations
2562 and studies at sawmills, cutting a great many different species of wood, in fact, all of the principal commercial species. I attended a large number of conferences held for the purpose of developing appropriate standards. They were held at various points in the United States. Some of them were regional conferences in different sections of the country and dealt with the species produced in that particular region. Other conferences were with meetings of representatives of lumber manufacturers, producers, and consumers held in some of the important cities for the purpose I have before mentioned, of arriving at proper standards. Other conferences were held in Washington under the auspices of Secretary Hoover, to make the standards effective and have them declared the standards of the lumber industry.

After that I became associated with California White and Sugar Pine Manufacturers Association as manager of trade extension. My duties there consisted of helping in the formulation of advertising programs, advertising matter, the attendance at these meetings of retailers, wholesalers, or other groups of lumber people interested or who might possibly be interested in the use and distribution of products of California pine mills.

I was in that work for about a year and a half, until the Sugar Pine Sales Company was formed. Then I went with that company in the capacity of sales manager and more later in that of ex-
2563 tension manager. My work there was similar to what it had been with the California Pine Manufacturers Association, but it was more specifically applied to trade extension as regards sugar pine.

When that organization was dissolved I was taken over by Mr. Tyson, head of the Charles Nelson Company, as the sales manager to handle the products of his particular California pine mill, cutting chiefly sugar pine.

Q. And you are still with them?

A. Yes, sir.

Q. Now, in connection with your work, Mr. Ivory, have you had an opportunity to observe the durability of sugar pine as constructed in the buildings at any time?

A. I have.

Q. Will you narrate what effort you made to observe the durability of that wood at one time or at various times?

A. My efforts in that connection extended over a period of nearly three years, possibly longer. Those efforts consisted in endeavoring to locate buildings which had been erected sufficiently early to give a demonstration of durability and which were still in existence.

Q. Go ahead.

A. A number of such buildings were found, photographed, and reported on by me.

Q. Now, at this time did you have an opportunity or take an
2564 opportunity to examine the condition of any structures and ascertain how old those structures were, actually were?

A. I did.

Q. Will you state in some fullness, but not too great detail, what you found with regard to any particular instances of these structures?

A. Well, I found a hotel at Calaveras Grove of Big Trees, known as the "Mammoth Trees Hotel." The building was erected, according to records they now have, in 1854.

Examiner DE BRULER. What wood was that?

The WITNESS. Sugar pine used chiefly in the exterior parts.

Examiner DE BRULER. All right.

By Mr. BURR:

Q. Go ahead.

A. The building is still extant and in use and gives conclusive evidence of considerable durability in the species of sugar pine.

Q. What sort of shape is it in?

A. The building is in habitable, usable shape, and is now used as a hotel.

Q. Does it give evidence of having been repaired from time to time and parts of it replaced?

A. There have been additions made to it, as evidenced by the photograph which I have of the building, as originally constructed and as it is today.

2565 Mr. MATTHEW. Just a moment. That answer is not responsive. The question was as to whether there was evidence of repairs.

By Mr. BURR:

Q. Has it been repaired from time to time; does it show?

A. I couldn't say that it had. There is no evidence that I have observed of the repairs.

Mr. MATTHEW. May I have the examiner's indulgence a moment? I don't like to interrupt counsel or the witness, but I make the suggestion that a mere argumentative conclusion ought to be left out of the witness' testimony. I desire to move to strike out the statement made by the witness which I tried to object to.

Examiner DE BRULER. What was the statement?

Mr. MATTHEW. To this effect: That the building showed conclusive evidence of durability. I move to strike out that part. I have no objection to his stating what the age of the building may be or what the appearance of the wood may be. The particular sentence to which I object is a form of conclusion and, I think, ought to be omitted. I think counsel will agree to that.

Examiner DE BRULER. You state the facts, not conclusions.

By Mr. BURR:

Q. What was the appearance of the building as regards rot?

2566 A. I saw no evidence of rot.

Q. You saw no evidence of rot?

A. No.

Q. Where the sills were made of sugar pine, did you examine where they came in contact with the ground?

A. I did not examine that.

Q. You did not examine that?

A. No.

Q. What evidence of replacement did you find?

Examiner DE BRULER. That relates to the sugar pine?

Mr. BURR. Yes.

A. I found no evidence of replacement.

By Mr. BURR:

Q. How was the building roofed?

A. With sugar-pine shakes.

Q. What was the size of those, roughly?

A. Roughly, half inch thick by six inches wide by thirty-six inches long.

Q. Now, what other pines, if any, did you find in that building?

A. I did not find any other pines in that building.

Q. Well, it wasn't wholly sugar pine, was it?

A. I did not examine the interior frame.

Q. Was the exterior entirely sugar pine?

A. Yes, sir.

Q. By the by, has your company, or is your company, the

2567 Charles Nelson Company, interested in sugar pine at the present time?

A No, sir.

Q. Is your company interested in any variety of pine at the present time?

A. As a manufacturer?

Q. Yes; as a manufacturer.

A. There is incidental to our production a small amount of pine business, monticola, cut at one of our mills whose main production is Douglas fir, but it is a minor factor.

Q. Does your company wholesale as well as manufacture?

A. Yes.

Q. Are you interested in wholesaling any variety of pine at all?

A. Yes, sir.

Q. What variety?

A. Any variety produced on the Pacific coast.

Q. Is your company interested in pushing in a wholesale way any variety of pine as contrasted with any other?

A. No, sir.

Q. Now, did you observe any other sugar-pine buildings in connection with your search on the subject of durability?

A. Yes; I observed a hotel in Yosemite Valley, built and used as a hotel in around 1860, then known as the Hutchings Hotel. That building is now the oldest building standing in the Yosemite Valley. It is still used as part of the Sentinel Hotel.

2568 Q. That is made of sugar pine, is it?

A. Sugar pine was used in the roof and sides of that building.

Q. Did you examine the roof and sides?

A. I did.

Q. What sort of condition, as regards the presence of rot and decay, was there?

A. I did not find rot or decay.

Q. You looked for it, did you?

A. Yes, sir.

Q. Any other variety of pine in the sides and roof of that building?

A. Not that I could identify.

Q. Was there any replacement work that you noticed in the sides and roof of the building?

A. There was replacement in the sides of the building.

Q. Will you describe that, please.

A. Additional windows had been cut and some windows had been transformed into doors.

Examiner DE BRULER. Was that of white pine?

The WITNESS. The replacements?

Examiner DE BRULER. The parts that had to be replaced, was that of pine?

The WITNESS. To the best of my knowledge, the parts replaced were of pine; yes, sir.

2569 By Mr. BURR:

Q. Proceed.

Examiner DE BRULER. Don't go into any other woods except pine.

The WITNESS. I couldn't see the material that had been taken out.

By Mr. BURR:

Q. Now, any other building that you examined?

A. Yes; I once examined a cabin constructed at Meadow Valley which, from the best evidence to be obtainable, had been built about 1870.

Q. What was the reputation as to when that building had been erected?

A. The report of people living in that vicinity was that it had been erected about 1870; that was corroborated by tree growth surrounding it since it had been abandoned, and my experience as a forester would lead me to believe that the building had stood at least fifty years.

Q. What was the nature of this tree growth, briefly?

A. Young trees of indigenous species which had grown up around it.

Q. There might be young trees around a building that had been constructed last year. What was there in that growth?

A. The size of the trees themselves, some of them came upwards of fifteen to eighteen inches in diameter, and standing in such
2570 a position that it was evident the growth had come on of itself; that it had not been planted there.

Q. In what condition was that building?

A. The roof of that building had been covered with sugar-pine shakes. Those sugar-pine shakes were still doing service. It had been neglected, some had been knocked off, and debris largely from the trees growing overhead in the form of leaves and needles had collected extensively on the roof of that building. Also a tree, about six or eight inches in diameter, had at some time in the past fallen across the roof of the building. The tree itself, which had fallen, showed evidences of rot.

The structure, the sugar-pine shakes, were, while not altogether free from decay, showed sufficient evidence of withstanding the advance of decay to convince me of the durability of the shakes.

Q. Now, the debris that had fallen on the roof, of what nature was that—leaves or what?

A. Leaves, needles, etc.

Q. Did you scrape that off and examine the condition of the sugar pine underneath the debris?

A. I did.

Q. Where was it that the rot that you referred to had taken place?

A. Under the debris.

Q. Any other building that you found in your investigation?

A. I inspected a disused hotel at Grub Gulch.

2571. Q. Where is that?

A. It is east of Fresno in the foothills of the Sierras, an old mining community, where mining is followed no longer, or at least not to any extent.

Q. Well, what did you find as to the age of that building?

A. The building was reputed to be about fifty-five years old.

Q. It was made of sugar pine, was it, or to what extent was the exterior made of sugar pine?

A. Sugar pine was used in the roof, in the form of shakes, and in the window sills and casings.

Q. What condition did you find it to be in?

A. I examined one of the window sills, took it out and sawed it apart and looked particularly at the joints, where trouble is most apt to occur, and found it to be of sound wood.

Q. What, if any, evidences of decay did you find to the exterior of that building in the sugar-pine work?

A. I did not identify any evidence of decay in the sugar pine in the building.

Q. Now, were there any other buildings that you examined during that trip?

A. Yes; there was a cottage at Fresno Flats.

Q. And where is Fresno Flats?

A. A few miles beyond Grub Gulch, much in that same general vicinity.

Q. Well, I wish you would state what the age of that building is, or as reported to you?

2572 A. The building is reputed to have been either built in 1854 or 1856.

Q. Was it made of sugar pine on the outside?

A. Sugar pine was used for the roof and the siding of the building.

Q. Did you examine it as to conditions of decay, and the condition of rot?

A. I did.

Q. What did you find the condition as to the decay?

A. I did not observe any decay in the exterior, the outside of the building.

Q. Did you observe any signs that the building had been repaired and replacement work done on the outside?

A. I believe the roof had been replaced.

Q. A new roof put on, is that true?

A. Yes, sir.

Q. Did you examine any other buildings on that trip with regard to the durability of sugar pine?

A. That is all.

Q. Have you made any other trips of similar character investigating the durability of sugar pine?

A. I made a number of trips where the general subject was observed, but I have no further specific instances to report.

Q. What were the results of your observations on those other occasions as regards the durability of sugar pine?

2573 Mr. MATTHEW. I object to that. It calls for a mere conclusion. If he wants to testify as to specific instances, I have no objection.

Mr. BURR. I won't press the question.

Q. Now, did you report these matters to the California White and Sugar Pine Association?

A. I did.

Q. And those matters were embodied in circular material, were they?

A. They were embodied in circular material, not all of which was published by the California White and Sugar Pine Association, however; some by the Sugar Pine Sales Company.

Q. Now, have you brought any photographs that you made, during any one of those trips, of these buildings that you have described?

A. With me today?

Q. Yes; have you any?

A. I believe I have some copies of them in my brief case over there.

Q. I wonder if you would be kind enough to produce them?

A. (Witness produces copies of photographs referred to.)

Q. They are copies embodied in circular material, are they?

A. Yes.

(Here followed remarks off the record.)

Mr. BURR. If the examiner please, after consultation off the
2574 record with opposing counsel, I desire to ask for permission to mount and myself to mark as "Commission's Exhibit No. 47 for the record" pictures to be cut from circular material just produced by Mr. Ivory entitled "Mammoth Trees Hotel, with two wings added shortly after the preceding sketch . . ."—also "The oldest building now standing in Yosemite Valley . . ."—also "Deserted cabin of a gold miner . . ."—also "Cabin built of California sugar pine at Fresno Flats."

(Here followed remarks off the record.)

Mr. BURR. Those pictures will be offered as one exhibit to be Commission's ex. no. 47.

Examiner DE BRULER. They will be so received.

(The copies of photographs referred to were thereupon received in evidence and are to be marked Commission's Exhibit No. 47 by counsel for the Commission.)

Mr. BURR. They may be received subject to my action as described?

Examiner DE BRULER. Yes.

(Here followed remarks off the record.)

Examiner DE BRULER. We will take an adjournment until 2 o'clock.

(Whereupon at 12.05 p.m., a recess was taken until 2 o'clock p.m.)

2575

AFTER RECESS

2 O'CLOCK P.M.

Examiner DE BRULER. If the parties are ready, we will proceed. The witness may take the stand now.

(Here followed remarks off the record.)

E. P. IVORY resumed the stand and further testified as follows:

Direct examination (continued) by Mr. BURR:

Q. Now, Mr. Ivory, the experience that you have had in the forests has it enabled you to observe the characteristics of ponderosa and sugar pine?

A. Yes, sir.

Q. Have you had any opportunity yourself to observe their lasting qualities?

A. Are you through with your question?

Q. Yes.

A. I have.

Q. What opportunities have you had, just what occurred when you got your experience as to the lasting qualities of these classes of wood?

A. I observed sugar pine in its longevity, or durability, and the certain specific cases as related this morning, and also——

Q. (Interrupting.) I am now talking about them in the forest, rather than made up into lumber. Have you had an oppor-
2576 tunity to observe how the trees, after they have been killed, last comparatively, these two species?

A. I have.

Q. Please describe your experience and observation along that line.

A. I have seen examples of sugar pine logs which had been lying on the ground for a great number of years, in which the heartwood was still sound, and which, when put into a saw mill, produced merchantable lumber.

I have seen logs of Pinus ponderosa, which had been lying on the ground for relatively a few years, four to five, which were absolutely valueless for lumber.

Q. For four to five years?

A. Yes, sir.

Q. What part of the country was that, do you recall?

A. The sugar pine has naturally been in the sugar pine producing territory, largely in the middle or southern Sierras.

The observation on California white pine has been more in the northern territory.

Q. Northern part of California?

A. Yes, sir.

Q. Just what parts, if you can tell?

A. In the vicinity of Lassen Peak, and on the extreme edge of California, as regards the Pinus ponderosa, and as to a certain extent in the territory of southern Oregon, contiguous to California.

2577 Q. Now, how did you know the age of these logs that you found, what were your means of observation, or ascertainment as to the age of these logs?

A. Part of it was just by general observation of the state of the material around them, the debris, and part resulted from the fact that I knew they had been felled when a given road was built, or put through that particular territory.

Q. And you happened to know, did you, what time that was?

A. Yes, sir.

Q. Now, have you had any opportunity to observe dead and standing timber of these two species as regards their longevity, or hasn't that come within your observation?

A. I have observed the dead timber of Pinus ponderosa and have noted that it seemed to be dead—standing timber I am referring to—and noted that it seemed to be in an unmerchantable condition after a relatively few years.

Q. What are the characteristics of these two woods as regards their variability in different parts of their range?

A. Which two woods do you refer to?

Q. Ponderosa and sugar pine.

A. I believe that ponderosa has a much greater variability than sugar pine; each has some variability, but that in ponderosa is much wider.

Q. And in what characteristics does ponderosa vary widely as you have testified, what are those?

2578 A. With respect to the relative width of the sap ring, with respect to the relative thickness of the summer ring, as contrasted with the spring wood ring, and with respect to the density of the summer wood as contrasted with the spring wood.

Q. Now, I wish you would say in which respect each diverges from the other. In other words, you have testified as to the width of the spring wood and summer wood. I wish you would say which is the most variable, or have you covered that? Which is the most variable in those respects?

A. Pinus ponderosa.

Q. Now, how about the color, is there more variability in one than in the other?

A. There is.

Q. Which is the more variable in color?

A. Pinus ponderosa.

Q. Which, on the average, has the more heart, the Pinus ponderosa or the sugar pine?

A. Sugar pine.

Q. Can you give me more definite, how much more, as a result of your observation?

A. My observation is that the sap ring in sugar pine doesn't average much over four inches. The sugar pine tree is a larger growing tree than Pinus ponderosa, and so, on the first count of both sap rings, or rather the sap rings of both species were to be of the same size, then there would be a great deal more heartwood in the sugar

2579 pine log because of its larger average size. However, it is not true that the sap ring in the two species are the same size, because in the Pinus ponderosa the sap ring averages considerably larger than it does in the sugar pine.

Q. Well, would it average a half larger, or double, or a quarter larger, or what would you say is your best judgment?

A. My best judgment would be, it would be about double the size.

Q. Now, is this diversity between—is this diversity of ponderosa to be found in the same locality, or are you referring merely to a diversity between different localities?

A. There is a diversity in the same locality and between different localities.

Q. Will you describe the diversity in the same locality a little more fully, if you may?

Mr. MATTHEW. May I inquire of the examiner whether or not there is any rule or practice of the Commission as to cumulative evidence?

Examiner DE BRULER. It is not supposed to go too far; no.

Mr. BURR. This is my last witness.

(Here followed remarks off the record.)

Examiner DE BRULER. Go ahead.

The WITNESS. Read the question.

(Whereupon the question referred to was read by the reporter.)

2580 A. There are some localities in which the tree seems to grow and produce wood of a harder consistency than it does in others, but within that same locality one is apt to find some specimens which is the softest variety produced by Pinus ponderosa. That is, the variations within a given locality run between two extremes.

By Mr. BURR:

Q. Will you, or will you not, find specimens of the harder varieties even in localities where the softer variety of ponderosa prevails?

A. The same variation occurs there, but the harder pieces in some localities are in the minority, whereas in another locality the harder pieces may be in the majority.

Q. Now, are you familiar with this bull pine that has been referred to?

A. No, sir.

Q. I believe you testified with regard to certain standardization conferences, as I recall. Was one of the objects of those standardization conferences a standardization of nomenclature?

A. It was.

Q. Was that a standardization of nomenclature, species, varieties of lumber, or what was it?

A. A standardization of nomenclature of the commercial varieties of lumber.

Q. Is there any relation between the nomenclature of pines and the securing to the consumer of the variety of pine which he desires to use?

2581 Q. I wish you would state what that relationship is.

A. In speaking of the consumer, I refer to the ultimate consumer of the material.

Q. All right; so do I.

A. The ultimate consumer is not inclined to study or inform himself on the numerous varieties of lumber that enters into the trade. Generally speaking, the varieties with which he is familiar are those that have been used in his territory for a great many years past, which he has heard discussed by contractors, or carpenters, or people

using wood. They are inclined to limit themselves to the very few groups of woods of which they have any particular knowledge.

In a large part of our consuming territory, particularly the populous Eastern States, the wood of most common knowledge in the days of, let us say, our fathers, or the generations past, is undoubtedly the old white pine of the East, Pinus strobus.

(Here followed remarks off the record.)

Mr. MATTHEW. I object to the witness testifying as to modern conditions in the East, unless he is further qualified.

Mr. BURR. Well, I will qualify him further.

Q. In connection with your standardization work, about how many meetings did you hold with consumers?

A. I should estimate twenty to twenty-five, at which consumers were present. There were a great many interviews probably running up to 200.

2582 Q. This was done under whose auspices?

A. President Hoover's.

Q. He was then Secretary of Commerce, is that true?

A. Yes, sir.

Q. And those were in various parts of the country, were they?

A. In each section of the country.

Q. Now, then, when you represented the sugar-pine combined sales organization, did you travel in the East in that connection?

A. Chiefly in the East.

Q. Did you come in contact with actual buyers of lumber?

A. I did.

Q. What varieties or classes of buyers did you come in contact with in connection with that work?

A. This is in connection with the Sugar Pine Sales Company work?

Q. Yes.

A. With pattern makers, pattern people, foundry people, in general, planing-mill operators, retail lumber-yard operators, architects, contractors, and the ordinary building.

Q. How many sugar-pine manufacturing concerns were in that organization?

A. I believe there were about ten or eleven—I couldn't say exactly now.

Q. Did that represent most of the important sugar-pine producers?

A. It was estimated to represent 65 percent of the production of sugar pine.

2583 Q. Were you virtually a sales manager for that combination or a sales agent?

A. I was sales manager of that organization during the first several months of its operation.

Q. How many months would you estimate you spent in the East interviewing consumers and others, as you have described?

A. For the Sugar Pine Sales Company?

Q. Yes, please.

A. About four months.

Examiner DE BRULER. I think the witness is qualified, subject to cross-examination.

Mr. BURR. What is the pending question?

The WITNESS. I was making an answer.

Mr. BURR. Read the last answer.

(Whereupon the last answer was read by the reporter.)

By Mr. BURR:

Q. Please continue.

A. They knew the wood just as white pine. They thought highly of it, and as I have previously said, were not given to making fine distinctions between the pines.

Now, when a wood which is not a white pine is presented to them, the probabilities are that the knowledge that this wood is not a white pine stopped some place along the chain of distribution, perhaps with the wholesalers, perhaps with the retailer, at least I be-

2584 lieve it stopped before it reached the ultimate consumer.

Mr. MATTHEW. Just a moment! I move to strike out that last.

Examiner DE BRULER. Why do you believe that; explain that.

Mr. MATTHEW. I would like to have my motion made of record on the ground that it is purely argumentative. I don't think the witness is competent to argue the case.

Examiner DE BRULER. Say whether you believe it is based on facts.

Mr. MATTHEW. I haven't had a ruling, to which I think I am entitled, from the examiner.

Examiner DE BRULER. I said that the ruling—I thought my ruling was made when I said he should not state anything excepting what he knew as a fact, or his conclusions should be based on facts.

Mr. MATTHEW. I understand my motion is granted?

Examiner DE BRULER. Yes.

Mr. BURR. How much is stricken?

Examiner DE BRULER. Read the answer.

(Whereupon the reporter read the answer referred to.)

Mr. BURR. Now, just what is to be stricken?

Mr. MATTHEW. I object to that part of the answer beginning with "the probabilities are that the knowledge", and so on, and move that it be stricken.

2585 Examiner DE BRULER. The last part may be stricken and the rest may stand for what it is worth.

By Mr. BURR:

Q. Now, Mr. Ivory, in connection with this work that you have done, you have talked with a great many of the buyers of lumber; have you?

A. Yes, sir.

Q. Now, what, as a matter of experience, did you find their status to be as regards their knowledge of whether or not California white pine was a genuine white pine?

Mr. MATTHEW. I understand that the witness is not free to relate conversations and is merely going to report what he understands to be the extent of the knowledge of the buyers. Is that right? Otherwise, I shall object to anything in the nature of hearsay.

A. I have been asked repeatedly to explain the differences in the pines and have been told that the actual differences were not understood. I have been asked if the wood sold as California white pine is a genuine white pine. I have had dealers and distributors tell me that they did not pass on to their trade the information that so-called California white pine is not a genuine white pine.

Mr. MATTHEW. I move to strike the last sentence on the ground that it is hearsay.

Examiner DE BRULER. The motion is denied. Let it stand for what it is worth. It is somewhat speculative.

2586 Mr. MATTHEW. I think it is obviously hearsay.

Examiner DE BRULER. I realize that.

Mr. MATTHEW. I think that motion should be granted.

Examiner DE BRULER. He stated what was told him.

Mr. BURR. I think so.

Mr. MATTHEW. That is the reason why it is objectionable.

The WITNESS. Further, I have had actual consumers, house builders, etc., tell me that they did not know the wood they were using and had purchased as white pine, which had come from the species Pinus ponderosa, was not a genuine white pine.

Mr. MATTHEW. I object to that as hearsay testimony.

Examiner DE BRULER. Objection overruled.

By Mr. BURR:

Q. Did you find that they were in a condition of doubt?

A. I found them in—I found many in a condition of doubt.

Q. Do you recall any specific instances of confusion of that kind?

A. Of which variety now?

Q. Where the consumer was not apprised as to the actual status of Pinus ponderosa as belonging, or not belonging, to the genuine white-pine group?

A. I recall an incident taking place in Binghamton, New York, where a builder told me he didn't know it was a genuine white pine.

Examiner DE BRULER. Do you know the name of the builder?

The WITNESS. Yes, sir.

2587 Examiner DE BRULER. Just tell who it was.

The WITNESS. Mr. Hotchkiss. In calling him a builder I refer to one builder about to build his own home, not one professionally engaged in that occupation.

Mr. MATTHEW. If I understand you correctly, this builder was not a contractor, but a builder in the sense that he was having a home built for him.

The WITNESS. That is the idea.

By Mr. BURR:

Q. Now, did you find that the persons whom you talked to were in a condition of doubt as to the relative and comparative qualities of ponderosa and genuine white pine?

A. I did.

Q. Is there a diversity of texture between heart and sap wood in ponderosa?

A. Between heart and sap wood?

Q. Yes; of ponderosa.

A. Your question, sir, is a diversity of texture?

Q. Yes.

A. There is.

Q. Is there a wider diversity of texture, on an average, in Pinus ponderosa, between heart and sap wood, than there is in sugar pine?

A. There is.

Q. I want to ask the same question with regard to the diversity between the summer and spring wood of those two species.

2588 Which has the greater diversity of quality?

A. Pinus ponderosa.

Q. In these conferences that you had in the standardization movement, I wish you would state more fully the various classes that attended those conferences.

A. They were attended by lumber manufacturers, wholesalers of lumber, and retailers of lumber, fabricators of lumbers, such as planing-mill operators, furniture manufacturers, purchasing agents, whose duties led them to buy large quantities of lumber, such as purchasing agents of railroads, contractors, architects. That is all that I recall.

Q. Were these conferences that you held in the various parts of the country, referred to in your answer, or were you referring to conferences at Washington?

A. I was referring to conferences generally, both at Washington and other points.

Q. How many of those did you say you held?

A. I estimated the number of conferences between twenty and twenty-five, that is, conferences on standardization, ways and means.

Q. Then did you make informal talks on occasions, in addition?

Mr. MATTHEW. That is objected to as immaterial whether the witness talked informally or not.

By Mr. BURR:

Q. Did you have other informal meetings?

2589 A. I did.

Q. How many of those did you hold in connection with the standardization movement, or was that in connection with the extension movement that you held those informal conferences?

A. For the most part in connection with extension.

Q. How many such talks, would you estimate, over your period of two and one half years?

A. Are you speaking of informal or formal discussions at this time?

Q. Well, include both in your answer if you will, then we will have it all.

A. I should estimate that I attended between 30 and 40 conferences formal, insofar as a program had been prepared in advance, and I have been asked to talk, and of less formal nature meetings with groups of salesmen, or with the force, manufacturing force of an operator, meetings of that kind, there were probably twenty to thirty.

Q. What is the local name for Pinus ponderosa in parts of California that you are familiar with it?

A. As lumber?

Q. As a tree?

A. Yellow pine or western yellow pine.

Q. What do the loggers, as well as the local people, call it?

A. Those are the names applied by them.

Q. In connection with your work for the association refer-
2590 ing to the California White and Sugar Pine Association, did you recommend either of these types of wood especially for durability?

A. I did.

Q. Which?

A. Sugar pine.

Q. Did you recommend Pinus ponderosa for durability for exterior work, use?

A. Pinus ponderosa was recommended at times for exterior use with qualifications, but not of as a durable nature as the sugar pine.

(Here followed remarks off the record.)

By Mr. BURR:

Q. When you say that recommendation was made in your last answer, you were referring to the recommendation that you, as a representative of that association made, is that true?

A. I am referring more specifically to recommendations made in literature which I helped prepare.

Q. Prepare for the use of the association, you mean?

A. Yes, sir.

Q. And that literature in the main was used, was it?

A. It was.

Q. That you refer to?

A. It was.

Q. In your work for the Sugar Pine Sales Organization, did you encounter sales resistance to sugar pine as the result of the use of white in connection with the term "California white pine"?

2591 (Here followed remarks off the record.)

Mr. MATTHEW. I object to the question unless it is made specific. It think it calls merely for a conclusion of the witness. If he wants to offer a specific illustration, I have no objection.

Mr. BURR. I think it goes to the weight, rather than the competency.

Mr. MATTHEW. I desire to press my objection. I understand the Commission wants facts.

Mr. BURR. I am talking about what he knows as a result of his experience.

Mr. MATTHEW. If the examiner please, I think he ought to be called upon for specific instances and not to respond to a general question which calls merely for a conclusion.

Mr. BURR. If the court please, when a man has talked to as many people as this man has, he knows as a fact whether there is sales resistance there.

Examiner DE BRULER. Let's go back to the question. Read the question.

(Whereupon the question referred to was read by the reporter.)

Mr. MATTHEW. It is further objectionable on the ground that it is argumentative. It assumes the whole question in issue about the effect of this term "California white pine".

Examiner DE BRULER. That is a question you can answer by yes or no.

2592 Your objection is noted, overruled, and exception allowed.

A. Yes.

By Mr. BURR:

Q. Now, you recall, do you, any specific instances of that character?

A. I do.

Q. I wish you would state what you recall in lines of specific cases.

A. I recall that a retail dealer in Reading, Pennsylvania, was unwilling to purchase sugar pine at its market value, because his use for that lumber would have been in the manufacture of what are known as the specials going in a home; that is, the type of millwork that is a little aside from standard in design and size. He bought the stock sizes of millwork from planing mills who put that material on the market under the name of white pine. He could not pay the price for sugar pine for the special work, because he could purchase the same class of material as had been used in the stock millwork for less money, and because both were called white it satisfied him that the material was marketable as white pine.

Mr. MATTHEW. I move to strike out the last sentence on the ground that it is hearsay.

Examiner DE BRULER. The motion is denied.

2593 By Mr. BURR:

Q. Do you recall any other specific case?

A. That is the only one I can give specifically.

Q. Were there others where the names and dates have escaped you?

A. There were.

Mr. MATTHEW. Now, Mr. Examiner——

Mr. BURR (interrupting). It goes to the weight.

Mr. MATTHEW. I am going to make another motion that the last question and answer be stricken. One thing is clearly obvious, that if this witness is asked if there are other instances, dates, and names, and places which he has forgotten I am entirely helpless on cross-examination, and yet an impression is created of record that here we have, perhaps, any number of instances which may be similar in character to the single instance which the witness is able to recall. I think it is highly improper to ask such a question and have it in this record, and I move to strike it.

Mr. BURR. If the examiner please, a man who has had the years of experience that this man has had knows whether there is sales resistance, and those instances that have passed out of his recollection certainly go to the weight.

Examiner DE BRULER. I will let it stand for what it is worth. The exception is noted.

I think you have gone far enough on that line. I hope no further questions of this kind will be asked.

2594 By Mr. BURR:

Q. Are you a skilled technologist on lumber and timber?

A. I passed an examination for the position of assistant wood technologist.

Q. Did you practice that branch of the profession; I mean did you follow it up?

A. I received a salary from the Government for practicing under that title.

Q. And for how long a time was that?

A. Two and one half years.

Q. In that connection did you have occasion to study the chemical composition of white pines and ponderosa at all?

A. I had occasion, but didn't take advantage of it.

Q. Did you study the analogy of the physical composition of these woods or the contrast of any?

A. I did.

Q. The physical characteristics of the white pines—will you state whether they are diverse or whether they are closely related, or what the situation is as regards their similitude, their likeness, or diversions?

A. You are speaking of white pine as a group?

Q. Yes; as a group.

A. Generally, the physical characteristics of the white pine are very similar. There are occasions where one of them may differ in one particular physical property more than the other, but

2595 as a class they are close together.

Q. Now, as regards Pinus ponderosa, is there is a similarity on the part of ponderosa with the genuine white pines, or is there a wider divergence in the physical constituency of the wood?

A. In several of its physical properties there is a close similarity between Pinus ponderosa and white pine and in others there is a wide divergence.

Q. I wish you would answer that question a little more fully, if you will, and let us know wherein the divergence comes, if you can testify along that line.

A. Regarding durability as one of the physical characteristics of the wood, I believe a great divergence comes——

Mr. MATTHEW (interrupting): Is durability treated as a physical characteristic?

Examiner DE BRULER. I don't think that is the point.

Mr. BURR. I am talking about the structure of the wood as a physical matter.

Q. Can you give evidence as regards the similarity or dissimilarity of the Pinus ponderosa in contrast with the genuine white pines as to physical constituency? I don't know whether that comes within your sphere of knowledge or not.

A. I think your term "physical constituency" might be amplified. To me it means certain properties that are grouped together by wood technologists as part of the wood. I would judge that your
2596 remarks lead to certain characteristics inherent in the wood, the assembling of the various minute members of which wood is made up.

Q. Yes. Is there a similarity among the white pines as regards that cell structure?

A. There is.

Q. Now, does Pinus ponderosa approach closely to the white pine group, or is it by itself in that respect?

A. It is by itself.

Q. Can you, as a technologist, take a smooth piece of white pine and tell which one of the white pines it belongs to?

A. No, sir.

Q. Can you tell whether a small piece of Pinus ponderosa is of that description, or will it be mistaken on occasions for some other variety of yellow pine?

A. For some other variety of yellow pine?

Q. Yes, sir.

A. If you are speaking of a piece so small that you require a microscopic examination, I would say yes.

Q. Well, now——

(Here followed remarks off the record.)

By Mr. BURR:

Q. I am somewhat in doubt as to your answer. Suppose I were to give you a piece of wood, say a couple of inches long and half an inch wide, would you be able to tell whether that piece of wood belonged to the white pine group or the yellow pine group?
2597 A. Not by a superficial examination.

Q. Would you be able to make a microscopic examination and determine which group it belonged to?

A. Yes, sir.

Q. Would you be able to tell further whether it was a Pinus ponderosa or some other group of the yellow pine group, if you had determined it belonged to the yellow pine group?

A. I could not.

Q. Would you say, as an expert, that there is a probable relationship between cell structure and durability?

Mr. MATTHEW. I object to that as leading.

Examiner DE BRULER. That is leading.

Mr. BURR. I do not think that is a leading question. It can be answered yes or no. I don't know what he is going to say.

Examiner DE BRULER. You can answer yes or no.

Mr. MATTHEW. The question is leading.

Mr. BURR. I will endeavor to reframe it.

Examiner DE BRULER. I really don't think it is.

Mr. MATTHEW. I do not intend to hamper you, but I think it is a mistake to frame questions in a way so it is obvious as to what the answer is bound to be.

Mr. BURR. I don't know. I think I am running some risk on some of these questions. I haven't talked with this witness in regard to this topic.

2598 Mr. MATTHEW. I am not questioning your propriety.

Mr. BURR. I don't think it is a leading question, but I will try to reframe it. I have no desire to take advantage of opposing counsel.

Q. Upon what, as a physical matter, must the durability of wood rests, if you know?

A. It rests on a combination of physical properties.

Examiner DE BRULER. State those combinations now.

The WITNESS. One would be—put it in this way: That durability would be increased, in my estimation, by lack of response to change in moisture content. In other words, a wood having the least shrinkage or swellage under the opposite conditions would be less subject to decay because the organisms of decay had less chance of getting into its interior.

Examiner DE BRULER. Would the size of the cells have anything to do with it?

The WITNESS. I do not believe so.

By Mr. BURR:

Q. Now, did you finish your answer?

A. There are other characteristics that undoubtedly enter into durability, most of which are imperfectly understood by wood technologists, or investigators of wood, but the chemical constituency is undoubtedly one of those.

Q. Now, in the respect that you have just referred to, in your last answer, I wish you would analyze the white pines and

2599 ponderosa.

A. Which respect, the chemical?

Q. As respects the physical constituency of the wood, as regards its reaction to the changes of the weather.

A. The white pine as a group change less than the yellow pines and therefore would be that feature would tend to give them greater durability.

Q. Now, what is the susceptibility of white pines as to fungus growths as compared with Pinus ponderosa, if you know?

A. The white pines are less susceptible to the attacks of fungus growths.

Q. How does the fungus appearance make itself known to the naked eye in these woods?

A. By discoloration, breaking down of the cellular structure, chiefly brashness, softness to the touch.

Q. What is the discoloration, what shade or general color appears upon the wood as the first sign of fungus growth; can you state that?

A. No, sir; because those colors run the whole gamut of the rainbow.

Q. There has been considerable about blue stain in the record. Is that blue stain a fungus, or isn't it?

A. A blue stain is technically classed as a mold.

Q. Well, is a mold a fungus?

A. In one sense it is, but it is not a wood-destroying fungus.

2600 Q. Well, is blue stain an approach toward decay?

A. Insofar as blue stain is a fungus it might, in one sense, be regarded as an approach to decay. It is not generally classed as decay unless it proceeds to a point where the structure of the wood itself has actually been attacked. In growth a fungus seems, a mold, seems to confine itself to the spaces between the cells; it doesn't seem to enter in and break the cells down. Nevertheless, the condition that fosters the growth of this fungus of the mold could easily foster the growth of the fungus.

Q. Now, will you state what is the relation of the white pines and ponderosa as regards their liability to checking?

A. The white pines are less liable to check.

Q. Which of the pines—that is to say, the white pines or the Pinus ponderosa—are more liable to warp?

A. More liable to warp, is your question?

Q. Yes, sir.

A. Pinus ponderosa.

Mr. MATTHEW. May I have the question read?

(Whereupon the question referred to was read by the reporter.)

By Mr. BURR:

Q. There has been some testimony with regard to beetles, infestation. Which wood is most liable to infestation by the beetle—the sugar pine or the Pinus ponderosa?

A. Pinus ponderosa.

2601 Q. Have you had an opportunity to observe any other of the white pines as regards their liability to this infestation?

The WITNESS. What is the question?

(Whereupon the question referred to was read by the reporter.)

A. No.

By Mr. BURR:

Q. When the heartwood of Pinus ponderosa is exposed to light, does it or does it not have a tendency to change in color?

A. It does.

Q. I wish you would explain that, please.

A. It takes on a dark reddish color on the outside surface, just that portion of it that is exposed to the light.

Mr. BURR. That is all.

Cross-examination by Mr. MATTHEW:

Q. Mr. Ivory, which of the pines is susceptible to attacks from blister rust?

A. The white pines.

Q. The white pines exclusively?

A. To the best of my knowledge.

Q. So far as you know, the ponderosa pine is not subject to attacks of the blister rust; is that true?

A. So far as I know.

Q. What is the blister rust?

2602 A. It is a disease of the trees that passes through several stages in its development. At one phase it occurs in species of the current, and in another phase it occurs in the leaves of the white-pine tree.

Q. Is the disease carried by fungus; is it a manifestation of fungus infestation, if that is the proper term?

A. It is; and it attacks the leaves of the tree.

Q. And what is the effect upon the tree?

A. It eventually will cause the death of the tree.

Q. Does it girdle the tree; does the bark die; is the tree girdled inside the bark?

A. On the smaller twigs chiefly.

Q. Does it attack the trunks of the trees inside the bark?

A. Its attack is not centered; it may eventually get to that part, but its attack is centered on the smaller twigs.

Q. Doesn't it finally kill the tree by getting into the inside of the bark on the main trunk?

A. In my estimation it kills the tree by defoliating it first.

Q. Are you quite certain that is the correct characterization of the operation of the white pine blister rust?

A. That is my understanding of it.

Q. Is there any beetle that attacks Pinus monticola peculiarly?

A. I do not know.

Q. Is there a beetle that attacks sugar pine?

A. I know of none.

2603 Q. Did you ever hear of a beetle called Dendroctonus monticola?

A. Yes, sir.

Q. What is it?

A. It is one of the very numerous Dendroctonus species.

Q. I wonder how it happens to have the name "monticola" included in its entire trade name?

A. I should judge from that name that it either inhabits the mountains, as does the Pinus monticola, or that it was associated with the species Pinus monticola, but I couldn't say from the name how. It might have received it the same way the tree did.

Q. You don't happen to know whether it especially attacks the Pinus monticola?

A. I do not.

Q. Or whether it likewise attacks other white pines?

A. I do not.

Q. I think you stated that you do not know of other beetles that especially attack either the Idaho white pine or the sugar pine?

A. I do not.

Q. I understood you to say, in response to questions from Government counsel, that if a small piece of Pinus ponderosa wood were submitted to you for microscopic examination you could determine whether or not it is a yellow pine in species, but could not say whether it was Pinus ponderosa or any other one of the yellow pine group?

2604 A. Yes, sir.

Q. I gather from that that it is your understanding that it is impossible to distinguish Pinus ponderosa wood from other yellow-pine wood by microscopic analysis.

The WITNESS. What is the question?

(Whereupon the question referred to was read by the reporter.)

A. You gather misinformation in that case.

By Mr. MATTHEW:

Q. Let's straighten it out. I understand you to say that you could not distinguish——

A. That is correct.

Q. Is it practical for some other expert to distinguish the wood of Pinus ponderosa from the wood of other yellow pines?

Mr. BURR. In small quantities, or this little piece?

Mr. MATTHEW. Either in small quantities or the little piece.

Mr. BURR. That is an important distinction.

A. Yes; I believe that they can tell some of the different yellow pines, one from the other.

By Mr. MATTHEW:

Q. Your own limitation is beyond attempting to say that the technical man could not tell the difference, microscopically, between the woods of several yellow pines?

A. I was attempting to say that a man would be able to
2605 point out, through some of the characteristics that he observed under the microscope, that he would be able to point out differences. Whether he could be certain or not, I cannot say.

Q. Well, what are the differences in structure between the wood of Pinus ponderosa and the wood of other yellow pines?

A. The difference is in structure, in general structure; it resembles the yellow pines.

Q. Yes; you so stated, and I asked you what the differences are.

A. Wasn't my response that I couldn't tell them apart?

Q. You might not tell them apart, but you might know differences. Do you know whether there are any differences or not?

A. There are certain characteristics that point them out, but they are not unfailing.

Q. Can you tell us what they are?

A. Generally speaking, the type members of the yellow-pine group, for purposes of this hearing, referred to as yellow pine, as longleaf yellow pine, has greater density and greater specific gravity, contains a larger amount of pitch, is yellower in color, is more contrasted between spring and summer wood.

Mr. BURR. Than Pinus ponderosa?

The WITNESS. Yes.

By Mr. MATTHEW:

Q. Those are the principal differences which you have in mind?

A. Those are the principal differences as referring to this small piece of wood you are speaking of, not as to the trees as a
2606 whole: there are a great many other things in taking the tree as a whole.

Q. I am talking about an examination of this small piece of wood. Have you any other difference in mind with respect to this small piece of wood?

A. No, sir.

Q. I understood you to say, in response to questions from counsel, that shrinkage is the test of the relative durability of the woods. Is that about correct?

A. Shrinkage—I differentiate shrinkage as one of the factors which influence the relative durability of wood.

Q. Isn't this the only factor which you mentioned, in response to the question of counsel, and if I am wrong I want you to correct me now?

A. That isn't the only one I mentioned. I mentioned chemical constituency.

Q. Don't you recall saying, in response to a question from counsel as to the principal factor affecting durability, that relative shrinkage is, in your opinion, the principal factor?

A. I didn't ever hear of such a question addressed to me.

Q. You stated that the relative size of the cells has no bearing on durability, did you not?

A. I did.

Q. Then, in that same connection, did you not state that in your opinion the measure of shrinkage in the wood was the thing that determined durability essentially?

A. What?

2607 Q. The thing that determined relative durability?

A. No, sir; I said that it had an influence on relative durability, but not the thing.

Q. What other factor did you give as having an influence on relative durability?

A. Chemical constituency of the wood.

Q. Any other?

A. I don't recall giving any other.

Q. That is what I was asking, what you actually gave. Now, by shrinkage, do you mean the shrinkage from a green to a oven-dry condition?

A. No, sir; I said the relative shrinkage.

Q. Yes; but by relative shrinkage do you mean relative shrinkage of that kind?

A. I mean the relative shrinkage that would take place between two pieces of wood subjected to the same atmospheric conditions.

Q. Would that be an appropriate test, to take two pieces of wood, one white pine and one ponderosa pine, and submit to a test for shrinkage from a green to an oven-dry condition?

A. It would not.

Q. Why wouldn't that be?

A. Because it doesn't take place in nature.

Q. That is the test the Government has used, is it not, in determining relative shrinkage?

A. It is.

2608 Q. That wasn't the test that you had in mind?

A. No; I have no test.

Q. You say that does not, or is not, anal'gous to the press that takes place in nature. What is the difference?

A. Nature never reduced wood to an oven-dry condition.

Q. Well, what does it do?

A. Merely reduces the moisture content of the material to a degree of equilibrium of the atmosphere.

Q. That process is the same, whether we take Pinus ponderosa or Pinus lambertiana, is it not?

A. That is right.

Q. And wouldn't the relative degree of shrinkage be the same, whether we take the natural test or the Government test, which runs from green to oven dry?

A. The degree of test of shrinkage would be the same.

Q. So, then, we may take, as a fair test of relative shrinkage, the Government test of shrinkage from a green to an oven-dry condition?

A. If you wish?

Q. I am asking you whether that is a fair test for relative shrinkage?

A. For relative shrinkage it is a fair test.

Q. Do you know whether or not the relative shrinkage of Pinus ponderosa, and of true white pines, has been determined by governmental tests?

A. It has.

2609 Q. Do you know whether relative shrinkage of Pinus monticola is greater or less than the relative shrinkage upon ponderosa pine?

A. I do.

Q. Which has the greater?

A. Pinus monticola.

Q. How about strobus?

A. It has less than ponderosa.

Q. And lambertiana?

A. Less.

Q. Do you know whether the relative shrinkage of ponderosa is greater or less than the relative shrinkage of the southern yellow pine as shown by Government tests?

A. Less.

Q. That is, ponderosa is less?

A. Yes, sir.

Q. The relative shrinkage of Pinus ponderosa brings it closer to the true white pines, as we have termed them, than to yellow pines, does it not?

A. Yes, sir.

Q. Mr. Ivory, in the course of your direct examination, you stated, in answer to a general question, as I recall it, that, considered with respect to physical qualities, Pinus ponderosa lumber is more nearly comparable with the lumber from the southern yellow pines

2610 than to lumber from the true white pines, as we have determined it. Is that a fairly correct statement of your testimony?

A. I do not recall that, neither the question nor the answer.

Q. Do you recall any inquiries as to the comparative physical characteristics of Pinus ponderosa lumber, white-pine lumber, and southern yellow-pine lumber?

A. I recall a comparison between certain physical characteristics of the wood, not of the lumber.

Q. Well, let's make it the wood then. Do you recall a general question as to the physical characteristics of the wood?

A. It seems to me the question was rather specific.

Q. Then you didn't intend to answer as in general?

A. I answered the question as presented.

Q. Do you recall your statement in that connection? If you do I wish you would give it to me because I want to ask further questions.

A. It is on the record. I suggest you consult that.

Q. You prefer not to attempt to give it to me now? Then I will ask the questions of my own.

By physical characteristics, and you did refer to some, you had in mind simply the microscopic or cellular structure of the wood?

A. I had in mind chiefly the cellular structure.

Q. Have you made any comparison of these woods with respect to their mechanical properties?

2611 A. Mechanical?

Q. Yes; physical properties in the sense of mechanical?

A. I have.

Q. Did you find, when you understood to compare these woods with respect to their mechanical properties, that the wood of Pinus ponderosa is more nearly comparable with the yellow-pine group than with woods of the white-pine group?

Mr. BURR. I am not quite clear by what you mean by mechanical properties.

Mr. MATTHEW. The witness understands.

The WITNESS. Repeat the question. If I understood it rightly, you may have misspoken.

(Whereupon the question referred to was read by the reporter.)

The WITNESS. The mechanical—a number of the mechanical properties of Pinus ponderosa are not closely comparable with the same properties of the type members of the yellow-pine group.

By Mr. MATTHEW:

Q. Let us assume, Mr. Ivory, that we are attempting to determine whether the wood yielded by the Pinus ponderosa tree is more nearly to be assimilated to the wood of the true white pines than to what you have appropriately termed the type yellow pines.

Mr. BURR. I am ready to stipulate that, and have offered to 2612 do so. I don't think we ought to go into that. I am willing to concede that ponderosa is more nearly approaching the hard dense pine group, yellow-pine group I mean, is more remote from the hard, dense yellow-pine group than it is from the white-pine group. Why go into that again?

Examiner DE BRULER. You concede that?

Mr. BURR. It is conceded in the complaint.

Examiner DE BRULER. All right.

Mr. MATTHEW. I didn't understand it was conceded in the complaint.

Mr. BURR. You will find it there.

Examiner DE BRULER. It is conceded now and I assume that will be sufficient.

Mr. BURR. The complaint says it belongs, from a purely botanical classification, to the yellow pine group, but it goes on and——

(Here followed remarks off the record.)

Examiner DE BRULER. The complaint speaks for itself.

Go ahead with the examination.

Mr. MATTHEW. If it is understood that counsel concedes that if this wood of Pinus ponderosa to be appraised with respect to its

mechanical properties, it falls more closely within the wood of true white pine groups than the wood of typical yellow pines, I think I need ask no further questions.

Mr. BURR. I don't know what you mean by mechanical prop-
2613 erties. You declined to give that information so far. I don't know what you mean in that connection.

Mr. MATTHEW. We have in evidence bulletin no. 556 of the United States Department of Agriculture which is entitled "Mechanical properties of woods grown in the United States." Counsel was not unfamiliar with that term certainly when we offered that bulletin in evidence at the Madison hearing. Counsel can refer to that.

Mr. BURR. That bulletin hasn't gone in, all parts of it.

Mr. MATTHEW. All right.

Examiner DE BRULER. If it is something counsel is not willing to concede, proceed with the cross-examination.

Mr. BURR. My efforts do not seem to be appreciated.

Mr. MATTHEW. Let's make the record clear. You asked me what I meant by mechanical properties, and I refer you to bulletin 556, and particularly to table no. 1, commencing upon page 34, and table no 2, which commences on page 37, relating to the tests of mechanical properties, which will make it clear as to what I mean in employing that term.

Mr. BURR. All right. Proceed.

Mr. MATTHEW. I understand that counsel does not concede the point, so I will submit my question.

Examiner DE BRULER. Go ahead.

By Mr. MATTHEW:

Q. I will reframe that question to save time. Let us assume,
2614 Mr. Ivory, that we are attempting to determine whether wood obtained from Pinus ponderosa more nearly resembles, in the mechanical property, the wood of the true white pines, or the wood of the typical yellow pines. Now, may I ask you whether it more nearly resembles the wood of the true white pines, or the wood of the type of yellow pines?

A. More nearly resembles the wood of true white pines.

Q. I assume that you do not intend to suggest by your testimony that the name which a tree happens to bear in the forest should necessary be the name which is given to the lumber yielded by that tree?

A. Not unless there are possibilities of confusion resulting from not using that name.

Q. Then, you are not contending that the name of the tree in the forest should, of necessity, be the name for the commercial name for the lumber yielded by the tree?

A. No, sir.

Q. In fact, you know there are many cases where the commercial name for lumber yielded by a particular tree is not identical with either the botanical name of the tree or the popular or common name of the tree in the forest?

A. I do.

Q. In the course of your conferences in the East, at which you referred upon your direct testimony, did you find out that the purchasers and users of lumber are familiar with the term

2615 sugar pine?

A. I did.

Q. Was the name quite commonly known and understood throughout the territory which you visited?

A. It was quite commonly known.

Q. In fact, that has been the name under which lumber yielded by the Pinus lambertiana has always been marketed throughout the East, is it not?

A. To the best of my knowledge, that is the name by which it has been marketed by its manufacturers.

Q. There is no confusion that you found in the public mind as to what was meant by the term sugar pine?

A. No, sir.

Q. Did you find that the public understood what is meant by the term pondosa pine?

A. Yes, sir.

Q. And in what year did you say these conferences took place?

A. They extended from 1924 until late in 1927; that is, my conferences as a representative of the White and Sugar Pine Producers. Conferences on standardization were, as I remember, dated back to 1921.

Q. And you say that the term pondosa pine was known to the public during the period in which these conferences took place, from 1921 on?

A. No, sir.

2616 Q. When?

A. 1926 and 1927.

Q. Was the term known to the trade before that time?

A. Not generally, not until it was advertised.

Q. In fact, the term was not coined until about the year 1925, was it?

A. As I recall it was about that time.

Q. Of course you know the term pondosa is merely a corruption of the mechanical name of the botanical name, ponderosa?

A. Corruption?

Q. I would call it a corruption. Did you find that the actual users of lumber were familiar with the term pondosa pine?

A. To whom do you refer as actual users in that case?

Q. Those to whom you referred in your direct testimony. I thought at the time you referred to people having homes built. You referred to one as a builder, later explaining that he was not a builder in the sense that he was a contractor and having a home built. Did you find the people of that class, the ultimate beneficiaries of this lumber, knew anything about pondosa pine?

A. I found some of them knew the name, because they had become conscious of it through advertising. They knew it was a soft western pine, and that is, to the best of my knowledge, all they did know about it.

Q. They didn't identify it with any particular tree, I assume?

A. Not to my knowledge.

2617 Q. The botanical nomenclature of the pines in the United States is not popularly understood throughout the country, is it?

A. The botanical nomenclature—which nomenclature do you refer to, please?

Q. Of the pines in the United States, all of them.

A. Well, all of the pines have a great many different kinds of nomenclature commonly used.

Q. You know what I mean by botanical nomenclature—I mean the botanical Latin names.

A. You are referring now to the Latin names of the woods?

Q. Exactly, and so stated.

A. They are not generally known.

Q. The term white pine is not a botanical or technical name, is it?

A. It is.

Q. Is the term yellow name a technical name?

A. It is.

Q. Why do you say it is a technical name?

A. Because it is used by technical people to distinguish two large groups of the pines.

Q. The terms are both botanical and technical?

A. Yes, sir.

Q. Do you know of any botanist who objected to grouping of white and yellow pines and used other terms?

2618 A. I know there are botanists who do not make that grouping. I couldn't name them offhand without consulting references, just who they are.

Q. You know there are some botanists who consider the terms white and yellow pine quite misleading?

A. No; I don't know that.

Q. You don't know that?

A. No.

Q. You don't know that some think it is much preferable to group them as hard pines and soft pines, or vice versa?

A. I know there are some who do use that classification, but why I am not prepared to say.

Q. Now, Mr. Ivory, isn't it a fact that the terms white and yellow are merely convenient and popular designations of groups of trees?

A. No; it isn't.

Q. Then you stand on the answer that the terms are botanically and technically incorrect in character?

A. Yes, sir. If counsel please, I would like to say that those names have other qualifications, but they do fulfill the functions of botanical and technical terms.

Q. You referred to a condition of confusion on the part of a certain class of the public, in any event, as to the meaning of the various terms. And you referred, I think, to California white pine as one of the terms which had caused confusion. Am I right in so recalling your testimony?

A. Yes, sir.

2619 Q. If the term California white pine were transferred from Pinus ponderosa lumber to sugar pine lumber, would there be any resulting confusion?

A. Your suggestion is one that had not occurred to me, and offhand I would say that it would be quite uncalled for, but were it put into effect you might suggest it to the sugar pine manufacturers.

Mr. MATTHEW. I move the witness be directed to answer my questions.

Mr. BURR. Let's hear the question.

Examiner DE BRULER. Answer that question.

Mr. MATTHEW. I move to strike out the answer on the ground it is evasion.

Mr. BURR. I object to striking it out. Let's have the question read first.

Examiner DE BRULER. Repeat the question.

(Whereupon the question referred to was read by the reporter.)

Examiner DE BRULER. Answer that question.

A. I see no reason for such a transfer.

Examiner DE BRULER. That is not responsive to that question.

The WITNESS. Mr. Examiner, I would like to merely make the statement and explain my answer, if I may.

Mr. MATTHEW. Can't you answer yes or no and then explain your answer?

2620 Mr. BURR. You are entitled to make any explanation you care to, but answer the question first.

The WITNESS. What is the question?

(Whereupon the question referred to was read by the reporter.)

Examiner DE BRULER. Answer the question yes or no.

Mr. BURR. If the examiner please, I object.

A. Yes.

Examiner DE BRULER. The objection is overruled. He has answered the question.

Mr. BURR. I object to further questions along that line. The Commission has no authority to change the name of a tree that is not herein charged with a misnomer.

Examiner DE BRULER. That is a proper question on cross-examination. The objection is overruled.

The WITNESS. Yes. The reason for the answer is, briefly, to begin with, it is a new suggestion, it comes to me first from counsel, but it seems to me that the present confusion resulting from the use of the name California white pine, as applied to the wood produced from Pinus ponderosa would be passed on to a certain extent to the sugar pine, that it would be in that respect at least for some time possibly harmful to the producers of sugar pine to use.

Mr. MATTHEW. Well, I move that the witness' so-called explanation be stricken on the gorund it is not germain to my
2621 query.

Examiner DE BRULER. I think the witness' answer may stand for what it is worth.

By Mr. MATTHEW:

Q. Now, Mr. Ivory, you recognize, of course, that the sugar pine is a true white pine?

A. Yes, sir.

Q. And the greater part of the sugar-pine lumber is obtained from the State of California, is it not?

A. Yes.

Q. So it would not be a misnomer in either the geographic or the botanical, if the term California white pine were used to describe what is now known as sugar pine, would it?

A. In either botanical or what?

Q. Geographical sense.

A. In a botanical sense I see no reason why the name California white pine should be used at all. I see no reason why the name California white pine should be used for sugar pine.

From a geographical sense there might possibly be some justification for it, though usually when a geographical name is supplied in connection with the naming of a tree it has reference to the State in which it was discovered, and sugar pine was discovered in Oregon.

Q. How would it do to call it Oregon pine? It is pine discovered in Oregon. Would that be proper nomenclature for the trade?

A. No, sir; because it would not be distinctive. In botanical
2622 nomenclature it is made to have it distinctive in one way or the other.

Q. You wouldn't say the State of discovery should be the first term in your nomenclature in this instance?

A. In this instance I think there are better means of describing it and naming it.

Q. Then your answer is that you wouldn't take the term "Oregon", would you?

A. No; because there are better means of description.

Q. You wouldn't take it?

Mr. BURR. Isn't it far afield?

Mr. MATTHEW. I think it is not.

Examiner DE BRULER. The objection is overruled, if you did object. Proceed with the cross-examination.

By Mr. MATTHEW:

Q. There is another reason, isn't there, and that is the term "Oregon pine" has already been given to another wood, and has been established for many years? Isn't that another reason in your mind?

A. It is not. We are not speaking now of lumber, but of botanical names of the trees.

Q. Let's talk about it as lumber. I think you are misunderstanding me if your think I am talking about the name.

A. You asked about the botanical nomenclature.

Q. Let's get around in the clear. I started, Mr. Ivory, by asking you some questions about the alleged confusion in the
2623 minds of eastern people as to what is meant by various terms as applied to lumber.

A. That is right.

Q. If you will recall, my next inquiry was whether or not the transfer of the term California white pine from Pinus ponderosa lumber to sugar pine lumber would be productive of confusion. You answered finally that it would, with an explanation. Have I correctly stated your testimony so far?

A. Yes, sir.

Q. Now, I asked you whether, still considering this lumber as lumber, any confusion would result if we undertood to apply the term Oregon pine to the lumber which is now introduced to the trade as sugar pine?

A. There would.

Q. You understood when I asked that particular question I was referring to lumber?

A. Yes, sir.

Q. Not merely to wood in any technological sense?

A. That is right.

Q. Would it be appropriate to term it Oregon pine as lumber?

A. No.

Q. Oregon was the State of discovery, and you reject Oregon again for the same reason that you previously had given?

A. For the reason that there were better methods of describing it.

Q. That is the only reason?

2624 A. That is the reason I gave.

Q. What are the better methods?

A. Something that is more characteristic of the wood itself, or some of the constituents, or something that sets it off and makes it different from other trees and species.

Q. You stick to the essential characteristics and uses of lumber; is that it?

A. No; I include the trees in my last statement.

Q. You finally got "trees" in, but for the most part you were talking about the essential characteristics and uses of lumber, were you not?

A. No.

Q. Well, the record will show whether you were or not. How did sugar pine get its name?

Mr. BURR. If the examiner please, this can't possibly lead up to any investigation of a finding that the Commission can make. I submit to you that it is not proper to go into the various names counsel can in his ingenuity think of as to what sugar pine might be called. The Commission has no jurisdiction over what to name any wood.

Examiner DE BRULER. The objection is overruled and exception allowed. Proceed with the cross-examination.

The WITNESS. What is the question?

(Whereupon the question referred to was read by the reporter.)

2625 Examiner DE BRULER. Answer the question, if you can.

The WITNESS. Are you referring to its scientific name or its common name?

By MR. MATTHEW:

Q. Common name, sugar pine.

A. I was not in on the naming of that wood.

Q. You weren't in on the naming of the other one, either?

A. I can give only hearsay evidence, if you wish.

Q. I will take hearsay on that.

Mr. BURR. I object to hearsay; let's stop somewhere.

Examiner DE BRULER. There is a lot allowed on both sides; I realize that; but we will hear this witness' testimony on that question. Answer the question, if you can.

A. When the sugar pine is freshly cut the sap which exudes from it evaporates fairly fast and leaves a residue that is slightly saccharine, or sugary. It is reported that because of that characteristic the first people to give a common name to the tree out here used the designation sugar pine.

By Mr. MATTHEW:

Q. Your reading and study would lead you to conclude that the term sugar pine has been the common name for this lumber from the time that it was first put on the market until the present day; am I right in that?

A. Yes.

Q. And the wood, I think you have stated, is well and favorably known, particularly for certain uses?

2626 A. Yes, sir.

Q. And has a fine reputation for durability and many other things?

A. It has.

Q. It would be something of a disadvantage to that particular lumber to change the name, in your opinion, would it not?

A. I don't know that; no, sir.

Q. You have no opinion to express on that?

A. No; I haven't.

Q. Now, in discussing these lumber problems, in the course of your conferences throughout the East, did you find that the term Idaho white pine was well known to users of lumber?

A. You are referring or using the same group of users previously referred to, or shall we include——

Q. (Interrupting.) Run the entire gamut of your conferences. I don't mean to restrict you.

A. I would prefer to have some understanding. I recognize that a consumer in one case may be the man to whom we sell, who fabricates it, who resells it; and a consumer in another case may be the man who eventually buys it. Now, having to do with Idaho pine, I didn't discuss it with the ultimate consumers of the material.

Q. Then you don't know whether the ultimate consumers of lumber, as you characterize them throughout the United States, know what Idaho white pine is?

A. No; but I do know that the intermediate group of con-
2627 sumers, such as the fabricators of lumber, and planing mill men, and the retail yards, generally know what Idaho white pine is.

Q. Let's deal with the intermediate group, the fabricators, for instance, they know what Idaho white pine is?

A. Yes, sir.

Q. And what northern white pine is?

A. Yes, sir.

Q. And what sugar pine is?

A. Yes, sir.

Q. And they also know what California white pine is?

A. Very largely; yes, sir.

Q. I suppose they likewise know what Douglas fir is?

A. Yes, sir.

Examiner De Bruler. You needn't answer that question. It is going out of the woods under consideration here.

By Mr. Matthew:

Q. In connection with your advertising for the California White and Sugar Pine Manufacturers Association, I think you stated that sugar pine was recommended very highly for purposes of durability, or where durability was deemed important. Is that right?

A. Yes, sir.

Q. If I don't adequately state your testimony, correct me.

A. Most assuredly.

Q. And you also testified, as I recall it, that California
2628 white pine was offered with a sort of a qualified recommendation?

A. For some outside uses.

Q. Would you mind developing that a little more fully? I don't mean go into it in great detail, but this, I understand, was joint advertising in behalf of the two woods through the association.

A. That is right.

Q. The manufacturers of white and sugar pine, that association, through advertising, recommended sugar pine for what purposes?

A. Recommended it for its durability; any uses where that factor was an important one.

Q. And how about the white pine?

A. It never preached durability of the California white pine. In fact it was mentioned as a species that was not durable in contact with the soil and under extreme conditions, but it was coupled for use for outside purposes where, in some circumstances decay might be expected to occur. But we attempted to safeguard the recommendation by indicating that other things were important there in securing longer life for it in those uses.

Q. You had general charge of that advertising work while you were with the association?

A. No, sir; the advertising work was controlled by a committee; there was an advertising manager and a trade extension manager. We all worked together, but my particular function was trade extension.

2629 Q. I understood you to say in your direct testimony that you had something to do with the advertising campaign.

A. That is right. I think I said that I participated in the preparation of advertising material.

Q. That is what I meant. And in preparing this advertising you were attempting truthfully to represent the uses for which these two woods are best adapted?

A. Yes, sir.

Q. Would you recommend sugar pine for use as mud sills?

A. I would not recommend it for that use because there are other materials much cheaper that have even greater durability for the purpose.

Q. And you would not ordinarily recommend sugar pine for use where it will be in contact with the ground and subject to alternate wetting and drying, would you?

A. I wouldn't recommend it, no; but the reason for doing it would be a combination of reasons behind not making that recommendation.

Q. One reason is it would not be particularly desirable from the point of view of durability where it is in contact with the ground and subject to drying and wetting in turn; isn't that a fact?

A. That would be a very minor consideration in my recommendation there.

Q. Well, would you consider it durable when placed in such a position?

A. Relatively; yes.

2630 Q. Relatively?

A. Yes.

Q. Relative to redwood?

A. Yes; relative to redwood.

Q. Cypress?

A. Relatively; yes. I understand "relatively" in this case is one of minor degree.

Examiner DE BRULER. Please don't get outside of the pine woods.

Mr. MATTHEW. This is not a point where I think counsel will object. We are trying to determine something about durability, Mr. Examiner. I am sure counsel will agree that is an appropriate line of inquiry here.

Q. I want to be sure we understand each other. Do you mean to imply that sugar pine would be more durable than redwood when placed in the position that I have just described?

A. No, sir.

Q. It would be less durable?

A. It would be less durable.

Q. Less durable than cypress?

A. Less durable than cypress.

Q. In your direct examination you referred to a number of rather old structures which were made of sugar pine. Your first exhibit was, I think, the hotel at Calaveras; the Mammoth Hotel; was it not?

2631 A. Mammoth Trees Hotel.

Q. How did you determine when that hotel was built?

A. By a protograph taken and dated back in the '50's and by information furnished by people occupying the residence at that time. I submitted, incidentally, this morning a photograph, or rather a sketch made in the '50's, and that went along with the other photograph this morning.

Q. And how did you determine whether or not the structure had been replaced from time to time in whole or in part?

A. How did I determine it?

Q. Yes.

A. I don't say it was replaced.

Q. I think you said it had not been.

A. Yes, sir.

Q. How did you determine it?

A. I determined it had not been.

Q. I said whether or not it had been. I want to know how you satisfied yourself on that point.

A. In the first place, the sketch in itself shown the original structure there and the recent photograph—that is, taken at the time I was making the investigation—also shows it today, and the building has siding and roof on it and parts which obviously were all of the same general time of manufacture and the same manufacture, manufactured at the same time, as you know there are marks

2632 by which you know those things, just as antiquarians know furniture by the way it was constructed. While I am no

expert on these pines out here, still it is rather easy, in looking at a structure, for you to say whether the wood actually belongs to this period or that period, later or previously.

Q. Could you tell whether it had been done seventy-five years ago or fifty years ago on such an examination?

A. I would like to get that question again.

Q. Could you tell whether the wood had been done seventy-five years ago or fifty years ago by such an examination?

A. Your original question didn't involve that, as I recall. It was whether alterations had been made.

Q. I thought you stated that by examining it you could satisfy yourself.

A. Yes; if there was no diversity in the type of manufacture and material used in the lumber, it was safe to assume that it had all been put in at the same time. That is the thought I had.

Q. I think you stated, Mr. Ivory, that you had not examined the sills of the Mammoth Hotel building?

A. I did. I stated that I had not examined the sills and joists.

Q. Weren't you rather curious to find out whether the sills were the old original sills?

A. The best evidence was that the building was extant or, in fact, inhabitable.

Q. Well, the most severe test of the lumber in that building would be afforded by the condition of the sills, would it not?

2633 A. If they were in contact with the soil; yes.

Q. Were they?

A. No; they were not as far as I could see.

Q. You don't know whether they were of sugar pine or California white pine, or some other wood?

A. Personally I don't believe they were sugar pine. I don't know what they were. I only testified as to that portion I saw.

Q. You have no impression as to whether they might be California white pine?

A. I don't think so.

Q. Was there any California white pine in the building?

A. I couldn't say as to that.

Q. You didn't see any?

A. No, sir.

Q. The only pine you saw in the building was sugar pine?

A. The only pine I indentified in the building was sugar pine.

Q. You were not interested at the time particularly in identifying anything but sugar pine, were you?

A. No.

(Here followed remarks off the record.)

By Mr. MATTHEW:

Q. Did you find any old structures built in whole or in part of California white pine during the period of your study?

A. Yes, sir.

Q. Were some of them about of the same antiquity as your sugar-pine building?

2634 A. I think they were a little after that, but not enough to be really a factor in determining their condition at this particular time. What I mean is this: They must have been built fifty years or more ago, but I couldn't say they came in the '50's exactly or in the '60's. They were barns chiefly.

Q. Did I correctly understand you to testify that the mechanical properties of the heartwood are different from the mechanical properties of the sapwood?

A. Some of the mechanical properties differ; yes.

Q. What is the distinction?

A. Well, the distinction varies with different varieties of lumber. A typical example, to illustrate what I mean, is the greater resiliency that is attributed to the sapwood of hickory. It is maintained that the sapwood of some species may have greater shock-resisting ability than in others; or that the situation may be reversed and such variations do occur in woods to a limited extent.

Q. Let's, for the purpose of my question, keep within the pines. Is there a distinction between the mechanical properties of the heartwood and sapwood of pines?

A. Yes; there is.

Q. Are you familiar with the results of tests made by the Madison Laboratories?

A. Yes.

Q. That is, in that respect?

A. Yes.

2635 Q. Have they not found that the mechanical properties of the sapwood and heartwood of the pine trees are practically identical?

A. They have found a great difference in the durability.

Q. I am talking about the mechanical properties.

A. There are some split differences in the hardness or the resistance of the wood to resist the impression of a small metal ball.

Q. It is so slight as to be almost negligible, is it not, that difference?

A. I don't think it is negligible.

Q. In general, was it not found that the mechanical properties of sapwood were identical with the mechanical properties of heartwood?

A. You say in general?

Q. Yes.

A. I think your question is too loose for me to give an answer that would be intelligent.

Q. You wouldn't be willing to say that, as far as the mechanical properties are concerned, the mechanical properties of heartwood and sapwood are identical?

A. Which do you want me to take into consideration—specific gravity, volume of shrinkage, modulus of elasticity, hardness, and height of drop to cause complete failure?

Q. We will rest there for the moment.

2636 A. Your question again?

Q. Whether or not the sapwood and heartwood are not practically upon a parity with respect to those mechanical qualities?

Mr. BURR. What kind of wood?

Mr. MATTHEW. All the pines.

Mr. BURR. I submit that that is hardly a fair question.

By Mr. MATTHEW:

Q. I will ask as to each pine in turn. We will take California white pine, Pinus ponderosa.

A. I believe that there is a sufficient difference there in the shrinkage of the two, the shrinkage factor of the two, to warrant saying they are not mechanically alike.

Q. I suppose you are not advised as to what the precise difference might be?

A. No, sir.

Q. Can you readily distinguish the lumber yielded by the sugar pine tree from the lumber yielded by other true white pine trees, and I use the words "true white pine" in a botanical sense?

A. In the large amounts, yes; in small amounts requiring microscopic investigation; no.

Q. Sometimes it is difficult to distinguish individual boards of sugar pine from individual boards of California white pine, is it not?

A. That is true.

Mr. MATTHEW. I think that is all.

2637 Redirect examination by Mr. BURR:

Q. I think you said that as to durability, where placed in contact with the ground, that you regarded redwood or cypress as more durable than sugar pine?

A. Yes, sir.

Q. Under those conditions do you regard sugar pine or ponderosa the more durable?

A. Sugar pine.

Q. Referring to the Mammoth Trees Hotel, did you examine any thing there except the exterior of the building?

A. No, sir.

Q. When you were with the Forest Service did you have an opportunity to collaborate in the preparation of statistics?

A. Of what nature do you have in mind?

Q. With regard to the technology and characteristics of various types of trees?

A. No; but I was in contact with work of that nature being done.

Q. Do you regard Government figures as being the last word on the subject of mechanical properties of wood, or would you regard your practical experience as having some bearing on those matters?

Mr. MATTHEW. I object to that.

Examiner DE BRULER. Objection sustained.

Mr. BURR. What is the ground of the objection?

Mr. MATTHEW. As speculative and theoretical.

2638 Examiner DE BRULER. Read the question.

(Whereupon the question referred to was read by the reporter.)

Examiner DE BRULER. Objection sustained.

By Mr. BURR:

Q. The blister rust has not reached California as yet, has it?

A. I have no knowledge of it being in California.

Q. Have you had any direct experience with that scourge?

A. I have seen results of the blister rust on two or three occasions, isolated trees.

Q. Where was that, what part of the country?

A. In the eastern portion, in New York State.

Q. How long ago was that?

A. When I was in college, about 14 years ago.

Q. Did you ever make a technical study of blister rust?

A. My study of that was very cursory and made during a course of tree diseases.

Q. Do you know when blister rust first reached this country, approximately?

A. I do not recall.

Q. I believe you testified that the words "white" and "yellow", when applied to these groups of pines, were both botanical and technical terms. Will you explain that, please?

A. Well, they are botanical in that the term—that is, in that they represent a group of classification, a grouping or classification,

2639 of the pines, differentiating one against the other. Therefore they—just as the pine itself is botanical, yellow becomes botanical and so does white.

They are technical in that they are used by technical men in making that very differentiation.

Q. Are those terms used popularly also in connection with references by nontechnical people, to the pines?

A. They are.

Q. They are then not only botanical and technical, but they are also popular divisions, are they?

A. They are.

Q. Are there other classes of wood that are divided similarly into groups, or is that confined to the pine lumber and trees only?

Examiner DE BRULER. Let's not go on to any other woods, please.

Mr. BURR. It is a matter of common knowledge.

(Here followed remarks off the record.)

Mr. BURR. That is all.

Recross-examination by Mr. MATTHEW:

Q. Do you recall testifying, to some extent, about the variability of lumber of sugar pine and of California white pine, respectively?

A. Yes, sir.

Q. The range of the woods—are you familiar with the sugar pine that comes from the Grant's Pass district in Oregon?

A. Only by hearsay. I have never handled any of it and
2640 never bought or sold any of it.

Q. Well, is your hearsay of such a character that you can say that you have some knowledge of the character of the lumber that comes from the Grant's Pass district?

Mr. BURR. I object to that attempt to bring in hearsay here. It is going too far.

Examiner DE BRULER. To what lumber does that refer?

Mr. MATTHEW. Sugar-pine lumber.

Examiner DE BRULER. Go ahead and answer the question the best you can, whatever your knowledge is.

A. The hearsay that I have in regard to that lumber is that it is not as well manufactured or as well graded, and in that respect it is not as equivalent of the lumber produced from the mills cutting sugar pine chiefly.

By Mr. MATTHEW:

Q. What I would like to find out specifically is this: Whether or not the sugar-pine lumber obtained from that district is not harder and flintier and, in those respects, less desirable than the sugar pine obtained from the California forests?

Examiner DE BRULER. State what you know about it.

Mr. BURR. He doesn't know there is sugar pine there of his own knowledge.

Examiner DE BRULER. State what he knows.

Mr. BURR. If he knows, it is only by hearsay, and I am going to object.

2641 A. I have heard it variously described as both soft and hard.

Mr. BURR. I object to hearsay. I think the respondents have witnesses enough to prove that.

Examiner DE BRULER. The answer may stand as it is.

By Mr. MATTHEW:

Q. Do you know a common defect in sugar pine from certain sections of California known as shake?

A. You are speaking of the tree as it grows in the forests now?

Q. Well, primarily of the effect upon the lumber yielded by the tree.

A. I know of no effect upon the lumber as produced by the mills that is a result of shake in the tree.

Q. There is no shake in the lumber which is yielded by the tree which has been affected by shake?

A. Perhaps, but put it this way: Shake is a defect wherever it occurs in lumber, no matter what species it occurs in, and is recognized as such and causes the lowering in grades or qualities of material that comes from it.

I am not cognizant of any mills cutting a tree, or trees, of a shake type, wherein the quality of their grades is influenced, where the relative quality of their grades is compared with other grades at variance.

Q. Then, I assume you don't know whether shake is a more common defect in sugar-pine lumber than in California white-pine lumber?

A. I do not know that; no, sir.

Mr. MATTHEW. That is all.

2642 Redirect examination by Mr. BURR:

Q. What is shake?

A. Shake is a separation of the growth along the lines of the annual ring, caused, well, nobody knows why exactly, but presumed to be the result of frost, or wind, or injury, or something occurring in the life history of the tree.

Q. It occurs in the timber; is that true?

A. In the standing trees.

Q. It is a vertical fissure, is it?

A. It is vertical and concentric with the center of the tree.

Q. If a sugar-pine tree is found to be shaky—what do you call them—a shaky tree—what is the term, what is the adjective?

A. Mr. Examiner, there is a tree called "a shake tree" which has no shake in it.

Q. How is this tree designated?

A. A ring shake tree.

Q. When you find that a tree has been ring-shaked, is that resulting wood put on the market, or is that discarded as lumber?

A. It is cut up into lumber; and if, in the process, the shake is such that it destroys the parallel edgings and surfaces of the lumber, then the lumber is reedged, or resawn, or reworked in some such manner so that the shake is not present in the final wood.

2643 If it is of a small nature, limited in its length, and can be included within a piece, it becomes a defect that causes it to be reduced to a lower grade than it might naturally fall in if its other defects only were considered.

Examiner DE BRULER. I think he has explained that fully.

The witness may be excused.

(Witness excused.)

Mr. MATTHEW. I think this might be an appropriate time, in view of the testimony of this last witness, to offer for the record "Simplified Practice Recommendation, R. 16-29, on Lumber, Fourth Edition." It is the most recent issue of this particular publication from the United States Department of Commerce, dated 1929, and the

effective date appears to be July 1, 1929. I offer it particularly for the matter which appears upon page 28.

Mr. BURR. May I have an opportunity to consider it?

(Here followed remarks off the record.)

Examiner DE BRULER. Have you any objection, Mr. Burr?

Mr. BURR. I want to see what it is.

Mr. MATTHEW. Out of deference to counsel, I will defer the offer until tomorrow morning.

Examiner DE BRULER. This is the end of your witnesses, Mr. Burr?

Mr. BURR. So far as the hearing in San Francisco is concerned, the Government is prepared to desist, not to say cease.

2644 Examiner DE BRULER. That is what I understood.

Mr. MATTHEW. May I call Mr. James?

ROY E. JAMES was thereupon called as a witness and, having been first duly sworn, testified as follows:

Direct examination by Mr. MATTHEW:

Q. Mr. James, what is your place of residence?

A. Los Angeles, California.

Q. What is your business?

A. Wholesaling and retailing lumber for resale to woodworking factories.

Q. By what company are your services engaged?

A. W. E. Cooper Lumber Company.

Q. And in what capacity?

A. I am secretary of the company.

Q. And how long have you been identified with that company?

A. Seven years.

Q. Continuously?

A. Yes, sir.

Q. How long have you been in the lumber business in California?

A. Seven years.

Q. Have you had any other experience in the lumber industry?

A. Yes, sir.

Q. Will you relate briefly?

2645 A. I started in the office of Brooks & Ross Lumber Company at Schofield, Wisconsin, approximately 25 years ago, and was with them several years. Later I went with Mr. Cooper, the same Mr. Cooper that I am now associated with, in his wholesale office in Milwaukee, and we ran that office for about two years, when that was discontinued and I took an interest and managed retail yards for him for about ten years.

Q. What lumber was carried in those yards?

A. At that time it was largely hemlock for piece stuff; yellow pine and Idaho white pine in commons; yellow pine for finish.

Q. Did you deal in northern white pine?

A. Very little.

Q. Will you continue, please, with the rest of your lumber experience?

A. After the war I was salesman and sales manager for one of the mills in Wisconsin for about four years previous to coming to California.

Q. What kind of a mill; that is, manufacturing what lumber?

A. Largely hard woods.

Q. Continue, please.

A. I then came to California and was associated with the W. E. Cooper Lumber Company.

Q. Are you familiar with northern white pine lumber?

A. To a certain extent; yes, sir.

Q. Are you familiar with Idaho white pine?

A. The only experience I have had in that was in a retail
2646 way where we handled the common boards in a retail yard.

Q. In what lumber do you deal at your Los Angeles yards?

A. All kinds of hard woods used in that territory, white and sugar pine from California, spruce and cedar—woods that are in the grades that are used by wood-working factories, not in building lumber, common lumber.

Q. You don't carry Douglas fir, for example, so-called Oregon pine?

A. No, sir.

Q. You do handle California white pine, as it is known as sugar pine?

A. Yes, sir.

Q. Do you obtain any of the California white pine from outside the State?

A. Southern Oregon.

Q. That is, in the Klamath Falls district?

A. Largely from the Klamath Falls district.

Q. Are the terms sugar pine and California white pine well established in the Los Angeles lumber trade?

A. They have been the terms that we have always used in that territory since I have been there, the only terms that I have ever known.

Q. Do your customers understand what they are getting when you supply either sugar pine or California white pine?

A. They do.

2647 Q. Have you had any complaint of any character respecting California white pine supplied to your customers by your company?

A. No, sir.

Q. Any complaints as to its durability or as to the quality or utility of the wood?

A. No, sir.

Q. You said that you had both a wholesale trade and retail trade.

A. Yes, sir.

Q. Will you explain a little more in detail the nature of your retail trade?

A. We sell in small quantities to the smaller wood-working factories, such as small cabinet shops, and small furniture factories, truck body manufacturers, and the smaller factories who are not equipped to buy in carload quantities.

Q. When you sell in carload quantities, to what trade do you sell the bulk of your product?

A. In the shop grades, I presume.

Q. What particular pine wood is demanded and used, for the most part, by your retail trade?

A. It depends on the use it is going to be used for. We sell out of the yard in a small way; I would say, we sell more white pine than sugar pine; that is, taking in the common boards which we sell.

Q. Does sugar pine normally command a price differential above California white pine in the Lost Angeles market?

2648 A. It does.

Q. That is grade for grade?

A. Yes, sir.

Q. Is there any particular industry which seems to prefer sugar pine?

A. Yes, sir.

Q. And what is that, if you please?

A. Patternmakers, for one.

Q. Yes.

A. In our territory the sash and door factories buy more sugar pine than white pine; that is, referring to sash and door people. We sell more white pine to the manufacturers of cabinets, bee hives, and other purposes like that.

Q. On the whole, do you dispose of more California white pine or sugar pine to your trade?

A. In footage, we sell considerably more white pine.

Q. I assume, Mr. James, that your company is equally interested in selling sugar pine and California white pine? That is, you are as anxious to press the sale of one wood as you are to press the sale of the other?

A. We are; absolutely.

Q. And you have no particular interest one way or the other?

A. No, sir; no particular interest.

Q. To what purposes do you ordinarily recommend that California white pine be used if you are called upon for a recommendation?

2649 A. For the purposes that I mentioned; such as cabinet manufacturing, bee-keepers' supplies—that is where the bulk of it goes, to that class of trade.

Q. Have you found that you encounter any difficulty in selling sugar pine in your territory because of the name California white pine which is used under which to dispose of the lumber yielded by the Pinus ponderosa trees?

A. No, sir; none whatever.

Q. Is the use of that name California white pine in any respect a disadvantage to sugar pine in a market way?

A. We experience none.

Q. So far as you can determine, is there any confusion in the minds of your customers as to just what sugar pine is and what California white pine is?

A. I can recall no instances. They have been buying it for several years and so most of them know whether they want white or sugar.

Q. Are you familiar with a type of pine timber known as Australian olears?

A. I am not; I never sold any of it.

Q. Is California white pine in use to a greater or less extent than sugar pine for box lumber?

A. We sell more white pine in our territory.

Q. That is, upon the request of your customers?

A. Those that we have sold to prefer the white pine to the sugar pine.

2650 Q. Do you find that your customers are interested at all in the particular territory from which lumber may originate?

A. Yes, sir; very much.

Q. Some of them are interested, for example, in obtaining lumber from the Klamath Falls district?

A. We have a great number of customers who insist on getting their white pine from that district.

Q. And have you others who prefer lumber from other districts for particular purposes?

A. Some. We have occasionally a customer to whom texture is no objection, and he will take white pine coming from central California.

Q. Then there is some discrimination shown by customers in the buying of lumber from the different districts?

A. There is in that respect.

Mr. MATTHEW. That is all.

Cross-examination by Mr. BURR:

Q. Mr. James, your customers are largely fabricators, are they?

A. Yes, sir.

Q. Do you sell to the man who builds a house?

A. No, sir; very seldom, if any.

Q. You do sell to retailers, do you?

A. We sell them some common boards and sugar-pine drain boards.

Q. What percentage would you say you sell to retailers?

A. In footage?

2651 Q. In percentage of total sales.

A. Very small percentage.

Q. Do you understand the California white pine to be a genuine white pine?

A. To be what?

Q. A genuine white pine.

A. Not necessarily; no, sir.

Q. Do you understand sugar pine to be a genuine white pine?

Mr. MATTHEW. You mean monticola?

Mr. BURR. I mean in the common designation of the word white pine, as was testified to by the last witness that the word "white" meant not only the botanical distinction but also meant a popular distinction.

Q. Do you classify California white pine as a genuine white pine?

A. I do not consider it so; never understood it was.

Q. You referred in your testimony constantly to the word white pine without the word "California." Is that the way the trade uses it?

A. In our trade practically all of the pine comes from California and southern Oregon and we do not go to the trouble of calling it California white pine. They designate it as white pine and sugar pine—cut it as short as possible.

Q. Do your customers come in and ask for white pine?

A. They do.

Q. They don't ask for California white pine?

2652 A. No, sir.

Q. And by that you understand them to mean California white pine, of course?

A. Yes, sir.

Q. Is that true?

A. Yes, sir.

Q. Now, then, do you understand that sugar pine is a genuine white pine?

A. I have understood that it was, botanically; yes, sir.

Q. In other words, the word California white pine means not a genuine white pine, and the words sugar pine refer to a genuine white pine. Is that true?

A. Botanically; yes, sir.

Q. You do know something about the northern white pine, do you?

A. Yes, sir.

Q. You have handled it?

A. Yes, sir.

Q. In your eastern business?

A. Yes, sir.

Q. Do you regard that as being a more closely akin, related to the sugar pine or to the California white pine?

A. More likely sugar pine.

Q. You think your customers understand that California white pine is not a genuine white pine?

A. We have never had the question brought up.

Q. Do you think your customers understand that sugar pine is a genuine white pine?

2653 A. Is a true white pine?

Q. Yes.

A. I don't know the question has ever come up or that it has been discussed. I do not think that there would be one out of one hundred that would know the different names of the woods, the botanical names.

Q. But it doesn't follow that they might not know the common classification of white pines and yellow pines, does it?

A. No.

Q. Did you ever have anybody ask for yellow pine, meaning California white pine? You never had that happen, did you?

A. The only instance that I recall is that once in a while we get a specification from the school board requesting a price on yellow pine.

Q. And by inquiry have you found that out to mean California white pine?

A. Yes, sir.

Q. Do you ever sell California white pine for pattern purposes?

A. No, sir.

Q. Why is that?

A. I don't consider it is the wood for that purpose.

Q. Why not?

A. Because the sugar pine is a softer wood and is more adapted for that purpose.

Q. Do you find you are able to make a greater profit on sugar pine or on California white pine?

2654 A. No difference.

Q. The sugar pine goes to a higher rate and you sell it for a higher rate?

A. Yes, sir.

Mr. BURR. That is all.

Redirect examination by Mr. MATTHEW:

Q. Mr. James, when you purchase lumber from one of the manufacturers, producers of California white pine lumber, under what name is it invoiced to you?

A. The majority of the white-pine mills invoice it as California white pine. In some instances they add in parenthesis "Pinus ponderosa." Others put in the trade name.

Q. The term California white pine always appears on the invoice?

A. Practically so, with one or two exceptions, possibly one or two mills.

Q. Do you find that your customers are interested particularly in the botanical names of the trees, or in the names of lumber, or primarily in the quality and use of the lumber?

A. The quality and use to which it is to be put.

Mr. MATTHEW. That is all.

Mr. BURR. Just one question: Do your invoices sometimes not read "white pine" without the word "California"?

The WITNESS. I don't recall an instance.

Examiner DE BRULER. You are excused

(Witness excused.)

2654-A (Here followed remarks off the record.)

Examiner DE BRULER. We will adjourn until January 31, 1930, at 10:00 o'clock a.m.

(Whereupon, at 5:00 o'clock p.m., an adjournment was taken until January 31, 1930, at 10:00 o'clock a.m.)

2654-B Docket No. 1620 to 1689, inc.

SAN FRANCISCO, CALIFORNIA, *January 31, 1930.*

Met pursuant to adjournment 10:15 a.m.

Before Ellis De Bruler, examiner.

Appearances:

Eugene W. Burr, for the Commission.

McCutchen, Olney, Mannon & Breene (Mr. *Mr.* Allen P. Matthew and Carl I. Wheat) for the respondents.

*Colloquy*

Examiner DE BRULER. If the parties are ready, we will proceed.

Mr. MATTHEW. If the examiner please, I think that shortly before the adjournment of the session yesterday afternoon I had offered for the record a copy of the report of the United States Department of Commerce bearing the caption "Lumber, Fourth Edition, Simplified Practice Recommendation R 16-29", dated July 1, 1929.

Examiner DE BRULER. Are there any particular portions of the bulletin you wanted to introduce?

Mr. MATTHEW. As I recall, counsel asked me to specify the particular matters in the bulletin which I wished to introduce.

Examiner DE BRULER. Yes.

2655 Mr. MATTHEW. I may say that I have no objection to its being received for all purposes for any use which either the Commission or the respondents may make of it, but I desire to specify the following in particular:

Examiner DE BRULER (interrupting). I understand it to be the desire of the Commission that only certain portions as are relative to the issues be referred to.

Mr. MATTHEW. That is agreeable to me. I offer it for the text which appears upon page III, as roman numerals, in the introductory portion of the pamphlet; also page IV, roman numerals, immediately following; also page V, roman numerals, and page VI, roman numerals.

I may state that upon those pages we find a list of the associations, manufacturers, individuals, and others who are listed here as having accepted the simplified practice recommendations which are found in the pamphlet. There are on page VI a list of those who are stated to have accepted the recommendations "in principle."

I offer it further for the text appearing upon pages 1—these numbers which I am now giving are Arabic numbers—pages 1, 2, 3, 26, 27, and 28.

In order that my purpose may be as specific as possible, may I direct attention to the fact that upon page 1, in the introductory paragraph, we find the recommendation that nomenclature and other matters listed there should be established as follows: Then
2656 follows the various recommendations under the caption of "American Lumber Standards."

And upon page 28, and that is what I desire specifically to bring to the attention of the examiner at this time, we find that the standard commercial name "California white pine" is the preferred name for the Pinus ponderosa and Pinus jeffreyi.

I make that tender.

(Here followed remarks off the record.)

Mr. BURR. If the examiner please, I think the only part to which I shall take objection is the part on page 27 and 28. You didn't offer 29?

Mr. MATTHEW. No.

Mr. BURR. I object to that part insofar as it relates to anything besides the true pines. I think this is subject to the same objection that counsel is trying to bring in here the misnomers, or supposed misnomers, in cedars and junipers, cypress, Douglas fir, true firs, and all of these other trees that have nothing to do here with the issues. And it seems to me that all that should be offered, from page 27 and 28, is that portion on page 28 under the little caption "Pines." I object to the introduction of the other material on pages 27 and 28.

I further object to the material with regard to size classification merely for the purpose of not having the matter encumber the record unnecessarily. I don't think it is very vital.

2657 Mr. MATTHEW. If the examiner please, as to the objection which counsel has made, which is addressed to the matter appearing upon page 27: Of course, this is obviously initially, and I take it the examiner will give it some consideration at this point. we are not confronted with the question of putting a lot of matter upon the transcript of the record. We have a pamphlet which is to be received for certain purposes. But I object fundamentally to the attempt to limit my tender so that it will exclude the trade names, or standard commercial names, of trees which appear upon page 27 of that pamphlet. I, of course, acquit counsel readily from any conscious attempt to misunderstand my purpose. We are not trying other woods; that is perfectly obvious. But one of the great broad

generic issues here is that whether or not there is any impropriety, whether or not there is a tendency to confusion in the fact that a commercial name for lumber may differ either from the botanical name or from the popular name of the tree from which it is produced. For example, it is no indictment of the manufacturers, or the distributors, of Oregon pine, so called, that it happens to come——

Examiner DE BRULER (interrupting). Let me ask, do you expect to go into that question—that has been ruled on—when you call your witnesses?

Mr. MATTHEW. Do I expect to go into that?

Examiner DE BRULER. Yes.

2658 Mr. MATTHEW. I expect to, and there is no question about it, and what Your Honor's ruling will be, of course, I do not at this time know; but I do not wish the impression to gain lodgement in Your Honor's mind that we are suggesting that somebody else is just as bad as we are accused of being, or that there are other misnomers in the industry, misnomers, so called. Our point is that it is entirely proper to have a commercial name for lumber which may be entirely different from the name of the tree in the forest, entirely proper, and one of the bits of evidence going to that proposition is found in this pamphlet, recommendations of the Department of Commerce, following conferences which were detailed at great length by an expert witness for the Commission yesterday, that there be certain recommended commercial names.

Examiner DE BRULER. I will let that in with the understanding that it be subject to Mr. Burr's motion to strike upon getting a ruling from the Commission.

Mr. BURR. If the examiner please, it seems to me that the consistent ruling at this time, in harmony with Your Honor's ruling yesterday is this: That this also should be excluded, as the other kindred matter was excluded, pending the examiner's ruling. In other words——

Examiner DE BRULER (interrupting). As I understand it, that is so intermingled that it cannot be separated.

Mr. BURR. Not at all! I invite your attention to

2659 page 28. You will find there is a heading there which says——

(Here followed remarks off the record.)

Examiner DE BRULER. Any part of this exhibit, which will be marked "Respondents' Exhibit No. 31", will be accepted that refers to pines and the remainder of it rejected.

Mr. BURR. Do I understand Your Honor to specifically reject all parts of page——

Examiner DE BRULER (interrupting). That is a general ruling that only that is admitted which relates to pines.

Mr. BURR. I think the exhibit should be marked as to what counsel has offered.

Mr. MATTHEW. If the examiner please, before that ruling becomes final, I think it is important that there be some discussion upon this record as to the limits of the rights of the parties in this case.

Your Honor will recognize that I am not wanting indefinitely the rulings of the examiner throughout this case, and I do not wish to seem unduly persistent in urging that a position which we take receive favorable recognition, but it is important that the purpose of our tender be understood, and that the effect of the limited ruling which counsel for the Commission has earnestly pressed upon you, should likewise be understood.

It is impossible clearly to appreciate the issues involved in this case which, of course, expressed narrowly are as to the proper
2660 commercial nomenclature of lumber yielded by the Pinus ponderosa tree, without having some appreciation of the commercial practice in designating lumbers yielded by other trees. If it is proper to admit the commercial names of other kinds of pine lumber, such as the various yellow pines, if you will, the various pines shown upon page 28, to which counsel has offered no objection, why is it not equally appropriate to broaden the list to include all of the pines of the coniferae, if you please? Why not firs, and larch, cedars, and other members of that general family?

One of the important lines of evidence which we expressly wish to urge upon the Commission, which we expect to argue eventually at Washington—I assume this case will reach the state of argument some day—is that it is not only proper, but essential, that lumber receive a commercial name which designates its quality and the uses to which it is best adapted, and that the mere acts of botanical nomenclature or of the popular names which happen to be given to the tree as it is in the woods, should not be the criterion for commercial nomenclature. That is the great broad issue which is bound to be in this case, and I think Your Honor should not restrict your ruling as narrowly as counsel has insisted.

Examiner DE BRULER. I will adhere to the ruling until we hear from the Commission on that subject, as an appeal has been taken to the Commission.

Mr. MATTHEW. Will the examiner permit an exception to be noted to the limitation upon our tender?

2661 Examiner DE BRULER. Decidedly so.

Mr. MATTHEW. And let it be understood that we may, if we are so advised, ask a reference to the Commission upon the point?

Examiner DE BRULER. Sure. This is your exhibit for identification no. 31?

Mr. MATTHEW. For the record.

Examiner DE BRULER. Then it will be received and so marked "Respondents' exhibit no. 31," as to the pines.

(Whereupon the pamphlet referred to was received in evidence and marked "Respondents' exhibit no. 31.")

Mr. BURR. It has been received subject to that limitation.

Examiner DE BRULER. Yes; that is right.

(Here followed remarks off the record.)

Mr. MATTHEW. I think it is now perfectly apparent, in view of the telegraphic advice which Your Honor has just received, that our exhibit no. 31 should be received for all of the purposes for which I did offer it, including the nomenclature appearing on page 27 and——

Examiner DE BRULER. That is not my understanding of the instructions and your offer is denied.

(Here followed remarks off the record.)

Mr. MATTHEW. I will call Professor Starker.

T. J. STARKER was thereupon called as a witness and, having been first duly sworn, testified as follows:

2662 Direct examination by Mr. MATTHEW:

Q. Mr. Starker, will you please state your full name and your place of residence?

A. T. J. Starker, Corvallis, Oregon, Oregon State College School.

Q. What is your position there?

A. Professor of Forestry.

Q. In the Oregon State College?

A. Oregon State College.

Q. What has been your education and your experience in forestry matters?

A. I received my bachelor's degree in forestry at the Oregon State College in 1910, received my master's degree at Ann Arbor, Michigan, and worked during the summer time while securing my college education for the Forest Service.

Immediately upon graduation I passed the examination for the technical grade of what they call the forest examiner, junior forester now, passed that grade and took employment with the district 6, Portland, Oregon, office. I spent about two years in timber reconaissance work, about five years in charge of timber sales in eastern Oregon, in work of the W. Eccles Stoddard Lumber Company sale, Baker White Pine Lumber Company sale, Oregon Lumber Company, and Nibley-Mimnaugh Lumber Company sales. I

2663 was then transferred to the Portland office and spent approximately three years there. Took the lumber census one year, was liaison officer between the Forest Service and the Spruce Division during the war and had charge of the gathering of aeroplane spruce cruises, for available amounts of aeroplane material.

In about 1918 I took a position as traveling secretary for the Western Pine Manufacturers Association, with headquarters in Portland, Oregon.

Q. What was the Western Pine Manufacturers Association?

A. That is an organization similar to the California White and Sugar Pine Manufacturers Association which operates in this ter-

ritory, and at that time had a membership of some 53 sawmills scattered from Bend, Oregon, to Leavenworth, Washington, east through the Spokane territory to Missoula, Montana. I believe that is the easternmost point.

I visited the mills many times during my connection with the Western Pine Manufacturers Association.

I also had charge of the Box Bureau, which was a branch of the association work.

Q. What was the nature of your duties as manager of the Box Department Bureau?

A. Within the Western Pine Manufacturers Association we had a smaller organization. Many of the mills belonging to the main association did not operate box factories, so that the mills which did have box factories attached to their plants formed a
2664 separate membership known as the Box Bureau and they paid their dues on a basis of the amount of stock that went into the boxes.

In 1922 I took a position as assistant professor at the Oregon State College, where I have been ever since, and was promoted the next year to associate professor, and the next year to full professorship.

Q. What subjects do you teach at Oregon State College?

A. Sylviculture, dendrology, wood identification, technology, lumber manufacture.

Q. Just what is meant by dendrology, Professor?

A. Dendrology is tree botany, to put it shortly.

Q. To what extent are you familiar with the lumber-producing sections of Oregon, Washington, and California.

A. Well, as I say, when I was connected with the Western Pine Manufacturers Association I travelled approximately fifty percent of my time visiting the mills of the membership and so became fairly well acquainted with the different mills and their operations, and the products that they produced.

I also forgot to state that one summer when I was with the Forest Service I had charge of the enforcement of the Weeks law, which is a cooperative agreement between the Forest Service and the Department of Interior in the protection of the lands taken back under the O and C land grant. So I travelled all that summer and——

Q. (Interrupting.) Are you familiar with the Klamath Basin section?

2665 A. Yes; I have visited mills at Klamath several times and McCloud, through that country.

Q. Do you know the lumber-producing section in the vicinity of Lakeview, Oregon?

A. One summer since I have been at the Forest School I spent in charge of a temporary reconnaisance party of the United States Forest Service and cruised several hundred thousand acres—I have forgotten the exact amount—in the Lakeview district east of Lakeview.

Q. And the Lakeview district is in southern Oregon, somewhat in an easterly direction from the Klamath Basin?

A. Yes.

Q. Have you some familiarity likewise with the redwood belt in California?

A. It is my custom, in order to acquaint my students with the various lumber-producing regions, to take them on a trip each spring. We have made two trips into the redwood region.

Q. Have you made any special study of the lumber which is yielded by Pinus ponderosa?

A. Well, as I say, in connection with my association work, I visited these plants and with the Forest Service was connected with two mill-scale studies. Mill-scale study, I want to make it clear for the record, is a method the Forest Service has of going at the determination of grades produced from different grades of logs.

2666 The logs are scaled on the mill deck usually by the best scaler available, and the lumber produced from that particular log is kept separate from other logs and is graded by as good a grader as the Forest Service can secure, and then a tabulation is made of the grades resulting from certain grades of logs.

Q. Then you know this tree in the forest and you know the products of the tree, do you, Professor?

A. Yes.

Q. You are familiar with the botanical classification of the pines?

A. Yes.

Q. Can you tell us just how the botanic classification is made; that is, how the grouping is determined?

A. Well, of course, I don't know what the original botanists, how they made their differentiation, but most keys in books on dendrology separate the pines on the basis of the number of needles in the fascicle or bundle. Primarily, of course, botany is based on the floral characteristics; but in trees like the conifers, the floral characteristics are very hard to distinguish, and whether or the original botanist used that or not I am not sure.

Q. Taking the botanical classification as it exists today, what are the criteria which determine the grouping of the several pines?

A. As I say, most dendrologists base their key on the number of needles in a bundle.

2667 Q. Is that true in the classification of the white pines and yellow pines, so called?

A. Yes.

Q. Are most white pines five-needle pines?

A. Yes.

Q. Is that true of all of the so-called white pines?

A. There are two pines which have five needles, which botanists do not put in the white-pine classification—Pinus torreyana and Pinus arizonica.

Q. In what class are those pines placed?

A. The hard pines, or yellow-pine group.

Q. Are all yellow pines characterized by three needles?

A. They are not.

Q. What exceptions are there?

A. There are many exceptions. Norway pine, for instance, has two needles; some of these southern pines in the southeast have two and three needles. If you only make two groups, you have the Pinus monophylla—and they are sometimes broken up into the pinon class—and Pinus quadriofolia. In other words, the pines vary from one needle to eight needles per bundle.

Q. In botanical nomenclature is any consideration given to the quality of lumber yielded by the tree, or to the uses which that lumber may be especially adapted?

A. I think not.

Q. Pinus ponderosa is classified by the botanists as being
2668 within the yellow-pine group, so called, generally?

A. Yellow-pine group; yes.

Q. As far as the color of its lumber is concerned, does it properly belong in the yellow-pine group?

A. The color of the lumber of Pinus ponderosa is a creamy to reddish cast, but it hasn't that distinctly reddish-yellow characteristic of the true southeastern pines—the Pinus palustris, slash pine.

Q. Is it frequently lighter in color than the lumber of so-called white pines?

A. In the Forestry Building at Corvallis we have a complete collection of indigenous American woods and some foreign woods, and about seven years ago we collected these specimens and the Pinus monticola board is a very much redder color than the Pinus ponderosa board. That is merely one example.

Q. May I ask you, Professor, whether the term "white pine" and "yellow pine" are true botanical terms?

A. I would say not.

Q. What is their nature?

A. They are just a handy method of dividing pines.

Q. Are the terms either botanical or technical in character?

A. They are more for popular consumption.

Q. Have you with you, Professor, copy of bulletin no. 556, which has been received in evidence in these proceedings?

A. Yes; I have a copy.

2669 Mr. MATTHEW. May I explain to the presiding examiner that this bulletin no. 556 is a bulletin of the United States Department of Agriculture entitled "Mechanical properties of woods grown in the United States." This bulletin was received in evidence at the hearing at Madison before Examiner Sheppard.

Examiner DE BRULER. It is already in evidence?

Mr. MATTHEW. It is already in evidence; yes.

Q. I will ask you, Professor, if you have made any analysis of the statistical data found in that exhibit relating to the mechanical properties of woods, and, particularly, of pine lumber?

A. I have.

Q. What is the nature of the analysis which you have made?

A. I merely extracted from this bulletin the outstanding mechanical properties of three yellow pines, being Pinus ponderosa, and three white pines.

Wood technologists base many of the properties of wood upon its specific gravity. That is in the first column.

I might say, in explanation, that there is only one way to judge the specific gravity accurately and that is in its oven-dry condition. In other words, if it had any moisture in it it might be variable, but in an oven-dry condition—by that I mean wood which has been in an oven at least 100 degrees Centigrate or 212 degrees
2670 Fahrenheit until it ceases to lose weight—the specific gravity of Pinus ponderosa is .42.

Mr. BURR. If the examiner please, can't we shorten the record by just referring to the exhibit, if counsel is going to offer that?

Mr. MATTHEW. This will be brief.

Mr. BURR. I don't think it ought to go in the record twice.

Examiner DE BRULER. I don't care to interfere with the manner in which counsel wishes to introduce that in the record.

By Mr. MATTHEW:

Q. Proceed.

A. Pinus ponderosa has specific gravity of .42 of what an equal volume of water would weigh. You will notice that it is less than the specific gravity of Pinus monticola.

Q. Have you dealt similarly with the statistical data showing the volume and shrinkage from green to oven dry, the modulus of elasticity, hardness, and other elements which you found in that table dealing with mechanical properties?

A. I have. Volume shrinkage for Pinus ponderosa is again less than Pinus monticola. And the modulus of elasticity for Pinus lambertiana shows a less measure of stiffness than Pinus ponderosa. In hardness and end grain, Pinus ponderosa is exceeded by——

Mr. BURR. I object. The record will show all these things by the exhibit. Why put it in twice?

2671 Mr. MATTHEW. Let him finish the sentence.

Examiner DE BRULER. I don't like to interfere with the manner in which counsel produces his record. Objection overruled. Proceed with the examination.

By Mr. MATTHEW:

Q. Proceed, Professor.

A. In hardness and end grain, the Pinus ponderosa is exceeded by Pinus lambertiana and Pinus monticola.

Q. You have set up, in comparative form, the data to which you have just referred?

A. Yes.

Q. I will ask you this general question: In relation to the comparative mechanical properties of the wood, does the lumber yielded by the Pinus ponderosa belong more appropriately in the white-pine group or in the yellow-pine group?

A. These mechanical properties of Pinus ponderosa, in every test, it falls within the limits as set by the white-pine group, and is very far removed from the average of the yellow pine.

Q. In your opinion, were a sufficient number of tests made, as shown in bulletin no. 556, to obtain results which may be regarded as reasonably reliable and informative?

A. I know not, of course, of the selection of this material. The number of trees listed, of course, is indicated here and with Pinus ponderosa there were 25 different trees tested, which is next to the highest, Pinus palustris being 34.

2672 Q. You have shown that on your statement, and it appears in the bulletin?

A. Yes.

Q. I think we need not go into that further. This statement [indicating] is compiled by you personally?

A. Yes, sir.

Q. And is it correct to the best of your knowledge and belief?

A. It is.

Mr. MATTHEW. We desire to offer this statement [indicating] in evidence, concerning which this witness has just testified.

Examiner DE BRULER. That will be respondents' exhibit no. 32, offered in evidence, and it is accepted.

(The statement referred to above was thereupon received in evidence and marked "Respondents' Exhibit No. 32.")

By Mr. MATTHEW:

Q. Professor Starker, have you, upon my request, made any review of the Commission's exhibit no. 32-A, as received in evidence in this proceeding?

A. I have.

Q. You are familiar with the exhibit and have analyzed it?

A. Yes, sir.

Mr. MATTHEW. May I add, Mr. Examiner, that that exhibit was received at the Madison hearing, and was offered on the part of the Commission.

2673 Q. Professor, that exhibit deals with the comparative specific gravity of the various pine woods?

A. Yes.

Q. And likewise with the variability of such specific gravity in individual specimens?

A. Of individual species, not specimens.

Q. I should have said that; yes. Have you made any analytical comparison of the specific gravity of the various kinds of pine lumber shown on that exhibit?

A. I have.

Q. Have you undertaken to compare the specific gravity of the Pinus ponderosa lumber with the specific gravity of other pine lumbers with respect to variability in range?

A. Yes, sir.

Q. Will you please state briefly the results of that analysis?

A. This exhibit was prepared by the Forest Products Laboratory, and I will deal with table 2 first. It lists the three white pines first. Their average specific gravity there is .355. The last three species listed as the three southern pines, or three of the southern pines. Their average is .492.

Q. Are these three southern pines the most important pines from the point of view of commercial lumber production?

A. Pinus palustris is the outstanding southern pine, as I understand it. Echinata is probably second; teda is also important.

2674 Yes; they are three of the most important. Their average is .492. The variation between the white pines and Pinus ponderosa is .018. The variation with the true southern pines, or the southern pines without the "true", is .119, or approximately six times greater variation.

In table 3, which is merely a variation of table 2, inasmuch as the specimens were taken at different heights in the tree, I did the same averaging and, to make it short, will say that Pinus ponderosa varies from the true white pines by .011; the variation with the southern pines is .133, or a difference in variation of 13 is to 1.

Q. What conclusions do you derive from that analysis as to the place which the Pinus ponderosa lumber occupies in the scale is to be more nearly assimilated to one group than to the other?

A. It has very little variation from the true white pines, and a very wide variation from the true yellow pines. That is very clearly indicated on the second sheet of the Commission's exhibit, as a line drawn perpendicular would fall very nearly through the center of the four first listed woods.

Mr. MATTHEW. The witness is now referring to a chart which was received in evidence at the same time and offered by counsel for the Federal Trade Commission and received as Commission's exhibit no. 32-B.

The WITNESS. One interesting thing that I picked out of this exhibit that of all the pines, all the seven pines tested, the

2675 softest or the specimens with the least specific gravity, were of Pinus ponderosa wood.

By Mr. MATTHEW:

Q. That concludes your comment on that exhibit?

A. Yes.

Q. Is there anything in these tests dealing with the mechanical properties of the woods which bears upon the suitability of the Pinus ponderosa lumber for pattern making?

A. I am not a pattern maker. I visited pattern shops. One of the things they insist upon is shrinkage, and, as indicated by these United States Forest Service tests, Pinus ponderosa has a less volume shrinkage from green to oven dry than some of the white pines.

Q. Does that element bear upon the suitability for pattern-making purposes?

A. Yes. In other words, its shrinkage is less; and, as I say, I visited certain pattern shops and they use it.

Q. When you stated that they insist on shrinkage, you mean they desire a wood which has as little susceptibility to shrinkage as possible?

A. Yes; that will allow shrinkage and swelling and thus deform their pattern after it is made.

Q. Have you seen patterns made out of Pinus ponderosa lumber?

A. Yes.

Q. Where?

A. Spokane.

2676 Q. Professor, there has been some testimony in this record as to the relative durability of Pinus ponderosa logs and Pinus lambertiana logs, respectively, when they are on the ground in the forest. I will ask you to state whether, in your opinion, any data or impressions as to the relative durability of the wood under those conditions can afford a criterion as to the durability of the wood when in the form of lumber and in use.

A. Well, any observations taken in the woods under those conditions would be very open to suspicion, and when the wood is used commercially I wouldn't say that this enters in.

Q. Will you explain just why not a little more clearly?

A. Well, two trees may fall at the same time in the woods and one may be rotten when it fell; one may have much more sapwood than the other; one may fall in a very moist place and, therefore, not decay rapidly. Another is subjected to alternating wet and dry conditions. There are so many factors—one is on a north slope and one on a south slope—there are so many factors that enter into decay that unless there were the same conditions prevailing in both cases the resulting conditions might be in error.

Q. Take the case of dead standing timber in the forest and the relative decay of different trees—can we obtain from any such information a proper criterion by which to determine the durability of the wood as lumber and in use?

A. Wood in use?

2677 Q. Yes, as lumber. That is, in place in a building either on the inside or the outside under normal conditions of the use of lumber?

A. I wouldn't test it that way if I were going to use a piece of lumber.

Q. The purpose of my inquiry is this: Have these illustrations any real relation to the durability, either absolute or relative, of lumber?

Mr. BURR. I suggest that is a leading question.

Examiner DE BRULER. Objection overruled.

A. I wouldn't recommend either one, any of the pines as I know them, for durability, and when I speak of durability I mean in the technical sense in contact with the ground.

By Mr. MATTHEW:

Q. I am not sure your answer is quite responsive. My question is, whether these tests, if we may call them tests, have any real bearing upon the determination of the durability of the lumber?

A. When you speak of durability, there might be a general conclusion drawn, but I say it would be open to criticism, because these factors, various factors, are not shown.

Q. Are you familiar with any data obtained from careful tests of scientific experiments of any kind, which would enable you to state whether, in your opinion, sugar pine lumber is more or less durable than California white pine lumber?

2678 A. The Forests Products Laboratory send us a copy of all their technical notes and we had one listing the various woods with a percentage, I believe, based on white oak——

Mr. BURR (interupting). Is that the one that was objected to and didn't go in?

Mr. MATTHEW. The witness is referring to 173, that was withdrawn.

Mr. BURR. Don't go into that.

Mr. MATTHEW. I didn't intend to. The answer may go out. I don't think it is responsive.

A. I know of no such tests.

By Mr. MATTHEW:

Q. Coming back, for a moment, to the question of nomenclature of lumber, I desire to ask you, Professor, whether there is any warrant for the assuming that a name, which appropriately designates a tree in the forest, is the most appropriate term for the designation of the lumber which the tree yields?

A. No.

Q. Why not?

A. As I stated before, the botanical classification is based on flowers, or fruits, or a number of needles in a fascicle, and botanists in general have not delved into the qualities of the wood.

Q. Now, passing from botanical nomenclature to merely the popular nomenclature, is the common or provincial name, if I

2679 may so term it, necessarily properly indicative of the lumber?

A. No.

Q. Why not?

A. The tree under discussion, Pinus ponderosa, is known by the Forest Service as western yellow pine. I believe in the popular mind, which is rather a transient thing perhaps, when they think of yellow pine they think immediately of a hard, dense, structural piece of material which Pinus ponderosa is not.

Q. The popular name of the tree may be given to it for many reasons, having no relation to the character or quality of the lumber?

A. Yes, sir.

Q. Are there many popular names for trees, pines and others, which are inaccurate and which vary in different localities?

A. The best summation is the check list, which lists these names, and there are many.

Q. The check list you are referring to is the check list of the Forestry Department of the United States Government, compiled by George B. Sudworth?

A. Yes.

Q. Is lumber uniformly or commonly marketed under trade names which correspond at all with botanical names?

A. No.

Q. Is it uniformly marketed under trade names that correspond with the common names of the trees in the forest?

2680 A. Some are and some are not.

Q. How long have you been familiar with the term "California white pine", Professor?

A. I probably became acquainted with that term when I went with the Western Pine Manufacturers Association in 1918; probably knew it before.

Q. Is the term well established and well known?

A. I think so.

Q. If this name were replaced by a name which suggests yellow pine, would it in your opinion be calculated to cause confusion, or would it be in the interests of eliminating confusion?

Mr. BURR. May I interpose an objection?

Examiner DE BRULER. Objection overruled.

A. Yes; I think it would cause confusion.

By Mr. MATTHEW:

Q. Why?

A. As before stated, the lumber dealers, when we say "yellow pine" to them, expect an entirely different article than that which is produced by Pinus ponderosa.

Q. To what particular uses, Professor, is Pinus ponderosa lumber best adapted?

A. Well, one of its outstanding uses is in the shop or cutting-up type for the manufacture of sash and doors, moldings, and the interior trim; much of it is used in exterior trim, moldings, cornices,

porch work, that is the upper parts of porch work—
2681 not flooring—and things of that character.

Q. Are there uses generally speaking identical with those with which the lumber of so-called true white pines is employed?

A. I am not very familiar with sugar pine, but Idaho white pine is a very poor shop type of tree as produced in the woods today.

Q. Why is that?

A. It doesn't produce the cutting type of lumber.

Q. What is the physical characteristic of the tree which makes it impossible to produce the shop type of lumber in any volume?

A. It has too many scattered small knots, while the Pinus ponderosa knots are much larger and, therefore, there are clear cuttings between the knots.

Q. In your opinion, Professor, is the trade in any respect confused by giving to this lumber yielded by the Pinus ponderosa tree a trade name which suggests white pine?

Mr. BURR. I think that is objectionable because that is the very thing that is to be determined.

Examiner DE BRULER. I think that was gone into by counsel on the other side. Objection overruled.

Mr. BURR. I withdraw the objection.

A. I think the people who consume Pinus ponderosa lumber know what they are getting when they get California white pine.

By Mr. MATTHEW:

Q. You have stated, Professor, that in your opinion, which is based upon analysis in part of the mechanical properties of
2682 these woods, the lumber yielded by Pinus ponderosa trees falls more closely within the lumber of the white-pine group generally than in the lumber yielded by the yellow-pine groups?

A. Yes.

Q. I will ask you to state whether, in your opinion, a trade name which suggests white pine is appropriate for this lumber?

A. I think so. You said trade name?

Q. I mean by trade name, a commercial name by which the lumber may be introduced in the industry and offered to purchasers. And I will ask you this further question, whether in your opinion there is anything misleading in the term which is employed to designate this lumber, California white pine?

A. No.

Q. Why not?

A. As I pointed out, its properties, as a wood, are within the bounds of the true white pines, its uses are very similar, and it is very dissimilar to the yellow-pine group in its wood.

Q. Are its natural uses likewise such as to bring it within the white-pine group of lumbers?

A. It is used for practically all of the purposes that the white-pine group is used for and, with the exception that I already noted, it produces better shop than Idaho.

Q. Do you know whether California white pine and sugar pine are commonly segregated into grades of common lumber?

A. I am not aware of that fact.

2683 Q. Are you familiar with the pine known as lodgepole pine?

A. Yes.

Q. What is that pine?

A. Lodgepole is Pinus contorta, and lumbermen also call it black jack, a tree that never gets very large, but in my experience with the Forest Service my instructions were, and I think I followed the instructions, to mark every tree that was merchantable, that is, that would produce a log of the minimum size. It never grows large.

Q. There has been some testimony here, Professor, as to the mechanical proprerties of sap and heartwood respectively. I will ask you to state whether, in your opinion, there is any difference between the mechanical properties of the sap and heartwood of the pines, particularly we will say, of the Pinus ponderosa?

A. I would have to go at that through a technical note which deals largely with hickory. Mr. Ivory mentioned it yesterday.

(Here followed remarks off the record.)

By Mr. MATTHEW:

Q. Forgetting hickory for a moment, I will ask you to state the basis for any conclusion which you have reached as to the mechanical properties of sap and heartwood, respectively.

A. In the summation of this technical note, which I just referred to, the Forest Products Laboratory said that as the result of some, either hundreds of thousands or a million tests, that they

2684 had found no difference between heart and sapwood when of the same character. In other words, as brought out under the discussion of durability of two logs in the woods, there are many variable factors, so that you would have to have the same number of rings and the same structure, etc., but there is no change in its mechanical property from sapwood to heartwood.

Mr. BURR. Let me ask a question: Those tests were all hickory?

The WITNESS. No.

Mr. BURR. What were they?

The WITNESS. I think in all woods. This particular note was on hickory pointing out to the lumber man that he was in error in picking out white hickory handles all the time because the red hickory handles out of the heart was just as good if of the same class of material.

Mr. BURR. But these large number of instances——

The WITNESS (interrupting). Many woods.

Mr. BURR. Many woods?

The WITNESS. As I understand it; yes.

By Mr. MATTHEW:

Q. Including the pines?

A. I think so.

Mr. BURR. Has that been published?

The WITNESS. Yes. I don't know the number. It is a technical note.

2685 Examiner DE BRULER. Does that include the pines or not; do you remember?

The WITNESS. There was no specific reference to pines in it.

Examiner DE BRULER. Was there any specific reference to woods?

The WITNESS. Yes; hickory.

Examiner DE BRULER. That is all, was it?

The WITNESS. But it stated the number of tests, and that was in the hundreds of thousands; it might have been a million.

By Mr. MATTHEW:

Q. Professor, there has been a great deal of testimony in this case as to the relative proportions of sapwood and heartwood in the different kinds of pines, Pinus ponderosa being contrasted with certain of the white pines. Have you prepared any chart which illustrates the relative proportions of sap and heart wood?

A. I have.

Q. Will you produce it, please?

A. (Witness produces chart.)

Q. What suggested the preparation of that chart which you have just produced?

A. If you remember, Mr. Examiner, at Spokane Mr. Lawrence introduced two charts showing the percentage of sapwood in Pinus monticola and Pinus ponderosa. I may be in error in the dimensions that he put on there, because it is from memory and I

2686 didn't put it down, but I am fairly sure that he used 1¾ inches for a sap ring of Pinus monticola and 3 inches for Pinus ponderosa. If those figures are right, that would indicate that Pinus monticola had 30 percent volume of sap and Pinus ponderosa had 48 percentage of sap; 30 percent of sap in Idaho and 48 percent sap in Pinus ponderosa.

But where I would disagree with Mr. Lawrence is that the logs don't come to the mill in equal size, and so I prepared an addition on the chart based on the fact that in Pinus strobus the logs come to the mill 20 or 25 logs per thousand, and the Pinus montincola in the Couer d'Alene region comes to the mill 15 logs per thousand, and Pinus ponderosa comes to the mill about 5 logs to the thousand. Some California operators would disagree with my 5 logs to the thousand, I understand, because their logs average larger than that.

Examiner DE BRULER. This is your testimony?

The WITNESS. Yes. But on that basis Pinus strobus would indicate a 60 percent of sap, Pinus monticola 53 percent, and Pinus ponderosa 55 percent.

I might state, Mr. Examiner, while at Ann Arbor I visited the white pine mills at Manistee, Michigan, and they were sawing logs 3 inches in diameter, hauling them 125 miles, and so crooked that when the head saw went through there were three pieces on the head rig instead of two. In that case the smaller the log the larger the amount of sap, the percentage of sap would be.

2687 By Mr. MATTHEW:

Q. And conversely, Professor, the larger the log the diameter, the lower the percentage of sap to the total amount of wood in the tree?

A. It would gradually decrease.

Mr. BURR. Did you say 3 inches in diameter they were sawing?

The WITNESS. Yes.

Mr. BURR. Do you call that a log?

The WITNESS. They were hauling them 125 miles, as I remember.

(Here followed remarks off the record.)

The WITNESS. Out of those logs they were making slack cooperage.

By Mr. MATTHEW:

Q. Your note refers to Pinus strobus in that connection?

A. They were sawing 4- or 6-inch logs.

Q. Of strobus?

A. Yes.

Mr. BURR. Is that chart being offered?

Mr. MATTHEW. I desire to offer in evidence the chart which the witness has testified about.

Mr. BURR. Before it is received, may I ask a few questions?

Mr. MATTHEW. Certainly.

By Mr. BURR:

Q. Now, where did you get that middle figure, Professor?

2688 A. Col. Greeley testified, as I remember, that the logs in the New England States were coming to the mill 20 or 25 logs per thousand. Professor Cheney testified that on a particularly good tract of timber, Pinus strobus, the logs were being cut from 4 inches to 24 inches.

Q. You mean in New England?

A. And also my experience at Manistee indicates they are quite small.

Q. That isn't virgin timber, is it, such as still exists in Minnesota?

A. I am not aware of Minnesota, but in Michigan there are only two tracts of virgin white pine left, as I understand it, one of 70 acres, the Grayling tract, and the other, I have forgotten the name—260 acres.

Q. There is still virgin strobus in quantity in Canada, is there not?

A. I think so.

Q. Now, that doesn't represent virgin Pinus strobus?

A. No; I think not.

Q. Do you think that the sap ring in the second growth of strobus is one and three quarter inches on that small size?

A. Well, I am not very familiar with Pinus strobus, but Mr. Lawrence testified, when he offered those exhibits, that it will vary very little as to the size of the tree, and I think that is true.

2689 Q. You think the sapwood is a constant in the white pines as the trees grow older?

A. Not exactly constant, it will probably decrease as the size gets larger, but it is slight.

Q. Decreases not only in proportion, but also in actual width, do you mean?

A. No; in proportion. It will vary very greatly between these. These are average figures [referring to chart] as thus arrived at.

Q. Where did you get the fourth figure, beginning at the left hand of the chart?

A. I think it was Mr. Klop that testified that the logs coming into the Couer d'Alene area would average about 15 logs per thousand.

Q. Well, there is other testimony, you are aware, that they are very much larger than that, is that not true?

A. I didn't hear it.

Q. You are aware that that is a very small Pinus monticola tree for virgin timber, are you not?

A. Yes.

Q. The monticola lumber on the market is largely virgin monticola, isn't it?

A. They get some small logs all through the Couer d'Alene region.

Q. You wouldn't say that is an average for virgin monticola being cut in the inland empire, Professor, would you?

2690 A. I based it on that testimony that the logs coming into the Couer d'Alene region was a large percentage of the logs logged in that area, about 15 logs per thousand.

Q. You wouldn't regard that as a typical size for virgin monticola, would you?

A. For that region, yes.

Q. For that region?

A. Yes.

Q. Are you familiar with selected logging, Professor?

A. During the war we selectively logged spruce, yes.

Mr. MATTHEW. Just a moment! I have no objection to counsel eliciting information, but this is not the time for cross-examination.

Mr. BURR. If the examiner please, it seems this leads up to a proper objection that this is not a representative chart and would not tend to clarify the issues.

Examiner DE BRULER. The chart may be admitted as a part of this witness' testimony and exception noted.

Mr. BURR. I think I have the right to ascertain whether it is valuable and appropriate.

Examiner DE BRULER. You have the right, but the chart will be admitted as part of the testimony.

Mr. BURR. I would like the record to show that my objection was timely and I desire to have it considered as being prior to the

2691 ruling, although it should appear in the record as subsequent to the ruling.

Examiner DE BRULER. It is admitted subject to the question.

Do you offer this as your exhibit no. 33?

Mr. MATTHEW. Yes; we offer it as an exhibit.

Examiner DE BRULER. It may be admitted as part of this witness' testimony, and it will be marked "Respondents' Exhibit No. 33."

(Whereupon the chart referred to was received in evidence and marked as "Respondents' Exhibit No. 33.")

Mr. MATTHEW. I think it should be understood that the chart which has been received at the earlier hearing showing Pinus monticola logs as being 21 inches in diameter was itself not representative.

Examiner DE BRULER. Those charts are part of the records and speak for themselves.

Mr. BURR. May the record show that I object on the ground that the witness' testimony shows that it is grossly misrepresentative of the actual situation?

Examiner DE BRULER. The record will show that is your statement.

By Mr. MATTHEW:

Q. Before leaving this chart, which has been received in evidence as respondents' exhibit no. 33, let me ask you, Professor, whether the two figures which appear in the left-hand portion
2692 of the chart, showing a cross-section of Pinus monticola and Pinus ponderosa, are your figures, or whether they were merely reproduced from the chart offered in evidence on the part of the Government?

A. I will say they are from memory, and to the best of my knowledge and belief they are the ones, the widths used by Mr. Lawrence's exhibit.

Q. I will ask you this: Whether in your opinion a diameter of 21 inches is a representative average diameter for Pinus monticola logs as they go to the mill in the Pinus monticola section?

A. Too large.

Q. Professor Starker, would an 8-inch board—that is, a board 8 inches in width—be a representative board of the lumber of Pinus ponderosa tree?

Mr. BURR. For what purpose?

Mr. MATTHEW. Well, for the determination, for example, of relative heart and sap.

A. I don't believe I am qualified to say whether that is true or not.

Q. You don't know whether it is a representative width or not?

A. I don't know, but——

Mr. MATTHEW. I wouldn't ask you to speculate about it.

If the examiner please, I have a few more questions of the professor which again meet with the objection, I have no doubt,
2693 on the part of counsel. I desire to ask them, in any event, for the purpose of the record, and I hope Your Honor will recognize their propriety.

Q. I asked you in the early part of your examination about the relation between commercial names of lumber yielded by various

trees and the common or botanical names of such trees. I will ask you to state if you know of any instances where the prevailing commercial name of lumber yielded by pine trees differs from the botanical or common name of the tree?

Mr. BURR. Are they pines?

Examiner DE BRULER. He said pines.

A. The mills in the inland empire cut Pinus contorta, but never bill it out that way.

Q. You mean they never bill it out under that name?

A. Never, or very seldom and it would be the exception. They bill it out as lodgepole pine, or blackjack. It is thrown into the Pinus ponderosa lumber. It makes a superior grade of common lumber because it is small knotted and tight knotted as a rule. And in the southern pines, as I understand it, the commercial grade of longleaf may include the lumber from seven or ten southern pines. The same way with shortleaf, depending upon its characteristics, whether it falls into what is commonly known in the trade as commercial longleaf.

Q. What particular characteristics determine whether the lumber shall be graded as longleaf commercially or as shortleaf commercially?

2694 A. Longleaf is harder and denser, more of the structural type, than shortleaf. The tree, Pinus palustris, growing on good sites will develop a wide growth ring and will be weaker in character than that which grows on the drier, sandier type of land.

Q. Have you any illustration taken from the group of pines where the prevailing commercial name differs from the botanical or common name of the tree?

A. Of course, the trade name "Oregon pine", is not a pine at all.

Mr. BURR. That is not a pine. I object to that question and answer on the grounds already stated.

Examiner DE BRULER. It has been definitely settled that is not a pine.

Mr. BURR. I move to strike.

Examiner DE BRULER. The objection is sustained.

Q. (By Mr. MATTHEW). Let me ask——

Mr. BURR (interrupting). It is understood that that is not only sustained, but stricken from the record?

Examiner DE BRULER. Yes.

Q. (By Mr. MATTHEW). I will ask the witness as to other coniferae.

Mr. BURR. I object to it on the same ground.

Examiner DE BRULER. Does it relate to pines?

2695 Mr. MATTHEW. It takes in all cone-bearing trees.

Examiner DE BRULER. The objection is sustained, unless it is confined to pines.

Mr. MATTHEW. Will the examiner allow me an exception?

Examiner DE BRULER. Exception allowed.

Q. (By Mr. MATTHEW.) I desire to ask the witness whether he is familiar with the tree which is quite commonly known as Douglas fir?

A. (Motion to strike answer physically granted.)

Mr. BURR. I object and——

Examiner DE BRULER (interrupting). Objection sustained and exception allowed.

Mr. BURR. I move to strike the question and answer.

Mr. MATTHEW. You have no right to strike physically from the record my questions to which you object.

Examiner DE BRULER. The objection is sustained and exception allowed.

Mr. MATTHEW. And made of record.

Mr. BURR. Does the court mean——

Examiner DE BRULER (interrupting). I passed on that. Go ahead.

Mr. BURR. May I not be heard?

Examiner DE BRULER. Go ahead.

Mr. BURR. Does this mean that this is to remain on the record although the examiner grants us a motion to strike?

2696 Examiner DE BRULER. He has a right to ask any question he may see fit, and I must rule on it, and——

Mr. BURR (interrupting). Before the answer.

Examiner DE BRULER. Yes.

Mr. MATTHEW. This must be clear, if I am going to save my exception it must be saved of record.

Mr. BURR. But not when the answer is in. I move to strike the answer completely from the record.

Mr. MATTHEW. It is beyond the power of the examiner, without my consent.

Mr. BURR. I don't think so.

Examiner DE BRULER. Let's proceed with the hearing.

Q. (By Mr. MATTHEW.) Do you know whether the lumber which is yielded by the tree commonly known as Douglas fir is marketed under various commercial names?

Examiner DE BRULER. Don't you answer those questions until time is given for objection.

Mr. BURR. I object.

Examiner DE BRULER. Objection sustained. I think we all understand this.

Mr. BURR. I think so.

Examiner DE BRULER. The objection is sustained, and I don't want you to answer those questions.

Mr. BURR. I am going to renew my motion to strike the answer made in analagous case on the previous occasion.

2697 Examiner DE BRULER. I didn't understand he answered.

Mr. BURR. He answered, that is the trouble.

Examiner DE BRULER. I can correct this record if your answer did go in. Did you answer "yes"?

The WITNESS. I think I said "yes."

Examiner DE BRULER. That answer is stricken then.

Mr. BURR. Physically stricken?

Examiner DE BRULER. Physically stricken.

Q. (By Mr. MATTHEW.) Are you familiar with a commercial lumber which is marketed under the name of Port Orford cedar?

Mr. BURR. I interpose the same objection.

Examiner DE BRULER. Objection sustained and exception allowed.

Mr. MATTHEW. Before the examiner proceeds further with these rulings, may I remind Your Honor of this point: That these were questions which I was putting upon the cross-examination of Mr. Weyerhaeuser and which the Commission now says should have been allowed on cross-examination. Now, if these very questions should have been allowed on cross-examination they are certainly pertinent when I am putting on the witness in opposition to the Government's case.

Examiner DE BRULER. Without arguing this further, the objection is sustained. I will not let that evidence in. You have your exception on the record.

2698 Mr. MATTHEW. Without seeming unduly persistent, again may I make this clear to Your Honor: That if the opposing witness, Mr. Weyerhaeuser, had answered those several questions upon cross-examination unsatisfactorily to me, certainly I would not be precluded from offering opposing evidence. And I understand that I am to have the right to recall Mr. Weyerhaeuser and ask him those questions.

Examiner DE BRULER. You have the right, yes.

Mr. MATTHEW. Then if I ask those questions and he answers them, as I understand it, in a way that will not present the facts as I believe them to exist, am I precluded from showing that his answers are wrong?

Mr. BURR. I think so.

Mr. MATTHEW. I think not.

Examiner DE BRULER. That is anticipating what Mr. Weyerhaeuser might swear to on cross-examination. The objection is sustained and exception noted.

Q. (By Mr. MATTHEW.) Are you familiar with other lumbers which are marketed under the name of cedar?

Mr. BURR. I object to that, if the court please.

Examiner DE BRULER. Objection sustained and exception noted.

Q. (By Mr. MATTHEW.) Do you know whether or not there is any commercial cedar lumber offered to the market under that

2699 name which is yielded from trees which are not botanically, or by common name, cedars?

Mr. BURR. I object on the same grounds.

Examiner DE BRULER. Objection sustained and exception noted.

Q. (By Mr. MATTHEW.) Do you know whether or not in general practice there are a great many kinds of commercial lumber offered to the trade under commercial names which are entirely distinct

from the botanical names and the common names of the trees from which they are produced?

Examiner DE BRULER. If that is limited to pines it is perfectly proper.

Mr. BURR. Read the question.

(Whereupon the question referred to was read by the reporter.)

Mr. BURR. I think that is subject to the same objection, if the court please.

Examiner DE BRULER. That answer should be limited to pines.

Mr. MATTHEW. I asked him the question as to pines a while back, I think.

Examiner DE BRULER. If that is intended to go outside of the pines, it is objectionable.

Mr. MATTHEW. I asked about a question and it is a question which is practically the correlative of a question which counsel was allowed to put to his witness yesterday.

2700 Examiner DE BRULER. The objection is sustained and exception noted.

Mr. MATTHEW. In that event, I move to strike from the record all of the testimony given by Mr. Weyerhaeuser upon his direct examination respecting the alleged harmful effect of so-called misnomers of lumber upon the lumber industry.

Mr. BURR. At this time I offer to stipulate that the matter of misnomers in the lumber industry, insofar as they relate to misnomers in other varieties than that alleged in this complaint, shall be stricken wheresoever it appears in the record, including the testimony in the East, New York, and elsewhere.

Mr. MATTHEW. If Your Honor please, I cannot consent to that stipulation, and I desire to withdraw the motion I last made, and in taking that position may I state the whole question, I think, will have to come before the Federal Trade Commission as to our rights on this general question of commercial nomenclature of lumber. So I think the record should be left where it is and we will seek a ruling from the Commission.

The WITNESS. Do you want an answer on pines alone?

Examiner DE BRULER. That has been sustained now.

By Mr. MATTHEW:

Q. If you had not completely answered as to pines alone, will you continue?

A. The check list which has been offered recognizes three
2701 types of names: the scientific or botanical name, the common name as adopted by the Forest Service, many common names and trade names. Under Pinus strobus they list nine trade names; under Pinus monticola they list three trade names; under Pinus resinosa they list seven trade names; under Pinus ponderosa they list seven trade names; under Pinus echinata they list four trade names; under Pinus palustris they list two trade names and twenty-nine common names.

Q. Do these trade names, in many instances, differ widely from the common or botanical names of the trees?

A. Usually don't coincide at all.

(Here followed remarks off the record.)

Examiner DE BRULER, We will [redacted] an adjournment until 2:00 o'clock this afternoon.

(Whereupon at 12:05 p.m. a recess was taken until 2:00 o'clock p.m.)

2702 AFTER RECESS

2:00 P.M.

Examiner DE BRULER. We will proceed with the hearing.

T. J. STARKER resumed the stand, and further testified as follows:

Direct examination (continued) by Mr. MATTHEW:

Q. Professor Starker, there have been some inquiries as to the turpentine or rosin content of Pinus ponderosa trees, and as to the practicability of extracting turpentine or rosin from ponderosa trees in a commercial way. Have you had any experience, or have you obtained any information respecting the commercial practicability of extracting turpentine or rosin from Pinus ponderosa trees?

A. I have.

Q. And what was the nature of your experience or information, and how was it obtained?

A. The Forest Service, in approximately the year 1914 or 1915, carried on a series of experiments throughout the Pinus ponderosa region trying to determine the practicability of tapping Pinus ponderosa for resin similar in character to the long leaf and slash pines of the South. I was in charge of the experiment on the Whitman National Forest in eastern Oregon for 2 years of this experiment. The results were very poor, as far as the product was concerned. We got some resin, but way below any commercial possibility.

2703 Q. What did you determine as to whether or not it was commercially or economically practicable to utilize Pinus ponderosa for the extraction of resin or turpentine?

A. I had never been in the southern pine region and my instructions were definitely outlined, based on the practice down there, and we followed that as near as possible, boxing the trees each two weeks, and when we would come around to weigh up at the end of the period each two weeks, some of them would be practically dry and some would have some resin. In other words, the labor expended was not commensurate with the results.

Q. Did you determine to your satisfaction whether or not the process was commercially practicable, or otherwise?

A. To my own satisfaction, yes; and the report that came out, I think, indicated that it was not commercially feasible.

Q. Was that your conclusion?

A. It was my conclusion, and the office of products also.

Mr. MATTHEW. I think I have no further questions on direct of Professor Starker, but I would ask leave at this time, and I believe it

would be an appropriate juncture, to refer to certain matters in Statistical Bulletin No. 21, Commission's exhibit no. 34, which we would like to have in evidence.

It is understood between counsel, as I understand it, that we can call attention to the features which we desire to have considered in evidence in this case and, in addition, to those features which were specified at a prior hearing.

2704 Mr. BURR. That is my recollection.

(Here followed remarks off the record.)

Mr. MATTHEW. I ask that my associate, Mr. Wheat, be allowed to call attention to those features.

Mr. WHEAT. In Commission's exhibit 34, United States Department of Agricultural Statistic Bulletin No. 21, entitled "American Forests and Forest Products", in addition to the tables mentioned by the counsel for the Federal Trade Commission at the Spokane hearing, we desire to direct, on behalf of the respondents, the Commission's attention to the following tables on the following pages: Table 18 on page 18; table 21 on page 20; table 55 on pages 62 to 65, inclusive; table 60 on pages 74 to 83, inclusive; table 61 on pages 84 to 93, inclusive; table 74 on page 116; table 75 on page 117; and table 126 on pages 215 to 217, inclusive.

(Here followed remarks off the record.)

Mr. WHEAT. In addition to those above mentioned, we understand that counsel for the Federal Trade Commission has asked the Commission's attention be directed also to table 128 on pages 221 to 223, inclusive; and table 133 on pages 240 and 241. In case our recollection on that matter is incorrect, we desire, on behalf of respondents, to have those last two mentioned tables considered by the Commission.

(Here followed remarks off the record.)

Mr. BURR. It is my understanding that Commission's exhibit

2705 34 for identification merely, and respondent's exhibit 34 for identification, just offered, are identical; that Commission's exhibit no. 34 comprises certain pages heretofore marked Commission's exhibit for identification no. 34, and that respondents' exhibit no. 34 for the record will comprise certain pages of respondent's exhibit no. 34 for the record; the two exhibits for identification being identical with the two exhibits for the record being wholly distinct.

Examiner DE BRULER. That statement is approved by the examiner.

Mr. WHEAT. I will discuss this exhibit with counsel and see that the exhibit is designated properly.

(Here followed remarks off the record.)

Mr. MATTHEW. You may cross-examine.

Cross-examination by Mr. BURR:

Q. Professor, if I recall your experience it touches more lightly on the southern territory than on the north and northwest, does it not?

A. Very slightly on the south.

Q. And it touches more lightly on California than it does upon the inland empire and as far south as Bend; am I correct?

A. Yes.

Q. You have not had anything like as much experience in the California and in the southern yellow pine belt as you have in the other districts; is that true?

2706 A. That is true.

Q. Now, with regard to the matter that you testified to this afternoon, is it your understanding that the attempt to extract turpentine from Pinus ponderosa was made in the early days before transportation reached California and for local turpentine necessities?

A. I know of no such experiments.

Q. I was referring to the use of Pinus ponderosa for turpentine in the early days in California before transportation with eastern or southeastern turpentine was available.

A. It is possible that the early settlers did that.

Q. What forest did you say you made that experiment in?

A. Whitman National Forest; that is out from Baker, Oreg., about 50 miles.

Q. Which direction?

A. Southwest in the Sumpter Valley Railroad.

Q. What is the character of ponderosa forests over there? Is that of a heavier and more dense type of ponderosa, or is that of a clear and larger growth?

A. Well, the areas that we were cutting produced some very fine quality logs.

Q. Would you say they were rather better than the average of texture of logs of the Pinus ponderosa or less than an average?

A. Oh, I think probably at that time they were better than the average.

2707 Q. Now, did you ever know of any experiments to use any of the genuine white pines for turpentine purposes?

A. I think that the early settlers way back, the pilgrims, and those people, I think they tried it.

Q. Tried it on the strobus, did they?

A. I think so; I am not absolutely sure of that.

Q. Do you know whether they got any turpentine from them?

A. I don't know what the results were.

Q. That was made in colonial times?

A. Yes, as I remember reading, they did try it.

Q. I believe you are professor of sylviculture?

A. Yes.

Q. And professor of dendrology also, is that true?

A. Yes, sir.

Q. And how many do you have there in the staff on forestry? Don't give the names, just how many have you?

A. About six.

Q. You are a full professor, are you?

A. Yes, sir.

Q. Are there other full professors or are you in charge of the department?

A. Well, our school is divided into three departments; we have a dean, and we have the professor of logging engineering, who is in charge of logging engineering; and I am the head of the technical forestry and lumber manufacture, our lumber manu-
2708 facturing department being very small.

Q. I believe you testified to the effect that the criterion as to the white pines of the north have needles, was not an infallible test, but that a couple of the varieties of pines that are commonly classed as white pines do not have the precise number of five needles, am I right?

A. No; I said that some five needle pines, two to five needle pines, are not classed as white pines.

Q. And those are torreyana and arizonica?

A. Yes.

Q. Those then have how many needles?

A. Five.

Q. And yet are not white?

A. Botanists do not so classify them.

Q. Is there any botanical classification that does fit all of the so-called classed white pines and does not fit any of the yellow pines?

A. Well, there may be, but not to my knowledge. For instance, some keys are based on whether the sheath that surrounds the bundle is deciduous or whether it remains intact, but as I remember there are some exceptions there.

Q. Do you mean deciduous or do you mean it drops once and for all when it gets good size?

A. It remains intact only temporarily.

Q. You mean by deciduous, falling?

A. Yes, only once. The needles of the pine remain on for
2709 varying periods of time.

Q. I understand that. The larches drop once every season?

A. Every year.

Q. How long do the needles stay on the white pines as a rule; do you know?

A. Up at Spokane one of my ex-students tried to determine the knowledge of his former professor and asked me about how long Pinus lambertiana needles remained on. I had never made a study of it particularly, and I guessed five years, and he had a tabulation which indicated that roughly 15 percent fell in two years and another percentage in three years, and about 47 percent in four years, and 35-odd percent in the fifth year, etc., up to about seven years.

Q. I am getting in deeper than I anticipated. There are varying times on the white pines?

A. Yes.

Q. That is, the life of needles that come in at one year will stay on varying periods?

A. Yes.

Q. When you say the sheaths of those needles fall once and for all, is that it?

A. Yes; that is the way I understand it.

Q. That isn't what I meant by deciduous; that is what you meant, isn't it?

A. Yes; I think the soft pines lose theirs the first year, and
2710 the hard pines, in some instances, lose theirs in the second year, or remaining intact, I mean.

Q. Isn't that true of all white pines?

A. I think all the soft pines lose their sheaths, as I remember the key, but all the hard pines do not remain intact. I may be confused there.

Q. When you say hard pines, do you include ponderosa among those?

A. Yes, sir.

Q. In other words, does not that, or is not that an unfailing test botanically of those classed as genuine white pines?

A. No; because in the hard pines certain of the hard pines lose their sheaths, as I remember the key.

Q. Are you sure of that?

A. Not absolutely, but it would be easy to get Sargent and prove it. I am sure there are some exceptions one way or the other.

Q. Are you sure whether Sudworth does not class that as an unfailing test?

A. I never saw it keyed by Sudworth. Sargent's key is the one I am referring to.

Q. Are you sure that Charles S. Sargent does it that way?

A. There are exceptions one way or the other.

Q. You are familiar with Elliott?

A. More or less.

Q. You are pretty sure that is not an unfailing key, then?

2711 A. There are exceptions.

Q. Are you familiar with the criterion as regards the bundles of vascular fibres in the needle itself as in white pines, as classed with so-called, classed as yellow pines?

A. I never went into that very much.

Q. You wouldn't be sure, then, that there isn't an infallible test that differentiates the yellow pine, so-called, from the white pine, so-called, in that vascular fibre matter, vascular bundling?

A. No.

Q. I am talking about the—it is the bundle of fibres in the needle?

A. That is the way we designate that fibro-vascular bundle.

Q. Are you familiar with any tests based upon the tracheids?

A. That is in the structure of the wood itself?

Q. Yes.

A. Yes; the yellow pines can be told with a magnification of some 250 or 350 magnifications; they can be separated from the true white pines by the dentate marks.

Q. As a dendrologist, would you say it is possible to determine a small piece of Pinus ponderosa from the genuine white pines infallibly?

A. Pinus ponderosa?

Q. Yes; microscopically.

A. You could separate it in to the yellow-pine group, maybe.

2712 Q. Is it possible to determine by a small piece of wood infallibly whether it is sugar pine or whether it is monticola?

A. No, sir.

Q. Is it possible to determine strobus microscopically from either of the other two in a small quantity?

A. No, sir.

Q. Is it possible for you to determine the difference between Pinus ponderosa and echinata, microscopically?

A. No, sir, I can't.

Q. How about teda?

A. That would depend on the smallness of the piece, what you are talking about.

Q. Yes; but on a small piece you couldn't infaliibly tell the yellow pine, so-called?

A. It would be hard, yes.

Q. You can always tell a piece of yellow pine from a piece of white pine, and vice versa, can you not?

A. Microscopically, with that amount of magnification; yes. It is usually apparent, those dentate marks.

Q. Now, the botanists in their books all use the common names, as well as the Latin names, do they not, for these species?

A. All botanists?

Q. Yes; don't they, in writing a book for use by ordinary men, or by students on the subject, don't they always use the common names along with the botanical names?

2713 A. It is quite common practice.

Q. The botanical name being the accurate means of identification among scientists?

A. Sometimes the scientific names are listed in an appendix.

Q. Isn't echinata lighter in color than palustris on an average?

A. I think so.

Q. It is nearer to the range as regards color to the Pinus ponderosa than it is to the harder pines of the South; is that true?

A. I don't think so; no, sir.

Q. The common name is Arkansas soft pine, is it not?

A. That is one of the trade names, commercial names.

Q. Do you regard it as a soft or hard pine, or as a medium pine?

A. Well, all woods vary.

Q. Yes.

A. And that particular region, I understand, produces a rather soft quality of Arkansas soft pine; yes.

Q. That is not as soft as Pinus ponderosa, would you say?

A. Not as soft?

Q. I mean, is it as an average ponderosa or as the more typical white pine, so-called, of the ponderosa? You are now refreshing your memory from what exhibits?

A. This exhibit that I offered this morning gives the actual facts. There is no use my offering my experience against technical information.

2714 Mr. MATTHEW. That is exhibit 32, respondents' exhibit 32?

Mr. BURR. Yes, sir.

Q. In exhibit for the respondents no. 32, you referred to the physical and mechanical properties of pines, and you took those from a certain table of book 556 of the Department of Agriculture, did you not?

A. Yes, sir.

Q. You use some six different mechanical properties; is that true?

A. If you count hardness, both end and side grain, too, it is six.

Q. And some 23 were given in that bulletin?

A. Yes.

Q. You use but six?

A. Yes, sir.

Q. Why do you use but six?

A. If you read the bulletin, the authors, as I understand it, rather stress certain ones and minimize others. I might say that I picked these out as representing the tests that usually are considered in the use of lumber. In other words, a technologist can take the specific gravity of a wood and almost tell you its strength, with certain reservations.

Q. You use it with reference particularly to the character and qualities that lead up and conduce to strength or the lack of strength; is that true?

A. Both are shown, yes, modulus of elasticity, and it shows that the white pine group and Pinus ponderosa are rather weak.

2715 Q. Neither Pinus ponderosa or the genuine white pines are sold upon the basis of strength, isn't that true? In other words, they are not strong structural woods for bridge purpose?

A. They are not.

Q. The particular qualities that you have outlined here make a rather unfavorable showing as regards strength for all these soft pines, isn't that true?

A. Just what I said; yes.

Q. You are not then comparing the mechanical characteristics as to which the white pines and Pinus ponderosa are shown particularly unfavorable, or are particularly interesting to those who wish

to decide which of those soft pines they would prefer to use, is that true?

A. The white pines, including Pinus ponderosa, are not sold particularly on their merit of strength.

Q. Anybody who buys them for strength is in an unfortunate predicament?

A. Disappointed.

Q. Let me ask you this: As regards the habitat of monticola, where does that begin and where does it terminate, taking it in a direction from east to west?

A. Oh, a little bit in Montana, west to the coast.

Q. West to the Puget Sound?

A. Yes.

Q. West to the Pacific?

A. West to the Pacific.

2716 Q. And how far east into Montana do you find that?

A. No' very far.

Q. Well, then, those five specimens of monticola shown on the respondents' exhibit 32, as illustrative of the characteristics of monticola, are taken from the extreme eastern boundary of the range of that species, is that true?

A. My experience indicates, I believe, that.

Q. Will you answer the question yes or no, if you can, and then explain afterwards?

A. Yes; it is taken from the eastern part of its range.

Q. Now, please explain if you desire.

A. There are some very fine quality Idaho white pine, or Pinus monticola, secured, brought into the mills at Missoula, Montana.

Q. Do you know what stand of monticola those five species were taken from?

A. Pardon?

Q. Do you know what kind of a stand they were?

A. No, sir.

Q. You weren't in on those figures?

A. I don't know the stands that any of these specimens were taken from.

Q. Would you, as a scientist, say that five trees taken on an extreme boundary of a range was fairly indicative of what that tree would produce?

A. It would be subject to criticism.

2716-A Q. Referring again to respondents' exhibit no. 32, I notice here that there were 25 trees taken from Colorado, Montana, Arizona, "W", and California. Is that "W" indicative of Washington?

A. Yes, sir; Washington.

Q. You don't know where any of these stands were taken?

A. No, sir.

Q. And you don't know whether bull pine or soft texture was used?

A. No, sir.

Q. You don't know whether those samples were collected by the association or by the forestry men, do you?

A. I could tell you this: That the usual practice is to have the Forest Service men select the logs.

Q. Did you get that from hearsay?

A. No, sir; during the war the Madison Laboratory wired our office, the Forest Service in Portland, to secure for them a large carload of Douglas fir, and I was delegated to go out and select those logs.

Q. When was that?

A. During the war. So I went out and picked out three Douglas fir logs——

Examiner DE BRULER (interrupting). Are you going into Douglas fir now?

Mr. BURR. No; I am trying to find out how they do this. We will not ask about the character and qualities of Douglas
2717 fir. I will object to the question.

Mr. MATTHEW. You want to object to your own question?

Mr. BURR. Yes; I can do that on the ground that it is not—what is the question?

(Whereupon the question referred to was read by the reporter.)

By Mr. BURR:

Q. Will you be kind enough to confine that to the proposition—did you get that from hearsay?

A. Not from hearsay, because the laboratory asked me to get certain trees and I am giving you that as an example.

Q. Did they prohibit your getting the assistance of the association men on that occasion?

A. No, sir.

Q. Did they tell you how to get those trees?

A. No, sir.

Q. Those specimens?

A. No, sir.

Q. Did you know, as a matter of fact, that the Madison Forest Products Laboratory frequently has its men secure the advice and the active assistance of the various associations in taking out the specimens that they use for material and data which go into these statistics such as respondents' exhibit no. 32 has reproduced? Do you know whether that is true or not?

A. I know while I was with the Western Pine Manufacturers Association they never asked me to pick out any.

2718 Q. How long were you with them?

A. Three years.

Q. Now, Mr. Starker—Professor, I should say——

A. Leave off the handle.

Q. I prefer the handle. If you have a military handle I will use it also. Now, the five specimens of resinosa of the Norway pine, would you regard that as a satisfactory exhibition for purposes of scientific treatment, five specimens merely?

A. The same thing would apply wherever five is used; this is the best available information we have.

Q. Have you ever found that your practical experience led you to believe that the Government's statistics were in error on certain points?

Mr. MATTHEW. I object on the ground that it is purely speculative.

Mr. BURR. It is cross-examination.

Examiner DE BRULER. I think that the witness can take care of himself. He can take care of himself on his answers.

A. Yes.

By Mr. BURR:

Q. I think you testified that their entire body of information, data, as far as they had them on the question of durability, was withdrawn, didn't you?

A. I think they sent us a note that they were withdrawing that particular information; yes, sir.

2719 Q. Now, as regards the U.S. figures, would you regard the experience of pattern manufacturers and the ability of manufacturers of the genuine white pines to sell to pattern makers as worth more or less than the Government figures with regard to texture under the circumstances that you have just narrated?

A. If you are questioning me as a salesman, I am not a salesman.

Q. No; but if you knew that the pattern makers preferred genuine white pines to ponderosa, on account of their texture, etc., would you regard that practical experience as more important than the Government figures as to texture and the like?

Mr. MATTHEW. Including the shrinkage?

By Mr. BURR:

Q. Including shrinkage?

A. I will answer "no", and say that there are many misconceptions among practical men.

Q. Are there not many misconceptions among scientists that have to be corrected at times?

A. Yes, sir; I think we are not exempt.

Q. I think you testified that down logs and their apparent liability to decay was not a very great indication of the durability of the lumber underweather conditions. That is true, isn't it?

A. Yes.

Q. If, over a wide range of territory and a wide range of experience, it was found that the down logs of one species almost

2720 uniformly outlasted the down logs of another species, and neither of those species of lumber had been fully tested as to their durability, would you not, as a practical man, rather prefer the species that had shown durability as a log?

A. Surely. May I qualify that?

Q. Certainly.

A. I consider that none of the pines should be used in contact with the soil, and as used scientifically the word "durability" means in contact with the soil.

Q. Well, the contact with the weather is not so strong a test where it is not in contact with the soil as contact with the soil; is that true?

A. That is true.

Q. However, there is a difference in durability between woods where exposed to the weather, if neglected as to paint, somewhat; is that not true?

A. There are many factors which will enter in.

Q. Can't you answer the question yes or no?

A. Yes; but there are many factors which go to influence the presence or absence of decay. I don't pose as a pathologist, but I think that the laboratory technicians have developed the fact that wood which is kept drier than 18 percent moisture will not decay; neither will wood which has a saturation of 60 percent decay. So that in certain locations, for instance, the moisture content would determine whether it would decay or not.

2721 Q. Well, are you through?

A. That is enough.

Q. Isn't it true that if the paint is deficient that water will often run inside of the paint and, therefore, increase the exposure of wood, which is protected in parts only by paint, to a point where the durability is again affected adversely to the extent that you have determined, as to your amount of moisture that is necessary in order to produce decay?

A. Paint may increase the liability for decay.

Q. And may bring a certain portion of the exterior coating of a house up to a point where it will have that factor of moisture which you have said induces decay; isn't that true?

A. It might.

Mr. MATTHEW. I think the witness mis-spoke himself. He stated paint will increase the decay.

The WITNESS. I didn't mis-speak. Paint will sometimes increase the possibility of decay.

By Mr. BURR:

Q. On certain conditions?

A. It will hold the water.

Q. It sometimes prevents evaporation and surface exudation of the moisture to the point where the wood is jeopardized?

A. Yes, sir. On the other hand, I might explain if it is thoroughly painted it helps to keep the moisture out.

2722 Q. If you expose a perfectly painted surface to the weather, any wood will be impervious to moisture and, therefore, will last indefinitely; isn't that true?

A. No, sir.

Q. Isn't that true? I thought it was.

A. No, sir.

Q. You mean to say that a wood that was one hundred percent painted, joints and everything, so that no moisture got in, and was thoroughly dried before it was installed, that that wood would be more liable to decay than the other?

A. Moisture will get in through paint.

Q. I see. I didn't understand that to be the fact.

A. Well——

Q. (interrupting). You may explain.

A. Moisture goes through paint to a slight extent; it is not impervious entirely.

Q. Have you made a study of this effect of painting?

A. No, sir.

Q. Are shop grades the only ones used in planing mills? I am referring now to the smaller planing mills.

A. No; they will use clears, I think, even commons for backs of cupboards.

Q. They use select grades, many of the smaller mills, do they not?

A. They use some clears.

2723 Q. They use some of these small knotted common grades for planing mill purposes, do they not?

A. I said they would use some commons; the majority is shop, of course.

Q. Particularly the small knotted varieties they would use, rather than the large knotted commons?

A. That would be better for their purpose.

Q. Just what instructions do you give with regard to classification of Pinus ponderosa to your students? Do you put that with the yellow pines or white pines?

A. I expected that question. I make a diagram.

Q. You do make a diagram?

A. Yes, sir. I put Pinus ponderosa over here [indicating] and Pinus monticola over here [indicating] and I list the common and trade names in it, and the Forest Service name under each one.

Q. You have some duplicates on the common names, do you not; one common name appears in various columns, isn't that true?

A. Yes.

Q. Let me ask you, do you call jeffreyi a ponderosa or separate species?

A. It depends on which book you pick up.

Q. I am asking you, suppose you write a book, where you put it?

A. I would put it Pinus ponderosa. You have two schools of botanists.

Q. I think we have already shown that. Now, the classification between yellow and white pines is not purely a common classification; it is a classification recognized by the botanists very
2724 generally, isn't it?

A. Well, they tried to make a key that will fit.

Q. And in tracing that key down, do you start with a general or with a particular in the key, do you start with a general or the particular?

A. As I said, they usually start with the number of needles in a bundle.

Q. And do you start with a particular differentiation of the species and lead down to a common genus, or do you start with the genus and branch off?

A. Genus.

Q. A bundle of species?

A. The pines of one genus.

Q. Certainly, I understand that. You start off in your classification with a genus, or do you lead back to the genus after having started with the species?

A. You can go clear back to the vegetable kingdom and come up to the genus.

Q. And you come down the line from the general to the particular?

A. Yes.

Q. Those white pines are classed by botanists and then they branch off into the various species?

A. Yes, sir.

Q. And they class the Pinus ponderosa with the yellow pine rather than with the other, do they not?

A. Yes, sir.

2725 Q. Are you familiar with the commercial practice in the southern pines?

A. Except by study.

Q. Not on the grounds?

A. No, sir.

Q. Where did you see, if you did see, lumber bought as longleaf yellow pine, which contained scattering shortleaf?

A. Never saw it.

Q. Isn't that entirely in the commonest grades?

A. Not as I understand the structural grades.

Q. That is hearsay with you, and not observation, is it?

A. From study.

Q. Is it not understood that the density rule applies to a grade of structural timber known as dense southern yellow pine structural timber, and not to longleaf pine?

A. They have a grade "dense structural" and I think they also have a grade "structural".

Q. Well, to which does that density rule apply?

A. If a short-leaf member would come under the specifications of the number of rings per inch, I think it would be included commercially in the longleaf grade.

Q. Wouldn't it be included in the dense southern, yellow, rather than in the longleaf?

A. As I say, I have no experience down there and that is my impression from study in the southern pines.

Q. Which is?

2726 A. That it would be included, if the piece of wood is commercially fit, in the estimation of the grader to fit into a particular grade, there is where he will put it regardless of its botany.

Q. Then, he doesn't put it into the grade of longleaf, but puts it in the grade of dense; is that true?

A. You are getting beyond my depth, Mr. Burr.

Q. Well, what I was trying to get at is this: Is it not true that in that grade of dense structural material that they have the dense pieces of both longleaf and the shortleaf? Is that true?

A. I can't make it any clearer than what I said, that in the judgment of the grader he will take the wood and judge it on its merits and put it in the classification where he thinks it fits, regardless of its botany.

Q. And a softer piece of palustris, which didn't have the density necessary for strength, would also, as well as certain pieces of short leaf, be excluded from the grade of dense structural timber, isn't that true?

A. That is the way I understand it.

Q. The word "long leaf" doesn't enter into the density rule, it applies to either variety, doesn't it, if dense enough to go into the dense grade?

A. Commercial long leaf may include short leaf, as I understand it.

Q. And commercial long leaf, if not dense enough, will be excluded from that grade, even——

2727 A. (interrupting.) It may be sold as short leaf, commercial short leaf.

Q. Depending upon the density?

A. Yes, sir; that is, if that is the particular object they are after—density.

Q. Now, is there any difference, in your judgment, between a piece of given density as between palustris and teda? I am referring to strength, if they have this same density, is there any difference in strength?

A. With the same density the rule is that they will have approximately the same strength.

Q. And put it in the same grade category?

A. That is the way I understand it.

Q. Do you know why the Forest Service selected the common name "yellow pine"?

A. I do not.

Q. Has it always been on the check list?

A. I think the old check list carried western yellow pine.

Q. You don't know of any time when it was called bull pine or yellow pine, without "western"?

A. I rather think the old check list carried western yellow pine. I never checked up on it. I know the new one does.

Q. Does the name California white pine appear on the check list? That is on there now, isn't it?

A. It is listed among the names, yes; but not as the pre-
2728 ferred common Forest Service term.

Q. When you state the botanical name is not the best name for commerce, are you criticizing the name pondosa? You don't intend to do that, do you?

A. Yes; I do.

Q. You don't think that is the right name?

A. No, sir.

Q. Were you working for the association at Portland when that name was adopted by most of your members?

A. No, sir.

Q. You weren't consulted on that?

A. No, sir.

Q. Do you think it ought to be pondosa?

A. A commercial name?

Q. Yes.

A. No, sir.

Q. You think that word "pondosa" is objectionable?

A. I dislike it very much.

Q. Are you criticizing the term sugar pine for that type of lumber when you say that you think that the common name for the tree ought not to be used for lumber?

Mr. MATTHEW. He didn't say that.

A. Sugar pine is well established in the trade, and I see no objection to it whatsoever.

By Mr. BURR:

Q. Isn't pondosa well established with the trade?

2729 A. I will say yes; but I have had some argument with my friends about how good it is established.

Examiner DE BRULER. I think that line of questioning has gone far enough.

By Mr. BURR:

Q. Professor, there is a great multiplicity of names given to a great many of these species in different parts of the range, isn't there? I am now referring to trees?

A. Referring to their trade names?

Q. Pine trees are given quite a number of different names, aren't they?

A. They are.

Q. And various pine lumber in different localities are given different names, aren't they, for the same species of trees from which they originate?

A. Yes, sir.

Q. As a practical man, aren't you in favor of giving the same name for the same species throughout the lumber commercial world?

A. I am not.

Q. You think that one given species should have different names in different parts of the territory where it is used?

A. Yes, sir.

Q. You think there is no advantage in having a uniform nomenclature of the pine trees?

A. I think it would be a disadvantage.

2730 Q. Is that a disadvantage to the trade or to the ultimate consumer?

A. It would be a disadvantage to the purchaser because he would not know from what part of the country the lumber originated. If I might cite an example, we will take Idaho white pine. I think it is a protection to the consumer to brand the stuff that comes from Victoria, and British Columbia, and coast Idaho, or coast white pine.

Q. Well, why not put a prefix in front of the trade name? In other words, if there is a ponderosa produced in the State of Washington that is superior we will say, to that produced in Idaho, for the sake of illustration, if the name pondosa were given to that ponderosa produced in various different parts, it could be called the "Washington pondosa", or the "Idaho pondosa", or the "Klamath pondosa", giving the same name to the species, and yet, at the same time, giving the producer an opportunity, if he has a specially high grade in that particular locality, to give it his own name, or local name, in addition to the trade name. Then would not the buyer and the ultimate consumer be able to know that that was the ponderosa species and yet at the same time to get the advantage of such distinction as there might be in different stands of that in different parts of its range. Wouldn't that be practical, Professor?

A. You could work it out that way. I noted my objection to pondosa.

2731 Q. I was using that for the purpose of illustration. It might be true of sugar pine; it might be true of sugar pine that somebody might say, "We are selling this high-grade Madera sugar pine" or "Tuolumne sugar pine", and take advantage, or say "This is the Jones sugar pine", if that was a trade name, and try to build up a good will along the trade name, in addition to the words sugar pine. Isn't that feasible?

A. Yes.

Q. Now, within that limitation, isn't it advantageous for one species of pine to have one species name, rather than a diversity of species name?

Mr. MATTHEW: That is, for the commercial lumber?

By Mr. BURR:

Q. For commercial purposes, yes, sir; don't you see any advantages in that?

A. Yes; I think that would be an advantage, maybe.

Q. Then, suppose an architect, moving from one place to another, where he is familiar with one name, finds in another locality another name in vogue for the same species. Don't you think that causes confusion in his mind?

A. You say architects?

Q. Yes, architects.

A. They would have to be educated.

Q. Whereas if it was the same uniform name for the species, that process of education would be much simpler?

A. Architects, my contact with architects indicates that they
2732 are not educated as to lumber.

Q. And I think there is a good excuse with this multiplicity of names, don't you agree with that?

A. No, sir; I wouldn't base it on that.

Q. At least that would contribute to confusion in his mind, would it not, where the same species is given many, many different names in the t[illegible]?

A. No, sir.

Q. You don't think that contributes at all?

A. No; I don't think so.

Q. Do you think, if you asked for white pine and find that Idaho white pine is a true white pine, and find that California white pine looks like Idaho white pine, you think there is no confusion in his mind when he is offered California white pine as genuine white pine?

A. I would consider California white pine a genuine white pine as regards its quality of wood.

Q. But if it were not a genuine white pine you think it would be confusing?

A. If it is hard in texture, you couldn't make particular cuttings, or moldings; it would be confusing, but its quality makes it a white pine commercially.

Q. Looks like an Idaho white pine?

A. Some species very much so.

Q. Assuming, for the purposes of your answer, that you
2733 are incorrect and that California white pine is not a genuine white pine, is not that a confusing term when it is offered to a man who sees it looks like Idaho white pine, and it is offered to him with the name "white" attached to it?

Mr. MATTHEW. I object to counsel suggesting that.

By Mr. BURR:

Q. The record shows it is not a genuine white pine, and the botanists do not class it so. Assuming that the botanists are correct, and it is not a genuine white pine, will you answer that question, is it not confusing?

A. If you are going to base it on botany, I will say yes.

Mr. MATTHEW. The witness distinguished between botany and the quality of the tree and I object to your questions implying the contrary.

Mr. BURR. That is all, sir.

Redirect examination by Mr. MATTHEW:

Q. You referred to Idaho white pine, particularly with respect to variations throughout its range, and distinguished particularly between the coast white pine of the monticola species, and the interior white pine of the same species. In what respects does the lumber from these two territories differ?

A. Well, your coast white pine grows in a climate that is very mild and your growth rings will be wider and be of coarser grain than that which grows in the mountains, for instance, of Idaho
2734 and it may carry more color in its heartwood.

Q. Is it quite the common commercial practice to identify the lumber which comes from the coast section as coast white pine, or coast Idaho white pine?

A. That is the way the wholesalers sell it.

Q. That is the practice of the wholesalers?

A. Yes.

Q. And that term is used in order to distinguish the lumber from that territory from the Idaho white pine from the interior?

A. Yes, sir.

Q. Is that, in your opinion, a desirable differentiation?

A. It protects the purchaser.

Q. Is there any warrant, in your opinion, from the point of view of the purchaser, for insisting upon a single commercial name for all of the lumber yielded by a particular species of trees throughout its entire range?

A. I think it would be a disadvantage to the purchase.

Q. There has been some testimony, in fact quite a good deal of testimony on the part of witnesses for the Government, that the ponderosa tree, by virtue of its enormous range, geographically and otherwise, yields lumber with marked different characteristics. Do you recognize that there is that differentiation?

A. There is considerable variation in Pinus ponderosa; yes sir.

Q. Do you think it would be to the advantage of the purchaser, or user of lumber from this tree, if a single commercial name were impressed upon it, or is it preferable to have different
2735 names which more or less indicate the quality and utility of the lumber from different areas?

A. That would be preferable.

Q. Which would be preferable?

A. To have the commercial name indicate from what region it was produced.

Q. In your opinion would the purchaser or user of this lumber be benefitted if the present commercial name of California white pine were replaced by a name which suggested yellow pine?

Mr. BURR. I object to that as immaterial because we don't contend it should be.

Examiner DE BRULER. The objection is overruled. You may answer the question.

Mr. BURR. I think it would be a mistake to put the word "yellow" in there.

Examiner DE BRULER. He may answer the question.

A. Yellow, in connection with pine, would indicate a hard, dense, rather strong wood, which I have indicated Pinus ponderosa does not possess those qualities.

By Mr. MATTHEW:

Q. Do you wish to be understood as testifying, or intimating in any respect that the Pinus ponderosa tree is not ordinarily classified by botanists as being within the yellow-pine group?

A. Botanists usually put it in the yellow-pine group.

Q. And you intended to so testify upon your direct examination?

2736 A. Yes, sir.

Mr. MATTHEWS. That is all.

Recross-examination by Mr. BURR:

Q. There are variations in the ponderosa tree in different parts of California, aren't there, similar to those which you testify as being the case throughout its range, considered as a whole?

A. There are variations in the pine grown in California.

Q. Some of it is rather of a harder type and some of it is the real soft type, is that true?

A. I think so; yes. Any tree is nature's product, and there are variations in every tree.

Q. And there are rather more in Pinus ponderosa than there is genuine white pine, isn't that true?

A. Pinus ponderosa grows over a larger area than any other commercial tree, and you might expect it would; I think it varies considerably.

Q. And it grows in a greater variety of soil and altitude in the same locality, doesn't it, than most of the white pine?

A. I have great admiration for Pinus ponderosa in its ability to grow in many places.

Mr. BURR. I think that is all.

Mr. MATTHEW. That is all.

(Discussion off the record.)

2737 Examiner DE BRULER. That is all with this witness.

(Witness excused.)

Examiner DE BRULER. We will take a five-minute recess.

(Whereupon a five-minute recess was taken.)

Examiner DE BRULER. If counsel are ready, we will proceed with the hearing.

Mr. BURR. If the examiner please, at the request of opposing counsel, I have asked Mr. Ivory to return for further cross-examination. I also have a very few questions that I would like to ask him as part of a return to my direct examination, to which opposing counsel has consented.

Examiner DE BRULER. Very well.

Mr. BURR. Mr. Ivory, will you resume the stand, please.

E. P. IVORY resumed the stand and testified further as follows:

Direct examination (continued) by Mr. BURR:

Q. Mr. Ivory, you testified on cross-examination, I believe, that you inspected a certain building at Grub Gulch that you found to be made from ponderosa and on the same location I believe you examined a sugar-pine building near the same site as to which you testified. Will you state what condition that building, made from Pinus ponderosa, was found to be in?

A. The building made of Pinus ponderosa was a barn or shed used for implements and grain. We were advised by the
2738 owner of it that——

Mr. MATTHEW (interrupting). I object to what he was advised by the owner. That is hearsay.

Mr. BURR. I think that is so.

Examiner DE BRULER. Objection sustained.

By Mr. BURR:

Q. Will you state the condition it was in?

A. The building was in usable condition. The side walls, which consisted chiefly of common boards, stood up lengthwise, were sound with the possible exception of a small portion at the bottom near the ground, which was decayed.

Q. I believe you testified that there were certain elements, or physical characteristics, I should say, in wood which has to do with the durability where exposed to conditions of moisture. And I believe you testified that the shrinkage of the wood was one of those characteristics. Are there any others?

A. Yes. I believe that the relative density of heartwood, rather, relative density of summerwood and springwood have an influence; it is somewhat correlated to shrinkage; furthermore, the percentage of sapwood as against heartwood has an influence because sapwood tends to shrink slightly more than the heart of the same board and causes a distortion and a stress that may result in checks, thereby reducing the resistance of that particular piece of lumber to decay.

Q. Now, referring to the consideration of spring and sum-
2739 mer wood, I wish you would apply that test to the sugar pine and to the Pinus ponderosa.

A. There is very little difference between the density of the springwood and the summerwood in sugar pine, whereas there is a con-

siderable contrast in that respect in Pinus ponderosa. As regard percentage of heartwood and sapwood, the sugar pine has less sapwood, lumber cut from it is less apt to contain sapwood; therefore, it is superior in that respect.

Q. Are you sufficiently familiar with the other white pines to state whether they are similar to Pinus ponderosa, or similar to sugar pine, in the respect of summerwood as against springwood, as regards the sap and heart situation to which you have just testified?

A. They are more similar to sugar pine.

Q. Does the situation as regards spring and summer wood, and heart and sap wood, tend towards greater durability in the Pinus ponderosa or in the genuine white pine?

A. It tends towards greater durability in the genuine white pines.

Mr. BURR. You may cross-examine.

Cross-examination (continued) by Mr. MATTHEW:

Q. Mr. Ivory, it is a fact, is it not, that in the early mining days of California Pinus ponderosa lumber was used very extensively

2740 in the building of miners' cabins and other structures?

A. I presume that to be the case.

Q. Well, don't you know it to be a fact, through your investigations?

A. No, sir.

Q. And you don't know that many of those early miners' cabins were constructed of Pinus ponderosa are still standing and in very good condition?

A. I recall none that I have seen and identified as containing Pinus ponderosa.

Q. You know it to be a fact, do you not, that the flumes used in mining were very largely constructed of Pinus ponderosa in the very early days of California, and that many of those flumes are still standing and in quite good condition?

A. I do not know that to be a fact.

Q. Do you know that Pinus ponderosa was largely used for mine props, installed in mines, in the early days of quartz mining in California?

A. I do not know that.

Q. And that many of those mine props are still in good condition?

A. I do not know that.

Q. You testified that you were some time the manager of trade extension, I think that was the term, for the California White and Sugar Pine Manufacturers Association?

A. Yes, sir.

2741 Q. And during that time you had some responsibility for the promotion work of the association?

A. Yes, sir.

Q. During that period you were engaged in promoting the sale and distribution of California white pine and sugar pine alike?

A. Yes, sir.

Q. I show you an article entitled "California White Pine" printed, reprinted from the "Timberman" of Portland, Oregon, dated June 1925, and over your name, and ask you if you recall writing that article?

A. (Examining article.) I do.

Q. I direct your attention to the following paragraph from this article entitled "California White Pine by Edward P. Ivory", under the captain "Early Use": "California white pine played an important part in the development of California. The miners used it very extensively in building their cabins and also in the construction of fumes for the early gold mining operations. Many of these reliecs remain to attest its durability. Later when quartz mining was undertaken this species was used for mine props. It has been used in great quantities for irrigation purposes."

I will ask you whether you recall writing the text which I have just read?

A. I do.

Q. And you believed at the time that that was a fair state-
2742 ment of the facts which are therein set forth?

A. That was hearsay evidence reproduced under the direction of the committee consisting of four members of the California White and Sugar Pine Manufacturers' Association, and was obtained from data publications then on file at the California White and Sugar Pine Manufacturers' Association, and——

Q. May I ask that the answer be stricken out on the ground it is not responsive and that the witness be directed to answer the question.

Mr. BURR. I think it should stand.

Mr. MATTHEW. I ask to have the question read and ask for a ruling.

(Whereupon the question referred to was read by the reporter.)

Examiner DE BRULER. You can answer that.

The WITNESS. I believe, sir, I have answered that.

Examiner DE BRULER. You can answer that yes or not. You were asked whether you believed it or not.

A. Yes; at the time I believed that to be the facts.

By Mr. MATTHEW:

Q. Do you repudiate it now?

A. Just what do you mean by repudiation?

Q. What I mean is, are you willing to stand upon those statements as correct and fair statements of facts, or do you now disclaim their accuracy?

2743 A. Just what do you mean by "disclaim their accuracy" please?

Q. Well, I think my question is very clear. Is this a correct statement, in your opinion, "California white pine played an important part in the development of California." Is that true?

A. Are you asking as a question of opinion or a question of fact?

Q. Whether you believe now that that is a correct statement of facts?

A. Yes; I believe that to be a correct statement of facts, but do not know that it is true.

Q. Do you believe it to be a correct statement that the miners used California white pine very extensively in building their cabins and also in the construction of flumes for the early gold-mining operations?

A. It is my opinion that the miners did use it.

Q. Then that is a correct statement of facts, in your opinion?

A. I wasn't there; I couldn't testify to that fact.

Q. In your opinion, it is an accurate, correct statement of facts, is it?

A. In my opinion, that is the correct statement of facts; yes.

Q. "Many of these relics remain to attest its durability." Is that a fair and correct statement of facts in your opinion?

A. I have not seen and identified any of these relics.

Q. In your opinion is it a fair and correct statement of facts?

A. Yes; I believe that some of those exist today.

2744 Q. Is it a correct statement that "Later when quartz mining was undertaken this species was used for mine props"?

A. From my own observation I can't say that that is exactly the case, but knowing the varieties of wood that are available to those operating such quartz mines, I believe that they do use that species.

Q. And that they did use it in the early quartz-mining days?

A. I believe they used it in the early quartz-mining days.

Q. Likewise, do you believe it to be a correct statement of facts that "It has been used in great quantities for irrigation purposes?"

Q. Then it comes to this, Mr. Ivory, does it not, that at the time when you wrote this article, from which I have quoted this paragraph, you believed that you were fairly and correctly presenting facts, and you believe today that you were fairly and accurately presenting the facts. You were entirely sincere in getting that out?

A. I was sincere in that.

Q. I don't question that at all, and you are not disclaiming it now.

A. I am not disclaiming it as a matter of probability; no, sir.

Q. Well, these are statements, are facts, and not mere matters of probability, are they, Mr. Ivory? These are categorical

2745 statements to the effect that the California white pine was used very largely in the early mining days.

A. What do you mean by "facts" in this case, something to which I can swear to personally, or observation, or something which I believe inferentially to be true, or which I heard as a matter to be true? Will you please explain that, and then I think I can answer.

Q. If I can help you I will be glad to. You testified at some length the other day about the durability of sugar pine as evidenced

by a number of sugar-pine structures which you have seen, and photographed, in the State of California.

A. Yes, sir.

Q. I assume that you were not there when those structures were erected?

A. No, sir.

Q. And I assume likewise that you were not there when these structures of the California white pine were erected, but as a student of this industry you have made an effort to inform yourself as to the antiquity of structures built both of California white pine and of sugar pine. Am I right?

A. Yes, sir.

Q. And you have attempted fairly, and without color, to present the facts as you have gathered them. Am I right in that?

A. When the words "without color" are included, I am afraid——

Q. (Interrupting.) Then you were coloring the story a little bit when you wrote that particular paragraph concerning which

2746 I have been interrogating you?

A. In an advertising or publicity sense, there is a certain amount of color, or picturesqueness, thrown into the story in that paragraph.

Q. Will you take out the color and picturesqueness from that particular paragraph and let us have it as it should be in order to fairly present what should be presented to the public?

A. Does counsel wish me to rewrite the paragraph?

Q. Yes; take out the color and picturesqueness.

A. I would say that in its method of presentation it is largely color and picturesqueness.

Q. Will you take it out?

A. Those are qualities of style rather than fact.

Q. The only criticism you offer now is to the literary style, which you think was a little bit too good? You are merely criticising the literary qualities?

A. I am not criticising; I am saying that in the preparation of advertising literature it is customary to endeavor to give it color and picturesqueness. This all comes from the question as to whether or not I prepared certain material without color, and I referred you back to the statement that when you included that it would be difficult to answer your question. That is what was in my mind.

Q. Do you claim there is any misstatement of fact in the paragraph which I have read to you and concerning which I have interrogated you?

2747 A. Will you again elucidate what you mean by "facts"?

Examiner DE BRULER. You know what that means. You may answer.

The WITNESS. If Your Honor please——

Examiner DE BRULER. Read that question.

(Whereupon the question referred to was read by the reporter.)

Examiner DE BRULER. Answer that yes or no.

The WITNESS. No. I have already testified on each of these things separately.

Mr. BURR. I think he is entitled to make an explanation, if Your Honor please.

Examiner DE BRULER. I think it has been dragging out long enough. He answered "no" and I think he has been given every opportunity to explain.

Mr. BURR. What?

Examiner DE BRULER. He has been given opportunities to make explanations.

By Mr. MATTHEW:

Q. Do you recall writing the paragraph in this same article to which I now direct your attention, the third paragraph from the commencement of the article?

A. (Examining article.) I do.

Q. Is that, in your opinion, a fair statement of the facts, and does it truly reflect your views at the present time?

A. It does.

2748 Mr. BURR. I would like to have a look at that, please.

Mr. MATTHEW. Very well. Here it is. [Handing article to Mr. Burr.]

(Here followed remarks off the record.)

By Mr. MATTHEW:

Q. The paragraph to which I have just directed your attention reads as follows: "There are 37 pine species in the United States, and just as the oaks are divided into white and red oak groups, so the pines are divided into white and yellow pine groups. Botanically, California white pine falls in the yellow pine group chiefly because it has three long needles in each bundle, whereas the white pines have five. The physical properties and uses of the wood cut from this tree, however, align it with the white pine group and set it apart very distinctively from the yellow pine group."

I understand that that represents your views as at the present time?

A. Yes, sir.

Q. And if there is anything in your testimony yesterday which suggests anything in conflict with the statements in the paragraph which I have just read, you would want to have this paragraph prevail, would you?

A. Just what testimony do you refer to, please?

Q. As to the distinction between the two groups of pines, and the lumber yielded by the two groups of pines?

A. You have the record. Will you please submit it and

2749 let me judge it.

Q. You know I haven't the record, so I won't press the question. I show you a paper entitled "Information Sheet No. 1 of the California White and Sugar Pine Manufacturers' Association"

dated February 1927, and apparently representing a revision of a previous paper of the same character, and ask you whether you recall this paper during the period of your connection with the association?

A. (Examining paper.) I was not employed by the association at that time.

Q. But that is a revision of a prior paper? Do you recall any of the language of this paper?

Mr. BURR. If the examiner please, I think it is hearsay unless this witness—for the purpose of correcting this witness' testimony.

Examiner DE BRULER. I don't know what you are talking about yet.

Mr. MATTHEW. Your point may be in order later on, but not right now.

Mr. BURR. What is the question?

(Whereupon the question referred to was read by the reporter.)

Examiner DE BRULER. You asked him what he knows about a certain paper handed him.

2750 By Mr. MATTHEW:

Q. I asked if he recognizes any of the text of this paper as having come from, or being identical with the text of a previous publication of the association while he had the position of manager of the trade extension.

A. (Examining paper.) I do.

Q. Was some of the material in this paper written by you or under your direction?

A. Some of it was written by me; yes, sir.

Q. Can you state whether or not any portion of the text of page 2, and particular of the first three paragraphs, column 1 of that page, was written by you?

A. This second paragraph is not especially familiar to me as having come—the second paragraph is not familiar to me right now, as having been written by me.

The third paragraph does appear familiar. I believe that it represents material that I wrote, but being a revision. I cannot say positively.

Q. But your best impression is that it is the material which you wrote?

A. My best impression is that it conveys ideas anyway that I had written in somewhat similar language; there may be minor variations.

Q. Do you recall the text of this paragraph on page 1, under the caption "Characteristics"?

A. I do. It was prepared under the direction of the trade
2751 extension committee of the California White and Sugar Pine Manufacturers Association. In fact, it was a statement of, one might almost say, policy of advertising prepared by them to be used.

Q. Did you write it?

A. I do not recall writing this paragraph.

Q. Is your best judgment that you did write the text of this third paragraph on page 2?

A. Yes, sir; my best recollection is that I did.

Q. The text of this third paragraph, on page 2, of this Information Sheet No. 1, dated February 1927, reads as follows: "Physical properties of California white pine, as demonstrated in tests made at the U.S. Government Forest Products Laboratory, Madison, Wis., and its uses, closely align California white pine with the botanical white pines. In fact, in many of its most important qualities and uses California white pine is more typically a white pine than are some species which botanically are classified as white pines."

Does this material which I just read represent, in your opinion, a fair statement of the facts?

A. It does.

Mr. MATTHEW. That is all.

Redirect examination by Mr. BURR:

Q. Mr. Ivory, when you were with the California White and
2752 Sugar Pine Manufacturers Association as extension manager, it was your business to aid the sales of both sugar pine and California white pine, so-called; is that true?

A. True.

Q. Did you get outside matter that appeared in the advertising columns of various publications?

A. I assisted in its preparation.

Q. Did you assist in the preparation of news articles that appeared in various trade journals with regard to both of these varieties?

A. I did.

Q. Do you recall whether or not you wrote advertising material and news articles that praised the durability of sugar pine, and gave specific illustrations of that durability?

A. I did.

Mr. MATTHEW. I object to that as immaterial and improper cross-examination.

Mr. BURR. If the examiner please, the question of comparative durability has been in issue a long time and I desire to show by this witness the comparative importance and the comparative bearing that should be given to the cross-examination of this very witness this afternoon, as regards the California white pine and sugar pine.

Examiner DE BRULER. That is cumulative; it was gone into thoroughly by this witness.

2753 Mr. BURR. I want to show the bearing of what has been called to his attention upon his real views at this very time that he has testified about.

Mr. MATTHEW. Cross-examination is one thing and——

Examiner DE BRULER (interrupting). I know.

Mr. MATTHEW (continuing). And direct and redirect examination happen to involve something entirely different. I merely am testing

the propriety of certain statements made by the witness, or completeness of the statements, when he was on the witness stand before. Of course, now, this is not only immaterial, but improper cross-examination, to ask the witness if he has written certain articles on sugar pine. It doesn't make any difference whether he has written them or not.

Examiner DE BRULER. I understand that.

Mr. BURR. If the examiner please, it seems it is important here and perfectly competent to show that although he has written certain articles with regard to California white pine, that the references to durability are not to be considered as contradicting what he has already said about the superior durability of sugar pine.

Examiner DE BRULER. Mr. Burr, I think the question of durability has been gone into repeatedly and repeatedly, and it is all cumulative. I shall rule that this witness shall not be further
2754 questioned along that line. We have to stop some time in the examination of these witnesses.

By Mr. BURR:

Q. Will you state whether the paragraphs which counsel has invited your attention to were paragraphs designed to primarily increase the sales of California white pine in favor of your members?

A. Primarily, the function of my whole work there was just what you point out.

Q. And your share in the preparation of these articles was done for that purpose, was it?

A. It was.

Examiner DE BRULER. I think the examination of this witness has gone far enough.

Mr. BURR. I am about to say I am through.

Examiner DE BRULER. I will be glad to hear it.

Mr. BURR. That is all.

(Witness excused.)

Mr. MATTHEW. May I call Mr. Brennan?

J. J. BRENNAN was thereupon called as a witness, and having been first duly sworn, testified as follows:

Direct examination by Mr. MATTHEW:

Q. Mr. Brennan, your services are engaged in the California Fruit Exchange?

2755 A. Yes, sir.

Q. In what capacity?

A. President of the California Fruit Exchange.

Q. And throughout what period have you been president of that company?

A. I have been president since 1926.

Q. And throughout what period have you been an executive officer of the California Fruit Exchange?

A. Since 1914.

Q. And continuous to the present time?

A. Yes, sir.

Q. What is the California Fruit Exchange?

A. The California Fruit Exchange is a group of 7,500 growers, incorporated in 1901 to market their own products?

Q. Is it a voluntary and nonprofit corporation?

A. Yes, sir.

Q. Just how does it operate, briefly?

A. The company is capitalized with $100,000 worth of stock, of which there has been $81,000 sold. Any member can buy two shares of stock.

The California Fruit Exchange at this time handles between 10,000 and 15,000 cars of fruit a year. It is handled on a purely consignment basis. We are a selling company; we don't buy. We make a flat charge, the same as the commercial operator does,
2756 of seven percent. At the end of every season we pay back to our growers everything above the cost of operation which has been, in the past twelve years, four percent paid back to the growers out of the seven percent charged for handling the business.

Q. That seven percent commission is a commission based upon the amount realized from the sale of the fruit at destination?

A. Yes, sir.

Q. Then, as the exchange operates, you are upon a nonprofit basis and the growers are paying your services in marketing and distribution of their fruit substantially at cost, or approximately at cost?

A. Cost.

Q. Can you state whether or not the California Fruit Exchange has been found to be a nonprofit and cooperative corporation by any tribunal or bureau of the Federal Government?

A. The Federal Government investigated us five years ago, and one of the internal-revenue men put a tax up against us of $65,000. We went on to Washington and were able to get back every cent of the tax, and the only tax we pay the Federal Government today is a tax on the stock.

Q. You do not pay any income tax upon any of the income of the California Fruit Exchange?

A. No, sir. I might tell you further how we operate and how we purchased our mill.

The California Fruit Exchange operates in this way: At the end of any season, when we find out what the earnings are,
2757 we declare an earning of four percent on every man's gross. At the annual meeting, which is held on January 14th every year, the directors refund back to their growers one percent of the four percent. Then we keep the balance of the money in the fund until the heavy borrowing of that season is over. In November of that next year we pay him a second one percent, and the other two percent is held in a withholding fund for five years. So at all times we have in our withholding fund, repayable to growers, $1,700,000, about.

Q. Does the California Fruit Exchange own and operate any lumber manufacturing plants?

A. We do.

Q. Where are they located?

A. At Gray Eagle and Blairsden, in Plumas County, and fifteen to twenty thousand acres of timberland.

Q. And for what purpose do you own and operate that plant?

A. To stabilize the shook product to our growers and to be able at all times to have a supply on hand for our growers.

Q. What do you do with the lumber which is not used in box shooks or supplied to your growers for other purposes?

A. In order to comply with the Government requirements on conserving timber, we sell our upper grades of timber and use our poorer grades of lumber for box.

Q. Then is this merely a by-product of your general operation?

A. That is all.

2758 Q. And such profit as you may obtain from the sale of lumber commercially is simply included in the income of your operation, which is finally brought down to a cost basis in the manner you have described?

A. The income from our mill every year is put with the earnings of the fruit and goes to make up the four percent that is paid to the growers.

Q. I assume you are not a technical lumber man?

A. I know nothing about the lumber business. I am a peach grower.

Q. Do you know whether or not the lumber which is marketed commercially from your mill is offered to the trade under the name of "California white pine"?

A. I think it is.

Q. Such profit as you make from the sale of your lumber commercially is purely incidental to your other operations?

A. Yes.

Q. And was found, by the Bureau of Internal Revenue, to be necessary to conduct your operations economically?

A. Yes.

Q. And the operation slightly reduces the cost of box shook to your growers?

A. Yes.

Mr. MATTHEW. That is all.

Mr. BURR. With the consent of opposing counsel, I wish the record to show that Mr. Brennan's testimony, beginning at the beginning and throughout, is part of Commission's case

2759 docket no. 1626, against the California Fruit Exchange, and is not a part of the other cases, docket 1620 to 1169, inclusive.

Mr. MATTHEW. That is agreeable. That is a special situation.

(Here followed remarks off the record.)

Examiner DE BRULER. Very well.

Mr. BURR. That is agreeable?

Examiner DE BRULER. Very well.

Cross-examination by Mr. BURR:

Q. Mr. Brennan, where are the members of the California Fruit Exchange?

A. All over the State of California.

Q. Have you any outside of the State of California?

A. No.

Q. This lumber of the better grades does not go into the boxes, but is sold in order to comply with the conservation requirements; and where do you ship that?

A. Well, that is something that I cannot tell. I suppose it is shipped all over the world. It is handled through the sugar and white pine people, some of it.

Q. To whom do you dispose of it?

A. Well, I don't know how it is handled. It is handled through our Mr. Rowe. We have a superintendent.

(Here followed remarks off the record.)

2760 Mr. BURR. Counsel for the defense says that it is shipped in interstate commerce, if Your Honor please.

Mr. MATTHEW. That is, to a large extent.

Mr. BURR. As well as intrastate commerce.

Mr. MATTHEW. Yes.

Mr. BURR. I think I have no further cross-examination.

Examiner DE BRULER. That is all. Stand aside; you are excused.

(Witness excused.)

Mr. MATTHEW. I will call Mr. Johnson.

W. P. JOHNSON was thereupon called as a witness, and having been first duly sworn, testified as follows:

Direct examination by Mr. MATTHEW:

Q. Mr. Johnson, where do you reside?

A. In Los Angeles.

Q. What is your business or occupation?

A. I am now with the W. E. Cooper Lumber Company as field purchasing man for sugar and white pine and spruce requirements.

Q. This is the same W. E. Cooper Lumber Company of which Mr. James is an officer?

A. Yes, sir.

Q. How long have you been connected with the lumber business in general?

2761 A. About twenty-four years.

Q. Will you briefly describe your experience in the lumber industry?

A. In my younger days, during the first two years, I was in Wisconsin among the pine and hardwood mills, after which I ventured out to California and Oregon, where I have been since, in and around most of the Oregon and California mills.

Q. And with that particular companies in California have you been identified?

A. When I first came to California I was purchasing and shipping for a Chicago firm, sugar and white pine for a period of two years. Later I was associated with the McCloud River Lumber Company, with the Standard Lumber Company, and the Sugar Pine Lumber Company, chief inspector of the California Sugar and White Pine Association for five and one-half years; and the last year and a half with the W. E. Cooper Lumber Company, of Los Angeles.

Q. You have had experience in the buying end and in the marketing end, and likewise some experience in the mills?

A. I have.

Q. And you have likewise had similar experience in the forests?

A. Not in a technical way.

Q. What is your familiarity with the pine forests, if any?

A. Well, I can detect sugar pine from our California white pine, spruce.

Q. Well, you have visited the forests frequently?

2762 A. Yes, sir.

Q. And you have been on the scene of the actual sawmill operations?

A. Yes.

Q. Both in California, Wisconsin, elsewhere, Oregon?

A. Yes, sir.

Q. You know the northern white pine?

A. Yes, sir.

Q. And I assume you are likewise familiar with the California white pine and with sugar pine?

A. Yes, sir.

Q. How long have you been familiar with the term "California white pine"?

A. Since my coming to the West, which was twenty-three years ago—twenty-two years ago.

Q. Has that been the common commercial name under which the lumber from the Pinus ponderosa tree has been marketed?

A. Until about four or five years ago it was practically the only name by which it was known, California white pine.

Q. And has sugar pine always been marketed under the name of sugar pine in the entire period of your contact with the industry?

A. Yes, sir.

Q. Have you ever known it to be offered to the trade under the name of "California white pine", or any other name, including the word "white"?

2763 A. No, sir.

Q. Are you able to compare these three lumbers, namely, northern white pine, California white pine, and sugar pine, with respect to their qualities and uses to which they are severally adapted?

A. Yes; I am.

Q. Will you state that generally?

A. In a general way?

Q. Will you state generally whether they are used for the same or for different purposes?

A. The northern pine is familiarly known as growing around the Great Lakes in the grades of common, selects, and better; their use is very similar to the California white pine. The percentage of shop was small, but what they did get went into the making of doors, the same as California white pine or sugar pine.

Q. Are there any important differences between the uses of California white pine and sugar pine?

A. In some cases there are.

Q. And what are those particular points of difference?

A. In some cases white pine is more desirable for doors; in some cases sugar pine is more desirable for doors. It depends entirely on the user of them. He tells you what he wants.

Q. Well, both California white pine and sugar pine are used quite generally in sash and door manufacture?

A. Yes, sir.

Q. For interior trim and similar purposes?

2764 A. Yes, sir.

Q. Are these two names, California white pine and sugar pine, well established in the trade?

A. Very much so. In fact, if I may qualify this, until a lot of these later trade names, botanical names, rather, came out, the trade was realy not confused during my time in the East; it was firmly fixed in their minds as to what they were going to get. If he bought California white pine or if he bought California sugar pine, he knew what he was going to get. But that condition, I don't think, prevails today, which is largely attributed to the fact that there has been so much talk about this botanical term, or misnaming, and for that reason he is possibly confused.

Q. What particular term have you in mind, as a botanical name, for lumber?

A. I have reference to some of my experience with the association when I was in the East.

Q. What particular term have you in mind, you said that there was some botanical term for lumber which had recently come into existence?

A. Pondosa.

Q. Has the introduction of this term, in your opinion, caused confusion to the trade?

A. Yes; I think it has.

Q. Will you state why?

A. Because that wood has always been known as western white pine.

2765 Q. I think you stated prior to the introduction of this term, "pondosa pine," the term "California white pine" was well

known to the trade and there was no confusion between California white pine and sugar pine?

A. No, sir.

Q. Do you find that sugar pine is preferred by some of your customers for various uses and California white pine for other uses?

A. Yes, sir.

Q. It is customary for our company to give to the trade just what it requires?

A. Absolutely.

Q. Do you find any complaint in the trade with respect to California white pine?

A. None.

Q. Have you any complaint respecting confusion between the two woods?

A. None.

Q. Any complaint as to the durability of California white pine?

A. None.

Q. Are you familiar with the reputation of sugar pine for durability?

A. In a measure, yes.

Q. And what is that reputation insofar as you are familiar with it?

A. What I would give you in this respect would be general belief.

2766 Q. Well, that is all I mean—is it good or bad or indifferent?

Mr. BURR. Among what class, the public?

Mr. MATTHEW. The trade with which he is familiar.

A. May I ask you to put the question again?

By Mr. MATTHEW:

Q. What is the reputation of sugar pine with respect to——

Mr. BURR (interrupting). Ask him if he is familiar with it first.

Mr. MATTHEW. He said "yes" to that.

Examiner DE BRULER. He is qualified.

By Mr. MATTHEW:

Q. I am asking now what that reputation is, is it favorable or otherwise?

A. Favorable.

Q. And are you familiar with the reputation of California white pine as to durability?

A. Yes, sir.

Q. And is that favorable or otherwise?

A. Favorable.

Q. Is there any difference between the repute of the two types of lumber as to this factor?

A. None.

Q. You say you know the trees to some extent in the forest. May I ask if you ever had charge of any sawmill operations in California?

2767 A. Well, I have had charge of several, but the more recent one was one in the San Joaquin Valley for the Sugar Pine Lumber Company.

Q. That was a sawmill of the Sugar Pine Lumber Company?

A. Yes.

Q. At what point, please?

A. Pinedale.

Q. In what county?

A. Fresno County.

Q. And what was the nature of your responsibility there?

A. I was superintendent of the entire plant.

Q. How long were you there, Mr. Johnson?

A. Five years.

Q. Then you are familiar with the cutting of sugar pine?

A. Yes, sir.

Q. Was there likewise some California white pine which was cut at your mill during that period?

A. Yes, sir.

Q. Are the two trees found in the same forest in that particular area?

A. Yes, sir.

Q. Have you had an opportunity to observe the comparative resistance of these two species of trees to decay when the trees are down in the forest, or otherwise?

A. Yes, sir; I have.

2768 Q. What opportunities have you had in that respect?

A. Insofar as decay is concerned—making a comparison——

Q. (Interrupting.) First, what opportunities have you had, I am now asking?

A. To observe the logs as they come to the mills to be sawed.

Q. Have you noted them on the ground in the forest?

A. Yes.

Q. Have you milled any logs of both species as they have been down in the forest for some time?

A. Yes; I have.

Q. What has been your experience as to the comparative resistance of logs of the two species to decay under those conditions?

A. Do you have reference to decay?

Q. Yes.

A. In the matter of comparison there is by far greater rot in the heartwood of the sugar pine than there is in the California white pine from that district, not merely because sugar pine predominates in volume.

Q. Have you finished your answer?

A. Yes, sir.

Q. Why is it there is a greater percentage of heartwood of the sugar pine than in the heartwood of the California white pine?

A. That I cannot say.

Q. That has been your experience?

2769 A. That has been my experience.

Q. Have you found that the sapwood of either species is more resisting to decay than the other when the logs are down in the forest?

A. I think——

Q. (Interrupting.) Under apparent similar conditions?

A. I think they are both on a very equal basis; they compare the same in the same climatic conditions.

Q. They are susceptible to rather rapid decay when on the floor of the forest?

A. I would have to say yes, and modify it, because a tree that has fallen from a smaller tree carries much more sap than one of the larger trees and, naturally, it would decay more in volume that the larger tree, the sapwood.

Q. The greater proportion of sapwood the greater the relative amount of decay in the entire trunk?

A. Yes.

Q. Have you had any experience in sawing logs cut from standing timber which has been dead for some time before cutting?

A. Yes, sir; I have.

Q. Have you observed the comparative resistance of the two species of lumber here in question to decay under those conditions?

A. I have.

Q. What has been the result of your observation?

2770 A. Well, on a comparative basis with the sugar and California white pine, there is much more decay in the sugar-pine log than there is in the white pine.

Mr. BURR. You are talking about standing timber?

The WITNESS. Fallen logs.

Mr. BURR. I thought you said dead standing.

Mr. MATTHEW. Standing dead timber now. I think we covered fallen logs before.

Q. I am asking about the standing dead timber. Do you so understand me and is it the same answer?

A. Yes; the same answer, the same as before.

Q. Are you familiar with a grade of lumber which has been referred to here as Australian clear?

A. Yes; I am.

Q. Is that confined to California white-pine lumber?

A. No, sir.

Q. What other lumber is classified or graded as Australian clear?

A. I believe they have it in several of the wood species, but also in the sugar pine.

Q. Do you know of any particular lot of sugar pine now in existence falling within the grade of Australian clear?

A. Yes; I think one of the southern mills has a large accumulation of sugar pine, Australian clears.

Q. What mill?

A. The Sugar Pine Lumber Company.

Mr. BURR. Of the Australian grade in the clears?

2771 The WITNESS. Yes, sir.

By Mr. MATTHEW:

Q. Are you familiar with the defect in lumber known as shake?

A. Yes; I am.

Q. Do you know whether or not either one of these two species is more affected by shake than the other?

A. Yes, sir.

Q. And which one?

A. Sugar pine.

Q. Is that actually carried into the lumber or is the effect of shake eliminated in the process of sawing?

A. That defect does not come out in sawing.

Q. Is it a defect which is contained in the finished product out of the mill?

A. Yes, sir.

Q. Are you familiar with the sugar-pine lumber yielded in the northern part of this range, say, in the Grant's Pass District in Oregon?

A. Yes, sir; I am.

Q. Does the quality of lumber differ materially from the sugar pine as yielded from the southern Sierra operations?

A. I will have to say yes and no on both of those, and then modify it. The sugar pine cut from where it is grown at an elevation around 2,500 to 3,000 feet is of a harder texture, while there is some that is grown at 5,000 foot elevation is of a

2772 nice choice quality.

Q. Then there is quite a variation in the quality of sugar pine over its range?

A. Yes, sir.

Q. And dependent, in a measure, on the elevation at which it grows?

A. Yes, sir.

Q. Mr. Johnson, I assume that your company is equally interested in selling both sugar pine and California white pine? That is, you are anxious to sell all you can of each species of lumber?

A. Yes, sir.

Q. Have you found that sugar pine encounters any sales resistance by virtue of the fact that California white pine is the common commercial name for the lumber yielded from Pinus ponderosa trees?

Perhaps I should reframe the question if that isn't clear.

Are you hampered at all in the sale of sugar pine because of the use of the term California white pine?

A. None whatever.

Q. Is the sugar pine, in a market way, prejudiced in any respect by the existence of this term "California white pine"?

A. None whatever.

Q. If the term "California white pine" for this lumber were replaced by some term in which the name "white" did not appear, would the market opportunities of sugar pine, in your

2773 opinion, be improved?

A. It would not.

Q. Will you state whether, in your opinion, these two lumbers are selling upon their merits, and that they are well known to the trade by virtue of their merits, and the uses to which they are adapted?

A. Yes, sir.

Q. Do you find that your customers have any interest in the botanical names of trees?

A. None.

Q. Are they interested in the common names of the trees in the forests in connection with the lumber, or are they interested rather in the quality and the use to which the lumber may be put?

A. The trade is so well versed on what they are going to get, when they order either one of the wood species, that this isn't an issue with us.

Q. Are there any differences in the practices which are followed in the manufacture of these two woods?

A. Yes; I believe there is.

Q. What are those differences, briefly?

A. Well, in the manufacture of sugar pine we endeavor to confine the sapwood to thinner thicknesses, whereas on the white pine, due to the fact that it has more sap, it seasons with less degrade.

2774 Q. Have you completed your answer?

A. No. Whereas, white pine can be cut from thicker lumber, including the sap, with less degrade on account of the sap.

Q. Just why should that be?

A. Well, from my experience the pieces in sugar pine cut 10, 12, and 16 quarter that has both heart and sap wood invariably degrade considerably.

Q. Is there any difference in the process of seasoning?

A. Yes; there is.

Q. Just what is that?

A. On kiln drying you mean, or air drying?

Q. Either.

Mr. BURR. I wonder if I could beg counsel's indulgence to permit me to have read back the last three or four questions and answers?

Mr. MATTHEW. Certainly.

(Whereupon the preceding four questions and answers were read by the reporter.)

By Mr. MATTHEW:

Q. You may proceed.

A. In kiln drying sugar pine it is dried on a quite different schedule than the white pine, due to its heavy moisture content and

the resistance of transfusing the moisture from within the board; whereas the white pine carries a much less moisture content and is dried on a different schedule.

2775 It would take some time to explain the reason why.

Q. I know. Does it make any particular difference in the result, as far as the manufactured product is concerned?

A. I think not.

Q. Does it have any particular effect upon the susceptibility of either lumber to warp, twist, in the stack?

A. If it is properly manufactured; no.

Q. Have you noticed any material difference between the two lumbers when they are properly manufactured, seasoned, and stacked in this respect?

A. Well, what we term "commercially seasoned" sometimes is not so when it reaches destination.

Q. I am asking for your best judgment as to properly manufactured and seasoned lumber.

A. There should be no difference.

Q. The remanufacturing of box lumber for the purpose of making fruit or other containers, is there any difference in value of these two woods?

A. Yes; there is.

Q. And just what is that difference and what accounts for it?

A. One cuts up with less waste than the other.

Q. Which one is that?

A. The white pine.

Q. Why is it?

A. Because the sugar pine contains larger knots and carries a greater percentage of what we term "dry rot."

2776 Q. Did you participate in the formation of the grading rules of the California White and Sugar Pine Manufacturers Association?

A. I did.

Q. Will you please outline the effects, or characteristics, of the different grades of these two species of lumber?

Mr. BURR. One moment!

Mr. MATTHEW. Not in great detail.

Mr. BURR. One moment, if the examiner please. At various times in the trial of this case I think it has been ruled in the east, and I think the present examiner's rulings have been more or less in harmony with that more categorical ruling in the early stage of the case against the reception of these grading rules. I don't think the Commission wants to go into those technicalities, and I don't think they are pertinent here. Major Sheppard so ruled, and I think that question is entirely incompetent in this case.

Mr. MATTHEW. I think counsel misunderstands my purpose. I am not intending to go into grading rules as such. I merely want to state something that was regarded as a defect in the species of lumber.

I will leave off the reference to grades—just say what are the defects?

Mr. BURR. Defects are technically defined. We don't want them here. There are many defects of all descriptions. It doesn't seem we want to trespass on that phase of the lumber business. I object to it as incompetent.

2777 Mr. MATTHEW. Let me reframe my question.

Q. Are typical defects in the two species of lumber different?

A. Yes, sir.

Q. What are those differences?

A. In the three and four common grades the old northern pine—you want a comparison of all?

Q. I am asking for sugar pine and California white pine?

A. I will come to that then. In the three or four common grades we have a greater amount of dry rot in those grades in the sugar pine than we do in the white pine. In the factory grades we have larger knots with more waste in the sugar pine than we do in the white pine. In the select and finish grades we have more pitch pockets in the sugar pine than we do in the white pine.

Q. Are you familiar with the grading of northern white pine?

A. Yes, sir.

Q. Can you contrast the defects which are characteristic of northern white pine with the defects of California white pine?

A. The defects in the northern pine as compared with the California white pine in the grades, in the shop and better grades, the knot defects are smaller in the northern pine, and in the common grades there is by far more dry rot in the three and four common grades in the northern pine.

Q. When you were in charge of saw-milling operations here in California, did you follow approximately the same methods in handling sugar pine and California white pine through the

2778 mill, or was there a difference in the methods?

A. In the manufacturing?

Q. Yes; or have you covered that?

A. I have covered that.

Q. Have you found any appreciable difference in the percentages of sound or unsound logs in these two varieties of trees, or have you covered that?

A. I think I have covered that.

Q. You testified about the relative susceptibility of the windfallen logs of the two species to decay. Were you able, in any instances where you did observe such logs, to determine how long they had been dead or how long they had been lying on the ground?

A. No; my guess would be about the same as anybody else's.

Q. Were you able to determine the relative commercial value of logs of the two species which were wind fallen?

A. Yes, sir.

Q. What was that determination?

A. Logs that we could detect that had been down for some time, due to the fact that the sapwood was decomposed, making it unmerchantable, but after sawing the sap off we found sound and commercial lumber in both the sugar and white pine.

Q. You saw no difference between the two?

A. No difference.

Q. Have you ever had occasion to see sugar pine used for mud sills?

2779 A. Never have.

Q. Have you ever seen any California white pine used for mud sills?

A. I don't know whether you term it mud sills, but I think you will find, in fact I know several of the, what we call small circular mills, use nothing but California white pine for their mud sills.

Q. You don't know the result of their experience?

A. Yes; I do.

Q. What are the results?

A. They have been very lasting; I know one has been in for twenty-seven years.

Q. Have you ever had any complaints as to either of these woods with respect to their durability, or respecting the proper seasoning of the lumber, or otherwise?

A. Yes; I have.

Q. What was the nature of the complaints?

A. Insufficiently seasoned lumber.

Q. Have these complaints been made with respect to either or both species?

A. Largely sugar pine.

Q. Can you account for the fact that the complaints are largely directed to the sugar pine?

A. About the only reason I can give is that the manufacturer doesn't want to leave it stay piled long enough and it takes too long to dry, than it does for the white pine.

2780 Q. That is due to the heavier moisture content of sugar pine?

A. Yes, sir.

Q. Have you had any experience with either wood when used for pattern purposes?

Mr. BURR. I object to that as hearsay.

Mr. MATTHEW. I asked if he had any experience.

Examiner DE BRULER. The objection is overruled. He asked if he had any experience.

The WITNESS. In the use of pattern lumber?

By Mr. MATTHEW:

Q. Yes.

A. Yes, I have.

Q. What has been your experience?

A. You mean in its use now?
Q. Yes.
A. The only experience I can state is in the nature of complaints on pattern lumber that I have had to readjust that have been shipped from the California mills.
Q. Do you furnish lumber for pattern purposes to the trade?
A. You mean the people I am with now?
Q. Yes.
A. Yes; we do.
Q. And the sugar pine is sometimes furnished for pattern purposes?
A. Yes, sir.
Q. Is California white pine sometimes furnished?
A. We haven't done it, our company. Our present company
2781 hasn't done it.
Q. And sugar pine, for the most part, has the call of the trade for pattern purposes?
A. In the Los Angeles district; yes.
Q. Is that true in other districts with which you are familiar?
A. I think not.
Q. I am calling for your own experience. You don't know as to it elsewhere?
A. No.
Q. In selecting pattern lumber from either sugar or white pine logs, you differentiate in either case between heart and sap wood?
A. Yes, sir.
Q. In which case?
A. In the sugar pine.
Q. What do you do in case of sugar pine?
A. We try to have our pattern lumber in sugar pine free from sapwood.
Q. What do you do in the case of California white pine?
A. The practice is that it carries a greater amount of sapwood and is accordingly included in pattern lumber.
Q. I think you said you had relatively little call for California white pine for pattern purposes in your district?
A. Yes.
Q. I will ask you finally to state, Mr. Johnson, whether
2782 you have any business interests in any lumber-producing concern?
A. No, sir.
Q. And you have no interest in this controversy except as you have appeared here as a witness?
A. None whatever.
Q. I may ask you also whether in your opinion a change in the name here under consideration, namely, California white pine, and its replacement by any other name, would or would not occasion any confusion or difficulty in the lumber trade?

Mr. BURR. If the examiner please, by any other name—some names might and some names might not. That is very indefinite and speculative.

Examiner DE BRULER. Objection overruled. The witness may answer.

A. I am satisfied not.

By Mr. MATTHEW:

Q. That it would not cause confusion if the name were changed?

A. Yes.

Mr. BURR. Would not cause confusion if a change were made?

The WITNESS. I didn't get the question right.

Mr. BURR. Read the question.

(Whereupon the question referred to was read by the reporter.)

The WITNESS. To that I would answer "yes" decidedly.

2783 By Mr. MATTHEW:

Q. Why would such confusion result?

A. Because, from my experience in the East on the Atlantic coast and out here, the trade is familiar with the trade name of California white pine and designate from which district they want stock, and the trade themselves tell you from which district they want this California white pine to come from, based on their past experience.

(Here followed remarks off the record.)

Examiner DE BRULER. We will take an adjournment until 10:00 o'clock a.m. February 1, 1930.

(Whereupon, at 5:10 o'clock p.m., an adjournment was taken until Saturday, February 1, 1930, at 10:00 o'clock a.m.)

2784 Docket No. 1620 to 1669, inc.

SAN FRANCISCO, CALIFORNIA, *February 1, 1930.*

Met pursuant to adjournment, 10:15 o'clock a.m.

Before: Ellis De Bruler, examiner.

Appearances:

Eugene W. Burr for the Commission.

McCutchen, Olney, Mannon & Greene (by Mr. Allen P. Matthew and Carl I. Wheat) for the respondents.

Examiner DE BRULER. Are you ready to proceed, gentlemen?

Mr. BURR. I think so.

Examiner DE BRULER. Proceed as rapidly as possible.

(Here followed remarks off the record.)

Mr. BURR. We have an exhibit here more or less pending.

(Here followed remarks off the record.)

Mr. BURR. I now request, if the examiner please, inasmuch as opposing counsel are proposing to use other parts of Statistical Bulletin No. 21, of the Department of Agriculture, dated October 1927, in addition to those which are already incorporated in the

record as Commission's exhibit no. 34, with certain designa-
2785 tions of letter number from "A" to "H" inclusive, I now request that the pamphlet which I supposed was marked as a whole, no. 34 for identification, be so marked, and that the designation no. 34 on the outside cover be changed to no. 34 for identification in order that the pamphlet may be remarked for purposes of respondents' no. 34, respondents' exhibit for identification and those portions which the respondents desire to offer be marked each page as "Respondents' Exhibit No. 34" for identification and those portions which the respondents desire to offer be marked each page as "Respondents' Exhibit No. 34" for the record A, B, C, E, and so.

Examiner De Bruler. It may be received and so marked.

(Whereupon the document referred to was received and marked "Respondents' Exhibit No. 34" for identification, and further designated at "Respondents' Exhibit No. 34A, 34B, 34C, 34D, 34E, 34F, 34G, and 34H" for the record.)

Mr. Matthew. It is my understanding that the exhibit should be received as such and not merely marked for identification, and that the Commission has offered certain parts of that exhibit and the respondents have offered certain other parts, and such have been received and are of record.

Examiner De Bruler. That is understood.

Mr. Wheat. In further explanation I might say that this document is both Commission's exhibit no. 34 for identification, and respondents' exhibit no. 34 for identification.

Commission's exhibit no. 34 for the record includes the
2786 following tables:

Comm. Ex. 34A: Table 9, page 9.
" " 34B: Table 10, pages 10 and 11 (present growth figures only).
" " 34C: Table 12, page 12.
" " 34D: Table 57, page 66.
" " 34E: Table 57, page 67.
" " 34F: Tables 82 (page 124) to 135, inclusive.
" " 34G: Table 128, pages 221–223, inclusive.
" " 34H: Table 133, pages 239–241, inclusive.

Respondents' exhibit no. 34 for the record includes the following tables:

Resp. Ex. 34A: Table 18, page 18.
" " 34B: Table 21, page 20.
" " 34C: Table 55, pages 62–65, inclusive.
" " 34D: Table 60, pages 74–83, inclusive.
" " 34E: Table 61, pages 84–93, inclusive.
" " 34F: Table 74, page 116.
" " 34G: Table 74, page 117.
" " 34H: Table 126, pages 215–217, inclusive.

Examiner De Bruler. Let's proceed with the hearing.

W. P. JOHNSON resumed the stand and further testified as follows:

Direct examination (continued) by Mr. MATTHEW:

Q. Mr. Johnson, I am not sure whether or not you stated that at one time you were an inspector of the California White and Sugar Pine Manufacturers Association?

A. Yes, sir.

Q. Were you its chief inspector during any period?

A. Yes, sir.

2786a Q. Throughout what period, please?

A. Our association was organized in 1916. For six months we loaned the chief inspector of the Western Pine Manufacturers Association, at which period of time he left, and I succeeded him for five and one half years following.

Q. What is the nature of your duties as chief inspector?

A. Harmonize the grades as produced from the log at the various mills in southern Oregon and California.

Q. Did you investigate complaints about grading, about the quality and nature of lumber?

A. Yes.

Q. Your duties carry you to the Middle West and to the Atlantic coast territories?

A. Yes, sir.

Q. Did you come in direct contact with the purchasers and users of California white pine and California sugar pine?

A. I can't say the ultimate users, but the dealers who received this lumber and parcelled it out to the trade.

Q. And with the sash and door manufacturers?

A. Yes, sir.

Q. Did you ever have any complaint presented to you as to whether or not the California white pine was unsatisfactory or not, such as it was represented to be?

A. Yes.

Q. And what was the nature of those complaints?

2787 A. On several occasions, for instance, the door factory had been accustomed to our California white pine from one district that was of a soft texture, and he had ordered similar stock on repeated orders and received stock from a community where the texture was not so soft.

Q. These complaints were directed against the character of the lumber received from certain districts?

A. Yes.

Q. And, in general, was their complaint about California white pine?

A. No.

Q. Was there any complaint about the name?

A. None.

Q. Was there any evidence that the trade was confused as to the term California white pine?

A. Not during my time back there.

Q. During this period you were rather in frequent contact with the sash and door manufacturers in the Middle West?

A. I was.

Q. What was the principal lumber which they were using in the manufacture of sash and doors?

A. Western and California white pine.

Q. Did any case ever come to your attention, during your period of service as inspector for the association, where California white pine had been furnished upon orders calling for sugar pine?

2788 A. No, sir.

Q. Did you ever have a complaint from the customer to the effect that he had ordered sugar pine and California white pine had been furnished?

A. Yes; I did.

Q. How many instances?

A. I know of only one specifically.

Q. Did you investigate it?

A. Yes; I did.

Q. And with what result?

A. The car was straight sugar pine.

Q. Have you had any experience with Idaho white pine lumber, Mr. Johnson?

A. Yes, sir.

Q. Is any of that experience recent?

A. Yes, sir.

Q. What is it, please?

A. I was field man for a company and constantly among the mills from Vancouver, B.C., as far south as it is manufactured in California, looking for lumber that will best suit and meet the requirements of our trade. I had occasion to run across a large unit of Idaho white pine logs in the Gray's Harbor country, Washington, logs which had grown on the south slope of the Olympia Mountains.

2789 They looked very favorable to me and I induced our company to buy them. Under my supervision I had them manufactured, graded, shipped to Los Angeles for seasoning and distribution among our trade.

Q. Has the lumber proved satisfactory to your trade?

A. Not altogether.

Q. Have you found that it differs in quality in any marked degree from lumber from the same species of tree grown in the interior?

A. Decidedly so.

Q. What are the differences?

A. It is much harder in texture.

Q. This lumber, as I understand it, was yielded by the tree which has been referred to here as the Pinus monticola?

A. Pinus monticola; yes.

Q. You know the tree?

A. Yes, sir.

Mr. MATTHEW. You may cross-examine.

Cross-examination by Mr. BURR:

Q. That particular variety of Idaho white pine is generally known as coast white pine, isn't it?

A. No; they call it Idaho white pine up there and ship it; it has been manufactured for some time and shipped down east as Idaho white pine.

Q. That is not in the inland empire at all, that is down on the coast?

2790 A. Yes.

Q. Grays Harbor is in southwest Washington, isn't it?

A. Yes.

Q. Do you happen to know whether that is an extremely rainy district?

A. It is.

Q. What companies did you testify that you had been connected with in the lumber trade, or didn't you give a list?

A. I don't recall whether I specified the names or not.

Q. You have been with the Sugar Pine Lumber Company, of Pinedale, have you not?

A. Yes, sir.

Q. How many years were you with them?

A. I was with them from 1923 to 1928.

Q. Who was your chief over there?

A. You mean the manager?

Q. Who did you report to?

A. While Mr. Hemphill was manager I reported to him.

Q. And after that to whom?

A. He was succeeded by B. A. Canon.

Q. You were with Staats & Payne?

A. Yes, sir.

Q. Of New York, were you not?

A. Yes, sir.

Q. What was your capacity with them?

2791 A. Buying on the coast here for them.

Q. Did you report direct to Mr. Frederick Staats during that period?

A. Yes; he was in New York and I was out here.

Q. You are now with the W. E. Cooper Lumber Company?

A. Yes, sir.

Q. How long have you been with them?

A. A little over one year.

Q. What other concerns have you been with during your lumber career?

A. The Standard Lumber Company, now known as the Pickering Lumber Company, the McCloud River Lumber Company.

Q. I think you testified to that. Any others?

A. I operated two small mills, one in Truckee and one in Loyalton.

Q. Loyalton is in California and Truckee is in Nevada?

A. Truckee is in California.

Q. You were in business for yourself on those occasions?

A. No, sir. I had entire charge of the lumber products there.

Q. For whom?

A. I was not in business for myself.

Q. Was that for Pickering?

A. No, sir.

Q. Who was that for?

A. One of them was the Rees Lumber Company, the other was for the Smith Lumber Company.

2792 Q. And what other concerns?

A. I was with the W. E. Kelley Lumber Company, of Chicago, when I first came west. I think that is all that I recall now.

Q. About a half dozen different concerns?

A. Yes.

Q. Besides the California White and Sugar Pine Manufacturers Association?

A. Yes, sir.

Q. Do I understand you to imply by your testimony that in your judgment the sugar pine wood is inferior to the California white pine?

A. I don't believe you did. If I did I didn't mean to convey that.

Q. The California sugar pine commands a better price on the market than California white pine, does it not?

A. In some grades.

Q. In which grades does it command a better price?

A. I should say 1 shop and better.

Q. How about 1 common?

A. We don't have such a grade, can't get it, doesn't produce it.

Q. You mean the sugar pine doesn't?

A. Yes.

Q. What common grades does sugar pine produce?

A. We call that 2 and better; I say we are getting no 1 common. It is so insignificant that it is put in with the 2 common.

2793 Q. Merged in with the 2?

A. Yes; and 3 common and 4 common.

Q. Does no. 2 common of sugar pine command a better price than nos. 1 and 2 of the California white pine, or either of these two grades?

A. In some instances.

Q. Isn't that true as an average?

A. No.

Q. Well, in your judgment, why does California white pine fail to command as strong a price on the grades better than the common grades than sugar pine?

A. I don't believe I can answer that.

Q. Let me see if I can help you. Do you think a reputation for sugar pine for greater durability than California white pine helps its price to be higher than that of the California white pine?

A. I don't believe I get your question now.

Q. Does a reputation in the trade for greater durability of sugar pine help that product to maintain a higher price on the market than California white pine?

A. I don't think so.

Q. You don't?

A. My personal belief is it does not.

Q. Does it have a better reputation for durability, in your judgment?

2794 A. No; not when you speak of durability.

Q. Durability when exposed to the weather, I am referring to.

A. No.

Q. It does not have a better reputation?

A. No.

Q. I want to ask you again, from your long experience in this business, why, in your judgment, sugar pine commands a higher price on the market?

A. If I can only give it in a brief way, it is for particular uses; it is more desirable.

Q. What uses are those?

A. You ask for durability, as far as durability is concerned, no. But in some cases, such as working it in different uses, on account of its softness, it possibly works up better than the California white pine does.

Q. What purposes and uses are those that it works up better for than the California white pine?

A. It is generally recognized in pattern work.

Q. What kind of wood is required for pattern purposes?

A. Today both California white pine and sugar pine.

Q. No, no; what kind of quality, not what wood?

A. What kind of quality?

Q. Yes.

A. Soft texture.

Q. Soft texture?

2795 A. Well seasoned.

Q. Yes?

A. Properly graded and manufactured.

Q. Does uniformity of texture have anything to do with its utility for pattern purposes?

A. Yes, sir.

Q. In those respects, in your judgment, the sugar pine is superior to California white pine?

A. In my judgment?

Q. Yes.

A. If the same degree of care is exercised in selecting both I question whether there is.

Q. How do you reconcile that with your statement that the use of the wood for pattern purposes is one of the elements that enables California sugar pine to obtain a greater price on the market than California white pine?

A. Merely it has been a practice, so far as I know, and they have enjoyed that privilege.

Q. It has enjoyed a higher reputation for those qualities than California white pine?

A. Yes.

Q. Isn't it because there is greater diversity in the California white pine product than there is in a sugar pine product?

A. No, I could cut you just as inferior patterns out of sugar pine, or monticola, or strobus wood as out of California white
2796 pine.

Q. But there isn't as great a run on that type of wood as there in the California white?

A. It is easier to get out of this true white pine.

Q. In other words, there is a greater range of quality and characteristic of the California white pine than there is of the sugar pine, isn't that true?

A. Let me get you straight on that.

Q. There is a greater range of characteristics and qualities in the Pinus ponderosa, or California white pine, than there is of the sugar pine?

A. No.

Q. Isn't it true that the California white pine product has a larger proportion of the harder material than the sugar pine?

A. Speaking generally, no.

Q. Isn't it on an average softer than the California white pine?

A. Yes.

Q. The average then of California white pine is harder; isn't that right?

A. I would rather say you are right.

Q. There are some sections of the California white pine range where there is very little that is suitable for pattern purposes; isn't that true?

A. Yes, sir; likewise the sugar pine.

Q. What range of the sugar pine would you say that is true of?

2797 A. Southern Oregon, northern California and possibly south of the extreme eastern part of the State.

Q. Are you familiar with Arizona and New Mexico ponderosa?

A. Briefly.

Q. Now, what other tendencies are there in the market that tend to give sugar pine a higher price than California white pine besides its use for pattern purposes?

A. Piano key stock.

Q. What kind of material is necessary for piano key stock?

A. Really, I don't know other than it has been the custom to purchase or receive sugar pine for piano key stock.

Q. You were with the sugar pine company at Pinedale, were you not?

A. Yes, sir.

Q. What was your function for that company?

A. Plant superintendent.

Q. Do they let you know what the purposes are for what they desire lumber for at any time when you were superintendent at the plant?

A. I had no occasion to look over every inquiry and order before it was accepted.

Q. Just what kind of stock do you manufacture for piano keys?

A. We try to select it from the heartwood, soft texture, free from pitch as we can.

Q. Why do you take it from the heart instead of from the sap?

A. From their specifications, they do not want sapwood in it.

2798 Q. Well, now, is the sap of ponderosa suitable for that kind of work?

A. I should say not.

Q. It is a little harder than the sap of the California sugar pine, is it not?

A. You said sap?

Q. Yes.

A. Sap in either case would be undesirable.

Q. Is the heartwood of ponderosa suitable for that kind of thing?

A. I would say not.

Q. It is a little harder than the heartwood of California pine, is it not?

A. Yes.

Q. Darker in color, as a rule, isn't it?

A. No; I wouldn't say so, but the sugar pine logs from which we get piano key stock is just as dark as California white pine.

Q. What other reasons are there for the enhanced price of sugar pine on the market contrasted with the California white pine?

A. Drainboards.

Q. Where is the drainboard used, in a house?

A. Sink, supposedly.

Q. Well, that is a place where the wet and dry condition alternates, isn't it, at the drain board?

A. Yes.

Q. That requires a wood that is decay resistent, does it not?

2799 A. Yes; but we probably supply more white pine drainboards now than we do sugar pine.

Q. But you think its reputation for utility for drainboards is one of the things that helped California sugar pine to a higher price?

A. It is generally believed so until they got to trying California white pine and that is enjoyed now.

Q. Wasn't that due to the reputation that California sugar pine had for durability?

A. It was believed so.

Q. In other words, it had that reputation, did it not?

A. It did have, but it doesn't now.

Q. Hasn't it still, as a matter of fact, a reputation for greater durability?

A. For drainboards?

Q. For drainboards.

A. Not when properly selected.

Q. What do you mean by when properly selected—how do you properly select it?

A. By cutting old heartwood.

Q. Hasn't California sugar pine a better reputation for heartwood than California white pine? I want the facts on that, isn't that true?

A. I think it does.

Q. Doesn't it deserve that reputation now?

2800 A. I have lots of respect for sugar pine.

Q. It deserves that reputation for durability, doesn't it?

A. Not on durability; no.

Q. But it has it, you say?

A. Not in my judgment.

Q. Well, I am not talking about your opinion; it has it in the trade, does it not?

A. Generally speaking; yes.

Q. You say that the trade is not confused by the term California white pine, did I understand you to say that?

A. Yes, sir.

Q. Do you regard California white pine as a true white pine?

A. As the trade understands it.

Q. Pardon?

A. As the trade understands it.

Q. Do they understand what true white pines are?

A. No.

Q. When California white pine is called white pine, doesn't that lead the trade to understand that it is a true white pine, helps to, doesn't it?

A. No.

Q. You think the word " white " has nothing whatever to do with the association in the mind of the trade of California white pine with the true white pines?

A. Positively not.

2801 Q. Positively not——

A. (interrupting.) Until about five years ago when the trade was befogged with a lot of these advertising campaigns to further the use of some other woods, and they got the architects to go down to the retail dealer and tell him he wasn't being supplied with true white pine. He didn't know; all he was supplying was what his trade wanted, and they bought it in accordance with what their experience had taught them as to what they had received before.

Q. Suppose a man had received before the genuine white pine, and he found some difficulty, we will say, in getting from his dealer a true white pine, and he said to his dealer, " Can't you supply me with what I have been getting? " and the dealer said, " No; I have got California white pine, however," don't you think that the use of the word " white " in that connection would help put the sale over?

A. None.

Q. You don't?

A. No.

Q. Did you say you had made trips back through the East?

A. Yes; while I was with the association, about three to six months out of each year, I was back there.

Q. How far east did you get?

A. As far as I could go.

Q. You went to New England?

2802 A. Yes, sir.

Q. How did you find that sugar pine was selling out there, was it on the market, did you find it competing?

A. Yes, sir.

Q. Did you find California white pine competing?

A. Yes, sir.

Q. Was that during the period that pondosa was sold under that trade name?

A. No, sir.

Q. What were they calling the inland empire ponderosa stock?

A. Western white pine?

Q. How did you learn anything about the reputation of the old northern white pine in that New England territory?

A. I had some occasion to see them cutting second-growth cuts.

Q. I am talking about the reputation of the wood as a building material, did you have any occasion to find out what the reputation of the northern white pine was in New England?

A. No; I can't say that I did.

Q. How many weeks did you spend in New England?

A. I couldn't state that; I was down there on several occasions.

Q. Several days at a time?

A. Oh, yes.

Q. And you mean to say you learned nothing about the reputation of northern white pine in New England and, as a lumberman in that district, don't you know as a matter of fact, sir, that northern
2803 white pine has a remarkable reputation in New England for durability and for all purposes for building, except heavy structural work?

A. Well, I can recite a lot of cases where they were buying California white pine.

Q. Answer the question first and we will talk about something else later.

A. No; I don't.

Q. You spent time in New England and you didn't find that out, is that true?

A. The trade was familiar with what they were getting, when we told them they were getting California white pine or sugar pine, and they knew what to expect.

Q. They knew the trade name, but did they know such as genuine white pine?

A. I don't believe it mattered to them.

Q. But the trade there is constantly asked by the customers for white pine, isn't that true, without the word "California" attached?

A. I didn't find that to be the case.

Q. You didn't?

A. No.

Q. Did you find that the trade there has an admiration for northern white pine for building purposes?

A. Yes, sir.

2804 Q. Northern white pine?

A. Yes; in some cases.

Q. I thought you said a little while ago you didn't learn anything about northern white pine and its reputation.

A. That is a white-pine producing country.

Q. Well, what do you mean by saying you learned nothing about northern white pine?

A. That isn't learning anything.

Q. You said you knew nothing about the reputation of northern white pine in that country, a few moments ago.

A. Yes, sir; I contend that and still contend it.

(Here followed remarks off the record.)

Examiner DE BRULER. Let's proceed with the cross-examination in the usual way.

Mr. MATTHEW. I want the examiner to understand that I object to this and counsel should be required to observe ordinary courtesy.

Mr. BURR. I have a right to admonish the witness.

Examiner DE BRULER. Ask the witness the question.

Mr. MATTHEW. I submit those answers are perfectly correct.

Mr. BURR. I stand on the record.

Mr. MATTHEW. So will I, unless the witness wants to make further comment.

Mr. BURR. I object to the suggestion; you can attend
2805 to that on redirect examination.

Mr. MATTHEW. It is agreeable to me.

Examiner DE BRULER. Please proceed with the hearing. We are taking up too much time.

By Mr. BURR:

Q. At the present time are you carrying most of the California white pine or the sugar pine?

A. In our yard, in storage, about half of each.

Q. Do you understand, Mr. Johnson, that there are certain pines that are known generally as genuine white pines?

A. I, personally?

Q. Yes.

A. Yes.

Q. Do you know whether so-called California white pine belongs to the genuine white pines?

A. Botanically, it does not.

Q. Do you think that the use of the word "yellow" instead of "white" in the name of California white pine would make a difference in the saleability of the California white pine if it were called yellow pine?

A. I think it would mislead the trade.

Q. Would it associate that product with the yellow pines of the south?

A. It would be impossible to associate them with it.

Q. I mean would it have the tendency to confuse the trade
2806 into thinking California yellow pine, so-called, was akin to the yellow pines of the south?

A. Yes.

Q. By that same token, don't you think that the calling of the California white pine, with the word "white" in it, has a tendency to associate the product with the genuine white pines of the north?

A. Positively none.

Mr. MATTHEW. I object to the form of that question.

Examiner DE BRULER. The objection is overruled.

By Mr. BURR:

Q. You think the word yellow pine would have a tendency to associate it with the yellow pines of the south, whereas the term "white" doesn't have any corresponding tendency to associate it with the white pines of the north, is that true?

A. They just know what they——

Q. (Interrupting.) Answer the question please, and explain afterwards.

A. It would, yes; because the trade now knows what California white pine is, and to call it some other name as pondosa would confuse them.

Mr. MATTHEW. I want the examiner to understand that the point of my objection, which I tried to make in timely fashion, but the

speed of this cross-examination is such that apparently the
2807 opportunity was not afforded, is that I have no objection to any cross-examination directed to actual confusion or misunderstanding, but a question which is framed in this fashion as to whether or not a term has a tendency to do certain results, is the very question before the Commission. It is the ultimate question. And in every instance where I have made that objection heretofore I have been sustained and the examiner has ruled that the examination must call for facts, evidently facts, rather than being directed to ultimate conclusions.

Examiner DE BRULER. He can give his judgment along that line.

Mr. BURR. He has already given it.

Mr. MATTHEW. I want the record to show that I object questions put in that form. I do not want to hamper counsel in his examination, however.

Mr. BURR. I think you are fair.

Mr. MATTHEW. If the question is framed differently I shall offer no objection.

Mr. BURR. The motion to strike was denied, was it not?

Examiner DE BRULER. Yes.

By Mr. BURR:

Q. The uses of sugar pine are rather more exacting than those of California white pine, aren't they, as regards the seasoning?

A. The uses, you say?

Q. Yes.

A. Yes, sir.

2808 Q. Tell me, does sugar pine season more satisfactorily?

A. More unsatisfactorily.

Q. It is a kiln dry proposition, that is, a kiln dry proposition is more difficult in sugar pine?

A. Very much more.

Q. And yet I thought you testified something with regard to patterns needing lumber that was properly seasoned?

A. Yes, sir.

Q. When sugar pine eventually is seasoned the resulting wood is more satisfactory for pattern purposes, the result is a better condition of seasoned lumber, is it?

Mr. MATTHEW. Than what?

By Mr. BURR:

Q. Than California white?

A. Well, when it is properly seasoned I believe it is.

Q. Why do you exclude the sapwood from the sugar pine pattern lumber, is it because the shrinkage is less in the heartwood than in the sapwood?

A. No, sir.

Q. Why is it?

A. Because it is difficult to season it without considerable degrade.

Q. You are talking now about the sap?

A. Yes, sir.

Q. The difficulty with the sap is to season it without the
2809 degrade?

A. Yes.

Q. And when you use Pinus ponderosa for pattern purposes, as I believe you said you did sometimes, is that true?

A. Yes.

Q. You eliminate the sapwood in the Pinus ponderosa from the pattern stock, do you?

A. No, sir.

Q. What do you use mostly, sap in the pattern stock of Pinus ponderosa?

A. I don't believe mostly; no.

Q. You use them both, do you?

A. Both.

Q. Do you use a combination piece?

A. Yes, sir.

Q. Without the sapwood the heartwood of Pinus ponderosa would not be large enough for larger patterns, would it?

A. No.

Q. Which is more durable, the heart or the sapwood?

Examiner DE BRULER. That has been gone into time and time again.

Mr. BURR. This is cross-examination and I am leading up to something.

By Mr. BURR:

Q. Which is more durable, the heartwood or sapwood?

2810 A. Which one?

Q. Yes.

A. Either wood? I don't think there is any difference. Maybe I misunderstood you.

Q. Which is more durable, the heartwood or sapwood of Pinus ponderosa?

A. The heartwood.

Q. The same is true of sugar pine, isn't it?

A. Yes.

Q. Which has the greater percentage of heartwood, California sugar pine or California white pine?

A. California white pine you said—sugar pine has the greater.

Q. Then how do you account for your testimony that the dead and down timber of California white pine is in a better condition than sugar pine?

Mr. MATTHEW. I don't think he said that.

Mr. BURR. I thought he did.

The WITNESS. I did not. I said there was more rot in the sugar pine heart than I found in the wind fallen logs of the yellow pine or white pine.

By Mr. BURR:

Q. Wasn't that, as a matter of fact, because the sugar pine in those particular logs was an older type and had begun to rot before it fell?

2811 A. That I don't know; it is just a condition I found there.

Q. That wouldn't be consistent with the high reputation of sugar pine for durability that that heartwood should rot first, would it?

A. Well, the only point I was trying to bring out was that heartwood in either one is immune from rot if exposed to the same weather elements.

Mr. BURR. That is all.

Redirect examination by Mr. MATTHEW:

Q. Mr. Johnson, was there any confusion in the pine-lumber trade as to these various lumbers before the word pondosa thrust itself into the situation?

A. I never had occasion to have it questioned.

Q. Have you found that your trade is interested at all in the botanical nomenclature or classification of trees?

A. None.

Q. Is it interested in the common names of the trees in particular localities in any respect, or is it interested rather in the quality and the use of the lumber which is offered to it?

A. That is what they are mostly interested in—the quality.

Q. You were asked some questions about the reputation of white pine in New England, and your first answers, as I recall it, had something to do with the local cutting of pine timber in New

2812 England at the present time, apparently not responsive to the question counsel had in mind. Now, I will ask you again whether you have been familiar for a long time with the reputation of northern white pine for durability? I am speaking now about the old time and established reputation over a great period of years?

A. Northern pine?

Q. Yes; Northern white pine.

A. The question is as to its durability?

Q. Its reputation, the reputation of the Northern white pine for durability.

A. It is generally good.

Q. You are familiar with it, that is the first question, whether you are familiar with its reputation?

A. Yes.

Q. And what is its reputation in New England?

A. Well, I couldn't speak for them down there. My experience was in Wisconsin.

Q. Then were you thinking of pine lumber, as to the state of its production, did you have that in mind?

A. I don't get that.

Q. Let's revise it. You said your experience was in Wisconsin?
A. Yes, sir; my manufacturing experience.
Q. Manufacturing the Northern white-pine lumber in Wisconsin?
A. Yes.

Q. My question has to do with the repute of Northern white-
2813 pine lumber for durability, irrespective of the State in which it may be used. You are familiar with that repute, as I understand it?
A. Yes.
Q. And what was that repute?
A. It was just generally good.
Q. And was that its repute in New England?
A. Yes.
Q. And did you intend to say anything on your cross-examination to the contrary?
A. No.
Q. Did you intend to make any comment as to the repute of the lumber which is now cut locally in New England?
A. I did not.
Q. You didn't have that in mind?
A. No.
Mr. MATTHEW. That is all.
Examiner DE BRULER. That is all.
(Witness excused.)
Mr. MATTHEW. I will call Mr. Pratt.

M. B. PRATT was thereupon called as a witness and, after having been first duly sworn, testified as follows:

2814 Direct examination by Mr. MATTHEW:

Q. Please state your name and place of residence.
A. M. B. Pratt, 3131 C Street, Sacramento.
Q. Are your services engaged by the State of California?
A. Yes, sir.
Q. In what capacity?
A. Chief of the State division of forestry.
Q. What is the division of forestry and with what larger unit is it identified?
A. The State division of forestry is one of the divisions of the State department of natural resources, which embraces forestry, parks, gas and oil, minerals, and fish and game.
Q. What are the particular functions of the division of forestry with which you are the chief?
A. The chief function of the State division of forestry is the protection of timber and watershed areas lying outside the boundaries of the national forests; most of these lands are in private ownership.
Q. And throughout what period have you been identified with the division of forestry?

A. I have been identified with the State forester's office since 1918. The State division of forestry is a recent title given to that work by the legisature.

2815 Q. How long have you been identified in the division, or predecessors?

A. Since 1918.

Q. How long have you been chief of the present division?

A. Since 1921.

Q. Please state briefly your academic preparation and your experience in forestry.

A. I completed a course at the University of Chicago in 1903, receiving a degree of bachelor of science, after which I went to the Yale University, where I completed my course in 1905 and received a degree of Master of Forestry. At that time I took the civil-service examination given by the Federal Government for forest assistant, and upon being notified of my success in taking the examination, was sent to California in July 1905 as a member of the United States Forest Service.

I did general work in California, particularly in connection with reconnaissance work, forest reconnaissance, rather timber reconnaissance for a year, and also on a market study on cooperation with the State of California.

In 1906 I was assigned to the Tahoe National Forest with headquarters at Nevada City, and was assigned to timber sale work which was my principal duty from 1906 to 1914. I was made deputy forester supervisor of the Tahoe National Forest in about 1912.

In 1914 I accepted a position at the University of California
2816 as assistant professor of forestry. While there I specialized on wood utilization and wood technology. I left the University of California in 1918—February 1918—and went with the State in the capacity of deputy State forester, in which capacity I remained until 1921, when I was appointed State forester, which is the title which has now been changed to chief of the State division of forestry.

Q. Does the State division of forestry cooperate with the lumber companies and likewise with the Federal Government in the work with which the division is charged?

A. Yes; we have a cooperative agreement with the Federal Government under what is known as the Clarke-McNary Act, whereby we receive a certain amount each year, based on the efforts made by the State and by the cooperating agencies, such as lumber companies, in the protection of our timber and watershed areas.

Q. Mr. Pratt, you are familiar with the forests of California and particularly with the pine forests?

A. My whole experience in forestry has been in California.

Q. You are familiar with lumbering operations there?

A. Yes, sir.

Q. And you know the wood which is yielded by these various pine trees?

A. Yes, sir.

Q. Do you know what is meant by California white pine?

2817 A. Yes, sir.

Q. And by sugar pine, of course?

A. Yes, sir.

Q. Will you briefly describe the lumber which is yielded by the Pinus ponderosa tree, and outline its general uses?

A. The lumber of Pinus ponderosa is a lumber which is used for interior trim, sash and doors, and the lower grades are used for fruit boxes. It is a wood which varies more or less in its quality, depending upon where it is cut and the locality in which it grows, but in general it is a soft whitish wood. It is botanically, of course, a yellow pine.

Q. That is, the tree is a yellow pine?

A. Yes.

Q. I will ask you to state whether, in the quality of the wood and the uses to which it is best adapted, it falls more appropriately within the yellow pine group or within the white pine group?

A. I consider its uses fall more appropriately within the white pine group.

Q. In your work, as a professor of forestry at the University of California, I understand you to say you went extensively into the problems of wood utilization and wood technology?

A. Yes, sir.

Q. And did you make comparative studies of the woods yielded by various species of pine trees during that time?

2818 A. Yes, sir.

Q. Including the sugar pine and the ponderosa pine?

A. Yes, sir.

Q. Likewise included in the southern yellow pine?

A. Yes, sir.

Q. Those were included in your studies?

A. Yes, sir.

Q. And pines of both the white and yellow pine groups respectively?

A. Yes, sir.

Q. Can you state, Professor, whether in your opinion the lumber yielded by the Pinus ponderosa tree is in general inferior to the lumber yielded by the sugar pine trees?

A. It is not inferior in my estimation.

Q. I assume that the lumber of one species may be deemed superior for certain uses than the lumber of certain other species?

A. Special uses; yes.

Q. Do you recognize any difference between the durability of the heartwood lumber of either species?

A. Yes; the heartwood is more durable, as a rule, than the sapwood.

Q. I mean, is the heartwood of either species more durable than the heartwood of the other species?

A. No; I dont know of any data which would be conclusive on that matter.

Q. Would you distinguish between the durability of the
2819 sapwood of the two species?

A. No.

Q. I assume you would not recommend the sapwood of either species for durability?

A. By durability I have reference particularly to the contact with the ground.

Q. Would you recommend either for use where it would be in contact with the ground?

A. No, sir.

Q. Is the lumber yielded by the Pinus ponderosa tree, which is commonly introduced to the trade under the name of California white pine, in general in competition with the lumber yielded by the yellow pine trees of the South?

A. No; they have different uses.

Q. And what are the notable uses of the yellow pines of the South?

A. For structural purposes, on account of the density of the wood, certain grades.

Q. Is California white-pine lumber particularly suitable for such purposes?

A. No; it is not classed as a structural timber.

Q. Is there a marked difference between the appearance of the lumber from Pinus ponderosa and the lumber from the southern yellow pines?

A. Yes; the southern yellow pine lumber has more resin
2820 in it and greater distinction between spring and summer wood than the ponderosa.

Q. Are the differences readily distinguishable, even by the layman?

A. As a rule, yes; typical specimens.

Q. How long have you been familiar with the term California white pine, Professor?

A. Since 1905, when I first came to California.

Q. Since that time to your knowledge has the lumber generally been marketed under the term California white pine?

A. Yes, sir.

Q. To your knowledge has sugar pine ever been marketed under the commercial name of California white pine?

A. No, sir.

Q. Or under any other name which included the word "white" in it?

A. It has always been called sugar pine as far as I know.

Q. To your knowledge is there any confusion in the lumber trade as to what is meant by California white pine and by sugar pine, respectively?

Mr. BURR. Wait a minute! I don't think he is qualified thus far on the trade. I doubt whether he knows first-hand what the reputation in the trade is.

Examiner DE BRULER. If he doesn't know he will say so. I will leave it to the witness.

Mr. BURR. I think he ought to be qualified.

Examiner DE BRULER. Objection overruled. Proceed with
2821 the examination.

Mr. MATTHEW. I will accept the examiner's ruling.

Mr. BURR. I want an exception to show the witness is not properly qualified as to his knowledge of the trade to answer a question of that sort.

Examiner DE BRULER. Exception allowed. Proceed with the examination.

A. What is the question?

(Whereupon the question referred to was read by the reporter.)

Mr. BURR. If you know.

A. I know of no confusion that exists.

By Mr. MATTHEW:

Q. At one time did you have charge of timber sales for the Forest Service?

A. Yes, sir.

Q. And you have an actual contact with lumber operations in the forest?

A. Yes, sir.

Q. You are familiar with the terms under which this lumber is introduced to the trade?

A. Yes, sir.

Q. And have been for many years?

A. Yes, sir.

Q. Professor——

A. (Interrupting.) Not professor.

Q. In the botanical classification of trees do botanists give any consideration to the quality, appearance, or utility of the lumber which is yielded by that tree?

A. I don't think so.

Q. You are familiar with the botanical nomenclature of the pines, of course?

A. Yes, sir.

Q. Is any consideration given to the quality or the appearance or the utility of lumber in making the botanical classification of pines, particularly ponderosa pine?

A. It is my opinion that botanists judge the floral characteristics, or the external characteristics of a tree in giving its common name more than they do the lumber of that tree.

Q. Do they give any consideration to the quality or use of the lumber, as far as you know?

A. No. I might say that the term yellow pine evidently originated in the mind of the early settlers, due to the distinctive color of the bark of the mature trees. My opinion in that matter is substantiated by that of——

Q. (Interrupting.) That would be hearsay. Is there any reason in your opinion, why the commercial name of the lumber yielded from a particular tree should coincide in any respect with the botanical name of the tree, or even by its common name or locality?

2823 A. No.

Q. Is there any relation between the commercial name and the botanical name?

A. No.

Q. Or with the common name of the tree itself?

A. No.

Q. You have stated, Professor, that as far as you know there has been no confusion in the lumber industry because of the use of the term California white pine. Can you think of any term which would more satisfactorily designate this lumber for introduction into the trade?

A. No; I could not.

Q. If the present term, California white pine, were replaced by some name which did not contain the word "white", would there be any resulting confusion in your opinion?

Mr. BURR. I think that is highly speculative.

Examiner DE BRULER. Read the question.

(Whereupon the question referred to was read by the reporter.)

Mr. BURR. The Commission cannot make a finding with regard to any other names.

Examiner DE BRULER. You may answer that. Your exception is noted.

A. In my opinion there would be a confusion.

2824 By Mr. MATTHEW:

Q. Will you tell why?

A. The trade are accustomed to certain names and any change in names sets up some doubt in their mind as to the quality of the material.

Mr. BURR. May I request that it be understood that my objection as to this witness' lack of qualification goes to all these things where he testified as to the trade and trade knowledge?

Examiner DE BRULER. It is so understood and the exception allowed.

By Mr. MATTHEW:

Q. Mr. Pratt, there has been some testimony in the record respecting blue stain, particularly as it may attack fallen trees in the forest. Is the appearance of that blue stain any evidence of decay?

A. No, sir.

Q. Why not?

A. It is a fungus; does not induce decay; it induces discoloration which results in degrade of the material, which is the most serious thing.

Q. May the lumber continue sound notwithstanding the presence of blue stain?

A. Yes, sir.

Q. Does the blue stain attack the sapwood of California
2825 white pine?

A. Yes.

Q. And of sugar pine as well?

A. Yes.

Q. Is there any distinction between the two in that respect?

A. I made a study one summer, when in the university, of blue stain on both sugar pine and ponderosa in the La Moine yards. La Moine is situated in the Sacramento Canyon of northern California. We found that blue stain was very prevalent in both air dried sugar pine and ponderosa, due to the defective circulation.

Q. Can you see any distinction in the behavior of the two woods under those conditions?

A. The sugar pine seems to be more susceptible to it than the ponderosa.

Q. Is the checking of a log on the ground in the forest any evidence of decay?

A. Due to moisture conditions I should say.

Q. I assume the checking may facilitate decay where it admits moisture in the crack?

A. It allows the entrance of fungus.

Q. In your opinion does the relative susceptibility of the two kinds of trees to decay, when lying on the ground in the forest, afford any indication of the relative durability of the lumber yielded by those trees when put to actual use?

A. No, sir; I don't believe there is much connection.

2826 Mr. MATTHEW. You may cross-examine.

Cross-examination by Mr. BURR:

Q. Mr. Pratt, have you ever been engaged in the lumber business?

A. No, sir.

Q. Have you been back East in connection with your lumber work?

A. Yes, sir.

Q. Where?

A. I attended foresters' conferences in various parts of the East—New York, Maryland, North Carolina, and Washington.

Q. On those occasions did you talk with wholesalers?

A. No, sir.

Q. Did you talk with brokers in the lumber business?

A. No, sir.

Q. Retailers?
A. No, sir.
Q. Architects?
A. No, sir.

Mr. BURR. I now move to strike all the witness' testimony with regard to the matters as to the knowledge of the trade as to the confusion of the trade, from the record for the simple reason that this witness is not qualified to know anything about trade conditions, or what would be confusing to the trade, or the ultimate consumer.

2827 Examiner DE BRULER. Motion denied and exception allowed.

Mr. MATTHEW. I don't recall he said anything about the trade.

Mr. BURR. He said it would be confusing to the trade. That is your question, as I recall it. I may be in error, but I think I made objection at the time.

Mr. MATTHEW. I am willing to assent, in the interest of expedition, to the granting of Mr. Burr's motion as to the testimony relating to confusion in the trade. I think there is some merit in Mr. Burr's feeling that I couldn't qualify this witness as to the eastern trade, at least. Perhaps it would save his time and my time to do that.

Mr. BURR. Thank you, very much.

Examiner DE BRULER. It may be stricken.

Mr. BURR. I think that is very considerate indeed.

By Mr. BURR:

Q. I think I understood you correctly to say in your judgment the uses of Pinus ponderosa lumber falls more appropriately in the white pine group than within the yellow pine group?
A. Yes, sir.
Q. Did I not?
A. Yes, sir.
Q. There are, however, certain differences in the uses, are there not, of the white pine lumber as contrasted with the Pinus

2828 ponderosa?

A. Yes, sir.
Q. Pardon?
A. Well, I am only familiar with the uses of the Pinus ponderosa as--you have reference to the strobus particularly, do you?
Q. There are some differences in the uses of Pinus ponderosa and sugar pine coming from your own State, are there not?
A. Well, I believe they are used for practically the same purposes.
Q. You do?
A. Yes.
Q. Are you familiar with which wood, if either, is used more extensively and satisfactorily for pattern purposes?
A. Sugar pine has the reputation of being used more extensively for pattern work.

Q. Will your experience enable you to state whether it is more adapted to pattern purposes?

A. No; my experiences wouldn't qualify me for that.

Q. You are not in the manufacturing business and haven't been?

A. No; I wouldn't be conclusive on that.

Q. I think you said that botanists didn't give any consideration to lumber distinctions in their botanical classification, did you?

A. It is my impression that botanists do not consider the quality of the lumber in giving common names.

Q. In giving them the Latin names, but don't they in giving the common names?

2829 A. I don't think so.

Q. Don't the botanical works, when they give the botanical distinctions between different species of wood, mention a great many other things besides the floral distinctions?

A. Oh, yes; they mention many things.

Q. And refer to the characteristics and quality of the various lumber produced by these various species, do they not?

A. Yes; in connection with the description of the tree, they go more or less into the lumber, quality of it.

Q. And when they divide into white pine and yellow pine groups, isn't the lumber produced by those woods given some consideration and weight?

A. Yes; to a certain extent, but as a matter of information and connection with the species.

Q. Did I understand you to say that you thought sugar pine on a whole was more susceptible to decay, or more susceptible to blue stain?

A. My limited experience in the La Moine yard is what I am talking about.

Q. How long was that experience?

A. About three months.

Mr. BURR. That is all.

Re-direct examination by Mr. MATTHEW:

Q. Mr. Pratt, is the botanical nomenclature in any respect dependent upon the lumber or its qualities?

2830 A. No.

Mr. MATTHEW. That is all.

Examiner DE BRULER. That is all.

(Witness excused.)

Mr. MATTHEW. May I call Mr. Grant?

E. J. GRANT was thereupon called as a witness and, having first been duly sworn, testified as follows:

Direct examination by Mr. MATTHEW:

Q. Mr. Grant, please state your name and place of residence?

A. E. J. Grant. My place of residence or office?

Q. Place of residence.

A. 906 North Alpine Drive, Beverly Hills.
Q. That is in California, of course?
A. California.
Q. What is your business or occupation?
A. I am in the lumber business.
Q. And with what particular company?
A. Algoma Lumber Company.
Q. The Algoma Lumber Company is one of the respondents in these proceedings. What is the Algoma Lumber Company, Mr. Grant?

A. It is a company engaged in the manufacture and sale of
2831 California white pine.

Q. And in what State does it conduct its operations?
A. Oregon—the manufacturing lumber.
Q. Where is its manufacturing plant located specifically?
A. At Algoma, Oregon, about ten miles north of Klamath Falls.
Q. You operate in what is commonly known as the Klamath Basin?
A. Yes.
Q. Throughout how many years has the Algoma Lumber Company been operating in this area?
A. Seventeen years.
Q. What has been the extent of your personal experience in the lumber industry, Mr. Grant?
A. I started in the lumber business with a box factory, or with an interest in a box factory, in 1905. In 1906 we purchased another factory and in 1908, to secure lumber for that second factory, we went into the purchase of timber and the erection of a sawmill. We cut out that particular tract of timber in approximately three to four years and then moved over to our present location.
Q. Then you have had some twenty-five years' personal experience in the lumber industry?
A. Yes.
Q. And all of that time in California and Oregon and in connection with the manufacture and distribution of pine?

A. Yes.

2832 Q. What species of lumber do you produce and market at your Oregon plant?
A. California white pine, sugar pine, and what we call red fir.
Q. Which lumber predominates?
A. California white pine.
Q. Throughout what period have you been familiar with the California white pine?
A. Since I first started in the business.
Q. Has your lumber always been sold under the name California white pine?
A. Always.
Q. It has been advertised to the trade as such?

A. Always?

Q. And invoiced under that name?

A. Yes.

Q. Do you sell directly to the trade or do you sell through some particular agency?

A. Our sales are varied. In some cases direct to the trade and in some cases through wholesalers, some cases direct to retail yards.

Q. Where do you find the principal markets for your lumber?

A. The upper grades nearly all go East, and the lower grades a considerable portion is sold in California as box shook; the balance is sold both in California and in the East as common lumber.

2833 Q. Let's take your box lumber, which is sold in California, first. May I ask whether you commonly segregate the sugar-pine lumber from the California white-pine lumber in assembling shipments of box lumber?

A. It is mixed together.

Q. And under what name does these shipments enter the trade?

A. As pine box shook.

Q. Is that the prevailing practice in this territory?

A. Yes.

Q. You ship your shop grades largely to the Middle West, Mr. Grant?

A. Yes.

Q. To what particular territory for the most part?

A. To factories along the Mississippi River and to Wisconsin points where the larger sash and door factories are located.

Q. To a large extent, I assume, your shop lumber is re-manufactured into sash and doors, and similar products?

A. Yes, sir.

Q. I think you stated that your select lumber goes further East, or am I right?

A. Yes, sir.

Q. How far does it go?

A. A great deal of it is sold in New York and Philadelphia territories.

Q. For what purposes does that lumber find ultimate utility?

2834 A. Largely for interior trim.

Q. You stated that you invoice your lumber as California white pine. I will ask you under what name you receive inquiries or orders for this lumber?

A. California white pine.

Q. Is the name well known to your trade?

A. Very well known.

Q. Is there confusion in the trade as to what it is, as far as you know?

A. None at all.

Q. Have you had any complaints from your trade respecting that name?

A. Not a single complaint.

Q. Any complaint as to the quality of the lumber which is furnished under that name?

A. None whatever.

Q. Any complaint as to the durability of it?

A. None.

Q. Has there been any complaint from your trade that confusion or misrepresentation exists by virtue of your use of this commercial name?

A. No complaint whatever.

Q. Do you find that any of your customers exhibit any interest in the botanical classification of trees or in the common names of the trees from which lumber may be produced?

2835 A. Not at all. I don't believe they know anything about it.

Q. What are they interested in?

A. In the qualities with respect to uses to which they intend to put the lumber.

Mr. BURR. What is the answer?

The WITNESS. In the qualities with respect to the uses to which they intend to put the lumber.

By Mr. MATTHEW:

Q. You stated, Mr. Grant, that your manufacturing plant and sawmill is located in the State of Oregon. I will ask you to state *whether*, in your opinion, there would be any confusion in the trade if you were to advertise and offer your lumber under the name of Oregon pine?

A. It would be a terriffic confusion because that name is already in general use in California for another wood.

Q. What is that wood?

A. Fir, commonly called, so-called "fir."

Mr. BURR. I object to that, bringing in another wood, if the examiner please.

Mr. MATTHEW. This is inevitable here because we have an Oregon manufacturer manufacturing pine and——

Examiner DE BRULER (interrupting). The answer may stand with the understanding we are not to go any other woods any further.

Mr. BURR. Will you allow me an exception?

2836 Examiner DE BRULER. Yes.

By Mr. MATTHEW:

Q. Would you feel that any confusion might result if your lumber product were offered to the trade under the name of Oregon yellow pine?

A. That would be still more so because that name of yellow pine is, by the name yellow pine, is commonly meant the lumber from

the South which enters the trade mostly for entirely different purposes and uses.

Mr. BURR. May the record show that my objection heretofore made with regard to inquiries as to various specific names that might possibly be adopted as substitutes, goes here to this line of questioning?

Examiner DE BRULER. Yes. I understand it. Objection overruled.

By Mr. MATTHEW:

Q. Mr. Grant, can you think of any name, other than the present commercial name of California white pine, which would satisfactorily designate your product and prevent possible confusion in the minds of your customers?

Mr. BURR. Same objection.

Examiner DE BRULER. Same ruling.

A. There is none.

By Mr. MATTHEW:

Q. Why do you prefer this name to all others which occur?

2837 A. Because it so correctly designates both the territory from which the lumber comes and corresponds to the uses to which other white pines are put.

Q. Uses of your lumber are in general similar to the uses of the so-called "true" white pines, as they have been termed by counsel?

A. Yes, sir.

Q. How far is the city of Klamath Falls from the Oregon-California boundary line, Mr. Grant?

A. Approximately thirty miles.

Q. And is this lumber area in the Klamath Falls basin rather closely identified geographically with the lumber belt of northern or northeastern California?

A. Very closely.

Q. Is it quite distinct from the lumber belts which lie to the northward of the Klamath Falls district, say in central Oregon and the interior?

A. Very distinct.

Mr. MATTHEW. You may cross-examine.

Cross-examination by Mr. BURR:

Q. As a matter of fact, you are forty miles from the California State line, are you not?

A. Approximately so.

Q. Would you be in favor of the Arizona white-pine people

2838 calling theirs California white pine where they make Pinus ponderosa lumber?

A. I am not interested in Arizona.

Q. I am asking, do you think that would be fair to your product?

A. I would have no objection to it.

Q. You would have no objection?

A. No.

Q. The same would be true of the Colorado Pinus ponderosa, which is mountainous country?

A. I want to qualify that by saying I would have no objection to having it called Arizona white pine, but I would object to its being called California white pine.

Q. You would?

A. Yes.

Q. Why?

A. Because the lumber produced is not of as good a quality as our California white pine. The trade expects that very good quality in buying California white pine.

Q. Well, now, aren't there some sections of California that don't have that good high quality of California white pine that you have there where you manufacture?

A. I am speaking of averages, not certain sections. I believe that unquestionably there are trees in California producing as poor lumber as the average of the Arizona white pine, or Arizona pondosa pine.

2839 Q. And there are trees in the Klamath Falls section that don't produce as good as the average of the California trees, aren't there?

A. Exactly, individual trees, but the average of the lumber is far superior.

Q. And the average then you think in California is superior to the Arizona white pine, is that true?

A. Yes.

Q. Aren't there sections in California where the stand is much inferior to the stand, for example, in the Klamath Falls section?

A. Yes.

Q. Then where would you draw the line as to whether an operator is entitled to use the word "California" in connection with his white pine and where he is not to use it?

A. I think it is properly drawn as now used. The California white pine includes the Klamath Falls and southern Oregon district, and does not extend to Bend and eastern Oregon, nor does it extend into Arizona. They are very distinct and separate.

Q. It takes in part of Nevada, doesn't it, that is, some of the Nevada lumber is called California white pine?

A. Yes.

Q. There are sections in California where it is not superior to some of the sections in Arizona, isn't that true?

A. That is individual trees, or the general average—the general average in my opinion and experience of the California lumber

2840 known as California white pine, from all sections where it is manufactured, is superior to any section where it is manufactured in Arizona.

Q. Average over the State you mean?

A. Average any section, not taking individual trees.

Q. Aren't there sections in California where the average Pinus ponderosa tree is considerably less smooth and soft than is the average in the Klamath Falls section?

A. Yes.

Q. Where would you say those sections are?

A. In my opinion the California white pine produced from the Tuolumne County region is inferior to the California white pine produced from the Klamath section.

Q. Isn't it your judgment that it is inferior to what it is over in Bend?

A. No.

Q. Are there any other sections besides Tuolumne—isn't it true that there are other sections you can name where the Pinus ponderosa in California is inferior to that at Klamath Falls and vicinity?

Mr. MATTHEW. I think the witness stated that the Klamath Falls section produced the best.

The WITNESS. There is no great amount of difference between the larger producing regions such as that operated in by the Weed
2841 Lumber Co., the McCloud River Lumber Co., and the Red River Lumber Co., with the Klamath section.

By Mr. BURR:

Q. You would say those are about on a parity, would you?

A. I would.

Q. And the rest of California you would say is not quite on a parity with that?

A. I don't want to speak specifically.

Q. I am talking about averages.

A. Generally there would be a little difference in favor of those regions as compared with the western slope of the Sierra Nevadas in the southern part.

Q. Now, as a matter of fact, aren't there sections in Arizona where the average is just as good as it is in certain sections in California?

A. Not to my knowledge, nor is it shown, I believe, by the average sales results.

Q. The Arizona people get the same prices, don't they, as a great many sections in California?

A. Not for their upper grades.

Q. For what?

A. Their upper grades.

Q. How about in New Mexico.

A. The same applies to New Mexico as applies to Arizona.

Q. You would still allow those people the use of the word "white" would you?

2842 A. I would if they would prefix it with "Arizona."

Q. Why shouldn't you prefix yours with "Oregon" if it comes from Oregon?

A. Well, because the larger California white pine district lying very close to us puts us, that is, the quality of our lumber so corresponds with that, and the California operators were pleased to have us join them in this California white pine name. The Oregon white pine would immediately identify us with red fir, which is a very inferior wood and used for different purposes. Oregon pine is the general term for red fir in selling it in California territory.

Q. I think you said that there would be very much confusion if you sold it as yellow pine. Why would that be?

A. Because the woods are used for different purposes.

Q. It would identify you with the yellow pines with the South, would it, for advertising purposes?

A. Which would cause a great deal of confusion in the minds of the buyers.

Q. That would tend to identify you with the yellow pines of the South, wouldn't it?

A. Yes; something to be avoided.

Q. Do you understand that the Pinus ponderosa does not belong to the genuine white pines, or don't you know that?

A. You are speaking botanically, or commercially, by the use of the word genuine white pine?

2843 Q. Does it belong, first, botanically to the genuine white pines?

A. I understand it does not.

Q. The use of the word "white" in connection with the trade term California white pine, serves to identify you with the genuine white pine, does it not?

A. I think commercially it is a genuine white pine.

Q. Will you please answer the question? Does that tend to identify you with the genuine white pines?

Mr. MATTHEW. Commercially or botanically?

By Mr. BURR:

Q. Commercially?

A. I think it does, and I think it deserves to.

Q. Your judgment is that it deserves to belong in that group?

A. Exactly.

Q. If I understand your testimony correct.

A. Yes, sir.

Q. And use of the word "white" helps that along, does it not?

A. Yes, sir.

Q. And is that the reason why you adopted it in part?

A. I did not adopt it, nor do I know when it was adopted. It has been in general use for over twenty-five years and is well known.

Q. That help that you receive in identifying your wood commercially with the white pine, that is gained from the use of the word "white" that is one of the reasons that you want to

2844 continue; is that true?

A. I think the——

Q. (Interrupting.) Wait a minute.

A. Could I answer and then qualify it?

Q. Yes.

A. The answer is yes.

Q. Now explain.

A. The qualification is that the use has become so general that it stands on its own merits and is well known to the trade under that name.

Q. By the trade you mean the people who buy from you?

A. Yes; and the—yes; I will answer that yes.

Q. Your company sells box lumber here in California locally, does it, or in Oregon locally, I would say; your common grades are sold locally?

A. In San Francisco or—they are sold through southern California and central California.

Q. Your box grades?

A. Yes.

Q. And your selects, I think you gave some testimony on that, your selects go where, to New York and Philadelphia, don't they in part?

A. In part.

Q. And there you sell those to wholesalers, do you not?

A. Yes, sir.

2845 Q. I think you said something about selling to retailers. Do you sell retailers direct, or through the wholesaler, or through broker?

A. In some cases we sell retailers direct, not very many.

Q. Do you sell the consumers direct, excepting for box uses?

A. Consumers—do you mean retailers or the man who builds a house?

Q. I thought you said you sold to consumers. Did you? Perhaps I am wrong.

Mr. MATTHEW. I don't think so.

Examiner DE BRULER. I think he said retailers.

Mr. BURR. All right. That is all.

Mr. MATTHEW. That is all.

Examiner DE BRULER. That is all.

(Witness excused.)

Mr. WHEAT. Call Mr. H. J. Nunneley.

H. J. NUNNELEY was thereupon called as a witness and, after having been first duly sworn, testified as follows:

Direct examination by Mr. WHEAT:

Q. Will you please state your full name and place of residence, Mr. Nunneley?

A. Hollis J. Nunneley, residence Los Angeles, California.

2846 Q. And in what business are you engaged?

A. In the sale of lumber in Los Angeles.

Q. And are you connected with some lumber company in that place?

A. I am connected with the E. K. Wood Lumber Company, of Los Angeles.

Q. How long have you been connected with that organization?

A. About three and a half years, a little better, practically four years.

Q. Is the E. K. Wood Lumber Company engaged generally in the lumber business in and about the Los Angeles area?

A. Throughout the West.

Q. And where is their headquarters?

A. San Francisco.

Q. And their Los Angeles office, with which you are connected, is engaged in what portion of their business?

A. Well, in the southern part of California and Arizona and New Mexico.

Q. And just what is your work with that company?

A. I am in charge of the sales of California white and sugar pine.

Q. Mr. Nunneley, were you engaged in the lumber business prior to going with the E. K. Wood Lumber Company, of Los Angeles?

A. Yes; I have been in the lumber business practically all my life.

Q. Will you just state briefly what that experience has been?

A. I worked as a boy, while going to school, in the woods, logging, etc.

2847 Q. Where was this?

A. In California?

Q. What part?

A. Northern California. After getting out of school, about 1919, I went into the mills, worked in the mills.

Q. Where was this?

A. Throughout northern California, most of the time with the Red River Lumber Company at Westwood, Lassen County.

Q. Just what was your work with the Red River Lumber Company?

A. My work there—I started working in the mill, worked through the mill; for some time I graded and shipped, also worked in the sales.

Q. Did you have occasion, during that experience with the Red River Lumber Company, to get into the woods themselves?

A. I spent quite a bit of my time in the woods more or less.

Q. Are you familiar with both Pinus ponderosa and sugar pine in the woods, and on down into their uses as lumber?

A. I am not familiar with them in Latin names, only as they are known, their trade names.

Q. By Pinus ponderosa I mean the wood marketed as California white pine?

A. Yes, sir.

Q. Then you are familiar with that wood and with sugar pine from the woods on down through the ultimate use?

A. Yes, sir.

2848 Q. Will you state briefly just what your present work is, just exactly what you do?

A. Actually selling to the consumers and the users of white pine and sugar pine and looking after those things.

Q. By white pine, to what lumber do you refer?

A. California white pine.

Q. How long have you been familiar with the name California white pine?

A. That is all I have ever known it as.

Q. Is that well known in the trade to which you come in contact?

A. I have always found it so.

Q. Do you know of any other name used for that lumber as a commercial name?

A. Never have known of any other name but that.

Q. Do you know whether or not there are any companies now producing their lumber in California which have recently adopted some other name, or does your recollection go to that?

A. I believe they have; I have seen price lists of companies in California in the last six months that have changed to some other name.

Q. What is that other name?

A. I believe they call it yellow pine.

Q. Do you recall what company that is?

A. The Sugar Pine Lumber Company, I believe, is one that I recall.

2849 Q. Are both sugar pine and California white pine coming into the Los Angeles market in large quantities?

A. Quite a large quantity; yes.

Q. And are the sales of California white pine increasing or decreasing, as compared to the general sales of sugar pine in that area?

A. I think it is increasing.

Q. What are the general uses to which that lumber, California white-pine lumber, is put in the area in which you have general dealings?

A. The largest use is millwork and finish and some sash and doors. The moving-picture industry uses a lot.

Q. What do they use it for, the moving-picture people?

A. Building sets, etc., that enters into millwork.

Q. Have you had occasion to consider the use of these several pines for furniture business?

A. Yes; some of that is used for that.

Q. Will you explain briefly what that is?

A. It is used in the furniture industry in building dressers, etc., things like that to some extent in Los Angeles.

Q. Is sugar pine also used in the furniture industry?

A. Very little. I don't know of any; however, there may be some.

Q. Can you explain why California white pine has gone into the furniture trade in preference to sugar pine?

A. My personal experience that I have had along that line is because the white pine paints so much easier than the sugar
2850 pine. Furniture is painted mostly with a spray gun and it takes several coats to cover up the pitch flecks in sugar pine. That is not true with the white pine. The objection that they have to sugar pine is for that reason and they won't accept it; they will only accept the California white pine.

Q. And the furniture trade requires, does it, a wood of excellent paintability?

A. Yes; and workable.

Q. And do the little what you have called pitch flecks in sugar pine occur quite generally in the sugar-pine lumber that comes into the market?

A. It is in all of it. It is characteristic of the wood, I believe.

Q. And do those pitch flecks, as you have termed them, hamper the paintability of the wood?

A. Oh, yes. It takes more paint to cover them up, because if you are trying to paint it a light color it will show through until you get enough paint on to cover it.

Q. Let me ask this: Does your company sell California white pine in considerable quantities in the southern part of California and in Arizona and in New Mexico?

A. Well, in board footage we sell more, I should judge.

Q. Of which?

A. California white pine.

Q. Than sugar pine?

2851 A. Than we do in sugar pine.

Q. Do you distribute a considerable quantity of the California white pine?

A. Yes, sir; it runs into millions of feet every year.

Q. Have you ever had any complaint from your trade as to the durability of the California white pine wihch you have furnished?

A. No; I don't recall of any time where any question has come up as to its durability or lack of durability. It has always been considered a good wood.

Q. Are you wholesaling and retailing both?

A. Both.

Q. And you deal with the ultimate consumer on occasions, do you?

A. Very often.

Q. And by that do you mean the man who actually builds the structure?

A. Yes; and living in it.

Q. Are you interested in any sugar-pine mill, or is your company?

A. None whatsoever.

Q. Have you any interest in pushing either sugar pine or California white pine over the other?

A. Not one over the other whatsoever. We are only interested in pushing them both—on which we can make the most money.

Q. Your chief aim is to sell as great a volume as possible of both woods?

A. Yes, sir.

2852 Q. In selling sugar pine to your trade, do you encounter, in your opinion, any sales resistance, or are you hampered in the sale of your sugar pine because of the use of the term "white" in the term "California white pine"?

A. No; never have known such a thing. It seems like everybody understands it, as that is all they have ever known.

Q. Do you believe that any confusion would result from a change in this trade name of California white pine?

Mr. BURR. We make the usual objection.

Examiner DE BRULER. Objection overruled and exception allowed.

A. I believe it would take a lot of work and time to reeducate them. It would be like changing my own name. I would have to go and get reacquainted with my friends.

By Mr. WHEAT:

Q. Would there be any change in the uses to which this lumber is put by the consumer?

A. I don't think the consumer is interested at all in the name of lumber.

Q. Do you believe a change in the name of California white pine, which would eliminate the word "white", would assist you in any manner in the marketing of your sugar pine?

A. No; I can't see where it would at all.

Q. Do you purchase any of this so-called "California white pine" from Oregon?

2853 A. Yes; quite a lot of stock comes from Oregon. It is one of the stocks that is known there; that is, the stock from Oregon called "California white pine", that grows in Oregon.

Q. Do you purchase from the Klamath Falls area in Oregon?

A. Yes; that is, the Klamath Falls lumber is generally known as stocks from the Klamath Falls district, not particularly Oregon.

Q. You know, do you, that the Klamath Falls area lies within the boundaries of the State of Oregon?

A. Yes; I know that.

Q. Mr. Nunneley, would there be, in your opinion, any confusion if the wood now marketed as California white pine from the Klamath Falls region were to be marketed under the name "Oregon pine" or "Oregon white pine"?

A. Well, I would imagine so. We sell quite a lot of lumber as Oregon pine.

Q. What lumber is that, sir?

A. That is the douglas fir species. We sell that as Oregon pine, and if we had to sell the other along with it we would have an awful time.

Q. That is one of the trade customs, to sell douglas fir as Oregon pine in the Los Angeles area?

A. It is.

Mr. BURR. I object.

Examiner DE BRULER. He has answered that.

By Mr. WHEAT:

Q. Are you familiar with the wood which is marketed as
2854 yellow pine in the South and East?

A. I can't say I am so well familiar with it. We have some of it in that territory. It is ordered and known there.

Q. It is ordered and known in the Los Angeles area, is it?

A. Yes.

Q. Where do you procure that yellow pine?

A. From down in the Southern States. It comes around through by boat, as a general rule.

Q. You bring it in by water to southern California points?

A. Yes; through the Canal.

Q. Do you get orders for yellow pine on occasion under that name?

A. Yes.

Q. Has it been your experience that the purchasers who order yellow pine, under that name, will accept California white pine as compliance with those orders?

A. No; they will not; absolutely not.

Q. Why not?

A. They claim it hasn't neither the suitability for the purposes which they want to use it, nor——

Mr. BURR (interrupting). We admit all that.

Examiner DE BRULER. That is admitted then.

By Mr. WHEAT:

Q. Let me ask whether California white pine, in general, is used for similar uses to sugar pine?

A. Practically so, in southern California; yes.

2855 Q. If a name were to be given to this wood, such as "California pine", or "California soft pine", do you consider that there would be any resulting confusion to the trade?

Mr. BURR. I object on the ground that the Commission has no constructive jurisdiction.

Examiner DE BRULER. Let him go into that if he wants to. Objection overruled and exception noted.

A. I believe that it would cause a lot of extra work and confusion among our trade and that we would have to do a lot of extra work to go out and tell each and every one that, just because the name was changed, but it was still the same wood. That would take a lot of effort.

By Mr. WHEAT:

Q. Wouldn't there be, in your opinion, any confusion between such names as I have suggested, "California pine" or "California soft pine", and the term "California sugar pine"?

A. Yes; I think it would have to be explained, the reason and what for and all about it.

Q. Did you ever have any complaint from your customers regarding the use of the trade name "California white pine"?

A. Never have had any question about it whatsoever.

Q. Does the trade which generally purchases California white pine from you reorder that pine under the same trade name?

A. Always so.

Q. It is familiar by that name, is it?

2856 A. Absolutely.

Q. In your opinion, does the term "California white pine" properly identify that wood with respect to its quality and uses?

Mr. BURR. I object to that. That is the question before the Commission.

Mr. WHEAT. It has been asked and answered by about fifty witnesses.

Examiner DE BRULER. Objection overruled. Answer the question. Exception allowed.

A. Yes; I do.

Q. (By Mr. Wheat.) And can you think of any name other than the term "California white pine" which, in your opinion, would more properly or accurately designate the lumber that is now marketed as "California white pine"?

Mr. BURR. Usual objection.

Examiner DE BRULER. Objection overruled. Exception allowed. Answer the question.

A. No; I have never thought of any name—never had that come up.

By Mr. WHEAT:

Q. I will ask whether the people with whom you deal, the purchasers of lumber from you, either wholesale or retail, are interested in the botany of the lumber which they buy from you?

A. I don't think so. I wouldn't think 1% would know.

Q. What, in your opinion, are they interested in?

2857 A. Only in the use for what they want the lumber. If the lumber will fit that particular use they want to put it to—that is what they are interested in.

Mr. WHEAT. I think that is all. You may cross-examine.

Cross-examination by Mr. BURR:

Q. Mr. Nunneley, do you travel into New Mexico and Arizona in connection with your sales work?

A. No; I personally don't.

Q. Does any of your product comes from Arizona and New Mexico, your so-called "white pine"?

A. No, sir; it don't.

Q. You specialize on the California and the Oregon?

A. Yes. That material from Arizona and New Mexico don't come into the Los Angeles territory.

Q. What do your customers ask for, white pine or California pine, or sometimes one and sometimes the other?

A. Sometimes one and sometimes the other. Most of our people or lots of the people in Los Angeles are from the East and are used to white pine and they call it white pine.

Q. When you have people more recently from the East, and ask for white pine, do they realize that the California white pine is not a true white pine such as they got in the East?

A. I don't think they think anything about it. They don't
2858 care anything about it so long as it answers their purpose.

Q. Do you think they know that the sugar pine really is a genuine white pine and belongs to the same group as eastern white pine?

A. I don't think so; some particular ones might have read the propaganda on it.

Q. There is a difference in the price of the sugar pine and California white pine in your district?

A. Yes, sir.

Q. And doesn't that have some influence on these furniture manufacturers in selecting California white pine in lieu of sugar pine?

A. I don't think so, because lots of them use much higher-priced woods than sugar pine.

Q. In the purchase of supplies they would consider price as one of the elements of their choice, wouldn't they?

A. Naturally so; surely so.

Q. That would be one of the elements in the purchase of California white pine in lieu of sugar pine for furniture purposes?

A. I wouldn't say between those woods. I wouldn't think that would be really a matter just between those two woods; it would in some other wood, a spruce or something like that.

Q. The price element is important to a man trying to keep the cost down, and that would be one of the elements considered?

A. I think so; I think he would consider that; yes.

Q. There isn't any northern white pine in your market, is there?

2859 A. Northern white pine?

Q. From Wisconsin?

A. No.

Q. Minnesota?

A. No; none.

Q. Is Idaho white pine—that is, does Idaho white pine get down there?

A. There is some; yes.

Q. Very little, is it?

A. Not any great amount.

Q. How do you sell that—or do you handle it?

A. We never have.

Q. Who, in Los Angeles, handles it, do you know?

A. Why, I believe the W. E. Cooper Lumber Company sell some there. I understand they do.

Q. Did you know that before you heard the witness examined here?

A. Yes; I have known that they do, because I went down and looked at the material.

Mr. BURR. That is all.

Mr. WHEAT. That is all.

Examiner DE BRULER. That is all.

(Witness excused.)

(Here followed remarks off the record.)

2860 Examiner DE BRULER. Let the record show that the hearing is adjourned until 10:00 o'clock a.m., February 3, 1930, to the offices of the Federal Trade Commission, in the Flatiron Building, 544 Market Street, San Francisco, California.

(Whereupon, at 12:35 o'clock p.m., an adjournment was taken until 10:00 o'clock a.m., February 3, 1930.)

2861 Docket No. 1620 to 1669, inc.

SAN FRANCISCO, CALIFORNIA, *February 3, 1930.*

Met pursuant to adjournment, 10:00 o'clock a.m.

Before Ellis De Bruler, examiner.

Appearances:

Eugene W. Burr, for the Commission.

McCutchen, Olney, Mannon & Greene (by Mr. Allen P. Matthew and Carl I. Wheat) for the respondents.

Examiner DE BRULER. Let's proceed with the hearing.

This meeting was adjourned to the Federal Trade Commission's office in San Francisco, but by consent of all parties the hearing was had in room 620, St. Francis Hotel, San Francisco.

Is that correct?

Mr. MATTHEW. Yes.

Mr. BURR. Yes.

Mr. MATTHEW. May the record show, if you please, that Mr. Grant, who was called as a witness for the respondents, and testified particularly with respect to the operations of the Algoma Lumber Company, is the president and manager of that company and has been for many years. I find I neglected to make that clear.

Examiner DE BRULER. The record may so show.

2862 Mr. MATTHEW. I will call Mr. Bliss, if I may, as the next witness.

CHARLES T. BLISS was thereupon called as a witness and, after having been first duly sworn, testified as follows:

Direct examination by Mr. MATTHEW:

Q. Please state your name and place of residence.

A. Charles T. Bliss, 15 Crocker Avenue, Piedmont, California.

Q. At the present time are you engaged in the lumber business?

A. Not at the present time.

Q. Have you been engaged in the lumber business at any time?

A. For a great many years until—and practically all my life—1915.

Q. Where and when did you enter upon the lumber business?

A. In 1886 I went to Greenbrook and took charge of the sawmills there.

Q. Where was Greenbrook?

A. In Nevada, on the shores of Lake Tahoe.

Q. And that is on the east side?

A. On the east side; yes.

Q. And with what company were you identified?

A. Carson & Tahoe Lumber and Fluming Company.

Q. Was that a corporation engaged in the manufacture and sale of lumber?

2863 A. It was.

Q. Throughout what period were you connected with the Carson & Tahoe Lumber and Fluming Company or its successors in interest?

A. From 1886 to 1898.

Q. You say that you took charge of the sawmill at Greenbrook. Mr. Bliss, will you tell us briefly the nature of your duties and responsibilties throughout your entire period of connection with that company?

A. I had charge of the logging and looked after the logging interests. I had charge of the sawmill and the shipping of the lumber from the sawmill.

Q. What kind of lumber was manufactured at the sawmill at that time?

A. White pine, some sugar pine and fir, and some cedar.

Q. Was the bulk of your lumber cut represented by what we know as California white pine?

A. Yes.

Q. And where did you find the principal markets for the lumber produced by the Carson & Tahoe Lumber and Fluming Company?

A. Virginia City, Nevada; Comstock Mines.

Q. And you had a market in any other territory?

A. About the time I went there we marketed our upper grades of lumber in the Salt Lake district.

Q. That is Salt Lake City, Utah?

A. Yes; that is where we shipped it.

2864 Q. Did you market any of you lumber to the east of that territory?

A. Never that I know of—never went there.

Q. You state that you were with the Carson & Tahoe Lumber and Fluming Coming from 1886 to 1898. Did you go in the employment of some other lumber company after that latter date?

A. I went with the Westside Lumber Company. I was with them for two years, or nearly two years, during the construction period.

Q. You had nothing to do with the actual operation of their sawmills?

A. I was not there after the lumber was marketed. They had sawed some lumber during the time that I was with them.

Q. You left that company about 1900?

A. I left that company in June 1900, or July 1, to be accurate.

Q. What was your next employment in the lumber industry?

A. I was manager of the Hobart Mills, the Sierra Nevada Wood and Lumber Company.

Q. The Sierra Nevada Wood and Lumber Company has been succeeded by the Hobart Estate Company?

A. It has.

Q. Will you state where the Hobart Mills are located?

A. It is located seven miles north, a little east of north, of Truckee, California.

Q. And you were with that company for how many years?

A. Fourteen years.

2865 Q. And in what capacity?

A. Manager.

Q. Now, Mr. Bliss, I think you stated that while you were with the Carson & Tahoe Lumber and Fluming Company the bulk of your lumber produced was represented by what we know as California white pine?

A. It was.

Q. Under what name was it sold?

A. It was sold as pine lumber to the trade—local trade.

Q. Without any other designation particularly?

A. Yes.

Q. When did you first hear it referred to as white pine, by any name including the word "white" pine?

A. About 1886 we got orders from Salt Lake, when they designated that they wanted the California white pine that we had formerly shipped them.

Q. From that time on was the lumber commonly marketed as white pine, or California white pine?

A. It was always marketed as white pine.

Q. That was in the local territory?

A. Local territory.

Q. Extending to Salt Lake City?

A. Yes.

Q. Did you at any time market any of this pine lumber during the period of your connection with the company to the east-

2866 ward of the Rocky Mountains?

A. Never knew of it.

Q. Did you know anything about the eastern white pine, or northern white pine, during your connection with the Carson & Tahoe Lumber and Fluming Company?

A. If I did, I didn't pay any attention to it; it didn't impress me at all.

Q. Did you come in competition with it?

A. Never did.

Q. Was sugar pine ever sold under the name of "California white pine", or any name which included the word "white"?

A. Never.

Q. It has always been sold as sugar pine?

A. Always.

Q. What kinds of lumber were produced by the Hobart Mills during the period of your connection with that operation?

A. Principally white pine, which we afterwards sold as California white pine. There was a little sugar pine, but very little; and fir, white fir, and the Sierra Nevada red fir, and very little cedar.

Q. Where did you find the principal markets for the California white pine that was produced at Hobart Mills?

A. The commons we marketed all locally, and to the Southern Pacific for snowshed uses; on the upper grades, we marketed that principally through the—I am speaking now of the better
2867 upper grades, the whiter flooring and ceiling—we marketed locally.

Q. The witness is referring to California white pine?

A. California white pine. The upper grades we marketed through the California Sugar and White Pine Agency.

Q. Was that sold as California white pine?

A. Yes, sir.

Q. Has it always been sold as California white pine when shipped into the eastern territories?

A. Yes, sir; as far as I know.

Q. You stated that the term "white" began to be applied to this pine lumber about as early as 1886?

A. That is the first that it was called to my attention, because I only entered into the lumber business actively at that time.

Q. And when did you first become acquainted with the term of "California white pine"?

A. The California Sugar and White Pine Agency was formed shortly after I went with the Hobart Mills. I wouldn't say the exact year, but about 1901, or along about that time.

Q. It was about that time that this lumber began to move east to a substantial extent?

A. Some of it had moved east from the California coast before that, as I understand it, but we found that there was a necessity for a marketing agency and we formed—I say "we", meaning the various companies—we formed what was known as "the California Sugar and White Pine Agency."

2868 Q. What name was used to describe this lumber from the commencement of the operation of that agency?

A. California white pine.

Mr. MATTHEW. You may cross-examine.

Mr. BURR. No questions.

Examiner DE BRULER. That is all.

(Witness excused.)

Mr. MATTHEW. I will call Mr. Oliver.

GEORGE D. OLIVER was thereupon called as a witness and, after having been first duly sworn, testified as follows:

Direct examination by Mr. MATTHEW:

Q. Mr. Oliver, please state your name and place of residence.

A. George D. Oliver, Hobart Mills, California.

Q. What is your business or occupation, Mr. Oliver?

A. General manager of the lumber department of the Hobart Estate Company.

Q. The Hobart Estate Company owns and operates the Hobart Mills?

A. They do.

Q. How long have you been the manager of the Hobart Mills?

A. Since about March 1, 1914.

2869 Q. And continuous since that time?

A. Yes.

Q. What has been your experience in the lumber industry?

A. Well, I began as a scaler in the woods for the Carson & Tahoe Lumber and Fluming Company in June 1886, and I continued in various capacities until the end of 1901, when I left the lumber business for eight years and a half. About the middle of the year of 1900 I went to the Sierra Wood and Lumber Company, which company was owned and controlled entirely by the Hobart Estate Company, and afterwards changed to that name, and I have been continuously with them since.

Q. You heard the testimony of Mr. Bliss, who preceded you?

A. I heard part of it; I came in while he was testifying.

Q. When did you first become familiar with the term "white pine", or "California white pine", to describe the lumber which is the subject of consideration in these proceedings?

A. The first time that I ever heard of the term "white pine" applied to California pine, I think, was in 1887. For a term of probably three months during that year I was taken to their office to take the place of a bookkeeper who was sick, and that three months was the only time that I was in touch with the sales at all; but I remember a letter coming through the office at that time stating that they wanted white pine, from the Tahoe region, if I remember.

Q. A letter from whom?

2870 A. Taylor, Romley and Armstrong, of Salt Lake.

Q. Is that one of your customers in Salt Lake City?

A. It was at that time.

Q. Throughout what territory was the lumber of the Carson & Tahoe Lumber and Fluming Company being marketed during that period, Mr. Oliver?

A. The principal parts of the product was going to the mines at Virginia City and in local territory, and some of the better grades were going as far east as Salt Lake, and possibly Denver. Sometime in '80 they started a box factory and began shipping box shook to southern California.

Q. During the period of your connection with the Carson & Tahoe Lumber and Fluming Company, as far as you know your lumber product was not going into the Eastern or Middle Western States?

A. I have no recollection of any definite shipments further than Salt Lake.

Q. Was your lumber product in competition anywhere with what is known as "the eastern" or "northern white pine"?

A. No.

Q. Did you know anything about this eastern or northern white pine?

A. Don't remember that I ever heard of it at that time.

Q. You went to the Hobart Mills, I think you said, in 1900?

A. Yes.

Q. In what capacity?

2871 A. Superintendent.

Q. And how long were you superintendent?

A. Until March 1, 1914.

Q. Then you succeeded Mr. Bliss as general manager?

A. Yes.

Q. And have been manager ever since?

A. Yes.

Q. When did you first become familiar with the common commercial name of California white pine for this lumber?

A. I think about 1901 or 1902, a number of the proprietors of sash and door factories in the Middle West came east, as we understood it, to find a successor for the lumber that was being gradually diminished and getting very scarce in the east.

Q. You say they came "east"?

A. I mean west.

Q. Yes.

A. And I know that we began shipping to certain firms California white pine about 1902, I think.

Q. Prior to that time were you making any substantial shipments east, as far as you know?

A. I don't know; I think so; but I didn't have anything to do with the shipping, and I have no recollection that we were.

Q. That is about the commencement of the shipments east, as far as you are familiar with them?

A. As far as I know.

2872 Q. What do you mean by east?

A. East of Salt Lake; we called it east, but I might have said in the Middle West territory.

Q. Under what name was this lumber offered to the trade at that time?

A. Just pine lumber in the local trade.
Q. And when shipments began to move east——
A. (Interrupting.) It was billed as California white pine.
Q. And has it been so billed ever since?
A. Yes, sir.
Q. Did you meet with any competition from the eastern or northern white pine in the Nevada, Utah, or Colorado territories, during the period of your connection with the Carson & Tahoe Lumber and Fluming Company?
A. No; not that I know of.
Q. Have you any competition with eastern or northern white pine in the local territory from Salt Lake City and west?
A. No.
Q. Did you know anything about eastern or northern white pine while you were with the Carson & Tahoe Lumber and Fluming Company?
A. I don't remember that I ever heard of it. I knew there was pine in the East, but we didn't consider it because we weren't in competition or any way interested in it.

Q. What are the principal markets for the lumber produced
2873 by your company, Mr. Oliver?

A. We manufacture box shook for shipment to southern California; we have a number of retail yards in Nevada that handle our common and some better grades; we also supply a number of yards in various localities, and we ship our 2 shop and better through the California Sugar and White Pine Company, with the exception of what we use in our own sash and door factory.
Q. Has your price list always described this lumber as California white pine?
A. The Hobart Estate Company always show California white pine.
Q. Do you have any sugar pine?
A. A negligible quantity; we don't pay any attention to it.
Q. Have you at any time in the past cut any sugar pine?
A. We have cut sugar pine, but we put it in with our white pine.
Q. Does your price list show sugar pine?
A. No; it is not mentioned.
Q. That is because you have a negligible quantity?
A. Yes.
Q. Have you had any complaints from your trade as to the identity of the lumber which is shipped to them?
A. None.
Q. Any complaint that any confusion exists in the trade by virtue of the name of California white pine?
A. None at all.

Q. Have you had any complaint, any confusion in particu-
2874 lar, with sugar pine?

A. No; not at all.
Q. Sugar pine definitely and distinctively is known as such?
A. Sugar pine only—as sugar pine only.

Q. Have you ever known it to be marketed under the name of "white pine", or "California white pine"?

A. Never knew it was considered as a white pine until a few years ago.

Q. Have you any complaint as to the durability of the lumber which is shipped from your mills as California white pine?

A. None at all.

Q. Have you had any demand from your trade for a change in the name of this lumber?

A. No.

Mr. MATTHEW. You may cross-examination.

Cross-examination by Mr. BURR:

Q. What was the total of that business that was going east in 1902?

A. I couldn't say. I was not identified with the sales, but I know there were a few cars.

Q. How far east did it go, east of Salt Lake, beginning about that time?

A. I think that it went to the sash and door factories along
2875 the Mississippi River.

Q. Why did you change the local name that you gave for this product so as to include the word "white" when you shipped east?

A. We didn't change the name; we merely added "white" because the customers gave us an indication that they wanted a lumber of that texture and color.

Mr. MATTHEW. I think there is a confusion; I think that you are referring to the shipments to the Mississippi River aren't you?

Mr. BURR. He testified, as I understood him, that when he shipped east he added the word "white", and he just testified so again.

Q. When you began using the word "white" that was after you began shipping to Salt Lake, was it, when you began shipping further east?

A. The term "white pine" was in use when I came back in the lumber business in 1901.

Q. And you were still selling locally as California pine, were you, or something of that sort?

A. It was just designated generally as the commons, as rough and surfaced, and the better grades as clear.

Q. Well, you called it "pine", did you?

A. Sometimes we didn't designate it as "pine"; the firs were designated as an indication they were not pine, and the pine went rough and surfaced and——

2876 Q. (Interrupting.) And sometimes you called it "pine" and sometimes you didn't; is that true?

A. I think the billing would show that, but I wouldn't say positively, because it was something I never thought of coming up against.

Q. Did you designate it as "white" when you sent it to Salt Lake?

A. That Salt Lake business was with the old Carson Lumber Company. I don't remember of any shipments of the Hobart Estate Company directly to Salt Lake.

Mr. MATTHEW. He is asking about the early shipments to Salt Lake.

The WITNESS. I don't know anything about the billing.

By Mr. BURR:

Q. When did you begin sending it to the Mississippi Valley, in your experience?

A. I think they were shipping there when I went with the company, but I haven't any particular recollection.

Q. That was on your return to the lumber business?

A. Yes.

Q. And at that time they were calling it "California white pine"; is that true?

A. Yes.

Q. In the Mississippi Valley, in those days, there was competition from the northern white pine, wasn't there?

2877 A. I don't know. I understood that the northern white pine, or whatever they were using, was diminishing, and it was necessary to find a lumber to succeed it, and this lumber was so satisfactory to them that the eastern men designated it "white pine" themselves. That was my understanding at that time.

Q. And you merely fell in line as to what your wholesalers were doing?

A. That is as I recollect it, although I wasn't connected with the sales or shipments then.

Q. Your company doesn't object to a change in the name of "California white pine", does it?

A. Most assuredly.

Q. It does?

Mr. MATTHEW. I want to interpose an objection.

Examiner DE BRULER. The objection is sustained.

Mr. MATTHEW. I move the question and answer be stricken out. It is not proper cross-examination.

Examiner DE BRULER. I think not.

Mr. BURR. He testified with regard to confusion, that there was no confusion, and it seems to me that is proper cross.

Mr. MATTHEW. It has nothing to do about confusion.

Examiner DE BRULER. I don't think it is proper cross-examination—what the company objects to.

Q. (By Mr. BURR.) These eastern shipments didn't amount to anything until about 1900, did they?

2878 A. Prior to 1900 I wasn't in the lumber business.

Mr. BURR. Mr. Examiner, was that question and answer stricken physically?

Examiner DE BRULER. You were asking about what his company objects to. I don't think it is proper cross-examination.

Mr. BURR. Was that physically stri'ken?

Examiner DE BRULER. I just sustained the objection.

Mr. BURR. And it remains in the record?

Examiner DE BRULER. Yes.

By Mr. BURR:

Q. To whom does your company sell, wholesalers, retailers, or what?

A. We sell 2 common to the retail yards, and our no. 2 shop and better is sold to the California Sugar and White Pine Company.

Q. Do you sell to any retail yards except in California?

A. None in California, all in Nevada.

Q. All in Nevada?

A. Practically so. I will qualify that and say one or two in the eastern part of California.

Q. The retailers you sell to are all in Nevada and those two in California?

A. Yes.

Mr. BURR. That is all.

Examiner DE BRULER. That is all.

(Witness excused.)

2879 I will call Mr. Sayre.

FREDRICK F. SAYRE was thereupon called as a witness and, after having been first duly sworn, testified as follows:

Direct examination by Mr. MATTHEW:

Q. Mr. Sayre, please state your name and place of residence?

A. Fredrick F. Sayre, 150 Duane Street, Redwood City, California.

Q. Are you at the present time actively engaged in the lumber business?

A. No, sir.

Q. Have you been engaged in the lumber business in the past?

A. Since '76.

Q. Will you relate briefly your experience in the lumber business, Mr. Sayre?

A. Retail, wholesale, lumber and building materials of all kinds in the early days; later, lumber only.

Q. At what point did you experience in the lumber business commence, Mr. Sayre?

A. Mont Claire [Montclair, N.J.], New York.

Q. What was the nature of your business there?

A. Retail yard.

Q. And how long were you there?

A. Left there in '86 and came to Colorado.

2880 Q. Did you engage in the lumber business in Colorado after your arrival there?

A. In Denver, Colorado.

Q. How long were you in the lumber business in Colorado?

A. Until 1901.

Q. With what particular company were you identified in Denver?

A. Sayre-Newton Lumber Company.

Q. That was a lumber company formed by yourself and associate, I take it?

A. Yes, sir.

Q. And what was the nature of your lumber business at Denver and other Colorado points?

A. Wholesale and retail.

Q. And what kinds of lumber did you deal in?

A. The native stock of Colorado, southern yellow pine, some Texas and Louisiana and Georgia; Chicago pine, as we called it, which was the northern white pine of Wisconsin and Minnesota; Oregon pine from Oregon, California pine from California, white and sugar pine both.

Q. Did you handle the California pines during the early part of your operations in Denver?

A. No, sir.

Q. Under what name did you market the pine lumber which you obtained from the Southern States?

— A. Yellow pine.

2881 Q. Was it known as "yellow pine", or just as "southern yellow pine"?

A. Southern yellow pine; pitch pine.

Q. Those were the common market names?

A. Yes, sir.

Q. And I think you stated that the term "Chicago pine" was employed to mean the eastern and northern white pine?

A. Yes, sir.

Q. When did you first begin to draw any supplies of lumber from California?

A. I think the first car I bought was in 1898.

Q. Prior to that time was the California pine product in competition at all with the eastern pines?

A. I never heard of it.

Q. Will you relate the circumstances under which you began to draw pine lumber from California?

A. The one car I bought in '98 directed my attention to it; and I came out to California in '99 to investigate what they had out here, starting in at Fresno, from which point I went to Sanger and over to the Fresno Flume and Lumber Company, up to the Madera Sugar Pine Company, and traveled all the way up the State to the Bukegime Sugar Pine Company, which had a mill just above Montague, on the Shasta division. I looked up the white pine and the sugar pine. I went over to the Hobart Mills, which was then known as the Sierra Nevada Wood and Lumber Company.

Q. Did you then increase your purchases of pine lumber
2882 from California?

A. Yes, sir.

Q. Both of white pine and of the sugar pine?

A. Yes, sir.

Q. Under what commercial name did you sell or distribute the pine lumber obtained from California and which we know now as California white pine?

A. We sold the California white pine in the Denver market, and we sold the California sugar pine.

Q. Did you sell the California white pine under that name?

A. Yes, sir.

Q. Why did you not call it by the name of "yellow pine", or by the name "California yellow pine"?

A. Because it would be misleading to call it "yellow pine"; it would immediately be classed in with southern yellow pine, and it would have been a misnomer for our markets there to use it or call it as "yellow pine."

Q. Under what name did you sell sugar pine?

A. Sugar pine.

Q. Have you ever known of sugar pine to be sold or introduced to the trade under any name other than sugar pine or California sugar pine?

A. No, sir.

Q. Now, Mr. Sayre, throughout what period were you selling this California white pine in the Colorado markets? I think you
2883 said you got the first car about 1898.

A. 1898 and 1899, and 1900; then I came west to California in 1901.

Q. Will you relate the circumstances which lead to your coming west, Mr. Sayre, and engaging in business here?

A. In 1899 I was out here on a buying trip for my company in Denver. I was asked to a meeting by a Mr. Harvey Lindley. We met at the Palace Hotel with Mr. Scott, Mr. Van Arsdale, Mr. Cox, Mr. Shaffer, Mr. Poole, and Mr. Dean.

Q. Is that the Mr. Elmer H. Cox?

A. Yes, sir.

Q. Mr. Cox has been previously a witness in this case?

A. Yes; I had talked about some of these—that is, I had talked with some of these manufacturers individually in my trip around among the mills—and had conveyed to them the information that there was a market for this California sugar and white pine in the extreme East if they would seek it, particularly among the sash and door men. At this meeting they asked me to tell them what I thought of the market, which I did.

I went on my trip north to Portland, Seattle, Tacoma, and back home. In 1900 I came out here on another buying trip and was called into another meeting with practically the same gentlemen,

with one or two added, and gave them another talk on the market of the East. In the meantime they had some two or three buyers out here from the Mississippi River looking over the field
2884 and they were interested. I think it was in February—I know it was the day the "Rio de Janeiro" went down in the bay here.

Q. That was in February?

A. I think it was in February 1901. I left here that night on my trip North again, and at Tacoma I got a wire from Mr. Harvey Lindley asking me if I would come out to California to undertake the marketing of this stock. I wired him that I couldn't do it; that I had my business in Denver.

Mr. BURR. All this is immaterial to the issues here.

Examiner DE BRULER. I presume it is leading up to some point.

Mr. MATTHEW. He will be brief. I want all the circumstances relating to the formation of this selling organization on record.

Examiner DE BRULER. That is all right.

By Mr. MATTHEW:

Q. Continue, Mr. Sayre.

A. This was followed by correspondence, and in May the committee, of which Mr. Harvey Lindley was the chairman, came to Denver to call on me and endeavor to induce me to come out here to take charge of the marketing organization known as the California Sugar and White Pine Agency.

Q. About what time was that agency formed?

A. I think it was formed in February, immediately after I was here, and put in charge of Mr. Tinkham.

2885 Q. At which time did you become identified with the agency?

A. June 1901.

Q. In what capacity?

A. Manager.

Q. And what were your responsibilities as manager of that agency?

A. That of introducing California sugar and white pine to the eastern and northern markets.

Q. Later on was the name of the agency changed to California Sugar and White Pine Company?

A. It was incorporated along in 1904 or 1905.

Q. And you continued as manager?

A. Yes, sir.

Q. How long were you the manager of the agency or the successor company?

A. Up to, I believe, December 31, 1920.

Q. Was that agency formed by a number of the manufacturers of white and sugar pine in California?

A. Yes, sir.

Q. From the commencement of your employment with this company, Mr. Sayre, was California white pine, as we know it, advertised and introduced to the trade under that name?

A. Yes, sir.

Q. Or was it at any time sold or advertised under any other name to your knowledge?

A. No, sir.

2886 Q. Can you tell me approximately the volume of the California white pine lumber that was marketed through your agency, or company, while you were manager?

A. From 30 million, I think, in 1901, to a maximum of 85 million in any one year.

Mr. BURR. That is both types of lumber?

The WITNESS. Sugar pine and white pine. About a third of that was sugar and two thirds white pine.

By Mr. MATTHEW:

Q. You can't give us the segregation; that is, segregate the volume that was marketed during your period of connection?

A. No; I couldn't because I haven't access to the records now.

Q. When did you retire from that company, Mr. Sayre?

A. 1920; at the close of 1920.

Q. During that period of approximately twenty years continuously, you sold California white pine under that name and California sugar pine under that name?

A. Yes, sir.

Q. Were you equally interested in pressing the distribution of both kinds of lumber?

A. Certainly.

Q. Did you find that the sale or distribution of sugar-pine lumber was hampered in any respect because of the fact that California white pine was marketed under the name "California white

2887 pine"?

A. Not at all.

Q. Was the distribution of sugar pine limited in any sense by the utilization of the name, "California white pine"?

A. No, sir.

Q. Were the two lumbers well known to the trade?

A. Yes, sir.

Q. Was there any confusion between them?

A. None that I ever heard of.

Q. Do you recall of any complaint from your trade respecting the use of the name "California white pine"?

A. None whatever.

Q. Do you recall any complaint as to the durability of the lumber which was furnished under that name?

A. No, sir.

Q. Did you find that your trade was interested at all in the botanical classification of the trees from which the lumber was produced?

A. No, sir.

Q. Did you find that the trade was interested in the common names of the trees from which the lumber was produced; that is, the conventional names of trees in the woods?

A. No.

Q. Was their interest entirely in the quality and use of lumber?

A. Yes, sir.

2888 Q. Mr. Sayre, if the name "California white pine" were replaced by some name which suggested yellow pine, would it, in your opinion, tend to remove the confusion or create confusion?

A. Create confusion.

Q. Why?

A. Because it would immediately class it with yellow pine of the South, which is not the same character of wood.

Q. Is the California white pine in any material degree in competition with the yellow-pine lumber of the South?

A. No, sir.

Q. Does it find utility generally for the same purposes as yellow pine in the South?

A. No.

Q. Is it used generally for the same purposes as the old northern white pine?

A. Yes, sir.

Mr. MATTHEW. You may cross-examine.

Cross-examination by Mr. BURR:

Q. When you were manager of this agency you sold to what classes of buyers?

A. Principally in volume to the sash and door manufacturers.

Q. You sold some to wholesalers, did you?

A. Yes, sir; we sold to wholesalers.

2889 Q. You didn't sell to the retailers in the eastern trade, I suppose?

A. Well, we sold some retailers; not very many, because the volume wasn't there.

Q. Where were those retailers located?

A. We sold to the retailers in Denver, and one or two, as I recall it now, in New York and in Newark, N.J.

Q. Those were large buyers, were they?

A. Yes, sir.

Q. For retail buyers?

A. Yes, sir.

Q. And those located in Denver were men that you knew personally and thereby got direct access to?

A. Yes; and so were those in New York and New Jersey.

Q. Your residence was in Mont Claire at one time, I believe?

A. Yes, sir.

Q. They were people that you knew personally, were they?
A. Yes, sir.
Q. But, in general, you didn't sell to the retail trade, I take it?
A. No, sir.
Q. In your sales in the East the California white pine came into competition with the northern white pine, did it not?
A. Well, yes, and no. I wouldn't say it came very much in competition; there was so little of the northern white pine left that there wasn't much competion of it.
2890 Q. As a matter of fact, it is still sold in that market, isn't it?
A. Yes; I presume so.
Q. If anybody wants to pay the price they can get northern white pine if they don't ask for too big a width?
A. I guess so; I haven't been East for a number of years.
Q. Do you see the advertisements in the national trade journals?
A. No; I don't.
Q. As a matter of fact, during that period just prior to 1920 you probably kept in contact with the trade journals and the advertising, did you not?
A. Yes, sir.
Q. And the advertising of northern white pine was still being inserted in the papers—that is, they were pushing northern white pine in those markets—were they not?
A. Yes, sir.
Q. And your California white pine came in competition with it, didn't it?
A. Yes; I presume you would call it competition.
Q. It was sold at a cheaper price, wasn't it, than the northern?
A. Yes; I guess it was. I don't know what the northern prices were.
Q. In connection with your work on the Atlantic coast, you are familiar with the long-standing reputation of the northern white pine for its high qualities, weren't you?
2891 A. We knew it as Michigan white pine on the Atlantic coast.
Q. And you knew that was the same thing in species as had been sold in New England as the old Maine and northern white pine; that is true?
A. Yes, sir.
Q. You knew that that had a high reputation for durability and for various qualities, did you not?
A. Yes, sir.
Q. When you sold your California white pine back there, wasn't it some advantage to be able to call it California white pine, in view of the reputation that white pine had in that market?
A. Well, I didn't so consider it.
Q. You didn't?
A. No, sir.

Q. Why not?

A. Simply because I put it on the market as white pine because it was a white pine, so far as color and texture of it went.

Q. I believe you testified that you didn't want to call it yellow pine because that word "yellow" would associate it with the yellow pines of the South. Did I understand you correctly?

A. Yes, sir.

Q. Didn't the word "white" associate the lumber with the northern and Michigan white pine?

A. Associated color of the pine.

2892 Q. Well, didn't it associate it, as a matter of common thought, in the trade; didn't that associate it with the northern white pine and Michigan white pine, to call it "white" instead of calling it "yellow"?

A. Yes; I assume it would.

Q. You don't know, I don't suppose, how the wholesaler to whom you sold, or the few retailers to whom you sold—you don't know whether they called it "California white", or whether they called it just "white pine", do you?

A. I never asked any questions about that.

Q. If they actually sold it as white pine, instead of attaching the word "California", it would confuse with the northern and Michigan white pine, wouldn't it?

A. They might put it over in that way. I don't know.

Q. This word "white" in there would help them put it over, if it was invoiced to them as California white pine?

A. If they sold it as white pine without any "California" to it, but I know it was sold through the Tonawanda market as California white pine.

Q. Those wholesalers sent it to the retailers as California white pine, did they?

A. Yes, sir; those wholesalers.

Q. Did you advise those meetings that you attended to use the words "California white pine" in their eastern sales?

A. I don't think I advised it in any such way. I said it was a white pine, as far as I was concerned, and it went in the east-

2893 ern market.

Q. Did you advise them that it was advantageous to call it "California white pine" in the eastern markets?

A. I didn't advise them that it was advantageous to call it "white pine"; I told them they must not call it "yellow pine."

Q. For the reason that it would associate it with the yellow pines of the South?

A. Yes; the yellow pine of the South.

Q. And you can't recall whether you advised them to call it "California white pine"?

A. I didn't give them any advice on it; I wasn't asked for advice on that.

Mr. BURR. That is all, sir.

Redirect examination by Mr. MATTHEW:

Q. Did you ever have any complaints to the effect that California white pine was being furnished upon orders calling for the old northern white pine, or Michigan white pine?

A. No, sir.

Q. You never knew of any confusion in the trade in this respect?

A. No, sir.

Recross-examination by Mr. BURR:

Q. You didn't come in contact with the actual buyers of the
2894 wood at all, the ultimate consumer, did you?

A. Oh, my, yes.

Q. I mean the men who actually are putting up houses and that kind of thing.

A. Sash-and-door men were my biggest customers, and I knew them personally.

Q. I am talking about the fellow that puts up a house.

A. That is a very small portion of the white pine from this country; I didn't come in contact with the carpenter.

Q. You didn't come in contact with the men who buys the sash and door?

A. No; not the man who bought the sash and door.

Q. Do you happen to know how those sash-and-door men sold their sash and doors?

A. Pine sash and doors.

Mr. BURR. That is all.

Examiner DE BRULER. That is all.

(Witness excused.)

Mr. MATTHEW. I will call Mr. Wist.

EDWARD F. WIST was thereupon called as a witness and, after having been first duly sworn, testified as follows:

2895 Direct examination by Mr. MATTHEW:

Q. Please state your name and place of residence.

A. Edward F. Wist; residence, 1216 Bay Street, Alameda, California.

Q. What is your business or occupation?

A. Secretary-treasurer and general manager of the California Sugar and White Pine Company.

Q. How long have you been connected with that company, Mr. Wist?

A. Since 1901.

Q. And how long have you been its general manager?

A. Ever since 1925.

Q. What generally has been the nature of your responsibilities from the time that you entered the employ of the company in 1901 to date?

A. Well, looking after the sales, shipments, and placement of orders, and various positions in connection with the selling organization.

Q. Did you have any experience in the lumber business prior to the time when you become identified with the California Sugar and White Pine Company?

A. I was with the Sayre-Newton Lumber Company at Denver from 1896 to 1901.

Q. That was the company, the concern, to which Mr. Sayre has just testified to?

A. Yes, sir.

2896 Q. From 1901 to date have you been continuously connected with the sales end of the California Sugar and White Pine Company?

A. Yes, sir.

Q. I think Mr. Sayre has testified that that company was formed to market the lumber produced by various different manufacturers?

A. Yes, sir.

Q. Will you give the names of those manufacturers, Mr. Wist, as they are today? What companies now market their lumber through your California Sugar and White Pine Company?

A. It has a membership of the Hobart Estate Company, the Shaw-Bertrim Lumber Company, the Swayne Lumber Company, the California Fruit Exchange, the Spanish Peak Lumber Company, and the Penman Peak Lumber Company. I think those are all.

Q. I suppose, from time to time, the personnel of the companies for which you market lumber may change?

A. Yes, sir.

Q. Have you been equally interested in pushing the sale of sugar pine and California white pine, Mr. Wist?

A. Yes, sir.

Q. You are as anxious to sell sugar pine as California white pine, and vice versa?

A. Yes, sir.

Q. Will you state briefly where you find your markets for this lumber?

A. In the Eastern States, the Middle West, further east,

2897 and the Middle West. In fact, all over the world, as far as that is concerned; we ship abroad; we export lumber to all markets everywhere.

Q. Under what name do you advertise and invoice the lumber which we have here referred to as California white pine?

A. California white pine—our letter also shows that.

Q. Has that been the practice of your company during the entire period of your connection with it?

A. Always.

Q. And under what name do you advertise and invoice lumber which has been referred to as sugar pine?

A. Sugar pine.

Q. Have you ever advertised it, or marketed it, under a commercial name with the word "white" in it; sugar pine?

A. No, sir.

Q. Are there distinctions between the two lumbers well known?

A. Yes, sir.

Q. Have any of your customers complained to you of a confusion between California white pine and sugar pine?

A. Never.

Q. Can you tell us approximately the aggregate volume of the sales of lumber through your organization since the period of your connection with it, Mr. Wist?

A. Well, we have shipped, I should say, over a billion and a half of both sugar and white pine, and over a billion of white

2898 pine.

Q. Have you had any complaints from your customers as to the quality of the lumber which is furnished under the name "California white pine"?

A. No, sir.

Q. Any complaints as to durability?

A. None.

Q. Has there been any demand from any of your trade from a change from the present name of "California white pine"?

A. No.

Q. Does California white pine come into competition to any material extent with the southern yellow pines?

A. The California white pine comes into a different class of work entirely from southern yellow pine.

Q. For what purposes is California white pine primarily, or predominately, used?

A. Millwork and finish, sash and doors, moldings, siding.

Q. For what purposes is the southern yellow pine predominately used?

A. It is used more for common construction work, as we call it.

Q. Is California white pine in competition with the southern yellow pine?

A. No, sir.

Q. Is the California white pine in competition with the Idaho white pine?

2899 A. To some extent, I think it is.

Q. To what extent, if you know?

A. Well, they have either of the finish type, common boards; in that end of the product they do compete; but they do not produce much of the factory type of sash and door lumber—that is, shop lumber.

Q. Then you don't encounter material competition from the Idaho white pine in your factory or shop grades?

A. No, sir.

Q. When did you first become familiar with Idaho white pine as such?

A. I don't remember, probably five or ten years ago.

Q. When did you first have any knowledge of it being marketed in the East or Middle West?

A. Well, about the same time. I just saw it in the trade press.

Q. Were you marketing California white-pine lumber long before you heard of Idaho white pine?

A. Yes, sir.

Q. If the present term of "California white pine" were replaced by a name which suggests the southern yellow pine, either by actual name or otherwise, what would be the effect upon the trade, as far as possible confusion is concerned, Mr. Wist?

A. I think they would be greatly confused; they wouldn't know what it was unless the present name was continued. I think it is a very distinctive name; it identifies the wood—where it
2900 comes from. I think it is a popular term to use.

Q. Can you think of any other name that would appropriately describe this lumber in order to identify it to the trade?

A. No, sir.

Mr. BURR. I object to that.

Examiner DE BRULER. Objection overruled.

Mr. BURR. It is immaterial.

Mr. MATTHEW. I think it is very material.

Q. (By Mr. MATTHEW.) Mr. Wist, have you found at any time that the sale of sugar-pine lumber is prejudiced in any respect because of the fact that California white pine is marketed under the name "California white pine"?

A No, sir.

Mr. MATTHEW. You may cross-examine.

Cross-examination by Mr. BURR:

Q. Do I understand that your company does the actual invoicing?

A. Yes, sir.

Q. In other words, do you sell the entire product of all these concerns that you represent?

A. We sell the product of what we call no. 2 shop and better; the upper grades.

Q. But not the common?

A. Some common, but not a great deal.

2901 Q. And it is shipped direct from the company to whomever you designate as the buyer; is that right?

A. Yes, sir.

Q. To what class of customers do you sell, Mr. Wist?

A. We sell to the wholesaler, retailer, the factories, and also planing mills.

Q. Well, the factories and planing mills represent about how large a percentage of your sales?

A. The largest percentage, because it is the largest percent of the shop and factory grades.

Q. Would you say 60%?

A. Sixty percent, I would say.

Q. How much of the sales are to wholesalers, approximately?
A. Well, I don't know; probably 30%, I should say.
Q. And about 10% to retailers?
A. Probably a little more than that, about 15% to 25%.
Q. Say, 15% to 20%?
A. That is a rough estimate.
Q. Which of those other figures would you want to correct?
A. Well——
Q. (Interrupting.) You have got now about 110%, haven't you?
A. I didn't know that.
Q. You said 60%, I believe, to the planing mills, and to the shop——

A. (Interrupting.) You might say 60% to the planing
2902 mills and the other divided up equally between the retailer and wholesaler.

Q. Where are these retailers?
A. Where are they?
Q. Yes.
A. Well, all over the country, in the Eastern States, New York, Pennsylvania, Ohio, and the Western States.
Q. Do you come in contact with northern white pine and Idaho white pine through that entire territory, or don't you?
A. I understand that wood is offered in those territories, too.
Q. And the characteristics and qualities of those woods vary from those of California white and sugar pine, to some extent, do they?
A. I understand they do.
Q. They vary from California white pine rather more than they do from sugar pine, don't they?
A. Possibly.
Q. And do you sell for pattern purposes?
A. Yes, sir.
Q. What variety do you sell most of for pattern purposes?
A. Sugar pine mostly.
Q. Do you recommend California white pin efor those purposes?
A. Well, if they would like it we wouldn't recommend it, the white pine especially; we recommend the sugar pine.
Q. Do you know how your customers retail, or don't you come in contact with them?

2903 A. Our customers?
Q. Yes.

A. I do.
Q. I mean do you know how they retail, under what terms?
A. No.
Q. You don't know whether they sell it as California white pine or white pine, or how they do?
A. No. Our salesmen, representatives, would probably know.
Q. Which of the companies that you represent sells more sugar pine than it does California white pine, any of them?
A. None of them. The sugar pine is the smallest percentage.

Q. It is the smallest percentage?

A. Produced.

Q. Which of your concerns would sell as much as one third sugar pine?

A. The Swayne Lumber Company.

Q. Any others?

A. That is the only one that would have that percentage of sugar pine; the other would have a small percentage.

Q. How much would you say would be the percentage of sugar pine of your total sales of pine?

A. About one third.

Q. You just said that only one concerns would have 30%, didn't you?

A. An approximate figure.

2904 Q. Isn't 33⅓% too high for your total sales of sugar pine if one would run 30% and the others small?

A. Yes.

Q. What is the percentage at the present time, instead of 33⅓%?

A. Possibly 30% would be the extent at the present time.

Q. You testified that only one of them would run 30%?

A. Yes; that is what I mean.

Q. You said only one of them would run 30% and now you say the whole bunch will run about 30%. There must be some mistake.

A. You take the Spanish Peak Lumber Company, they have some sugar pine—it varies.

Q. Isn't your percentage of sugar pine too high for your total, the percentage of sugar pine to your total, isn't that too high?

A. Of our total, yes; our grand total. I thought you meant of the total of each mill.

Q. I did ask about that. I think you testified it was about 33⅓% of the aggregate of sugar pine; isn't that too high?

A. Of our mills, yes.

Q. How much would it run to, do you think, of your mills?

A. Well——

Q. (Interrupting.) As a matter of fact, it wouldn't run 20%, would it?

A. I would say 20% to 25%.

Q. You make a differential between the two products, don't you, sugar pine is higher?

2905 A. Yes, sir.

Q. Why is that?

A. Because the demand of the trade has become accustomed to paying more for it.

Q. It is better for certain purposes than California white pine?

A. Yes, sir.

Q. Besides pattern work, what varieties of utility is it better for than the California white pine?

A. It is better for piano-key stock, drain-board stock, and it is very well adapted for that, besides pattern work.

Q. Do you recommend it for outside finish, rather than California white, wouldn't you?

A. I don't know. I think either one would do, would be satisfactory for outside work. I don't think they use much of the sugar pine on account of the cost of it.

Q. But irrespective of cost, would you recommend the sugar pine?

A. I probably would.

Q. When you come in contact with Idaho white pine, and northern white pine, in competition, the word "white" in your California white pine product is a help to the sales, is it?

A. I presume it would help, but I never thought of it in that direction.

Q. You think it would be?

A. Possibly it would.

Mr. BURR. That is all.

2906 Mr. MATTHEW. That is all.

(Witness excused.)

Examiner DE BRULER. We will take a five-minute recess.

(Whereupon a five-minute recess was taken.)

Mr. WHEAT. I will call Mr. Dwight.

WARD A. DWIGHT was thereupon called as a witness, and after having been first duly sworn, testified as follows:

Direct examination by Mr. WHEAT:

Q. Mr. Dwight, you are engaged in the lumber business, are you?

A. Yes.

Q. Just what is your present occupation and what company are you employed by?

A. I am president of the Dwight Lumber Company in San Francisco, and president of the Big Lakes Box Company at Klamath Falls.

Q. The Big Lakes Box Company is one of the respondents in this hearing?

A. Yes.

Q. And how long have you been engaged in the lumber business?

A. About 30 years.

Q. Will you briefly, for the record, state your experience in the lumber work, just what that has been?

2907 A. About 1900 I started in a small way as a broker and commission dealer in lumber and box shooks.

Q. Where was that?

A. San Francisco. In 1903 we started the Montague Box and Lumber Company at Montague.

Q. That is in California?

A. Yes; northern California. In 1917 we started the Big Lakes Box Company at Klamath Falls, Oregon.

Q. And have you ever been interested or employed by any other lumber concerns?

A. I was only employed for a few months by the Charles Nelson Company, of this city.

Q. Throughout the other period of your experience you have been in business for yourself or in connection with other persons?

A. Yes.

Q. When did you first hear the term "California white pine"?

A. I can't say that definitely; when I began 30 years ago California white pine was the name of the lumber we are still handling.

Q. What lumber did you specialize in when you first began marketing lumber?

A. We specialized in the beginning in the handling of spruce, box shooks in particular, and douglas fir, or Oregon pine as it is generally known.

Q. What did you say douglas fir was generally known as?

A. Oregon pine.

2908 Q. And that was in the California market, was it?

A. Yes. When we started the Klamath Falls operation, from that time on we handled more and more white pine and less and less of anything else.

Q. Do you now produce sugar pine from your operation around Klamath Falls?

A. A small percentage.

Q. Are you now interested in any other sugar-pine production, exception the Big Lakes Box Company?

A. No.

Q. And your sales of lumber are very largely confined to California white pine, is that so?

A. Very largely.

Q. During your experience in the sale of these woods have you ever had brought to you any knowledge of any confusion between California white pine and sugar pine?

A. Never.

Q. Are these lumbers both well known to the trade?

A. Yes.

Q. Is the distinction between them well known to the trade in general?

A. Very well known.

Q. Have there every been any complaints to you regarding the name under which you market your Pinus ponderosa lumber, to California white pine?

2909 A. No.

Q. Have any complaints every come to you that a confusion exists because of that name?

A. No.

Q. Have you ever had any complaints regarding the durability of California white pine?

A. No.

Q. Are you aware of any demand from the trade for any change in the name of California white pine?

A. On the contrary, they don't want it changed, those we deal with.

Q. Do you find that the trade with which you deal is interested in the botany of this wood?

A. None whatsoever.

Q. What are they interested in, if anything?

A. The quality of the wood.

Q. And are they interested in the uses to which it may be put?

A. Yes; naturally.

Q. If the name "California white pine" were to be replaced with any name suggesting yellow pine, would or would not that create any confusion in the lumber trade?

A. I think it would.

Q. And why?

A. Because it would identify it with a wholely dissimilar product.

Q. Are you in competition, as far as you know, with south-
2910 ern yellow pine?

A. Not as far as we have been able to determine.

Q. Do you know whether or not southern yellow pine is used for similar uses to the California white pine?

A. Very seldom.

Q. And what are the general uses of southern yellow pine?

A. It is a structural lumber for heavy work.

Q. Do you know whether the California white pine is generally used for the purposes for which the old northern white pine is used?

A. I think it is.

Q. Can you think of any other name which would appropriately describe the wood now marketed as California white pine, or in its properties and qualities?

A. I have tried for a good many years to think of one and haven't been able to.

Q. Do you yourself, Mr. Dwight, come in contact with the people who purchase this lumber?

A. You mean the ultimate consumer?

Q. Well, who do you come in contact with?

A. We come in contact with the wholesaler in particular, and very largely with the planing mills, sash and door factories.

Q. Is it your opinion that if there were complaints to these people to whom you sell your wood, regarding the use of this name, that that complaint would come back to you?

A. I think ultimately it would come back to us.

2911 Q. Do you believe that California white pine, as you have sold it, goes into uses for which it is primarily adapted because of its mechanical properties?

A. Yes; I do.

Q. Do you believe that there would be any change in such uses if the name were to be changed?

A. Not at all.

Q. Why not?

A. Because it is the merit of the wood that sells it; it is not the name. It would take some time to change the name, to get it over, and it would be costly and eventually, as soon as the buyer was able to identify the product with the new name, it would go just the same.

Q. But it would be necessary, would it, to educate the trade, so to speak, to any new name which might be adopted?

A. It would take quite some time before it became generally well known.

Q. Is the sale of California white pine increasing or decreasing, eliminating for the moment the present market depression?

A. I think, on the whole, it is increasing.

Q. Can you tell me whether or not the name "California white pine" has, to your knowledge, been continuously applied to the wood of Pinus ponderosa from California during the entire period of your lumber business?

A. It has ever since I knew anything about it.

2912 Q. Have you ever known of any other name being applied to that wood from the California area?

A. No; I haven't.

Q. Have you ever known of sugar pine being marketed as white pine?

A. No.

Q. Or as California white pine?

A. No.

Mr. WHEAT. I think that is all. You may cross-examine.

Cross-examination by Mr. BURR:

Q. Mr. Dwight, in the testimony that you have given you had relation to your business in connection with the Big Lakes Box Company, had you?

A. Yes.

Q. Your testimony is in relation to the Big Lakes Box Company rather than the Dwight Lumber Company?

A. I may explain that the Big Lakes Box Company is the manufacturing department and the Dwight Lumber Company is the marketing department.

Q. They are merely your sales agency, are they, your sales subsidiary?

A. Yes; the Dwight Lumber Company markets the products of the Big Lakes Box Company. I am president of both companies.

Q. Now, Mr. Dwight, are you the principal executive for the Big Lakes Box Company?

2913 A. Yes.

Q. Are you the one who generally attends the meetings of the California White and Sugar Pine Association?

A. Yes.

Q. Do you recall receiving from that association a questionnaire in which this was asked——

Mr. WHEAT (interrupting). If any question is arising with reference to any actions on the part of the Association, of course, we shall have to object, as they are not parties here. I don't know what this question is going to be, however.

Mr. BURR. This is a question asked in the following terms, and I shan't object if counsel wishes to make a motion to strike on the ground that that motion is not timely, and let him see what we have.

By Mr. BURR:

Q. Do you recall this question being asked you: "Since the Federal Trade Commission has been requested to issue a cease and desist order against the use of the word 'white' in the trade name of 'California white pine' on the grounds that 'California white pine' is not a true white pine, do you wish to continue the name 'California white pine'?" Along about June 17, 1927, do you recall that question?

A. I think I do.

Mr. WHEAT. I desire to object to the question, first, because
2914 it relates to something which did or did not transpire in relation to this association, which is not a party to this case; and, second, because whether or not any person connected with that association might or might not have desired to retain this or that trade name has nothing to do with the question now before the Commission, which is whether or not unfair competition exists because of the use of that trade name.

Mr. BURR. Let me be heard. The reason I am asking that question is this: He has testified that no other name would do. Now, if he answered "no", as he will testify that he did, I think, that means that he has at one time at least held a different view than he now holds, namely, that he would be agreeable to some other name and didn't wish to continue the present name of California white pine. Therefore, it seems to me, it is absolutely and directly material in that matter as cross-examination.

Mr. WHEAT. Why don't you ask him directly those questions that you have mentioned to the examiner? I have no objection, if he has changed his mind, but I do object to anything about reference to that association, or any statement which any man may have made.

Examiner DE BRULER. Why don't you ask whether he has changed his mind on that?

Mr. BURR. It seems I must first have the fact that he knows that question, and it seems to me it is absolutely and correctly ma-
2915 terial. Here is a man who comes here and says that no other name will suit him. I want to prove that his company has answered differently on that very question.

Examiner DE BRULER. Has he answered that?

Mr. BURR. His company has.

Examiner DE BRULER. Objection sustained.

By Mr. BURR:

Q. Did you answer the question that was propounded, or did some other member of your company answer it?

Mr. WHEAT. I object again because it refers to the same document.

Examiner DE BRULER. You can answer whether you answered that or not.

The WITNESS. I think probably I did.

By Mr. BURR:

Q. Do you recall whether you answered "yes" or "no"?

Mr. WHEAT. If you have sustained my objection you certainly cannot allow this particular question as to the particular document which I have in mind.

Examiner DE BRULER. I sustained the objection on the ground that it was an association, but now he says he answered it himself.

Mr. WHEAT. Go ahead. I think this witness is able to take care of himself.

By Mr. BURR:

Q. Did you answer that "no"?

2916 A. I don't recollect.

Q. Do you recall being handed a copy of the circular of the association dated June 17, 1927, which I now hand you?

Mr. WHEAT. I shall now have to object again to any matters pertaining to circulars of this association. We are not dealing with this association here, Mr. Examiner, and any circular that may or may not have been put out is immaterial in this case.

Mr. BURR. If the examiner please, this is an association, and it would not be difficult to prove, and I think it is already in the record, is one which most of these gentlemen who are respondents here are members of, and I will ask——

Examiner DE BRULER (interrupting). Ask him what part he took in it. That is far as you can go.

By Mr. BURR:

Q. Do you recall that circular, sir?

Mr. WHEAT. You are not purporting to offer the circular?

Mr. BURR. No; I am using it to refresh his recollection.

Mr. WHEAT. That is all right.

Examiner DE BRULER. That is all I understood it was for, to refresh his recollection.

A. (Examining circular.) I don't recall this particular circular. We received many of them.

2917 By Mr. BURR:

Q. Yes; and I would like to ask if that serves to refresh your recollection as to your answer. You are listed there as having answered "No" to that question and the question itself is repeated, and I wish you would state whether or not you recall now answering "No" to that question?

A. It was not answered by me. It was answered by Mr. Voigt. I didn't notice that before.

Q. Who is Mr. Voigt?

A. He is our vice president and general manager at Klamath Falls.

Q. Do you remember his consulting with you on that subject?

A. No.

Q. The answer is listed on that document, is it?

A. Yes, sir.

Q. For your company?

A. For the Big Lakes Box Company it was answered "No."

Mr. WHEAT. I move to strike the question and answer out on the examiner's ruling that this matter can be used for anything that this witness may be asked, but whether or not it is listed as "Yes" or "No" is immaterial.

Examiner DE BRULER. Let it stand.

Mr. BURR. It is an admission on the part of his company.

Mr. WHEAT. If this matter is pressed as an admission on the part of this company in this case, then I must press my
2918 motion to strike this out. I think clearly that is immaterial in this matter and I think I am entitled to a ruling on that.

Mr. BURR. If it is true that his company answered "no", it is absolutely and directly an admission on the part of this company, this respondent. There is no question about that.

Examiner DE BRULER. He has answered, and it may stand and the exception allowed.

By Mr. BURR:

Q. Mr. Dwight, you sell to what classes of customers?

A. Very largely to wholesalers.

Q. And some to planing mills?

A. Sash and door factories, yes; wholesalers, sash and door factories are our principal trade.

Q. Practically your entire trade, is it not?

A. I should say the very large percentage of it.

Q. How large a percentage is other classes—that is, what are the other classes, pattern manufacturers?

A. We sell very little pattern lumber.

Q. You don't sell the retail trade at all?

A. Very, very seldom.

Q. You say that the word "yellow", if it were adopted for your product, would align you with the southern manufacturers of the hard yellow pines of the South, isn't that true?

A. I think it would have that tendency in the mind of the ultimate consumer, perhaps.

2919 Q. Well, now, the use of the word "white" helps to align you in the minds of the ultimate consumer with the northern white pine and the Idaho white pine, does it not?

A. I don't think so.

Q. By the same token, why wouldn't it?

A. Because white pine describes our lumber and yellow pine does not.

Q. It does help to align you with the white-pine group?

A. Yes; with the white-pine group.

Q. And that, if I understand you correctly, is where you think you belong in that respect?

A. I think so.

Q. That is one reason why you would like to continue the use of the word "white"; that is, it will continue to align you with the northern white pines?

A. No; that isn't the reason.

Q. What is the reason?

A. The reason is that the name is in general use and has been known for fifty years or more and adequately describes the lumber and tells the buyer what it is like, and the buyer is used to receiving it under that name.

Q. Don't you think you compete with Idaho white pine and northern white pine in these markets?

A. I presume so.

Q. Does it help you to sell in competition with those types of lumber to have the word "white" in there?

2920 A. I don't think it does, other than it is a name the buyer is accustomed to using and knows about it.

Q. That buyer has people come in and ask for white pine?

A. Probably.

Q. And in that case your California white pine can be sold as white pine more readily than if the word "white" wasn't in that name?

A. I don't think it is the name; it is the similarity of the wood that makes it possible.

Q. Doesn't that help, the similarity of the wood?

A. I don't see that it does. We can't tell what the retailer may resell anything for.

Q. You can't tell that?

A. No.

Q. Do you ever get commendation from the ultimate buyer, the home builder?

A. Very seldom.

Q. You never get any compliments or kicks?

A. If he kicks we probably get it back, because if he sends the lumber back to the retailer the retailer will probably tell the wholesaler and the wholesaler passes it back to us.

Q. If the complaint came several years afterwards it might not get back to you?

A. Probably not.

Mr. BURR. That is all.

2921 Redirect examination by Mr. WHEAT:

Q. Now, Mr. Dwight, did you ever answer to this association mentioned by Mr. Burr that you did not wish to continue the name "California white pine" for the Pinus ponderosa lumber which you produce?

A. I think not.

Q. Do you know whether or not your company ever answered this question in the negative?

A. I do not know that.

Mr. WHEAT. Then I will move that, under the examiner's ruling with reference to questions being asked this witness, that such matter be stricken out.

Mr. BURR. I think it is perfectly competent as an admission of that company.

Mr. WHEAT. The examiner ruled that he could be asked the question as to his own knowledge.

Examiner DE BRULER. I understand you to say that that is the answer of your company?

The WITNESS. I don't recollect that particular circular and I did not answer it. It is stated in there that a Mr. Voigt did answer it, and I don't know whether he did or not.

Mr. BURR. You have no real doubt but that the association correctly reported that, have you?

The WITNESS. I know nothing of it.

2922 Examiner DE BRULER. I think your motion to strike will be allowed, subject to your objection. It will remain in the record but subject to the exception.

Mr. BURR. All right.

Mr. WHEAT. That is all.

Examiner DE BRULER. We will take a recess until 2:00 o'clock p.m.

(Witness excused.)

(Whereupon at 12:00 noon a recess was taken until 2:00 o'clock p.m.)

2923 AFTER RECESS

2:00 P.M.

Examiner DE BRULER. If the parties are ready, we will proceed with the hearing.

Mr. BURR. Let the record show we now return to the Government's case, for the time being, to hear a further cross-examination of Frederick E. Weyerhaeuser, in accordance with the instructions contained in a telegram of Secretary Johnson, of the Commission, under date of December 31st.

Do you want that telegram in the record or not?

(Whereupon followed remarks off the record.)

Examiner DE BRULER. Mr. Weyerhaeuser will please take the stand.

F. E. WEYERHAEUSER resumed the stand and further testified, as follows:

Cross-examination (continued) by Mr. MATTHEW:

Q. Mr. Weyerhaeuser, at the time of your prior appearance on the witness stand I asked you certain questions respecting the commercial names under which your company offers to the trade lumber manufactured from the tree known as Douglas fir. Do you recall the inquiries along that line?

A. Yes; I think so.

Q. Now, may I ask you whether all of the lumber manu-
2924 factured by any of the companies in which you are interested, from this particular species of tree, is offered to the trade under a single commercial name?

A. So far as I know it is.

Q. Is all of it sold as Douglas fir; that is, by that name?

A. So far as I know.

Q. Do you not know that a considerable proportion of it is sold under the name of "Oregon pine"?

A. I do not.

Q. Have you an export trade in Douglas fir?

A. Not a direct export trade.

Q. Then you do not sell any Douglas fir lumber at Pacific ports in cargo lots?

A. It is sold, if I am correctly informed, through an agency. We don't sell it direct.

Q. Then you utilize the services of some agency in taking care of your export demands?

A. Yes, sir.

Q. Do you know whether your sales organizations, or your producing companies, receive orders under the name of Oregon pine, or Douglas fir, for this lumber which is sent to the export trade?

A. No; I do not.

Q. What is the agency through which you handle your export lumber?

A. I can't recall the name of it; it is a well-known agency.

2925 Q. It is not the Weyerhaeuser Sales Company?

A. No, sir.

Q. It is not any company in which you have any interest or control?

A. Well, I am not sure whether we have an interest in it or not. It is a subject which I know very little about, as I have had practically no contact with the export business.

Q. And you have no information at all as to the commercial name under which that lumber is exported?

A. No.

Q. Do you know whether any of the lumber manufactured by your companies from this particular tree which we have, for the moment, identified as Douglas fir, is sold under the name of red fir?

A. I think not, but——

Q. (Interrupting.) Did you ever hear——

A. (Interrupting.) May I answer that question? I am not sure I understood it.

(Whereupon the question referred to was read by the reporter.)

A. I think not, although I must say again, as I said before, that the detail of our business is too vast for my being familiar with all the details.

Q. Then, you never heard of a lumber bearing the commercial name red fir?

A. Yes; I have.

2926 Q. What is the extent of your familiarity with that term?

A. I have heard a great many discussions on the part of lumber men as to the difference between red fir and yellow fir. I have never heard an explanation that was satisfactory to me or at all convincing.

Q. Do you know the name red fir as the commercial name for lumber?

A. Yes.

Q. Do you know that any red fir lumber is produced in the Pacific Northwest?

A. Will you define the Pacific Northwest?

Q. I will include Oregon, Washington, Idaho, and western Montana.

A. Yes.

Q. Do you know whether it is yielded by a tree which is different botanically from the tree which yields Douglas fir lumber?

A. I don't know that it differs botanically.

Mr. BURR. If the examiner please, I think I neglected to say that this examination is subject to my exception.

Examiner DE BRULER. That is understood.

Mr. BURR. In accordance with the telegram which we did not read into the record.

Examiner DE BRULER. That is understood.

By Mr. MATTHEW:

Q. Is it your impression that they are one and the same tree?

Mr. BURR. If the examiner please, I rather object to asking

2927 for impressions. I don't think it adds anything of value to either side.

Examiner DE BRULER. He can answer the question. I think he can answer the question the best he can.

A. It is my impression that it is the same tree.

By Mr. MATTHEW:

Q. Are you able to specify the territory in which we find this red fir lumber produced?

A. It is produced in Idaho and in the Klamath Falls section and in a great many other places.

Q. Is it produced in what we commonly term the coast section where we find the typical Douglas fir, or the great bulk of Douglas fir?

A. It is rather difficult for me to explain. In the fir forest woodsmen will claim that one tree is a yellow fir and another tree is a red fir. But none of them can give any definite grounds for stating that one is a yellow fir and the other is a red fir.

Q. Is there any difference between the lumber yielded by the red fir and yellow fir, respectively?

A. In general the yellow fir is very old and produces a softer type of lumber than the trees which are called red fir; for the most part the red fir is a much younger tree than the tree that is called yellow fir.

Q. Then the red fir lumber is usually marketed separately from the Douglas fir lumber?

A. I think not.

2928 Q. Do you know that for many years there was quite a market for red fir in the Minneapolis area under that name?

A. Yes; there was.

Q. What was meant by red fir in the Minneapolis area at that time?

A. So far as I know it was the fir that was shipped from Idaho and principally from Idaho and Montana.

Q. Is there any change in conditions in the Minneapolis territory in that respect?

A. Not that I know of.

Mr. BURR. You are referring to market conditions, changes?

Mr. MATTHEW. Yes.

By Mr. MATTHEW:

Q. In other words, the term red fir in Minneapolis still means the fir which originates in what you describe as western Montana and Idaho, you say?

A. Yes.

Q. And some other place?

A. Well, the small tree grows in the Klamath Falls territory, but I am not familiar with all the producing plants of this section of the country.

Q. But the term red fir, in Minneapolis, does mean still the lumber manufactured or produced in western Montana and in Idaho?

A. Yes; so I understand.

2929 Q. It is not your understanding that the tree from which this lumber is produced is in fact a fir, is it?

A. I am not familiar particularly with the botanical terms, but I have heard it stated that the tree which we ordinarily call fir is not a true fir tree.

Q. You don't think that the botanical nomenclature of the tree is particularly important so far as naming the product of that tree is concerned, do you?

A. So far as the naming of that tree is concerned, I do not think it is important.

Q. So even if it should prove to be the fact that the tree from which Douglas fir lumber and red fir lumber are both obtained, is botanically, not a fir at all, but belongs to an entirely different genus, you wouldn't think that would call for a renaming of the lumber, would you?

A. I would not unless it was shown that the name of the lumber resulted in confusion and wastefulness.

Q. The question then is one of confusion and wastefulness and not merely of the botanical identification of the tree, or even of the common name of the tree of the forest, is it?

A. Not as to that wood.

Q. Or as to the wood of any other tree for that matter, isn't it?

A. Yes.

Q. As far as you know, no confusion is caused by the utilization of the term Douglas fir to describe the lumber which we have

2930 just been reviewing?

A. No, sir; as far as I know.

Q. No economic waste or anything else deterious to the lumber industry or to the consumer?

A. Not so far as I know.

Q. Nor is there objection of similar character to the use of the term red fir, as far as you know?

A. No.

Q. I think I asked you a preliminary question when you were on the stand previously respecting Port Orford cedar. I am not sure that I recall your response, but I think you did say that you are familiar with that term. Am I right in that?

A. I have heard the term.

Q. Do you know the lumber?

A. I do not.

Q. Of course, you do not know whether it is yielded by a tree which is botanically a cedar?

A. I do not.

Q. You do not know whether it is yielded by a tree which bears the common or colloquial name of a cedar, do you?

A. No; I know nothing about it.

Q. Do you know of any lumber marketed under the name of incense cedar?

A. I have merely heard of it; I know nothing about it.

Q. Do any of your companies produce incense cedar?

2931 A. Not so far as I know.

Q. Does your sales company deal in incense cedar, so far as you know?

A. I never heard of its doing so.

Q. Is it possible that it may deal in such lumber under some name other than incense cedar?

A. It is possible; but I think not.

Q. You know nothing about it?

A. No.

Q. Does your company, do any of your companies, produce western red cedar?

A. We manufacture cedar on the Pacific coast, which, I think, is called western cedar. I am not sure of the common name of it.

Q. You don't know whether the name of the lumber is western cedar or western red cedar?

A. I have always referred to it as cedar.

Q. Do you know whether it is yielded by a cedar tree?

A. I do not.

Q. You would again deem that immaterial so long as there is no confusion in the lumber trade?

A. So long as there is no confusion in the lumber trade and no harmful results to the ultimate consumer.

Q. Does your company manufacture or deal in any hemlock lumber?

A. Yes, sir.

Q. And what commercial names do you sell hemlock under?

2932 A. Hemlock.

Q. Is it known as mountain hemlock, or as western hemlock, or does it bear any name except hemlock?

A. The only name I know it by is hemlock.

Q. You don't distinguish between mountain hemlock and west coast hemlock?

A. I don't know the term mountain hemlock, what it means.

Q. Do you know there are different species of hemlock from which lumber is produced in the Pacific coast area and the intermountain area, respectively?

A. I do not know that there are different species.

Q. If there should be different species and the lumber yielded by the two species is substantially the same, the quality and utility, would you see any objection to mingling lumber from the two trees and selling it under a common commercial name?

A. That is purely an assumption.

Q. It is a hypothetical question, I will grant that; but upon that hypothesis, what would be your answer?

A. I don't think it is fair to ask that question without making a complete statement of the qualities.

Examiner De Bruler. Read the question.

(Whereupon the question referred to was read by the reporter.)

Examiner De Bruler. That refers to essentially the same lumber. Do you understand what he means? It is essentially

2933 the same lumber. Would there be objection to selling it under the same name?

The Witness. It would necessarily be the same species.

By Mr. Matthew:

Q. Assume, for the purpose of my question, that there are two different species, yet we find that the lumber yielded by the two

species is identical in appearance, quality, and utility. Would you see any objection to marketing all of this lumber under a single commercial name?

A. No; for under the definition they would be the same species.

Q. In my definition, Mr. Weyerhaeuser, they are different species, according to the botanists, and yet the lumber coming out of the two species is exactly the same, or apparently the same.

Examiner DE BRULER. You understand he means if the lumber is the same would it make any difference?

Mr. BURR. That is a thing that doesn't occur in the state of nature.

Examiner DE BRULER. He is assuming it.

Mr. MATTHEW. It is shown of record it occurs in the short leaf and longleaf yellow pine of the South.

Mr. BURR. No—that there is no difference in the lumber?

Mr. MATTHEW. I didn't say that.

Mr. BURR. Your question to him says identical.

The WITNESS. Of course, I can't admit that it is a

2934 physical possibility.

By Mr. MATTHEW:

Q. Let us assume——

Mr. BURR. I object to the assumption.

Examiner DE BRULER. Let him go ahead.

Mr. BURR. It is so clearly hypothetical and——

Examiner DE BRULER (interrupting). He can ask the question and he can answer if he can.

By Mr. MATTHEW:

Q. You can't make that assumption, is that the difficulty?

A. I don't think there could be such a situation that could exist.

Q. You can't assume a common type of lumber coming out of two different species of trees for the purpose of my question?

A. Not exactly the same; no, sir.

Q. Now, assume that the red fir and the yellow fir, which we discussed a few moments ago, are recognized by the botanists as being two distinct species, and yet that the lumber yielded from the trees of the two species is identical, would there be any objection in marketing that lumber from both species under a common commercial name?

A. That is the same kind of a question.

Q. Well, but it doesn't involve quite as difficult an assumption. Mr. Weyerhaeuser, you have spoken of the difficulties which you have had in understanding the differences between red fir and yellow fir?

2935 A. Yes.

Q. Now, please make my assumption hypothetical only, and then answer my question.

Mr. BURR. I object to it on the same ground.

Examiner DE BRULER. Objection overruled. He can answer if he can.

A. Well, I must answer on my knowledge of the two woods. I see no objection to marketing them under the same nomenclature.

Examiner DE BRULER. He has answered that.

By Mr. MATTHEW:

Q. Do you know that lumber from both the red and yellow fir is marketed as Douglas fir?

A. Yes.

Q. You see no objection to that?

A. No; I see no objection to it.

Q. Under what commercial name do you expect to market the fir lumber which will be milled at your plant at Klamath Falls?

A. Probably will call it red fir, but I am not sure as to that.

Q. You are not sure—why not call it douglas fir?

A. It has been our practice to call the fir that we have manufactured in the inland empire red fir and I suppose the name will carry over to the Klamath Falls as it is practically the same tree. I cannot see any difference between them.

Q. That is primarily because this inland type of tree yields a lumber that is somewhat different in appearance and quality
2936 than the lumber from the coast type, as I understand it?

A. I presume because it is a smaller tree.

Q. And the lumber is on the whole somewhat different for that reason?

A. Yes; there is a difference in the type.

Q. In the type of lumber?

A. Yes.

Q. Do you think that any confusion would result if the lumber manufactured at your Klamath Falls plant from the ponderosa tree were marketed under the name of Oregon yellow pine?

A. I think not.

Q. That would be quite an appropriate term for Pinus ponderosa lumber produced in that section, would it not?

A. I see no objection to that term.

Q. The lumber is produced in Oregon, and from a tree which is botanically yellow pine, and for those reasons you think the term would be appropriate, as I understand it?

A. Yes.

Q. Is it possible that any of that lumber marketed will go to southern California?

A. We have not begun marketing any, but I assume some of it will be sold in southern California.

Q. Do you think that the use of the term Oregon yellow pine in the southern California trade might result in confusion with lumber known in that area as Oregon pine, and which is in
2937 fact identical with what we have discussed as douglas fir?

A. I know nothing about the term Oregon pine. I have merely heard it and I do not know how extensively it is used.

Q. Don't you know, Mr. Weyerhaeuser, that for at least fifty years, and possibly seventy or seventy-five years, Oregon pine has been the prevailing name, throughout California at least, for lumber obtained from the Douglas fir tree?

A. I assume it has, but I don't know of it of my own knowledge.

Q. Then you don't know that when a customer goes into a retail yard in Los Angeles and asks for Oregon pine, or just pine, he will get this Douglas fir lumber?

A. No, I don't know that, sir.

Q. Well, if it should prove to be the fact that the term Oregon pine, in southern California, now means and for fifty years at least has meant, this Douglas fir lumber, would you not agree that the term Oregon yellow pine, as applied to Pinus ponderosa lumber, would create confusion in that market?

A. I think it would not if the term yellow were used.

Q. You don't see enough identity or similarity between the term Oregon pine and the Oregon yellow pine to produce confusion?

A. I think the term yellow pine is very commonly known over the west.

Q. The term yellow pine?

A. Yellow pine.

A. Yes. Yellow pine, for at least designating a certain tree.

2938 Q. I am talking about lumber now. We are talking about The Los Angeles lumber trade. I am assuming that the people down there never saw a yellow pine, for the moment.

A. I don't think it would.

Q. You see no confusion?

A. No.

Q. Well, when you say absolutely no confusion, that is a very positive statement.

A. I see no occasion for confusion enough to be considered.

Q. At least you are quite satisfied there would not be utter chaos in the lumber markets down there if such a name were used to describe ponderosa lumber from the Klamath Falls district?

A. No, I think not.

Q. Is it likely that the use of the term Oregon yellow pine, to describe this lumber, and to introduce it into the Los Angeles trade, might cause confusion with the yellow pine lumber of the Southern States?

A. I don't understand that any yellow pine lumber from the Southern States is sold in California.

Q. You were not here, I take it, when a certain lumber man from Los Angeles testified in this case that rather considerable quantities of southern yellow pine lumber are now coming into the Los Angeles markets by vessel through the canal?

A. No; I wasn't here. I didn't hear that.

Q. May I state that there is such testimony. And, assum-

2939 ing that to be the fact, would you recognize the possibility of confusion in the Los Angeles markets through the use of the

term Oregon yellow pine to describe ponderosa lumber from the Klamath Falls district?

A. Before I answer that may I ask what kind of yellow pine is being shipped into the Los Angeles market?

Q. I can't pretend to recall the testimony exactly. Counsel will correct me if he thinks I am wrong. I think the testimony is merely to the effect that the southern yellow pine lumber, which is used primarily for structural purposes, is coming in in substantial quantities in that market.

Mr. BURR. I think it is practically the typical longleaf pine. That would be typical southern yellow pine, longleaf.

Mr. MATTHEW. I think counsel and I are agreed.

Mr. BURR. There was such testimony, I will concede that.

The WITNESS. I think there would be no serious confusion.

By Mr. MATTHEW:

Q. And if a customer came to a Los Angeles retailer and asked just for yellow pine lumber, you think there might be doubt in the dealer's mind as to whether he meant southern yellow pine lumber or Oregon yellow pine lumber.

A. There might me, probably would be.

2940 Q. Do you know whether the northern white pine lumber, that is, lumber yielded by the Pinus strobus, is marketed to any substantial extent in southern California?

A. Certainly is not.

Q. As far as you know there is practically none finding a market in that territory, is there?

A. There may be an occasional car, but I don't know of it.

Q. Considerable quantities of lumber produced from Pinus ponderosa trees are now being marketed in the Southern States, are there not?

A. I don't know that there are.

Q. Don't you know there is quite a market for what we term California white pine, and what you term up in the inland empire, pondosa pine, are being marketed in Texas, particularly in recent years?

A. Not to my knowledge.

Q. You are not familiar with any comparatively recent revision of the railroad rate structure involving the rates from the northwestern mills into Texas in order to stimulate the flow of northwestern lumber into that territory?

A. Yes; I am familiar with it, and a considerable amount of fir has moved into that territory, but I have no information that any considerable amount of pondosa has, but I may be mistaken.

Q. Does the fir lumber come into competition with the southern yellow pine?

2941 A. It comes into competition with the longleaf yellow pine.

Q. It is used for similar purposes to that extent?

A. Yes.

Q. Structural purposes, we may say?
A. Yes.
Q. Is the common term dimension stock?
A. Dimension and timber.
Q. Do you know whether the California white-pine lumber is competing with the longleaf yellow pine lumber of the South to any material extent?
A. No; not that I know of. Maybe I didn't answer the question. Will you read the question?
(Whereupon the question referred to was read by the reporter.)
The WITNESS. May I ask in what territory?

By Mr. MATTHEW:

Q. Well, say in the Southern States to start with. I think you said you knew of no movement down there. Take any common market, Chicago, if you will.
A. They are not very active competitors, one wood being rather the complement to the other, for many uses.
Q. Explain that—one being the complement of the other?
A. Well, the longleaf is used more particularly for timbers and dimension; so-called "California white pine" is used for inferior trim and paneling, and things of that kind. There is competi-
2942 tion between all woods.
Q. But then to a negligible extent in the case of these two woods, you say that one is largely the complement of the other?
A. Yes.
Q. Then it is desirable, is it not, Mr. Weyerhaeuser, from a point of view of your own philosophy of this proceeding, that lumber yielded from the ponderosa tree in California shall be so designated that it shall not be confused in any respect with the longleaf yellow pine lumber of the South?
A. Yes; I think so. The longleaf yellow pine from the South is sold as longleaf yellow pine, which designates it very definitely.
Q. Is it always sold under the name of longleaf yellow pine?
A. I can't answer that question.
Q. Isn't it very frequently sold just as southern pine?
A. I have already stated that while we manufacture longleaf pine I am not connected with the management of the company and so I am not very familiar with the subject, but as far as I know it is designated as longleaf yellow pine, whereas the Arkansas pine is now designated as Arkansas soft pine.
Q. We are concerned about this ultimate consumer. Let's get away from the mill, and away from the wholesale, if you please, and actually into the hands of the retailer or the consumer. And at that point isn't it a very uncommon thing to use the term yellow pine to express the longleaf yellow pine lumber of
2943 the South? Isn't that what that term means in a great many markets throughout the Middle West and East?
A. I don't think that you can say the term yellow pine means longleaf as distinguished from shortleaf; no, sir.

Q. Isn't the term yellow pine, without any qualifying term, frequently used upon orders for longleaf yellow pine?

A. I don't think I can answer that of my own knowledge.

Q. Do you think it would be a desirable thing for the lumber industry, and for the consumer, in the respects which have been covered by your testimony, if our ponderosa lumber from California were introduced to the trade under the name of California yellow pine?

The WITNESS. What is the question?

(Whereupon the question was read by the reporter.)

A. That question is very indefinite.

By Mr. MATTHEW:

Q. I can make it more definite and——

Examiner DE BRULER. It seems to be quite definite. Read the question.

(Whereupon the question was read by the reporter.)

A. I see no objection to it; there may be a better term.

By Mr. MATTHEW:

Q. You would rather call it pondosa pine, wouldn't you?

A. Yes, because that would include under one term all of the ponderosa lumber manufactured.

2944 Q. And serves to identify our lumber with the lumber which is obtained from the ponderosa pine mills of the Northwest?

A. Yes.

Q. Now, assuming that we would not in any event pass to the term pondosa pine, and that the question is, shall we adopt the term California yellow pine, it is your testimony, as I understand it, that there is nothing undesirable in the use of that term to describe our lumber, the lumber originating in California, and it comes from a tree which is classified botanically as a yellow pine—there is no objection, according to your testimony, to employing the term California yellow pine under which to introduce this lumber to the trade?

A. I see no objection.

Q. Now, Mr. Weyerhaeuser, notwithstanding that you have testified specifically that this California lumber from the ponderosa tree is not essentially competitive with the longleaf yellow pine lumber of the South, but that the two lumbers are practically complementary in character, you yet insist that there is no objection to the use of commercial names for these two lumbers which shall identify each as yellow pine lumber, is that your testimony?

A. Yes, because the longleaf pine is so designated, easily designated, and the short leaf pine, which is very similar to this ponderosa, very similar in its sapwood, is called Arkansas short leaf

2945 so that if this were called California yellow pine I think the matter of nomenclature of the yellow pines would be pretty clearly fixed.

Q. Would you want to get the ponderosa pine lumber into the yellow pine group?

A. Yes.

Q. Why didn't you adopt the name for your northwestern ponderosa pine which had the word "yellow" in it.

A. Well, if I remember correctly at the time we adopted the term western soft pine and that seemed to distinguish it from the yellow pines of the South. I should not have objected to the term western yellow pine myself.

Q. You didn't think there would be any advantage in trying to distinguish it from the yellow pine lumbers of the South?

A. Not particularly as to shortleaf. There is a marked difference between it and the longleaf.

Q. Aren't you quite certain, Mr. Weyerhaeuser, that you are unwilling to use the word "yellow" in the commercial name for your ponderosa pine lumber because of possible confusion with the yellow pine lumbers of the South? Wasn't that one of your objectives to avoid that confusion?

A. Well, it may have been. I don't remember. That was some years ago. I don't remember the discussion, but we arrived at the conclusion that western soft pine was the proper name and properly described the wood.

Q. Instead of using the term western soft pine, you called
2946 it pondosa pine?

A. We have changed. At first we adopted the name western soft pine. I think the Western Pine Association adopted the name pondosa and we also adopted it.

Q. Do any of your producing companies belong to the Western Pine Association?

A. Not now.

Q. When did your companies withdraw?

A. Several years ago. I can't fix the date. If it is important I can get it for you.

Q. No, if you can't recall. Did you participate in any of the discussions which preceded the coinage of this happy term, pondosa pine?

A. Do you mean at the discussions which resulted in the adoption of the name pondosa?

Q. Yes.

A. No; I was not at any such conference.

Q. The name was coined before you knew anything about it?

A. It was.

Q. Did you participate in any discussion on the part of the executives of the Weyerhaeuser companies which preceded the replacement of the term western soft pine, by the term pondosa pine?

A. I don't remember; I suspect I did.

Q. You don't recall any discussion of whether the word
2947 "yellow" would be avoided in any commercial name which you should adopt for your lumber?

A. No, sir; I do not have any such recollection.

Q. Mr. Weyerhaeuser, if the Pinus ponderosa tree were classified by botanists as a white pine tree—that is, belonging in the group which we recognize as the white pine group—would you see any objection to characterizing the lumber as California white pine?

A. I would.

Q. Even if our tree were botanically in the white pine group you would still see objection to our terming the lumber California white pine?

A. I think I would withdraw that, as to calling it California white pine, so long as the term were used which would permanently differentiate it from the white pines whose reputation had been established over the centuries.

Q. And the term "California" is sufficiently distinctive, or distinguishes it for that purpose, does it not?

A. No; I think not. But again you give me a supposition which is impossible. If it were a white pine I think you could not object to the term white pine in describing it, provided there were added to the name something which clearly distinguished it from the white pines of long reputation.

Q. I want to be sure that I get your mature view on that point. We are assuming, for the purpose of my question, that Pinus ponderosa is thrown by botanists in the group of white pines.
2948 In that event you would feel that you would have no objection to the marketing of the lumber from that tree under the term of California white pine?

A. We would probably have an objection, but I am afraid our objection would be weak if the tree truly were a white pine, but again that would be an impossibility. You are asking me a question which is beyond the realm of possibility.

Q. Irrespective of the quality, appearance, or utility of the lumber, you would recognize that we could use the term California white pine to describe our lumber if, in truth, we had a tree which is botanically a true white pine?

A. You certainly would have a very good argument for calling it white pine if it were a white pine, providing you differentiated it.

Q. Then, your answer is "Yes", as I understand that—you would see no objection to our using the term California white pine, no valid objection?

A. We would have an objection.

Examiner De Bruler. I think he has answered that.

Mr. Matthew. He has qualified it each time.

Examiner De Bruler. You are assuming something that is not true, that is not a fact, and you are assuming that the botanists do classify it as a white pine.

Mr. Matthew. Yes; of course, it comes right around to this:
2949 It simply shows the emphasis being placed solely on the botanical criterion and I want to make it clear of record. I have a purpose in doing so.

I will pass to slightly a different phase.

By Mr. MATTHEW:

Q. If the commercial name, California white pine, as now used, were to be abandoned could you see any objection, from the point of view of the lumber industry, or the customer or consumer, if the sugar pine producers were to adopt the name California white pine for their product?

A. Understanding, of course, as I have testified before, that I know little if anything about sugar pine, but if the reputation of sugar pine is established as being a wood of like qualities with white pine, then I see no objection to it.

Q. Suppose that the reputation of sugar pine should be markedly inferior to the reputation of the old northern white pine, and even to the reputation of Idaho white pine——

Mr. BURR (interrupting). If the examiner please, let me interpose an objection. I think we have been patient on this. When we got to the pines he got to a point where he had already examined this witness. This witness wasn't recalled to go into the pines, because those questions were not barred before, and it seems to me, for counsel to rehash the whole topic the same as has been true for the last three quarters of an hour that——

2950 Examiner DE BRULER (interrupting). I don't like to restrict him.

Mr. BURR. It seems that counsel is unduly trespassing by the fact that this witness was recalled for a specific purpose, that is, for examination along the line that was debarred before by the ruling of the examiner.

Examiner DE BRULER. Proceed with the cross-examination.

By Mr. MATTHEW:

Q. I will reframe my question. Assuming the repute of sugar pine lumber is seriously inferior to the repute of northern pine lumber and of Idaho white pine lumber, and recognizing that the sugar pine tree is botanically a true white pine, can you see any objection today, from the point of view of the lumber industry, the customer or the consumer, to the adoption of the term California white pine by sugar pine manufacturers?

A. Yes.

Q. And what?

A. Yes, if the wood were an inferior wood, I think the white pine manufacturers would object; but if it were a true white pine, I think the case would be weakened by that fact, and perhaps the Commission would permit them to use the term white pine, with some other qualification clearly differentiated from white pine, which clearly made it possible to distinguish the qualities of white pine from those of this new supposition.

Q. Now, you are passing to quality.

A. I have always had quality in all of my definitions.

Q. A moment ago you stressed the botanical differentiation.

2951 A. Well, perhaps your question was such that made me. I don't remember.

Mr. BURR. If the examiner please, I think that is rather unfair, because botanical distinction includes the quality of the wood product.

Mr. MATTHEW. Botanical distinctions do not determine quality.

Mr. BURR. They do—in every book you can find.

Examiner DE BRULER. Proceed with the cross-examination.

Mr. MATTHEW. I think we have a little confusion left in the record. If counsel will bear, I am nearly through. I shan't trespass very much further on your patience, but I want to pursue for a moment this question of proper commercial nomenclature of the lumber from the California pines.

By Mr. MATTHEW:

Q. I understand you to testify that with respect to the lumber which we know today as "sugar pine" and which you recognize as coming from a tree which is botanically a true white pine, you would question the right to the use of the term "California white pine" if the wood was in fact inferior to the wood of the northern white pine?

A. If I remember correctly, I stated we probably would object, but I thought our case would be very much weaker because of the wood being a true white pine.

Examiner DE BRULER. That was his answer.

2952 By Mr. MATTHEW:

Q. Let me come back to the question which I, in fact, asked you a moment ago but unconsciously I think you did not answer. I am asking you if you see any objection, from the point of view of the lumber industry, the customer, or the consumer. Now, I take it, that your answer which you previously have given reflects your views as a producer and marketer of lumber. Now, let's take the purchaser of lumber in the Middle West or in the East. Do you think he would have any grievance if the term "California white pine" were hereafter to be employed to designate what has for fifty years or more been known as "sugar pine"?

A. No, I think he would not.

Q. You can't see any confusion in the lumber trade in the East hereafter if the term "California white pine" means sugar pine lumber?

A. Why, certainly there would be confusion for a brief period of time until the term became known. I didn't suppose you meant immediate confusion. I thought you meant over a period of time.

Q. Then you think there would be some immediate confusion?

A. Why, certainly.

Q. And some immediate confusion on the part of the consumers of lumber as well who have come to know California white pine as it is marketed today?

A. Possibly, but I think that there would be very little confusion there.

2953 Q. That is because the consumers know comparatively little about what lumber may be in any event?

A. Some do and some don't.

Q. On the whole, they don't know much about it, do they?

A. I think that is so, on the whole.

Q. Do you know that some lumber from the Pinus ponderosa tree is manufactured in Arizona and in New Mexico, do you not?

A. Well, I have seen advertisements of lumber purported to have come from that territory. I have never seen the lumber milled or been in the territory.

Q. Assuming that such lumber is manufactured in those two States from Pinus ponderosa trees, do you think it would be appropriate to designate the lumber as southern yello pine?

A. I really know nothing about the lumber or the tree, so I don't think I am qualified to answer that question.

Q. Let's identify it as the same ponderosa which has this great range from Canada down into Mexico, which has been the subject of considerable testimony in this case, and the tree which is classified botanically as a yellow pine. We have that tree in Arizona and New Mexico. Can we appropriately call the lumber yielded by that tree southern yellow pine?

A. Well, it very closely resembles Arkansas short leaf. From that point I view I can see no particular objection to it.

Q. The Arkansas short leaf is commonly called Arkansas soft pine, as I understand it?

2954 A. That is a recent—comparatively recent trade name; yes, sir.

Q. And it is quite distinctively known by that trade name?

A. It is becoming so.

Q. The bulk of the short-leaf-pine lumber from the South is marketed under a name which is quite different from the term Arkansas soft pine. It is called short-leaf pine, is it not?

A. Well, I think the term now used generally is Arkansas soft pine.

Q. For all of the short-leaf-pine lumber of the Southern States?

A. No, no; I am not familiar with the short-leaf lumber that grows along the Atlantic seaboard. I don't know how that is marketed and I know nothing about the trees.

Q. What I am trying to get at, very frankly, Mr. Weyerhaeuser, is this, and then I am through: Is the term "Arkansas soft pine" restricted to the short-leaf-pine lumber coming from the State of Arkansas?

A. Well, I can't answer that question. There is a belt of timber which is called short-leaf pine which covers pretty much the State of Arkansas and a fringe in each one of the neighboring States. It runs up into Missouri, runs over into Oklahoma, and it runs into Louisiana and possibly over into Mississippi. I have traveled through that country, but I haven't been through all these operations and I couldn't tell you; but the great bulk of the timber, so far as my knowledge goes, is within the State of Arkansas?

2955 Q. Would you think it appropriate to use the term "Arkansas soft pine" to designate the lumber which comes from this timber belt which you have just described as spreading over into the adjoining and neighboring States?

A. If the timber were identical in quality and in species, and were the same as the reputed qualities of Arkansas pine, I could see no objection to it.

Q. I am assuming that. Assume these conditions and upon those conditions you see no objection to the term "Arkansas soft pine" covering all of that lumber?

A. No.

Redirect examination (continued) by Mr. BURR:

Q. Do you know of any confusion of douglas fir with other species known as firs?

A. I do not.

Q. You deal very largely in douglas fir, so called, your companies, do they not?

A. Very largely; yes.

Examiner DE BRULER. I think you have gone into that far enough.

Mr. BURR. You have allowed an unbridled cross-examination for the second time, and I certainly shall insist on a fair redirect
2956 examination of this witness. It seems to me that the examiner desires to curtail the record and bears his brunt down upon me, rather than opposing counsel, and I submit that there has been a long and exhaustive examination here, and you are certainly not going to curtail me on redirect.

Examiner DE BRULER. Go ahead. I hope you will not make it too long.

Mr. BURR. I will not. I thank you for the admonition.

By Mr. BURR:

Q. Do you deal more largely in douglas fir than any other one variety of wood?

A. We do.

Q. Now, in all your experience, have you ever had a complaint as to the confusion of douglas fir with the so-called genuine fir varieties?

A. I never have.

Q. Or with any other wood?

A. Never have.

Q. You were examined with respect to other supposed misnomers, or alleged misnomers, on the part of opposing counsel. Have you ever had any complaints or any expressed information as to misnomers, as to confusion, in those other varieties due to those supposed misnomers?

Examiner DE BRULER. You refer to the varieties that you mentioned?

Mr. BURR. Yes; I am referring to Port Orford cedar and
2957 other varieties that were mentioned in the cross-examination.

Examiner DE BRULER. You are not trying to broaden it any?

Mr. BURR. Not at all. I am referring to the testimony this afternoon on cross-examination.

The WITNESS. Except as to the case under consideration, I have never heard a criticism resulting that purported to grow out of confusion of nomenclature.

By Mr. BURR:

Q. By the case under consideration you mean the misnomers so alleged in the complaint?

A. I do.

Q. Of the California white pine, or the other white pine, made from the Pinus ponderosa tree?

A. Yes.

Q. You are coming upon the market with your Klamath Falls ponderosa lumber, are you?

A. We are.

Q. Do you know whether any of it has as yet been sold?

A. In small quantities.

Q. It is just beginning to come in, is it?

A. It is.

Q. That is one of your largest mills, is it?

A. It is one of the larger mills. I wouldn't say it is one of the largest.

2958 Q. Are you planning to call it Oregon yellow pine?

A. No.

Q. What do you expect to call it?

A. Pondosa.

Q. Then all the questions about the possibility of naming it Oregon yellow pine is purely hypothetical, is it?

A. It is.

Q. Is there any sugar pine in your territory tributary to Klamath Falls?

A. Yes; there is a sprinkling of sugar pine, considerable quantities in some places.

Q. Are you planning at all to call that California white pine?

A. I don't know that I have heard any discussion of that point. I think there is—no doubt we will call it sugar pine.

Q. Is the term "sugar pine" one which has been used for a long time with respect to that type of lumber, do you know?

A. So far as I know it has for a long time.

Q. Do you regard it as a distinctive name for that type of lumber?

A. I do.

Q. Do you see any advantage in calling it California white pine under those conditions?

A. In whose interest, may I ask?
Q. In the interest of selling the lumber.
A. Of selling the sugar pine?
Q. Yes.
2959 A. No; I see none there.
Q. Have you had any discussion with the sugar-pine manufacturers with regard to the possibility of changing the name of sugar pine to California white pine?
A. I have not.
Q. Have you had any with any other members of your organization, looking up to the possibility of changing that name?
A. No.
Q. Is Pinus ponderosa in competition with Arkansas soft pine, as distinguished from the typical southern pines of the harder description?
A. It is more so in competition.
Q. Do you know whether sash and door and exterior trim are made out of Arkansas soft pine?
A. They are.
Q. Would you see any objection to the designation of ponderosa from various different sections, as Klamath pondosa, inland empire pondosa, Spokane pondosa, or anything of that kind; would you see any objection to differentiation of them with different qualities from different localities?
A. May I ask whether you mean the ordinary differences that exist in the variety, or if they were markedly different?
Q. Let me withdraw that for the moment. There are differences in different localities as to the qualities and characteristics of the lumber made from Pinus ponderosa trees, are there?
2960 A. Yes.
Q. Now, your Klamath Falls pondosa, or rather the lumber from Klamath Falls made of that particular species, has a great deal of good will in the market, has it, as coming from the Klamath Falls section?
A. It certainly has some.
Q. Do you think it would be a proper nomenclature for manufacturers, selling pondosa from the Klamath Falls section, to designate it Klamath pondosa?
A. Why, I see no reason why they shouldn't do so, but it would be, in my opinion, very poor merchandising of pondosa pine. The mere fact that a wood moves in great volume, just as fir is sweeping over the country, makes no difference, in my judgment, what they call fir; it is sweeping over the country, and it will be used, no matter what name they give it, and the same way, as a matter of merchandising, the lumber from the ponderosa tree. I think it will be excellent merchandising who manufacture that lumber to agree

on one name and have a wood that is also sweeping over the country, as fir is.

(Stricken from the record), see p. 2961.

Mr. MATTHEW. I don't think counsel will contend that that answer is altogether responsive.

Mr. BURR. I will not object to a motion to strike.

Mr. MATTHEW. My motion is to strike that part of it which goes to his expression of judgment as to how desirable it would be to have the term "pondosa" adopted by all the manufacturers
2961 of lumber from this tree.

Mr. BURR. I will not oppose the motion if the answer is stri'ken entirely.

Examiner DE BRULER. It is stri'ken.

By Mr. BURR:

Q. Now, assuming for the purpose of your answer, that pondosa in different localities varies widely, do you see any objection to coupling with the word "pondosa" the name of the concern manufacturing it, for example, Shevlin-Hixon pondosa, or Klamath pondosa, or other names that would be distinctive of the company or distinctive of the locality?

Mr. MATTHEW. May I object to that on the ground that it is absolutely immaterial.

Examiner DE BRULER. Objection sustained.

Mr. BURR. Opposing counsel has gone down the line with one after another of hypothetical questions and it seems I might be allowed one.

Examiner DE BRULER. I think it is going too far.

Mr. BURR. I think it already went too far, under my former objection, and that was the time, if the examiner please, to cut out this kind of hypothetical questions.

Examiner DE BRULER. He was cross-examining under direction of the Commission and he was allowed to go the full limit under this cross-examination.

Mr. BURR. He certainly was. It seems to me it would
2962 necessitate a similar ruling on redirect.

Examiner DE BRULER. Objection sustained.

By Mr. BURR:

Q. I believe you have testified that if Pinus ponderosa had been a genuine white pine, or by some chemical alchemy it became a genuine white pine at some future time, that you wouldn't object to its being called a white pine. Is that my understanding of your recross-examination this afternoon? That if botanically it was a white pine that you wouldn't object to it being called a white pine?

A. I think I said we might object, but I didn't think our objection would be as strong.

Examiner DE BRULER. He has answered that to my knowledge three different times. I think it is correct.

Mr. BURR. It is a foundation question, if the examiner please.

By Mr. BURR:

Q. Now, is it your understanding that the term "white pine" as including a group of pines, includes the characteristics as lumber of that group of pines?

A. Yes.

Q. That also is used by botanists in connection with the term "white pine", is it not?

A. Yes.

Mr. MATTHEW. I object on the ground that it is not
2963 proper cross and the witness isn't qualified to answer as to what botanists do in classifying pines. He disclaimed knowledge on that.

Mr. BURR. If the examiner please, this witness must know something about botany for the very reason that a great many of counsel's questions were predicated on that knowledge.

Examiner DE BRULER. You can answer that if you have the knowledge, Mr. Weyerhaeuser.

A. I have been told that botanists consider the quality of the wood in the designation of it botanically.

Mr. MATTHEW. I interposed an objection on the ground that, first, it was improper cross-examination; second, that the witness wasn't qualified to testify as to what botanists included in making this botanical nomenclature, and I press the objection and I move to strike the answer.

Mr. BURR. If the examiner please, when opposing counsel said that if the botanical relation were such as to place this among the white pines, that so-and-so and so-and-so would be the effect, that presupposes that this witness has some concept of what the botanical distinctions are.

Mr. MATTHEW. Not at all.

Examiner DE BRULER. He may answer that one question. Read it to him.

Mr. BURR. He has already answered.

Mr. MATTHEW. I move to strike it out.

2964 Examiner DE BRULER. I will overrule the objection.

Mr. MATTHEW. He has already answered and I move to strike the answer and, likewise, because it is indefinite.

Examiner DE BRULER. The motion is denied and exception allowed.

By Mr. BURR:

Q. And you testimony was based on that supposition, was it?

A. Yes.

Mr. BURR. That is all, sir.

Rerecross-examination by Mr. MATTHEW:

Q. You say your answers to my queries as to the botanical designation of these pines were predicated upon the assumption or understanding that botanists included the quality of the wood in the tree in the determination of botanical nomenclature?

A. Yes; I have heard that they do.

Q. If you happen to be wrong in that assumption, would your answers to my queries differ?

Mr. BURR. If the examiner please, that is an unfair question because the record already shows, by several experts, that they do include the characteristics of the wood. Why ask the question contrary to fact?

Examiner DE BRULER. It seems to me, Mr. Matthew——

Mr. MATTHEW (interrupting). Just a moment! The expert
2965 testimony is definite to the effect, as I recall it, and I believe without conflict, that in the making of the botanical nomenclature botanists do not consider the cha acteristics of the wood.

Mr. BURR. If the examiner please, that is directly contrary to my understanding and the testimony shows that they consider, first, the floral distinction——

Examiner DE BRULER (interrupting). I think this has gone far enough. It seems to me, Mr. Matthew, that you have brought it all out.

Mr. MATTHEW. Then let's get at it another way. I think I can safely do that without trouble either to counsel or Your Honor, as I desire to make it clear, and I want to make it clear if I can.

Examiner DE BRULER. Go ahead.

By Mr. MATTHEW:

Q. If the botanical nomenclature is made entirely independently of the quality or utility or appearance of the lumber yielded by the tree, do you think it makes any difference what the botanical nomenclature may be so far as the designation of the lumber is concerned?

Mr. BURR. I object to the question as being contrary to fact.

Mr. MATTHEW. I have a right to put a hypothesis that presents my understanding of the fact, whether counsel agrees or
2966 not.

Examiner DE BRULER. Read the question.

(Whereupon the question was read by the reporter.)

Mr. MATTHEW. I will withdraw the question. I would rather not press it in that form.

Examiner DE BRULER. It seems you are going into such remoteness it has nothing to do with the issues.

Mr. MATTHEW. It is made a large part of the issues and if the present presiding examiner had been with us from the start, I think he would understand that a very earnest effort was made, if I understand the intention of testimony at all, to make the line of com-

mercial names follow the cleavage of botanical terms. That is one of the issues certainly in the case and it has been appropriate, I think, for me to interrogate a witness along that line.

Examiner DE BRULER. I stated it seems this line of questioning has gone far enough. Proceed.

Mr. MATTHEW. I will attempt to reframe the question and submit it to a ruling.

By Mr. MATTHEW:

Q. I understand now, Mr. Weyerhaeuser, that it is your understanding that in determining the botanical nomenclature of the pine trees, the botanists give consideration to the quality of the wood within the tree?

A. I have been told so.

2967 Q. Having been told so that is your understanding?

A. I have accepted it as I have very much other information.

Q. And it was upon that belief that you made your replies to my hypothetical questions as to the proper nomenclature for this lumber?

A. I had in mind that what you say is true.

Q. And you answered, in response to one of my questions, that if the Pinus ponderosa tree were in fact recognized by botanists as being within the group of true white pines, so called, you felt that you would not be in a position at least to object to the use of the term "California white pine" to describe the lumber yielded by the tree?

A. I didn't say that.

Q. Let me put this question to you: If the Pinus ponderos tree were in fact recognized by botanists as being within the group of true white pines, so called, would you feel that you could rightfully object to the term "California white pine" as the commercial term for the lumber yielded by the tree?

A. Yes.

Q. And why?

A. Because, as I have tried to say a great many times, the reputation of a wood, its qualities, has a lot to do with this question of nomenclature and, in fact, I think your question is an assumption based upon an impossibility.

Q. Well, let's assume the impossibility in the first instance.

2968 Examiner DE BRULER. I think he has answered that, it seems to me.

Mr. MATTHEW. He has answered two different ways in the record. I will you will have some difficulty in finding out exactly how the record stands.

By Mr. MATTHEW:

Q. Let's pass to something else for a moment. Is douglas fir selling on its merits or on its name?

A. Principally on its merits, also on its name. The two are involved in one idea.

Q. If you called it douglas spruce, would it still sell on its merits?

A. I think so, after it became known that the name had been changed.

Q. You wouldn't want to change the name to douglas spruce, would you?

A. It would involve another confusion.

Q. You said you never heard any complaint or confusion resulting from the use of your term "douglas fir", did I so understand you to say that?

A. Yes.

Q. Did you never hear of complaints to the effect that the term "douglas fir" had caused confusion by reason of the term "white fir" to describe a lumber coming from California?

Mr. BURR. I don't think it is proper re-recross.

2969 Examiner DE BRULER. He asked if he ever heard of it. He may answer yes or no.

A. I haven't.

By Mr. MATTHEW:

Q. Do you know of a lumber called white pine fir that is manufactured in California?

A. I know the term white pine fir. I have never seen the tree. At least I have never seen it manufactured in California.

Q. Do you know whether or not it comes from a tree which is botanically a true fir?

A. No; I don't know that it is a true fir.

Q. Well, if it happens to be a true fir, would you still claim that you have the right to use the word "douglas fir" to describe the lumber coming from a tree that is not a true fir?

A. Have a right?

Q. Yes.

A. You say have the right to use it?

Q. Yes.

A. I assume we would have the right to use it until some competent commission ordered us not to.

Q. Let's assume that, but does it cause any confusion in the trade? In other words, here is a manufacturer of lumber in California who gets his lumber from a true fir and markets it as white fir, if you please. You are manufacturing lumber from a tree that is

2970 not a white fir at all, and calling it a douglas fir. Has he any just reasons against you borrowing the term "fir" from his tree?

A. I think not. We manufacture a lot of white fir ourselves and we have never sensed any confusion in the selling of our white fir because of the nomenclature of the so-called "coast fir."

Q. Then as long as there is no serious confusion, you would think it entirely appropriate for you to continue the term "douglas fir"

to describe a lumber which comes from a tree which is not botanically a true fir?

A. If it caused no confusion, and did not result in the ultimate consumer getting a wood which did not answer his purpose, because of false nomenclature, I see no reason.

Q. Assuming all those qualifications, you see no objection to using the term "douglas fir" to describe a lumber coming out of a tree that is not a true fir?

A. I see no objection to the term unless——

Examiner DE BRULER (interrupting). I think he has answered that several times.

Mr. MATTHEW. That is all.

Mr. BURR. That is all.

(Witness excused.)

Examiner DE BRULER. We will take a five-minute recess.

(Whereupon a five-minute recess was taken.)

2971 Examiner DE BRULER. We will proceed if the parties are ready.

Mr. MATTHEW. I will call Mr. Mortenson, please.

H. D. MORTENSON was thereupon called as a witness and, after having been first duly sworn, testified as follows:

Direct examination by Mr. MATTHEW:

Q. Please give your name and your place of residence.

A. Name, H. D. Mortenson; residence, Klamath Falls, Oregon.

Q. What is your business or occupation?

A. Lumber manufacture.

Q. With what company are you identified?

A. Pelican Bay Lumber Company, Klamath Falls.

Q. And what is your relation to that company?

A. President and general manager.

Q. How long have you been its president and general manager?

A. Seventeen years.

Q. Is that since its organization?

A. Yes.

Q. Where is the plant of the Pelican Bay Lumber Company located?

A. It is about two miles north of Klamath Falls, Oregon.

Q. What kind of lumber is produced there?

A. At the present time California white pine.

2972 Q. Do you cut any sugar pine?

A. Not now.

Q. Have you in the past?

A. A little.

Q. What disposition was made of sugar pine which you did cut?

A. It went right in with the white pine.

Q. Will you please give us a brief outline of your entire experience in the lumber industry?

A. Well, I guess you might say I was born in the lumber industry. I started in picking up lath when I was about twelve years old, back in Wisconsin. I worked during my vacations.

Examiner De Bruler. Make this as brief as you can.

A. (Continuing.) As I said, I worked during my vacations in Wisconsin, in Michigan, and I worked one year after finishing college in Michigan. Then I came west and worked for two years for the Santa Barbara Lumber Company, at Santa Barbara, a retail yard, and I went up to Eureka and worked for a year and a half there, running the yard for the Redwood Company and became their sales manager, and was their sales manager for five years; and then I started the Pelican Bay Lumber Company.

Q. While you were in Wisconsin and Michigan did you became familiar with the northern white pine?

A. Yes.

Q. Have you any interests in any southern yellow pine
2973 manufacturing industry?

A. Yes; I have a financial interest.

Q. And does that company manufacture shortleaf or longleaf yellow pine?

A. I guess it is longleaf.

Q. Have you been through the forests of the south, the pine forests?

A. Somewhat.

Q. Do you know southern yellow pine, ar eyou familiar with it?

A. Yes.

Q. Under what name do you advertise and market and invoice the lumber which you product at Klamath Falls?

A. California white pine.

Q. Has that been your practice since the commencement of your relation to the industry?

A. Yes, sir; it has.

Q. When did you first become familiar with the term California white pine?

A. I first heard the name when I was working at Santa Barbara in about 1905.

Q. Have you known this lumber as California white pine ever since?

A. Yes; I have.

Q. Are you in personal touch with the marketing of your lumber, Mr. Mortenson?

A. Yes.

2974 Q. Do you give personal attention to the supervision of that end of the enterprise to some extent?

A. To some extent. I have a sales manager and I am very close touch with him.

Q. Do you personally travel, from time to time, throughout the East and call on the trade?

A. Yes.

Q. Do you sell entirely through your own sales organization, or do you sell through any agency?

A. Well, we sell through our own offices and we also sell through wholesale and commission men. Our box shook is sold through the California Pine Box Distributors.

Q. And where is the bulk of your box shook marketed?

A. In California and some in Arizona, a little in Texas.

Q. Do you market the remaining portion of your products in California and Arizona?

A. Yes, we do; we ship boards, common lumber, and some finish.

Q. Where do you find a market for the rest of your product?

A. Well, the shop and factory lumber goes largely to Mississippi River points, and Wisconsin factories. In fact, we are shipping some back to Wausau, Wisconsin, where I first heard of the business, first started in the business, and we send down to Texas—Waco, Texas, Dallas, Texas.

Q. Is your lumber sold in that territory under the name California white pine?

2975 A. Yes, sir, it is.

Q. You are familiar with the ponderosa tree as it appears in the forest, Mr. Mortenson?

A. Yes, I am.

Q. Does it resemble the yellow pine trees of the South in appearance?

A. No; it is quite distinctive looking from the yellow pine.

Q. What is the difference?

A. It has a different bark and it is lighter in color.

Q. How would you characterize the bark of the southern yellow pines?

A. Well, it is more of a brownish, dark brownish color.

Q. Have you ever known sugar pine to be marketed under the name of California white pine, or any other name including the word "white"?

A. Sugar pine?

Q. Yes.

A. No; I haven't.

Q. Is it your practice at the present time to mark or brand your lumber with any particular letters or name?

A. We have just begun branding our lumber. The National Lumber Manufacturers' Association is very anxious to inaugurate a grade and trade marking practice in the lumber industry so that all lumbers shall be named, that is, labeled its grade and trade name, and our association, the California White and Sugar Pine Manufacturers' Association, being in accord with that movement, and

2976 we are ourselves, being subscribers to this movement, we have begun to mark our lumber with the grade and the name "California white pine."

Q. That is, the full name "California white pine" is used in marking the lumber?

A. Yes.

Q. And that name will appear on every piece of your lumber?

A. We haven't gotten quite that far with it yet, but it is ultimately the aim to have that so.

Q. Do you purchase any lumber from the Government Mr. Mortenson?

A. Lumber?

Q. Yes; any trees, logs?

A. Yes; we do.

Q. Have you ever had any sugar pine trees included in such purchases?

A. Yes; we have.

Q. And these trees were in the Klamath Falls basin area?

A. Yes.

Q. What has been the quality of the sugar pine trees in that territory, from the point of view of the production of lumber?

A. Well, the sugar pine timber that was in with our timber appeared very good from the outside, but when we began to manufacturing it we found that it was full of shake, stump rot, and in fact produced so little lumber that it was so inferior that we petitioned the Forest Service to relieve us of the wasteage in
2977 cutting it, and after an examination on their part they acquiesced to our request and allowed us to leave the sugar pine.

Mr. BURR. Leave it? You mean you didn't cut it?

The WITNESS. We didn't cut any more of it. We cut some of it, but at the time we convinced them that we shouldn't cut it.

By Mr. MATTHEW:

Q. Had it any other defects other than those you have mentioned? I think you mentioned shake and stump rot, did you?

A. Yes.

Q. Just what is the nature of this stump rot?

A. Well, it was just dotty timber.

Q. And how seriously would that affect the merchantability of the lumber yielded by the tree?

A. Well, we would have to take down the large tree and take it into the plant, and be at all the expense of logging and bringing it to the mill and manufacturing it, everything of that kind, and probably get 10% or 15% of good lumber out of it, and the expense of that sort of an operation was prohibitive.

Q. Does your California white pine lumber come to any marked extent into competition with the yellow pine lumbers of the South?

A. To some extent, yes, in common boards and to a lesser extent in finish.

Q. Is there any material competition in the shop grades?
2978 A. No. The southern yellow pine, to my notion, in that respect is quite a different tree. When you open up southern yellow pine, in the process of manufacturing, it goes into common grades and such materials as are used for construction purposes; whereas when you open up Pinus ponderosa, that is undeniably shop

grade. It is not useable for any other purpose except factory reworking.

Q. Do you know whether the southern yellow pine yields any lumber of typical shop grades?

A. I don't think the grade is in the tree.

Mr. MATTHEW. I think probably counsel for the Commission will allow me to state that the grading rules of the Southern Pine Association do not specify the shop grades. I have here a copy of the 1929 Standard Specifications, which have been consulted in that respect.

Subject to correction from counsel, I would like to have it understood that——

(Here followed remarks off the record.)

By Mr. MATTHEW:

Q. Specifically, what are the shop grades of lumber?

A. There are no. 1 shop, no. 2, no. 3 shop, and then there is another factory grade which is no. 3 clear.

Q. Does your lumber come more in competition with the northern white and Idaho white pine than with the southern yellow pine lumber?

A. Yes, sir; it does.

2979 Q. And for what reason?

A. Well, for the reason that it is adaptable to the white-pine uses more closely than it is to the uses of the general characteristics of the southern pine.

Q. What are the primary uses for California white pine?

A. The primary uses are for interior and exterior finish, the shop lumber which goes into mill work and doors, sash, and uses of that character, and common boards which are used for shelving and the better class of construction.

Mr. BURR. Which lumber is this?

Mr. MATTHEW: California white pine.

A. (Continuing.) Then, again, box lumber goes into crating and box materials, principally for food products.

By Mr. MATTHEW:

Q. Do you meet substantial competition from Idaho white pine in the shop grades?

A. No. We meet with some competition from Idaho white pine, but it isn't very material in shops.

Q. Why is that?

A. Well, the Idaho white pine doesn't produce the volume of shop by any means, nor does it produce the wide, thick shop.

Q. Do you meet with substantial competition from the northern white pine in the shop grades?

A. No.

Q. Will you state the reason?

2980 A. It is not produced in a very appreciable quantity. The sash and door factories only rely on a wood which has a large volume.

Q. At the present time are the requirements of the more important sash and door manufacturers largely supplied with lumber from the Pinus ponderosa tree?

A. Yes; I think it is quite generally true that they are.

Q. Is California white pine selling on its merits—that is, because of its quality and its utility—or for some other reason?

A. Why, it is selling on its merits. Its qualities are well known by actual test and actual usage.

Q. Have you had any complaint from your trade respecting the use of the name California white pine?

A. No.

Q. Have you had any complaint from your trade to the effect that any confusion exists by virtue of the use of the term "California white pine"?

A. No; we have not. We have had some suggestion that it would be wrong for us to change it. Some of our people——

Mr. BURR. That is not responsive.

Mr. MATTHEW. The latter part should go out; that part of his answer, "no, we have not", is all that need be retained.

By Mr. MATTHEW:

Q. Have you had any complaint from your trade respecting the durability of California white pine?

2981 A. No; not that I know of. I have heard one or two cases where things of that kind have been discussed during my years with the business, but nothing material at all.

Q. Have you had any complaint from the trade respecting any alleged confusion between California white pine and sugar pine?

A. No.

Q. Are the terms "California white pine" and "sugar pine" well known to the trade?

A. Very well known every place that I have been.

Q. Do you know of any confusion between the lumbers?

A. No; I do not.

Q. Mr. Mortenson, you referred to the production of shop from the California white pine trees and from Idaho white pine trees, respectively. I will ask you to state what percentage of the lumber yielded by the California white pine trees in your section is represented by shop and better.

A. Shop and better—you mean just shop and shop and better?

Q. Let's take shop first, and then shop and better.

A. I would say that the shops would run between 30% and 35%.

Mr. BURR. That is Pinus ponderosa?

The WITNESS. Yes.

By Mr. MATTHEW:

Q. How about shop and better?

A. Well, that includes up to 3 clear.

Mr. BURR. Which does—the 30%?

The WITNESS. Yes.

2982 By Mr. MATTHEW:

Q. Take the shop and better collectively and give the proportion.

A. I think the region would probably produce 35%.

Mr. BURR. That would take the rest of the clear, would it?

The WITNESS. That would take the clear—yes; I guess 35% to 36% would probably include that.

By Mr. MATTHEW:

Q. I would like to call your attention to exhibit no. 29, Commission's exhibit no. 29, as offered in evidence in this case, pointing to show the result of studies on the heartwood content of standard grades of soft wood-yard lumber, based upon 1 x 8 inch boards inspected from the face side, and I will ask you to state whether, in your opinion, we can appropriately make a study of boards of those dimensions for the purpose of determining the normal percentage of heartwood and sapwood?

A. You mean boards of that size?

Q. Yes; 8 inches in width—I understand that means boards 8 inches in width.

A. I don't think that would correctly represent the proportion, particularly in this section of the country. I think that narrow boards like that would come more nearly from the outside of the log and be inclined to have more sap than the wider board, and we manufacture bigger and wider lumber here.

Q. Is a board 8 inches in width typical of your lumber?

2983 A. No; that is a small size with us.

Q. What would be?

A. Most of our boards run—the great preponderance of them are 12 inches and next to that 10 inches, and then we get quite a little 14, 15, and 16 inch.

Q. Will you briefly explain the manufacturing process and point out the part of the tree from which the wider boards, say the 12-inch boards, are obtained?

A. Well, they generally start in slacking off from the outside, and you get this small narrow lumber either from small logs or the first cuts on the larger logs. Whereas as you go on in your process of manufacture, what you call working down in the center of the log, and cant down——

Q. Explain what is meant by "canting down."

A. Turn it down and square it up, and turn it down on the carriage, and you begin to cut off the pieces off that cant, and in this country we cant down to 12 inches pretty largely, so that our lumber would be wider in size than these 8-inch pieces that are spoken of.

Q. Is there normally a greater percentage of heartwood in your 12-inch boards than in your 8-inch boards?

A. Percentage as to volume?

Q. Yes.

A. Yes; there is more heartwood than sapwood; yes.

Q. Well, is there more heartwood relatively in the 12-inch
2984 boards than in an 8-inch board?

A. Yes.

Q. That is because the 8-inch board normally comes out of the exterior portion of the log?

A. Yes; or out of a little small log.

Q. Mr. Mortenson, your lumbering operation is located in the State of Oregon and yet your lumber is offered to the trade as California white pine. Will you state why you use that term?

A. Well, we use that term for this reason: That trees grow of certain size and characteristics in accordance with the topography and soil and climatic conditions of the country in which they live, and it so happens that the Pinus ponderosa tree seems to reach its largest size and best texture in certain quite well-defined topographical areas; or, you might say, Big Basin, or territory, and that character of tree extends up into the Klamath Falls district. After going north of there it drops off to a smaller and not so perfect a tree. So that it is the character of the tree in this basin which was there long before the State lines were laid out that determines in our minds the place it belongs in the lumber world as the general characteristics and perfection of texture.

Q. In your opinion, would it be practicable to term your lumber "Oregon yellow pine" or "Oregon pine"?

A. I think not.

Q. Why not?

2985 A. Well, it would be very confusing, and if we called it Oregon yellow pine it would confuse us with our trade down in Arizona and Texas, wherever we went with it. We maintain an office at Dallas, Texas. I think it would be very confusing to that office to call it Oregon yellow pine; it would be confusing to the people that wanted to buy it.

Q. Would it be practicable to use any term which contained the word "yellow" without resulting in confusion in the lumber trade?

A. I do not think it would be practical.

Q. Would you be willing to use any term which contained the word "yellow" or which suggested the word "yellow"?

A. I wouldn't.

Q. And for these same reasons, that it might confuse it with the southern yellow pine?

A. Yes.

Q. Would the term "Oregon pine" without the word "yellow" be practicable?

A. No; that wouldn't be practicable either. When I worked in Santa Barbara, that is all we handled there, O.P.—everything was

Oregon pine—Oregon pine or redwood, and it is still sold pretty largely all through here as O.P., and that isn't our kind of wood at all.

Q. That is, Oregon pine is still called Douglas fir and comes from a tree which is not even a fir?

A. Yes.

2986 Q. Would it be practicable or desirable, from a point of view of the manufacturer or the trade, to use the word "pondosa"?

A. I think not. I believe that there would be some confusion and detriment. That is the same kind of a tree, but the wood and the sizes that come from it are contrary to our sizes and texture in many respects. I think it would be confusing.

Q. There has been some testimony, at an earlier hearing in this case, respecting a conference held in either Portland or Spokane, some two or three years since, in the course of which there was some discussion of an advertising campaign. I think that testimony was given by Mr. Getis.

Mr. BURR. I think so; yes, sir.

By Mr. MATTHEW:

Q. Do you recall participating in such a conference, Mr. Mortenson?

A. Yes; I was up at a conference regarding advertising.

Q. Do you recall some discussion of the use of the term "Pacific soft pine" in the course of that conference?

A. Yes.

Q. Would you relate the substance of the discussion briefly?

A. Briefly, we had hopes of a campaign for advertising at that time; at that time there was no advertising being done by any of the western woods, and the National Lumber Manufacturers' Association was contemplating an advertising campaign with its motto and slogan, "Use wood" They wanted to foster the use of wood for all purposes that they could possibly get it used for. We

2987 thought it would be a good idea if we could get the Western Pine Association to join with our association and put on a sort of joint campaign if this slogan "Use Pacific soft pines", and then each association would carry on its own advertising campaign directing the buying public to their wood specialties. In the case of western pine it would be Idaho white pine, and at that time I think it was western soft pine, or western white pine—I have forgotten the name—and in the case of our association it would be sugar pine and California white pine. But we didn't go ahead with that campaign. We just discussed it.

Q. Was there any suggestion on your part that the term "California white pine" would be discontinued as the prevailing commercial name for this lumber?

A. No, sir; I had no authority, and never have had any authority, to in any way tender any other name than California white pine.

Q. The term "Pacific soft pine" was merely to be used in a general advertising campaign for all these Pacific coast pines?

A. Yes; as I understand it.

Q. Mr. Mortensen, you have stated, I think, that you had no demand from your trade for a change in the name "California white pine." May I ask whether there has been any protest received by your company from any of your trade against the possibility of a change in name?

A. Yes.

Q. What is the nature of the protest?

2988 Mr. BURR. I think that is hearsay. It doesn't prove that the change of name ought not be made. We can't cross-examine the people that protested.

Examiner DE BRULER. He asked if he knows of any. That is not hearsay.

Mr. BURR. If he says "Yes" that means there has been a protest that is hearsay, and I can't cross-examine.

Examiner DE BRULER. The objection is overruled and exception allowed.

Read the question.

(Whereupon the question referred to was read by the reporter.)

Mr. BURR. I move to strike that last answer and object to this question.

Examiner DE BRULER. What was the answer to that last question?

(Whereupon the answer referred to was read by the reporter.)

Mr. BURR. I move to strike the last answer, and object to this question.

Examiner DE BRULER. The motion is denied and exception allowed.

The WITNESS. Could I change that word there? I didn't understand that word "protest." I would like to change that.

2989 Mr. BURR. He wants to change his answer to "No; it wasn't a protest", and I think——

Examiner DE BRULER. Let him make the answer himself. Read the question and answer.

(Whereupon the reporter read the question and answer.)

Examiner DE BRULER. Has there been any protest?

The WITNESS. Yes; there has.

Examiner DE BRULER. What is the nature of it?

Mr. BURR. I object to the question.

The WITNESS. They say——

Examiner DE BRULER (interrupting). Who said? Can you recall an instance of that kind?

The WITNESS. Yes.

Examiner DE BRULER. Go ahead; state when it was, as near as you can.

A. Well, there have been three or four of our customers that have said——

Mr. BURR (interrupting). Wait a minute! This is hearsay, what he is going to say.

Examiner DE BRULER. He is stating what the customers said.

Mr. BURR. That is not in the nature of an admission.

Examiner DE BRULER. Finish the answer and we will see what it is.

The WITNESS. All right; if you will give me a clear track I will answer the question.

2990 A. Some of our customers have said——

Examiner DE BRULER. If they made a protest, then say what the protest was about.

The WITNESS. Some of our customers said that they thought it would be bad to change the name.

Mr. BURR. If the examiner please, I renew my motion to strike. We went east for the very purpose of finding out, and allowed time for the opposition, one day at each place, to bring on people who were customers who could testify along this line, so I could cross-examine. It seems to me it is highly objectionable to bring in hearsay testimony far removed from the scene and not subject to our cross-examination.

Mr. MATTHEW. If the examiner please——

Examiner DE BRULER (interrupting). We will let the answer stand. But don't follow that line any further.

Mr. MATTHEW. Before Your Honor lays down a final admonition—this may save some time.

Examiner DE BRULER. All right; go ahead.

Mr. MATTHEW. It is a fact that the rule against hearsay is not violated unless the truth of the statement which the witness reports is in issue. This isn't a question of hearsay here. This witness can't say that he heard something, and that that statement which he repeats is, therefore, to be deemed to be true or otherwise. But he can rest the fact that certain protests, or statements, were

2991 made to him, not with a view to their being truthful or otherwise. The rule against hearsay isn't applicable here at all.

Examiner DE BRULER. I have ruled with you.

Mr. MATTHEW. Yes; but you have admonished me that I shouldn't go further.

Mr. BURR. If the examiner please——

Examiner DE BRULER (interrupting). Let Mr. Burr make a statement.

Mr. BURR. What is desired here is to show that the trade that this man deals with do not desire a change. That is only for the object of proving that they made a protest. I want to find out whether that is true or not; I want to find out why, and it seems to me it leaves the Government in an unfortunate position, which they ought not to be subjected to, by proving that what theses people said, the people that protested, and that is what they said, that they didn't want a change. The sum and substance goes right back to the hearsay rule, and I am denied my right to cross-examination.

Mr. MATTHEW. Hearsay isn't involved at all.

Examiner DE BRULER. The ruling is that the witness has answered and the answer may stand.

Mr. MATTHEW. If Your Honor please, I do not care to take up time on the record with needless explanation, but I think there should be no possible erroneous impression because of counsel's statement as to the opportunity afforded us in the East and Middle West.

2992

Examiner DE BRULER. I understand that.

Mr. MATTHEW. I hardly think you understand this part of the situation, and I think counsel's comments shouldn't go unanswered. I think Mr. Burr will agree that the Government was to permit us to put on evidence at points in the East, or Middle West, if inconvenient to get witnesses to the coast, but we were not required to do so. We were able to avail ourselves of that suggestion only in New York City. And, of course, we moved rather rapidly from point to point and frequently did not know, until about a day or two in advance, where the next hearing would be. That was all in the control of the Federal Trade Commission, and we made no effort, could make no effort, to gather witnesses for particular hearings.

Mr. BURR. If the examiner please, I want to say one word. I don't want to have it appear that my comment was unfair. The idea was this: That we did allow some opportunity for examination by the defense, but with the understanding that, if they desired to go East again, they were at liberty to do so. But that is no reason for having testimony narrated here at second-hand, but rather the contrary. They had an opportunity before, and they are preparing to have an opportunity again, to examine just such witnesses. I object to this as a substitute for calling them, either at the former occasion or at the subsequent occasion.

2993

Examiner DE BRULER. Your objection is noted and exception allowed.

Mr. MATTHEW. I will challenge the correctness of that, Mr. Burr.

By Mr. MATTHEW:

Q. Mr. Mortenson, I wish you would state what reasons you have for desiring to retain your present commercial name of California white pine?

A. The reasons for wishing to retain the name?

Q. Retaining that name; yes.

A. Well, it is a name that has been in use for a great many years and it is very well and favorably known throughout the United States and also in several foreign markets. A change in the name would create a considerable amount of confusion; the confusion, I think, would last for a considerable period of time. There has been lots of money spent in advertising this name, and I dare say that the collective advertising of our association and individuals and travel-

ing, etc., would amount to many hundreds of thousands of dollars, and we would lose all of that—would have to do it all over again. It would take a long time to get it over. Then I don't think that a change in the name would in any way change the use of the lumber. It would still go into the same channels as it does now, and I think if the name was changed the sugar-pine people might call their wood California white pine and take advantage of the name. And there is a standardization movement on the part of the Government
2994 now, lumber standards, and the name is well defined in that; it has become very widely known. For those reasons I would like to see it retained, because I do not think it causes any confusion as it now is.

Q. If the same California white pine was superseded by some other term, and then any of the sugar-pine manufacturers or distributors should adopt the name "California white pine" for their product, would there be any resulting confusion?

A. Yes; quite a little.

Q. How would it be practicable then to distinguish your product from the product which is now manufactured and sold as sugar pine?

A. I haven't reached that point yet; I don't know how it would be done.

Q. Have you been able to think of any term to be used as a commercial name for this lumber which more accurately and satisfactorily designates it than the term "California white pine"?

Mr. BURR. I object to the question on the ground that the Commission has no jurisdiction there. It is not in the issues here.

Examiner DE BRULER. Objection overruled. Let him answer.

The WITNESS. What is the question?

(Whereupon the question was read by the reporter.)

A. I have been trying to think of a name, but I have been unable to find any that would, to my mind—would more accurately
2995 describe it. California white pine is individual, distinctive, and doesn't mean Idaho white pine; it doesn't mean northern pine; it means California white pine.

Mr. MATTHEW. You may cross-examine.

Cross-examination by Mr. BURR:

Q. Mr. Mortenson, do you realize that the record shows that—and you have heard a great deal of it—the change was made by the pondosa people from western white pine to pondosa without losing their business appreciably?

A. I didn't hear anything of that kind go in this record, but I am not aware of that as a fact.

Q. If you knew that was the case, would you regard that as bearing upon the question of the great losses that you would sustain, if you changed the name from California white pine to some other?

A. Well, I have my own personal idea as to how well they got along with that change, and from my own experience.

Q. You think they lost trade, do you?

A. I think so. I think it was confusing.

Q. Well, what other term was the word "pondosa" with in your judgment?

A. I don't think that it was confused with any other term.

Q. It is not a confusing term with anything else that you know of as the pondosa word?

2996 A. No; I think that is quite original.

Q. Do you think that the word "pondosa" is easy for the trade to associate with the species from which that lumber is made?

A. I imagine it would be when they once get the idea.

Q. It really suggests the botanical word itself, doesn't it?

A. I don't think so; I don't think that lumbermen have ever thought about botany until within the last few years.

Q. And do any of your own members, using the word "California white pine", show in parenthesis the word "pondosa" or "ponderosa" in connection with the trade name?

A. I believe they have done that recently.

Q. Has your company done that at all?

A. I don't think we have in our direct business; we have participated in some advertising in which the name "Pinus ponderosa" was used as a description of the tree.

Q. You don't regard putting in the word "pondosa" or "ponderosa" in parenthesis in connection with your advertising as tending to confuse the species of lumber, the variety of lumber?

A. Why, I don't think it is necessary. I think with our lumber it is just California white pine. To add to it is confusing.

Q. Those who have used that word "pondosa" or "ponderosa" along with the words "California white pine", that has proved confusing, has it?

A. I don't think they pay much attention to that; they are looking at California white pine. As long as that is there it is

2997 *there it is* not so confusing.

Q. That helps to make a link between the shippers of California white pine and those who are calling the same wood pondosa; is that not true?

A. It might if they kept it up continuously.

Q. And the use of that word in connection with advertising tends to identify the species of Pinus ponderosa throughout its range, does it not?

A. Using the word?

Q. Pondosa in connection with the words "California white pine"?

A. No; I don't think it does as a name. I don't think it is associated with Pinus ponderosa.

Q. Do you think the trade to whom you sell realize that the pondosa lumber and the California white pine is made from the same tree?

A. I think a great many of them do.

Q. A great many do and others do not; is that true?

A. There may be some that don't, but practically everyone that we deal with knows that.

Q. And the using of the word "pondosa" or "ponderosa" in connection with advertising, under the name of California white pine, as the more general term, helps to spread that information—doesn't it?—that California white pine and pondosa are made from the same tree?

A. We don't use that.

2998 Q. I know, but that helps to spread that information.

A. It might, if you used it, but we don't.

Q. You testified that some do.

A. In one or two isolated cases—I think only one.

Q. Which one is that?

A. (Answer ordered physically stricken from the record.)

(Here followed remarks off the record.)

Examiner DE BRULER. The answer is physically stricken from the record. It must be physically stricken under the rules of the Commission.

(Here followed remarks off the record.)

Examiner DE BRULER. Proceed where we left off.

By Mr. BURR:

Q. Do you know whether any of the Arizona companies are members of your organization?

A. Yes; I know.

Q. Are they?

A. They are not.

Q. They are not?

A. They are not.

Q. Are any of the Arizona companies members of your organization?

A. What organization are you speaking of?

Q. I am talking about the association.

A. No; I don't think there is a single Arizona mill that is a member of the California association.

2999 Mr. MATTHEW. I take it that the examiner understands that there is no complaint here against certain respondents as members of the association, but there are a number of individual complaints against certain specific companies.

Examiner DE BRULER. I understand that.

Mr. MATTHEW. Many of which happen to be members of this association.

Examiner DE BRULER. Yes.

By Mr. BURR:

Q. Do you happen to know whether the manufacturers of a white pine further south, so-called, the Arizona white pine and the New Mexico white pine, have used the word "pondosa" or "ponderosa" in connection with their advertising?

Mr. MATTHEW. I object on the ground that it is immaterial.
Examiner DE BRULER. If he knows he can answer.
A. I am not familiar with their practice down there.

By Mr. BURR:

Q. Counsel examined you with regard to the possibility of calling your product Oregon yellow pine, and I believe you testified that you would regard that as confusing to the public on account of the possible mistake as to the distinction between your wood and that of the typical yellow pine of the South; is that true?

A. Yes.

Q. You were referring there to longleaf, most essentially, were you?

3000 A. Longleaf and shortleaf as well.

Q. The shortleaf is rather a different type, isn't it?

A. Yes.

Q. You understand that to be the Arkansas soft pine?

A. Well, lately there has been a change of name down there; they call it Arkansas soft pine?

Q. That would be a wood that competes with you more directly, wouldn't it, than the longleaf?

A. No; not much more directly.

Q. Is there any other type of wood, besides the Arkansas soft pine, that is known to the trade as shortleaf yellow pine?

A. Not that I know of. Southern yellow pine is all that stuff down through Mississippi, but that is largely longleaf.

Q. That is the typical southern yellow pine, is it not—the longleaf?

A. Longleaf is southern pine; yes.

Q. The Arkansas soft pine does make sash and door and window frames and that kind of thing, does it not?

A. They make some sash and door out of that; they also make it out of yellow pine and make it out of cypress and redwood.

Q. Then both of those do compete with you, do they?

A. Yes; but to a minor degree.

Q. But the Arkansas soft pine far more than the others; isn't that true?

3001 A. We don't find it so.

Q. The line of demarcation between what is called California white pine and pondosa shades off, doesn't it, so that in the same piece of forest a log may go one way and be called one and the other way and be called the other; isn't that true?

A. No; I don't think that is true.

Q. Which is the concern that is lumbering just north of where you have your holdings?

A. Do you mean in the western pondosa pine belt?

Q. Just north of you in the ponderosa——

A (interrupting). The Algoma Lumber Company.

Q. They are immediately just north of you?

A. Yes.

Q. What is the one north of the Algoma Company?
A. The Lamb Lumber Company.
Q. And they call theirs California white pine?
A. Yes.
Q. What is north of them?
A. I think there is this Forest Lumber Company.
Q. And they call theirs California white pine?
A. Yes; they are in that belt of timber.
Q. What is immediately north of them?
A. That is the end of the manufacturing end, I think. There is no plant in this basin north of them.

Q. Are you positive that there is no place where the forest
3002 shades off between the pondosa and the California white pine; where they practically meet?

A. Why, this timber belt—this California white pine timber belt—that type of pondosa tree has its end at eighty or ninety miles north of Klamath Falls, then it begins to taper into a different type of tree— but I understand you to ask me whether there was a difference, if there was pondosa trees right in with our California white pine—that is, the pondosa type.

Q. No; what I am getting at is this: Is there not a place in Oregon where, in the same forest, one concern is calling it pondosa and the one immediately south is calling it California white pine?
A. No; I don't know of such a place.
Q. How about the Shevlin-Hixon? *Where are they?*
A. They are in a different belt of timber; they are out of what I have defined at the California white-pine belt. They are at Bend.
Q. In the Bend district, aren't they?
A. Yes.
Q. Are there any others working there in the Bend district?
A. Yes, sir.
Q. Who?
A. There is the Brooks Scanlon.
Q. They are also calling theirs pondosa?
A. Yes.

Q. Who else is there?
3003 A. I think that is all at Bend.

Q. Is there not a California white pine manufacturer in the Bend district?
A. I do not know of one.
Q. The sugar pine people have not appraised you, have they, of any desire to call their product California white pine?
A. No; they have not.
Q. You have heard no rumors of that sort, no wild rumors?
A. Yes; I have heard rumors.
Q. But nobody has told you that, of a responsible character, that they were considering it?
A. I have never discussed the matter with the sugar pine manufacturers themselves.

Q. Were you present when Mr. Danaher testified?

A. I was not.

Q. You didn't hear his testimony that he would regard that as a great mistake?

A. What is that?

Q. You didn't hear his testimony then that he would regard that as a great mistake?

A. I didn't hear his testimony at all.

Q. The sugar pine is sold at a higher price—is it not?—than either the pondosa or California white pine?

A. Some of it is.

Q. If confusion resulted it would be to the detriment of the
3004 sugar pine, wouldn't it?—if there was confusion of California white pine after they renamed the California white pine and the product which is now sold as California white pine?

A. I don't think so.

Q. Wouldn't the confusion act to the detriment of the higher-priced wood?

A. I don't think so.

Q. I wish you would explain that, if you can.

A. Well, the buyers of lumber and the users of lumber know the quality of the goods they are getting. Today there is one concern that is in the business manufacturing California white pine—trees that are in the California white pine belt, I mean, and their plant is too—and they have another plant in the pondosa pine belt, and their timber is in the pondosa pines, and through the same sales organization they sell pondosa and they sell California white pine, and they get a better price for California white pine.

Q. What concern is that?

A. Well, that is the McCloud River Lumber Company and the Shevlin-Hixon Lumber Company at Bend.

Q. They are selling it under two different corporate names?

A. No; it is all sold through the same office, Shevlin-Carpenter-Clark Company, in Minneapolis. So the value of the wood itself helps determine the value, and sugar pine would get a better value where it was capable of rendering a better service, if it
3005 could render that service.

Q. Aren't the Shevlin interests pushing their goods under the special name of Shevlin pondosa, or Shevlin-Hixon pondosa?

A. They call it pondosa pine, and they call their McCloud stock California white pine. Of course, they use the Shevlin name.

Q. I think you misunderstood the last question. My thought was this: You testified that you thought that if the California white pine name were changed, and they began to call it something else, and if the sugar pine manufacturers started to call theirs California white pine, that confusion would result. Didn't you say so?

A. Yes.

Q. Wouldn't that work to the detriment of the higher-priced commodity rather than to the cheaper-priced commodity, if there was confusion?

A. Confusion between the name California white pine?

Q. Between the two products due to the change in name; isn't that true that it would work to the detriment of the higher-priced commodity rather than the lower-priced commodity?

A. You mean if they changed their name to California white pine?

Q. Yes; that was your testimony, that you thought there would be confusion there, if I understood you correctly.

A. Well, I don't know what the result of that confusion would be.

Q. You think it would be confusing, do you?

A. They would be using the name "white pine" for what-

3006 ever merit they think there was in it, instead of sugar pine.

Q. If there was confusion there it would mean that somebody was buying one thing when he thought he was getting another; that is what you mean by confusion in this connection?

A. It would be that he wouldn't know what he was getting if they changed the name and shifted the name; he wouldn't be sure that he was getting the same lumber.

Q. Wouldn't that work to the detriment of the higher-priced commodity rather than the lower-priced?

A. It might tend to.

Q. Doesn't the Shevlin-Hixon pondosa reach right down into the Klamath Basin?

A. Not any timber that they have cut so far that I know of.

Q. Where is the farthe*r*est south they are cutting?

A. Well, it is quite a long ways north of where I consider this district to be. I am not posted on their immediate operation as to how far down they are; they own a little timber down in the Klamath Basin, but they are not operating on that, I am sure.

Q. Isn't that forest continuous, running down there practically with the stand of ponderosa most of the way?

A. There are quite a few openings in there.

Q. This sugar pine at Klamath Falls that you say was affected with shake and stump rot and was dotty—that dotty means overripe timber, doesn't it?

A. Well, it means punky.

3007 Q. Overripe?

A. I suppose it would be overripe, overgrown.

Q. There is overripe timber of all varieties of trees around, allowed to stand too long for the best use; isn't that true?

A. Yes; but there is lots of dotty timber that is not overripe. There are some fir timber that is not overripe; it is a character of the soil it grows in and the character of the stand, as I understand it, that causes this inferior quality in the tree, as well as age.

Q. In sugar pine that stump rot is due to age, isn't it?

A. Well, I am not qualified on that particular thing; I know that is there and that is all.

Q. To whom, in point of classes of business, do you sell to?

A. We sell to various sash and door plants, planing mills, retail yards, wholesalers.

Q. What percentage goes to planing mills and millwork shops generally?

A. Probably 25%.

Q. And how much to wholesalers?

A. About 15%.

Q. To what other classes do you sell?

A. We sell some through our own offices.

Q. What do you mean by your own office?

A. We have an office in Chicago and one in Dallas, Texas.

3008 Q. How large a percentage through them?

A. Let's see—I have 15% and 25%, that is 40%—I should say about 20%.

Q. To whom do they sell? Do they sell to wholesalers? Or how?

A. Our offices?

Q. Yes; those two offices.

A. Principally direct to the trade.

Q. Direct to the retailer?

A. To the retailers and to some box plants, and some sash and door people. We don't keep a distribution of their business.

Q. The remainder of your product goes to whom?

A. Goes pretty largely all to the pine box association in the form of box shook, and what is left goes down to southern California.

Q. The retailers?

A. To retailers.

Q. You maintain no retail establishment, of course?

A. No; I have none.

Q. In testifying that you thought it would be confusing to call your product some kind of yellow pine, you had in mind solely the situation as regards the yellow pines of the South?

A. Yes; largely the yellow pines of the South. They are for a distinct purpose; theirs is for construction lumber, and it is yellow pine that is generally regarded as a construction lumber. They have tried to get away from that name themselves. They call it southern pine now mostly instead of yellow pine. It is construction lumber.

3009 Q. Why should they object to calling it yellow if that is——

A. (Interrupting.) They don't object; they have called longleaf, shortleaf yellow—I mean they have had several names.

Q. You think the word "yellow" would associate you with the yellow pines of the South; is that true?

A. Yes.

Q. The use of the word "white" tends to associate you with the white pines of the North, the Idaho and the northern?

A. It tends to associate us with the lumber to which the white pines have been applied.

Q. And it tends to associate you with that group of lumber, doesn't it?

A. Yes; that lumber goes into those uses.

Q. And that is one of the reasons why you desire to continue that name, is it not?

A. Not because it aligns us with the white pines, but because our lumber is being used for the same purposes as the white pines.

Q. And it has a tendency to align you with that particular lumber, doesn't it?

A. That type of lumber for that use; yes.

Q. And that is one of the reasons why you prefer it?

A. Yes; wherever it defines the use.

Mr. BURR. That is all.

Mr. MATTHEW. That is all.

Examiner DE BRULER. You may be excused.

3010 (Witness excused.)

(Here followed remarks off the record.)

Examiner DE BRULER. We will take an adjournment until February 4, 1930, at 10:00 o'clock a.m.

(Whereupon, at 5:10 o'clock p.m., an adjournment was taken until Tuesday, February 4, 1930, at 10:00 o'clock a.m.)

3011 Docket No. 1620 to 1669, inc.

SAN FRANCISCO, CALIFORNIA, *February 4, 1930.*

Met pursuant to adjournment, 10:00 o'clock a.m.

Before Ellis De Bruler, examiner.

Appearances: Eugene W. Burr, for the Commission.

McCutchen, Olney, Mannon & Greene (by Mr. Allen P. Matthew and Carl I. Wheat) for the respondents.

Examiner DE BRULER. Are the parties ready to proceed?

Mr. MATTHEW. If the examiner please, in order to make Mr. Weyerhaeuser's testimony, upon his last appearance on the witness stand, entirely complete and intelligible, I desire now to tender for the record additional process of respondent's exhibit no. 31, particularly certain data which appears in appendix A, on page 27. Your Honor will recall that you admitted for the record that part of the tabulation which appears on page 28, roughly speaking. Mr. Burr, I think, objected to the receipt of the matter appearing on page 27. And if I remember your ruling correctly as of that time, that portion of the tender was not accepted.

Examiner DE BRULER. That is correct.

3012 Mr. MATTHEW. Following the ruling of the Commission and Mr. Weyerhaeuser's further testimony upon cross-examination, I desire now to offer for the record the nomenclature of the commercial softwoods appearing upon page 27 of respondents' exhibit no. 31. I offer specifically the standard commercial names and

the botanical names of the following commercial softwoods. I shall merely state the standard commercial names in each instance, for the purpose of convenient identification, and shall assume that the botanical name appearing on the table will likewise be of record: Incense cedar, Port Orford cedar, western red cedar, Douglas fir (coast type), red fir (intermountain type), red fir (Rocky Mountain type), and white fir.

Those are the only species concerning which I interrogated the witness.

Examiner DE BRULER. Those species were all mentioned.

Mr. BURR. I think so, and as a matter of comity I am not going to make an objection.

Examiner DE BRULER. It may be admitted.

Mr. MATTHEW. I will call Mr. Walker.

WILLIS J. WALKER was thereupon called as a witness, and after having been first duly sworn, testified as follows:

Direct examination by Mr. MATTHEW:

Q. Please state your name and your place of residence for
3013 the record.

A. Willis J. Walker, Minneapolis, Minnesota.

Q. What is your business or occupation?

A. Lumberman.

Q. And with what company are you identified?

A. I am president of the Red River Lumber Company.

Q. The Red River Lumber Company is a respondent in one of these proceedings, Mr. Walker?

A. Yes, sir.

Q. Throughout what period have you been connected with the Red River Lumber Company?

A. I have been an official of the company since 1896, and before that period I had been around their operations and working for them at various times since its organization in '82 or '83.

Q. Under the laws of what State is the Red River Lumber Company incorporated?

A. Minnesota.

Q. Where are its principal milling operations situated?

A. Westwood, California.

Q. What is the nature of the plant at that point.

A. There is a sawmill with the reworking plants for sash and doors, and moldings and miscellaneous products of our lumber, including a veneer plant.

Q. Can you approximate your average annual cut?

A. About 175 million average.

3014 Q. Do you market both California white pine and sugar pine?

A. Yes.

Q. And where do you find your principal markets for the products of your operations?

A. Our lower-grades lumber goes as boxes into California, Arizona, Texas, and Colorado, to a large extent, and to a lesser extent into the middle west countries as boxes; our common lumber goes into California, Nevada, the same States I have named, and more or less through the East. Our upper grades go, I think, to practically all the States in the Union, largely into the Mississippi Valley, and the territory between the Mississippi and the Atlantic coast, the northerly part.

Q. Through what period has your company been operating at Westwood?

A. Since 1912.

Q. Will you briefly relate your experience in the lumber industry prior to the opening of your operations in California?

A. My personal experience?

Q. Yes.

A. I began sweeping the Camp and Walker mills when I was five years old.

Q. Where?

A. Minneapolis. I worked in those two mills at odd times and in the planing mill, and in '83, I think it was, I worked in the Red River mill at times at Crookston packing, shipping, and similar jobs, including running a lathe in the machine shop.

3015 Mr. BURR. That was in Minnesota?

The WITNESS. Crookston, Minnesota.

I worked a little in our mill at Grand Forks. And when I was eight years old I was on the log drive going down the Clearwater River, the Red Lake, and the Red River, into the north into Canada, one summer.

Examiner DE BRULER: I think the qualifications of this witness would be admitted by reputation anyway.

By Mr. MATTHEW:

Q. Was your company operating largely in the northern white pine in Minnesota?

A. Yes, sir.

Q. When did you first become familiar with the term "California white pine"?

A. In 1889.

Q. Under what circumstances did you become familiar with the term "California white pine"?

A. Father sent his head woodsman, Frank J. Klein, to the Pacific coast to make a general examination and report on the timber on the coast as a whole, and particularly with reference to a wood to replace the apparently disappearing white pine, for the purpose of manufacturing sash and doors. Klein spent nearly a year out here, and when he came back, among other woods he reported on, was the California white pine and sugar pine.

Q. When did California white pine first begin to find a
3016 market, to a noticeable extent, in the Middle West and in the eastern portions of the United States—that is, within your knowledge?

A. I think it was in about 1908 that we first began to get competitive reports from the Mississippi River sash and door factories of quotations from the West.

Q. In 1908?

A. I don't remember that date, but along in approximately that time.

Q. And I assume that you commenced to market your California white pine in 1912, or thereabouts, from your Red River Westwood mill?

A. From the Westwood plant. Previous to that we had sold some lumber from the mill that we bought up in the Sacramento Valley. We had about a half million that we sold off in about 1908. That was an incidental operation.

Q. Does the Red River Lumber Company produce and market sugar pine as well as California white pine?

A. Yes.

Q. Have you been producing and marketing sugar pine during the entire period of your operations at Westwood?

A. Yes.

Q. What proportion of your average annual cut is represented by sugar pine, approximately?

A. It varies decidedly in different years, depending in what group of timber we are logging the heaviest around the mill. Ordinarily I would say it was 20% to 25% of our cut.

3017 Q. Can you approximate the annual cut of sugar pine of your company on the average?

A. Not without adding them up. Last year we cut 65 million, about, of sugar pine, and about 98 million of white pine.

Q. Do you know how the volume of your production of sugar pine compares with that of other lumber producers in California?

A. I think it is one of the larger, if not the largest, individual mill.

Q. Are the terms "California white pine" and "sugar pine" well established in the trade to which you sell your lumber?

A. Yes.

Q. Does your company ever receive orders for sugar pine under any name which includes white pine?

A. Not that I recollect.

Q. Are all of the orders for sugar pine received under the name "sugar pine"?

A. So far as I know.

Q. Has this been the practice during the entire period of your connection with the lumber industry?

A. Yes.

Q. Will you state whether California white pine is commonly used for the same purposes for which the old northern white pine has been and is used for?

A. It is used for the same purposes, as far as I can think of.

Q. It is used generally for the same purposes for which the
3018 southern yellow pine lumber is used?

A. Not to the same extent.

Q. Is the California white pine lumber largely used for structural purposes?

A. It is used more for industrial cutting-up purposes.

Q. Are the shop grades of California white pine lumber obtained mostly from the heartwood or from the sapwood of the tree?

A. From the heartwood.

Q. Just why is that? What circumstances bring that about?

A. The sapwood is largely the clear lumber and goes into the clear lumber grades; and as you get into the heart the defect, the knots, are more typical of the shop than of the clear.

Q. The shop grades of lumber characteristic'ly have these knots to which you refer?

A. Yes; large scattered knots.

Q. Approximately how many logs on the average are required in your operations in order to produce 1,000 feet of California white pine?

A. On the average about two and one half; last year it went about two and a third.

Q. These are logs averaging 16 feet in length?

A. Average as they run to the mills; about 16 feet would be the average.

Q. Approximately how many logs, on the average, are required in order to produce 1,000 feet of sugar pine lumber?

3019 A. I don't know our average in sugar pine. Last year it was slightly less than two; they scaled about 510 feet to the log. But I don't know how that compares for our average.

Q. On the whole, the sugar pine logs are larger than the California white pine logs?

A. Yes.

Q. Are you familiar with the tree from which the so-called "douglas fir" lumber is produced?

A. I am.

Q. Do you know the common name of that tree in the forest?

A. It depends on the locality.

Mr. BURR. If the examiner please, I think douglas fir has been ruled out.

Mr. MATTHEW. I think that was the one thing that was ruled in.

Examiner DE BRULER. I think that is true. I think that ruling was after the cross-examination of this other witness that no further evidence along that line would be permitted.

Mr. MATTHEW. Not as I so understand the ruling.

Examiner DE BRULER. I so understand it.

Mr. BURR. That is the understanding that the examiner had the other day and announced, if I understood it correctly.

Mr. MATTHEW. I desire to take exception and have the question of record.

Examiner DE BRULER. Certainly, for the record.

3020 By Mr. MATTHEW:

Q. Do you know whether or not this tree bears different names in the forest?

A. Yes.

Mr. BURR. I object.

Examiner DE BRULER. Objection sustained.

Mr. BURR. Let's have the "Yes" off the record.

Mr. MATTHEW. It may go off.

By Mr. MATTHEW:

Q. Is any white fir produced in your operations?

I think the operations of this company should be in the record here.

Mr. BURR. He said white fir—I object.

Examiner DE BRULER. His objection is sustained.

Mr. MATTHEW. If the Examiner please, it will be recalled that the witnesses offered by Mr. Burr himself referred to the various kinds and qualities of lumber which they produced. It wasn't at all confined to pines.

Examiner DE BRULER. Are you going to ask him what he produces?

Mr. MATTHEW. It is something more than that. Of course, I want that to be shown, but Your Honor will recall that at the hearings over which you presided in the North there was testimony on the part of Col. Greeley and others as to Douglas fir lumber.

3021 Mr. BURR. If the Examiner please, we threshed this whole matter out a number of times. I don't object to this witness saying he produces Douglas fir and white fir, if it isn't leading up to these other questions that are subject to the Commission's ruling; but I assume, and doubt counsel will deny it, that they were so intended.

Mr. MATTHEW. Certainly, I will not deny it; there is not reason why I should not. The Examiner must understand this: Supposing Mr. Weyerhaeuser has made a statement inadvertently, which we think is incorrect, or incomplete. Am I compelled to stop right there?

Mr. BURR. Unless you appeal to the Commission and get it overruled; yes, sir.

Mr. MATTHEW. I don't so understand the ruling.

May I suggest, Mr. Examiner—and I do not intend to go beyond two or three questions—I suggest that the questions and answers be placed upon the record subject to a motion of counsel to strike out, and that will save time all along the line. It will save a reference to the Commission and the confusion we had before.

Mr. BURR. I object entirely to the proposition, because the Commission has ruled and don't want this irrelevant matter taken.

Examiner DE BRULER. I am bound to sustain the objection under the ruling of the Commission.

3022 Mr. MATTHEW. May we have that ruling produced, if Your Honor please?

(Whereupon Examiner De Bruler produced a telegram received from the Federal Trade Commission.)

Mr. MATTHEW. Now, as I read the ruling of the Commission, as expressed in this telegram of January 31, from its secretary, it certainly does not foreclose me from this line of examination.

Mr. BURR. We were talking, if the Examiner please, in our wires to the Commission about the possible relevency of these issues, and when the Commission says that the trial of collaterial issues be avoided I think he is talking about this very thing, because the context of the telegram demands nothing in the world but that the reference to collateral issues are the references to these other lines of industry outside of the pine industry.

Mr. MATTHEW. I might as well put myself on record and bring this particular controversy to a conclusion. If the Commission sanctions a certain line of cross-examination, then anything within the field of that cross-examination is certainly appropriately the subject of further cross-examination of other witnesses in this record. I understand the Commission merely to admonish us that we should keep out of irrelevant issues and not attempt to expand the field beyond the line of proper cross-examination, but certainly I

3023 am denied to a right belonging to every litigant if I must rest upon the testimony elicited upon cross-examination of an opposing witness and cannot meet that testimony. If that cross-examination was proper cross-examination, and the Commission says that it was, I can certainly meet that testimony.

Examiner DE BRULER. I understand the Commission's ruling to be that that is outside of the issues of this complaint.

Mr. BURR. I think so.

Examiner DE BRULER. And has no place in the introduction of testimony relating to it. Consequently, the objection is sustained.

Mr. MATTHEW. I don't so understand, and I shall ask to have my exception noted of record.

Examiner DE BRULER. Exception noted.

Mr. MATTHEW. I offer to prove at this time that there has been confusion created as a result of the term "Douglas fir," particularly, because lumber from the true white fir is marketed as white fir.

Mr. BURR. If the Examiner please, I am going to object to the introduction of evidence under that offer.

Examiner DE BRULER. The objection is sustained. He made his statement of record.

Mr. MATTHEW. I understand that any further tenders on my part along these lines are denied?

Examiner DE BRULER. That is right.

3024 Mr. MATTHEW. And my exceptions are noted again?

Examiner DE BRÜLER. Exception noted.

Mr. MATTHEW. To make the record clear, the purpose of my tender is to show that commercial names of lumber very frequently have no relation either to botanical classification or to the common names of the trees in the forest.

I will continue with questions which I think will not be subject to objection.

By Mr. MATTHEW:

Q. Mr. Walker, in your milling operations do you find that there are more or fewer defects in sugar pine logs than in California white pine logs?

A. More in sugar pine, very much more.

Q. What is the nature of the defects appearing on the sugar pine logs?

A. Both trees have knots; the sugar pine has a large amount of rot, and a large amount of shake or so-called "wind shake." The white pine has larger knots, they are sounder, and have very little rot and practically no shake.

Q. Is it always practicable to detect or remove this defect that you have characterized as shake before the lumber is marketed?

A. No.

Q. And why?

A. It is not advisable.

Q. What is the effect of shake if it becomes apparent after
3025 the lumber is actually put in use?

A. Shake is a crack or separation of the grain, and the wood parts crack afterwards.

Q. Have you had any recent experience with shake in sugar pine lumber?

A. Yes.

Q. What is the nature of that experience?

A. It was a complaint from one of our large customers, who buys both white and sugar pine for toy blocks, that the sugar pine blocks were cracking open from shake after he manufactured them.

Q. Have you had any such complaint respecting California white pine?

A. No; not that I have heard of.

Mr. BURR. What kind of blocks?

The WITNESS. They are a cube about an inch and a half in size.

Mr. BURR. For children?

The WITNESS. Toy blocks; yes.

By Mr. MATTHEW:

Q. Now, you referred to rot; what is the nature of the rot which you encounter in the logs of sugar pine and California white pine?

A. The largest percent is what is known as "stump rot," which begins at the bottom of a tree and ordinarily runs up through the center of the tree and extends, with age, out toward the bark.

3026 In addition to that we have what is known as ring rot, where a tree may be sound at the base but rotten at some point above there where the water apparently gets in around the dead limb.

Q. Which of these trees is more susceptible to ring rot, in your experience?

A. The sugar pine.

Q. Have you noticed any difference in the relative durability of California white pine and sugar pine lumber when put to use around your plant?

A. No; I haven't detected any difference.

Q. Do you use both discriminately?

A. Yes.

Q. And for the same purposes?

A. Yes.

Q. Do you mill any logs from fire-killed timber?

A. Yes.

Q. Both California white pine and sugar pine?

A. Yes.

Q. Do you make any distinction between the use of logs from either variety of tree?

A. No; we take either tree that appears to be fit to mill.

Q. Do you find that you are able to mill logs from fire-killed timber of both varieties several years after the fire?

A. Yes.

Q. Have you had any recent experience in that connection?

3027 A. We had a bad fire at the head of Sacramento Valley, in one of our timber groups, in 1924. A mill man has been logging that and buying the timber for us for the last three years, and expects to cut more of it this year.

Q. Do you log both sugar pine and white pine after fire killed?

A. Yes, sir.

Q. Have you noticed any difference in the relative susceptibility of sugar pine and California white pine to decay when down in the forest, as from lying on the ground?

A. No; I don't know of any difference.

Q. In your opinion, does the question of susceptibility of decay to the log when lying in the forest have any relation to the durability of the lumber when put into use?

A. Oh, I think a lumber under similar conditions would act the same as the logs do. It is just lumber, after all, in either case.

Q. And to what extent are you familiar with the marketing of southern yellow pine lumber in the Northern States; have you had any contact with it?

A. We have in Minneapolis and in Chicago, where we have a yard.

Q. Do you know whether any of this lumber is ever sold as yellow pine, without specification of short leaf or longleaf?

A. Yes; we have bought both without such designation.

Q. Just as yellow pine?

A. Yellow pine, or southern pine.

3028 Q. If the term "California white pine" should be discontinued as the commercial name under which lumber from Pinus ponderosa is marketed, is there any liklihood, in your opinion, that there would be any resulting confusion in the lumber market, lumber trade?

A. Yes.

Q. Would there be any confusion with sugar pine?

A. Yes.

Q. Why?

A. Not unless the sugar pine took that name which was suggested yesterday.

Q. Is that a possibility in your opinion?

A. In my opinion it is a certainty.

Q. I will ask you to answer the general question as to what, in your opinion, would be the effect upon the lumber trade if this term California white pine were to be superseded by some other term, that is, as to possible confusion or otherwise?

A. I think we would have to adopt a new name that would come as near to describing the characteristics of our lumber as we could in the public mind, and would then have to spend a large amount of money to convince the using and buying public that the lumber that they had formerly known as "California white pine" would be marketed under some other name.

Q. Is there a possibility of confusion between different kinds of lumber in the meantime?

3029 A. Certainly there would be, because the customer wouldn't know under what name they could order the lumber, and if an order came in worded for California white pine, as the trade now knows it, we could not accept it without explaining to the public that we could no longer use that name, or accept an order on that basis, and get the order rewritten under the new name. In other words, if they order California white pine and were furnished lumber that had to have some other name, we would not be complying with the order.

Mr. MATTHEW. You may cross-examine.

Cross-examination by Mr. BURR:

Q. You think there is an advantage in the use of the word "white" in connection with the term "California white pine"?

A. Yes.

Q. Have you at any time estimated that it is worth about $2.00 a thousand to the California white-pine manufacturers?

A. I don't remember ever having tried to put it in dollars and cents.

Q. But you think it has a monetary advantage to you?

A. I do.

Q. Why is that?

A. Because it classifies our woods with the other woods that have been known to the trade, including itself as white pines, the
3030 general group with this (sic) similar characteristics.

Q. Well, now, that is one of the reasons you want to continue to use it, is it?

A. That is one of the reasons; yes.

Q. Do you happen to know whether that was one of the reasons why it was adopted in the beginning?

A. I do not; it was adopted long before.

Q. Before your time?

A. Before my time; as far as I know, it was in use here when Klein was out here, and in use when I came out first in '99.

Q. You think that the California sugar-pine manufacturers would doubtless take the words "California white pine" in case you were forced to discontinue that name?

A. I think they will; I think they are doing it today in advertising that their sugar pine is genuine white pine.

Q. Isn't it genuine white pine?

A. Some of the botanists say it is.

Q. They have been advertising it as a genuine white pine for many years?

A. They have and so have we.

Q. And the association has advertised it as genuine white pine, in contract with the California white pine, haven't they?

A. Yes.

Q. I mean the sugar pine as genuine white pine.

A. The genuine white pine; yes.

3031 Q. You think it would be an advantage to the sugar-pine people to call it California white pine on the market?

A. I think that feature would be an advantage to them.

Q. You think they could make some sales they are not making now?

A. Yes; I think they would.

Q. Isn't there, as a matter of fact, a possibility that there would be a confusion between sugar pine, if they named it California white pine, and the product that you have been selling and calling California white pine for so many years?

A. Yes; but I think they will not give up the name sugar pine. I think they will advertise it both ways so as to get orders under each title.

Q. Well, do you think it would be good sales policy to advertise the same wood two different ways?

A. It is very often done in the lumber business.

Q. Are you of the opinion that they would charge a different price for the same product advertised in two different ways?

A. I don't know.

Q. The word "California white pine" is now attached to a wood that is selling on the market considerably lower in price than the sugar pine, isn't it?

A. Most of the items; yes.

Q. All of the items except some of the common, lower common grades; isn't that true?

3032 A. Yes; excepting there are some purposes that white pine is sold for that the sugar pine is not suited to.

Q. The sale of a higher-priced commodity, under a title that has been used for a lower-priced commodity for a long period of years, wouldn't be helpful to a higher-priced commodity, would it?

A. In general, no; I would say that the tendency would be the other way.

Q. Wouldn't that tendency operate, if they were to rename sugar pine California white pine?

A. That would be the tendency, but the sugar-pine people don't hold their prices at the maximum point.

Q. Neither do the California white-pine people necessarily, do they?

A. No; that is true.

Q. They can't always get the maximum price on the market?

A. No; but for certain purposes, such as enameling, the sugar pine is not suited to it, and they sell it as California white pine under that title and make sales they couldn't otherwise make.

Q. There is a difference in value, corresponding to the difference in price, between the sugar pine as the higher-priced wood, and the California white pine, for most purposes, isn't there?

A. I don't think so.

Q. What is the cause of the difference in price?

A. I think the sugar pine was known to the East first and that the sugar pine thereafter was more uniform in quality than

3033 was the white pine, so-called "white pine", from the various districts, and I think that gradually the spread between those two is diminishing as they find less difference in the working value of the woods.

Q. The sugar pine is better for pattern purposes, isn't it?

A. It is a little easier to work and it is more troubled with shake defects in the pattern after it is made and in use; but, in general, I should say the sugar pine was preferable.

Q. Isn't it preferable for organ and piano work?

A. Yes; they seem to prefer the sugar pine.

Q. Why do you think that is true?

A. I don't know.

Q. It is a little softer, a little easier to work?

A. Yes; but I don't see that it has much benefit in making organs.

Q. Do I understand you to testify that shake cannot be detected before it is marketed?

A. Some of it can and some of it can't; a lot of it *it* is impossible to tell until it is worked or used afterwards.

Q. Was that true of the true white pine of the North?

A. To a considerable extent.

Q. And even there you couldn't tell it until after it is marketed in some cases?

A. Part you can and part you can't.

Q. The white pine of the North has always commanded a
3034 higher price than the California white pine, has it?

A. I don't know. I have seen the northern white pine sell very cheaply.

Q. I mean in general, by and large.

A. In general, since they have been competitive in the eastern market, the white pine has brought the most money. I doubt whether it would bring the most out here.

Q. With treatment the sugar pine takes enamel just as well as anything else?

A. It does not.

Q. Do you know what I mean by treatment?

A. Yes.

Q. It takes an enamel treatment?

A. It covered the wood with shellac, or something else, I think the result thereafter would be the same.

Q. They have a treatment that removes the piny pitch pockets, don't they?

A. Not that I know of; they cover them—they don't try to remove them—they cover them with shellac or some other finish. Those are the small pitch pockets. The deep pitch pockets, you can't cover them; the pitch is always coming out.

Q. On the eastern market strobus is still being sold, the northern white pine?

A. Yes.

Q. You can buy it if you are willing to pay the price, can't you?

3035 A. Yes.

Q. Except for the extremely wide widths, I presume?

A. Widths and thicknesses.

Q. And that is still commanding a little higher price, isn't it, than the California white?

A. Yes, I think it is.

Q. Isn't the word "California white pine", that term, I should say, isn't that term one which has a tendency to help the California white pine to sell as white pine in the eastern markets?

Mr. MATTHEW. I object to that question because that is the whole question in issue. I have been sustained on that objection heretofore.

Mr. BURR. If the examiner please, he is asking the reverse of this very question.

Mr. MATTHEW. No.

Mr. BURR. He is constantly asking the tendency of change of names to confuse.

Mr. MATTHEW. I asked what the effect would be, not any tendency.

Examiner DE BRULER. Ask what the effect is.

By Mr. BURR:

Q. What is the effect on the market of the use of the word "white" in your trade term?

A. I think it has a tendency with the general trade to classify our wood with the other woods that have been known at the
3036 same time as white pine as to general characteristics. It is a direct reference to its color.

Examiner DE BRULER. I think Mr. Walker gave the same answer on direct examination.

Mr. MATTHEW. I didn't ask that question.

Examiner DE BRULER. Practically the same answer.

By Mr. BURR:

Q. Is the effect to confuse the buyer as to whether he is getting northern white pine or California white pine?

A. No; I think it tends to clarify in the buyer's mind what the wood is when we say it is California white pine.

Q. Well, isn't the effect of the use of the word California white pine sometimes to eliminate the word "California" and merely call it white pine?

A. Not intentionally; so far as I know we like to advertise the California feature.

Q. Do you not like to advertise that California white pine is genuine white pine?

A. No; not from the botanical standpoint; I don't think the lumber men care anything about the botanical classification. We are selling lumber, not the names by which the botanists classify wood.

Q. As a matter of fact, are you not using the term California white pine for the purpose of making the public believe that it is virtually the same thing as the old northern white pine?

3037 A. In its characteristics we claim it has the same characteristics, but it is not, as far as I know, that is, we have never advertised it as from the same tree as the eastern white pine.

Q. You do advertise it is equal, as a white pine, with the northern white pine, do you not?

A. I don't know whether we have ever made as sweeping a statement as that, as equal—we advertise it is better in somethings.

Q. You have a slogan "Producer of White Pine for Half a Century" haven't you?

A. I believe so, yes.

Q. And that slogan is being sent abroad in trade journals of national circulation, is it?

A. Yes.

Q. And you have been using that for how long a period?

A. I don't know, several years anyway; I don't know just how long.

Q. Mr. Walker, I will hand you a group of papers and ask you if these are portions of your advertising, sir.

(Here followed remarks off the record.)

A. (Witness examin'g advertisements.) Yes; those are our ads, as far as I know.

Mr. BURR. I ask that they be received in evidence and marked as "Commission's Exhibit No. 48," if the examiner please.

Examiner DE BRULER. Have you any objection, Mr. Matthew?

Mr. MATTHEW. Just a moment! There is no objection. I don't think this is proper cross-examination, but I think counsel
3038 would have a right to introduce them in any event.

Examiner DE BRULER. It will save time.

Mr. BURR. I note there are references to the exhibit number in the examiner's report and I beg that I may be given permission to remove those references in pen and to properly bind these exhibits.

May it appear of record that this exhibit consists of 5 pages.

Examiner DE BRULER. They will be received as Commission's exhibit no. 48.

(Whereupon the five advertisements referred to were received in evidence and marked "Commission's Exhibit No. 48.")

By Mr. BURR:

Q. Do you regard sugar pine as a true white pine?

A. Yes; I think it is white pine in its qualities, and I understand the botanists classify it as a white pine, too.

Q. Is the trade unable or is it able to tell the California white pine from the so-called genuine white pines by appearance?

A. I think so—by appearance—I don't know, not necessarily.

Q. In the clear grades, the California white pine is largely sap, isn't it, rather than heart in character?

A. The clear grade will run more to heart; yes.

Q. More to heart?

A. More to sap—excuse me.

Q. Did I understand you to say that year in and year out
3039 your cut has been about 20% or 25% sugar pine?

A. That would be my estimate.

Q. You are sure it will run that high, are you, as an average over a period of years?

A. I wouldn't say, I wouldn't be sure; my impression is it would run rather higher, but about that.

Q. The California white pine goes into the Middle West more than it does to the Atlantic coast?

A. We market more of all our lumber in the Middle West than we do on the Atlantic coast.

Q. As a matter of fact, doesn't the sugar pine go to the Atlantic coast more than the Middle West?

A. I don't think so.

Q. The northern white pine goes to the Atlantic Coast more than to the Middle West, does it not?

A. A lot of it goes direct to England, from the Canadian mills. I think the tendency would be that way; yes.

Q. Now, when Mr. Klein went to the Pacific coast, did he report also on the availability of Idaho white pine?

A. Yes.

Q. Did he regard Idaho white pine, sugar pine, and California white pine as woods that might appropriately be used in the Middle West and eastern points, did he?

A. Yes.

3040 Q. Has any manufacturer of sugar pine indicated to you that he had under consideration calling the sugar pine California white pine, if the ponderosa lumber was required not to be called "California white pine"?

A. I discussed it with several of the sugar-pine manufacturers, because as a sugar-pine manufacturer we were interested in the outcome of this suit, but I do not know that any have recommended that change.

Q. Did you discuss that change with anyone?

A. Yes.

Q. With whom?

A. Jim Tyson, James Tyson, I should say; Elmer Cox and Ray Danaher.

Q. Anybody else?

A. Burt Lakin, of McCloud.

Examiner DE BRULER. I think this has gone far enough along that line.

Mr. BURR. I would like to clear that matter up. I think it is rather important.

By Mr. BURR:

Q. Did any of them indicate that they had any desire to call sugar pine California white pine?

A. Only to the extent of saying that it does them an injury by calling ours white pine, when theirs was the only California wood that was a true white pine.

Q. Stump rot is a disease of old trees, is it not?

A. Not necessarily; no.

3041 Q. Is your stand of sugar pine a stand of mature trees, practically exclusively?

A. There is no such thing as a mature tree.

Q. I beg your pardon.

A. As I understand, a tree will grow forever unless disease of some kind gets into it to destroy the wood.

Q. But trees that are old are more susceptible to those diseases, are they not?

A. They have been exposed longer and a larger percentage of disease has got into them.

Q. Yes.

A. But I see many small and young trees apparently that are very defective. They are just like a tooth—when the covering is broken the interior decays.

Q. Didn't you ever change your logging operations so as to avail yourself of an old stand that was beginning to decay on account of age?

A. No; I never knew an old stand to decay on account of age.

Q. I mean on account of susceptibility due to age, and being susceptible to various influences of decay and disease on account of age.

A. I have known of timber to be cut because it was defective, or because it was burned, or blown down, but not on account of age. I understand that is the scientific truth, as well as our general experience.

Q. What is that?

3042 A. That a tree does not mature or become of old age.

Examiner DE BRULER. I think that has gone far enough. We are taking up time for nothing, it seems to me.

Mr. BURR. I think that is all.

Redirect examination by Mr. MATTHEW:

Q. Mr. Walker, you referred a moment ago to your advertising, some copies of which are in evidence as Commission's exhibit no. 48. May I ask you whether it is a fact that your company has been producing white pine for half a century or thereabouts?

A. Not under its corporate name for the full fifty years.

Q. But that company, or its immediate predecessors, for about fifty years?

A. Much more than fifty years.

Q. I think you stated you produced sugar pine in California from the very commencement of your operations here?

A. Yes.

Q. And these advertisements which are presented to you, for the most part, apparently cover both the California white pine and the sugar pine?

A. Yes; and the other woods that we manufacture.

Q. Then whether this alignment of lumber nomenclature has got to follow botanical lines, or some other criterion, you are in fact producing white pine and have been for very many years?

3043 A. Yes.

Q. You push the sugar pine and California white pine alike in your advertising, do you not?

A. We push both of them. I wouldn't say just alike—I don't know which we advertise the most.

Q. I didn't mean to suggest one more than the other, but you are actively interested in advertising sugar pine and the California white pine?

A. Yes.

Examiner DE BRULER. I understand his company cuts both sugar pine and California white pine.

Mr. MATTHEW. It does and certainly there is nothing inappropriate in that.

Examiner DE BRULER. I was just asking if that was a fact. I understood him to say they own and cut both. Is that correct?

Mr. MATTHEW. Yes; there is no question about it. I want to make that point clear in the record.

By Mr. MATTHEW:

Q. When you bill California white pine and sugar pine, do you bill them separately and under distinctive names?

A. Bill them?

Q. Yes.

A. On all but the common grades; we mix some of the common grades.

Q. Except where you have one of common grades, do you bill them separately?

3044 A. Yes, sir; as far as I know.

Q. Under what name do you bill the sugar pine?

A. Sugar pine.

Q. And under what name do you bill the other wood?

A. California white pine—C.W.P.—we usually use the initials.

Mr. MATTHEW. That is all.

Recross-examination by Mr. BURR:

Q. When you state that your advertising material, as on page 2 of Commission's exhibit no. 48, "California white pine", and then after a few descriptive lines say "The physical properties that have made white pine the highest standard of quality for generations are found in Paul Bunyan's Plywood Panels", do you intend there to refer to California white pine as distinguished from sugar pine or northern?

A. We do not; because we put the woods into the panels indiscriminately.

Q. You don't say anything in the context at all about sugar pine; you speak of California white pine and then you speak of white pine, and its long reputation, is that true?

A. I didn't prepare this; this is one of the details, like some that Fred Weyerhaeuser mentioned yesterday, that I am not familiar with. I will have to look it over.

3045 Examiner DE BRULER. That is an exhibit that is in the record and that speaks for itself. I think that has been gone into far enough, Mr. Burr.

Mr. BURR. I would like an answer to just that one question and I will not pursue it further.

A. This is a direct application to what we call our Paul Bunyan's plywood made in our veneer plant, in which we put in both the California white and the sugar pine material.

By Mr. BURR:

Q. In each door?

A. Not necessarily—as it happens to run. We use them indiscriminately.

Q. The context, however, ties up California white pine with the white pine produced for a long period, does it not, in the ad?

A. No; it ties it up with the characteristics. We have always maintained it has the same characteristics we do here.

Q. You endeavor to tie up, for the purposes of advertising, in the public mind your California white pine with the white pine of generations, do you not?

A. Not with the characteristics of the two woods. We try and advertise all we can that they are very similar.

Examiner DE BRULER. I think the exhibit speaks for itself. I think you have gone far enough.

Mr. MATTHEW. The examiner understands, I am sure, and counsel understands that considered with respect to quality and
3046 use we think our lumber is properly characterized as California white pine.

Examiner DE BRULER. Sure, that is your position.

Mr. BURR. That is all.

Examiner DE BRULER. That is all.

(Witness excused.)

Examiner DE BRULER. We will take a five-minute recess.

(Whereupon a five-minute recess was taken.)

Examiner DE BRULER. Are you ready to proceed again, gentlemen?

Mr. MATTHEW. I will call Mr. Spaulding.

JOHN D. SPAULDING was thereupon called as a witness and, after having been first duly sworn, testified as follows:

Direct examination by Mr. MATTHEW:

Q. Please state your name and place of residence for the record.

A. John D. Spaulding, Diamond Springs, California.

Q. What is your business or occupation?

A. Lumber.

Q. With what company are you identified?

A. California Door Company.

Q. What is the California Door Company?

3047 A. They have been manufacturers of sugar pine and white pine for thirty years.

Q. What is your position with that company?

A. Sales manager.

Q. What particular part of their product have you charge?

A. The moving of all lumber, except the box lumber, which is converted to the box shook and sold through a sales organization in California.

Q. You are not in charge of the sales of doors?

A. Of the box.

Q. You are not in charge of the sales of doors?

A. No.

Q. You are in charge of sales of lumber?

A. Lumber.

Q. Where do you have the principal markets?

A. All over the world.

Q. How many years have you been the sales manager of that company?

A. About two years.

Q. What has been your prior experience in the California lumber industry?

A. I had charge of the California Sugar and White Pine Company's sales for eight years.

Q. During what period?

A. From 1918 to 1926, inclusive.

Q. Were you selling sugar and white pine both?

3048 A. I was.

Q. For that company?

A. Yes.

Q. Briefly, what was your prior experience in the lumber industry, Mr. Spaulding, before you came to California?

A. I started in at 16 in Wisconsin, and for five years I was learning the grades of Wisconsin white pine and Norway pine, and the hardwoods that grow in the State of Wisconsin, shipping, and then for ten years I was operating sawmills. From there I went to buying for the largest factory in the United States, in the Middle West, and I bought for them for ten years all species of softwood and hardwood.

Q. I think you stated that you were the vice president and general manager of the California Sugar and White Pine Company?

A. Yes.

Q. And had general charge of their sales?

A. I did.

Q. Did you personally visit the trade in the Middle West and Eastern States?

A. All over the United States.

Q. Do you visit the trade at the present time in your capacity as sales manager of the California Door Company?

A. I do, from Canada to the Gulf, and even the West Indies.

Q. Will you state, please, the approximate proportion of your cut represented by the California white pine and sugar pine,

3049 respectively?

A. One year we cut more of one species and the next year more of the other; it averages about 50-50.

Q. Then, you are equally interested in the marketing of sugar pine and California white pine?

A. Equally interested.

Q. Do you find that the marketing of your sugar pine lumber is hampered, or is restricted, in any way, because of the fact that the term "California white pine" is the established commercial name for lumber yielded by the Pinus poderosa tree?

A. No.

Q. When you were vice president and general manager of the Calfornia Sugar and White Pine Company, did you find that the

marketing of sugar-pine lumber was hampered in any respect by virtue of that circumstance?

A. No.

Q. Did you encounter any sales resistance to sugar pine because of the existence of that term "California white pine"?

A. No.

Q. You stated that you are in contact with the trade in the East by frequent visits?

A. Yes.

Q. Are the terms "California white pine" and "sugar pine" well understood in the trade?

A. They are.

3050 Q. Is there any confusion between the two lumbers in the trade at the present time?

A. Not that I know of.

Q. Have you an export trade, Mr. Spaulding?

A. Yes.

Q. In what countries, briefly?

A. Why we ship to Scotland, England, Ireland, some to Switzerland, Africa, South America, West Indies, and the Hawaiian Islands.

Q. Under what commercial names do you offer these two lumbers to your export trade?

A. Sugar pine and California white pine.

Q. If the term "California white pine" were superseded by some other term, would there be any confusion or difficulty in the export trade for your lumber?

A. There would be because we are not in personal contact with those buyers and we would have to do an awful lot of explaining for a long period of time to cause them to understand what we are talking about in species.

Mr. MATTHEW. You may cross-examine.

Cross-examination by Mr. BURR:

Q. You say you have known of no confusion of these names. Have you any information with regard to a naval ammunition depot over at Hawthorn, Nevada, recently?

3051 A. Hawthorn, Nevada?

Q. Yes.

A. Yes, I have.

Q. Don't you know something about that?

A. Yes, I do.

Q. Wasn't there an offer there of California white pine for genuine white pine and a refusal?

A. There was not.

Q. There wasn't?

A. No, sir.

Q. State what happened, if you know.

A. A man went into the office and wanted a price on some pine. He did not state sugar pine. He ambiguously talked pine.

Q. As a matter of fact, wasn't that a Government proposal that asked for it?

A. Yes, but the Government proposal was not submitted to the California Door Company. May I explain?

Q. Yes.

A. You talk to the average architect in the United States and he doesn't know anything about anything that is wood, technically.

Q. Does he practically.

Mr. MATTHEWS. Just answer the question.

Examiner DE BRULER. Let him answer the question.

A. He does not know practically. Therefore you have to catechize him to find out what he does want.

3052 By Mr. BURR:

Q. I don't think that furnishes an explanation of why it was that order, if it was true, that California pine was offered on a Government proposal calling for genuine white pine.

A. It was not offered as genuine white pine to the Government. It was offered to a contractor and it was not to the United States Government at all. We had no contract with the Government.

Q. Well, how did the Mittry people come into that?

A. They took the contract with the Government.

Q. And were they or were they not ordering California white pine on a proposal for genuine white pine?

A. I don't know anything about what their contract was with the Government.

Mr. MATTHEW. I have no objection to asking anything of this witness that he has knowledge of. If I understand your questions and his answers, this is not related to the California Door Company.

Mr. BURR. He testified he was familiar with it.

The WITNESS. I have given you what I know about it. I know our company's side of it.

By Mr. BURR:

Q. Don't you know, as a matter of fact, that the Government declined to accept some California white pine which was offered on a proposal for genuine white pine?

A. I understood they refused some finish product because it
3053 was not sugar pine.

Q. And was it California white pine?

A. California white pine.

Q. How long have you been in the habit of going east on these trips?

A. Since 1918.

Q. And you say you go clear into Canada and to the southern part of this country?

A. I have.

Q. At various times?

A. Yes.

Q. Whom do you call upon under those circumstances?

A. I call on the industrials, which means the steel people in all their varied lines, the electrical people, the sash-and-door people, the planing mills, the wholesalers, and the distributors.

Q. What do you mean by the distributors, the retailers?

A. Well, not exactly a retailer. They sell in carload lots.

Q. You mean jobbers of the various types?

A. Yes.

Q. How much of your time do you spend in the East?

A. It depends entirely on conditions; sometimes I am gone sixty days and again I will be gone longer than that. I have made two trips of sixty days each last year.

Q. And those classes that you wait upon, you say there is no confusion between the white pine that you encounter?

3054 A. No; because we have sold them for years—the people I call on we have sold for years.

Q. Isn't it true, Mr. Spaulding, that for a number of years you were strong advocates for the change of the name California white pine to something else?

A. No, sir.

Mr. MATTHEW. I object to the question.

Mr. BURR. I move it be stricken if counsel objects.

Mr. MATTHEW. It may stand as it is.

Mr. BURR. I will unite in the motion to strike.

Examiner DE BRULER. It may be stricken, if you are agreed.

The WITNESS. I will tell you why if you want to know.

Examiner DE BRULER. No use going into that matter—it amounts to nothing.

Mr. BURR. That is all.

(Witness excused.)

Examiner DE BRULER. Call the next witness, please.

Mr. WHEAT. Call Mr. Dean.

W. B. DEAN, was thereupon called as a witness, and having been first duly sworn, testified as follows:

3055 Direct examination by Mr. WHEAT:

Q. Will you state your full name and place of residence, please?

A. W. B. Dean, Chico, California.

Q. And in what business are you at the present time?

A. Lumber.

Q. And will you state the company with which you are associated and your position with that company?

A. General manager of the lumber department of the Diamond Match Company.

Q. How long have you held that position?

A. Since about 1907.

Q. The Diamond Match Company is one of the respondents in these proceedings?

A. It is.

Q. Were you in the lumber business prior to the year 1907?

A. I was.

Q. Will you please briefly state your general experience?

A. Briefly, I started in as office boy for the Sierra Lumber Company in the same town, Chico, California, in the year 1907, going from office boy to manager of that concern.

Q. By the way, then did I misunderstand you? I thought you said you had been general manager of that concern since 1907. Since when have you been general manager?

3056 A. Since about 1915, general manager of the Diamond Match Company.

Q. Just what are your duties in that position?

A. Manufacturing and disposing of their lumber products.

Q. What products do they produce?

A. Sugar and white pine, fir, cedar.

Q. This is in what part of California, sir?

A. In the counties of Butte, Plumas, Tehama, and Shasta.

Q. Where is your mill located?

A. Sterling City, California.

Q. That is near Chico?

A. Yes.

Q. How long have you had personal knowledge, or been personally familiar, with the term California white pine?

A. It is rather difficult to be exact, but I should say since about 1904 or 1905.

Q. And how long have you been familiar with the term sugar pine?

A. Ever since I have been in the lumber business.

Q. Have you marketed both of those continuously since that time?

A. Yes.

Q. About what proportion of your annual cut is sugar pine?

A. I should say somewhere between 20% and 25%.

Q. And about what proportion is California white pine?

A. About 30%.

Q. And the rest is mixed woods?

A. Fir and mixed woods.

3057 Q. Where do you market your California white pine and sugar pine, in general?

A. The upper grades go to the Missouri and Mississippi River Valley points and in California.

Q. Do you personally control the marketing of this lumber?

A. Yes.

Q. And do you market it yourself, or through some agency organization?

A. Outside of the coast, we market through an agency in Chicago.

Q. What is that agency?

A. Louis Wuichet.

Q. I will ask you whether or not you have encountered what is known as sales resistance against your sugar pine by reason of the fact that the word "white" is included in the term California white pine?

A. No.

Q. Have you ever been hampered in the sale of your sugar pine because of the use of the word "white" in the term California white pine?

A. No.

Q. Have you ever heard of sugar pine being marketed as California white pine, or under any other term containing the word "white"?

A. No.

Q. Are you equally interested in pushing the sales of both your sugar pine and your California white pine?

3058 A. We are.

Q. Have you ever had any complaints come to you on the ground that the word "white" is not a proper word in the name California white pine?

A. No.

Q. Do you know of any confusion which has been caused by the use of the word "white"?

A. None.

Q. Have you ever had any complaints against your California white pine on the ground of durability?

A. No.

Q. I will ask you whether there is any demand from the trade with which you deal for a change in the name from California white pine to some other name?

A. Never have heard of any comments.

Q. To whom do you bill your lumber; just how do you sell it?

A. We sell it, as I mentioned a while ago, through Wuichet of Chicago, for shop and better.

Q. And how do you invoice the lumber?

A. We invoice it as sugar pine or California white pine to Wuichet.

Q. And he acts as your agent, as a sales agent; is that so?

A. Yes—not our direct agent—we sell to him direct and he resells.

Q. Has Mr. Wuichet ever complained to you——

3059 Mr. BURR (interrupting). Wait a minute! I object to that.

Mr. WHEAT. If he is the man to whom he sells, I can ask him whether he ever complained.

Examiner DE BRULER. Objection overruled.

By Mr. WHEAT:

Q. Has Mr. Wuichet, to whom you sell, ever complained to you regarding the use of the word "white" in the name California white pine?

A. No; he never discussed that.

Q. Has he ever complained to you regarding durability with reference to your wood?

A. No.

Q. Are you familiar with southern yellow pine, Mr. Dean?

A. Slightly.

Q. To a very limited extent?

A. Very limited extent.

Q. Well, I will ask you whether you are familiar with northern white pine?

A. The same answer.

Q. I will ask you whether or not you know of any ancient structures in the part of California where your operations are conducted, that are built of Pinus ponderosa?

A. Well, there are many very old buildings in the various towns in the Sacramento Valley, but as to whether they are one or the
3060 other—that is, sugar or white pine—I couldn't say.

Q. Can you tell by your inspection of the outside of the buildings?

A. No; because they are painted.

Q. Even if they were not painted, and were ancient structures, could you tell which wood was used in their construction after many years?

A. Those familiar with the characteristics of the two woods might be able to tell.

Q. Do you think you could?

A. I think I could.

Q. I will ask you whether you purchase any California white-pine lumber in addition to producing it yourself?

A. At times during the war period we bought box lumber and a little of the small mill cuts.

Q. And have you ever bought any California white-pine lumber from the Klamath Falls region?

A. During the war time; yes.

Q. Does your company, under your direction, operate retail yards?

A. Yes.

Q. Where?

A. In the Sacramento and San Joaquin Valley.

Q. How many yards do you have?

A. Forty-seven.

Q. And do you know whether California white pine from
3061 the Klamath Basin, in Oregon, is marketed in those areas?

A. Not through our yards.

Q. Not through your yards, but it is marketed in competition with your wood?

A. I think it is.

Q. Do you believe there would be any confusion if the name California white pine, from the Klamath Basin, were to be marketed in an area in which you operate retail yards, under the term "Oregon pine" or "Oregon yellow pine"?

A. I think it would be.

Mr. BURR. I object to that on the usual grounds.

Examiner DE BRULER. He can answer, give his opinion.

A. (Continued.) I think it would be very confusing.

By Mr. WHEAT:

Q. Why?

A. Because once a trade name is established and people know the article by its name, they would have to be reeducated at expense and trouble.

Q. Would there be—had you finished?

A. To determine what kind of material it was.

Q. And if a purchaser asked for Oregon pine would there be any confusion if the Pinus ponderosa from the Klamath Basin were called by that name?

A. Why the architects in the various cities, particularly the larger cities like San Francisco and Sacramento, have been calling

3062 Oregon pine, which is really a douglas fir.

Q. That is a general practice?

A. That would conflict with calling white pine in Oregon an Oregon pine.

Mr. BURR. I move to strike that reference to Douglas fir.

Examiner DE BRULER. That is out of the record, now, Douglas fir.

Mr. BURR. Did you grant the motion?

Examiner DE BRULER. It may be stricken.

By Mr. WHEAT:

Q. I will ask, then, whether or not there is any other wood—you don't need to state what it is—is there any other wood marketed in California at the present time and known as Oregon pine?

Mr. BURR. I object.

Examiner DE BRULER. Ojection sustained.

Mr. WHEAT. That is exactly the question that was allowed in several times, and I think the record is perfectly clear on that; that is, if we stay within the pines, and I am asking him whether or not, if we should change the name to Oregon pine, if that would make a confusion with any other wood now marketed as Oregon pine.

Mr. BURR. Any other pine now marketed——

Mr. WHEAT (interrupting). We have been through this so——

Mr. BURR (interrupting). You are trying to sneak it in. Put the word "pine" in if you are sincere.

3063 Mr. WHEAT. Stay away from the word "sincere", please.

By Mr. WHEAT:

Q. I will ask you, for the record, whether or not there is any lumber marketed in California as Oregon pine?

A. Yes.

Mr. BURR. Wait a minute!

By Mr. WHEAT:

Q. And I will now ask you whether or not it is pine?

Mr. BURR. Wait a minute! I object.
Examiner DE BRULER. Objection sustained.
Mr. WHEAT. Exception.
Examiner DE BRULER. Exception allowed.
Mr. WHEAT. You may cross-examine.

Cross-examination by Mr. BURR:

Q. Do I understand that Louis Wuichet takes your entire product?
A. Of the uppers; yes.
Q. What do you market through your lumber yards?
A. We market all kinds of building materials.
Q. I don't understand that very well.
A. I might qualify that by saying that Wuichet takes all the uppers in shop and better of the factory grades he handles.
Q. And none of those go through your retail stores; is that true?
3064 A. A small percentage of our uppers go through retail stores.
Q. Then, Wuichet doesn't take them all?
A. No.
Q. Your sales to Wuichet are made outright and no brokerage arrangement?
A. He gets a brokerage, but he resells, but we don't know to whom.
Q. He is not selling as your agent; he buys outright?
A. Yes.
Q. Then, you don't come in contact with his trade at all?
A. We do not.
Q. When you are selling both sugar and white pine, so-called, if a buyer were desirous of having something that was known as white pine you would be able immediately to sell him the California white pine, would you not.
A. I presume we would.
Q. And you make as much margin off the one as you do the other, of profit?
A. That varies in al lines; no one could answer that.
Q. As far as you know, there is no greater margin of profit made on the one than on the other?
A. It is comparable.
Mr. BURR. That is all.
Examiner DE BRULER. The witness is excused.
(Witness excused.)
3065 Mr. WHEAT. Call Mr. Baker.

R. D. BAKER was thereupon called as a witness, and, after having been first duly sworn, testified as follows:

Direct examination by Mr. WHEAT:

Q. Mr. Baker, will you state your full name and place of residence?
A. R. D. Baker, San Francisco.

Q. And in what business are you engaged?
A. Lumber.
Q. With what company?
A. Lassen Lumber and Box Company.
Q. Where is that company located?
A. Susanville, California.
Q. And what is your position?
A. President.
Q. Have you been connected with that company for some time?
A. Since the organization, in 1918.
Q. And prior to that, were you in the lumber business?
A. Yes.
Q. Will you state briefly what your lumber experience has been?
A. I started in Saginaw, Michigan, in 1890, with a manufacturing firm of lumber; later, I went to Toledo, Ohio, for two years as manager of a distributing yard for the lumber produced by the same people from the Duluth, Minnesota, pine, and Canada.
3066 Two years later I went to Pittsburgh, opened a sales office, to sell the lumber. I was with that firm until '97 and I organized a wholesale concern and did a wholesale lumber business in Pittsburgh for twenty-five years until 1918, coming to California.
Q. And in your experience in selling lumber in Pittsburgh, what varieties of pine did you market?
A. Well, yellow pine, white pine largely, Norway pine.
Q. And how long have you known the term, or been familiar with the term, "California white pine"?
A. Since 1897.
Q. How did you become familiar with it, if you recall?
A. We bought it and sold it to the retail and planing mill trade in the East from that time.
Q. And did you ever travel in the West during that period to examine this lumber?
A. Not until 1904; I made my first trip to the coast in 1904.
Q. For what purpose did you make the trip?
A. To get first-hand information as to the product manufactured out here, Idaho pine, and California pine, and sugar pine, and redwood.
Q. And did you at that time introduce those woods into your Pittsburgh trade?
A. We introduced them prior to that.
Q. And do I understand that you sold both Idaho white pine and California white pine?
3067 A. Yes.
Q. Over a period of years, did you?
A. Yes.
Q. Extending up to what year?
A. Up to 1918. I think the first shipment of Idaho pine was in 1904.
Q. Did you sell both Idaho white pine and California white pine after that period?

A. Until 1918, when I came to California. We didn't sell Idaho after that time.

Q. At any time did you find that you encountered sales resistence, or were hampered in any way in the sale of your Idaho white pine because of the use of the term "white" in the trade name "California white pine"?

A. No.

Q. Did you also sell sugar pine?

A. Yes.

Q. During what period, sir?

A. From 1904, more or less, until 1918, until I came out here.

Q. Did you during any of that period find that you encountered sales resistence, or were hampered in any way in the sale of sugar pine by reason of the use of the name "white" in the trade term "California white pine"?

A. No.

Q. You were familiar, were you not, have you been familiar
3068 for some period of years with the eastern or northern white pine?

A. Yes.

Q. Did you sell that in the Pittsburgh market?

A. Yes.

Q. During the whole period you have mentioned?

A. No; I sold it before I went to Pittsburgh; I sold it from Saginaw and from Toledo.

Q. And after that did you continue to sell it?

A. We did; and we also sold it more or less up to the time we left Pittsburgh and closed our office there in 1918.

Q. Did you at any time find that you encountered sales resistence, or were hampered in any way in the sale of northern white pine by reason of the use of the term "white" in the name "California white pine"?

A. No.

Q. As a matter of fact, Mr. Baker, did the northern white pine and the California white pine come into direct competition in the Pittsburgh area during the period when you were engaged in business there?

A. Yes.

Q. And would you explain what that was?

A. Well, the northern white pine was well known in that market. Pennsylvania produced white pine, and some in New York State.

Q. Did it still produce it when you were in business in Pennsylvania?

3069 A. Yes.

Q. In quantity?

A. Yes. We had to follow the timber. That is the reason we came West for lumber later. The pine was getting more scarce in the East.

Q. Explain what you mean by "following the timber"?

Mr. BURR. I don't think it is responsive.

Mr. WHEAT. I think it is not. I will reframe my question.

By Mr. WHEAT:

Q. I will ask you whether or not you found at any time that northern or eastern white pine was becoming scarcer in the market in Pittsburgh?

A. Yes.

Q. Will you explain that in some detail, giving some dates?

A. Well, my recollection is that the decline in the northern pine was very noticeable, began to be very noticeable, about 1905, and being in the wholesale business and trying to make a little profit on lumber, we reached out for something else that could be used and would satisfy the trade as pine, and for that reason we came West. We first went West. We went into Minnesota—in Wisconsin we didn't get strictly white pine in the common grades. It was white and Norway mixed. In Minnesota it was a good deal the same way.

We finally got into Idaho and handled more or less Idaho pine.

3070 Q. You mean the wood commonly marketed as Idaho white pine?

A. Yes. And then we got into California for the reason, particularly for the reason, that we could not get widths and thicknesses in the other woods that our trade required in the northern-pine product, and we introduced in Pittsburgh, and in the east, I believe, we were the shippers of the first car of Idaho white pine. Later we introduced California common grades also, from California, called California white pine.

Q. When you were in Pittsburgh, just what section of the east did you market your lumber in?

A. Ohio, and all over the State of Pennsylvania, and New York very largely, some in Maryland, New Jersey, and some in New England.

Q. Did you find that the California white pine, which you purchased from California, satisfactorily made the uses for which you purchased this lumber?

A. Yes.

Q. And what, in general, were these uses?

A. Our first purchase of California white pine was wide boards, shelving boards. Later it was shop lumber, factory lumber.

Q. And for what purposes was the factory lumber used?

A. For finish and shelving and cornice lumber.

Q. I will ask you whether or not those uses are also uses to which the northern white pine was applied?

A. Yes.

3071 Q. Could you, after around 1905, obtain northern white pine in widths which would meet the demands of your trade?

A. Not entirely.

Q. And will you explain that?

A. We required quite a considerable of wide boards. What I mean by that is boards wider than 12 inches; in fact, 14, 16, 18, and 20 inches was in strong demand in our territory. We had to come west to get those boards and we found them in California. The wide boards were the first California pine that we shipped, after my trip out here in 1904. Previously, we had not bought common from California; we bought sugar pine and California white pine shop lumber, factory lumber.

Q. Have you ever had any experience with the deterioration of Pinus ponderosa lumber in the Pittsburgh area through rotting?

A. No.

Q. Have you ever had any experience in the deterioration of any other lumber through rotting?

A. Well, my own personal experience has been quite limited. I built two houses in Pittsburgh, and I had a retail yard in Pittsburgh select the pine for those houses. The exterior was all pine. They were brick houses, but the cornice lumber and the porch flooring and the pilasters were all pine. I had the stock selected from northern pine.

Q. You mean northern white pine?

A. Yes. I think the pine all come from Minnesota. As for
3072 deterioration, in about two years I had to replace a good portion of the porch flooring and the bases under the pilasters on the porch.

Q. Had they rotted?

A. They had.

Q. What did you replace them with?

A. Pine again.

Q. Has your general experience with Pinus ponderosa, as regards is durability, been satisfactory or otherwise?

A. Satisfactory. We have had no complaints.

Q. Is California white pine, in general, what would be termed in the trade a shop-type lumber?

A. A portion of it.

Q. Will you explain that?

A. When the portion is shop?

Q. Explain why that is true.

A. It is wider, it produces—that is, it is tree that produces wide lumber and thick lumber and it is an excellent shop lumber for sash and doors.

Q. By shop lumber, what do you mean?

A. Factory lumber for general purposes in a factory, and sash and doors are the principal things the shop grades are used for.

Q. What part of the tree does this lumber come from?

A. It comes more or less from all the tree, more particularly from the larger logs, and first and second and third log of the
3073 tree, before you get into the very knotty common type in the upper part of the tree, and the limbs are very knotty, which does not produce a satisfactory shop grade.

Q. Then from that portion of the trees in these first and second and third logs does the shop lumber come?

A. I don't understand the question.

Q. From what portion of the tree does the shop lumber come from in these lower logs; do they come from the outside or inside?

A. It is largely from the heart; there is some shop on the outside of it, some sap shop.

Q. What is it that makes the shop lumber?

A. Large coarse knots with clear cuts between; it is a cutting type of lumber.

Q. Mr. Baker, did I understand you to say that you had experience in your Pittsburgh operations in the safe of southern yellow pine?

A. Yes, sir.

Q. Did that include both short leaf and long leaf?

A. Yes, sir.

Q. I will ask you whether or not the wood of Pinus ponderosa is adapted for the same, or for similar uses, to that of the southern yellow pines?

A. To some extent.

Q. Will you explain?

A. The common boards from Pinus ponderosa and the
3074 common boards from the southern pines are very much the same and there is some factory lumber produced from the yellow pine.

Q. Is that a larger percentage of the cut?

A. No; it is not. The yellow pine, I would say, is a flooring lumber. They have a great deal of flooring from the South—that is, tongue-and-groove flooring—and some finish, but not a large percentage. It is really a structural timber in the main.

Q. Does the California white pine in the eastern market come into more direct competition with the so-called "genuine white pines", or with the southern yellow pines?

A. The white pines.

Q. Are you in direct contact with the sale of California white pine at the present time?

A. Yes.

Q. And how long have you been in contact with that?

A. Since we have been manufacturing it.

Q. Just——

A. (Interrupting.) And prior to that in the wholesale business. That was part of the duties—selling it.

Q. What portion of the country do you market your California white-pine lumber in at the present time?

A. In the Middle West and Eastern States and some in the Southern States. We ship some to Texas and Oklahoma.

Q. What grades, largely, go to the Middle West and East?

A. Factory lumber goes to the Middle West and the upper
3075 grades go to the eastern trade.

Q. How do you invoice your California white pine?
A. California white pine.
Q. Have you done so continuously?
A. Yes, sir.
Q. Ever since you began operation in California?
A. Yes, sir.
Q. Have you ever operated anywhere else except at Susanville?
A. No, sir.
Q. About what is your cut there?
A. About 50 million feet per year.
Q. Are the terms "California white pine" and "sugar pine", respectively, well known to the lumber trade in this country, so far as you have had contact with it?
A. Yes.
Q. Have you ever heard of any confusion between those two names?
A. No.
Q. The distinction between these two woods is well known—I will ask you whether it is well known?
A. Yes; it is.
Q. Have you ever heard of sugar pine being marketed as California white pine, or under any term including the word "white"?
A. No.
Q. Have you ever received any complaints regarding the use of the term "white" in the name California white pine?
3076 A. No.
Q. In your experience in marketing these woods in the East did you encounter any confusion in the trade because of the use of the name California white pine?
A. None after we got it introduced. We introduced it and had to explain what it was.
Q. That was about in what period?
A. 1897; that is, starting, but you are speaking now——
Q. (Interrupting.) Your own experience?
A. From 1897 on.
Q. Did you find that the trade with which you dealt was interested in the botany of the woods which they were purchasing?
A. No.
Q. What were they interested in?
A. The lumber.
Q. And what particular were they interested in the lumber?
A. They were interested in lumber that was suitable for their use.
Q. And would you say that California white pine enters the lumber market for the uses to which it is primarily adapted?
A. I think so, to a great extent.
Q. Can you think of any other name which would more appropriately describe this Pinus ponderosa lumber from California, and its properties and qualities, than the term "California white pine"?
A. No.
3077 Mr. WHEAT. I think that is all.

Cross-examination by Mr. BURR:

Q. You say you had some confusion at first until after you explained what these various lumbers were, is that what you said?

A. I don't know that I would say that; I mean the confusion; we had to explain what we were offering, tell a man what it was, and what we thought it would do, and how it would act, and those things.

Q. That was when you were introducing the western woods, is that true?

A. Yes, sir. Every new wood we have to do that very thing.

Q. Now, in your experience in the East, at Pittsburgh particularly, I think you testified that you had been in the habit of selling large quantities of northern white pine from Pennsylvania and other points, is that true?

A. We did.

Q. And they were in the habit of asking for that as white pine, were they not?

A. Oh, yes.

Q. When you offered them Idaho white pine as an alternative to their northern white pine, didn't that word "white" in the term Idaho white pine help to sell it?

A. Possibly so—we were selling white pine.

3078 Q. And didn't the word "white" in connection with the trade term California white pine have a similar effect in helping you?

A. Possibly so.

Q. You don't regard California white pine as a genuine white pine, do you?

A. No; for the reason that we are told that it isn't.

Q. You don't think it has quite as good characteristics as the northern white pine and Idaho white pine, barring the widths and thicknesses?

A. In some respects we think it is better.

Q. In what respects do you think it is better?

A. It is a sounder timber.

Q. What do you mean by sounder?

A. Just what it says—sounder.

Q. Free from knots or rot?

A. It has, perhaps, as many knots, but it doesn't have the rot, doesn't have the shake. The northern white pine has rot and shake. It is a sounder lumber.

Q. You always got a better price for the genuine white pine, didn't you?

A. I couldn't say that we did for the reason——

Q. (Interrupting.) That was the rule, wasn't it?

A. I think generally it has been a little higher in price.

Q. And the Idaho too, isn't that true?

A. Not always.

3079 Q. As a rule, now?

A. I would say so, possibly.

Q. And the sugar pine is higher than California white, isn't it?
A. I believe so.
Q. Yes.
A. It has been—it isn't today very much.
Q. Well, that is the general rule of the market that sugar pine is higher, is it not?
A. I think so.
Q. The trade regards those as worth more, or they wouldn't pay more, isn't that true?
A. I suppose they pay more because they have to pay more.
Q. They want to get that wood in preference to California white pine and they pay more?
A. If they want it I suppose they would have to pay more to get it.
Q. And there are those that want it badly enough to pay more for it?
A. I suppose so.
Q. Enough so that the market price is higher?
A. Yes.
Q. Don't you think they are right in paying more for the genuine white pine?
A. No; I do not.
Q. You think they are foolish in the head, do you?
3080 A. I do, and I tried to make it clear, and I have convinced some that they were wrong.
Q. And you are selling California white pine to some of these purchasers that you have convinced are wrong in buying and paying more for the other varieties?
A. Yes.
Q. You have never been in the retail business, have you?
A. No, sir.
Q. And your sales as a wholesaler there in Pittsburgh were merely to the retail trade, were they?
A. Largely planing mills, retailers, and some to the manufacturing trade, industrial.
Q. I think you testified there wasn't any sales resistance against Idaho or sugar pine, or northern white pine as the result of the use of the word "white". Now let me ask you this: When a purchaser came in and asked for white pine, and you were able to sell California white pine better, as I think you testified, because it had the word "white" in it, doesn't that as a matter of fact form an outlet for the California white pine that otherwise wouldn't exist?
A. My experience in selling California white pine——
Q. (Interrupting.) Can't you say yes or no and explain afterwards?
A. I don't understand the question.
Mr. BURR. Will you read the question, Mr. Reporter?
3081 (Whereupon the question referred to was read by the reporter.)

A. When a man asks us for white pine we say, "We will quote you on California white pine". That is the only way we quote. We don't quote on white pine. We explain we are quoting on California white pine. We get inquiries for white pine, but we quote California white pine. We say, "We have your inquiry of such and such a date. Our product is California white pine. We are quoting you on that." If we don't get the order, why we don't get it. If they don't want that we don't get the order—they don't order.

Q. I am referring to your experience in Pittsburgh, and I think you testified that there were buyers who asked for white pine and that, in fact, that the word "white" was in the term California white pine, enabled you at that time to sell California white pine better than if the word "white" was not in there. Doesn't that then constitute a sales resistance against the genuine white pine?

A. I don't think so.

Q. You wouldn't call that as being within your definition of what a sales resistance would be?

A. No.

Q. That, however, would form an outlet for the California white pine that would not exist but for the word "white" in the trade term, isn't that true?

3082 A. Well, it might have some influence on some buyer. If you talked "white" to him it might have some influence.

Q. I think you said that when you were in Pittsburgh you were naturally after a profit. The northern white pine went up in price, is that true?

A. It was up and down, like all the other woods are up and down. It wasn't always high.

Q. It was always higher than the California white?

A. Not the common grades. If you will permit me to explain perhaps I can answer the question another way. We sold, or tried to sell, the lumber that would pay us best in the wholesale business, whether western pine or northern pine—the one that would pay us the best. If we could sell one for less than the other, and give the trade something that was right, that is the stock we talked to him about.

Q. In other words, you talked price primarily.

A. We talked price after knowing what the man required, and we would naturally try to sell stock that paid us the best to handle, but we aimed to give him what he needed.

Q. You testified that Pennsylvania white pine became scarce, and the tendency of the increased freight rates for hauling it from a distance tended to make it a higher-priced wood, didn't it?

A. Not necessarily. Idaho white pine was sold very much lower at times than northern.

Q. I intended to specify northern—as Pennsylvania north-

3083 ern white pine became scarcer, and you had to ship what

northern white pine you sold from greater distances, the tendency was an enhanced price, isn't that true?

A. The product from a distance, regardless of higher freight rate, was sold in competition and at the same price, possibly sometimes a little more, sometimes a little less.

Q. Then there wasn't any general enhancement of the price of northern white pine before you left the East?

A. No; no, I wouldn't say that—the price has been gradually increasing.

Q. As that gradual increase took place your tendency was to sell more and more of the California white pine, rather than to pay the higher price and charge the higher price for the northern white pine, is that true?

A. Well, as I said before, I answered that when I said we sold the product that paid us better, whether northern pine or the other. We gave the man what he wanted.

Examiner DE BRULER. I think he fully answered that.

By Mr. BURR:

Q. I think you testified that California white pine was satisfactory to your trade?

A. Yes.

Q. Now that is a question of time, when the matter of durability enters a wood, isn't it?

A. The trade we sell is the lumber dealer, not the consumer.
3084 What he does with the lumber after he gets it we don't know anything about it.

Q. That doesn't come back to you?

A. No, sir; unless he found that our lumber was bad when he received it, that was the only time we would get a complaint.

Q. The select grades of California white pine are largely sap, are they not?

A. Well, perhaps more of the log, more of the upper grades contains sap than the lower grades, possibly. It depends on the size of the tree from which the lumber is made.

Q. Just generally speaking, there is more sap in the higher grades of ponderosa than there is in the higher grades of sugar pine, or the Idaho white, isn't that true?

A. I think there is more sap in the ponderosa pine than there is in the Idaho. I am not so familiar with the sugar pine; I couldn't say.

Q. There is more sap in the shop grades of the ponderosa than there is in the shop grades of the Idaho white, isn't that true?

A. Yes; I suppose so, because it is a much larger tree.

Q. The porch flooring that was made of northern white pine, did you personally check up to ascertain whether it was really northern white pine?

A. I sold the lumber myself from Minnesota to the retail dealer who had it in stock and I told him I wanted him to pick me out the lumber to go into these houses, which he did. I gave you
3085 that experience because it is the only personal experience I had in deterioration of lumber.

Q. Did you personally check up as to whether it was northern white pine?

A. Yes.

Q. You are competent to tell whether or not it was northern white pine?

A. I think I am. I was then—I might not be today.

Q. Do you know it was sap or heart?

A. We tried to get away from the sap.

Q. Tried to?

A. But it had more or less sap in it; we couldn't get away from it.

Q. When you speak of the yellow pine of the South, and you say that most largely goes to the heavier structural work, is that true?

A. I think so—it is timbers and flooring.

Q. That isn't quite so true of the Arkansas soft pine?

A. I believe not. There is more finish and more cutting type of lumber and more clear lumber.

Q. That does compete with California white pine, doesn't it, for shop grade lumber, etc., to quite an extent?

A. Not very much shop in the Arkansas soft pine. It is a clear lumber, more clear in it possibly, and a softer type of lumber, but it is not the structural timber material.

Q. And when you are referring to the typical yellow pine
3086 of the South it is not so much of the Arkansas soft pine as it is the longleaf, isn't it?

A. If a man wants longleaf we talk longleaf; if he says yellow pine we give him anything we have for sale. If a man says he wants yellow pine we don't make any distinction.

Q. When you get orders for white pine, and you explain that it is California white pine, you don't explain that is botanically a yellow pine?

A. No.

Q. Do you explain that it differs from the genuine white pines in its characteristics as lumber?

A. No.

Examiner DE BRULER. I think he has gone fully into that. I think those questions have been carefully gone over.

Mr. BURR. That is all.

Redirect examination by Mr. WHEAT:

Q. I want to ask you whether or not, when you are getting them introduced in the trade in the Pittsburgh area, the confusion that you mentioned with reference to getting California white pine intro-

duced, was equal and was similar to the confusion you met in getting sugar pine and Idaho white pine introduced?

A. Same thing.

Mr. BURR. I think that is leading.

3087 Examiner DE BRULER. The record is clear on that.

By Mr. WHEAT:

Q. Was there any greater confusion in getting California white pine introduced than the other two?

A. No.

Q. Did you ever have a buyer who seemed to be interested in botany?

A. No; they don't know anything about it.

Q. Does Idaho white pine produce a shop type of lumber?

A. Not very much, a smaller percentage.

Mr. WHEAT. That is all.

Mr. BURR. That is all.

(Witness excused.)

(Here followed remarks off the record.)

Examiner DE BRULER. We will take a recess until 2:00 oclock p.m.

(Whereupon, at 12:25 o'clock p.m., a recess was taken until 2:00 o'clock p.m.)

3088 AFTER RECESS

2:00 O'CLOCK P.M.

Examiner DE BRULER. Are you ready, Mr. Wheat?

Mr. WHEAT. I think so.

I will call Mr. Cone.

GEORGE B. CONE was thereupon called as a witness and, after having been first duly sworn, testified as follows:

Direct examination by Mr. WHEAT:

Q. Mr. Cone, what is your business, please?

A. Lumber.

Q. State what position you hold now, if any?

A. Sales manager of the Fruit Growers Supply Company.

Q. And state the nature of that concern?

A. Well, in the manufacturing of California white and sugar pine, principally for shipping cases for Sun Kissed products, citrus products.

Q. Is the Fruit Growers Supply Company the organization which owns the so-called "Sun Kissed" brands?

A. That is correct.

Q. And what materials are shipping under that brand?

A. Oranges, lemons, and grapefruit.

Q. And where does the Fruit Growers Supply Company own lumber mills?

3089 A. One at Hilt and one at Susanville, California.

Q. And what varieties of lumber do you cut at those mills?

A. California white and sugar pine, California red fir and white fir, and some cedar.

Q. And what is your position with the company?

A. Sales manager of the lumber division.

Q. Just exactly what does the lumber division do?

A. Well, we sell the grades that are not used in box products, the upper grades.

Q. How long have you been in the lumber business, Mr. Cone?

A. Since 1906.

Q. Will you relate briefly your lumber experience?

A. I started in Mississippi in the spring of 1906 and was down there a little over three years.

Q. What were you doing there?

A. In the sales of yellow pine.

Q. What?

A. Yellow pine. And I came to California in 1909 and sold retail here until the fall of 1915.

Q. What did you sell here?

A. Douglas fir, redwood and white cedar, Port Orford cedar.

Q. Sugar pine?

A. No sugar pine or white pine.

Q. Did you have a planing mill?

A. Not directly in connection with our yard; no.

3090 Q. Did you sell construction lumber, or what type?

A. Construction lumber.

Q. And after 1915 what did you do?

A. Went to Los Angeles and was in the retail there.

Q. What branch of the lumber business, sir?

A. In the wholesale, selling just about the same as here, Douglas fir and redwood.

Q. And after that?

A. I went with the Fruit Growers Supply Company in 1919.

Q. And have you been continuously with that organization since 1919?

A. Yes, sir.

Q. In your present position?

A. Sales manager of the lumber division.

Q. You are familiar with the so-called "southern yellow pine"?

A. Why fairly so, as I recall it, after these years.

Q. What did you say the years were that you were selling yellow pine?

A. 1906 to 1909.

Q. You sell both sugar and California white pine?

A. Yes, sir.

Q. Which is produced in greater quantity at your two plants?

A. California white pine.

Q. At both plants?

A. Yes, sir.

3091 Q. Do you cut any sugar pine at the Susanville operation?
A. Yes; a limited amount.
Q. Do you cut more sugar pine at your Hilt operation?
A. Yes, sir.
Q. Where is Hilt?
A. Hilt is about a half mile from the Oregon line in California, on the Shasta line of the Southern Pacific.
Q. Have you ever been in the actual manufacturing end of the business?
A. Yes, sir.
Q. When?
A. In Mississippi and both at Hilt and Susanville.
Q. How long have you been personally familiar with the term California white pine?
A. I would say 18 or 20 years.
Q. And have you been familiar with it generally ever since that time?
A. No; I wouldn't say that I have—I have been familiar with it since my connection with the Fruit Growers Supply Company.
Q. Have you ever known of the lumber produced from the tree Pinus ponderosa, from California, being marketed under any other name than California white pine?
A. No, sir.
Q. In connection with your duties as sales manager for the Fruit Growers Supply Company, do you have occasion to travel
3092 throughout the United States?
A. Yes, sir.
Q. And just where do you market the larger portion of your lumber?
A. From the Mississippi River factories on east to the Atlantic coast.
Q. Just specify in some detail where your main markets are and what you sell?
A. The sash and door factories along the Mississippi River, the State of Ohio, Pennsylvania, New York, New Jersey, Maine, Rhode Island and some of the Southeastern States.
Q. Do you sell any lumber already remanufactured, or do you sell only the raw lumber?
A. We sell lumber that requires more manufacturing to make it useable.
Q. Just specify?
A. For sash and door cut, but we don't make that finished. We just dress it to size and sidings and moldings.
Q. How do you market your Pinus ponderosa lumber?
A. Almost entirely through wholesalers.
Q. And under what name?
A. California white pine.

Q. Do you invoice it as such?
A. Yes, sir.
Q. How do you market your sugar pine?
3093 A. California sugar pine.
Q. Do you invoice it as such?
A. Yes, sir.
Q. Have you ever heard of California sugar pine being sold under any other name than sugar pine, or California sugar pine?
A. No, sir.
Q. And do I understand you to state that the terms "California white pine" and "sugar pine" are well known to the trade with which you deal?
A. Very.
Q. Do you receive orders under those names?
A. Yes, sir.
Q. Is the distinction between those two woods well known?
A. Very.
Q. I will ask you whether or not you encounter any sales resistance or are hampered in any way in the sale of your sugar pine lumber because of the use of the word "white" in the term California white pine?
A. Not at all.
Q. In your experience have you ever heard of sugar pine being marketed as California white pine, or under any term containing the word "white"?
A. No, sir.
Q. Are you interested equally in pushing both of these woods?
A. Yes, sir.
3094 Q. Have you ever had any complaints from any of your customers regarding the use of the word "white" in the term California white pine?
A. Not at all.
Q. Do you know of any confusion which has resulted from the use of the word "white" in the term, California white pine?
A. Never.
Q. Have you ever had any complaints from any of your customers regarding the durability of California white pine?
A. No, sir.
Q. Have you ever received any demand from any of your customers for a change in the name of California white pine?
A. No, sir.
Q. Do you find that the customers whom you deal with are interested in botany?
A. No, sir.
Q. What are they interested in?
A. What they can get out of the plank they are buying.
Q. Just what do you mean?
A. The purpose for which the lumber is intended. In buying California white pine it isn't so much the name as it is the utility of the plank.

Q. And what are the main uses to which California white pine is put?

A. For cut stock purposes and finish.

3095 Q. If the name California white pine were replaced by any name suggesting or including the word "yellow", would it or would it not in your opinion create confusion in the lumber trade?

Mr. BURR. May I have the usual objection?

Examiner DE BRULER. Objection overruled and exception allowed.

A. Undoubtedly.

By Mr. WHEAT:

Q. Will you specify why?

A. Well, anything with "yellow" in it pertains to the South and there is——

Q. (Interrupting.) You mean anything containing the word "yellow"?

A. Yes, relative to the wood; the natural thought is of the south.

Q. What are the general uses of southern yellow pine?

A. Almost entirely construction.

Q. Is Pinus ponderosa, which you sell, adapted or suited to construction work?

A. Not as compared with the southern pines.

Q. Are you familiar with northern white pine?

A. No; only as I might encounter it in our sales.

Q. I will ask you whether or not California white pine is, in your opinion, naturally what is known as a shop-type lumber?

A. It is.

Q. And specify why?

A. Because of the large clear cutting between defects that

3096 are required in door cuts.

Q. Just what happens to a piece of shop board when it gets to one of these board factories?

A. They size it up for the possibilities of obtaining clear cuts suitable for door production.

Q. Then what do they do?

A. Cut them out, eliminate the defects, that will result in the clear pieces for door construction.

Q. Is the same true in connection with the shop type lumber which is used for sash purposes?

A. Yes, sir.

Q. Would you say that the shop lumber which you market is or is not largely obtained from the heartwood of the tree?

A. Yes, sir.

Q. Would you say it is or is not?

A. It is obtained from the heartwood.

Q. Why is that?

A. Well, there is where you get your knot defects, and it is from those, cutting from those boards, in the inside log that you get your shop timber.

Q. Have you ever had a complaint from anyone who purchases from you that California white pine is not adaptable to this shop use?

A. No, sir.

Q. Does it go into the market in large quantities for that use?

3097 A. Tremendous.

Q. Is there any other wood in the United States which goes into shop use in as great quantities as California white pine?

A. No, sir.

Q. Are you familiar with Idaho white pine?

A. No.

Q. I will ask you whether southern yellow pine is suitable or adaptable for these remanufacturing uses?

A. No, sir; not compared with our California white pine.

Q. I will ask you whether or not you can think of any other name which would more appropriately describe the Pinus ponderosa lumber from California, and its general properties and qualities?

A. I could not.

Mr. BURR. I would like to make the usual objection.

Examiner DE BRULER. Objection overruled. Exception allowed.

A. No.

By Mr. WHEAT:

Q. In your opinion does the Pinus ponderosa, which is marketed under the name California white pine, go into the uses in the trade to which it is primarily adapted?

A. Yes, sir.

Q. In your opinion is California white pine selling on its merits as lumber or for some other reason?

A. On its merits as lumber.

3098 Mr. WHEAT. You may cross-examine.

Cross-examination by Mr. BURR:

Q. Did I understand you to say that you sold the under grades of the product of the Fruit Growers Supply Company—under grades, was that your word?

A. I might have used lower grades.

Q. You sell the box lumber, and things of that kind, do you?

A. We sell some box lumber; most of it is used in our own production of boxes.

Q. That comes under you, does it?

A. Yes, sir.

Q. Are there not some kinds of boxes for butter and egg crates that you can't use in the ponderosa?

A. Yes, sir.

Q. That is on account of the odor, isn't it?

A. Well, it is on account of—the odor doesn't affect the citrus fruit.

Q. I say, the butter and the egg boxes; you can't use the California white pine for that, can you?

A. Yes.

Q. Pardon?

A. Yes, sir.

Q. You do use that kind of lumber for those purposes, do you?

A. Yes, sir.

3099 Q. You have never been in the retail business, have you?

A. Yes, sir.

Q. Where?

A. San Francisco and Los Angeles.

Q. How long was that period?

A. I was here from 1909 to the fall of 1915.

Q. And in connection with that business, did you have people who recently came from the East to deal with?

A. Well, not to my knowledge; no.

Q. Well, those towns are full of people from the East, aren't they, particularly Los Angeles?

A. Yes.

Q. And they doubtless bought from you for building purposes, did they not?

A. I wouldn't know whether they were from the East or not.

Q. But you did deal with the people from the East, without doubt?

A. I imagine so.

Q. Did you have some calls for white pine when you were in that trade?

A. My department didn't handle the white pine.

Q. What was your department?

A. Wholesale.

Q. I know, but I thought you said you had been a retailer?

A. Yes; I have.

Q. But you were in the wholesale department?

3100 A. Yes, sir.

Q. So you had no experience on the retail end?

A. No, sir; not in Los Angeles.

Q. How about San Francisco?

A. All retail experience here.

Q. And you had experience in the San Francisco retail business, did you?

A. Yes, sir.

Q. How long a period was that?

A. From 1909 to 1915.

Q. Did you have calls from the trade for white pine during that period?

No; we didn't handle it.

Q. Didn't handle it then?

A. No.

(Here followed remarks off the record.)

By Mr. BURR:

Q. In connection with your work, I think you said you sold largely to wholesalers and the rest to mills; is it?

A. Sash-and-door trade and planing mills.

Q. I think you testified that the association of the word "yellow" in connection with California white pine, if the name were changed to include the word "yellow", would be with the southern pines; is that true?

A. Yes, sir.

3101 Q. You particularly referred to longleaf in that connection?

A. Not necessarily; no.

Q. Isn't that the typical hard pine of the South rather than short leaf?

A. That is true.

Q. The word "white" in connection with California white pine has a tendency to connect this type of lumber with the northern white pine of the early days, does it not?

A. Why, I imagine so.

Q. And the Idaho also?

A. I presume.

Q. I think you said that the shop grades of California white pine are more heart than sap?

A. That is right.

Q. The shop grades of sugar pine, insofar as sugar pine is used for that purpose, is still more largely heart, isn't it, than is the case for California white pine?

A. So I understand.

Q. Practically all heart, isn't it, in that variety?

A. Yes, sir.

Q. The sugar pine has rather a better reputation in the trade for durability than California white pine, hasn't it?

A. I understand it does.

Q. That is one of the reasons why it is a higher-priced wood?

A. I assume so.

3102 Q. The Arkansas soft pine is used for shop purposes, sash and door, and things of that kind?

A. I didn't know that it was.

Mr. BURR. That is all.

Redirect examination by Mr. WHEAT:

Q. Mr. Cone, do you believe it is appropriate for the lumber of the tree Pinus ponderosa, which has been marketed as California white pine, to be associated as lumber with the white pine group rather than with the yellow pine group?

A. I think it should be associated with the white pine group.

Mr. WHEAT. That is all.

Examiner DE BUTLER. You are excused.

(Witness excused.)

Mr. WHEAT. I will call Mr. Adams.

B. W. ADAMS was thereupon called as a witness and, after having been first duly sworn, testified as follows:

Direct examination by Mr. WHEAT:

Q. State your full name, Mr. Adams?

A. B. W. Adams.

3103 Q. What is your business?

A. General sales manager of the Pickering Lumber Company.

Q. Where is your office?

A. 703 Russ Building, San Francisco.

Q. And how long have you been occupied in that position?

A. I have been with the Pickering Lumber Company since January 1, 1929.

Q. And prior to that what was your experience in the lumber business?

A. Well, approximately eight years prior to that I was sales manager for the Fruit Growers Supply Company, the same concern represented by the gentlemen just preceding me.

Q. When did you start in the lumber business, Mr. Adams?

A. July 1, 1901.

Q. And where was that?

A. In the sash and door business at Dubuque, Iowa, as their purchasing agent.

Q. What was the concern?

A. Karr Ryder & Adams Company, Dubuque, Iowa.

Q. How long did you occupy that position?

A. For approximately 18 years.

Q. And when did you first come to California?

A. I first came to California about April 1, 1905.

Q. And what was the purpose of your coming to California at that time?

3104 A. To take the place of their California representative who preceded me in looking after their shipments of California white and sugar pine lumber for sash and door purposes at Dubuque, Iowa.

Q. Do I understand that the Karr Ryder & Adams Company, of Dubuque, maintained a representative in California for the purposes mentioned by you?

A. Yes.

Q. And what was your experience after 1905?

A. I was in California from April 1905 until April 1906, at the time of the fire, when I temporarily moved my residence back to Dubuque, Iowa, expecting shortly to return, but taking up other duties and I didn't return to California as a resident of California until January 1916.

Q. But during the interval of ten years did you visit California and, if so, for what purposes?

A. I visited California regularly and a number of times, from two to seven times a year, to secure their supply of California white and sugar pine.

Q. After 1916 will you briefly relate your lumber experience?

A. I continued for two or three years after that, picking up this lumber for the Dubuque concern, but started out in January 1916 to organize and operate a line of retail lumber yards in California, which were located, as we purchased them, from the towns of Nord, on the north, to San Martin, on the south, in Santa
3105 Clara County.

Q. How long did you remain in the retail lumber business?

A. I had those retail lumber yards—that is, was interested in them—from 1916 to 1921.

Q. And then what did you go into?

A. Well, it overlapped a little; I think it was in 1919 I commenced to sell, as sales manager, the lumber for the Fruit Growers Supply Company, which was the position I held up until a year ago, January.

Q. And since that time you have been with the Pickering Lumber Company?

A. Yes.

Q. And did you state what your present position is?

A. Yes, sir; general sales manager.

Q. In selling lumber for the Pickering Lumber Company, and also for the Fruit Growers Supply Company, did you have occasion to visit various parts of the East and Middle West and there get in touch with the purchasers of lumber?

A. Yes, in a way; although my acquaintanceship started in the earlier years when my headquarters were at Dubuque, Iowa, and I became acquainted, I would say, with a large majority of the people in the manufacturing business who utilized west coast lumber for their products.

Q. Will you tell me why the sash and door concern of the Middle West utilized these so-called "west coast" products?

3106 A. Because the California white pine filled more nearly than any other wood available the place of what was formerly used and known as northern white pine, which I understand botanically as Pinus strobus.

Q. Have you known that the tree from which California white pine is produced is not botanically classified by botanists as a white pine?

A. Yes.

Q. Are you familiar with southern yellow pines?

A. Yes, sir.

Q. Have you ever marketed southern yellow pine?

A. Not selling it, but I bought millions of feet of it for the same concern in Dubuque, along with the other.

Q. I will ask you whether, in that connection, southern yellow pine finds its way very largely into the sash-and-door trade in this country?

A. I would say no.

Q. Why not?

A. Because yellow pine in no way takes the place of or is like either the white pine, Pinus strobus, or California white pine, so-called "Pinus ponderosa." There was a time—if it is all right to mention this—when the customers of the sash-and-door people in the Middle West would specify trim, that is, casings, base, even doors, moldings, etc., yellow pine, and at no time would we have con-
3107 sidered that California white pine would in any way fill that bill.

Q. Did you sell California white pine as yellow pine?

A. We did not, and it would not have been accepted.

Q. Why not?

A. Because of the appearance of the lumber being so nearly that of white pine that it could not be used in the place of yellow pine, which, in the sash-and-door fraternity, is always understood as yellow pine coming from the South. I have forgotten the botanical name.

Q. In mentioning yellow pine, do you include what has been commonly known and marketed as Arkansas soft pine?

A. Arkansas short leaf, yellow pine, was the lightest, softest, most workable of the yellow pines that we received in that territory. From that I would say that Georgia yellow pine was perhaps as hard as any we ever got.

Q. In its general mechanical qualities and workability, did you find that Arkansas soft pine was of such a character as to be classed with the wood marketed as California white pine?

A. Absolutely no.

Q. Will you explain?

A. Because any of the yellow pine, whether from Arkansas, Texas, Louisiana, Georgia, or other points, has a grain that is distinctive of itself and in no way, or at least only in a very remote way, resembles the texture, grain, and appearance of the California white pine.

3108 Q. Do you include the wood marketed as Arkansas soft pine?

A. I do.

Q. Then I will ask you, Mr. Adams, whether you consider it appropriate for the lumber, Pinus ponderosa, which has been marketed as California white pine, to be associated as lumber with the white pines, rather than with the yellow pines of the South?

A. Yes; but the lumber used by these manufacturers is not sold for its botanical characteristics.

Q. I am not asking about botany now.

A. That is right.

Q. I will ask, Mr. Adams, whether you are familiar with sugar pine as a tree, as well as lumber?

A. Yes.

Q. Does the company for which you now sell lumber cut sugar pine as well as California white pine?

A. They do.

Q. Can you state approximately the proportions which they cut, the average?

A. It will vary from year to year depending on the location they are logging, but in a general way it would be in the neighborhood of 40 percent sugar pine.

Q. 40 percent sugar pine?

A. Yes.

Q. Well, have you had occasion to observe dead and down
3109 logs of both California white pine and California sugar pine in the forests?

A. Yes.

Q. Is it your opinion that the lasting qualities of logs dead and down in the forest—what is your opinion as to relation of the lasting qualities of logs which are dead and down in the forest, to the durability or lasting qualities of the lumber produced from those several species of wood when in use as lumber?

A. Lumber is sold on grades and whatever grades of a certain kind that develop from a log, whether it would have been dead and down, or whether cut alive, they would properly fall in the sphere in which they belong. Does that answer the question?

Q. Well, I will ask you it this way: From your experience as a lumber man, do you believe that the relative lasting qualities of logs dead and down in the forest has anything to do with the durability of the wood in use as lumber?

A. I should say not.

Q. Have you ever had any complaint as to the durability or lasting qualities of the California white pine which you have sold?

A. No.

Q. I will ask you whether the shop lumber which you market from the Pinus ponderosa tree comes more largely from the heart of the tree or from the sap?

A. Very largely from the heart.

Q. Why is that?

3110 A. Because the defects that constitute shop lumber are largely knots and the knots appear in what we understand as the heartwood of the log, rather than the sap.

Examiner DE BRULER. Let me ask; is that matter in dispute, that question?

Mr. WHEAT. I think, Your Honor, that the Government has introduced certain testimony which would indicate that it is in dispute.

Examiner DE BRULER. That is in dispute, Mr. Burr?

Mr. BURR. I think that the evidence for the Government shows that a very much larger percentage of the shop grades of Pinus

ponderosa are sap than is the case in the genuine white pines in the shop grades.

Mr. WHEAT. I take it, it is, perhaps, a matter of dispute and those questions are appropriate.

Examiner DE BRULER. Go ahead, then.

By Mr. WHEAT:

Q. Let me ask, how long have you known the term California white pine?

A. Since 1901.

Q. That was when you first entered the lumber business, was it?

A. Yes, sir.

Q. Are you familiar with Idaho white pine?

A. I have seen a great deal of it; I wouldn't say that I was familiar with it.

3111 Q. Did you purchase——

A. (Interrupting.) Not in the use of it, except in the common boards.

Q. You did not, then, purchase Idaho white pine for shop purposes when you were with Karr Ryder & Adams?

A. Practically none, because the shop type of lumber does not occur in Idaho white pine as it does in California white pine.

Q. When you were with Karr Ryder & Adams do you recall any complaints of the failure of the manufactured products produced from California white pine by them?

A. I do not.

Q. Can you tell me whether sugar pine varies over its range in its qualities and characteristics?

A. It does.

Q. Will you state your experience in that line?

A. The softest textured sugar pine is produced along the Sierras from the neighborhood of Fresno, or Kings River, above Fresno, a line running east and west, with Fresno as a base, and perhaps the American River on the north; and as you go further north in varying differences the character of the sugar pines grows harder, as indicated by that species harvested around Grants Pass and that locality in Oregon, which is a very much harder, flintier type than that in central California.

Q. Is the price, the general market price, of sugar pine cut in the Grants-Pass region in Oregon greater or less than the average

3112 price of California white pine of equal grades?

A. The sugar pine produced in Grants Pass and that territory is generally considered of no more, if as much, value as the California white pine, except perhaps in a very limited instances.

Q. Your company is engaged very largely in the cutting of sugar pine at the present time, is it?

A. No; as I stated, the cut would approximate, I should say, 40% of the present operation at Standard and Tuolumne. The third mill, which is now under construction at Alturas, or near Alturas County,

in Modoc County, will produce practically no sugar pine, but a very fine type of California white pine.

Q. Does that—is that mill already in operation?

A. It is not; it is under construction.

Q. Are you familiar with sugar pine in actual use, Mr. Adams?

A. I would say so.

Q. In your opinion, is sugar pine any more nearly adapted to the general uses to which California white pine is put than California white pine is?

A. My judgment is that there uses are more widely separated than is ordinarily understood. The sugar pine contains more shake than does the California white pine. There are certain purposes to which sugar pine is put where it is more adaptable, perhaps, than white pine.

Q. I will ask you whether, on the other hand, there are certain purposes to which these woods are put to which the Cali-

3113 fornia white pine is more adaptable than sugar pine?

A. Yes; that is true. A number of millwork operators in the Mississippi Valley, at least some of them, have told me personally that they would not——

Mr. BURR. I object to hearsay.

By Mr. WHEAT:

Q. Just say what your experience has been, rather than what anyone has told you.

A. My experience has been that our customers would not accept sugar pine at the same price as white pine for millwork purposes in the Mississippi Valley.

Q. What has been the reason for this rejection of sugar pine?

A. The white pine is better—the California white pine is better adapted for enamels, paints, staining, or sand blasting than is the sugar pine. It is not so likely to tan when exposed to the sunlight in a manufactured state. And California white pine is obtainable in sufficient volume to take care of the uses for which, to which, it is put.

Mr. BURR. May I have that answer read?

(Whereupon the answer referred to was read by the reporter.)

By Mr. WHEAT:

Q. Mr. Adams, just why is the California white pine better adapted to the purposes which you have mentioned?

A. For the enamels, paints, etc., it is better adapted by rea-

3114 son of the fact that the California white pine does not exude a resinous or saccharine—what we call sugar—deposit that appears in sugar pine, and which in the sugar pine, if not properly treated, this saccharine deposit will come through the enamel or the paint and discolor it, which situation does not exist with California white pine.

Q. Does California white pine take a superior finish in millwork to sugar pine?

A. I would say not with the exceptions that I previously mentioned.

Q. Can you approximate the amount of shop lumber which is used annual'y by the large sash and door factories?

A. The information is available.

Q. I thought the witness had the information with him.

A. I would rather not estimate that because it would be approximate only.

Q. Does sugar pine require more care in being seasoned than California white pine?

Mr. BURR. You mean the kiln dried?

Mr. WHEAT. Either kiln or air.

Mr. BURR. I will admit it does for kiln drying.

By Mr. WHEAT:

Q. I will ask for air drying, does sugar pine require more nursing, so to speak?

A. I would say it does.

Q. I wish you would explain.

3115 A. A large number of the pine producers in California aim to put through their dry kiln as large a quantity as possible of the California white pine which is produced; whereas most of the sugar pine is air dried; on the one hand it is because a better condition can be obtained by air drying than by kiln drying it by reason of the fact that under certain conditions in the kiln the cellular tissue of sugar pine is apt to collapse or stain, which generally does not occur under the same careful conditions in drying the white pine.

Q. I am talking now entirely of air drying. Is there any difference in the way these two woods act in seasoning in the air?

A. Sugar pine takes longer to dry than does white pine; and if tests were made under identically the same conditions I would say that the sugar pine requires the more care.

Q. When you were with Karr Ryder & Adams, in Dubuque, Iowa, in the early 1900s, was northern white pine used to any large extent in the sash and door trade?

A. That was just about the diminishing point of northern white pine for general use by the aggregate of the sash and door manufacturers.

Q. And would you say, from your experience, that California white pines does appropriately find its way into the uses for which the northern white pine was formerly used?

A. More nearly than any other species of wood they were able to find.

3116 Q. Will you explain that, please, having in mind Idaho white pine and sugar pine and California white pine, and any others that you have in mind?

A. The general appearance of California white pine, which is the basis upon which it is sold to the trade of the door and sash manu-

facturers, and the necessity of obtaining it in sufficient quantities to permit an economical operation of their plants.

Q. Perhaps I should reframe my question. I think you said that California white pine, in your opinion, more nearly fits into the place of the old northern white pine than any other wood. I am asking you why?

A. Because the material is sold on its appearance and it more nearly fills the place of the northern white pine than any other wood obtained.

Q. Why couldn't the Idaho white pine fill that fill?

A. For the reason that Idaho white pine does not produce the width, shop type cuttings, as does the California white pine.

Q. And why couldn't sugar pine fill that?

A. Sugar pine, according to my experience, has never been available in sufficient quantities to warrant taking *taking* it up as a single product of manufacture.

Q. What do you mean by available in sufficient quantities?

A. Well, there are estimated to be produced in California about
225 to 250 million feet of sugar pine annually, of which, probably
as an extreme, 40%, including 1, 2, and 3 shop, would be
3117 suitable for sash and door manufacture, so that that percentage of 250 million feet would in no way take care of the needs of these various manufacturers who use many times that amount of material in the manufacture of their softwood doors, and the California white pine, as I stated before, more nearly fills the place of the northern white pine than any other pine. Sugar pine in appearance is not like the northern white pine although it is botanically a true white pine.

Q. Do you know whether or not the names California white pine and sugar pine, are well known to the lumber trade throughout the country?

A. They are, and have been since 1901, when it was first shipped east in quantities.

Q. Have you every been aware of any confusion between these two woods?

A. No—you mean between sugar pine and California white pine?

Q. Yes.

A. And compared to northern white pine?

Q. As compared to each other first.

A. No.

Q. As compared to northern white pine?

A. I would make an exception to that, if I may explain.

Q. Explain, please.

A. And that is, there is a type of California white pine which I
believe the Jeffery pine comes under the same class, as our
3118 California white pine. There are instances where, as a buyer of sugar pine—and I did buy sugar pine for certain purposes in years gone by—I would have accepted without question a plank cut from certain Jeffery pine trees. The appearance of which, after

it was manufactured, it would take an expert to determine whether it was sugar pine or whether it was California white pine.

Mr. BURR. And it was actually neither, but Jeffery pine.

The WITNESS. Jeffery pine. I am not discussing the botanical——

Examiner DE BRULER (interrupting). Where is that cut?

The WITNESS. Jeffery pine?

Examiner DE BRULER. Yes.

The WITNESS. Jeffery pine appears in a limited quantity, I think, as far south as El Dorado County.

Examiner DE BRULER. You mean in California?

The WITNESS. Yes, sir.

By Mr. WHEAT:

Q. It is marked as California white pine, is it not?

A. We usually market it as California white pine.

Q. The Jeffery pine is mentioned in this complaint as one of the two types of pine that are marketed as California white pine?

A. I wanted to make that exception.

Q. Now, in selling sugar pine, have you ever encountered
3119 any sales resistence, or have you ever been hampered in any other manner because of the use of the term "white" in the name California white pine?

A. No, I haven't; I sell both of them right now.

Q. Are you equally interested in pushing both of them?

A. Yes.

Q. And you are selling as much as you can of both?

A. Yes, sir.

Q. Have you ever heard of sugar pine being marketed as California white pine, or under any other term containing the word "white"?

A. Not generally. It has been termed by some people a true white pine.

Q. But have you ever seen it invoiced as California white pine?

A. Never.

Q. Or any other name containing the word "white"?

A. No.

Q. Have you ever had any complaints from the people with whom you deal regarding the use of the name California white pine?

A. I have not.

Q. Are you conscious of any confusion which has resulted from the use of the name California white pine?

A. I am not.

Q. Have you ever had any complaints from your trade regarding the durability of the wood marketed as California white pine?

A. I have not.

3120 Q. Have you been conscious of any demand from the trade with whom you deal for any change in the name of California white pine?

A. No; on the contrary I have had their support in continuing that.

Q. Do you find that the people who purchase lumber from you are interested in its botany?

A. We do not sell lumber from a botanical designation.

Q. I will repeat the question and will ask whether you find the buyers are interested in the botany of the tree?

A. Never have known of any.

Q. What are they interested in?

A. They are interested in the service, grade, and price.

Q. You have discussed this matter——

A. (Interrupting.) And texture.

Q. In your opinion, does the wood now marketed as California white pine go into the trade for the uses to which it is primarily adapted because of this mechanical quality?

A. Yes.

Q. In your opinion, is California white pine selling on its merits as lumber?

A. It is.

Q. Now, Mr. Adams, have you ever had any experience in the use of California white pine for pattern purposes?

A. I have some.

Q. Will you state what that experience has been?

3121 A. It probably won't be interesting to you, but a party from Pittsburgh came into the office when I was with the Fruit Growers Supply Company, and I tried to sell him our California white pine as pattern lumber. His remark was that California white pine, he didn't think, was adaptable for pattern purposes; and to demonstrate to my own satisfaction that it might properly be used for that purpose, I took a piece of four-inch plank and carved from it the specimen of an elephant that you see in that box. [Indicating specimen of elephant carved from wood.]

Mr. WHEAT. Mr. Examiner, I do not wish to offer this as an exhibit, but I wish to ask the witness some questions about the matter.

(Here followed remarks off the record.)

By Mr. WHEAT:

Q. I will ask you whether or not you yourself carved this elephant, and ask you what wood it was carved from?

A. It was carved from a piece of California white pine. I did it myself.

Q. Did you ever attempt the same process with sugar pine?

A. Yes; I did. There is an elephant, a little different possibly than that, in Mr. Steinmitz office in the Pickering Lumber Company manufactured from sugar pine.

Q. Did you have as good results from that as you did from the California white pine?

3122 A. The sugar pine is a more delicate wood and it requires more care and skill in carving a thin portion like the ear than does the California white pine, because the wood itself is more delicate.

Q. Now, Mr. Adams, was this specimen, which you have now before you, ever used actually as a pattern?

A. Yes; it was. I think there is a date on there, 1925, is there not?

Mr. BURR. Yes, sir.

A. (Continuing.) Early in that year was the time I cut out that elephant and it was left, just for experimental purposes, for, I should say, two years, without having anything in the form of a preservative, like shellac or varnish or anything on the outside, just to see what the results would be; and the pattern, as you will notice, remained perfectly intact and didn't check, warp, or split. A friend of mine came along one day and wanted to make a pattern of that, which he did, and the bronze casting made from that as a pattern is now in my home.

I never attempted to make a pattern from the specimen I referred to as made of sugar pine for the reason that I doubt very much if it would stand the strain of wrapping—I think that is the term used.

By Mr. WHEAT:

Q. W-r-a-p-p-i-n-g—you mean?

A. Yes. In drawing the mold from the flask when it is put into the sand.

3123 Q. This particular specimen was actually used, I understand it, then, as a pattern for a casting?

A. It was, and that is why it shows that discoloration. I tried to scrape the shellac, or whatever preparation they put on it, off, but I was only partially successful.

Mr. WHEAT. You may cross-examine.

Cross-examination by Mr. BURR:

Q. Now, this Karr Ryder & Adams firm, to whom did they sell, what classes of buyers?

A. They distribute their products through a number of jobbing houses in different parts of the country in which they are interested in various proportions, as well as serving the retail lumber yards to such an extent as their freight rates will permit.

Q. To what extent, what proportion of their business is to retailers?

A. I couldn't tell you that.

Q. That is a minor proportion, is it; do you know?

A. I would imagine so; yes.

Q. They didn't conduct any retail establishments?

A. No, they didn't.

Q. You have never been in the retail business yourself, have you?

A. Yes; I was in the retail lumber yard business in Cali-
3124 fornia from 1916 to 1921.

Q. Well, in that connection did you have purchasers who had recently come to California, among others?

A. Which situation are you referring to?

Q. When you were in the retail business.

A. Well, I never inquired as to where they came from.

Q. No doubt quite a percentage of the population was from the East?

A. California was populated from people outside the State.

Q. And you had requests for white-pine lumber, did you?

A. The retail yards of California used practically no California white pine. It was almost entirely a redwood and douglas fir, commonly known as Oregon pine.

Q. Then you virtually didn't handle the California white pine, or any other variety of pine, is that right?

A. Not through these retail yards, but during that same time, understand, please, I continued to supply, up until about 1918, or something of that kind, the people back East. I looked after their interests.

Q. Looked after the retailers back East?

A. No; the Karr Ryder & Adams Company which, while I was building up this string of retail yards, the principals of Karr Ryder & Adams, were also interested in a very small way and, by the way, to that extent, they were interested in retail yards. You asked that question. I didn't think of it at the time.

3125 Q. They were interested in retail yards?

A. In a small way; they were interested with me in building up the retail yards.

Q. You didn't meet the actual trade in connection with that retail business, did you, in the East?

A. In the East?

Q. Yes.

A. Not the trade of the retailers.

Q. No?

A. No.

Q. Now, there is a considerable amount of sap in the California white-pine shop, is there not?

A. There is a proportion of sap that will occur in the shop grades of California white pine.

Q. And that is greater than the sap that occurs in the genuine white-pine grades, isn't that true?

A. The sap of the white pine, of California white pine, varies in different localities in the State. The sap on the sugar-pine tree is less in proportion to the size of the tree than it is in the California white pine. Does that answer the question?

Q. Yes, in part. And less of the sap gets into the shop grades of the sugar pine than in the case of California white pine?

A. I would say so.

Q. If one tree, in its dead-and-down condition, was found to decay more rapidly than the other, wouldn't you regard that as an indication that the lumber, when exposed to the weather in

3126 building-construction purposes, would decay more rapidly than the other?

A. No.

Q. You wouldn't regard that as an indication at all to relative durability?

A. I don't think I would be qualified to answer the first question for the reason that I know of no reliable experiments or observations that have been made to properly compare the decaying characteristics of a sugar pine tree as compared to that of a white pine tree, because one might grow on one slope of a hill in a wet or dry situation, while the other one was the reverse; and I have never known of any reliable experiments along that line having been conducted. It is simply a matter of conjecture.

Q. Assuming, for the purpose of your answer, that it had been ascertained that one variety was more durable than another, in the form of dead and down logs, wouldn't you regard that as an indication that the one that was more durable in the shape of a log would have a greater durability where exposed to the weather in building-construction purposes?

A. I would still think that was a matter of conjecture because the lumber, after it is manufactured, if it is not properly taken care of, it will deteriorate—either one of them would deteriorate.

Q. Suppose we granted that, yet at the same time would not the condition——

3127 A. (Interrupting.) It might be assumed so, yes.

Q. There is a greater reputation in the trade for durability in favor of sugar pine than there is California white pine—isn't that true?

A. It has been more largely advertised to that effect.

Q. Isn't there a greater reputation in the trade, to ask my question again?

A. I didn't mean to avoid the question.

Q. I think not; I think you are a candid witness.

A. My personal experience wouldn't so indicate; but, as I say, it has been advertised to the trade and advertising is the thing that puts a thing into the minds of the public a suggestion until at times it becomes to be accepted as a fact.

Q. My question didn't relate to your own experience, but to the repute.

Examiner DE BRULER. I think he has answered that.

Mr. BURR. I don't think he has. He said his own experience wouldn't so indicate.

The WITNESS. I couldn't answer for somebody else.

By Mr. BURR:

Q. Do you know what the repute of sugar pine is in the trade for durability?

A. Sugar pine is, to my knowledge, not advertised for its superior qualities of its lasting characteristics, but for its adaptability to a certain use.

3128 Q. You say, sugar pine?

A. Yes.

Q. I am not talking about the advertising. I am talking about the status of sugar pine in the trade. Hasn't sugar pine a higher repute for durability than California white pine?

A. I wouldn't say so.

Examiner DE BRULER. He has answered that fully, it seems to me. You have taken up a lot of time on this one question. It has been gone over and over.

Mr. BURR. He never answered it before.

Examiner DE BRULER. This is cummulative.

Mr. BURR. That question has been disposed of now.

By Mr. BURR:

Q. Ponderosa also varies, does it not, in various localities?

A. It does.

Q. It varies more widely than sugar pine, don't it?

A. I don't know that it does. I would say no. I think I explained that formerly.

Examiner DE BRULER. You have answered that.

Mr. BURR. I don't think you did.

By Mr. BURR:

Q. Now, I think you said that the uses of sugar pine and California white pine were more widely separated than is ordinarily understood. Which are the purposes for which sugar pine is best adapted?

3129 A. Sugar pine is more largely used for pattern purposes than is California white pine. That is one example.

Q. Are there any others?

A. The fact that the logs are so much larger generally than the California white pine enables the manufacturers to produce therefrom a larger proportion of wide upper grade lumber, which is sometimes desirable, especially in thick stock, like cutting boards for clothing manufacturers where they cut 15 or 20 thicknesses of cloth on a board and they want a very soft textured board upon which to cut. And it is used, in some instances, for incubator material. Its tensile strength is not as great as that of California white pine.

Q. Its density is not quite so great?

A. No; where a soft even grain of wood is desired, where there is practically no growth of shake in the piece of wood that is being used, it is very desirable.

Q. That is what makes it most used for pattern purposes?

A. Yes. I sell both sugar pine and white pine. I am not decrying the qualities of sugar pine. It is a good wood.

Q. Really better for pattern purposes than white pine?

A. I don't think so.

Q. You don't?

A. I do not, as has been demonstrated by my own experience.

Q. It sells better to the trade for that purpose?

A. It does, but in that connection I would like to say a
3130 word. In former times, most pattern makers were used to the northern white pine, which was a splendid wood for pattern purposes, more nearly like the California white pine than is sugar pine. And as the supply of that became less, it was a difficult thing to even get them to change from the northern white pine to sugar pine, because of the personal like or dislike for a certain thing that had been in use for a certain number of years. But wherever people had used California white pine for pattern purposes it has proven equally as desirable as has sugar pine.

Examiner DE BRULER. I think you fully answered and I think practically all the witnesses agree.

Mr. BURR. No; they don't.

Examiner DE BRULER. I haven't heard any here that haven't agreed on the pattern proposition.

Mr. BURR. If the examiner please, you haven't heard half of this case.

Examiner DE BRULER. I mean only on the coast, I haven't heard any different.

Mr. BURR. I think you will have to leave to counsel a little bit this question of cross-examination for the simple reason that half of the case was taken back East.

By Mr. BURR:

Q. I think you spoke of a resinous deposit that exudes from sugar pine. As a matter of fact, the California white pine, on the whole, is more resinous than sugar pine, is it not?

3131 A. It is not.

Q. It is not?

A. No; it is not.

Q. Would you be surprised to learn that you are the first witness that has testified to that effect?

A. No.

Q. You would not?

A. No.

Q. You regard yourself as in the minority on that point, do you?

A. I judge from my own experience—if you mean by resinous, pitch.

Q. I mean the resinous content on the whole, that sugar pine is less resinous than is the California white pine, on an average.

A. My experience is that it is not.

Mr. MATTHEW. I think possibly the witness may be confused by what you mean by resinous.

Mr. BURR. I think so.

The WITNESS. Unless I don't understand what he means by resinous.

Mr. MATTHEW. The witness is referring to these little exudations.

Mr. BURR. That isn't the only form in which it appears in wood.

The WITNESS. There are pitch pockets—I am talking about
3132 the pitch streaks that occur, and particularly in the sugar pine of the North you will find that the butt logs of the sugar pine are very often heavily impregnated by pitch, which I am including as a resinous substance.

By Mr. BURR:

Q. What is this treatment you refer to that is given to sugar pine to remove those pitch pockets?

A. I don't recall that I made any statements as to that.

Q. You spoke of a treatment that was given on account of those sugar deposits, which you refer to as saccharine, I think.

A. I said unless a proper treatment were given.

Q. Yes; what is that proper treatment?

A. There have been a number of experiments conducted by the University of California, as I understand it, and the most suitable one of those is a preparation of shellac to be put over the wood when it has been reduced to the smoothest possible situation, after which it gives satisfaction. That is not necessary in the treatment of California white pine.

Q. That does take care of that pitch pocket difficulty, does it, in the sugar pine that you sell?

A. That has been the only thing that the professor who made these experiments—I think it was Professor Ritz—I think that is the only way you could find that he could keep from discoloring the enamel, paint, Duco, etc. This saccharine deposit comes out in little beads that look like the gum that would exude from a cherry tree.

3133 Mr. BURR. That is all.

Examiner DE BRULER. That is all.

(Witness excused.)

Mr. WHEAT. I will call Mr. Pray.

R. F. PRAY was thereupon called as a witness and, after having been first duly sworn, testified as follows:

Direct examination by Mr. WHEAT:

Q. Mr. Pray, what is your business?

A. Lumberman.

Q. How long have you been engaged in the lumber business?

A. Since 1892.

Q. Will you relate briefly your experience in the lumber business?

A. I started in with Mr. T. B. Walker, of the Red River Lumber Company, in Minneapolis, in the fall of 1892. I remained there until the spring of 1896 and then was sent to Crookston as office manager in the Red River Lumber Company. I was there nearly three years and was back in the Minneapolis office about six months, and went to Akely, Minnesota, where the Red River Lumber Company had a mill, and I was there for fourteen years as resident manager.

3134 Q. What did you produce at those mills?

A. Minnesota white pine and Norway white pine and some spruce and jack pine.

Mr. Burr. That is Akely, Minnesota?

The Witness. Yes.

By Mr. Wheat:

Q. What proportion was Norway pine?

A. About 60%.

Q. In the lower grades did you sell northern white pine as such as what it mixed?

A. We sold it as white pine in the upper grades; in the grades of 4 and 5 they were mixed.

Q. Mixed what?

A. Norway and white pine.

Q. How was it sold, under what name?

A. Northern pine.

Q. Continue with your lumber experience.

A. In June 1913 I was sent by the Red River Lumber Company to what is now Westwood. I was resident manager there from the time I got there in June 1913 until the spring of 1923.

Q. And since then what has been your business?

A. Wholesaling lumber.

Q. Under what name?

A. Lumbermens' Exchange. I have done some special work in connection with that, with other companies, however, not directly concerned with the selling.

3135 Q. You say you cut the old northern white pine at your mills in the East?

A. Yes.

Q. Can you tell me about how many logs to a thousand you were cutting prior to the time the mill closed down at Akely?

A. When we started in 1899 they were running 14 to the thousand and the last year I was there they ran 22 to the thousand.

Q. About what was the smallest size log that was cut?

A. We cut everything that would make a 2 by 4.

Q. How long have you been familiar with the term California white pine?

A. Since the fall of 1898.

Q. How did you become familiar with that term then?

A. When I left Crookstown and went to the Minneapolis office for that six months, Mr. Klein had been west and had reported to the office there on the California white pine, and subsequent to that I saw estimate books of which estimates were given as California white pine and sugar pine.

Q. Have you ever talked with the logger in the woods in the California operations of your company, or have you ever heard them mention names of the trees in their vernacular?

A. Yes.

Q. What do they call the sugar pine tree, and what do they call the tree from which California white pine comes?

A. They call them white and sugar.

3136 Q. Referring, respectively, to which trees now?

A. To the California white pine and the California sugar pine.

Q. Do you know whether or not the lumber called California white pine comes from a tree which is botanically a so-called "genuine" white pine?

A. What?

Q. Do you know whether the wood marketed as California white pine comes from a tree which is botanically a so-called "genuine" white pine?

A. I understand it is not.

Q. Were you engaged in selling northern white pine at any time?

A. Yes.

Q. During what period?

A. From the spring of 1899 until 1913, when I left there.

Q. Were you engaged in selling the California white pine at that time?

A. No, sir.

Q. Was California white pine in the market in competition with northern white pine at that time?

A. It was toward the latter end of our experience, or my experience; in Akely.

Q. Did you ever encounter any sales resistance, or were you hampered in any way in marketing your northern white pine because of the use of the word "white" in the term California white pine?

A. No, sir.

3137 Q. Will you tell me what is the character known as shake in sugar pine, or in any pine?

A. Well, it is a shattering of the grain, the different layers become separated from each other.

Q. Is that always perceptible prior to the making of the lumber?

A. No; it isn't.

Q. I will ask you whether sugar pine or California white pine, and which of the two, is most susceptible to this difficulty?

A. The sugar pine; you very seldom find shake in California white pine.

Q. Have you had any experience, any concrete experience, with shake in sugar pine?

A. Well, I have one in my pocket.

Q. Produce it, please.

A. (Witness producing toy blocks.)

Q. Will you explain what this is you have in your hand?

Mr. BURR. Let me see it. (Examining toy block.)

By Mr. WHEAT:

Q. May I ask you what this object is?

A. That is a toy block that has been embossed on both ends.

Q. Will you explain what has happened to it?

A. When the pressure was applied to put on the embossing the shake is shown up in the block and it has broken off at that point where the shake was.

Q. That is, the shake which has appeared destroyed the quality of that particular piece of lumber for the use to which it was
3138 intended?

A. It has.

Mr. BURR. We will stipulate it has.

By Mr. WHEAT:

Q. A question was put to a previous witness as to the amount of pitch in sugar pine, as compared to that in California white pine. Will you state what your experience has been?

A. My experience is that the sugar pine has considerably more, what lumber men call pitch.

Q. Just what is that?

A. Well, there are several forms in which it is found; one is a pitch pocket, that is impossible to eradicate without cutting the thing out physically. Another is the streaks of pitch that appear, especially in the lower logs of a tree, and then there is the sap, or exudation that comes out in the form of bubbles, little bubbles.

Q. Which is more susceptible to stain in the yard, sugar or California white pine?

A. Sugar pine.

Q. I should have asked you before, when you were resident manager of the Red River Lumber Company at Westwood, was sugar pine cut in considerable quantities?

A. Yes; about 25%.

Q. In the use as patterns, does the shake that you have mentioned cause any difficulty?

3139 A. Oh, yes.

Q. Have you found it to be your experience that rot is found frequently in growing California white pine trees, the Pinus ponderosa?

A. Very little in the California white pine.

Q. What has been your experience with reference to sugar pine?

A. Frequently find it.

Q. What is the result in the lumber?

A. You find it in the lumber.

Q. What are, in general, the uses for which the northern white pine of the East and North is suited to be best adapted to?

A. Do you mean the eastern white pine?

Q. Yes.

A. We consider it adapted to every purpose that soft lumber was used for.

Q. Was it adapted to heavy structural uses?

A. They used it for such.

Q. Was it adapted primarily for heavy structural uses?

A. I think it was adapted for that; yes.

Q. What was it used for in general?

A. Well, first as finish, to start with the higher grades, and lap siding and molding, cornice lumber, and sheeting.

Q. Was it introduced in re-manufacture?

A. Sash and doors.

Q. What are the general uses to which California white
3140 pine has been put in the market?

A. That is more particularly a factory or industrial lumber, because of its characteristics and its size. You get larger pieces of clear cuttings out of California white pine than you could from the northern pine.

Q. Can you tell whether or not the northern pine is going into the trade for shop purposes in as large a quantity as it did 20 years ago?

A. I know it is not; it is not used in as large proportions as it was sometime ago and every year it is much less.

Mr. WHEAT. That is all, you may cross-examine.

Cross-examination by Mr. BURR:

Q. Mr. Pray, I believe you spoke of the differences between these two woods. Which has the heavier specific gravity, the Pinus ponderosa or the sugar pine?

A. The California white pine is heaviest.

Q. Heavier?

A. Yes.

Q. It is therefore denser wood, isn't it—density and weight are the same thing?

A. Yes, I would like to qualify it. You will find many more sugar pine logs going to dead head than you will the California white pine.

Q. What do you mean by dead head?

3141 A. It does not indicate that the specific gravity is greater. It is hard to handle sugar pine without getting an excessive amount of dead head.

Q. Well, now, this pitch that appears in the sugar pine, that is mostly in the form that you described as bubbles or exudation of bubbles?

A. Yes.

Q. The California white pine has more in the way of streaks of pitch and the larger pitch pockets than the sugar pine, doesn't it?

A. I don't agree with you.

Q. I am not testifying, I am asking you.

A. The way you ask I thought you were trying to put something in my mouth. I don't remember finding any pitch pockets, so-called, in the California white pine; you very seldom find any pitch pockets.

Q. I am not talking about the tiny pitch pockets.

A. I am talking about the large ones.

Q. You never found in that lumber?

A. Very seldom in California white pine.

Pardon me! I think that you misunderstand what I mentioned as a pitch pocket. That is why I think you are amused, because I don't think you understand.

Q. Suppose you go ahead and clear it up.

A. A pitch pocket is an opening varying in width from say
3142 a sixteenth of an inch to a quarter of an inch, and from an inch to five or six inches long, that is wide open and has nothing in it but pitch. That is what I call a pitch pocket.

Q. And you say you practically never see those in California white pine; is that right?

A. That is true.

Q. Do you regard resin as pitch, as being practically the same thing, or don't you?

A. I don't know anything about resin.

Q. You don't know whether that appears in either of these woods or not?

A. Resin, no; I never had any experience with resin.

Q. Do you make a distinction between resin and rosin?

A. I understand that rosin is resin after it is treated.

Q. Do you find resin in either of these woods?

A. Yes.

Q. In both of them?

A. Yes, sir.

Q. Which has the more of that?

A. I would say that the sugar pine has.

Q. Has more resin?

A. Yes.

Mr. BURR. That is all.

Mr. WHEAT. That is all.

(Witness excused.)

3143 Examiner DE BRULER. We will take a five-minute recess.

(Whereupon a five-minute recess was taken.)

Mr. WHEAT. I will call Mr. Gaetjen.

HARRY W. GAETJEN was thereupon called as a witness and, after having been first duly sworn, testified as follows:

Direct examination by Mr. WHEAT:

Q. What is your business, sir?

A. Planing mill, retail planing mill.

Q. Have you been engaged in the lumber business for some time?

A. Yes, I started in to learn the trade of bench hand in 1901 at the old Pacific, Sixth and Berry, San Francisco. About 1906 I became draftsman in the Empire Planing Mill; about 1912 I became the superintendent; in 1915 the manager; and in 1919 I became the president and manager of the concern, owning one-third interest.

Q. You are engaged in what branch of the lumber business?

A. Planing mill; we manufacture sash and door and interior trim and cabinet work.

Q. Do you use a wood known as sugar pine in that business?

A. Yes, sir.

Q. And do you use a wood known as California white pine in that business?

A. Yes, sir.

3144 Q. I will ask you whether or not those terms are known respectively to the trade in this area?

A. They are.

Q. Have they been known for a period of years?

A. Yes, sir.

Q. Have they been known throughout the entire period of your lumber experience?

A. Yes, sir.

Q. Do you buy any California white pine from the Klamath Falls region?

A. We have; we buy it from different section, but we have bought from Klamath Falls.

Q. If the term California white pine, as respects that particular lumber, were to be changed to Oregon pine, or Oregon white pine, I will ask you whether there would be any confusion which would result in the trade?

Mr. BURR. The usual objection.

Examiner DE BRULER. Objection noted and exception allowed.

A. I would say yes there would be confusion.

By Mr. WHEAT:

Q. Will you state why, sir?

A. Well, I think that the trade around the bay area here has been used to having sash, particularly, and doors made of white pine, or sugar pine. And if we were to call that sash Oregon

3145 pine it would probably be rejected and sent back.

Q. Why?

A. Because they have been built up with the thought that sash should be made of sugar or white pine and they wouldn't use an Oregon sash in this district.

Q. To what does the term Oregon pine in this district refer?

A. Douglas fir.

Q. When you said "white pine" a moment ago, did you have reference to California white pine?

A. Yes.

Mr. WHEAT. You may cross-examine.

Mr. BURR. No questions.

Examiner DE BRULER. That is all.

(Witness excused.)

Mr. WHEAT. I will call Mr. Johnson.

WALTER S. JOHNSON was thereupon called as a witness and, after having been first duly sworn, testified as follows:

Direct examination by Mr. WHEAT:

Q. What is your business, Mr. Johnson?

A. Lumbering, principally wholesaling and manufacturing.

Q. With what company are you connected?

3146 A. The Tarter, Webster & Johnson, the American Box Corporation, the Associated Lumber and Box Company, the Klamath Pine Lumber Company, the Stockton Box Company, the Harper Box and Lumber Company, the American Tile Box and Lumber Company, the American Tile Box Company, and the Underwood Lumber Company.

Q. State what your connection is with these various companies?

A. Well, I am a director in all of them, and president of three or four of them, and vice president of some others. But that is the substance of it.

Q. In what general business are these organizations concerned?

A. Well, they are engaged in the manufacturing and milling and distributing of lumber products.

Q. Where are your mills?

A. The sawmill for the Klamath Pine Lumber Company is at Klamath Falls; the Associated Lumber and Box Company is a box factory principally, handling upper grade lumber as well as box. is located at Dorris, California, Siskiyou County; the Underwood Lumber Company is a box factory, at Lakeview, Oregon, southern Oregon; the Harper Box and Lumber Company is a box factory at Los Angeles; the Stockton Box Company is located at Stockton, California, and makes shook; the American Tile Box Company makes shook in Oakland.

Q. In addition to that——

A. (Interrupting.) The American Box Corporation acts as a distributor for the products of most of our factories in shook;

3147 and the Tarter, Webster & Johnson Corporation sells the lumber.

Q. When you say "sells the lumber" you mean lumber which is not used for box-shook purposes?

A. Yes.

Q. What lumber is that?

A. Upper grades, principally white pine.

Q. And that is the California white pine that is under discussion in this case?

A. California white pine and sugar pine, and other lumber, but principally California white pine.

Q. Where do you market this lumber?

A. All over the United States, and some goes export.

Q. I will ask you whether or not the terms "California white pine" and "sugar pine" are respectively well known in the trade with which you deal?

A. They understand thoroughly what we mean when we quote on either California white pine or sugar pine.

Q. How long have you been familiar with these terms respectively?

A. Ever since I have lived in the State of California, which has been about thirty years.

Q. Do you know whether sugar pine has ever been marketed as California white pine, or under any name including the name "white"?

A. I understand, in all our experience, that sugar pine has been marketed under the name of sugar pine exclusively, and never
3148 is confused with white pine in quoting.

Q. Have you met with any sales resistance or have you been hampered in any other manner in selling sugar-pine lumber by reason of the fact the term "white" is used in the name California white pine?

A. Never had any confusion of any kind.

Q. Are you equally interested in pushing both of these lumbers in the trade?

A. Yes, we sell them both.

Q. Have you received any complaint from your customers regarding the use of the name "California white pine"?

A. Never have heard anything but favorable comment, as that name describes the wood we are selling.

Q. Do you know of any confusion which may have resulted in the use of that name?

A. No; in addition to that we made a special effort through correspondence to ascertain if there was any confusion and everybody that answered the letters replied that they——.

Mr. BURR (interrupting). I object to what they replied.

By Mr. WHEAT:

Q. I believe you may omit that portion of that, Mr. Johnson.

Have you ever had any complaints from your customers regarding the question of durability of California white pine?

A. How do you mean that?

Q. Have you ever had anyone claim that it had failed in
3149 practice, was not a durable wood?

A. No, never.

Q. Are you conscious of any demand from your trade for a change in the name from California white pine to some other name?

A. No, we are requested by all means to retain the name if possible.

Mr. BURR. I object to that.

Mr. WHEAT. The latter part of the answer may go out.

By Mr. WHEAT:

Q. Do you find that the people who purchase lumber from you are interested in the botany of the trees from which the lumber is cut?

A. I find that they know less about the botany of the trees than I do, and that is very little.

Q. I am asking you whether or not you find that they are interested in the botany?

A. They are not at all interested.

Q. What are they interested in?

A. They are interested in getting a wood that is suitable for the purpose for which they intend to use it.

Q. In your opinion is California white pine selling on its merits in the lumber markets for the uses to which it is now put?

A. Exactly so, I think the customers in every instance are getting exactly what they want under that name.

Q. I will ask you whether it is your opinion that California white pine goes into the trade for the uses to which it is primarily
3150 adapted?

A. Yes, in all instances that I know of, because the customer wants that particular wood for the particular purpose which he buys it for and he gets it when he buys it under that particular name.

Q. Are you familiar with southern yellow pine?

A. Yes, sir; we sell it.

Q. What has your experience been with it?

A. I might say in that connection that we operate a plant in Plant City, Florida, where we sell orange boxes, and other shook items in that territory for vegetables, strawberries, tomato's, etc.

Q. You are familiar then with what is known as southern yellow pine?

A. Yes, sir.

Q. In your opinion if the name California white pine were replaced with any name which contained the word "yellow" to describe the wood now marketed as California white pine, would there there be a resulting confusion?

A. There would be a decided confusion, particularly in the Southern States where they know what yellow pine is.

Q. Do you market California white pine in the Southern States?

A. We market pine shooks in the Southern States, including Texas and Florida.

Q. Do you market any of the upper grades in the Southern States?

A. Not of the upper grade yellow pine.

3151 Q. You market upper grades of the California white pine in the Southern States?

A. We do in all States.

Q. What other grades of California white pine do you market in the Southeast?

A. We market shook grades principally in the South and East in California white pine; that is, what I mean by shook grades is cut shook.

Q. Why do you say there would be a confusion if the term California white pine were replaced by the term, or any term including the word "yellow"?

A. The persons in the South or Southeast, or in southern California, in the Imperial Valley, would presume that, if we named it yellow pine, that that was the same hard texture pine that is used in the South for shook, and it wouldn't be what they wanted at all.

Q. Getting away from the matter of box shook for a moment, and into the matter of upper grades of lumber, would there be any resulting confusion in your opinion?

A. I would say there would be a decided confusion. If persons familiar with white and yellow pine were to order yellow pine, thinking they were to receive the southern wood, and get California white pine, which would not have the necessary strength for the particular work they intended to use it for, and it certainly would not be suitable for their purposes, being an entirely different
3152 type of wood, certainly there would be confusion and complaint.

Mr. WHEAT. You may cross-examine.

The WITNESS. Can I make an additional statement?

Examiner DE BRULER. If you wish.

The WITNESS. In connection with the selling of shook, we move shook from Idaho, eastern Washington, Oregon, California, along the west coast of Washington and Oregon, and we move shook that comes out of Mexico, in southern woods, and we are very familiar with what the trade requires in shook requirements in the various sections. In receiving shook out of Idaho we receive considerable shook that is made from the fall downs of upper-grade lumber that comes out of the planing mills up in that section, door factories, etc., and——

Examiner DE BRULER. I think that is sufficient.

The WITNESS. What I was bring out is that we get a great deal of Idaho white pine that comes into the field with California white pine, and we are familiar with them all.

Cross-examination by Mr. BURR:

Q. When you speak of distributing in your direct examination, you are not referring to retailing, are you?

A. No; we do some retailing, yes.

Q. You do retailing?

A. We do retailing of shook.

3153 Q. Retailing of shook?

A. Yes.

Q. What is that used for?

A. Fruit boxes, all kinds of containers for canned goods, vegetable crates, etc.

Q. That is something that goes into common grades, isn't it?

A. Common grades; yes.

Q. The lower grades, is that right?

A. Yes.

Q. Now, that retail work in selling these shooks, that isn't sold to private individuals, that is sold to people who are in the business of boxing fruit stuffs, etc., is it?

A. Largely.

Q. In other words, you don't sell to the ordinary retail-lumber trade, do you?

A. Not like a lumber-yard trade; no.

Q. In those yards are not the pines quite frequently intermingled on those common grades?

A. Very frequently; yes.

Q. In other words, when you are selling the common grades it makes no difference whether it is from sugar, Idaho, or white pine?

A. It makes a great deal of difference in the shook whether it is Idaho or sugar pine or California white pine; yes, it does.

Q. Can't you combine those grades together and sell them as
3154 common pine without distinguishing the variety?

A. In some particular item, like a rough crate, it might not make a great deal of difference, but in, say, a pear or apple box, we couldn't dare make them out of sugar pine because they are inclined to split; they don't have the tensile strength. We have to make them out of California white pine because of superior strength.

Q. It is harder and stronger?

A. It is stronger, not harder.

Q. A little denser wood on the average?

A. Well, I wouldn't say denser; I don't know what you mean by denser.

Q. It has a little more compact fiber, otherwise it wouldn't be stronger, would it?

A. Well, it must be different construction there that I don't know anything about; that would be a technical thing.

Q. Do you use California white pine, or what, for orange boxes?

A. We use principally California white pine for orange shook. We use some sugar pine, if it is for slats, or something narrow; but the trouble is with wider sugar pine we find too much shake, wind shake, too likely to split.

Q. Now, is there any product where you have to use something other than California white pine, on account of any odor that is due to California white pine?

A. Yes.

3155 Q. That is butter and eggs?

A. That wouldn't be true only of California white pine, but all woods in the West have an odor except spruce, and it would scent butter and eggs.

Q. You said you found that your trade did not desire a change of the name of California white pine; is that my understanding?

A. Yes, indeed.

Q. What classes of customers did you write for that information, wholesalers or what?

A. All classes of customers whom we sell to.

Q. How long ago was that?

A. Within the last six or seven months.

Q. I believe you said the use of the word "yellow" would tend to confusion if applied to California white pine with the yellow pines of the South; is that true?

A. Yes.

Q. The use of the word "white" has a corresponding tendency to associate California white pine with the northern white pines, and its reputation, doesn't it?

A. Yes.

Mr. MATTHEW. Would you amend that question so as to omit the word "tendency"?

Mr. BURR. It has that effect, does it?

The WITNESS. How do you mean?

Mr. BURR. Read the question.

(Whereupon the question was read by the reporter.)

3156 Mr. BURR. I will agree to strike the answer and question both and I will reframe it thus:

Q. The use of the word "white" in the term California white pine, does that have the effect to associate the California white pine product with the northern white pine products in the mind of the public?

A. Well, I don't believe that would be so among certain classes of trade, and yet it might be true of other classes. For instance, all the westerners out here have no idea of northern white pine; they don't know what it means. But back East where they have been using northern white pine for years, where they are cutting out the forests of Maine, Michigan, Wisconsin, and so on, they might associate the names together, yes—but we don't.

Q. And the easterners who have just arrived from the East, out here, have the same mental effect produced upon them, wouldn't they, by the use of the word "white"?

A. Well, that would be only a guess of mine; some might and some might not.

Mr. BURR. That is all.

Redirect examination by Mr. WHEAT:

Q. Do you know of any confusion which has resulted because of the use of the word California white pine?

Mr. BURR. I think he has already testified about that.

3157 By Mr. WHEAT:

Q. Just a minute. Do you know of any confusion which has resulted because of the use of the term California white pine with northern white pine?

A. Never heard of any at all.

Q. And does that include both the East and the West?

A. I would say our experience has been, wherever we have sold lumber, and we have sold lumber all over the world; sold shook in

South Africa and lumber at all points, and they know what they are getting when they get California white pine.

Mr. BURR. But you never deal with the actual consumer or his representative, the architect?

The WITNESS. We don't deal with the architect; no.

Mr. BURR. That is all.

Examiner DE BRULER. That is all, you are excused.

(Witness excused.)

Examiner DE BRULER. Call the next witness.

Mr. WHEAT. I will call Mr. Browne.

RICHARD H. BROWNE was thereupon called as a witness and, after having first been duly sworn, testified as follows.

Direct examination by Mr. WHEAT:

Q. Mr. Browne, will you state your name, address, and
3158 present business?

A. Richard H. Browne, 2960 Divisadero Street, San Francisco; at the present time I am in the employ of the California White Pine Manufacturers, who are respondents in this case.

Q. And you have been employed for a particular purpose in connection with this hearing?

A. I have.

Q. What has your lumber experience been?

A. My first experience was tallying shop lumber in Chokio, Minnesota, in 1901. I came West in 1903 for the Red River Lumber Company, and the T. B. Walker interests, and was with them continuously to 1923, with the exception of a few months during the panic of 1907, when I was employed by the C. A. Smith Lumber Company at Coos Bay, Oregon. Since 1923 I have been engaged in the wholesale lumber business in San Francisco up till last February.

Q. You were engaged with the Red River Lumber Company for from 1903, in California, until 1923?

A. Yes.

Q. And what was your work in connection with that employment?

A. My work was examining timber lands, purchase of the same, filing scrip, and handling all matters pertaining to the timber.

Q. You were in the woods a great deal?

A. Practically, until 1914, until the big mill was built at Westwood. I assisted in laying out the mills, the small mills, at Westwood, and afterwards I worked in the sales department and
different division in Westwood, but my principal work was
3159 looking after timber.

Q. In connection with the present proceedings have you, at the request of the respondents represented by the firm McCutchen. Onley, Mannon & Greene, procured certain photographs of ancient structures in the State of California?

A. I have.

Q. I will hand you these sheets containing photographs and ask you if they are the ones which you mentioned?

A. (Witness examining photographs.) They are.

Q. I hand you a sheet of paper marked "Roop cabin, Susanville, Lassen County, California, built in 1854", containing three photographs numbered 1, 2, and 3. I will ask you what the photographs represent and when they were taken.

A. That is a photograph of a cabin which is called the Roop cabin built at Susanville, Lassen County, California, in the year 1854. The photograph was taken on December 23, 1929.

Q. By whom?

A. By myself.

Mr. BURR. I object to his testimony as to when it was built.

By Mr. WHEAT:

Q. Mr. Browne, have you been a resident of Susanville?

A. I have.

Q. During what period of time?

A. I resided in Susanville from 1908 until 1916.

3160 Q. And can you tell me whether the Roop cabin is a well-known ancient structure in this area?

A. It is.

Q. Where is it located?

A. It is located on Wetherill Street, 250 feet north of Main Street.

Q. Did that cabin figure in an important historical incident?

A. It did.

Q. Explain what that was.

A. It was used as a fort at the time when the boundaries of California and Nevada were not understood definitely by the settlers. Plumas County endeavored to claim that portion of the valley as belonging to them and endeavored to collect taxes from the inhabitants thereof, and they resisted by armed force and there was a battle fought and the invaders were repelled.

Q. May I ask you what the general reputation of the Roop cabin is in the Susanville area for age?

A. It is without any question, that is, it has been determined without any question, that the cabin was built in the summer of 1854. We have the Fairfied history of Lassen County; we also have the daughter of Mr. Roop, Susan, after whom the town was named, and we have photographs of the cabin back as early as 1860. We also have the register of the——

Mr. BURR (interrupting). I waive the objection.

Mr. WHEAT. I thought I would prove it.

Mr. BURR. You have done well.

3161 By Mr. WHEAT:

Q. Will you tell me whether or not any wood of the species now known and marketed as California white pine is in this cabin?

A. In view 1, all of the logs shown there are of California white pine.

Q. And are there any of them with the bark still remaining?

A. There is. I also took a piece of bark and laid it up near the edge where it can be plainly seen in the photograph.

Q. Will you state where it is and point it out to the examiner?

A. Yes. It is on the right-hand corner, the fourth log up. I can only state that the other logs are, to the best of my knowledge and belief. California white pine logs.

Q. Mr. Browne, what is the elevation of Susanville and what is the average rainfall and climate?

A. It is situated at an elevation of 4,195 feet; the average rainfall is about 16 inches; the snowfall is about 6 feet—that is, the entire snowfall of winters. The summers are warm; the temperature is as high as 100 to 105 degrees above zero, while in the winter time it drops as low as 16 to 20 degrees below zero. The summers are dry and warm, while the winters are wet and cold.

Q. I will ask you whether or not—I hand you a sheet of paper with two photographs numbered 4 and 5, and certain writings, and ask you if you will state what these photographs represent, when they were taken, and the general reputation as to age of the building which they represent?

3162 A. This is known as the old Goodrich house, at Mountain Meadows, Lassen County, California. More definitely described——

Mr. WHEAT (interrupting). Before we go further I would like to have the first sheet, to which the witness has already testified—that is, the Roop cabin—marked as "Respondent's Exhibit No. 35" for identification.

Examiner DE BRULER. It may be so marked.

(Whereupon the photographs of the Roop cabin were marked "Respondent's Exhibit No. 35" for identification.)

The WITNESS. I would like to finish my answer—which is more definitely described as the southeast quarter of section 35, township 29 north of range 9 east, Mt. Diablo base and meridian.

By Mr. WHEAT:

Q. That describes the location of this house?

A. Yes.

Q. What is the reputation in the community as to the age of this particular house?

A. The reputation in the community of that house is that it was built early in 1860. I further confirmed that by taking the official United States map, as filed by the surveyor with the United States Government on December 31, 1866, in which he shows in the southeast quarter section 35 a house which he calls the Gooch house, which is shown on the official map of the United States Government of township 26 north, range 9 east.

3163 Q. Can you tell me whether the reputation in the community is that this house is the Goodrich house?

A. Yes. Furthermore, in Fairfields history of Lassen County it was referred to as the voting precinct of the county in the year 1861

and was afterwards referred to as the C. C. Goodrich place in Mountain Meadows.

Q. Now let me ask you whether or not the climate at that point in Mountain Meadows is similar to that at Susanville?

A. It is more severe; the rainfall is greater, approximately 25 inches, of which a greater portion is snow. The storms and winters start in earlier in the fall and the snow remains on the ground a longer time in the spring. The summers are not as warm as they are in Susanville, as this is 1,000 feet higher than at Susanville, an elevation of approximately 5,000 feet.

Mr. WHEAT. I ask that that be marked "Respondent's Exhibit No. 36" for identification.

Examiner DE BRULER. Very well; it may so marked.

(Whereupon photographs of the Goodrich house were marked "Respondent's Exhibit No. 36" for identification.)

Mr. WHEAT. Respondent's exhibit no. 36 for identification shows two photographs.

Examiner DE BRULER. Yes.

By Mr. WHEAT:

Q. Mr. Browne, can you state whether you examined the Goodrich house to ascertain from what variety of lumber it was constructed?

3164 A. I did.

Q. And what was the result of your investigation?

A. The exterior lumber, as near as I can see— that is, the siding— was made of California white pine. I also took a sample from the wood from the house and had the same tested by Mr. M. R. Brundage, of the United States Forest Experiment Station, Hilgard Hall, University of California.

Q. Will you produce the sample that you took from the Goodrich house?

I may state, for the purpose of identifying the lumber in these various structures, that we asked Mr. Browne to take a sample of the lumber and we have had them identified by the wood technologist at the University of California, whom we will present on the stand at the next session.

I merely desire now to identify these small samples of lumber.

A. Here are the two samples which I removed from the Goodrich house [indicating].

Q. Just where did you procure these two samples from, and are they fair samples of the lumber which is on the house at the present time?

A. Those samples were taken from the front of the house, a piece of siding, approximately about four feet from the foundation, which is a wet exposure.

Q. And may I ask you whether or not the other siding
3165 which you examined on this house is in approximately the same state of preservation as the piece which you obtained?

A. It is. In fact, I took the pieces that were split, easy to get off, so as not to deface the house, or take off a piece of siding which I would have to replace.

Q. On what date did you do this?

A. December 28, 1929.

Mr. WHEAT. I will ask the examiner that these two pieces of wood be marked for identification.

(Here followed remarks off the record.)

By Mr. WHEAT:

Q. I hand you a sheet of paper with three photographs on it and ask you to explain it briefly.

A. It is known as the old Spaulding house, which is located in Susanville and was built in the year of 1863 by S. N. Spaulding, whose son, John B. Spaulding, is a banker and druggist of Susanville at the present day. From him I received the information that this house was built the year before he was born, setting the date as 1863.

Q. I will ask whether or not, in addition, there is any general reputation around the community as to the age of this house?

A. There is, because when I made the inquiries among the old timers of Susanville they all directed me to this house as the oldest house then standing in the town of Susanville.

Mr. BURR. You say that is about 4,000 feet elevation?

The WITNESS. 4,195.

3166 Mr. BURR. And you already described the climate.

The WITNESS. Yes.

By Mr. WHEAT:

Q. Will you tell me whether or not the outside lumber on this house—what is it made of?

A. The lumber is made out of California white pine.

Q. Did you take these photographs, and if so, on what date?

A. I did. It was approximately December 23 or 24.

Q. 1929?

A. Yes. I took all these photographs between December 20 and December 31, 1929.

Mr. WHEAT. May that stand for all of them?

Examiner DE BRULER. Yes.

By Mr. WHEAT:

Q. Have you procured a piece of siding from this house?

A. I have.

Q. And was the method of procuring it similar to that of procuring the piece from the Goodrich house?

A. It was, only it was taken from a lower place near the bottom, near the foundation.

Q. Does that place show on any of the photographs?

A. It can be seen in the lower photograph, no. 8, to the left of the door.

Q. Was this side of the house exposed to the weather, that is, was the piece that you obtained exposed to the weather?

3167 A. Yes.

Q. Did you state whether or not you saw any evidence, on this house, or any of these other houses, pieces from which you obtained, of rebuilding or reconstruction or recovering of the outside?

A. No; I did not; and also from the fact that the windows, the design of the door, and the siding matter itself, shows its age. Furthermore, this siding was put on with square-cut nails, which will show in the wood samples taken off as one of the square-cut nails was taken out with the sample.

Q. This same testimony applies to the second piece?

A. Yes.

Mr. WHEAT. I ask that the photographs of the Spaulding house be received as respondent's exhibit no. 37 for identification.

Examiner DE BRULER. So received.

(Whereupon the photographs of the Spaulding house were marked "Respondent's Exhibit No. 37" for identification.)

By Mr. WHEAT:

Q. I hand you another sheet of paper and ask you what it contains?

A. This contains two photographs of the old Wright house, built in Susanville approximately in 1870. The date was determined by me by interviews with Mr. Wright's daughter, Mrs. C. D. De Forest, who is at present living in Johnsonville.

Q. I ask you whether or not also, by common reputation,

3168 the age of that house was approximately determined?

A. It was. And in explanation I will state that the lower photograph on the page shows the south and west exposure and that the prevailing storms in that country come from the south and west. I will also state that I removed samples of siding from this side of the house, which is shown very clearly on the lower part of the window on the extreme left of the photograph, which was the bottom board next to the foundation.

Q. Have you those pieces with you?

A. I have.

Mr. WHEAT. I will ask that this sheet, with two photographs, be received and marked "Respondent's Exhibit No. 38" for identification.

Examiner DE BRULER. They will be received and so marked.

(Whereupon the two photographs of the Wright house were marked for identification, "Respondent's Exhibit No. 38.")

By Mr. WHEAT:

Q. I now hand you another sheet of photographs and ask you what that contains?

A. This is known as the Judge Harris house, at Alturas, Modoc County, California. I ascertained the age of this house by confer-

ring with the old timers, and particularly with Col. Thompson, the old Indian fighter who has written a book, "The History of Modoc and the Troubles in the Early Days with the Indians." I also photographed this house and took samples from the same,
3169 from the outside siding, which is exposed to the weather.

Alturas is approximately, that is, the elevation is about 4,800 feet; the climate is very similar to Susanville with the exception the rainfall may be deficient by about an inch, and not quite as much snow, but more extreme cold weather. I have personally been in Alturas when the thermometer registered about 33 degrees below zero and I have been there in the summertime when it was as high as 105 degrees.

Q. I will ask you whether or not the siding which you mention on this house is composed of California white pine?

A. It is.

Mr. WHEAT. I will ask that this sheet of photographs headed, "Judge Harris house", regarding which the witness has just testified be marked "Respondent's Exhibit No. 39" for identification.

Examiner DE BRULER. So marked.

(Whereupon the photographs of the Judge Harris house were marked "Respondent's Exhibit No. 39" for identification.)

Mr. WHEAT. Mr. Examiner, may the two samples testified to by the witness as pieces taken from the Goodrich house, referred to in the photographs marked "Respondent's Exhibit No. 36" for identification, be marked, respectively, "36A" and "36B" for identification.

Examiner DE BRULER. They may be so marked.

(Whereupon the two samples of wood referred to were
3170 marked "Respondent's Exhibit No. 36A and 36B" for identification.)

Mr. WHEAT. I will now ask, Mr. Examiner, that the two pieces of wood testified to by the witness as having been taken from the Spaulding house, mentioned in respondent's exhibit no. 37 for identification, be marked, respectively, "Respondent's Exhibit No. 37A and 37B" for identification.

Examiner DE BRULER. They may be so marked.

(Whereupon the two pieces of wood referred to were marked "Respondent's Exhibit No. 37A and 37B," respectively, for identification.)

Mr. WHEAT. Now I will ask that the two wood samples mentioned by the witness in connection with his description of respondent's exhibit no. 38 for identification, be marked "Respondent's Exhibit No. 38A and 38B", respectively, for identification.

Examiner DE BRULER. So marked.

(Whereupon the two samples of wood referred to were marked "Respondent's Exhibit No. 38A and 38B", respectively, for identification.)

By Mr. WHEAT:

Q. Mr. Browne, is the Wright house, regarding which you testified, also known in the community as the Folsom house?

A. It is at the present time known as the Folsom house.

Mr. WHEAT. I will ask that the sample of wood mentioned
3171 by the witness, in connection with his testimony regarding respondent's exhibit no. 39 for identification, be marked "Respondent's Exhibit No. 39A" for identification.

Examiner DE BRULER. So marked.

(Whereupon the sample of wood referred to was marked "Respondent's Exhibit No. 39A" for identification.)

By Mr. WHEAT:

Q. I will now show you another sheet with photographs on it and ask you to explain what that is?

A. That is the Rice house in Cedarville, Modoc County, California, which was built approximately in 1870. In making my investigations in this community I was referred to this house as being the oldest house standing in that town. One of the Rice girls is at present living in this house.

The samples of siding were taken from the front of the house, which is a south exposure. The climatic conditions of Cedarville are approximately the same as that of Alturas, it being situated on the west side of Surprise Valley.

Q. At an altitude of approximately what?

A. Approximately 4,400 feet.

Mr. WHEAT. I will ask that the sheet with the two photographs be marked "Respondent's Exhibit No. 40" for identification.

Examiner DE BRULER. It may be so marked.

(Whereupon the two photographs of the Rice house were marked "Respondent's Exhibit No. 40" for identification.)

3172 By Mr. WHEAT:

Q. Did you produce samples of this house?

A. I did.

Q. Will you tell what your investigation showed that the exterior siding of this house was constructed of?

A. California white pine.

Q. And have you samples here?

A. I have two samples.

Mr. WHEAT. I will ask that these two samples be marked, respectively, "Respondent's Exhibit No. 40A and 40B" for identification.

Examiner DE BRULER. So marked.

(Whereupon the two samples of wood referred to were marked "Respondent's Exhibit No. 40A and 40B" for identification.)

By Mr. WHEAT:

Q. I will ask you whether or not the siding on this Rice house was in fair condition when you examined it?

A. It was in very good condition.

Q. I hand you another sheet of photographs and ask you what it contains?

A. That is a photograph of the Masonic Hall in Cedarville, Modoc County, California. The lower portion of this hall, which is a two-story building, was the first schoolhouse built in Surprise Valley.

Q. That is the general reputation in that community?

3173 A. Yes.

Q. About what date was it built, according to general reputation?

A. Approximately 1870. The photographs shown are a north exposure. The samples are taken from the north side of the building. I removed four samples of siding from this building and determined that the wood was California white pine.

Mr. WHEAT. I ask that these photographs on this sheet headed "Masonic Hall, Cedarville", be received as respondent's exhibit no. 41 for identification.

Examiner DE BRULER. So received and marked.

(Whereupon the two photographs of the Masonic Hall, Cedarville, were marked "Respondent's Exhibit No. 41" for identification.)

Mr. WHEAT. I will also ask that this sample of wood which Mr. Browne has just testified to, be received as Respondent's Exhibit No. 41A for identification.

Examiner DE BRULER. So received and marked.

(Whereupon the sample of wood referred to was marked "Respondent's Exhibit No. 41A" for identification.)

By Mr. WHEAT:

Q. I hand you another sheet of paper and ask you what it contains?

A. This is the photograph of a log cabin which was erected in Cedarville and was known as the Cressler and Bonner Trading Post, which is quite a historical building. It was the first building in Surprise Valley and was erected in 1854 and used as a

3174 trading post for a number of years. It is at present in a park set aside for the purpose of preserving this, but still there has been no repairs made to the building.

The photograph on the lower portion of the page shows California white-pine logs. This I determined by the bark which is still on the logs on the north side of the building.

Q. That includes the sapwood, does it?

A. The entire logs—sap, heart, and bark.

The climatic conditions are the same as I have spoken of at Cedarville.

Q. And the reputation of this building in the community is that it was built approximately at the time you stated?

A. It is.

Mr. WHEAT. I will ask that the sheet, the two photographs, be received as respondent's exhibit no. 42 for identification.

Examiner DE BRULER. So received.

(Whereupon the two photographs of the Cressler and Bonner Trading Post were received and marked "Respondent's Exhibit No. 42" for identification.)

Mr. WHEAT. If Your Honor please, I will ask that these respective exhibits for identification, respondent's exhibit nos. 35 to 42, inclusive, for identification, be received as respondent's exhibits nos. 35 to 42, inclusive for the record; and, in addition, the wood samples,
3175 respondent's exhibit nos. 35A and 35B, and such similar matter for each of these exhibits for identification, be also received under those numbers.

Mr. BURR. I would like to ask if it is not the intention to have the expert testify as to whether or not they are California white pine?

Mr. WHEAT. Yes.

Mr. BURR. May I ask that the reception of the wood samples be postponed until that time?

Mr. WHEAT. It is agreeable. You have no objection to the photographs going in at the present time?

Examiner DE BRULER. The photographs may go in now.

Mr. WHEAT. We ask that respondent's exhibit no. 35, 36, 37, 38, 39, 40, 41, 42, for identification, become the same numbers for the record.

Mr. BURR. No objection.

Examiner DE BRULER. So received.

(Whereupon respondent's exhibits nos. 35 to 42, inclusive, were received in evidence.)

Mr. WHEAT. You may cross-examine.

Cross-examination by Mr. BURR:

Q. Did you notice any sugar pine in any of these structures?

A. No, I didn't; because that is not a sugar-pine territory, Mr. Burr, and I went up there principally for that reason because
3176 I was familiar with that territory and knowing that these houses in the early days would be built of the lumber closest to their present location; that they wouldn't go back into the mountains to get sugar pine, so I felt that I would be more apt to find California white pine in that locality.

Q. And California white pine and ancient structures were what you were looking for?

A. Yes, indeed.

Q. Did you make any examination of the roofs of these buildings?

A. No, I did not because most of the roofs there were shingled, and of course the log cabins showed the shakes, but the shakes are very badly decayed there, and rotted out, and I thought that there wouldn't be any advantage gained by making an examination.

Q. You don't know whether those shakes were made out of California white pine or not, do you?

A. No, but my impression would be that they were made out of California white pine because in my timber work throughout the mountains I found that shake makers used a great deal of California white pine in the manufacture of shake.

Q. Without going through these eight buildings in detail, did you notice replacement work?

A. No, I did not; I looked for that carefully to see if there were replacements. I tried to get the structures showing the age in which they were built. You will see the old doors and the windows
3177 that show in the photographs.

Q. All these samples that have been marked for identification, they were in each case exposed to the weather?

A. Siding in every case.

Q. They were siding and exposed to the weather?

A. Yes.

Q. There is no sign here of paint; were these unpainted buildings?

A. There are signs of paint there.

Q. There are?

A. Yes, indeed; you will find on the Spaulding house the yellow paint very heavy there on the piece underneath your hand there.

Q. How much sign of rot did you notice?

A. The siding as a whole was very sound. But so that there could be no question in regard to the samples I took them off where they had been split and knocked off a piece. You know how a siding will split off, or where the nail is. I removed that portion so that sample should show decay because the water has been in it and running through from where the nail and split was. I could have removed better samples by taking an entire piece of siding off the building, which would have shown sounder condition than those I have.

Q. Those buildings are now being occupied?

A. They are all being occupied with the exception of the two log cabins, the Cressler and Bonner Trading Post and the old Roop cabin. I will say that the old Roop cabin is now being used
3178 for a cow barn; the grandson of Governor Roop is using it.

Q. There is some sign of rot then in connection with the exterior of these ancient buildings?

A. There is in the log buildings, and also you will notice in the Judge Harris house, of Alturas, that there is some rot on the porch; the wood has rotted off the edge. I think the photograph will show that very clearly.

(Here followed remarks off the record.)

Q. In that connection you refer to respondent's exhibit no. 39, do you?

A. Yes. I might qualify that statement and say that all the houses are not occupied. The Spaulding house in Susanville is not occupied at the present time. There is a "For rent" sign that shows in the photograph, but it is just temporarily vacant.

Q. Now the Cressler and Bonner Trading Post, respondent's exhibit no. 42, is in rather bad condition isn't it?

A. Yes.

Q. Would you say that the condition is due to decay, to a large extent?

A. Partially so and partially from neglect on account of the roof not being taken care of the shakes, which have rotted away, has allowed the snow to pile up in the winter time and there will be snow on the inside and outside of the building and the snow on the outside would naturally melt, and would leave snow on the inside which would cause rot.

3179 Mr. BURR. I think that is all.

Redirect examination by Mr. WHEAT:

Q. In taking these samples you were carrying out my directions, were you, to procure something by which you could prove the identity of the wood, and not determine by the samples the state of the building?

A. That is correct.

Mr. WHEAT. That is all.

(Witness excused.)

Examiner DE BRULER. We will take an adjournment until February 5, 1930, at 10:00 o'clock a.m.

(Whereupon, at 5:15 o'clock p.m., an adjournment was taken until February 5, 1930, at 10:o'clock a.m.)

3180 Docket No. 1620 to 1669, inc.

SAN FRANCISCO, CALIFORNIA, *February 5, 1930.*

Met pursuant to adjournment 10:10 o'clock a.m.

Before Ellis De Bruler, examiner.

Appearances:

Eugene W. Burr for the Commission.

McCutcheon, Olney, Mannon & Greene (by Mr. Allen P. Matthew and Carl I. Wheat) for the respondents.

Examiner DE BRULER. We will proceed if the parties are ready.

Mr. WHEAT. I will call Mr. Brundage.

M. R. BRUNDAGE was thereupon called as a witness and, after having been first duly sworn, testified as follows:

Direct examination by Mr. WHEAT:

Q. Please state your full name and address?

A. Marsden R. Brundage.

Q. And your residence, please.

A. 1708 Milvia Street, Berkeley.

Q. Mr. Brundage, what is your business or profession?

3181 A. I am associate forester with the California Forest Experiment Station engaged in research of various kinds of forest products.

Q. By whom are you employed?

A. By the United States Forestry Service, branch of research.

Q. What particular field is yours?

A. My field is mostly research in the utilization and in the sylvacultural relationships with utilization.

Q. May I ask are you a wood technologist?

A. I am a wood technologist by training and that is the part of my duties there at the station. We are called upon to identify wood specimens. We deal usually with the local specimens and send others back to the forest-products laboratory.

Q. And have you had training in the identification of wood samples?

A. Yes.

Q. Where?

A. I had training in Michigan State College at East Lansing, Michigan, where I was given that course in connection with the general four years' course in forestry.

Q. After that what has been your experience in that line?

A. My experience since that time—since I have been in the forestry service, I have been called upon to identify probably 30 or 40 times a year specimens of wood which are usually California woods send to the office requesting identification.

Q. May I ask whether the portion of your duties for the Forest Service is this wood identification?

3182 A. A portion is; yes.

Q. May I ask you whether or not you can microscopically identify the various species of pine grown in the United States, and to what extent that identification can go?

A. The identification of pines is rather difficult because of the similarity of microscopic features. The pines are usually classified in groups only, unless the origin is known, in which case they can be assigned to perhaps one or two species if the region is definitely known.

Q. May I ask whether there is among these pines a group known to botanists as the white-pine group?

A. Yes.

Q. And another generally known as the yellow-pine group?

A. Yes.

Q. Can you always identify, microscopically, pieces of small samples of wood as being one or the other of these groups?

A. You can always identify any group as belonging to one group or the other with certainty with a compound microscope.

Q. If you know the region which the sample was obtained from, can you, with reasonable certainty, identify the sample as belonging to some particular species within the particular group?

A. You can.

Q. I will ask you whether or not, during the past month, you have made certain wood identifications at the request of the respondents in the present proceedings?

3183 A. I have.

Mr. WHEAT. The examiner will recall that at the Spokane hearing certain wood specimens were produced and were marked with exhibit numbers.

Examiner DE BRULER. Yes.

By Mr. WHEAT:

Q. I will hand you respondent's exhibit no. 26 and ask you whether you examined this sample of wood, and if so, what your identification proved to be?

A. I examined this sample of wood and found it to be one of the yellow-pine group.

Q. And knowing the location from which it was obtained, what species would you say it was?

Mr. BURR. Were you informed where it was obtained?

The WITNESS. I was not informed where this was obtained.

Mr. WHEAT. I will now state that the records shows this was obtained at Spokane, Washington.

By Mr. WHEAT:

Q. What would you say the species is?

A. If you said it grew in the vicinity of Spokane, Washington, as a tree, was produced naturally in that region around that vicinity, I would say in all probability it is Pinus ponderosa.

Q. I will hand you a sample marked "Respondent's Exhibit No. 29" and ask you if you identified that sample?

A. I did.

3184 Q. Will you state for the record what you found that to be?

A. I found that to belong to the same group as the preceding specimen.

Q. And assuming that this specimen came from the Spokane territory, and was grown in that area, what would you state as to the species?

A. That is probably also Pinus ponderosa.

Q. I will hand you a specimen marked "Respondent's Exhibit No. 25" and ask you to state what you found that to be, if you examined it?

A. I examined that and found it to belong to the yellow pine—ponderosa group or yellow pine group.

Q. I will hand you a specimen marked "Respondent's Exhibit No. 27" and ask you if you examined and identified that specimen?

A. I identified that specimen as a member of the white pine group.

Q. And if you were informed that this specimen was obtained at Spokane, Washington, to what particular species of the white pine group would you assign it, in all probability?

A. To Pinus monticola, western white pine.

Q. I will hand you a specimen labeled "Respondent's Exhibit No. 28" and ask you if you examined this specimen and identified it?

A. I examined that specimen and identified it as a member of the white pine group, and if it came from that region around Spokane, it is undoubtedly western white pine.

3185 Mr. BURR. Or monticola?

The WITNESS. Yes.

By Mr. WHEAT:

Q. I will hand you another specimen which was mentioned, Mr. Examiner, in the testimony of the witness Klopp at the Spokane hearing, and ask you if you examined this specimen and identified the same?

A. Yes; I examined that specimen and identified that as belonging to the yellow pine group.

Q. I will ask you whether or not, if you were informed that this specimen came from a house in the city of Spokane, you would be able to identify it, as to species?

Mr. BURR. Just came from a house, you said?

Mr. WHEAT. Yes. You recall the testimony of the witness Klopp.

A. (Examining specimen referred to as having come from a house.) Not knowing what other species are shipped into Spokane, I wouldn't want to confine it to any particular species, just by knowing what house it came from. If we know the origin of the tree, from the wood from which it was cut, if it grew in the vicinity of Spokane before it went into the house—in other words, if it is locally grown timber, it would undoubtedly be Pinus ponderosa.

Q. May I ask you whether or not members of the yellow pine group lumber produced from members of the yellow pine group other than Pinus ponderosa are, if you know, generally
3186 shipped into the area?

Mr. BURR. That was some years ago you mean?

Mr. WHEAT. Thirty-five years ago.

Mr. BURR. Do you know about that 35 years ago?

The WITNESS. I don't know definitely, but I would consider it extremely doubtful that any lumber, timber, was shipped into the western region of any kind for construction purposes.

By Mr. WHEAT:

Q. On that assumption what would you say that wood in all probability is?

A. Undoubtedly western yellow pine. It has the characteristics of western yellow pine.

Q. What species do you refer to?

A. Pinus ponderosa.

(Here followed remarks off the record.)

Mr. BURR. I think it should show on the record that he produces a specimen taken from that, from respondent's exhibit no. —.

Mr. WHEAT (interrupting). This has not been introduced yet as an exhibit.

(Here followed remarks off the record.)

Mr. WHEAT. I will ask, Mr. Examiner, that this wood sample regarding which the witness has just testified be received and marked "Respondent's Exhibit No. 43."

3187 Examiner DE BRULER. Respondent's exhibit no. 43 will be received.

(Whereupon the sample of wood referred to was received in evidence and marked "Respondent's Exhibit No. 43.")

By Mr. WHEAT:

Mr. Brundage, I will hand you a wood sample marked "Respondent's Exhibit No. 36A" for identification and ask you whether you investigated this wood sample and ascertained the species from which it was obtained, and making the assumption with reference to all the samples which I am now about to hand you, that they were procured from structures in the northeastern portion of the State of California.

A. And a good many years ago—I think that time element would be important.

Q. And a great many years ago.

A. I examined this specimen and I identified it positively as belonging to the yellow pine group and, if it came from that section of the State—it will be necessary to repeat that.

Mr. BURR. I don't think so. We can stipulate you can make a blanket question.

The WITNESS. How could I state that?

By Mr. WHEAT:

Q. Do you believe it to be Pinus ponderosa?

A. Yes.

Q. Under the explanation which you have made?

3188 A. Yes, from the explanation I have made.

Q. I will hand you now a sample of wood marked "Respondent's Exhibit 36B" for identification, and ask you whether you examined this sample of wood and what the result of your investigation was?

A. I examined this specimen under a microscope and found it to be a member of the yellow-pine group and it is probably Pinus ponderosa.

Q. I will hand you a wood specimen marked "Respondent's Exhibit No. 37A" for identification, and ask you whether you inspected this wood sample and, if so, what you found it to be?

A. I identified this specimen also as a member of the yellow-pine group, and if it was cut from California forests it is probably Pinus ponderosa.

Q. I hand you specimen marked "Respondent's Exhibit No. 37B" for identification and ask you whether or not you examined this specimen and, if so, what you found it to be.

A. I examined this specimen and found it to be also a member of the yellow-pine group, and if grown in the State of California is probably Pinus ponderosa.

Q. I hand you now the following exhibits for identification, respondent's exhibits nos. 38A, 38B, 39A, 40A, 40B, and 41A, all marked for identification, and ask you whether you examined these specimens and, if so, what the result of your examination was.

A. I examined all these specimens microscopically and found them to be members of the yellow-pine group and, if grown

3189 in California forests, are in all probability Pinus ponderosa.

Cross-examination by Mr. BURR:

Q. None of those could be lodgepole pine, in your judgment?

A. None of those could be lodgepole.

Q. That is a yellow pine, is it not, lodgepole?

A. That is of the yellow-pine group also; yes.

Q. You could tell by examination infallibly whether it was lodgepole or Pinus ponderosa, can you?

A. I could be fairly certain about the possibility of its being the lodgepole pine grown in California. The lodgepole pine grown in outside regions I am not so familiar with, but lodgepole pine grown in this State is a different texture.

Q. So there is no real possibility that that could be lodgepole?

A. I don't believe there is any possibility of any of those being lodgepole.

Q. Is there any yellow pine, native to California other than Pinus ponderosa and the lodgepole?

A. Pinus jeffreyi is a member of that group.

(Here followed remarks off the record.)

A. I should qualify that—that is either Pinus ponderosa or Pinus jeffreyi. They can't be distinguished when they are mixed indiscriminately by the lumberman.

3190 By Mr. BURR:

Q. Do you know whether jeffreyi is sold as California white pine commonly?

A. It is as far as I know; it is usually sold and mixed with Pinus ponderosa and sold as the same species.

Q. Some botanists regard jeffreyi as a subspecies of Pinus ponderosa, do they not?

A. Some botanists do, although it is definitely recognized in Sudworth's Check List as a distinct species.

Q. Do you regard it yourself as a distinct species?

A. I regard it as a distinct species in the woods where it can be identified by tree characteristics and where it has the marked characteristics that are assigned to the jeffreyi pine species by botanists. There are intergrading species. That is, there are trees intermediate between Pinus ponderosa and Pinus jeffreyi, which have the characteristics of both in needles, cones, bark, etc., but the distinct Pinus ponderosa and the distinct Pinus jeffreyi are very easy to tell apart in the woods.

Q. There are gradations between the characteristics of the jefferyi and the characteristics of ponderosa shading all the way between the two?

A. Yes; there are.

Q. I think you testified that you would be able to distinguish without doubt or hesitation the white pines from the yellow pines?

3191 A. Miscroscopically, yes.

Q. Is that due to a different cell structure?

A. That is due to a different cell structure in what is known as the tracheid cell and also to a difference in the pits between the cell walls of the parenchyma and the wood tracheids.

Q. Respondent's exhibit no. 28, I believe you said was ponderosa. Can you tell whether it is heart or sap?

A. That is not ponderosa—that is a member of the white-pine group.

Q. Will you state whether it is heart or sap?

A. The sapwood extends—do you want it in inches approximately; that is, part heart and part sap?

Q. Well, just what is it?

A. About 40% sap on that side and 60% heart here.

Mr. WHEAT. Which you mean the reverse side.

By Mr. BURR:

Q. The part with the stamp of the number of the exhibit is heartwood, is it?

A. That is heartwood; yes.

Q. Referring to respondent's exhibit no. 25, will you state whether that is heart or sap?

A. Exhibit 25 appears to be 100% sapwood.

Q. And that is what kind of wood?

A. That is one of the yellow-pine group.

Q. How about respondent's exhibit no. 26? You testified
3192 that is yellow pine. Is that heart or sap?

A. That is a member of the yellow pine group; it has the appearance of being all sapwood.

Q. And respondent's exhibit no. 27 is heart or sap?

A. There is some slight appearance of that being partly heartwood but I wouldn't want to swear to you without having it cleaned off or polished up on the end.

Q. What did you testify that was?

A. That is a member of the white pine group.

Q. And you think it is largely heart, do you?

A. I would like to whittle that off a little bit (whittling on respondent's exhibit no. 27). That appears to me to be about 50% heart, but I wouldn't want to be real definite about that.

(Here followed remarks off the record.)

By Mr. BURR:

Q. You say that is white pine, do you, exhibit no. 27?

A. Yes, white pine group.

Q. Handing you respondent's exhibit no. 29, which you testified was——

A. (Interrupting.) My mark is on it here; that is a member of the ponderosa group.

Q. That is heart or sap?

A. That specimen is about 70% heart and 30% sap by volume; one surface is 90% heartwood and the other surface is 60% heartwood.

Mr. WHEAT. By the first surface you mentioned, you
3193 referred, did you, to the surface opposite to that on which the stamp of the exhibit number appears?

The WITNESS. Yes.

Mr. WHEAT. And that surface is nearly all heartwood?

The WITNESS. Yes, just a narrow strip of sap along one edge.

By Mr. BURR:

Q. You are positive that is not all sap, are you?

A. It is possible for a board to become darker by exposure to the light, but from the end section the darker color follows across the end grain and the lighter color remains, and the line of division is along one of the annual rings. I could classify it about 70%, that is, I would classify 70% of that piece, as I said before, as heartwood from the darker color.

Q. That is a question on which experts might differ, is it?

A. Yes, it is.

Q. Would you be able to tell as to these respondent's exhibits for identification 36 to 44, but given letter designations along with those numbers, would you be able to tell whether those exhibits, after this lapse of time, were heartwood or sapwood?

A. I wouldn't want to make any identification as to heart or sap of a specimen of that size and that age. The color characteristics of the original wood are lost due to aging.

Q. In view of the length of time that they have lasted, namely, from the 1860's down to beginning, in some cases, in the 70's would you say those were more apt to be heart or sap?

3194 A. I wouldn't say that heart or sap would make much difference, provided the specimens had not been in a locality where the conditions were unfavorable for decay. If they had been conditions, if they had been under conditions favorable to the growth of wood-rotting fungi, they would probably be heartwood.

(Here followed remarks off the record.)

Mr. WHEAT. The respondents object to any questions to this witness on cross-examination which have to do with anything except the identification of these wood samples regarding which he has been questioned.

Mr. BURR. If the examiner please, the whole purpose of the offering of these exhibits is to show the long durability of this wood under conditions that it was used in these structures in that part of the country, and it seems I may certainly cross-examine on anything which goes to that purpose.

Examine' DE BRULER. You may cross-examine with that exception noted.

Mr. WHEAT. I want it understood that our objection goes to anything except the identification of these specimens, and he has been produced by us as an expert on that single question.

Examiner DE BRULER. I understand that the witness won't answer anything except what he knows about.

Mr. WHEAT. I take it that your ruling does not allow general examination of this witness.

3195 Examiner DE BRULER. No; not general examination; no indeed.

Mr. BURR. I don't anticipate any general examination. In fact, I am about done.

By Mr. BURR:

Q. Are you familiar with the climate in Modoc County in and about Alturas?

A. I am not.

Q. You don't know whether that is a climate which is particularly susceptible to decay conditions as regards wood, or do you?

A. No; I have no knowledge of the weather conditions, or the winter conditions in that region.

Q. And the same is true of Susanville, is it; are you familiar with the Susanville climate?

A. I have been there in the summer; as in most parts of California it is very dry there in the summer.

Q. Does altitude have anything to do with the degree of fungi inroads upon lumber?

Mr. WHEAT. Of course, my objection will run to this line of questions?

Examiner DE BRULER. Objection overruled and exception allowed.

A. I am not qualified as a pathologist to answer that question.

Mr. BURR. I think that is all.

Examiner DE BRULER. That is all. You may be excused.

(Witness excused.)

3196 Mr. BURR. I will call Mrs. Fitzgerald as a Commission's witness.

May the record show the respondents are not resting, as far as this hearing is concerned, but at their request we at at this point, for convenience sake, going to the Commission's rebuttal to resume the defense somewhat later in the day.

Mrs. MELBA FITZGERALD was thereupon called as a witness and, after having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Your name is Miss Melba Fitzgerald?

A. Mrs. Melba Fitzgerald.

Q. And, Mrs. Fitzgerald, you are in what line of work?

A. Secretary to Mr. Scott.

Q. And Mr. Scott is the——

A. (Interrupting.) Acting secretary-manager——

Q. (Interrupting.) Of the California White and Sugar Pine Manufacturers' Association?

A. Yes.

Q. Located in the Call Building in this city?

A. Right.

Q. You appear here, do you, under subpoena calling for the production of certain papers?

A. Yes, sir.

3197 Q. Did you bring with you, under that subpoena, a copy of the circular of your association no. 1831?

A. Yes.

Q. You appear here in the absence of Mr. Scott, do you?

A. Yes.

Mr. BURR. I will ask that that circular be marked "Commission's Exhibit for Identification No. 49." Wait a minute! That isn't what I want.

Mr. Examiner, I find that certain papers which are apparently part of the exhibit I desired to have produced do not seem to be attached and I will, therefore, ask a little different line of questions.

By Mr. BURR:

Q. Handing you a circular purporting to be circular no. 1831, in mimeograph form, I will ask you if that is a document which was circulated by your organization?

Mr. MATTHEW. Just a moment!

Examiner DE BRULER. Show that to the attorney.

Mr. MATTHEW. I want to be very certain, Mr. Examiner, that my right to object is not being lost by not making a timely objection.

Examiner DE BRULER. That is all right.

Mr. BURR. I am trying to identify the paper.

By Mr. BURR:

Q. That was circularized to your membership?

A. Yes.

3198 Mr. BURR. It is that, rather than the other one, that I desire to have marked "Commission's Exhibit No. 49" for identification. May it be so marked?

Examiner DE BRULER. Sure.

(Whereupon the circular referred to was marked "Commission's Exhibit No. 49" for identification.)

The WITNESS. These first two pages, the list of the letters, and also these are copies of the letters and apparently they were separate and——

By Mr. BURR:

Q. (Interrupting.) In the one that you produced?

A. Yes.

Q. But the paper with the letters attached was the circular complete which went out?

A. Yes.

Q. Handing you now Commission's exhibit for identification no. 49, will you state whether the letters, which form a part thereof, are letters or copies of letters, I should say, of members of your association to the various parties named?

Mr. MATTHEW. I object to the question as absolutely immaterial. I cannot see that it makes any difference whether this association has sent out a circular, or whether it has copies of letters from members of the association to individuals.

Mr. BURR. If the examiner please, that is merely a preliminary question.

Examiner DE BRULER. You may answer the question.

3199 Mr. MATTHEW. I object to the line of preliminary questions. This is an effort to go into a line of inquiry which is not only not germane to these proceedings, but it involves an association which is not concerned in the proceedings at all.

Examiner DE BRULER. I don't know what is being offered.

Mr. BURR. If Your Honor please, you may look at it. I am agreeable.

(Here followed remarks off the record.)

Mr. BURR. My contention, if the examiner please, is that this paper, which I am proposing in a moment to offer, contains admissions which are inconsistent with the answers herein and, therefore, are thoroughly germane and pertinent. These parties are all parties respondent, insofar as these letters are concerned, and, I think, practically all of them, as far as the vote is concerned.

Mr. MATTHEW. The examiner has ruled out heretofore all testimony about the association, or any action which might have been taken by the association, or any action by its membership.

Mr. BURR. I am not offering it yet. Wouldn't the objection be better when I offer it?

Mr. MATTHEW. You are spreading upon the record a lot of material which, even though it be of a preliminary character, is calculated to create erroneous impressions, and I want my

3200 objections noted immediately.

Examiner DE BRULER. Your objections are noted.

Mr. MATTHEW. I think it is preposterous to have this line of inquiry on this record.

Mr. BURR. I think it is vital and pertinent and directly to the point.

What is the question pending?

(Whereupon the question referred to was read by the reporter.)

Mr. BURR. Strike the question. I will ask a little different question.

By Mr. BURR:

Q. These letters are written by members of the association in connection with the questionnaire that was sent out by the association?

Mr. MATTHEW. I object to that as leading, in the first place; in the second place, because it is absolutely immaterial and irrelevant.

Examiner DE BRULER. Is that association action only? Are you offering something that is association action?

Mr. BURR. This is a preliminary question to the offer of the exhibit. I want to show the circumstances under which the letter was

written, not to find or charge the association in the slightest, nor to indicate that the association is in any way a party to this proceeding, but merely to show the circumstances under which the letters
3201 were written, which is a preliminary matter. Then I will offer it and then the objections can properly be made.

Examiner DE BRULER. Go ahead.

Mr. MATTHEW. I want to have the record show that I object to this line of query.

Examiner DE BRULER. Very well.

(Here followed remarks off the record:)

Mr. MATTHEW. At the time when Mr. Dwight was on the witness stand in this case there was a direct ruling by Your Honor that nothing regarding the association could or would be asked.

Mr. BURR. That is not regarding the assoc'ation.

Examiner DE BRULER. I am trying to find out. Proceed as fast as you can and we will see what you are going to introduce.

Mr. BURR. Read the question.

(Whereupon the question referred to was read by the reporter.)

A. Yes.

Examiner DE BRULER. Let me ask, are these letters written by respondents in this case?

Mr. BURR. Yes; and the record will show that. I don't need to ask that; she don't know who they are.

Examiner DE BRULER. That is true.

Mr. BURR. I will say for the record that these letters
3202 are written by the McCloud River Lumber Company; by Arther Fleming, of the Sugar Pine Lumber Company; by the Siskiyou Lumber Company; by the Big Lakes Box Company; by F. J. Solinsky, Jr., of the Hobart Building; by the Hobart Estate Company; by the Lassen Lumber and Box Company; by the Owen and Oregon Lumber Company; by the Forest Lumber Company; by the Pelican Bay Lumber Company; by the Ewauna Box Company; by the Hess Lumber Company. And without characterizing them further I will say that the record, in my judgment, will show that they are all respondents.

By Mr. BURR:

Q. I desire, however, to ask the witness who F. J. Solinsky is? Do you know what company he is connected with?

Mr. MATTHEW. I——

A. (Interrupting.) Castle Craig.

Mr. MATTHEW. I move that be stricken physically for a moment. I was trying to object.

Examiner DE BRULER. Yes.

Mr. BURR. That completes the list.

Mr. MATTHEW. This question and answer don't belong in the record if my point is right. I understand that we are dealing with rebuttal testimony at this point.

Mr. BURR. Surely.

Mr. MATTHEW. All right. There isn't a word of testimony
3203 in this record about the Castle Craig Lumber Company, for example, and no witness has appeared on its behalf or against it. Now upon what possible theory of the conduct of any proceeding, can any reference to the Castle Craig Lumber Company be appropriate rebuttal testimony? I offer that as one illustration of my point.

Mr. BURR. That exhibit contains letters in which they say they do not regard——

Mr. MATTHEW (interrupting). I object to counsel stating what it contains.

(Here followed remarks off the record.)

Mr. BURR. If the examiner please, I now desire to offer the circular described and marked "Commission's Exhibit No. 49" for identification and offer to prove thereby that this question was asked of the membership of the association, including a large number of the respondents herein, to wit: "Since the Federal Trade Commission has been requested to issue a cease and desist order against the use of the word 'white' in the trade name 'California white pine' on the ground that 'California white pine' is not a true white pine, do you wish to continue the name 'California white pine'?"

I wish to further offer to prove that the annual board footage of 580,333,000 answered "Yes" and that 845,862,000 answered "No."

I further offer to prove that various members of the associa-
3204 tion, in letters to the association, included as part of the proposed exhibit, who are respondents in this case, gave answers inconsistent with the defense testimony as to the probably effect of the change of the name from California white pine to some other name; and that some of the respondents favored such a change and suggested names which they would prefer to California white pine for such purpose.

I now offer this exhibit as an exhibit for the record.

Mr. MATTHEW. I object first, on the ground that this tender is not responsive to proper rebuttal; in fact, it is not rebuttal at all. I object, in the second place, because the mere circumstance that the members of an association may have been polled by one of its officers for the purpose of ascertaining what their course of action might be in the event of a threatened procedure against them by governmental authorities, is not properly the subject of the introduction of evidence in this proceeding, or in any proceeding. I object, in the third place, upon the ground that there are certain respondents which, while respondents in legal contemplation, are hardly respondents in point of fact, and that the several letters and that the data which counsel desires to introduce is not appropriate evidence upon any theory in the case.

Mr. BURR. I would like to make a brief reply before you rule.

Examiner DE BRULER. You may.

3205 Mr. BURR. As regards the objection that this is not rebuttal in its nature, I would say that the effect of this evidence, to the extent that it is given weight, will be to offset testimony which has been given by several defense witnesses with regard to the effect which, in their judgment, they testified would ensue from a change of name.

As regards to the objection that these parties are not making admissions for one another, I would say that if the examiner desires I would stipulate that each of these letters be received as evidence against that particular concern for the purpose of this consideration.

Examiner DE BRULER. Objection sustained and exception allowed. Proceed with the hearing.

By Mr. BURR:

Q. Mrs. Fitzgeral, did you produce certain letters?

A. Yes, sir; those listed.

Q. Did you bring a letter from Mr. Presnell to the Pickering Lumber Company?

A. Yes.

Q. Also a letter from the Long-Bell Lumber Company to Col. Greeley? Just give me the group.

A. (Witness handing letters to counsel.) There is a duplication on that list; two letters of the same date and I only found one.

Q. Who is Mr. E. R. Irwin, whose name is signed to one of these telegrams?

A. In 1924—I didn't know the gentleman.

3206 Q. 1928?

A. I don't know.

Mr. BURR. May these be marked for identification "Commission's Exhibit No. 50" for identification?

I now offer copies of the following items of correspondence: J. M. White, general manager, Long-Bell Lumber Company, to W. B. Greeley, chief forester, of February 14, 1928; B. W. Bacon, general manager of the McCloud River Lumber Company, to C. Stowell Smith, January 9, 1927; also the Pickering Lumber Company, by D. H. Steinmitz, vice president, to Col. Greely, dated February 15, 1928; also telegram California White and Sugar Pine Manufacturers Association to M. B. Nelson, Long-Bell Lumber Company, Kansas City, April 2, 1928.

I ask that they be marked as "Commission's Exhibit No. 50" for identification.

Examiner DE BRULER. They may be so marked.

(Whereupon the items of correspondence referred to were marked as "Commission's Exhibit No. 50" for identification.)

Mr. BURR. I might add that Commission's exhibit no. 50 for identification comprises five pages.

If the examiner please, I now desire to offer these letters so incorporated as Commission's exhibit no. 50 for the record as admissions on the part of respondents. Long-Bell Lumber Company, McCloud River Lumbers Company, Pickering Lumber Company, and as re-

gards the last item, as in the nature of proof that a majority
3207 of the California and Oregon members of the association using the word white pine were willing to eliminate that word from their trade name.

Mr. MATTHEW. Mr. Examiner, I trust that neither Your Honor nor counsel will think that I am lacking in deference to my adversary if I protest earnestly, but without heat, against a procedure which seems to me to violate all of the rules of procedure and all of the canons of correct conduct in the presentation of a cause. I do not use those words offensively and when I make that statement I make it sincerely.

I have no doubt that counsel for the Commission is proceeding as he sees fit. But I am satisfied equally, in the course of comment of this character, is exactly of a character to do injustice to respondents which may be very difficult to remedy. It is not unlike making a statement as to contemplated testimony in the presence of a jury, which even though subsequently ruled out and with the jury instructed to disregard it, may yet have an impression created which may find its way into the verdict and finally in the judgment.

If I may start with the last item in this list first: A telegram from the California White and Sugar Pine Manufacturers Association to the Long-Bell Lumber Company, dated April 2—the objection is obvious in the first place. The telegram purports to recite the results of certain investigation and the attitude of certain Ore-
3208 gon and California pine manufacturers. Obviously it is not the best evidence of the facts which it purports to recite. That is one fatal objection.

A second objection is that this association is not competent to make admissions on behalf of these respondents or any of them.

In the third place, the matter herein set forth is irrelevant and immaterial in any event.

And, in the fourth place, it is not proper rebuttal.

Mr. BURR. You are not disputing the authenticity. My understanding was you wouldn't require proof of authenticity.

Mr. MATTHEW. I have been careful to say I don't object to these because they are copies. I say that a telegram which purports to recite that somebody said so and so, or voted so and so, is not the best evidence of what that party actually did.

Mr. BURR. When you said "best evidence" I thought you referred to the fact that they were copies.

Mr. MATTHEW. No——

Examiner DE BRULER. Have you finished?

Mr. MATTHEW. I am not through yet.

The first letter which appears in this exhibit, no. 50 for identification, is one which is apparently signed by the general manager of the Long-Bell Lumber Company, a respondent not represented by us, and as far as I know there has been no appearance in behalf of the Long-Bell Lumber Company in these proceedings.

Mr. BURR. Mr. Andrews represented them.

3209 Mr. MATTHEW. I think not. He appeared for the Pickering Lumber Company and for the Forest Lumber Company. I am certain in that respect.

There has, in any event, been no evidence offered either on behalf of the Long-Bell Lumber Company, or on the part of the Long-Bell Lumber Company.

Examiner DE BRULER. I understand that.

Mr. MATTHEW. I could not purport to offer evidence in their behalf so this letter is not rebuttal; it does not tend to refute or contravene anything that may have been said by the Long-Bell Lumber Company or any one of our witnesses.

We have a letter next from the McCloud River Lumber Company, another respondent not represented in this hearing, one of these nominal respondents, if Your Honor please, in this trade-name controversy in whose behalf no evidence has been introduced. Now, can a letter signed by a representative of that company be rebuttal to anything in this case? It is impossible in the very nature of things.

Third, we have a letter here from the Pickering Lumber Company signed by Mr. Steinmitz, but dealing with a matter as to which there was no testimony on the part of a single witness which we called on behalf of the Pickering Lumber Company. We called Mr. Adams, of the Pickering Lumber Company; he gave no testimony whatever as

3210 to whether or not the change in that name would be hurtful to his company or otherwise. So this is not rebuttal. But in any event, if Your Honor please, and this is in accordance with Your Honor's ruling the other day, it would be appropriate for counsel to ask any question of Mr. Adams in the scope of proper examination, but to offer a letter of another party dealing with another matter, of course, it falls far outside the bounds of propriety.

Examiner DE BRULER. Mr. Burr, have you anything to say?

Mr. BURR. Yes; please, sir.

If the examiner please, in the first place, I am offering the letter signed by the Pickering Lumber Company, the Long-Bell Lumber Company, and the McCloud River Lumber Company, respectively, as against those particular companies. I do not regard them as admissions as against the entire group of respondents and I think I tried to make that clear in my offer a moment ago.

Mr. MATTHEW. They have not appeared, so it cannot be rebuttal.

Examiner DE BRULER. Let's proceed.

Mr. BURR. These companies have all answered and I take it that under the consolidation of these cases, for purposes of trial, all matters which are offered for and against the Government in this proceeding inure to the benefit of each respondent or to the purposes of each respondent. These companies having all answered put in issue the very facts that are here sought to be proved on the Government's

3211 part and seems to me that correspondence in the way of admissions, when there is no objection as to the authenticity should undoubtedly go in the record for the purpose of show-

ing that these matters which have been alleged in the answers and which have been attempted to be proved in the defense testimony, are proper rebuttal and should be received for what they are worth.

Examiner DE BRULER. These respondents, mostly all of them, are contesting this proceeding.

Mr. BURR. They have answered; we have to prove it.

Examiner DE BRULER. And many witnesses have been put on the stand concerning these matters and you have had an opportunity to cross examine them, and for that reason I think the objection should be sustained to the introduction of these letters.

Mr. BURR. If the examiner please, I would like to have an exception.

Examiner DE BRULER. Exception allowed.

Mr. BURR. I want to bring the matter before the Commission whether the matter is argued either interlocutory or finally.

Examiner DE BRULER. I understand that. My position is that the respondents are now contesting this proceedings and whatever they might have said they have a right to contest the proceedings on its merits at the trial of this case and for that reason I am sustaining the objection to the introduction of these letters.

3212 Mr. MATTHEW. I assume that the objections that I have specifically urged are included in Your Honor's ruling?

Examiner DE BRULER. Certainly they are.

Mr. BURR. Are included?

Examiner DE BRULER. I have heard both of you.

Mr. BURR. On the grounds you mean?

Examiner DE BRULER. Yes; on the grounds. I heard both of you.

Mr. BURR. That is all.

Mr. MATTHEW. No cross-examination.

(Witness excused.)

Mr. MATTHEW. I am sure that counsel and I are not in disagreement as to the tentative understanding between us as to the conduct of these proceedings. As I recall it, there are some fifty complaints.

Mr. BURR. Fifty.

Mr. MATTHEW. We appear for a number of the respondents in those separate proceedings, there being a separate complaint against each company. Mr. Burr discussed with me his testimony, I think at least twice, the difficulties of making up a separate record against each respondent, which I have, of course, recognized. He suggested that at some appropriate time we might join in some kind of a

3213 stipulation as to the extent of which testimony offered either by the Government or on the part of the respondents might be deemed to be available to all, or to be prejudicial to all, as the case might be. I told him that I was with him in an effort to arrive at some such stipulation, but that I apprehended the difficulty in arriving at the form of the stipulation, and we have not as yet entered into any stipulation. I wouldn't want my silence here to give rise to the impression that I will agree that the testimony which may be offered against a single respondent may be, and which may seem prejudicial,

may likewise be prejudicial to all or taken against all. It might be that a single respondent is subject to criticism in some respect and the others are free. So I do not wish counsel to gain the impression, or Your Honor, that I assent to the suggestion that all evidence here is available equally for and against the parties. I think we will have to sometime agree on some stipulation.

Mr. BURR. It seems to me that there are two propositions which must be proved individually, or admitted individually, as regards each individual of the fifty respondents, and those two are contained in paragraph two of the complaint and the first part of paragraph three. They are the question of interstate commerce and also the question of whether or not each given respondent has used a trade name with the word "white" incorporated therein. It seems to me that all other questions relate to the practice of calling Pinus
3214 ponderosa a trade name which includes the word "white", and that that evidence should be regarded as not individual to each individual complaint, I mean each individual respondent, but as covering the entire range of the respondents, with this possible exception: There has been testimony with regard to the character of the Pinus ponderosa wood as differing in certain respects and in certain different territories as manufactured by certain different respondents; that right on the face of it shows how wide the scope of the evidence is that is being given in that respect. For example, we have had special testimony with regard to the character of the Pinus ponderosa in the inland empire, special testimony as to the character of it in the Klamath Falls district, etc. That might have some local bearing as contrasted, but that appears in the face of the testimony, so that it seems to me that we may regard the testimony as received once and for all for the entire body of the respondents, with the two exceptions contained in the allegation, or the issues set forth in paragraph two and the forepart of paragraph three; paragraph one merely being formal as to where they are incorporated.

It seems that that is the line of demarcation.

Mr. MATTHEW. I cannot assent to that fully. I don't want to argue it with you now, but I think you and I should agree we haven't yet had a definite stipulation on that point. I think the record should show that.

3215 Mr. BURR. We haven't had any stipulation on that. I have corresponded with you and talked with you about it, and with Mr. Andrews also.

May the record show that Mr. Andrews is here present, he having just come in the room a moment ago?

Mr. MATTHEW. We have no desire to put the Government to any unnecessary difficulty of proof. That isn't the thought. I have tried to cooperate fully with counsel all through to avoid that.

(Here followed remarks off the record.)

Mr. WHEAT. I will now offer for the record the following respondent's exhibits previously marked for identification: "Respondent's Exhibit No. 1" for identification, "Respondent's Exhibit No. 2" for

identification, "Respondent's Exhibit No. 5" for identification, "Respondent's Exhibit No. 6" for identification, "Respondent's Exhibit No. 8" for identification, and "Respondent's Exhibit No. 17" for identification, and ask that those be received under those same numbers for the record.

Mr. BURR. I do not desire to waive any right to avail myself of such detraction from the validity of the exhibits as may have been brought out by cross-examination, which I have not distinctly in mind, and I wish also to say that I am not receding from my view heretofore expressed that most anything pro or con can be proved with regard to these types of lumber by exhibits, and I do not
3216 regard the exhibits as persuasive evidence in the final case.

Examiner DE BRULER. Your statement is of record and the exhibits are all introduced in evidence and so received.

(Whereupon respondents exhibits no. 1, no. 2, no. 5, no. 6, no. 8, no. 17, previously marked for identification, were received in evidence and so marked.)

Mr. BURR. If the examiner please, it will be recalled that at Spokane, and earlier in the San Francisco hearing, I had identified four exhibits, nos. 40, 41, 45, and 46, of the Commission's series of exhibits. The witnesses were tendered for cross-examination. I wish to add here to my former statement, that these exhibits are put in the record only for defensive purposes, or rebuttal purposes, in view of the fact that the defense has been putting in the exhibits which they have just offered for the record. I do not regard exhibits as the way in which to prove the issues in this case. I am merely offering them only because opposing counsel have offered theirs.

I now ask that they be received.

Examiner DE BRULER. They will be received.

(Whereupon Commission's exhibits no. 40, no. 41, no. 45, and no. 46, having previously been marked for identification, were received in evidence and so marked.)

Mr. MATTHEW. The only comment I wish to make is that the presiding examiner in the eastern hearings was particularly insist-
3217 ent that samples of these woods should be produced. He made the suggestion before we volunteered any suggestion on our part.

Examiner DE BRULER. The record will doubtless show that.

Mr. BURR. I would like permission to mark the word "identification" from those four samples.

Mr. MATTHEW. No objection.

Examiner DE BRULER. Very well.

(Here followed remarks off the record.)

Examiner DE BRULER. We will take an adjournment until 1:30 o'clock p.m.

(Whereupon, at 12:00 o'clock noon, a recess was taken until 1:30 o'clock p.m.)

3218 AFTER RECESS

1:30 P.M.

Examiner DE BRULER. We will proceed with the hearing.

Mr. WHEAT. If the examiner please, I request that the wood samples marked "Respondents' Exhibits No. 25, 26, 27, 28, and 29" be received for the record.

Examiner DE BRULER. They may be so received.

(Whereupon the samples of wood, having been previously marked "Respondents' Exhibits No. 25, 26, 27, 28, and 29", were received in evidence.)

Mr. BURR. I would like to call Mr. Hemphill as a rebuttal witness.

Examiner DE BRULER. Proceed.

JOHN P. HEMPHILL was thereupon called as a witness and, having been first duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Mr. Hemphill, you are connected with the Madera Sugar Pine Company?

A. I am.

Q. And for how long a period have you been so connected?

A. Since 1910.

Q. And your capacity is that of general manager, is it?

A. Yes, sir.

3219 Q. And how long have you held that position?

A. Since 1927. The reason I hesitated was because I did the work for many years before that, but didn't use the title.

Q. Mr. Hemphill, has your work brought you into familiarity with the Pinus ponderosa and the sugar pine also?

A. Yes.

Q. Is that in the forest or in the form of lumber or both?

A. Both.

Q. Have you had an opportunity to become familiar with Pinus ponderosa and sugar pine in various parts of California?

A. I have.

Q. I wish you would tell us about that a little.

A. About my opportunity or about——

Q. (Interrupting.) About your opportunity to observe and know the characteristics of these lumbers.

A. It has always been the policy of our company to have men in responsible positions visit about so as to get new ideas, and I visited practically all the important operations in this State and in southern Oregon.

Q. In the pine lumber business, you mean?

A. In the pine business, yes. I have also visited redwood operations.

Mr. BURR. Never mind the redwood. Do you desire that stricken?

Examiner DE BRULER. Yes, strike out redwood.

The WITNESS. I did some special work for the Long-
3220 Bell Lumber Company at Weed, in about 1920, and I was in their woods operations for six weeks.

By Mr. BURR:

Q. Mr. Hempbill, I believe there was some testimony in the defense that customers would not accept sugar pine at the same prices in lieu of Pinus ponderosa on certain occasions. Has that been your experience that they refused sugar pine in lieu of Pinus ponderosa at the same price?

A. No. We usually get a price premium depending upon the grade. It varies from $2.00 to $20.00.

Q. Do you know of any purposes for which Pinus ponderosa is better adapted than sugar pine so that they would refuse the sugar pine?

A. I do not, unless they want a tough wood. Some of our local customers use it in preference to sugar pine where they want something that will not bruise or wear. They use it for sled runners. I don't know of any other use where it would be superior. It has a tougher fibre.

Q. The testimony was given that sugar pine was apt to tan, I believe that was the expression, when exposed to the sun light. Is that your experience as contrasted with Pinus ponderosa?

A. They both tan, but Pinus ponderosa turns much more reddish in color, particularly the heartwood. I would say that the sugar pine takes on a light brownish color.

Q. It does darken some?

3221 A. Yes, some, but the change in color is not nearly so perceptible in sugar pine as it is in ponderosa pine.

I took particular notice of that last summer when I was up at Klamath Falls. The Pelican Bay Lumber Company's offices finish in Pinus ponderosa a natural wood and the red heart stands out as plainly as any place I have ever seen it.

Q. Stands out in what color?

A. Red; it is contrasted with creamy yellow on the part of the sap.

Q. Of the same species?

A. Yes.

Q. Did you ever make a special investigation as to the tanning of the two woods due to exposure to the light?

A. Yes; I observed it. In shook, or door cuttings, or finished lumber, it is the heartwood that turns more reddish in the Pinus ponderosa than it does in sugar pine.

Q. Does the sugar pine change color more or less in the heart than in the sap, would you say, referring now only to sugar pine?

A. I don't think there is very much difference; I never noted any particular change in the sap. They are both sort of creamy.

Q. Is there a substance which exudes from the sugar pine lumber after it has been thoroughly cured?

A. I have never seen that.

Q. Is there a substance that exudes before or during the curing process?

3222 A. While it is green there is a gummy substance that exudes from all pine, as far as my experience goes, but not particularly from sugar pine.

Q. Well, the evidence shows that there are some small showings in the sugar-pine lumber, of what has been designated by some witnesses as pitch pockets. Will you describe what those are—if you follow me.

A. Well, what we call a pitch pocket is a parting of the grain, a kind of a blister. Some others might have reference to a slight resinous fleck that seems to characterize pine. I don't know just what you mean by pitch pocket.

Q. Referring to these slight resinous appearances?

A. Little flecks.

Q. Isn't that a characteristic quality of sugar pine, that it shows those flecks as distinguished from other pines, both white and belonging to the yellow-pine group?

A. I have looked at a good many samples of pine and it is my impression that they are found to a greater or less degree in all of them. I think possibly they are a little more marked in the sugar pine in some specimens.

Q. Isn't there a characteristic——

Mr. MATTHEW. (Interrupting.) I don't want to seem technical, but couldn't you avoid leading the witness so much? I think you asked two leading questions.

Mr. BURR. Yes.

3223 The WITNESS. The trouble in most of these questions is that a person is uncertain as to just what is being talked about. One might have one idea of what a fleck is and another person might have another idea; one might be talking about resin and still another about pitch, and they would have the same thing in mind. If I had the wood here I could make it plain what I mean.

By Mr. BURR:

Q. Let me start from another angle: Why is the Pinus lambertiana known as sugar pine?

A. Because the wood dries under certain unfavorable conditions there is a saccharine substance that appears on its surface. It is almost as if it had been lightly covered with white flour. You can scrape your finger along and get enough of that so you can taste it. Moreover, if the butt has a fire scar, the sugary substance, that saccharine material, as it is called, forms in little globules which can be picked off about the size of a pea and they are quite sweet to the taste.

Q. Is that in the lumber or is that in the timber?

A. You never find these little globules of sugar anywhere except in the log, the underside of a fire scar is the only place I have ever seen

them, but sometimes it does appear in the form of a light floury substance on the surface of lumber. For what reason I do not know.

Q. There is testimony in the record to the effect that it is desirable to cover over pitch pockets or flecks, and something
3224 of that nature that is peculiar to sugar pine. Can you describe what treatment that is and for what purpose?

A. We have had some complaints from our distributors—a very few I might say—to the effect that when sugar pine is enameled white there is a tendency for these little flecks, as I call them, and they are scattered over the face of the piece, to cause a slight yellowing of the enamel. And the California White and Sugar Pine Manufacturers' Association was responsible for some sort of an investigation being made, and if my memory serves me right, it was found that occurred to a greater or lesser degree in all the white pines, and even in the ponderosa, but sugar pine was a little more marked than in the other pines; and the remedy suggested was that the lumber be first shellaced before being enameled. The shellac seemed to seal up these little flecks, or resin ducts, and keeping this material which caused this slight discoloration, from coming into contact with the enamel itself, in which case the enamel remained perfectly white. That is my memory of it.

It seems to me a great deal more has been made of that——

Examiner DE BRULER (interrupting). Just answer the questions.

A. (Continuing.) Than our experience seems to warrant.

Mr. MATTHEW. I move to strike that out.

Examiner DE BRULER. It may be stricken out.

3225 Mr. BURR. I will concur in that.

Mr. MATTHEW. The witness shouldn't volunteer statements.

By Mr. BURR:

Q. Which is the more resinous type of wood, the Pinus ponderosa or the sugar pine, as an average proposition?

A. I am not sure just what is meant by resinous, but if you mean which has the harder grain, which is the more pitchy——

Q. Which is the more pitchy?

A. I would unhesitatingly say Pinus ponderosa.

Q. How does that resinous characteristic show up in Pinus ponderosa?

A. As I understand the meaning of the term, it shows up more in the grain of the wood than in any other way.

I spoke a while back about the wood being of a tougher fibre. That is what I understand by your question—which is the pitcher.

Q. Is toughness of fibre in the pines related to resinous or pitchy content?

Mr. MATTHEW. If he knows.

A. I am not a wood technologist. That is beyond me, but I will explain it as best I can.

Examiner DE BRULER. You need not answer that.

By Mr. BURR:

Q. Which wood requires more care in dry kilning, Pinus ponderosa or the sugar pine?

3226 Examiner DE BRULER. If you know.

A. Sugar pine.

By Mr. BURR:

Q. Do you have to do with the kilning process for your company?

A. Yes; I do.

Q. Now, why does sugar pine require more care in kiln drying?

A. Because of its tendency to burn.

Q. Why does it have a greater tendency to burn, if you know?

A. Because of the softer fibre, the softer texture, it seems to brown.

Q. Is there any effect upon sugar pine in the cell tissue during the process of drying?

Mr. MATTHEW. You are not calling for a technological answer?

Mr. BURR. No, sir; I am not.

The WITNESS. Read the question.

(Whereupon the question was read by the reporter.)

Mr. MATTHEW. It seems that is a technological question.

Mr. BURR. Let him explain nontechnically.

Q. What takes place in the wood during the process of drying?

Mr. MATTHEW. I think the witness isn't qualified to answer, and I object on the ground he is not qualified.

Mr. BURR. I think he knows as a practical man.

Mr. MATTHEW. You asked about the cell tissue.

Mr. Burr. No, I didn't. You are thinking of the other question.

3227 The WITNESS. Do you want me to tell you about our experience in drying lumber?

By Mr. BURR:

Q. Yes.

A. We have no difficulty at all in kiln drying Pinus ponderosa. It is the most satisfactory way of drying that lumber. We have never made any success at all of kiln drying sugar pine, because it burns and discolors. If we put Pinus ponderosa in open piles to dry——

Mr. MATTHEW (interrupting). I object. That is not responsive. He was not asked about putting it in open piles.

Mr. BURR. I could ask him.

The WITNESS. It shows a marked tendency to split on the ends and check, and at certain seasons of the year to develop a blue stain.

We have no trouble at all in air drying our sugar pine. In fact, that is the only way we are able to dry it. It shows a much less marked tendency to split and check and does not develop stain as Pinus ponderosa does.

That is all I can tell you about drying lumber.

Mr. MATTHEW. I think counsel will admit that the last part of the answer is not responsive.

Mr. BURR. I asked him to tell in his own way what he knew, and I think it is responsive.

Q. How long does it take to dry the Pinus ponderosa?

3228 A. We allow about one day for each quarter of an inch thickness in kiln drying it.

Q. And how long do you allow for the drying by air process of the sugar pine?

A. About one week for each quarter of an inch in thickness; approximately a month for four quarters, during the best drying season.

Q. Is there any effect in the nature of warp that takes place during the air drying of Pinus ponderosa when that is attempted?

Mr. MATTHEW. I suggest that is leading again.

Mr. BURR. I don't think so; I don't know what he is going to say. I am not suggesting any answer.

A. If your stickers catch the end of the board the weight of the pile tends to hold the piece straight. But if you are piling mixed lengths that portion which is not caught by the back sticker shows a marked tendency to twist within the pile and sometimes where both ends of the plank are caught a tendency to twist causes check in the lumber.

Q. How large a percentage of sugar pine is of the shop grades?

A. Do you mean by shop grades the grades used for factory purposes?

Q. Which grades are used for factory purposes?

A. 3 shop to 3 clear.

Q. Including both?

A. Yes.

Q. That is four grades?

3229 A. Four grades.

Q. How large a percentage of the sugar pine, taking it by bulk, is in those four grades?

A. In our section of the country it would be fifty percent or better.

Q. How much belongs in the shop no. 3 and better?

A. Up to what?

Q. All the way up to the best from——

A. (Interrupting.) Sixty-five percent.

Q. You say sixty-five percent, would you?

A. To make it one hundred percent, thirty percent, or thirty-five percent would be box and common.

Q. Testimony has been given in this case on the defense that there is not enough white pine produced suitable for factory use to supply the demand for shop use. Have you any information on that topic?

A. I don't know about that.

Q. Do you sell your product of the factory grades largely to mills, millwork concerns?

A. Yes. I was going to add that we sell it all; we don't cut up any of it at all.

Q. Where are those mills to which you sell your lumber of that type, that grade; where are your customers, mostly for the shop purposes?

A. We sell considerable in Los Angeles and vicinity; the bulk moves east.

3230 Q. How far east?

A. Clear to the Atlantic seaboard. Perhaps I should explain that what we sell east moves largely through wholesalers, although we do make some direct sales to some of the factories.

Q. What percentage of your shop grades go east of Denver, would you say, including no. 3 clear, for the purpose of your answer?

A. I really don't know.

Q. What becomes of the amount of sap that you have in your sugar pine?

A. You are speaking now in sawing the log?

Q. Yes.

A. We try to turn our logs in such a manner as to get as much clear as possible. We don't turn a log until there is two grades in the face of the slab. By the time we have squared it up the sap is pretty much cut away from the log and is principally in the grades of select and better.

Q. What is the bulk of your clear grades—B select and better—what is the bulk of your B select and better, sap or heart?

A. I never collected any figures; I don't know.

Q. I am referring now to sugar pine.

A. Yes; but the sap ring on the more mature timber is relatively thin and I feel that the bulk of it is heart.

Q. What is shake in sugar pine?

A. Sugar pine has very long limbs. I read that in some instances in a flat-topped tree the spread is almost 70 feet. The wind catches those limbs and twists a tree first one way and then
3231 the other, and in some cases causes cracks or checks to develop at the heart; they radiate from the heart outward. They are almost altogether in the common grades because we box that heart and I do not recall ever seeing any shakes in our shop or better lumber.

Q. When you say you box the heart, you are referring to what part of the heart?

A. The center of the log.

Q. That part of the so-called heartwood that is in the center of the tree?

A. Yes; with the original heart right in the center of what they call the cant.

Q. Is the shake a fissure or a cleavage?

A. It is an opening that will extend straight through the center of the heart for a certain distance.

Q. Is it an opening that runs vertical in the tree as it stands?

A. You will see that check or shake running through the center at one angle, at one end of the log, and at somewhat a different angle on the other end of the log, showing that there is a twist in the grain and that is parted in the heart of the tree.

Q. But this cleavage or parting is a parting that runs straight up the tree?

A. Straight up the tree; yes. It is found particularly in butt logs and seldom above.

Q. Is it possible for you to detect shake in the lumber?

A. Yes; it is.

3232 Q. Always, would you say, or is that not always true?

A. After it is dry you can detect it without difficulty.

Q. The shake does not get into the manufactured product, then?

A. Yes; it is found in the commond; it is from the shaky part of the heart that the grades of no. 3 and no. 4 common are made.

Q. The shake is considered in connection with the grading, is it?

A. Yes; it doesn't characterize any of the upper grades in our section.

Q. Is the shake that occurs occasionally in other pine trees, do you know?

A. Yes.

Q. What other pine tree?

A. Pinus ponderosa.

Q. Is Pinus ponderosa less or more liable to shake than sugar pine?

A. Less; it hasn't as heavy a top.

Q. Testimony has been given in the defense that there is more stump rot and ring rot in sugar pine than in Pinus ponderosa. Will you state what your experience is as to what the situation is?

A. I have seen more rot in the sugar pine than I have in the Pinus ponderosa.

Q. Please explain fully.

A. It is my observation that a ponderosa tree is more easily killed by fire than sugar pine, and it is in these fire scars that the rot

3233 develops in the sugar pine. The ponderosa tree is very often killed, usually killed where there is a hot fire, and has no chance to recover. I have never seen a rot in a sugar pine that was not damaged, did not show previous signs of having been damaged.

Q. The presence of rot——

A. (Interrupting.) It is accidental.

Q. The presence of rot is taken care of in the grading of the wood, is it not?

A. It is cut out entirely. It is either sawed out or edged out. You don't find it in the lumber at all.

Examiner De Bruler. You need not make any volunteer statements.

By Mr. BURR:

Q. Have you observed the condition as to rot in any particular section so as to obtain any special information on that subject?

A. I never thought anything about it. I just recall having observed that it is evidence of burn in most logs where you find rot.

Q. Which is heavier as a rule, sugar pine or so-called California white pine?

A. California white pine.

Q. Which is the more likely to sink in the form of logs when floated into a pond?

A. That is hard to answer. When a sugar-pine log is heavy it is very heavy. In our section the ponderosa logs are for the most part just a little bit lighter than the specific gravity of water,
3234 whereas in the mature sugar pines in particular the logs from the second cut bounce around on the water like corks.

Q. How about——

A. (Interrupting.) I would say that on the average the ponderosa is heavier.

Q. How about the butt logs?

A. The sugar pine butt logs are very heavy.

Q. And they frequently are heavier than the weight of water, and do they sink?

A. Yes; the majority of the butts sink.

Q. How about the loss of weight as the result of the drying process; is that greater in sugar pine or in ponderosa, if you know?

A. The shipping weight of sugar pine is lighter than that of ponderosa.

Mr. MATTHEW. I am not so sure that that answers the question.

Examiner DE BRULER. That doesn't seem to be responsive. Read the question.

(Whereupon the question was read by the reporter.)

The WITNESS. The loss of what?

By Mr. BURR:

Q. Weight.

Mr. MATTHEW. In the drying process.

I move that the prior answer be stricken on the ground that it is not responsive.

Examiner DE BRULER. The answer may be stricken; this
3235 will be his answer.

A. That is kind of hard to say. I never weighed any green Pinus ponderosa or any green sugar pine, but I do know——

Mr. MATTHEW (interrupting). I object to the witness speculating about it.

The WITNESS. I am telling you what I know, if that is what you want.

By Mr. BURR:

Q. Can you answer the question from what you know?

A. I would say, from what I know, that sugar pine dries out more than Pinus ponderosa.

Q. I am referring to loss of weight; is that what you mean, dries out more; do you mean loses more poundage?

Mr. MATTHEW. I think the witness has shown he doesn't know, because he hasn't made any tests. He shouldn't be pressed to answer the question.

Mr. BURR. I don't care to press it unless he knows.

The WITNESS. The specific gravity of Pinus ponderosa is greater than that of sugar pine.

By Mr. BURR:

Q. You are now talking about the log?

A. The green lumber. The specific gravity of sugar pine on the average is less than that of Pinus ponderosa.

Q. You are still talking about the log?

A. Lumber. The shipping weight of sugar pine is less than the shipping weight of Pinus ponderosa; but I really don't know how much moisture is given off because I don't know the relative weights.

3236 Mr. MATTHEW. I move to strike out the witness' statement.

Examiner DE BRULER. I think it may stand. He explained it the best he could.

Mr. MATTHEW. It is harmless anyway; I won't press my motion.

The WITNESS. I would like to say that we flume our lumber, and I know which is the heavier green, and when we weigh our lumber I know which is the lighter dry.

Examiner DE BRULER. You have explained that.

By Mr. BURR:

Q. It has been testified that sugar pine stains more than California white pine. What is your experience on that?

A. That is not true in our section.

Q. Which lives longer, the sugar pine or the ponderosa?

Mr. MATTHEW. You are talking about the tree in the forest?

Mr. BURR. Yes.

A. The sugar pine.

Mr. BURR. That is all.

Cross-examination by Mr. MATTHEW:

Q. Mr. Hemphill, do you ever recall seeing any sash and doors which had been manufactured out of sugar pine with the tiny beads or bubbles scattered at irregular intervals over the surface?

A. No, sir, I never; we don't have much connection with the
3237 manufactured article.

Q. You never saw any sugar pine sash in place unpainted?

A. Yes; I have.

Q. And sugar pine sash in place which had been painted as well?

A. I wouldn't know after it had been painted whether it was sugar pine or not.

Q. But you might know sugar pine had been used in making the particular sash which had been painted and placed in a building?

A. I can't say, to my positive knowledge, that I ever observed any sugar pine sash that had been painted. I had no occasion to.

Q. Whether you had occasion to is not what we want—we want the facts. Then we are to understand that you never saw, to your knowledge, any sugar pine sash in place painted with little tiny bubbles or beads, of a yellowish character, scattered irregularly over the surface?

A. I have never seen that in sash or any other lumber. My attention has never been directed to it.

Q. And neither have you seen that particular manifestation in sash or door in the unpainted form?

A. No.

Q. Do you know that Professor Fritz, of the University of California, was employed by the California White and Sugar Pine Manufacturers Association to conduct experiments for the purpose of correcting the tendency of sugar pine lumber to develop these little bubbles or beads of resin, or saccharine matter, whatever they may be, which we have been discussing?

3238 A. I read the bulletins, and it was my impression at the time I testified about this in direct examination that he was employed by the association, but I am not certain; I read the bulletins.

Q. I thought you testified upon your direct examination that it was upon your suggestion, in part at least, that he was requested to make such experiments.

A. No; I didn't.

Q. I doubtless misunderstood you. I thought you referred just casually to some experiments or tests made upon your suggestion.

A. I did, but you asked me the question as to whether or not I was certain that the association employed him. I am not certain. It is my impression, thinking back over the matter, that the association was in part responsible for the publication of these bulletins which I read.

Q. All right. I don't care to ask you for the contents of the bulletins, but don't you know it to be a fact that Professor Fritz at least made some experiments or tests for the purpose of finding a corrective for the tendency of sugar pine to develop these tiny beads or bubbles upon the surface?

A. My recollection of the bulletins is that they dealt not only with sugar pine but with other samples as well.

Q. Then you don't know that the prime purpose at least was to find a corrective for the difficulty as to sugar pine?

A. As to that I am not certain.

Q. You don't know one way or the other?

A. No.

3239 Q. I think you characterized this little exudation upon sugar-pine lumber as being rather floury in character; that is, you could rub it off with your hand?

A. Yes.

Q. Before it reaches that floury state doesn't it go into a state of beads or bubbles? Isn't that the first manifestation of the condition?

A. No, sir. To me it seems as though the moisture in coming to the surface deposits that upon the surface.

Q. Then you are referring to something which is entirely distinct from these beads or bubbles concerning which there has been some testimony in this case?

A. I don't believe there is any sugar in these beads or bubbles.

Q. Well, I don't mean to imply, Mr. Hemphill—let's get this clear—that there may be sugar in the beads or bubbles. Just to make it clear some witnesses have said that they might contain saccharine matter or might contain resin or pitch, or something else. But I am addressing myself to the fact that there are these beads or bubbles. Have you seen those beads or bubbles on the sugar-pine lumber?

A. No, sir.

Q. That is entirely new to you, the suggestion that there are such beads or bubbles on sugar-pine lumber? That is entirely novel to you?

A. Insofar as they relate to sugar.

3240 Q. Mr. Hemphill, I tried to make it clear that I didn't care whether it consisted of sugar, or any other substance. I am asking whether there are beads or bubbles which exude from the lumber and are scattered at irregular intervals over the surface?

A. I have seen what you would call incrustations in our lumber, pine lumber, but I am not willing to state that it was one pine or the other. I think the pine lumber bleeds and becomes incrusted with this substance which is within the wood. In our operation our lumber is floated in water.

Q. You have had quite a bit of experience in the lumber business?

A. Yes, sir.

Q. In your connection with the Madera Sugar Pine Company?

A. Yes. I would say that pine lumber of either species is apt to become incrusted with the substance I have in mind. I don't know——

Q. (interrupting). By incrustation you mean something——

A. (interrupting). Juice that dries on the surface.

Q. All right. May we leave your testimony in this way: That to your knowledge you have never seen any bubbles of some pitchy or resinous, or saccharine, or some other matter, exuding from the surface of sugar-pine lumber and scattered at irregular intervals over that surface?

A. I do not recall having seen that.

Q. And you do not know, as a fact, that sugar-pine lumber is more subject to that particular development than Pinus ponderosa lumber?

3241 A. Not of my own knowledge.

Q. All right. Do you know that some of the manufacturers and distributors of sugar-pine lumber get out instructions to their customers to the effect that the sugar-pine lumber should be shellaced, or otherwise protected, before paint or enamel is placed upon it in order to avoid yellowish or pitchy bubbles coming upon the surface?

A. Not about the pitchy bubbles; I do know that it is recommended that before enameling white sugar pine it be shellaced so that the little flecks or resin ducts may not color the enamel, but I also distinctly recall Professor Fritz having stated in his bulletins that it is relative in all pines.

Mr. MATTHEW. May I ask that the latter part of the witness' answer, about Professor Fritz's recommendations in his bulletin be stricken out as not responsive.

Examiner DE BRULER. Just answer the question. The rest may be stricken. Confine your answers to the question.

By Mr. MATTHEW:

Q. Does your company issue any such instructions or recommendations?

A. On a few occasions when our distributors have written us relative to this matter we have sent them copies of Fritz's bulletin.

Q. And these——

A. (Interrupting.) Without recommendations or admissions.

Q. These inquiries, I think you said upon your direct testi-
3242 mony, had come in with respect to sugar pine?

A. Yes.

Q. Now, Mr. Hemphill, you said that sugar pine has a greater tendency than the California white pine to burn when subjected to the kiln-drying process?

A. Yes.

Q. And by burning, I think you explained you mean that it discolors more in the kiln-drying process, or do I so understand—I was in doubt—what did you mean by burning?

A. It turns sort of a brownish color just like scorched wood.

Q. In the kiln-drying process?

A. Yes.

Q. Then it is more susceptible than the California white pine to turning that brownish color in the kiln-drying process?

A. Yes, sir; under certain temperatures, under high temperatures.

Q. I don't recall that you made that qualification?

A. I didn't say anything about temperatures, but under the same conditions, under the same kiln-drying schedule, that will occur. It will occur in sugar pine, whereas it don't occur in ponderosa.

Q. I so understood you.

A. Even the ponderosa will brown stain if the temperature is high, too high, or the humidity too low. You can burn any pine that is—but sugar pine burns on the lower temperature.

Examiner DE BRULER. Please confine your answers to the questions. I suppose you could burn any pine.

3243 By Mr. MATTHEW:

Q. Under equal and similar conditions the sugar pine burns more in the kiln drying process, does it, than the California white pine?

A. Yes, sir.

Q. Let's come to the treatment of the lumber in the piles. You have explained that if the California white pine lumber is not properly caught by the stickers, as I think you termed them, it is likely to twist?

A. Yes, sir; that is my experience.

Q. If the stickers are properly placed, and the lumber is carefully piled, I assume that twist can be avoided?

A. Yes; although——

Q. (Interrupting.) Let me ask——

Mr. BURR (interrupting). Let him finish his answer.

A. (Continuing.) If the grain is poor and there is a very marked tendency in the piece to twist, it will check instead of warping; the weight of the pile holds it straight.

Mr. MATTHEW. I didn't ask the witness anything about checking.

Mr. BURR. I think he has a right——

Examiner DE BRULER (interrupting). Just answer the questions. Confine your answers to the questions.

Mr. BURR. Let us hear the question. I think he is answering the question.

(Whereupon the question was read by the reporter.)

3244 Mr. MATTHEW. I am talking about twists.

Examiner DE BRULER. Answer the question.

Mr. BURR. Warp is part of the twist.

Mr. MATTHEW. Let's have the answer.

(Whereupon the answer referred to was read by the reporter.)

Examiner DE BRULER. That answer may stand.

(Here followed remarks off the record.)

Examiner DE BRULER. Proceed with the examination. Just answer the questions asked.

By Mr. MATTHEW:

Q. Mr. Hemphill, is the sugar pine which is subjected to the air-drying process ordinarily of greater thickness than your California white pine that is subjected to the air-drying process?

A. I would say yes, for the reason that there is a great deal more Pinus ponderosa cut into six quarter than any other thickness; whereas sugar pine is used eight quarter and thicker in considerable quantities for specialty uses of one kind and another, patterns in particular.

Q. The thicker the lumber the less the tendency to warp and twist in a pile, isn't that true?

A. No.

Q. You see no difference in this respect?

A. No; it is the texture of the wood.

Q. Isn't it a fact that the Madera sugar pine is recognized as being substantially above the average sugar pine produced in
3245 the West in quality?

A. We try to create that impression for sales reasons.

Q. Apart from that, isn't it true that your operations are in a particularly choice part of the sugar-pine range?

A. I personally consider the Pickering and the Yosemite Lumber Company and the Sugar Pine Lumber Company have just as good timber as we have, although I have heard it said that in certain counties in that immediate vicinity they do produce exceptionally good sugar pine.

Q. There are some sections where the sugar pine is inferior to that produced in other sections; that is true?

A. We feel that sugar pine north of Sacramento is not as good as that further south.

Q. Do you know whether the sugar pine north of Sacramento runs sixty-five percent no. 3 shop and better?

A. I have never seen any figures on that.

Q. The figures that you have given are confined to your operations?

A. That is all I know anything about.

Q. Is any of the sap lumber produced in your milling operations thrown away, apart from that, of course, which simply results from the facing of the log, and the cutting of the edges?

A. No, sir; we try to save all the wood we can. A good deal of that which is closest to the bark is ripped into moulding strips and used for moulding purposes.

Q. That is mostly sapwood?

A. Yes.

3246 Q. And does some of that sap lumber go into the higher grades of clears?

A. Yes, sir; it does.

Q. From what part of the sugar-pine tree do you obtain the bulk of the common?

A. The heart itself the center of the tree.

Q. Then, the bulk of the sap lumber must find its way into the selects?

A. Select and better.

Q. Select and better?

A. Yes.

Q. Did I correctly understand you to say that the shake, which appears in the sugar pine, is more commonly found in the sap or in the heart; which?

A. In the very center of the tree.

Q. Then, that would be in the commons?

A. In the commons; yes.

Q. You have never known of any shake being in the higher grades?

A. It is a very rare occurrence.

Q. You have known it to be in the higher grades in some instances?

A. Yes; where a tree had gone back a great deal. That is——

Q. (Interrupting.) I am not asking the reason why. But you have known it to appear in the higher grades?

A. Yes; in rare instances, I have.

3247 Q. Have you ever had a complaint about shake in lumber which had been supplied from your mills?

A. No, sir.

Q. Never knew of any complaints about shake?

A. No, sir.

Q. I think you said there is not very much shake in the Madera section of the country?

A. In the center of the tree, in the center of a very old tree, with a heavy top you will find it.

Q. Yes, I think you misunderstood the question.

A. In our section, or any other section, I believe.

Q. I got the impression from your testimony that shake is rarer in the Madera section than in some other parts of the sugar pine range. Did I misunderstand you?

A. Of my own knowledge I do not know. I can say, however, it is the general belief that the sugar pine of southern Oregon has more shake, is more shaky. I don't know whether I ought to try to answer that. Shake in sugar pine outside of common grades is relatively rare, as far as my knowledge goes.

Examiner DE BRULER. I think he has answered that sufficiently.

Mr. MATTHEW. I think I have no further questions.

Redirect examination by Mr. BURR:

Q. In the piling of lumber are the widths all kept in the same pile, the same widths always in the same pile, or varying widths

3248 in that same pile?

A. In common lumber we separate the material as to widths and lengths; in the shop and better we pile our lumber up to 14 inches in one pile, and over 14 inches in another pile. Our reason is we want to maintain the air chimneys up and down through the pile and hit-and-miss piling don't make that possible. At operations which are neighbors to us it is the practice to put all widths in the same pile in the shop and better lumber. There is a segregation, however, as to grades.

Q. Where you have varying widths in the same pile, what is the effect as regards the warping of the Pinus ponderosa and the sugar pine?

A. The widths have nothing to do with the warping.

Q. How about the piling in various widths, does that have anything to do with it?

A. The widths, insofar as the piling is concerned, has nothing to do with warping, but it does smother the lumber and has a tendency to create strain.

Examiner DE BRULER. You need not go into that any further.

By Mr. BURR:

Q. You say there is shake in the higher grades of lumber, as I understand you, on occasions, is that true?

A. I have seen it on rare occasions.

Q. Well, if there is shake in that lumber, does it go into the higher grades?

3249 A. We edge it out. I had in my mind, as you slab through the log, you do find shake beyond the center of the log. It sometimes extends beyond the center within that portion which would be included in common grades, but in going through the edger it is our manufacturing process to rip that out. You don't find it in our shop or better grades, in their finished form. I was thinking of saw milling rather than the finished lumber.

Re-cross examination by Mr. MATTHEW:

Q. Is shake a defect in your grading rules?

A. No; not in the shop. Even though there was a shake in the planing, if you could get the required number of door cuttings in the piece it would be included in the grade.

Q. That is true of all the grades, is it?

A. No. The clears and better must be free of shake and the sound common must be free of shake. It is only the cut up material.

Mr. BURR. You say it must be free as a matter of grading rules?

The WITNESS. Yes.

Mr. BURR. That is all.

Mr. MATTHEW. That is all.

(Witness excused.)

3250 (Here followed remarks off the record.)

Examiner DE BRULER. It being agreeable to all parties concerned, the hearing in the above-entitled matter is now completed at San Francisco and we will reconvene for taking testimony at Flagstaff, Arizona, at 10:00 o'clock a.m., February 7, 1930.

All parties to this record will please take notice of this adjournment.

(Whereupon, at 3:05 o'clock p.m. an adjournment was taken to February 7, 1930, at 10:00 o'clock a.m., Flagstaff, Arizona.)

3251 Docket Nos. 1620–1669, inc.

FLAGSTAFF, ARIZONA, *Feb. 7, 1930.*

Met pursuant to adjournment, 10:00 o'clock a.m.

Before Ellis De Bruler, examiner.

Appearances:

Mr. Burr for the Commission.

Chandler M. Wood, Albuquerque, N.M., appearing for respondents Cady Lumber Corporation, George E. Breece Lumber Company, and the White Pine Lumber Company.

T. J. Byrne, Prescott, Arizona, appearing for respondents Saginaw & Manistee Lumber Company, of Williams, Arizona; and the Arizona Lumber & Timber Company, of Flagstaff, Arizona.

Mr. BURR. Will you be sworn, Mr. Nickerson?

R. A. NICKERSON was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Your name, please?

A. R. A. Nickerson.

Q. Mr. Nickerson, you are the manager of the Saginaw & Manistee Lumber Company, are you?

A. Yes, sir.

3252 Q. How long have you held that position?

A. From July 1st, 1915, until and including December 31, 1920; then from September 1924 until the present time.

Q. And prior to 1915 were you in the lumber business?

A. Yes, sir.

Q. Where was that?

A. Manistee, Michigan.

Q. For the same company?

A. No, sir; for the R. G. Peters Salt and Lumber Company.

Q. Now, you appear here this morning in response to a subpena calling for the production of certain papers and one thing and another, do you not?

A. Yes, sir.

Q. Does that call for copies of advertising material used by your company, including circulars, booklets, and advertisements issued in newspapers, magazines, and trade journals, so far as available, from June 1, 1924, to the present time?

A. Yes, sir.

Q. Does that also call for copies of letterheads, price lists, invoices used during the same period?

A. Yes, sir.

Q. Now; have you brought papers in response to that demand upon the Government's part?

A. To the very best of our ability to do so. I think you

3253 want several copies of each?

Q. Will you be kind enough to produce them?

A. There is a copy of statement which has been in use continuously—all the time I have been manager of the Saginaw and Manistee Lumber Company, and according to the records in the intervening period, which is fifteen years.

Q. That is in the nature of a form of bill rendered?

A. Yes, sir; statements of accounts.

Q. Now, on that heading there your product is designated as Arizona soft pine, is it not?

A. Yes, sir.

Q. And you have also produced here a form for invoice purposes, have you?

A. Yes, sir.

Q. And you' product is designated in the same manner on that form, is it?

A. Yes, sir.

Q. Now, how long has that been the case, Mr. Nickerson, with regard to the bill and the invoice forms?

A. The invoice form is approximately nine years.

Q. Nine years?

A. Yes, sir; that particular form.

Q. How about the billheads?

A. Here is some more you want [indicating].

Q. And you have produced also an acknowledgement of
3254 order form of the Saginaw and Manistee Lumber Company, have you?

A. Yes, sir.

Q. And that designates the product in the same fashion decis'ely, does it?

A. Yes, sir.

Q. And your letterhead, the same is true of that, is it?

A. Yes, sir.

Q. Now, with regard to advertising, did you make as thorough a search as you possibly could?

A. Yes, sir.

Q. Was that done by you or under your instruction?

A. Under my instruction.

Q. How many years back did you carry?

A. We went back for about nine years.

Q. And brought it right down to the present time?

A. Yes, sir.

Q. I see an advertisement in the 1928 yearbook of the Santa Fe system?

A. Yes, sir.

Q. Of your company?

A. Yes, sir.

Q. And how is the product designated there?

A. Arizona soft pine.

Q. The material you have produced here is the same that you submitted for my inspection at the hotel, is it?

3255 A. Yes, sir.

Q. There are no additions, are there?

A. No, sir.

Q. This is the complete file, is it?

A. No, sir.

Mr. BURR. Now, I will stipulate that I have examined your advertising and I find that the product has been designated, in so far as these matters have been brought to my attention, as Arizona soft pine under the heading of this company, with the exception of a complimentary write-up, apparently, in the Williams News, as to which I will ask.

Q. The Williams News of December 2d, 1927, gives a write-up which was paid for by you, does it?

A. No, sir; that write-up was not paid for, but there was an ad carried in the same paper at the same time, which was paid for.

Q. That carried the write-up?

A. Yes, sir.

Q. Now, in that how do you designate you product, in that write-up?

A. Western yellow pine.

Q. And the ad, how does that designate your product, if at all?

A. Arizona soft pine.

3256 Mr. BURR. Will you please read me that stipulation I just dictated, please, Mr. Reporter?

(Thereupon the stipulation of Mr. Burr, as above shown, was read aloud by the reporter.)

Mr. BURR. You may cross-examine.

Cross-examination by Mr. BYRNE:

Q. With reference to this designation of your product as western yellow pine in the news article last spoken of, the composition of that article was not at your direction or that of the company?

A. Not particularly.

Q. It was written by some disinterested outside party or someone in your office?

A. It was written up by a man in our office.

Q. What I am getting at, Mr. Nickerson, western yellow pine is not the designation under which you commonly sell the product?

A. No.

Q. Your designation is Arizona soft pine?

A. Yes, sir.

Mr. BYRNE. That is all.

Redirect examination by Mr. BURR:

3257 Q. Is that the way in which you have sold that orally as well as by written advertising?

A. Yes, sir.

Q. During the entire last five years?

A. Yes, sir.

Q. Why do you designate it as Arizona soft pine instead of Arizona white pine?

A. Why?

Q. Yes, sir.

A. Because the resemblance of the pine itself is far removed from the yellow pine of the Southern States which has been called yellow

pine, to my personal knowledge, for thirty-five years. It in no way resembles that yellow pine except upon inquiry it has never been referred to as I know of as yellow pine. The Forest Service frequently, I believe, designate it as western yellow pine, but it has a texture and resembles more nearly a white pine than it does the yellow pine of the South which has used that trade-name for so many years, but that is what it is known by in the trade.

Q. Your answer states why you do not call it yellow pine, does it not?

A. Yes, sir.

Q. Now, what I tried to ask you a moment ago is, Why you do not call it Arizona white pine?

A. There is no particular reason for doing so. It is not
3258 apparently a white pine, although it does resemble it very closely in a great many respects.

Q. Do you regard it as quite as soft as the genuine white pines?

Mr. BYRNE. Wait a moment. He has not stated he is acquainted with the genuine white pines.

Mr. BURR. Well, we will ask him that very thing:

Q. Are you acquainted with the northern white pine or the Lake States white pine?

A. I lived, thirty-five years ago, in Michigan, and became quite thoroughly familiar with white pine. Afterwards, in the sawmill we cut a small quantity of white pine with adjoining mills that were cutting nothing but white pine, with which I was quite familiar.

By Mr. BYRNE:

Q. You are referring to the Michigan pine?

A. I am referring to the Michigan pine in manufacturing.

By Mr. BURR:

Q. Now, do you regard Arizona white pine has quite as soft a texture as Michigan white pine?

A. Practically so.

Q. Practically so?

A. The sapwoods are very different, to distinguish one from the other.

Q. By sight, you mean?

3259 A. Yes; in the timber.

Q. But the texture of the northern white pine is a little softer on the average than the ponderosa, is it not?

A. It may be discovered to be a little softer through an actual technical test, but for merchandising purposes and for use it is very difficult to tell one from the other.

Q. Yes?

A. Particularly in the sapwoods.

Q. In the sapwoods?

A. Yes, sir.

Q. Hardwood ponderosa is a little harder than the northern white pine, is it?

A. It is, generally speaking, a little different. I don't know as I would say it is harder.

Q. How would you express it?

A. It is different in appearance, usually.

Q. I wish you would describe that a little wherein it differs in appearance.

A. Well, placing it on the basis of its being soft or not soft, I would hardly know how to define the difference. If you will permit me to use an illustration, the heartwood of this Arizona timber is sufficiently soft that it can be cut in very thin layers for shook purposes. It holds a nail, I would say, equally well with the genuine white pine. Therefore, my conclusion would be for all prac-
3260 tical uses it would be of equal softness as you call it.

What do you mean by "soft"?

Q. Well, I mean softness of texture.

A. You mean soft as to pressure? That it would stand less or greater weight or what would your definition of softness be?

Q. The softness is the ease of working and the freedom from harder substances that sometimes are to be found in pines. I imagine the softness would be practically the antithesis of the pitchy contents. The more pitch there is in the pine, I take it, the less the softness. I don't know. I am not an expert upon that, but that would be my way in which I would guide your request as to what I mean by "softness."

A. I would not feel badly about that, because I don't know of anyone that is an expert so far as the so-called "softness of wood" is concerned.

If you mean "feel" of the wood—say, the pine has a satiny feel—close your eyes and feel of it as to the surface—I doubt if you could tell any difference in the softness. For all practical purposes the heartwood of the two species of equal grade, I doubt if there is very much difference.

Q. Now, you don't call it white pine?

A. No.

3261 Q. You have not called it white pine?

A. No, sir.

Q. Now, why haven't you?

A. There is no occasion to do so. The mill in Flagstaff has been here a great many years. I think that the Saginaw mill in Williams was the second mill built in this particular territory. About thirty-six years ago the Saginaw mill was built, and the market conditions were different. The white pine of Michigan was disappearing, as it was in Wisconsin and to a lesser degree in Minnesota, and it took the place, to some extent, of those woods—it was sufficiently soft to do so. I rather assume the designation of "soft pine" was intended to describe it as nearly as possible for merchandising purposes——

Examiner DE BRULER. Let me ask you this:

Q. Which wood splits more easily?—in driving nails through it—the genuine pine or the pine that you sell?

A. Genuine white pine?
Q. The genuine pine or the pine that you sell?
Mr. Wood. You mean the Michigan pine?
Examiner De Bruler. Yes. Which splits easier?
The Witness. Grade for grade and grain for grain I doubt if anyone could tell the difference.
Q. That is a good test as to the softness of wood, whether it would split in driving a nail in it?
3262 A. In driving a nail in it?
Q. Yes, sir.
A. It is for practical purposes; yes, sir.

By Mr. Burr:

Q. Well, now, do you regard your wood as entitled to the name "white"?
A. If you were describing it as to color——
Q. (Interrupting.) No; I am not describing it in any way——
A. (Interposing.) We have never been interested.
Q. You have never been interested in whether it was called white or not?
A. No, sir.
Mr. Burr. That is all.

Recross-examination by Mr. Wood:

Q. Mr. Nickerson, how many kinds of pine are produced in Arizona?
A. Only one that I know of.
Q. And that is the Pinus ponderosa?
A. So I am informed; yes, sir.
Q. How many mills are there in Arizona producing and manufacturing this pine—of any size or substance?
A. Well, there are—up until recently, I think there were only four operating in the northern part of Arizona. There
3263 may be plenty of other small mills in the southern part of the State.
Q. No mills of size?
A. No.
Q. Those mills are the Saginaw and Manistee——
A. (Interposing.) Yes, sir.
Q. And the A.L. & T.?
A. Yes, sir.
Q. What are the others?
A. The Standard Lumber Company and the Cady Lumber Corporation, I believe, is the correct designation, at McNary.
Q. And do these mills outside of your mill and that of the A.L. & T. mill market their product as Arizona white pine?
A. Why, I am not particularly familiar with the designation of the product. I have seen their literature.

Q. And you have seen it designated as——

A. (Interposing.) I have seen it designated as "white pine" with "Pinus ponderosa" in parenthesis.

Q. Arizona white pine?

A. I am not sure, but I believe it was Arizona white pine.

Q. But you have seen the designations "Pinus ponderosa" below it in brackets?

A. Yes, sir.

Q. Do you sell much of your lumber in the State of Arizona?

A. Markets, of course change. I would say approximately
3264 fifty percent at this time.

Q. And you sell it to wholesalers and retailers?

A. Retailers only.

Q. Retailers in Arizona?

A. In Arizona.

Q. And do you sell to the same customers that the Cady Lumber Corporation and the Standard Lumber mill sell?

A. Probably. I am not familiar with their specific sales, but they have—the Cady Corporation have a salesman in Phoenix and, I believe, he sells for the Cady Corporation and the Standard, both—he covers the same territory. It is reasonable to presume that he sells the same customers.

Q. You have known of cases where customers have bought from both you and the Cady Lumber Corporation?

A. Certainly.

Q. Have you noticed any confusion among customers by reason of the fact—as to the species of timber they were getting—by reason of the fact that the Cady Lumber Corporation designated their pine as "white pine" and you designated yours as "soft pine"?

A. No.

Q. Have you ever had any complaints from them that different names had been used to designate the product?

A. No.

3265 Q. Have you any objection to the Cady Lumber Corporation designating their product as "Arizona white pine"?

A. None whatever.

Q. Do you know what the man on the street, the public generally, calls this Arizona ponderosa pine?

A. I think not.

Q. You don't know what the public uses to express it?

A. No. In a great many instances the user of lumber—yes, I have.

Q. What do they call it?

A. Sometimes "native pine"; sometimes "Arizona pine." I don't recall of ever hearing a user of wood—of this pine manufactured in Arizona, putting in the word "soft" or "white."

Q. Or "yellow"?

A. Or "yellow" or any other color or any other designation other than native pine or Arizona pine.

Q. Or sometimes just "pine"?

A. Yes; just pine.

Q. Have you had an opportunity to acquaint yourself with the California white pine, the Pinus ponderosa that is designated as California white pine?

A. To some extent. More in southeastern Oregon east of the Cascades than in California. However, in California to some extent.

3266 Q. Do you know the difference in texture and general characteristics between the California white pine and your pine?

A. Generally, yes.

Q. What would you say they were?

A. The so-called California white pine which has come under my observation, as I stated to a greater extent in southeastern Oregon than in the State of California, the trees grow on an average much taller. They have more water, greater average rainfall, and I would say better soil conditions. The timber averages a great deal greater per thousand feet per acre than it does in Arizona, undoubtedly due to the more favorable growing conditions. As a consequence, the ring growths—I presume you know exactly what I mean—are farther apart, since in Arizona a stand of five thousand acres is a fairly good average, more noticeable in the sapwood, the ring growths in Arizona are much closer together and, consequently, board for board, the texture is finer—that is, the ring growths are closer together than they are in the general run in the California white pine, so-called.

Q. Is Mr. Louis Wuichett your sales representative in Chicago?

A. He is, and has been for over thirty years.

Q. Has he been the sales representative of your mill since it was established here in Arizona?

A. Since the mill was established?

Q. Yes.

3267 A. No. The mill was established a few years before that time, but Mr. Wuichett came out to Arizona in the fall of 1899 to examine this wood, and shortly after that time he began selling it in the Middle West territory contiguous to Chicago.

Q. Well, is he your sales representative for all the territory outside of Arizona?

A. Yes; with the possible exception of Gallup, New Mexico, which is just over the line from Arizona; and Needles, California, which is across the river in California on the west, from Arizona.

Q. Is he also the sales representative of many of the California white-pine companies?

A. Yes; several. How many, I am not acquainted with, but several.

Q. Is it not a fact that he wished to distinguish between the product of the California white-pine companies and that of the Arizona companies in selling his product—in selling the product,

and that he so distinguished it by using the term "California white pine product" for the California companies and "Arizona soft pine" for the Arizona companies we represent?

A. That is true. His designation of Arizona soft pine for a great many years included a mill that was actually in New Mexico.

3268 Q. That was the White Pine Company or the Breece?

A. The A. B. McGaffey Company. I think the firm name was McGaffey Lumber Company. I am not quite sure.

Q. How did he designate their product, if you know?

A. That was included under the designation of Arizona soft pine.

Q. Is any Michigan or northern pine brought into this market for sale, into the State of Arizona for sale?

A. I have never heard of it being brought in here.

Q. So that you do not meet with any competition here in Arizona with Michigan pines?

A. I doubt it very much.

Q. And the same is true with the Idaho pine?

Mr. BURR. Idaho white pine?

Mr. WOOD. Idaho white pine.

The WITNESS. So far as I know; I have never heard of it being sold in Arizona.

Q. Is sugar pine sold here at all?

A. Some sugar pine; yes, sir.

Q. And where is it sold; what part of the State?

A. Usually, I think, in the middle and southern parts of the State.

Q. But for what purposes is it sold, primarily, in the southern parts of the State?

A. Mostly for sash and doors.

3269 Q. Is it sold much for structural purposes?

A. I have never known of its being used to any extent whatever for construction purposes.

Q. You say that practically the only sale here for it is for sash and doors?

A. That is the only sale I have ever known of.

Q. I believe that—for what purpose is the Pinus ponderosa used to any extent throughout Arizona—for exterior purposes in houses and buildings?

A. Yes; railroad ties—very much out doors.

Q. The Sante Fe Railroad uses ponderosa ties exclusively throughout the State?

A. I think they do. They do to a large extent, at least.

Q. Have you had an opportunity to observe how the Pinus ponderosa has stood up for outside construction purposes in the State of Arizona?

A. Yes, sir.

Q. What is your opinion of the same?

A. It will stand——

By Examiner DE BRULER:

Q. What is your observation?

Mr. WOOD: Yes.

Q. What is your observation?

A. My personal observation has been to the effect with equal care I doubt if there is any difference in the value for the
3270 purpose for which it is used or in its life. I doubt if anyone could truthfully state that the ponderosa pine was poorer than any other wood for structural purposes here—deteriorating through rotting.

Q. Is it used extensively throughout northern Arizona for building purposes?

A. Yes, sir.

Q. Both dimension and boards?

A. Yes, sir.

Q. Do you know of any buildings in this vicinity built of Pinus ponderosa of many years' standing?

A. Yes, sir.

Q. Have you any particular one in mind as you make that answer—any specific buildings?

A. I am living in a house——

Mr. BURR. I think counsel has gone far beyond the scope of my direct examination. I think it should appear he has made him his own witness for all his purposes.

Mr. WOOD. Yes; I am perfectly willing.

Q. Will you continue with your answer?

A. I am living in a house built about twenty-two years ago of Arizona pine. It shows no indication of rot whatever any place.

Q. Built throughout of Arizona pine?

A. Everything except the hardwood floors, which are oak.

3271 Q. It gets pretty cold here, doesn't it?

A. Usually, in the winter.

Q. What is the snowfall in northern Arizona, if you know?

A. It varies considerably. The average moisture, I am informed by the Forest Service, is twenty-three inches. In 1928 the local supervisor in Williams advised me the moisture fall, snow and rain, was fifteen for the year.

By Mr. BURR:

Q. Where was that?

A. In Williams, Arizona.

By Mr. WOOD:

Q. And what is the distance from Williams to Flagstaff, about?

A. About thirty-four to thirty-six miles.

Q. Do you know the altitude of Flagstaff?

A. Approximately.

Q. What is it?

A. Between 6,900 and 7,000 feet.

Q. And what is the altitude of Williams?

A. Just a little under 6,800 feet.

Q. Have you any other buildings in [redacted] that have built for some years?

A. A great many of them.

Q. Have you any in mind that have been built for more than twenty years?

A. Yes, sir.

3272 Q. Thirty years?

A. Not quite.

Q. Between twenty and thirty years?

A. About twenty-seven years.

Q. Are they used—is Pinus ponderosa used for office buildings at all throughout this part of the country?

A. I don't recall any particular office buildings now in existence, since certain fire restrictions have removed all wooden structures within certain fire limits.

Q. You have fire limits that prevent that building?

A. Yes; they are allowed to use a certain amount of pine inside; floor joists, which are still in existence, of many years standing.

Q. Did you ever hear the native pine referred to as pondosa pine in the State of Arizona?

A. Not in Arizona. I don't recall that name as ever being applied to it other than to describe it or to cover its botanical name.

Q. I will ask you if you have encountered any sales resistance by reason of the fact that certain mills in Arizona and New Mexico have used the term "white pine" in designating their product?

A. I have not.

Mr. Wood. I think that is all.

Mr. Byrne. Just one question:

3273 Q. Mr. Wuichett handles lumber shipped to him by your company in what capacity?—as a commission merchant or is he an agent working directly for your company and under your company's instructions?

A. He is a purchaser of lumber from us. All our invoices go to him. He has always paid us for every foot of lumber.

Q. It is an out and out sale between your company and Mr. Wuichett?

A. It is.

Q. You don't know to whom he sells?

A. Not ordinarily. We are permitted to know if we wish, but that is entirely his business.

Q. You don't know what description he uses for your product after he purchases it from you?

A. Just in a general way.

Mr. Wood. Are you through?

Mr. Byrne. Yes.

By Mr. WOOD:

Q. Have you ever had any complaints from any customers of Mr. Wuichett who were delivered the Arizona pine that they thought they were buying a different species of pine from that which they received?

A. No.

Mr. WOOD. That is all.

3274 Redirect examination by Mr. BURR:

Q. Do you come in contact with purchasers who buy from Mr. Wuichett?

A. Occasionally.

Q. What part of the country are they located in?

A. In 1928 we shipped lumber upon his orders to sixteen States, and it covers a very large part of the northern part of the Middle West.

Q. Does he occasionally have customers in the East?

A. Yes, sir.

Q. I mean in the Atlantic Coast States?

A. Vermont.

Q. And your lumber has gone as far back as that, has it?

A. Yes, sir.

Q. Now, you say you do not know of the product of your company being known as "pondosa"?—did I understand you correctly?

A. We have never so designated it, and I have never known of any one calling it that.

Q. Some of the Arizona ponderosa pine is known as "pondosa", isn't it?

A. Not to my knowledge.

Q. Don't you know one of the Arizona concerns referring to it as the "pick of the pondosas"?

3275 A. Yes; I have seen that.

Q. Which concern is that?

A. The Cady Lumber Corporation.

Q. And they cut in Arizona, do they?

A. Yes, sir.

Q. That is quite a slogan of theirs, is it not—"The pick of the pondosas"?

A. They use it. Beyond that I don't know how it is considered.

Q. Now, is there any Jeffry pine in this State?

A. Not that I know of.

Q. You know that species of pine, do you?

A. I am not familiar with it.

Q. Now, Mr. Wuichett's customers are wholesale dealers, are they—or jobbers or how?

A. Some are jobbers, perhaps. I doubt if any are jobbers—let me correct that. So far as our lumber is concerned, I would say the

sales are largely to industrial plants and remanufacturing plants putting the lumber into specific products.

Q. Mr. Wuichett does not sell to retailers very often?

A. Very seldom. Occasionally.

Q. Now, did I understand you that your Arizona soft pine has, in your judgment, a greater softness and ease of working than the California ponderosa in the sections you mentioned?

3276 A. Working in what manner?

Q. Ease of working.

A. That covers a wide territory, Mr. Burr.

Q. Suppose you answer to the best of your ability. I do not claim to be an expert at all upon that subject. You were contrasting Pinus ponderosa lumber produced by your company?

A. Yes, sir.

Q. With the ponderosa produced in various sections of California, and I think you said their trees grew faster and the annual rings were wider, I figure?

A. Yes, sir.

Q. What effect does that have upon the ease of working the product, if any?

A. Very little, if any.

Q. What was the point of that distinction you made?

A. If you mean by "working" the working that is done at the mills—that is, the manufacturing, putting it through a planing mill?

Q. What is the difference there?

A. Practically no difference.

Q. The texture of your wood is about the same as the other, would you say—what is the difference in the slowness of growth?

A. The ring growth, the closer together it is, the slower it grows.

3277 Q. I see.

A. That is largely a matter of appearance.

Q. Well, what is the difference in appearance?

A. One shows a wider ring growth than the other.

Q. Wider?

A. Yes, sir.

Q. Now, there has been some testimony in this case that there is a difference in the texture in the Pinus ponderosa in California between the spring and summer wood, the light and the darker growth, not the annual ringage.

A. Yes.

Q. Now, is there a difference, in your judgment, of the same character in the slower growing Arizona ponderosa that you have described?

A. You say as between the summer and winter growths?

Q. Spring and summer growths. The testimony is that the spring growth in the ponderosa in California is rather a softer wood than the summer growth of each annual ring. In other words, there

is a little difference in the ease of working on account of the difference between the texture and softness of the two parts of the annual ring. Now, do you find any difference in Arizona as regards that feature in the wood, or have you observed that?

A. It is almost too highly technical for me. The darker
3278 layers, the thinner streak in your lumber, is what you are talking about?

Q. Yes.

A. It indicates the restful period of the tree, doesn't it, in the winter time when the sap goes down? From then on to the next dark is that soft growth which it makes during that particular year? It may be wider for a narrow—or wider upon one side of the tree that upon another part, to distinguish between the inner part of this lighter spacing which undoubtedly is the spring growth as it grows out, not in. In my opinion this does not amount to anything in the practical use of the wood. A carpenter with a piece of one wood and a piece of another upon his bench is not interested, does not care, and the chances are he does not know the degree of ease with which he works either of them, pure white pine or this Arizona pine of approximately equal grade or quality. I doubt if he knows.

Q. It might be there and he not know it?

A. Exactly, but in the practical working of it it amounts to nothing.

Q. Is there any difference in the Arizona soft pine and the California white pine, in your opinion?

A. If there is any difference?

Q. Yes; if there is any difference in the Arizona soft pine and the California white pine, from the practical character and quality of the wood?

3279 A. Practically none.

Q. You think yours is just as soft and just as easy to work as the California variety, do you?

A. Yes, sir.

Q. Now, do you find there is very much difference in different parts of the stand in this State? Is there much difference in the ponderosa pine and the ponderosa in other sections of the stand?

A. Yes, sir; there are differences.

Q. I think you said Louis Wuichett was desirous of distinguishing between the Arizona and the California varieties of the ponderosa lumber?

A. I beg pardon—I didn't intend to express any statement as to his desires.

Q. That was the question. I noticed the very word "desire" in the question.

A. The actual card that he has in the American Lumber Man, the business card that he uses, distinguishes between the two woods—that is, the California and the Arizona. One is called, "California white pine", as it is designated in California, and the

other is designated as "Arizona soft pine." What his desires are in selling the lumber, I could not, of course, state. He is the man to answer that question.

Q. I thought you stated he was desirous of making a distinction there?

3280 A. I have no intention of stating his mental attitude upon that question.

Q. Now, this is a semiarid, or arid district of the country, is it not?

A. Very much so at times.

Q. And the farmers here need irrigation waters in order to raise crops in this locality?

A. I know of no irrigation here.

Q. Do you know of farming here?

A. Yes; to a limited extent.

Q. There is some dry farming here, is there?

A. Yes, sir.

Q. I think you spoke of twenty-three inches of moisture. That includes the depth of snow, does it?

A. Converted to water, as I understand it.

Q. You would say the precipitation here is twenty-three inches?

A. That is the more correct designation.

Q. Have you seen the official figures as to that?

A. I have not.

Q. It is merely hearsay to you as to the amount of precipitation?

A. It is. Mr. Kimball, the local supervisor at Williams, informed me of that upon my inquiry.

Q. Now, the high altitude and the freedom from humidity

3281 in this climate is quite marked, isn't it?

A. It is nearly seven thousand feet high, and we have fairly light precipitation.

Q. And that has a tendency to make all varieties of wood more durable when exposed to the weather, does it not?

A. You mean lumber in construction?

Q. Yes; even where exposed to the weather, it is more durable?

A. Not necessarily.

Q. You think a high degree of humidity and great precipitation is not a factor in producing decay?

A. Not necessarily; no.

Q. Is that so?

A. It depends entirely upon how it is used.

Q. I am talking about precisely the same degree of care or same degree of neglect; that you consider the same degree in this climate and under another lower, isn't the climate here less drying?

A. How much precipitation?

Q. Suppose it is twice as much as it is here?

A. There would be no material difference in that event.

Q. You mean a precipitation of forty-five inches, such as on the Atlantic co'st?

A. No, sir.

Q. Now, do you mean to say that the resistance to decay is
3282 no greater in a high altitude than at sea level or virtually so?

A. I am not qualified as an expert. I have looked at thousands of buildings, and a great deal of lumber used in construction work; and you put timber in a wet place or where it has water continuously, regardless of whether there is anything coming out of the clouds or not, and it will react to those conditions approximately the same as it would anywhere else. If you put pine on the outside of your building and you paint it and take care of it properly, in a very high precipitation, certainly it will require more care to get the same results.

Q. Than in an arid climate?

A. Yes; but with no care at all, standing outside, a piece of pine that has lain in the water—logs lying in the water, to my personal knowledge for forty-two years, were scarcely discolored.

Mr. BURR. That is all.

Mr. WOOD. Just one question.

Re-cross-examination by Mr. WOOD:

Q. I believe you testified that you had seen advertisements of the Cady Lumber Corporation, that they sold the pick of the pondosa. Do you know whether the Cady Lumber Corporation sells direct or through some sales organization?

Mr. BURR. I object to that.

3283 Examiner DE BRULER. Objection sustained.

Mr. BURR. We are going to have them on the stand, are we not?

Mr. WOOD. I was going to lead up to whether he has not in mind that the sales organization has used that expression rather than the Cady itself.

Q. Upon reflection, do you know whether the term, "pick of the ponderosa" has been used by the Cady Lumber Corporation or the Southwest Lumber Sales Corporation?

A. The place I recall seeing it now was on a price list of the Southwest Sales Corporation which I believe is the correct company name.

Mr. WOOD. That is all.

Redirect examination by Mr. BURR:

Q. Selling for several Arizona companies?

A. I don't know how many they were selling for.

Mr. BURR. That is all.

Examiner DE BRULER. You are excused.

(Witness excused.)

Mr. BURR. Call Mr. Riordan.

M. J. RIORDAN was thereupon called as a witness and, having been duly sworn, testified as follows:

3284 Redirect examination by Examiner DE BRULER:

Q. Let's see, your name is M. J. Riordan?

A. Yes, sir.

By Mr. BURR:

Q. Mr. Riordan, you are connected with the Arizona Lumber and Timber Company?

A. Yes, sir.

Q. With headquarters here in general?

A. Yes, sir.

Q. How long have you been with them?

A. Forty-four years.

Q. You are now secretary?

A. Yes, sir.

Q. And for how long a period have you been?

A. Practically forty-four years.

Q. Now, as secretary, are you one of the executives of the company?

A. Actually, I am; but really I am not. I don't practice it. I am not a practicing executive.

Q. You do the work without the title?

A. No; I have the title and I have the power over the other fellow. We have executives who do the work.

Q. Now, you appear here under the Government's subpena, do you?

A. Yes, sir.

3285 Q. And I wish you would state whether that calls for the following copies of advertising material used by your company, including circulars, booklets, and advertisements in papers and magazines, newspapers, and trade journals, so far as available, from June 1, 1924, to the present time; also one copy each of letterheads, price lists, and so forth, used during that period. Have you brought some papers in compliance with that requirement?

A. Yes, sir.

Q. Let me ask you whether what you have brought is all that could be found in your files in compliance with the subpena?

A. I don't know. I got the subpena at dinner last night, and this morning at half-past nine I went to the office and got what had already been prepared. I didn't look them over at all.

Mr. BURR. I am surprised the subpena did not reach you earlier.

Mr. BYRNE. Perhaps Mr. Koch is a little bit better qualified to testify.

Mr. BURR. Is Mr. Koch here?

Mr. BYRNE. Yes; this gentleman here [indicating].

By Mr. BURR:

Q. Now, you gave instructions this morning, did you, for the search, or when?

A. No; I didn't give any instructions at all. I got what
3286 was already there. I didn't have any time for instructions without getting up too early.

Q. Now, how is your product designated to the trade?

A. Pine.

Q. You don't call it "white pine"?

A. We don't call it anything—just pine.

Q. How long has that been the case?

A. Forty-four years.

Q. You do not call it "Arizona pine" here, do you?

A. Sometimes we call it native pine, bull pine, jack pine.

Q. Now, you testify positively, do you, that your company has not either orally or in writing sold or offered to sell its product as a variety with the trade-name of "white" in connection with it?

A. Not to my knowledge.

Q. Not to your knowledge?

A. No, sir.

Mr. BURR. Off the record.

(Discussion off the record.)

By Mr. BURR:

Q. Now, Mr. Riordan, who are Johnson and Koch?

A. Johnson and Koch, they were a firm handling——

Q. (Interrupting.) I beg pardon?

A. Johnson and Koch were a firm handling lumber in Phoenix. They are out of existence now, I think.

3287 Q. Were they agents of yours or did you sell to them outright or how?

A. I don't know. Mr. Koch can tell you.

Mr. KOCH. They were our agents.

Mr. BURR. How?

Mr. KOCH. They were our agents.

Q. (By Mr. BURR.) Now, the papers that you have produced here, do they comprise all the forms that you have used for the last five years?

Mr. KOCH. Yes, sir.

Mr. BURR. Perhaps I had better call Mr. Koch right now. If there is no cross-examination of this witness, I will put Mr. Koch on.

Mr. WOOD. No cross-examination.

Mr. BYRNE. No cross-examination.

(Witness excused.)

Mr. BURR. Mr. Koch, will you be kind enough to take the stand and be sworn?

I. B. KOCH was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Q. Will you state your name for the record?

A. I. B. Koch.

3288 Q. Referring to the various forms of stationery produced by Mr. Riordan a moment ago, will you state whether these have been changed in the last five years?

A. No, sir.

Q. They have been used continuously during that period?

A. Yes, sir.

Q. I wish you would tell me who Messrs. Johnson and Koch are?

A. Mr. Johnson is here at this time.

Q. Well, what is his relation to your company?

A. He represents us in Phoenix.

Q. Do you sell to that firm outright or are they agents of yours?

A. They are agents.

Q. And are they advertising your Arizona ponderosa pine?

A. No, sir.

Q. Are they selling your Arizona ponderosa pine?

A. Yes, sir.

Q. And I hand you here a paper or, rather, three papers, which I wish you would describe for the record—state what they are.

A. Those are our price lists which we furnish to our agents.

Q. You furnished those to Johnson and Koch, did you?

A. To Johnson only. Mr. Koch is no longer there.

3289 Q. That is yourself?

A. That is another Mr. Koch.

Q. That is another Mr. Koch?

A. Yes, sir.

Q. He is no longer with Mr. Johnson?

A. No, sir.

Q. That designates some product as "Arizona white pine" on the back of each of those three papers, does it?

A. Evidently; yes, sir.

Q. Now, are those your products that are priced in that fashion?

A. Yes, sir.

Q. Where do those price lists go, if you know?

A. Just to the customers in Phoenix.

Q. They don't go east?

A. They don't go outside of the State at all.

Mr. Burr. Off the record.

(Discussion off the record.)

Mr. Burr. In order to save encumbering the record, if the examiner please, I will state that I have examined the envelopes, both stamped and unstamped, the bill heads, invoices, and letter heads, and the order blanks of this company——

Examiner De Bruler. What company is that, now?

The Witness. The Arizona Lumber & Timber Co.

3290 Q. What is your position?

A. Vice president and manager.

Examiner De Bruler. I see.

Mr. BURR. Together with the advertising in a certain school year book and in a certain school paper——

The WITNESS. Yes.

Mr. BURR. Also in daily papers at Phoenix and Flagstaff, and I find that none of these advertisements just described, and none of the forms that I have just described contain the trade term—any trade term, including the word "white."

I offer them as Commission's exhibit number——

Examiner DE BRULER. Fifty-one.

Mr. BURR. I offer them as Commission's exhibit number fifty-one for the record, the three sheets which the witness has described as price lists, issued in the name of the former partnership of Johnson and Koch, and I ask that they be received in evidence.

Mr. BYRNE. May I ask one question on voir dire?

Mr. BURR. Certainly.

Voir dire examination by Mr. BYRNE:

Q. This price list that Mr. Burr has referred to, Mr. Koch, does that go to anyone else outside of an agent?

A. No, sir. We furnished it to Johnson. He is our agent.

3291 Q. Just to him?

A. Yes, sir.

Q. It does not go to the trade or to the general public?

A. Unless delivered by him. We do not send it direct to anybody.

Q. (By Mr. BURR.) Well, it is for the purpose of his use, is it not, in securing business?

A. Yes; I suppose so.

By Mr. BYRNE:

Q. How long a period of time has this price list been in use, Mr. Koch?

A. I suppose about four or five years.

Q. And it is still in use at the present time?

A. Yes, sir.

Q. However, any lumber sales made by your agent, Mr. Johnson, are exclusively within the State of Arizona; is that not true.

A. Yes, I think so; nothing sold outside of this list does not go outside of the State.

Mr. BYRNE. We, therefore, object to the reception of the exhibits of the price lists in evidence for the reason that they do not go outside of the State of Arizona, and could only possibly refer to sales within the State.

3292 Examiner DE BRULER. It may be received in connection with his testimony.

(Thereupon, the documents so tendered were received in evidence and duly marked as "Commission's Exhibit Number 51, Witness Koch", and the same are forwarded herewith.)

Direct examination (cont'd) by Mr. BURR:

Q. Now, Mr. Koch, has your company in any other respect, aside from the issuance of these price lists, at any time during the last five years that you know of referred to your product with the trade name "white" in connection with it?

A. No, sir.

Q. How do you sell your product outside of the State?

A. Through Mr. Wuichett.

Q. Do you know how he designates it?

A. Judging from his letter heads, "Arizona soft pine."

Mr. BURR. I think that is all.

Cross-examination by Mr. BYRNE:

Q. In connection with Mr. Wuichett, Mr. Koch, your company ships your product to him as an out-and-out sale, does it not?

3293 A. Yes.

Q. You retain no direction over the manner he shall sell or to whom shall sell?

A. No.

Q. Or over the designation which he may use in describing the product?

A. No, sir.

Q. Your company retains no control over the prices at which Mr. Wuichett sells your product?

A. No, sir.

Mr. BYRNE. That is all.

Examiner DE BRULER. That is all.

Mr. WOOD. I would like to ask a question.

Examiner DE BRULER. Oh, excuse me. Go ahead.

Cross-examination by Mr. WOOD:

Q. Have you met any sales resistance——

Mr. BURR. I object to that as improper cross-examination.

Examiner DE BRULER. Unless you make him your witness.

Mr. WOOD. I will make him my witness.

Q. Mr. Koch, do you know whether any other lumber companies in Arizona are designating their product as "Arizona white pine"?

A. No, sir.

3294 Q. You do not know, then, whether the Cady so designate their lumber or not?

A. No, sir, except on the advertisements.

Q. (By Mr. BURR.) Except what?

A. From the advertisements I have seen.

By Mr. WOOD:

Q. From the advertisements you would judge that they were advertising and holding it out as "Arizona white pine"?—is that correct?

A. As "pondosa", I believe.

Q. As "pondosa" or "Arizona white"?

A. "Pondosa", as I remember it.
Q. Have you seen any recently?
A. No, sir.
Q. Have you at any time received any complaints from customers, either from Arizona or elsewhere, that—or any inquiries as to whether the Cady Lumber Corporation was using a different name in designating its product than you are?
A. No, sir.
Q. Have you any objection to the Cady Lumber Corporation or other lumber corporations using the term "white pine" in designating their product, when they are selling Pinus ponderosa?
3295 A. None whatever; no, sir.
Q. Were you at any time in the lumber business in New Mexico?
A. Yes, sir.
Mr. BURR. If the examiner please, I think I shall object to this line of questions, because there is nothing in the complaint that the Government has the opinion that people who sell under the designation "soft pine" are injured.
Examiner DE BRULER. It is really outside of the complaint, Mr. Wood.
Mr. WOOD. I am finished with that line of questioning.
Mr. BURR. All right. I will withdraw the objection for the time being.

By Mr. WOOD:

Q. Were you in the lumber business in New Mexico?
A. Yes, sir.
Q. What company?
A. American Lumber Company.
Q. How long were you with them?
A. Six years.
Q. During what years?
A. I believe 1906 to '12.
Q. What was your official position with the company?
A. As manager.
Q. What kind of lumber did your organization manufacture?
3296 A. The American Lumber Company manufactured New Mexico white pine.
Mr. BURR. If the examiner please, this is not a respondent here. Is this material?
Mr. WOOD. I think it is material on the question as to the times that the words "New Mexico white pine" has been used in designating the New Mexico product.
Examiner DE BRULER. You may ask him about how long it has been used as that.
Mr. WOOD. Will you read the question to the witness, please, Mr. Reporter?
(Thereupon the last question as above shown was read aloud by the reporter.)

The WITNESS. As we knew it.

By Mr. WOOD:

Q. And of what species was the New Mexico white pine?—ponderosa?—Pinus ponderosa?

A. We didn't know it at that time as ponderosa.

Q. You didn't know its botanical name?

A. No, sir; we paid no attention to it.

Q. Do you know how long your company used the term "New Mexico white pine"?

A. No, sir.

Q. It had been used before you came there?

A. Yes, sir.

3297 Q. Did you at any time have any complaints from any customers in selling them your timber and lumber as New Mexico white pine they were receiving a different kind of lumber than they expected?

A. No, sir.

Mr. WOOD. That is all.

Examiner DE BRULER. That is all.

Redirect examination by Mr. BURR:

Q. When you sold for the company, what sort of customers did you do business with?

A. Retail yards.

Q. Whereabouts?

A. Through the Middle West.

Q. And did you sell any to planing mills?

A. Some were.

Q. Did you sell any to wholesalers?

A. Yes, sir.

Q. Now, how much of a percentage did you sell to wholesalers; were you connected with the sales end of it?

A. Not materially; no, sir.

Q. You would not be able to testify as to the relative proportion?

A. No, sir.

3298 Q. Even roughly?

A. I would rather not.

Q. The bulk was to wholesalers and planing mills, was it?

A. Yes, sir.

Mr. BURR. That is all.

Examiner DE BRULER. That is all.

(Witness excused.)

Mr. BURR. Now, I think as far as the hearing in this town is concerned, the Government is prepared to rest.

Mr. BYRNE. If that is the case, Mr. Burr, we would like the record to show a motion on behalf of both of the respondents for an order directing the dismissal of the complaint as to both respondents, on the grounds that no competent proof has been introduced in support of the allegations of paragraph three of the complaint.

Mr. BURR. I will say that nobody here has the power to act upon that motion, as I understand it; but I will say this: that I anticipate that if the chief counsel is agreeable I shall move to dismiss both of these respondents.

While there is a little showing that the word "white" has been used, I assume it will not be used if an order was so issued, and it has not been in interstate commerce and I don't think it is very material or important.

Would you be willing to stipulate you would stop using the word "white" in case an order was issued and sustained
3299 against other parties?

Mr. BYRNE. No, Mr. Burr. The whole desire of these two companies, and the only reason why they defended this matter at all is that they have been accused of unfair practices. Otherwise, we would have ignored the whole proceeding and consented to an order.

Mr. BURR. In case of dismissal you would stop using the word "white"?

Mr. BYRNE. We do not admit we have used it.

Mr. BURR. I refer to Commission's exhibit number 51, was it not?

Mr. BYRNE. That took me entirely by surprise. I didn't know that had been used. I would not care to make that stipulation at the present time.

Mr. BURR. I may not move with regard to the Arizona Lumber & Timber Company, with this limited use, but I may in connection with that; but I certainly shall with regard to the Saginaw & Manistee Lumber Company. It seems to me with the very slight use in this matter—I thought you would be willing to stipulate and there would be a certainty of dismissal. Would you be willing to take it under advisement and write me later?

Mr. BYRNE. Yes; I will do that.

Examiner DE BRULER. Now, have the respondents any witnesses to offer?

Mr. WOOD. Yes. I think we will put one witness on the
3300 stand. I asked him to come here at two o'clock.

Mr. BURR. Well, that is agreeable. Have you any evidence, Mr. Byrne?

Mr. BYRNE. No. We do not care to offer any proof at all.

(Thereupon a short recess was taken.)

AFTER RECESS

*Stipulation re order to dismiss as to Arizona Lumber & Timber Co.*

Mr. BURR. After further considerations, it is stipulated that in event an order to dismiss is made in favor of the Arizona Lumber & Timber Company, and in the further event that an order to cease and desist is issued against the manufacturers of the so-called "California white pine", and such order is either acquiesced in by respondents named therein or is affirmed by the Federal courts in case

the proceeding is carried to the courts by petition for review or petition for enforcement, the Arizona Lumber & Timber Company will acquiesce and will discontinue the very limited use of the word "white", as connected with its product.

Is that agreeable?

Mr. BYRNE. Yes; on behalf of the Arizona Lumber & Timber Company it is so stipulated.

Examiner DE BRULER. Very well. We will take an adjournment until 2:00 o'clock this afternoon.

(Thereupon, at 11:50 o'clock a.m. an adjournment was taken until this afternoon.)

3301 AFTER RECESS

2:00 O'CLOCK P.M.

Examiner DE BRULER. Are you ready, gentlemen?

Mr. WOOD. Yes, sir. Will you be sworn, Professor Douglass?

Prof. A. E. DOUGLASS was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct Examination by Mr. WOOD:

Q. You may state your name for the record.

A. A. E. Douglass.

Q. What is your occupation, Professor Douglass?

A. I am a professor in the University of Arizona.

Q. In what department?

A. Astronomy.

Q. How long have you been at the University of Arizona?

A. Since 1906.

Q. Well, will you briefly tell the court what you did prior to your association with the University of Arizona?

A. I came out here as one of the men—the chief assistant in connection with the Lowell Observatory up here on the hill [indicating] in 1894, and I stayed here until 1906, when I went down to Tucson.

Q. Have you had an opportunity to acquaint yourself with the species of lumber known as Pinus ponderosa?

3302 A. Yes.

Q. What has been that opportunity?

A. Well, about that time when I was going to Tucson I became very much interested in the feasibility of telling the climatic conditions by means of the rings on the trees. I tried different trees which were the ponderosa around here, and I watched them a great deal, studied them over here at the mill; studied the sections and had sections brought in. I made thousands of borings in trees and I estimate I have in the neighborhood of five thousand specimens that I have worked on. This came out of it: I could use the ponderosa with ease and advantage where practically every other species was excluded and just using a little pinon, a kind of species around here, of course.

Q. Why is it that you can use the ponderosa with advantage?

A. It is because the rings are very distinctive and the trees rarely omit rings—that is, there are a very few trees that do not have a full cut of rings, one for every year. The thing I did definitely was to work out one ring a year.

Q. You found the Pinus ponderosa preferable for that purpose?

A. Yes.

Q. Throughout what territory?

A. Primarily, of course, here in this, for the purpose of dating——

Q. (Interrupting.) By this you mean Arizona and New Mexico?

3303 A. Yes. That is the reason, but, of course, I have also looked at some of the ponderosas from California. I have seen specimens of the same species to my best knowledge all the way up California as far as the Columbia River.

Q. I believe you stated you could tell the age of trees by specimens?

A. Yes.

Q. Taken from them?

A. Yes.

Q. How do you do that?

A. Now, perhaps there would be two answers to that question—that is, the age of an individual tree would mean the actual counting of the rings in that tree, but the age at which a tree or log was a living tree would be a very much more difficult problem. Each age involves a counting of the rings with accuracy and precision which is done by comparing a great many trees together so as to eliminate error; picking out the characteristics in the center of the live tree you can pass over to a dead log, then the continuity is preserved until we have built up here a sequence of over twelve hundred years.

Q. Now, in that connection, I understand that you have collected specimens of timber and logs?

Q. (By Examiner BRULER.) Now, what kind of timber?

3302 By Mr. WOOD:

Q. Of the species of the Pinus ponderosa?

A. Yes.

Q. Will you state briefly where you obtained—strike that out.

Q. Will you state briefly the places that you have visited for the purpose of obtaining specimens of Pinus ponderosa; where you found them located; the condition of the ponderosa, and the age, as you determined it by the rings?

A. I have visited especially the Hopi Indian villages one hundred miles northeast of here, speaking of Arabi particularly, and there have worked over a large number of specimens of ponderosa that were used as ceiling beams, both in the buildings still inhabited and those abandoned about the year 1906. Of course, beams of the latter we could get at more easily.

Q. Will you at that point state the age of the various timbers you found, where they were located, and their condition?

A. Those timbers were all sorts of ages. The oldest of them were probably cut in the neighborhood 1770 in that particular village, and the earlier ones were cut, probably about 1370 A.D. I have down at Tucson a six-foot timber that was cut not far from 1370 A.D., that is still good and solid. It has lost a part of the sap-
3305 wood at this time but the heartwood is sound and the timber is soft. One would trust his weight upon it.

Q. Was this Pinus ponderosa?

A. Yes, sir.

By Mr. BURR:

Q. What did you say that date was?

A. Approximately 1370.

By Mr. WOOD:

Q. Where was it located in the building where you found it?

A. It probably had been in use continuously, but it was actually in use as a vertical support in one of the rooms still available in one of the houses in Arabi, in this old Indian village.

Q. What do you mean by "still available"?

A. I mean the house had virtually gone to ruin, but there were several rooms in use there.

Q. Now, are there any other timbers you care to refer to in connection with the Hopi villages, or specimens that you obtained?

A. Well, I might say this: That there were a large number—that in making our search for these particular timbers our method of getting them was to pick out the projecting beam ends that were obviously cut by a stone-ax cutting. That was presumably before the Spanish conquest, in the early 1600's. So these projecting
3306 beams would show whether they had been cut by a stone ax or not. Of course, that gave us means of judging of the beams to make borings in for samples.

Q. And these beams were exposed to the weather, you say?

A. Yes; those ends were projecting ends.

Q. Now, then, will you name briefly some other places where you got specimens?

Q. (By Mr. BURR.) Where are those?

A. All in the Hopi village.

By Mr. WOOD:

Q. Do you know what the altitude of the Hopi village is?

A. It is over 6,000 feet, I think.

Q. How far is it from Flagstaff?

A. One hundred miles northeast.

Q. Now will you name some other villages and the results you obtained therefrom?

A. I have three specimens here from the Pueblo Bonita.

Q. Where is that located?

A. That is in Chaco Canyon in northwestern New Mexico. It is sixty-five miles north of Thoreau.

Q. Did you take specimens from that pueblo for the purpose of determining their ages—the age of the timber?

A. Yes; the age of the ruin—that is, these timbers were
3307 mostly sent to me. I have some I took myself, but these particular specimens were sent to me by Mr. Judd, of the National Geographic Society. His purpose was in determining the age of these timbers.

Q. What did you determine to be the age of the timbers you took for specimens?

A. These pieces I have here were cut approximately in the year 1103. That would make them about eight hundred and a quarter years old.

Q. What did you find their condition to be as to rot and decay?

A. Perfectly sound timber.

Q. Were they used for beam purposes?

A. Yes, as ceiling beams.

Q. Have you made the same investigations in various parts of Arizona and New Mexico?

A. Well, in this northern region. I have not—there is not the same material available in the way of logs in southern Arizona. It is very difficult to get ruins near enough to pine trees down there to get beams that have lasted for some time.

Q. Of what age?

A. You mean of those I have not been able to use?

Q. Yes.

A. They are very likely of the same age. The different
3308 kinds of wood, juniper—that I can not use.

Q. You have collected specimens from various pueblos?

A. Yes, sir.

Q. And ancient dwellings throughout New Mexico and Arizona—is that true?

A. Yes, sir.

Q. Have you found a number of beams throughout Arizona and New Mexico, and rafters, that are several hundred years old?

A. Well, I should suppose so. Of course, I have not been looking at it from the point of view of what exposure has done to them. We judged a great many of those beams by stone-ax cutting evidence. That is the part that has been exposed to the weather.

Q. What has been your experience as to the condition of the beams and rafters and other specimens you have taken of Pinus ponderosa from the standpoint of rot and decay?

A. Where they were exposed to constant moisture they have rotted. Of course, there was no protection on the outside. There were some rare places where they were plastered inside of the building.

A log left down on the ground, subject to moisture, has decayed. The ends up in the air that could dry readily have lasted a long time—that is, otherwise, we would not be able to see those stone-ax cuts, which are perfectly plain.

3309 Mr. Wood. I think that is all I care to ask him.

Cross-examination by Mr. Burr:

Q. Do you find that the rings of the Pinus ponderosa that you said made good specimens for you, do you find they are better marked than other trees?

A. They are not so permanent as the douglass fir, but they are more reliable in the sense I say that there was just one ring to a year, and it was easy to trace in case of individual error.

Q. Have you had experience in observing rings of Pinus ponderosa in other sections?

A. I understand—yes; I have used it in California; several different localities, San Diego up as far as the Columbia River.

Q. That is known as California white pine?

A. I don't know. I never had that name given to me for it.

Q. You are not sure whether it is Pinus ponderosa?

A. I am practically sure it is Pinus ponderosa. The Forest Service has sent me some of these specimens.

Q. You are not an expert forestry man, are you?

A. No; but in the identification of trees within the limits I have done a great deal of it for this purpose.

3310 Q. This Hopi village district is an irrigated section, is it?

A. No; it is up on top of a mesa, about 600 feet below the valley bottom. That valley bottom used to be farmed——

Q. (Interrupting.) That was irrigated when they farmed it, wasn't it?

A. I don't think so. I think there was a meandering stream that gave some irrigation.

Q. A good many of those southwestern Indians irrigated?

A. They did in southern Arizona a great deal. I don't say they did not do a little bit.

Q. Are you familiar with the percipitation in the Hopi village district?

A. I should say—I don't know whether it has been measured. I think it has at Keams Canyon, over beyond there.

Q. You don't know what it is?

A. As a guess I should say it is in the neighborhood of twenty inches.

Q. What is the altitude there?

A. Over 6,000 feet. I don't remember the exact altitude.

Mr. Burr. I think that is all.

Examiner De Bruler. That is all, Professor.

(Witness excused.)

Examiner DE BRULER. The taking of testimony in these
3311 cases is now adjourned until 10:00 o'clock a.m., February the tenth, 1930, at Albuquerque, New Mexico.

(Thereupon, the further hearing in this matter was continued until February 10, 1930.)

3312 Before the Federal Trade Commission

In the matter of White Pine cases

Docket No. 1620–1669, inc.

ALBUQUERQUE, NEW MEXICO, *February 10, 1930.*

Met pursuant to notice 10:00 o'clock a.m.

Before Ellis De Bruler, Examiner.

Appearances:

Eugene W. Burr (Washington, D.C.) for the Federal Trade Commission.

Chandler M. Wood, attorney for the respondents, The George E. Breece Lumber Company, The White Pine Lumber Company, and The Cady Lumber Company; R. R. Ryan and Edmund W. Hohnhaus, of counsel.

3313 PROCEEDINGS

W. G. RAMSHAW was called as a witness for the Commission and, having been duly sworn, testified as follows:

Direct examination by Mr. BURR:

Examiner BRULER. Your name, please.

A. W. G. Ramshaw.

Examiner BRULER. And your residence?

A. 601 Luna Boulevard, Albuquerque.

Mr. BURR. Your business is what?

A. Lumber.

Q. What company?

A. At present with the White Pine Lumber Company, Bernalillo, New Mexico.

Q. Are you also with the Southwest Lumber Sales Corporation?

A. I was up to January 1st, 1930.

Q. What capacity did you occupy with the Southwest Lumber Sales Corporation?

A. My last position was president of the Southwest Sales.

Q. How long did you hold that position?

A. A year and a half.

Q. How long had you been with the Southwest Lumber Sales Corporation when you resigned?

A. Two years.

Q. Now, at that time the Southwest Lumber Sales Corporation was representing what lumber and manufacturing concerns?

3314 A. The Cady Corporation, the Standard Lumber Mills, Incorporated, the White Pine Lumber Company.

Q. Were you handling all of the products of those three concerns?

A. Yes, sir.

Q. Did your company ever handle the product of the Saginaw-Manistee Lumber Company?

A. No, sir.

Q. Did you ever have the Southwest Lumber Sales Corporation handle the product of the Arizona Lumber & Timber Company?

A. No, sir.

Q. Now, from your knowledge of the business of the Southwest Lumber Sales Corporation, can you state whether or not that company has at any time during the past five years handled the business of the Saginaw-Manistee Lumber Company or the Arizona Lumber & Timber Company?

A. I think not.

Q. Now, you say you think not; how sure are you?

A. I am pretty positive of that, during my administration.

Q. During the past five or six years?

A. I couldn't state as to that.

Q. Who in your company could tell us that?

Mr. Wood. What company are you referring to now?

Mr. Burr. The Southwest Lumber Sales Corporation.

A. We have only been in existence since I have been with them, and I think that they never handled it during the life of

3315 the Southwest Lumber Sales Corporation.

Q. Has your company ever handled the product of the George E. Breece Lumber Company?

A. No, sir.

Cross-examination by Mr. Wood:

Q. When was the Southwest Lumber Sales Corporation organized?

A. 1928.

Q. Did you go with them at the beginning?

A. Yes, sir.

Q. What position did you first hold?

A. Vice president.

Q. You spoke of the Standard Lumber Mills; where is their mill located?

A. Standard, Arizona.

Q. Is that a subsidiary of the Cady Lumber Corporation?

A. Yes, sir.

Q. Where are the mills of the Cady Lumber Company located?

A. McNary, Standard, and Flagstaff.

Q. The Standard being a subsidiary corporation?

A. Yes, sir.

Q. And the mills they own directly, where are they located?
A. McNary and Flagstaff.
Q. What State?
A. Arizona.

3316 Q. Now, then, Mr. Ramshaw, have you had experience in forestry matters?

A. Yes, sir.
Q. In the manufacture of lumber?
A. Yes, sir.
Q. Where was that experience?
A. Spokane district.
Q. Will you tell the examiner what experience you have had in forestry matters and what company you were with?
A. I was Northwest representative of Porter Kennedy Company of Omaha, at which time I had entire charge of their timber holdings, manufacturing, buying and selling of lumber, including all the inland empire woods.
Q. How long a period did you do that?
A. Fifteen years.
Q. What kind of lumber did you manufacture—for them?
A. The so-called "pondosa", Idaho white pine, Angleman spruce, white fir, red fir.
Q. During what years did you hold that position?
A. I came here in December 1925. About 1910.
Mr. BURR. Terminating at that time?
A. Terminating in 1925.
Mr. WOOD. How did you market and sell your pondosa when you were with that company?
A. As western white pine and later as pondosa.

Q. Did they market is as ponderosa pine?

3317 A. No; there were several names used at that time—they were using de Schutz white pine——

Q. Koble white pine?
A. Yes; we sold for a while under the name of Knoble white pine.
Q. Did you sell any of the white pine under the name pondosa?
A. Yes.
Q. At what time; when?
A. The last couple years.
Q. Prior to that time?
A. Western white pine.
Q. Why were the names Koble——
Mr. BURR. May the record show this witness has now become a defense witness?
Examiner BRULER. Yes; the witness now is the witness of the respondent.
Q. Why were the terms "de Shutz white pine" and "Koble white pine" used?
A. Merely for sales purposes; to get a little better price.

Q. Were these names the names of the sections, the district?
A. The districts.
Q. In which the lumber was produced?
A. Yes, sir.
Q. During any of the time that you sold this lumber in the Northwest as western white pine or the white pine designated by the
3318 district in which it was produced, did you ever have any complaints on the part of your customers that they were receiving Pinus ponderosa and they had expected to receive some other kind of a pine?
A. No, sir.
Q. Where did you sell this pine?
A. All through the East.
Q. To whom did you sell it?
A. Consumers; that is, retail yards, wholesalers, commission men, industrials, and manufacturers.
Q. How did you market your Idaho white pine, so called?
A. As Idaho white pine or monticola.
Q. While connected with the Southwest Lumber Sales Corporation under what trade name did they designate and market and sell Pinus ponderosa?
A. As white pine.
Q. Do you know when the Cady Lumber Corporation was organized?
A. June 1925.
Q. Do you know how they marketed and sold their product all the time they sold it to the Southwest Lumber Sales Corporation?
A. Yes; as Arizona white pine.
Q. Have you had opportunity to observe California white pine?
A. Yes, sir.
Q. What opportunities have you had to observe it?
A. In contacting the trade, looking over the stocks in the
3319 various yards.
Q. How would you say that the Arizona and New Mexico white pine compares in characteristics and texture and purposes of use with the California white pine?
A. I would say that the Arizona and New Mexico as compared to the California is a little softer in texture and whiter in color. The Arizona and New Mexico white pine has a pinkish cast as compared with the yellow cast of the California.
Mr. BURR. Are you referring to the tree or the lumber?
A. The lumber.
Mr. WOOD. How would you say that it compared in purposes of use with the California white pine?
A. Similar; about the same.
Q. You mean they are used practically for the same purposes?
A. Yes, sir.
Q. How would you say it compared in general characteristics and texture with the so-called pondosa pine?

A. I think it is softer in texture and whiter in color.
Q. Do you know the reason for that?
A. Higher altitude.
Q. What is the timber line in New Mexico and Arizona?
A. Seven thousand feet; that is, the starting of the timber, about seven thousand.
Q. Do you know where the timber starts in California?
3320. A. I am not familiar enough with that to state anything definite.
Q. Do you know whether it starts lower than seven thousand feet?
A. Yes, sir.
Q. Do you know where the timber line starts in the Northwest where pendosa, so-called pendosa pine, is produced?
A. I think it is around twenty-five hundred to three thousand feet.
Q. Does the altitude at which the timber grows affect in any way its durability?
Mr. BURR. I wish you would qualify him as to what he knows about that first.
Mr. WOOD. All right, sir.
Q. Do you know whether the altitude at which lumber timber grows in any way affects its structural strength or durability?
A. I can't answer that side of it.
Q. Can you answer it from the standpoint of your observation?
A. Altitude has a tendency to make the timber soft in quality, due to soil and moistural conditions; the tree is larger, therefore it is softer quality.
Q. From the standpoint of your observation, what effect would that have on durability?
A. That would be pretty hard to answer.
Q. What is the comparitive speed of growth of a tree grown
3321 in the lower or higher altitudes?
A. I couldn't answer that.
Q. What class of customers do you sell the Arizona and New Mexico white pines to?
A. Including all the consumers, such as the retail yards, industrials, manufacturers of all kinds.
Q. What proportion of your product is marketed locally?
A. I would assume—local depends upon how far you go.
Q. I mean within the States of Arizona and New Mexico.
A. Very small, I should say not over ten percent.
Q. In New Mexico?
A. Yes, sir.
Q. What about Arizona?
A. Arizona would go, from the Arizona mills, about twenty-five percent.
Q. Do you sell any lumber to the Santa Fe Railroad?

A. Yes, sir.

Q. For what purposes?

A. For ties and general construction work.

Q. Do you know what proportion of the Santa Fe Railroad uses Pinus penderosa for ties, what parts of the railroad uses it, in what States the railroad uses it?

A. Practically everything in Arizona, New Mexico, Texas, and Kansas.

Q. What is the production of the Cady Lumber Corporation?

A. The McNary mill is one hundred and ten million and
3322 the Standard about fifty million.

Q. What is the capacity of the Flagstaff mill?

A. About fifty thousand feet a day on single shop.

Q. How much a year?

A. That would run up into thirty-five or forty million.

Q. So the capacity of the Cady Lumber Corporation is close to two hundred million feet?

A. Yes, sir.

Q. Do you know the capacity of the Arizona Lumber and Timber Company?

A. The actual capacity or the amount they cut?

Q. The amount they cut?

A. They have been cutting an average of about thirty to thirty-five million; that is merely hearsay; I don't know that to be definite.

Q. You know it is somewhere in that neighborhood?

A. Yes, sir.

Q. What is the capacity of the Saginaw-Manistee?

A. Equally as much, if not more; I think fifty to fifty-five million.

Q. Annual cut?

A. Yes; that is merely hearsay.

Q. That is what you understand?

A. Yes; I don't know definitely.

Q. Are there any other lumber mills in Arizona of any
3323 size and importance outside of the Cady mills and Saginaw-Manistee Lumber Company and the Arizona Lumber & Timber Company?

A. No, sir; not of any importance.

Mr. BURR. How about the Breece Lumber Company?

A. They are in New Mexico.

Mr. WOOD. So the Cady Lumber Corporation produces more lumber and sells more lumber than all the lumber companies combined in Arizona; is that true?

A. Yes, sir.

Q. What is the capacity of the White Pine Lumber Company?

A. The capacity is between ninety and one hundred million.

Q. Is the White Pine Lumber Company operating at the present time?

A. No, sir; only in the logging.

Q. That is, you are in preparations for operation?
A. Yes, sir.
Q. How long was the period of cessation of operation of the White Pine Lumber Company?
A. Approximately eighteen months.
Q. So how long then did the Southwest Lumber Sales Corporation actually sell any lumber for the White Pine Lumber Company?
A. About the first six months, six to eight months.
Q. About the first six months of 1928?
A. Yes; that is, if the life of the Southwest Sales.
Q. That was organized in 1928?
3324 A. 1928.
Q. In selling lumber for the Cady Lumber Corporation did the Southwest Lumber Sales Corporation bill lumber direct or how was it billed?
A. The Cady Corporation billed their lumber direct, and the Standard the same way, and the White Pine the same way.
Q. Then you simply acted as a selling agent?
A. Yes, sir.
Q. And placed orders with the various mills?
A. Yes, sir.
Q. Solely?
A. Yes, sir.
Q. For what purpose is the Pinus ponderosa of Arizona and New Mexico marketed?
A. All purposes of building construction, including sash and doors and material finish, railroad materials.
Q. What lumber is principally used, if you know, for constructual purposes throughout the Southwest, what pine is principally used?
A. Arizona white pine and California pine.
Q. Is it used for constructual purposes at all in Kansas?
A. Well, there is a distinction there between the constructual and general uses, the white pines don't go to the constructual materials, it is more for sheeting material, finish, more of a light construction.
Q. It is used for exterior purposes?
3325 A. Yes, sir.
Q. It is used in New Mexico for building purposes, is it not, outside construction?
A. It is used all over the country for structural work, for building purposes.
Q. I don't know as I quite understand your first answer. I asked you if it was used for building purposes, outside construction, in Kansas?
A. Yes, sir.
Q. And in Colorado is it used?
A. Yes, sir.
Q. And what other States?

A. All States east of California with the exception of the Western Central States, which would take in Minnesota and the States west on account of the freight rates, and it goes as far east as Maine.

Q. Have you had opportunity to observe its durability and structural strength of ponderosa pine?

A. Yes, sir.

Mr. BURR. I wish you would develop what opportunity he has had to observe it.

A. Just in a general way of observing the buildings all over the country; my observation of their life and so forth.

Mr. WOOD. What would you say as to the durability and structural strength of ponderosa pine?

A. You mean as compared to others?

3326 Q. No; as to its general suitability for those purposes?

A. It is absolutely practical.

Q. And satisfactory?

A. Absolutely satisfactory.

Q. Is there any Idaho pine or Pinus strobus sold throughout Kansas, Texas, New Mexico, Arizona, or any of the s'-called Southwestern States?

A. In Kansas I would say in very limited quantities; the other States I have never run across it.

Q. Is any sugar pine sold throughout this territory?

A. Yes, sir.

Q. Where is that sold?

A. Generally through the sash and door concerns, I might add foundry work and for pattern work.

Q. Is it sold for any other purposes you know of?

A. Sugar pine?

Q. Yes.

A. Well, it could be but I don't know in particular.

Q. Would you say there is a bunch of it sold throughout this territory?

A. I would say quite a quantity; yes.

Q. In New Mexico?

A. Yes.

Q. It is sold primarily for pattern work and for sash and door work, is it not?

A. Generally, and special door, what you call a French door.

3327 Q. Is it sold for the ordinary sash and door in New Mexico?

A. Yes; but the comparison is that it is more expensive than the California white pine and Arizona white pine and it is only used in particular places on account of the price.

Q. What particular places is it used?

A. Making a French door, pattern work, things of that kind. It answers the purpose much better and they pay a better price for it.

Q. How does it answer the purpose better?

A. Well, I think it is easier worked and there is more of the thick lumber in the sugar pine than there is in the pondosa, California or Arizona, and it works out easier and better for a French door or for pattern work, it works softer.

Q. What is a French door?

A. That is a door that has four stiles, the center part is generally always windows, that is the opening, and the stiles aren't very well supported.

Q. What lumber is used here for the panel door?

A. California white pine, Arizona white, or the pondosa.

Q. Is yellow pine sold in this territory to any extent?

A. Yes, sir.

Q. For what purposes is it sold?

A. General building purposes.

Q. Interior work at all?

A. Yes, sir.

3228 Q. For what interior work?

A. Interior trim.

Q. And by yellow pine, what species of pine have you in mind, the southern yellow pine, the shortleaf and longleaf?

A. The shortleaf and longleaf, both; yes.

Q. Is it sold in competition with the Pinus ponderosa at all?

A. Yes and no; in certain districts they prefer yellow pine and they haven't come to the white pine yet, and the thing is reversed in other districts, they prefer the white pine to the yellow pine.

Q. For the same purposes?

A. For the same purposes.

Q. Have you ever had any complaints from your customers in selling them ponderosa pine as named white pine or Arizona white pine, that they thought they were getting another species of lumber?

A. No, sir.

Q. Have you ever known or heard of any jobbers, retailers, or wholesalers, or any other person during your lumber experience when buying Pinus ponderosa under the designation of New Mexico white pine, Arizona white pine, California white pine, or western white pine, who at any time said they believed they were receiving sugar pine, Idaho white pine, or Pinus strobus?

A. No, sir.

Q. Have you ever known or heard——

3329 Mr. BURR. I wish counsel would be a little careful on the leading business. I think that is rather an extremely suggestive question, or, rather, four or five questions in one.

Q. Have you ever known or heard of any wholesalers who bought Pinus ponderosa under the designation of New Mexico white pine, Arizona white pine, California white pine, or western white pine who said that he had purchased the same for purposes for which it was ill adapted and that he believed when he so purchased it that he was buying some other kind of so-called genuine white pine?

A. No, sir.

Q. Have you ever heard of any jobber that so stated?

A. No, sir.

Q. Have you ever heard of any retailer that so stated?

A. No, sir.

Q. Have you ever heard of any other person that so stated?

A. No, sir.

Q. Did you ever know or hear of any builders who at any time said they were misled as to the advoccay, recommendation, adoption, or use of Pinus ponderosa because it was called white pine with or without the designation of New Mexico, Arizona, western, or California?

Mr. BURR. I object to that on the ground it calls for hearsay testimony solely.

Examiner BRULER. It really means has he ever heard any
3330 reports of that kind. I think it is proper.

Mr. BURR. Ask him if any person of that type, any builder, has ever complained to him, rather than such a broad question, whether he has ever heard of any such complaint having been made to anyone.

Examiner BRULER. I think he can answer the question, if you ask him whether he has heard such complaint made to him; I think it is a good question. It is a little broad, but he can answer.

Mr. BURR. Take an exception.

Examiner BRULER. Exception allowed. Go on and answer.

A. No, sir.

Q. Did you ever hear of any architect who said that he was thus misled?

Examiner BRULER. I think you had better put that, Have you heard any architect make the statement.

Q. Have you ever heard any architect make the statement that he was thus misled?

A. No, sir.

Q. Did you ever hear any of your consumers make such a statement?

A. No, sir.

Q. Or any consumers?

A. No, sir.

Q. Did you ever hear that any jobber misrepresented Pinus
3331 ponderosa as some other kind of white pine in selling the same?

A. No, sir.

Examiner BRULER. I think you are getting a little broad there.

Mr. BURR. I object to that; it calls for a conclusion.

Examiner BRULER. Yes; the questions are not properly framed. There you are asking if he has ever heard in a general way; that is too broad. Ask him his knowledge in regard to the matter.

Q. Do you know of any case——

Examiner BRULER. That is right now. That is different.

Q. Do you know of any case where a wholesaler, retailer, or jobber at any time sold Pinus ponderosa to his customers representing the same to be Idaho white pine, sugar pine of Pinus strobus?

Mr. BURR. That should be confined to his own personal knowledge.

Examiner BRULER. As to his personal knowledge; that is correct.

A. No, sir.

Q. Did you ever know at any time of any wholesaler, retailer, jobber or any other person delivering Pinus ponderosa upon an order of purchase calling for Idaho white pine, sugar pine, or Pinus strobus?

Mr. BURR. I think these questions are all highly leading.

Examiner BRULER. They are a little leading, but he may answer. He is an intelligent witness; he is not going to answer anything he doesn't know. You may answer.

3332 A. No, sir.

Q. At any time that you have been in the lumber business, has any manufacturer or dealer in Pinus strobus, sugar pine, or Idaho white pine made any complaint to the Cady Lumber Corporation, the Standard Lumber Mills, the White Pine Lumber Company, or the Southwest Lumber Sales Corporation because of the use by them of the terms Arizona white pine or New Mexico white pine?

Mr. BURR. I think that should be confined to the complaint made to him.

Examiner BRULER. You must only answer those things which you know of your own personal knowledge.

A. Not to my personal knowledge.

Q. Has it at any time been brought to your attention that such complaint or objection was made to the Cady Lumber Corporation?

A. No, sir.

Q. To the Standard Lumber Mills?

A. No, sir.

Q. To the White Pine Lumber Company?

A. No, sir.

Q. To the Southwest Lumber Sales Corporation?

A. No, sir.

Q. Has at any time any manufacturer or dealer in Pinus strobus, sugar pine, or Idaho white pine requested you to

3333 desist from the use of the term Arizona white pine or New Mexico white pine?

Mr. BURR. If the examiner please, these are the most leading questions I have encountered in quite a number of my travels. I think these are all objectionable. As I have suggested, there is a suggestion made there that he answer no to a combination of four or five questions, and it seems to me that counsel is doing practically all the testifying; it doesn't take anything but merely an automatic thought to supply the answer.

Examiner BRULER. There is a lot of truth in what Mr. Burr has said. This is an intelligent witness; he is only going to state what he knows; he isn't going to state hearsay.

Mr. BURR. The rule is all the stricter in regard to hearsay testimony in regard to intelligent witnesses.

Examiner BRULER. I understood your objection was directed to whether it was leading or not.

Mr. BURR. Absolutely. That is the fundamental reason for the rule against leading questions.

Mr. WOOD. These allegations were made specifically in the complaint. I am sim'ly asking him if they are true or not.

Mr. BURR. I now object upon the further ground which counsel has suggested, namely, this is the sum total virtually of the thing the Commission itself has based this complaint upon and which the Commission itself has to pass upon; he is asking for conclu-

3334 sions which it is the duty of the Commission to pass upon.

Mr. WOOD. I am asking him if at any time any manufacturer or dealer has asked him to desist from the use of the term.

Examiner BRULER. Let's go back to the question, please.

Q. Has at any time any manufacturer or dealer in Pinus strobus, sugar pine, or Idaho white pine requested you to desist from the use of the term Arizona white pine or New Mexico white pine?

Examiner BRULER. You may answer that yes or no.

A. No.

Q. Or requested the Southwest Lumber Sales Corporation to desist from such use?

A. No.

Examiner BRULER. If you know.

Q. So far as you know, has any such request been made to the Southwest Lumber Sales Corporation?

A. No.

Q. Has at any time any manufacturer or dealer designating their product as Pinus pondosa made any complaint or objected to you because of the use by the Southwest Lumber Sales Corporation of the terms New Mexico or Arizona white pine?

A. No.

Mr. BURR. Strike the word Pinus and let it go pondosa.

Q. Yes; pondosa.

Mr. BURR. Strike the word Pinus out of that question, please.

3355 Q. Have at any time any manufacturers or dealers in lumber in Pinus ponderosa designating their product as pondosa requested the Southwest Lumber Sales Corporation or yourself to desist from the use of said designation?

Mr. BURR. That should be confined to your own knowledge.

Examiner BRULER. Yes; of your own knowledge.

Mr. BURR. And I object again on the ground it is leading, and take an exception to the examiner's ruling.

Examiner BRULER. Exception allowed.

A. No.

Q. How do your customers order Pinus ponderosa? What terms do they use in ordering it?

A. Principally Arizona white pine.

Q. That is the way they ask you for it?

A. Yes.

Q. Do they ask for it as yellow pine?

A. No.

Q. Or as western yellow pine?

A. No.

Q. Have you any objection to the use of the term pondosa pine?

A. Yes.

Q. What is your objection?

A. Because the general trade use is Arizona white pine; they are more familiar with it.

Q. Have you any objection to the use of the term yellow
3336 pine or western yellow pine?

A. Yes.

Q. Why?

A. Confusing the Southern yellow pine with it.

Q. Have you any objection to the use of the term soft pine?

A. Yes.

Q. Why?

A. Because it is better known as Arizona white pine.

Cross-examination by Mr. BURR:

Q. Now, the manufacturers of ponderosa pine in Arizona, some of them do use the term soft pine or Arizona soft pine, do they not?

A. Yes.

Q. And are making sales under that nomenclature?

A. Sure.

Q. In your advertising for the Southwest Lumber Sales Corporation you have used the word pondosa yourself largely?

A. The Pinus ponderosa under the name of the Arizona white pine.

Q. You have used the word pondosa in connection with it?

A. Also used the word pondosa in connection with it.

Q. Does your trade sometimes ask you for pondosa?

A. No; mostly for Arizona white pine.

Q. They do occasionally ask for it under the name pondosa?

A. No, sir.

3337 Q. The Southwest Lumber Sales Corporation used the slogan "The pick of the pondosas", did they not?

A. Yes.

Q. That was advertised quite widely and published in your circular material, was it not?

A. Yes.

Q. So you don't object to the use of the word pondosa entirely?

A. Yes.

Q. You think it was a mistake to call it "The pick of the pondosas"?

A. Yes; I can explain that to you. During the first six months of the Southwest Lumber Sales Corporation, it was handled by Mr. Hobbs, it is really his idea, since I took over the sales we discontinued the use of the word pondosa entirely and use Arizona white pine only.

Q. Was Mr. Hobbs still with the company?

A. He was the first six months with the corporation.

Q. He was president while you were vice president?

A. Yes; when I became president we discontinued the use of "The pick of the pondosas."

Q. Have you discontinued the use of the word pondosa entirely from your advertising?

A. Practically; yes.

Q. What do you mean, "practically"?

A. I would say entirely.

3338 Q. Why did you say practically first, then? I didn't quite understand you.

A. I will modify that and say entirely.

Mr. BURR. I think, if the examiner please, I will ask the witness if these are advertisements and price lists gotten out by the Southwest Lumber Sales Corporation during the time that he was connected with the organization.

A. This is during Mr. Hobbs' time.

Q. You were at that time vice president, however?

A. Yes.

Examiner BRULER. You had knowledge of the fact they were gotten out then?

A. Yes.

Mr. BURR. I now ask that the papers which the Commission has identified, consisting of six pages, be received and marked as Commission's exhibit for the record, number 52.

(Marked "Commission's Exhibit No. 52.")

Q. Does the ponderosa pine differ considerably in different parts of its range?

A. Yes.

Q. Does it differ in this Arizona and New Mexico range according to altitude and other features?

A. Altitude principally.

Q. Now, did you regard your "The pick of the pondosas" as erroneous advertising?

3339 A. That was Mr. Hobbs' idea and not mine.

Q. Was it erroneous in point of fact—do you regard yours as better than California?

A. In some respects; yes.

Q. Now, in what respects would you regard it as superior to the California ponderosa?

A. The texture of our ponderosa is softer than the California.

Q. Now, is the percentage of heart and sap a matter that you have noticed in connection with your experience?

A. Pertaining to what?

Q. Pertaining to ponderosa tree. First, referring to Arizona, have you noticed how much a portion of the lumber is heart and how much is sap?

A. That varies, so it would be hard to answer that question.

Q. Do you mean it varies in Arizona widely?

A. It varies over the entire ponderosa district.

Q. In each section or forest, so you couldn't give an estimate?

A. I haven't figured out the percentage.

Q. It varies in different trees of the same stand, you mean?

A. That would also follow.

Q. Now, at the time of your experience up until 1925 in the so-called inland empire, was there a great variety of different names used for ponderosa?

A. Yes.

Q. The word pondosa was not used until you were about
3340 leaving there; is that true?

A. I can't refer to the date—I do know, too—but it was a movement by the Western Pine Manufacturers' Association mills to get away from the confusion of the Idaho white pine.

Q. Do you happen to know whether or not it was brought about in part from the proceeding or several proceedings brought by the Federal Trade Commission at that time?

A. I don't recall that.

Q. Now, your present product from Arizona and New Mexico points, you say that goes clear to Maine, if I understood you correctly?

A. Yes.

Q. How long has that been true?

A. During my experience with the Southwest Lumber Sales Corporation and previous to that, and with the White Pine Lumber Company.

Q. What percentage of your sales would you say is made to retailers? First, let's take the industrials; how large a percentage to the industrials?

A. I would say twenty-five percent to the industrials.

Q. That includes the sash and door?

A. No; the industrials would include the low-grade lumber. The sash and door isn't included in the industrials.

Q. Take the mill manufacturers?

3341 A. The sash and door?

Q. Yes.

A. Not over—what we call shop lumber wouldn't go over ten percent.

Q. You are including in that all the finishing?

A. Finishing, sash and door, interior finishing, and things like that.

Q. You also sell to jobbers?

A. Wholesalers and commission men.

Q. What percentage to wholesalers and commission men?

A. Now, of course, I am including the sales direct to the trade through the wholesalers or commission men; all our business is handled through wholesalers and commission men.

Q. Most of the rest, that would go about sixty-five percent, then?

A. I am estimating the amount of lumber would be consumed by the sash and doors, all the amount of that particular grade is purchased, of our particular timber.

Q. The wholesale and commission men sell to finishers?

A. Yes.

Q. And industrials also?

A. Yes.

Q. Practically your whole distribution is through wholesalers and commission men?

A. Yes.

Q. And they in turn sell to retailers, industrials, and mills?

3342 A. Yes.

Q. I think you testified the Santa Fe Railroad used ponderosa for ties?

A. Yes.

Q. They treat those before use?

A. Yes; they use some of them without being treated.

Q. Creosote, is it, they treat them with?

A. Yes.

Q. The great majority of them are creosoted or otherwise treated?

A. Practically all. They use some for just temporary work, is what I had reference to.

Q. Did you testify any other railroad uses them?

A. The Santa Fe is all we can reach through here.

Q. You would testify positively, would you, that Arizona and New Mexico white pine averages softer and whiter than the California white pine?

A. I should say so; yes.

Q. Does it average softer and whiter than the California white pine from certain selected districts, such as Klamath Falls and Modoc County?

A. I should say so, because our stuff runs to a pinkish color rather than yellow.

Q. Does it discolor and turn darker with exposure to light?

A. Yes; that is characteristic of all pines.

Q. It is characteristic more of ponderosa than strobus, is it not?

3343 A. Yes.

Q. It is more characteristic of strobus than lambertina?

A. Yes.

Q. And the same would be true in contrast with the monticola?
A. Yes.
Q. I think you said the bulk of timber in which the ponderosa is found in this general latitude begins about *about* seven thousand feet elevation?
A. Yes.
Q. How high up does it go?
A. Nine to eleven thousand is where the timber comes from; we start at about seven and from there *ot* goes as high as nine to eleven thousand feet.
Q. It runs from seven to eleven thousand?
A. Yes.
Q. But the best is from nine to eleven thousand?
A. Yes.
Q. How is the timber on the average from seven up to nine, how does it vary from that up to eleven?
A. I would say around seven to nine is more exposed and nine to eleven more dense, which has a tendency to improve the quality.
Q. You mean higher up?
A. Yes.
Q. How does it differ in lumber texture from seven to nine?
3344 A. Because of the moisture and soil and production. It may be in a draw. Seven thousand might be as good as eleven.
Q. But on the average you think the higher up is better?
A. By all means.
Q. What is the difference in the texture of the lower elevation where it grows and the lower elevation where the ponderosa grows?
A. Timber that is exposed is inclined to run more to a pithy type than timber that is dense, due to elements, exposure, and so forth.
Q. Does it run heavier or lighter in size or timber?
A. Not much difference.
Q. That from seven to nine, you don't mean it is timber you don't sell?
A. O, no.
Q. You use it all?
A. Yes; because timber always varies from poor to the best in every locality.
Q. And Arizona white pine now is your universal trade name for the goods since you were connected with it?
A. Yes.
Q. Did I understand you that the trees in the Southwest here are larger than those farther north?
A. No, sir.
Q. They are smaller on an average, are they not?
3345 A. The timber in this district comprises the same as the Bend and Spokane district in size, averages about five, five and a half to a thousand feet, figuring on sixteen-foot logs.
Q. How does it run to the grade?
A. Runs about the same as the Northwest.

Examiner BRULER. What would be the size of an average log in timber?

A. One hundred and fifty feet in footage, an average of about sixteen inches.

Examiner BRULER. About sixteen inches?

A. Yes; that runs, of course, from twelve to thirty-six.

Mr. BURR. In your observation of the durability of Arizona white pine, have you been able to watch specific buildings over a period of years so as to be able to tell what the durability where exposed to the weather was?

A. The best illustration I have of that is in visiting the old pueblos through this district. One Indian mission at Jemez Springs destroyed in 1680, I think the date is, there is wood sills still exposed that are still intact. I mean wood sills still intact.

Q. Built in 1680?

A. Destroyed in 1680. Those are the things of my personal observation of the age of this particular wood in this district.

3346 Q. Did you check up whether it was ponderosa or not?

A. Yes.

Q. It naturally would be in this locality?

A. Yes.

Q. Does any sugar pine grow over here?

A. No.

Q. Any jeffrey pine here?

A. No.

Q. Where was that observation of the building that was destroyed in 1680, where was that mission?

A. Forty-five miles north and west of Bernalillo, or about seventy miles northwest from Albuquerque.

Q. Do you know about what altitude that is?

A. I should judge about seven thousand feet.

Q. Humidity is rather lacking there?

A. Yes.

Q. That has a tendency to preserve wood, does it not?

A. Yes.

Q. Do you know what the rainfall is over there?

A. I haven't the least idea.

Q. Now, when you refer to the yellow pine and the confusion that would result if this wood were called by some trade term of pine including the word yellow, you refer more to the longleaf than you do to the shortleaf; do you not?

A. No, sir.

3347 Q. The shortleaf really is a lighter, softer wood than the longleaf?

A. Yes.

Q. Does the shortleaf compete for sash and door business with the Pinus ponderosa?

A. Yes, sir.

Q. It competes a good deal more than the longleaf; does it not?

A. Yes, sir.
Q. Do you yourself travel in the eastern territory?
A. Last year I put in sixty percent of my time East.
Q. And whom did you call upon in that connection?
A. The wholesalers, commission men, industrial, sash and door, retail yards.
Q. What part of the country did you travel in?
A. As far north as Milwaukee and as far east as Boston.

Redirect examination by Mr. Wood:

Mr. Wood. There are two things I would like to ask about that I didn't think to ask on direct.

Examiner Bruler. All right, go ahead.

Q. Is there any Pinus ponderosa brought in from the Republic of Mexico and sold in the Southwest?
A. Yes, sir.
Q. What is it called?
A. We call it the Madera pine and the Mexican pine.

3348 Q. Do they use the word white in connection with it?
A. Yes; Madera white pine.
Q. They call it Madera white pine?
A. And Mexican white pine.
Q. And is it sold in competition with the Arizona and New Mexico white pine?
A. Yes.
Q. Do you know how much is brought into this country?
A. I couldn't say off hand; the mill produces between twenty-five and thirty million a year and most of it goes into El Paso.
Q. Do you know where that maill is located?
A. I think they call it Madero, Old Mexico.
Q. Do you know the name of the company?
A. That is the old Pierson interests, that is the Pierson interests own that.
Q. The Pierson Lumber Company?
A. No; the Pierson interests own that; I think it goes under the name of Madera White Pine Lumber Company of El Paso.
Q. Is the Arizona white pine and New Mexico white pine sold for box purposes here in the Southwest?
A. Yes, sir.
Q. For what purposes?
A. Vegetable crates of all kinds, crating of all kinds.
Q. Was at any time the yellow white pine sold to the Southwest for that purpose.

3349 A. In the lower Rio Grande country, yes.
Q. Do you know if it is still used for that purpose?
A. Practically, no.
Q. What do they use now where they used to use yellow?
A. California and Arizona white pine.
Q. Do you know why the change was made?

A. On account of the whiteness of the lumber made a better looking package for sale.

Q. Is that the only reason?

A. It is lighter for shipment; easier to nail on the end without splitting.

Q. Than the yellow pine?

A. Yes.

Q. What is the altitude of the timber of the Cady Lumber Company?

A. From seven to eleven thousand feet.

Q. Do you know the altitude at which they have been cutting since you have been with the organization?

A. Recently around nine thousand.

Q. Have they been cutting around that for some time?

A. Yes.

Q. What is the altitude of the timber of the White Pine Lumber Company?

A. Between seven and eleven thousand feet.

Q. What is the altitude where they are now logging?

A. About eight thousand feet.

3350 Q. Is the term pica pondosa used at all at the present time?

A. No, sir.

Q. Is this a form of price-list quotation gotten out by the Southwest Lumber Sales Corporation?

A. Yes; it was discontinued since I took charge.

Q. I refer now to the price list and ask you if these are the price lists now used?

A. No, sir; not now.

Q. These are not the forms?

A. No.

Q. That is an old form. This is the form that is now used?

A. None of these forms have been in use for a year and a half.

Q. Are these the same things I gave you?

A. Practically the same.

Q. Then I guess I haven't any present forms?

A. We haven't any present forms in this bunch; I discontinued all that when Hobb went out.

Q. And you simply now advertise your product as Arizona white pine?

A. Arizona white pine.

Q. And invoice it as such?

A. Yes.

Re-cross-examination by Mr. BURR:

3351 Q. Now, this Madera white pine comes from what State down there, if you know?

A. I think the State of Chihuahua.

Q. That is a still higher elevation than yours?

A. About the same, Mr. Burr. I can't talk as intelligently about that as I can locally; I haven't been down there.

Q. Where is this with reference to the New Mexico white pine?

A. The same stand, virtually.

Q. Is that a fairly soft textured material?

A. Yes.

Q. About the same quality of yours?

A. About the same quality; it runs more to the brownish in color.

Q. These people that sell that, is that American capital?

A. Yes.

Q. They sell from El Paso?

A. Yes.

Q. Sell all through the State and ship from El Paso?

A. Yes; their trade, however, is confined principally to the local situation rather than the eastern markets.

Q. Are the people that sell it at El Paso the same concern that manufacture it, if you know?

A. Yes.

(Witness excused.)

3352 PABLO ABEYTA was called as a witness for the respondent and, having been first duly sworn, testified as follows:

Direct examination by Mr. RYAN:

Q. Your name is Pablo Abeyta?

A. Yes.

Q. How old are you?

A. I will be sixty years come February.

Q. Where were you born?

A. In the Pueblo of Isleta.

Q. What tribe of Indians do you belong to?

A. Generally, the white people call us Pueblo Tribe, although that is no tribe whatever; it is just simply a name of the white people, I suppose, because pueblo is a Spanish word for town, and, I suppose, the first missionary that came into this part of the country found my ancestors living in fixed homes, the same as they do today; they probably said, "Here is a pueblo and these are pueblo Indians"; so the Indians did not care, and they do not care today; so we remain as Pueblo Tribe.

Q. You live in the Pueblo of Isleta?

A. Yes.

Q. Where is Isleta from Albuquerque?

A. Thirteen miles south of Albuquerque.

3353 Q. How far is it from the Rio Grande?

A. It is on the western bank of the Rio Grande; originally, the river was on the west side.

Q. The Rio Grande runs along the side of the town, almost through the town?

A. Yes; it runs now on the east side of the pueblo; about one hundred and fifty years ago it was on the west side.

Q. It is on the bank of the Rio Grande?

A. Yes.

Q. Where were you educated, Pablo?

A. I started to school here in Albuquerque in the county school conducted by the Jesuits, then went to Santa Fe to Saint Michael's College.

Q. Have you ever held any official position in your pueblo, in the political government of the pueblo?

A. Yes, sir; I have been a member of what they call the principalus for forty years now, and I have held all the local offices that the pueblo has a good many times.

Q. You have been governor of the pueblo, too?

A. Yes.

Q. That is a position recognized by the Federal Government, is it not?

A. Yes.

Q. Have you made any special study of the history and traditions of your people?

3354 A. Well, I am one of the members who—I don't know what you would call it, we are learned in tradition and history. When I was only a young boy there was five pupils, we were taught the tradition and history by five masters and my master was number 1. When I thought I had it complete then I had to go and recite it to master number 2, then again to master number 3, 4, and 5, and back again to my own master to see if there was any word that was left out.

Q. In that manner you kept alive the traditions of your people at Isleta?

A. Yes.

Q. Have you written any book on the history or tradition of the Isleta pueblo?

A. I have been writing a book for the last 30 years now, but I haven't finished and I don't expect to finish it or publish it as long as I live.

Q. You expect it to be published after your death?

A. If my will is followed out it will probably be published in about fifty or seventy-five years.

Q. How old is the pueblo of Isleta?

A. Traditional history in part recites this of the pueblo, that twenty-three generations of pueblo Indians life had already existed in it when the news was brought in telling of the arrival of strange people in big boats with houses built on them with wings white as snow, that came into this country, we had already been there
3355 twenty-three generations. We figure twenty-two years to a generation.

Q. When did the tradition show the strangers arrived in the vicinity of Isleta, what was your calculation?

A. That would be close to five hundred years ago. Tradition doesn't state they came close to Isleta; it states they came into this country of ours.

Q. Whose expidition was that? As a matter of history, wasn't it Coronado's?

A. We call that the coming of Columbus, because the messenger brought in the news after many weeks of travel from the South and East. He said big boats with houses built on them and these boats had wings; I suppose they meant the sails.

Q. That is referring to the original landing of Columbus?

A. Yes.

Q. There is a church at Isleta, is there not?

A. Yes.

Q. How old is that church?

A. Traditional history also recites that the church was under construction twenty-two years and was already what the Indians term two men's head high, that is, one man on top of another man, it was already that high when orders came from Santa Fe to let this go and start the one that they call the San Miguel, which they claim to be the second oldest church in the United States; ours was started twenty-two years before San Miguel, although ours was
3356 finished after San Miguel.

Q. The San Miguel Church in Santa Fe?

A. Yes.

Q. Are you acquainyed with the trees that grow in this vicinity, the pine trees and the fir and other trees?

A. Some of them.

Q. You know the pine tree?

A. Yes.

Q. And know the names they are called?

A. Yes.

Q. You know the fir, spruce, pine, and timbers from them?

A. Yes.

Q. What do the Indians call the pine that grows in this country?

A. We have an Indian name, of course, for most all of the trees grown; we call in the Indian language wee-patu, that is the white pine.

Examiner BRULER. How do you spell that?

A. W-e-e patu, I don't know how to spell that.

Mr. BURR. We will stipulate the spelling is wee-patu.

Q. What did the Spaniards call the white pine?

A. Pinavete.

Q. Are there beams used as vigas or beams in the structure of the church at Isleta?

A. We have this white pine.

3357 Q. You have vigas or timbers on the roof for support?

A. Yes.

Q. What tree is that timber from?

A. Those in the church, the big ones are this white pine.

Q. They are the white pine vigas?

A. Yes.

Q. Do you know how long those vigas have been in that church?

A. According to the Indian tradition that church has been roofed three times and the last time it was roofed was somewhere around 1844 and it was claimed by the old people that when this third roof was put on they used about three or four of the former vigas that they had on the second roof, and they claimed these to have been more than fifty years old.

Examiner BRULEY. Where they boards or shingles?

Mr. RYAN. The cross beams they put across the roof of the house they call vigas.

Examiner BRULEY. I thought you were talking about the roofing.

A. We build our four walls and put the vigas across.

Q. And the vigas which were put in that church in 1844, you say they are still there in that church?

A. Yes.

Q. Have you examined their condition as to whether they are well preserved or in decay, recently or at any time?

A. In 1914 we put this new cone-shaped roof for protection
3358 because it used to leak and we uncovered most all of those vigas and they are in a pretty well preserved condition.

Q. Did you notice any evidence of decay on any of the vigas?

A. Very little, except what there was outside of the walls sticking out where it rained on it, it showed a little decay, not much.

Q. What material are the walls of that made of?

A. Mud.

Q. That is, adobe?

A. Adobe.

Q. And the ends of some of these vigas were embedded in the adobe?

A. When they are about ready to put the vigas or the roof on they generally lay another viga along the length of the wall and then put those crosspieces, vigas, on top of it, and of course that only holds about so much of that viga on the top of the other viga and the rest of it lays on the mud.

Q. You say the only evidence of decay observable in the vigas was that place where the viga rested in the adobe or mud?

A. Yes.

Q. And the rest of those vigas, what was their condition?

A. They are pretty good.

Q. Well preserved?

A. Well preserved.

Q. How about the homes and houses of your people in Isleta, what construction are they?

3359 A. They are the same; the houses are built of the same material, this adobe, excepting the very old houses, they are built with this sort of thing we call caliche, it is lava formation of malpai rock.

Q. What sort of timber do they have in them?
A. The same kind as on the church.
Q. White-pine timbers?
A. Yes.
Q. Are they used as vigas?
A. Yes.
Q. Do you know of any old vigas in any of the homes in Isleta at this time?
A. The house where I live, my father used to tell me that he didn't know whether his grandfather or great-grandfather built the house, and it is still in good condition.
Q. How old, then, would you say your house is, as far as you know?
A. Over one hundred and fifty years old.
Q. And there are vigas used in the construction of that house?
A. Yes.
Q. Were those vigas ever changed?
A. No, sir.
Q. Of what timber are they?
A. White pine.
Q. What is the condition of the vigas as to preservation?
A. They don't show any decay at all.
3360 Q. No signs of decay?
A. No signs of decay—that is, where it is outside—it might be those that are covered with mud, it might be a little decay, but they have a lot of weight on top of the vigas; if the vigas were decayed it would cave in.
Q. Those vigas are cross beams put from one wall to the other?
A. Yes.
Q. And they support the roof?
A. Yes.
Q. What is the construction of the roofs of the homes in Isleta, how are they built?
A. The roofs, you mean?
Q. Yes.
A. The very old houses, after the walls were built and the cross pieces, the vigas, laid across, then they put some of this cottonwood tree about the size of an inch and a half pipe, and they covered that, almost covered that roof with those small pieces of wood, and then put some hay on top of that, then covered that all with dirt.
Q. That is, adobe?
A. Yes.
Q. The point I am getting at, are the roofs of heavy construction?
A. Yes; in some places about eight or ten inches of adobe on top.
3361 Q. And the vigas support the roof?
A. Yes.
Q. Now, you mentioned your home. Are there other homes that you know of in Isleta of like age?

A. Practically, I suppose, all of them are that same build.

Q. Do they use the viga, too, as a cross beam to support the roof?

A. Yes.

Q. And from what lumber are those vigas made?

A. White pine.

Q. White pine, then, is generally used in the construction of the homes in Isleta?

A. Yes.

Q. Are they old timbers or are they of recent construction?

A. Well, if a house for some reason falls down the vigas are never damaged, they build the walls again, and use the old vigas over again.

Q. And what is their condition as to being in a state of good preservation or state of decay?

A. There is no rot at all.

Examiner BRULER. How long have they been there?

A. Well, those I have seen there ever since I can remember.

Mr. RYAN. What is the altitude of Isleta compared with the altitude of Albuquerque?

A. It might be one hundred or two hundred feet difference.

3362 Q. Practically the same altitude?

A. Yes.

Examiner BRULER. What is Albuquerque?

Mr. RYAN. A little less than five thousand, a few feet less, by the Geological Survey, practically five thousand.

Q. Now, Isleta is built along the banks of the Rio Grande?

A. Yes; well, it is built on a mesa all around, the river run at one time on the west side.

Q. The Rio Grande has changed its course?

A. Yes; and the Indians broke that bank on the east side because the Indians always used to go to the river in the morning to what they call wash their faults away and pray to the rising sun. Well, they didn't like to do that, wash their faults away, with the sun on their back, so they broke the east bank according to the Indian tradition and let the water through, but the water stayed all around, even after the missionaries came, and I just suppose that when the missionaries came, I suppose they saw the village standing on an island surrounded by water and they called it Isleta, that is the Spanish name for little island.

Q. How do you people live, agriculture?

A. Yes.

Q. And you farm all around Isleta?

A. Yes.

Q. And is the rainfall sufficient for your farming or do you use water for irrigation?

3363 A. We use water for irrigation.

Q. Is that particular locality a dry or humid one?

A. It is dry at certain times of the years, not very dry the other times.

Q. You are surrounded by the river and by the irrigation canals and acequias?

A. Yes; there is no more water on the west side; the Government built a drainage canal two years ago and drained the water.

Q. And it now goes to the east of Isleta?

A. Yes.

Q. Is the term white pine used generally by your people, by the Indian people in this locality?

A. I don't know what you would call it, but in some sort of ceremonies, if a party went into another person's house for certain ceremonial doings, he would refer to the four walls, we call it in the Indian way the four walls of his house, and they would refer to two, three, four, and five vigas; they call it the white pines; they ask for forgiveness for having intruded into this home of this man for certain ceremonies, and refer to these vigas and to the walls.

Q. What is the tradition of the name of this particular tree
3664 which you gave the Indian name for, the English equivalent of white pine; how long has that term been used as applied to the tree?

A. That would be very hard to tell; there would have to be a lot of Indian tradition, it dates back, a long ways back, before the coming of these strange people.

Cross-examination by Mr. BURR:

Q. Does the Indian word for this pine include the idea, white? Does it include a word meaning white?

A. Patu means white.

Q. Now, these vigas, as I understand it, the end is covered with adobe, is that right; the house is all covered on the outside with adobe?

A. Yes.

Q. Including the end of the viga, is that right?

A. Yes.

Q. The outside where the viga comes will be up and down wall of adobe?

A. Yes.

Q. Straight up and down?

A. Yes.

Q. These cottonwood roofs are covered with adobe on the outside, are they?

A. Just the ceiling of it. You see, they are covered first with
3365 hay, a certain grass that grows up high, and they cover that up tight, then put dirt on top. Put a piece of cottonwood tree under the ground and in three months it is rotten.

Q. How long do these cottonwood pieces last; you have to replace them every little while?

A. As long as it doesn't touch the clay or dirt it doesn't rot.

Q. They will last indefinitely?

A. Yes.

Q. All the time?

A. Yes.

Redirect examination by Mr. RYAN:

Q. This adobe roof you use, it is put on the cottonwood branches or poles which are then covered with hay, much as you lay cement, isn't it?

A. They way they do that, of course first they put the vigas, then put the cottonwood like my finger this way, then cover that up with this grass and hay, cover it such a thickness [indicating] and then put this common clay.

Q. Now, you live on the roofs of your homes a great deal, walk upon the, don't you?

A. O, yes.

Q. So that the roof is really used from the top as a floor?

A. Yes.

(Witness excused.)

3366 (At this time an adjournment was taken until 2 p.m.)

CHARLES H. LEMBKE was called as a witness for the respondents and, having been first duly sworn, testified as follows:

Direct examination by Mr. WOOD:

Q. What is your name?

A. Charles H. Lembke.

Q. Where do you live?

A. 1418 West Roma, Albuquerque.

Q. What is your business, Mr. Lembke?

A. General contractor.

Q. Where is your business situated?

A. In Albuquerque, New Mexico.

Q. How long have you been in the general contracting business?

A. About ten years.

Q. What was your business prior to that?

A. Masonry contracting.

Q. What is your age?

A. Forty.

Q. During the ten-year period that you have been engaged in the general contracting business in Albuquerque, have you used Pinus ponderosa at all for building purposes?

A. Almost entirely.

3367 Q. For exterior and interior construction?

A. All purposes.

Q. Will you name some of the purposes you have used it for?

A. All purposes that lumber would be used for in building construction; for all purposes for which lumber would be used for construction.

Q. For outside purposes?

A. All purposes, outside and inside, exterior and interior.

Q. Is any other kind of lumber used in New Mexico so far as you know for construction purposes, buildings, other than Pinus ponderosa?

A. What we know as building—Oregon pine, Douglas fir; also southern yellow pine.

Q. For what purposes is southern yellow pine used?

A. We have had it used in sash and door only.

Q. Do you use it at all now for sash and door purposes?

A. Not in the last three years I haven't used southern yellow pine.

Q. Then you use Pinus ponderosa exclusively for sash and door?

A. Yes.

Q. Have you found Pinus ponderosa suitable or unsuitable for building purposes?

A. Very suitable.

Q. Have you ever had any complaints from your customers
3368 regarding the grade of the Pinus ponderosa for building purposes?

A. No, sir.

Q. How long have you lived in New Mexico?

A. Forty years.

Q. Do you know what the public generally call Pinus ponderosa in speaking of it?

A. Native lumber.

Q. Do they ever call it white pine?

A. I would say that it would be known as white pine or native pine.

Q. Whom do you buy your lumber from?

A. The local dealers, local yards.

Q. Do you buy it at all from manufacturers?

A. No, sir.

Q. In ordering it, how do you specify?

A. Native pine.

Q. Do you ever specify white pine?

A. I would say that we did not specify white pine.

Q. Have you ever used the term yellow pine in ordering the native pine?

A. No; we haven't used the term yellow pine; we couldn't get native pine for yellow pine.

Q. Have you ever used the term pondosa pine?

A. No, sir.

Q. Or soft pine?

3369 A. No, sir.

Q. Are you at present building a courthouse, have a contract for building the courthouse at Fort Sumner?

A. We have a contract; it isn't under construction, at Fort Sumner.

Q. What kind of construction is that going to be?

A. That will be a brick building; it will be of wood frame and joist, studding, roof joists.

Q. What kind of lumber will you use for that?

A. Native pine.

Q. Have you just built a high school at Fort Sumner?
A. Yes; it has the southern yellow pine for sash.
Q. And what is the balance of the lumber used?
A. Native pine.
Q. What is it used for?
A. For joists, ceiling joists, studding.
Q. Are you acquainted with any old buildings around here in Albuquerque that are built of Pinus ponderosa?
A. We have dismantled several, wrecked them, I should say. Recently wrecked a brick building with native joists, studding, ceiling joists, roof joist, and my father estimated to his knowledge the building was forty-five years old. It was in very good shape.
Q. What did you do——
A. We used all the lumber in it in new construction.
3370 Q. What was its condition as to rot and decay?
A. None; it was in good shape.
Q. Do you know a residence here called the Frank Mindlin residence?
A. Yes.
Q. Did you ever examine the lumber in that residence?
A. The lumber in that residence is native pine, and it is in good shape.
Q. Do you know how long that residence has been built?
A. Better than forty-five years.
Q. Do you know whether the original joists and studding and sash and doors are still in it?
A. They appear to be the original joists and studding.
Q. That were there when the building was built?
A. They were the original joists and frame in that building.
Examiner BRULER. Does that include the weatherboarding on the outside?
A. Yes.
Mr. WOOD. What kind of weatherboarding is it?
A. That is native pine, joists, studding, ceiling joist, roof rafters; they have never been replaced; that building is about thirty-five or six years old.
Q. How is it made on the outside?
A. It is a brick residence.
Q. Do you know to what extent other contractors throughout
3371 New Mexico use native pine for exterior and interior construction?
A. Yes; that is the local lumber; that is the only lumber that we use.
Q. Do you use any Idaho pine?
A. No, sir.
Q. Or Pinus strobus?
A. Not to my knowledge.
Q. Do you use any sugar pine?
A. No.

Q. Do you know of any other contractors that use those kind of pines?

A. No.

Cross-examination by Mr. BURR:

Q. Now, you say the custom is to build with Pinus ponderosa, as I understand you, in this locality?

A. The native pine; yes.

Q. As a matter of fact, most of the buildings are not built on the outside with lumber at all; isn't that true?

A. It might be classified as a brick town, if that is known that way; we have frame buildings here; all frame buildings are native pine.

Q. Do you happen to know what the rainfall here is?

A. No, sir.

3372 Q. It is quite light, isn't it?

A. Yes; it is an arid State.

Q. And this is an arid part of the State, the same as the rest of it?

A. Yes.

Q. Do you know what the elevation is here, about five thousand feet?

A. Approximately.

Q. That is just about right?

A. Forty-nine hundred and something.

Q. And the humidity is very light, isn't it, very small humidity?

A. Yes.

Q. Those questions of rainfall and humidity have quite an effect upon the lasting quality of wood in any climate, do they not?

A. Yes.

Q. And the less humidity and less rainfall the better chance wood has to endure where exposed to the weather; isn't that true?

A. Yes.

Q. Now, Frank Mindlin's house, how about those sash and door; have you ever examined them to find out whether they are native pine?

A. They are native pine.

Q. You know that to be the case, do you?

3373 A. Yes.

Q. Do you happen to know whether they have ever been replaced or not?

A. They have not.

Q. You know that personally, do you not?

A. Yes.

Q. Did you have anything to do with the construction of that house?

A. I did not have. We altered the house and we took some of the frames out of it. I know they haven't been made in the last twenty-five years.

Q. What did you take them out for?

A. We altered the house, changed the shape of the back end of the house; the frame couldn't be used now; they are odd size.

Q. They were in good condition when you took them out?

A. Yes.

Q. Do you happen to know where they were made?

A. No.

Q. Bought right here in Arizona, were they?

A. They were made right here in New Mexico?

Q. They were New Mexico construction?

A. Yes.

Q. Do you happen to know whether the precipitation here is about eight inches in Albuquerque?

3374 A. No, sir.

Q. You don't know whether that is about right or not?

A. No, sir.

Q. And the weatherboarding outside in Mr. Mindlin's house, that, you say, was Pinus ponderosa, native pine?

A. Native pine.

Q. You are sure of that?

A. Yes.

Q. From examination of your own?

A. Yes.

Q. Do I understand you that you use native pine for strength purposes, for beams and studding?

A. Yes.

Q. And joist and all that kind of thing?

A. Yes.

Q. Do you regard that as strong as the yellow pine of the South, approximately?

A. The price governs this a little more than strength, I believe, we can use a little more of it if we have to.

Q. A little heavier beam and still pay less?

A. Yes.

Q. Do you get any particular kind of native pine, do you make any special specifications as to native pine or just take the ordinary run for strength purposes?

A. Yes; there is no grading on it.

3375 Q. No grade as to density, hardness, or weight?

A. No, sir.

Q. Do you find that the characteristics and quality of it vary from time to time, of the native pine?

A. I say there is no grading—we get a first and second grade of pine; all mills grade their lumber and there is a difference in that; what is given to us as number one common lumber usually runs the same grade.

Q. Do you construct largely for resale purposes?

A. No, sir.

Q. Or are you called upon as a contractor by some man who is putting up his own house?

A. That is the way; we don't build anything for sale purposes.

Redirect examination by Mr. Wood:

Q. What would you say as to whether brick buildings or wooden buildings are more commonly used in Albuquerque?

A. Brick.

Q. For residences?

A. Yes.

Q. That is the last few years?

A. I wouldn't say brick, I would say frame.

Q. What else is used?

A. Hollow tile and adobe.

3376 Q. But frame buildings were formerly used to a great extent?

A. Yes; we have a good many buildings that are stucco buildings, more lumber in them than the average.

Q. Are there many office buildings that are of wood construction?

A. Outside?

Q. Yes.

A. No.

Q. There are some, aren't there?

A. I don't know of any outside timber construction.

Q. Do you know anything about flood conditions here in Albuquerque?

A. Whether we have floods?

Q. Yes.

A. Well, I am not familiar—that is, I have kept no check on it, but we are not subject to floods.

Q. Do you remember a flood here during the course of the last year, an overflow of the Rio Grande?

A. Last year?

Q. Yes; in September and October.

A. Well, very slight, from the overflow of the Rio Grande.

Q. Wasn't there quite a lot of flood water came down from the Sandia Mountains?

A. Yes; but that didn't cover much territory.

Q. It covered parts of the town, did it not?

A. Not in the city limits; it was outside the city limits.

3377 Q. North of town?

A. North of town, yes; it covered quite a bit north of town.

Examiner Bruler. Unless that was shown to be frequent, I don't see what it could have to do with the issues in this case.

Mr. Ryan. Would the court permit me to ask a few questions?

Examiner Bruler. Sure, if you wish.

Q. The country along the Rio Grande Valley, say, from a point at Domingo, near Domingo, to the Elephant Butte Dam, differs greatly from the rest of the State, does it not?

Mr. BURR. I object to that as wholly immaterial.

Mr. RYAN. The question was asked about humidity; I am trying to bring out the point about humidity and its effect on timber.

Examiner BRULER. Go ahead.

A. It is low land, and the subsurface water is very close to the ground.

Q. The water table is very close to the surface?

A. Yes.

Mr. BURR. Whereabouts is this, counsel?

Mr. RYAN. Speaking of the area within the Middle Rio Grande project, which is a project of flood control and drainage, our great problem here is drainage, not humidity.

Q. And the water table is very close to the surface?

A. Yes.

3378 Q. And on account of that water table being so close to the surface, much of the land here is overloaded with water, is it not?

Mr. BURR. I object to the leading of the witness.

Examiner BRULER. It is rather leading, Judge.

Mr. RYAN. To save time; he knows all about it himself.

Examiner BRULER. If he does know about it, he should testify about it.

A. It is all low ground, anybody can see it; the water table is very near the surface, it covers a large area adjoining the river.

Examiner BRULER. Is that country built up of the houses of the wood in question here?

A. Yes; it is all native-pine construction in that area.

Examiner BRULER. Does the water come high enough to reach the wood?

A. Yes; the water is right up above the ground.

Examiner BRULER. Does it reach the wood?

A. Yes.

Examiner BRULER. How often?

A. Well, annually.

Mr. RYAN. This area of land which I have mentioned, would you in brief say the limits of it is covered by the Middle Rio Grande Conservancy District?

A. Yes.

3379 Q. What is the primary purpose of the project?

A. Drainage.

Q. And flood control?

A. And flood control.

Q. So that in this area there is a problem of drainage and flood control?

A. Yes; surface water.

Re-cross-examination by Mr. BURR:

Q. How often do these floods occur?

A. The water table rises annually as the river rises.

Q. What time of year is that?

A. After April each year, the snows come down and the river raises, and the water table raises, of course, all through the valley, and there are some parts of the areas in this Middle Rio Grande Conservancy District that the water rises above the surface and stays there several months.

A. And then recedes and is gone until the following spring?

A. Yes.

Q. The water stands there about the same level, does it?

A. Yes. The flood that we had here, the flood that you speak of, was principally caused from water from the flood waters from the higher land coming down into the lowland territory.

Q. From the mountains?

A. Yes.

3380 (Witness excused.)

Brother AUGUST, called as a witness for the respondents, having been first duly sworn, testified as follows:

Direct examination by Mr. WOOD:

Q. You may state your name.

A. Brother August.

Q. And your residence.

A. Santa Fe.

Q. Are you a member of some order of the Roman Catholic Church?

A. Yes; we call them the Brothers of the Christian Schools.

Q. Are you president of Saint Michael's College?

A. Yes.

Q. At Santa Fe?

A. Santa Fe, New Mexico.

Q. How long have you been president of it?

A. I am now in my sixteenth year as president.

Q. How long have you lived in Santa Fe?

A. It makes now fifteen years.

Q. Were you born in this country?

A. I am a Frenchman by birth, but I am an American citizen since sixteen years.

Q. Do you know the San Miguel Church in Santa Fe?

A. I know it very well.

Q. Do you know when that church was built?

3381 A. We have no written record of it; some says in 1540 or 1541 and other ones say in 1606, when Santa Fe was chosen as the capital of the Territory.

Q. Has that church at any time been remodeled?

A. Yes; twice, at least.

Q. When were the two times?

A. It was destroyed by the Indians in 1618, and De Vargas ordered to rebuilt the roof, I think, in 1692, but the work was completed

only in 1710—we have the date on one beam—and after in 1872 a big storm destroyed the steeple and they rebuilt as it is at present; only part of the steeple was rebuilt.

Q. And then when was it subsequently remodeled twice?

A. In 1680 they put a new roof with a kind of square beams, but I am sure in 1830 this roof was remod'led by the other one, kind of round beam going from wall to wall.

Q. Have you had an opportunity to observe the native white pine; the native pine that is grown throughout New Mexico?

A. I am very much acquainted with the pine; I know generally everybody calls it white pine.

Q. Do you know whether any of that pine was used in the original construction of that church?

A. What I know of this church, practically all the wood used is white pine, taken from Santa Fe Canyon.

Q. Is it a wooden building?

3382 A. It is an adobe building but we have as wood the roof and all the gallery from 1710.

Q. There is a gallery built in the church in 1710?

A. Yes.

Q. Which is still in place?

A. It is just the same now.

Q. Is it built of native pine?

A. Yes; built from native pine, what they call white pine, ponderosa pine.

Q. Now, have you had occasion to examine the rafters and beams of the church?

A. The other day I called a man from the Forest Service to examine the beams and he opened a kind of hole in the center and I have here a specimen if the wood, taken from the beam.

Q. Are these specimens taken from the beams?

A. They are taken from the roof, the beams of the roof.

Mr. Wood. I would like to offer these in evidence.

Mr. Burr. We haven't even got the hearsay evidence as to whether they are Pinus ponderosa.

Q. Are these the native pine?

A. Native pine.

Mr. Burr. That is what the gentleman told you?

A. Yes; Mr. Rock, from the Forest Service.

(Marked "Respondent's Exhibit 44.")

Mr. Wood. I offer in evidence respondent's exhibit 44,

3383 specimens of Pinus ponderosa taken from the roof of San Miguel Church in Santa Fe, New Mexico.

Q. Do you know how long the beams from which these samples were taken have been in place in use in the same church?

A. These have been in San Miguel Church since 1830.

Q. Did you recently in the last year or so remodel the church at Santa Fe or put on a new roof?

A. Two years ago I put a protective small roof above those beams, 1928.

Q. Did you examine the beams at that time?

A. I told the contractor at Santa Fe to examine the ends of those beams and he told me they were in very good condition.

Mr. BURR. I object to hearsay and move to strike it.

Examiner BRULER. Yes.

Q. Did you examine it yourself?

A. I went on the roof, I examined two or three and they were in good condition.

Q. Did you remove any of the roof beams at that time?

A. I didn't remove any of them. I replaced the flooring and below the flooring I found used as rafters some of the beams, I think the ones put in in 1692, and they were still in pretty good condition.

Q. Is there any wood in the church that has been in place since 1692?

A. Since 1692, we replaced the roof in 1913.

3384 Q. Are there any timbers still used in the church——

A. Not anyone except the smaller roof I put to protect the other one.

Q. I don't think you understand me. Are there any timbers in the church today in use, native pine, which have been in use since 1692?

A. Only those rafters I saw; I found some rafters and I saw them native wood from Taos.

Q. When did you sell those?

A. I think in 1928.

Q. What was their condition?

A. Their condition was pretty good; they were rotten at the end but in the middle the condition was pretty good.

Q. Those rafters had been in there since 1692?

A. I suppose they were since that time; I don't know for what purpose they put those rafters.

Q. Those beams you refer to as having been in the church since 1830, what record have you to show they have been there since that time?

A. We have the book. [Witness produces book.]

Q. What book is that?

A. Written by L. Bradford Prince, who has been for a long time the president of the Historical Society of New Mexico; I think on page 30.

3385 Q. The book to which you refer is "Spanish Mission Churches of New Mexico"?

A. Yes.

Q. Who is L. Bradford Prince?

A. I think he used to be Governor in New Mexico years ago; I heard his name several times, but I have never been acquainted personally with him.

Q. Do you know whether he was at one time Chief Justice of the Supreme Court of New Mexico?

A. Yes; I heard that.

Mr. WOOD. I would like to read into the record, if I may——

Mr. BURR. I don't think that is appropriate.

Examiner BRULER. I think his testimony is sufficient.

Q. Have you talked with other members of your order about the name commonly given to Pinus ponderosa in New Mexico?

A. Yes; when I came in 1916 in Santa Fe, they were very old members who have been here in the country for over forty years, residents of Saint Michael's, and all of them called this pine white pine.

Cross-examination by Mr. BURR:

Q. Brother August, you testified as to the roof beam from which respondent's exhibit 44 was taken; where is that, across the inside of the church?

A. That was inside the church; they go from wall to wall.

3386 Q. And the outside part of the church is what?

A. The outside part of the church is adobe; and now we covered that with cement.

Q. The beam which you testified to, from which Respondent's Exhibit 44 was taken, that was covered over at the end with adobe, was it?

A. Yes.

Q. How thick was that adobe covering, do you think?

A. Some of the beams go all around the adobe wall, and those round beams, they rest on those beams and between the two beams they put adobe.

Q. The adobe covers outside?

A. It covers outside; maybe we have one or two just outside; I think one or two of those beams, very long beams, they go a little outside of the other beams, one or two beams.

Q. But they are covered outside with the adobe, too?

A. Yes.

(Witness excused.)

KENNETH J. BALDRIDGE, called as a witness for the respondents, having been first duly sworn, testified as follows:

Direct examination by Mr. WOOD:

Examiner BRULER. State your name, please?

A. K. J. Baldridge.

3387 Examiner BRULER. And your residence?

A. Albuquerque.

Mr. WOOD. What is your business, Mr. Baldridge?

A. Retail lumber and building materials; a small percentage wholesale.

Q. What is the name of your firm?

A. J. C. Baldridge Lumber Company.

Q. And your business is in Albuquerque?

A. Yes.

Q. How long has the J. C. Baldridge Lumber Company been in existence?

A. Since 1881.

Q. You have been associated with it how long?

A. Nineteen years.

Q. Have you been in business anywhere else except in Albuquerque?

A. A short while in El Paso.

Q. How long were you in El Paso?

A. Six months.

Q. What were you doing there?

A. Manufacturer's agent.

Q. What kinds of pine do you sell in your yards?

A. Native New Mexico white pine.

Q. Do you sell any Idaho and Michigan pine?

A. No. sir.

Q. Do you sell yellow pine?

3388 A. No. sir.

Q. Either longleaf or shortleaf?

A. No, sir.

Q. Have you at any time sold southern pine?

A. Prior to 1917.

Q. And then what did you sell it for?

A. Long dimension and uppers.

Q. Why have you discontinued selling yellow pine?

A. Principally on account of market conditions, prices, and fir in long lengths answers the purpose of yellow pine in long lengths and can be had for less money.

Q. Do you know if any of the other dealers in Albuquerque sell any pine except the white pine, native pine?

A. I don't believe they do.

Q. Do you know the term generally used by the public in describing Pinus ponderosa?

A. Both native and white pine used.

Q. Do some people use the term white and some native or are they used interchangeably by the same people?

A. I believe they are used both ways, the same man will use white and native; other people will use native entirely and others will use white entirely.

Q. Is the term yellow pine or western pine ever used to specify this native pine?

A. No, sir; not to my knowledge.

3389 Q. Have you ever heard it called ponderosa pine?

A. No; not locally; I have seen advertisements of that is all.

Q. But it is not called that locally?

A. No, sir.

Q. By your customers?

A. No, sir.

Q. What term do your customers use in specifying the pine they buy?

A. Native and white both, and some just pine.

Q. Who do you sell to?

A. We sell to the general public; a large percentage of our business is to general contractors; we sell the Government; we sell the State and its subdivisions.

Q. Do you sell the United States Government?

A. We do.

Q. Do you ever hear this pine called soft pine?

A. Occasionally; yes.

Q. To what extent?

A. Very little.

Q. What is the native or white pine used for here?

A. We sell it to the State for substructure on some bridge work having that type of construction; to contractors and owners; to the general contractor; it is used in house building and other building; for stringers, joists, studding, rafters, siding occasionally; it
3390 used to be used a good deal more for siding of course than it is now.

Q. Have you had an opportunity to determine upon its suitability or unsuitability for outside construction?

A. Yes; from observation I believe I have.

Q. What has been your observation as to that?

A. For use outside such as siding it has given very good service here in New Mexico; that is what you mean by outside, siding, outside frame, and so forth.

Q. And for frame construction?

A. For frame construction it has given very good service; yes.

Q. You consider it satisfactory?

A. Yes.

Q. I believe you said that you sold lumber or pine, Pinus ponderosa, to the State of New Mexico?

A. Yes.

Q. How do they specify in their orders, what kind of pine?

A. The State usually specifies native pine.

Q. Do they ever specify white pine?

A. I don't believe the State do; the Government, however, does.

Q. I am coming to that later. How about the city of Albuquerque?

A. The city, I believe we have received orders from them both ways.

Q. Both white and native pine?

A. Yes.

Q. What branch of the United States Government do you sell to?

3391 A. Most of our business with the Government has been the United States Indian school here.

Q. That is the Department of the Interior?

A. Yes.

Q. How do they specify pine bought by them?

A. White pine, they specify that when they want the native pine, the abbreviate it, capital W, capital P. They don't write the words out.

Q. Have you had opportunity to observe the results of the use of the native pine in bridge construction in New Mexico?

A. Not to such an extent that I could testify as an expert witness.

Q. But you know it is used?

A. Yes; sell lots of it.

Q. For what purpose is it used in connection with bridge construction?

A. For stringer, beams, and flooring.

Q. For buttricks?

A. Yes; and abutments.

Q. So that it is used for parts of the bridge construction that extend into water?

A. Frequently; yes, frequently sell it for piling.

Q. Is there much rise and fall during the year in the Rio Grande River?

A. Yes.

3392 Q. Do you know what it is?

A. No.

Q. But you know there is a great deal of it?

A. Yes.

Q. And is there much rise and fall in the other streams in New Mexico?

A. Yes, sir.

Q. Do you know how long manufacturers in New Mexico have called their product white pine?

A. From my own personal knowledge, I would date the length of time I have been in the lumber business; my father tells me it was called white pine when he entered the lumber business in New Mexico in 1881.

Q. What was the house in which you were born built of?

A. Practically all native pine, some redwood.

Q. But the frame construction was native pine?

A. Yes.

Q. When was that house built?

A. I couldn't give you the exact year, however, prior to 1890.

Q. Do you know its present condition?

A. Yes.

Q. What is it?

A. Very good.

Q. Do you know its condition from the standpoint of rot and decay?

3393 A. I haven't made a close physical examination of it; I have been through it; just from a superficial examination of it I would say it is good.

Q. Do you handle sash and door?

A. Yes.
Q. From what wood are the sashes and doors made?
A. The majority of them are made of native or white pine.
Q. Do you handle any sash and doors made of other pine?
A. No, sir; I do not.
Q. Then all you handle is made of the native pine?
A. The reason I say practically all is because the supply of our native white pine and Arizona white pine sometimes makes it necessary for the mills from whom we buy to go to California for their shop lumber, if the supply here isn't sufficient to take care of it.
Q. Then in that case they are made of California white pine?
A. And we occasionally get some sugar pine.
Q. For what kind of doors?
A. That is very seldom, however.
Q. For what kind of doors?
A. Wood doors. The type door, you mean?
Q. Yes.
A. They use that for rails and stiles in five cross and panel cross, French doors, front doors, store doors.
Q. Are they used very frequently here of sugar pine?
A. Sugar pine; no, sir.
3394 Q. Do you know to what extent sugar pine is sold in New Mexico?
A. No; I don't. You mean by dealers?
Q. Yes.
A. By local dealers?
Q. Yes.
A. I don't believe it is carried in stock by any of them.
Q. How do you sell your lumber and specify it in selling it to your customers?
A. We, as a rule in billing it out, don't put any designation at all of the kind of lumber; that is, providing it is our native or white pine, we generally designate that just by grade.
Q. Number one common, number two common?
A. If, however, fir or oak or any other grade than the native or white pine, then naturally we put the designation on it as to the type which it is.
Q. Did you ever receive an order for Pinus strobus?
A. No, sir.
Q. Or for Idaho pine?
A. No, sir.

Cross-examination by Mr. BURR:

Q. Now, the sugar pine is much higher than the native pine here, isn't it?
3395 A. I don't know; I don't have a recent quotation on sugar pine.
Q. Do you know whether sugar pine is higher than California white pine in the California markets, do you have a contact with that, as to how it is quoted?

A. No, sir.

Q. Do you see quotations at all for California white pine?

A. Very, very seldom. I saw one probably sixty days ago, I couldn't tell you what the prices were though.

Q. Well, the native pine practically commands the pine market, does it, entirely, here?

A. Now, are you speaking as in competition with fir?

Q. In competition with pine?

A. Yes; it does, it controls.

Q. There is nothing over here except the native pine?

A. That is all I know of.

Q. Except these occasional shipments of sugar pine for special purposes?

A. Yes.

Q. Are you familiar with the price of the shop lumber of sugar pine?

A. No, sir; we don't handle any shop lumber ourselves.

Q. I thought you spoke of selling to manufacturers these various inside trim, various varieties of lumber trim?

A. No, sir; we don't sell to the factory.

Q. Who are your customers in the main besides those you
3396 have mentioned?

A. I mentioned about all of them.

Q. You sell retailers, do you?

A. Yes.

Q. How large a percentage goes to retailers, would you think?

A. You mean to the other dealer, the other merchant?

Q. Yes.

A. I don't have that exact figure in my head.

Q. Your wholesale business, however, is small?

A. Yes; I wouldn't say to exceed ten percent of the total.

Q. Now, this house where you were born, is that a frame building?

A. Yes.

Q. That is a frame building throughout?

A. Yes.

Q. Now, you seemed to be rather inclined to qualify it when you stated that was in good condition; what do you mean, what sort of condition is it in?

A. I didn't want to go on record as saying I had made a thorough physical examination of the house; I was up there last week and went through it. I did, however, examine the outside of the house closely and found that in good condition, the siding, and so forth.

Q. Is it showing some signs of decay?

A. No; the paint looks worse than the wood itself.

3397 Q. As a matter of fact, paint is the thing that is most apt to be neglected?

A. Yes.

Q. People don't paint their buildings until they positively have to; isn't that true?

A. Yes.

(Witness excused.)

JAMES N. GLADDING, called as a witness in behalf of the respondents, having been first duly sworn, testified as follows:

Direct examination by Mr. WOOD:

Examiner BEULER. Please state your name and residence.

A. James N. Gladding; Albuquerque.

Mr. WOOD. Where do you live?

A. 643 North Cedar.

Q. What is your business, Mr. Gladding?

A. Structural engineer and architect.

Q. What is the name of your firm?

A. Gaastra & Gladding.

Q. Were you at one time city engineer of the city of Albuquerque?

A. Yes.

Q. And city manager?

A. Yes.

3398 Q. How long were you city manager?

A. Two years.

Q. How long were you city engineer?

A. I don't remember exactly, about eight—I should say ten years, city engineer.

Q. Were you at any time connected with the city of El Paso?

A. City engineer in El Paso.

Q. How long were you city engineer in El Paso?

A. Two years.

Q. How long have you been in the business of architect and engineer in Albuquerque?

A. About seven years.

Q. What kind of buildings do you design and make specifications for?

A. All kinds.

Q. Specify what kind.

A. We have done courthouses, warehouses, schools, residences.

Q. Office buildings?

A. No; we haven't had any office buildings.

Q. Do you use Pinus ponderosa at all in the construction of those buildings?

A. To a large extent.

Q. What do you use it for?

A. Interior trim and exterior woodwork in houses.

Q. Do you use it at all in warehouses?

3399 A. Very seldom, except for floor joist and subflooring.

Q. What other kind of wood do you use in warehouses?

A. We have used yellow pine.

Q. Outside of yellow pine, what kind?

A. Oregon fir.

Q. Do you ever use Pinus strobus or Idaho pine?

A. We never have used Idaho pine.

Q. What pine do you use for your sash and doors and interior trim?

A. White pine, native pine.

Q. Do you use yellow pine?

A. No; I don't remember of ever using any yellow pine.

Q. Do you ever use sugar pine?

A. No.

Q. In specifying the native pine, how do you designate it?

A. Usually as white pine or native pine.

Q. Do you ever specify it as yellow pine?

A. No.

Q. Is there any preference in your use for building purposes and structural purposes in case it has to be pine, as between the yellow pine and the white pine?

A. Not in structural purposes, we do as interior trim.

Q. What is your preference?

A. We like the native pine.

Q. Better than the yellow?

3400 A. Yes; the yellow pine is a little more pithy, unless in particular cases where we want the grain effect, when we stain the woodwork, we use the white pine.

Q. What is the tendency of the yellow pine, comparative tendency of the yellow pine and white pine when nailed at the end as to its splitting?

A. It is more inclined to split and splinter.

Q. Which one?

A. The yellow pine.

Q. What percentage of the timber used for building purposes for interior and exterior in New Mexico would you say was native pine?

A. In this section of the country it is mainly white pine.

Q. Practically all?

A. Yes.

Mr. BURR. Did you say interior and exterior both?

A. Yes.

Mr. WOOD. Do you know what the people of New Mexico, the public, the man on the street, generally calls the Pinus ponderosa in designating it?

A. White pine.

Q. Have you ever heard it called yellow pine?

A. No.

Q. Pondosa pine?

A. No.

3401 Q. Soft pine?

A. No.

Q. Have you had opportunity to observe the various structures built of the native pine as to the suitability of that wood for exterior purposes?

A. Yes, sir.

Q. What has been that opportunity, other than the erection of buildings?

A. Well, I have been very much interested in the building game since 1906, which I first came to New Mexico.

Q. And what would you say as to its suitability for building purposes in this State?

A. I should say it was very suitable.

Q. And has it proved satisfactory?

A. Yes, sir.

Q. Do you know to what extent other architects use Pinus ponderosa?

A. I think it is just about the same.

Q. Use it for exterior and interior purposes?

A. Yes.

Q. How long did you say you had been in New Mexico?

A. Since 1906.

Q. Is there any part of that time where Pinus ponderosa was designated by any other term than white pine, as you have previously testified to?

A. No.

3402 Q. It is always called that?

A. Yes.

Q. Have you done any bridge construction?

A. Some.

Q. Where have you done some bridge construction?

A. I built four bridges on the Rio Pecos.

Q. And where is the Pecos River?

A. It is up north of Santa Fe, in the Santa Fe Forest.

Q. How far from Santa Fe or from Albuquerque?

A. It is about a hundred and twenty-five or thirty miles from here.

Q. Do you know the altitude there?

A. Not exactly; I should imagine it was sixty-five hundred or seven thousand.

Q. When did you build those four bridges?

A. In 1919.

Q. Who did you build them for?

A. The Bureau of Public Roads.

Q. Of the State of New Mexico?

A. No; the Federal Government.

Q. What kind of lumber did you use in those bridges?

A. Native pine.

Q. Were they entirely constructed of native pine?

A. Entirely.

Q. Did parts of the bridges extend into the water?

3403 A. No.

Q. Not when the rivers were high?

A. No; it wasn't intended to be.

Q. Do you know whether or not the native pine is used much for bridge construction in New Mexico?

A. Yes; it is used quite a little.

Q. Do you know whether it has been found to be satisfactory?

Mr. BURR. I think he is asking for a mere conclusion; he is asking for hearsay.

Examiner BRULER. Just what you know about it from your personal knowledge.

A. I know it has been used a great deal in New Mexico.

Q. Do you know whether it has been found to be satisfactory or unsatisfactory?

Mr. BURR. That is asking for a conclusion, the same objection as to the question before.

Examiner BRULER. Have you ever heard any complaints of its use as to its age or lasting qualities?

A. No; I haven't. In particular cases where we need a little increased strength we specify yellow pine.

Mr. WOOD. For what purposes is that?

A. When the size of the native pine becomes too cumbersome and we think we could get the same result by using a little smaller timber, we use the yellow pine.

Q. Is adobe construction used much in New Mexico?

3404 A. It is a very popular form of construction.

Q. Do you know how long it has been used for construction purposes?

A. I guess since we had any inhabitants in New Mexico.

Q. Do you know whether it was used by the Indians?

A. Yes; it is.

Q. And it was used by the Mexicans following the Indians?

A. Yes.

Q. Do you know why it is a popular form of construction?

A. It was the cheapest material they had and they were accustomed to handling it or became accustomed to handling it.

Q. It was a form of architecture in use by the Indians?

A. Yes.

Cross-examination by Mr. BURR:

Q. Adobe cannot be used where the rainfall is rather heavy, can it?

A. No.

Q. How much larger do you require your native pine stringers of heavy material to be in order to get the same strength that you expect to get if you order yellow pine instead?

A. The strength of yellow pine is fifty percent higher than the native pine.

Q. Size for size?

3405 A. Yes; size for size.

Q. Now, as a matter of fact, when people talk about this pine that you have in these forests here, don't they call it pine more often than they call it white pine?

A. Probably do.

Q. And don't they call it native pine more often than they call it white pine?

A. No; I would think that would be about fifty-fifty.

Q. The native pine here commands the market so far as pine is concerned, does it not?

A. I didn't get that question.

Q. The native pine here commands the market so far as pine is concerned; it practically bars all other pines, does it not?

A. Unless it is specially specified.

Q. Have you had occasion to know at what price you can get the sugar pine?

A. No.

Q. You haven't studied the price of it at all that you could get sugar pine at?

A. No.

Q. And the same, I presume, is true of the northern white pine and Idaho white pine; you haven't given that any attention?

A. No.

(Witness excused.)

3406 (At this time a short recess was taken.)

A. J. SINE, called as a witness in behalf of the respondents, having been first duly sworn, testified as follows:

Direct examination by Mr. WOOD:

Examiner BRULER. Please state your name and residence.

A. A. J. Sine; Albuquerque.

Mr. WOOD. What is your business, Mr. Sine?

A. Wholesale lumber selling.

Q. What kind of lumber do you sell?

A. Pine lumber and fir lumber.

Q. Your office is in Albuquerque?

A. Yes.

Q. How long have you been in Albuquerque?

A. Three years.

Q. Were you in the lumber business prior to that time?

A. Yes; in Chicago.

Q. What kind of lumber business were you in there?

A. Wholesale and commission lumber.

Q. In the retail business?

A. I was interested with my brother in a retail yard.

Q. So you were in the wholesale and retail business in Chicago?

A. Yes.

3407 Q. For how many years?

A. Since 1908.

Q. From that time until when?

A. In Chicago from that time until—well, I have retained my interest in Chicago although I have been out here, but I haven't been active in Chicago for three years.

Q. What kind of lumber did you handle in Chicago?

A. North coast, douglas fir, and pine, and pine from the inland empire.

Q. Did you handle Pinus ponderosa?

A. We handled western pine and Idaho white pine and some California white pine.

Q. That is, of those species, Pinus ponderosa?

A. Yes.

Q. In purchasing from the manufacturers of Pinus ponderosa, what term did you use in specifying the kind of lumber you wanted?

A. Western white pine.

Q. To what class of customers did you sell?

A. To retail yards, sash and door factories, other interior finish factories, and industries, as we call them.

Q. In selling them, how did you invoice and sell Pinus ponderosa?

A. Western white pine.

Q. To what extent did you handle Idaho white pine?

3408 A. I should say it wasn't over ten percent of the sales, a limited amount.

Q. In ordering that, how did you order it?

A. Idaho white pine.

Q. In selling that, how did you sell it?

A. Idaho white pine.

Q. In delivering your customers lumber upon the specification for western white pine and where you delivered them Pinus ponderosa, did you ever have any complaint from your customers as to the character of the species of the lumber which was delivered them?

A. Yes; I have.

Q. On what occasion?

A. They complained it was harder than white pine, than the true white pine. May I explain it?

Q. Yes.

A. At the time I started to sell it, western white pine was not a familiar product in the Mississippi Valley; as a matter of fact, I introduced it in a good many places, induced men to try it, and at times they would state that they had had other western white pine that was sof'er than this white pine that I had delivered them; I would then ask them to see what they had, because I wanted to identify it as Idaho white pine if it was softer than the pine I was selling.

3409 Q. And then you would see what they had and explain to them the difference?

A. Yes.

Q. But those complaints grew less and less?

A. Yes, sir; they grew less.

Q. Did you have any complaints along the last time you were in Chicago?

A. No. Those complaints were introductory complaints.

Q. Much earlier?

A. Much earlier.
Q. Now, what kind of pine do you sell in New Mexico?
A. New Mexico white pine.
Q. Do you sell any Arizona white pine?
A. Very limited amount.
Q. But you sell some?
A. I have sold some.
Q. Where did you purchase that?
A. I have had some from the Cady Corporation.
Q. To whom do you sell?
A. To the retail yards and sash-and-door factories.
Q. Where are your customers located?
A. In Raton, Gallup, Las Vegas, Hot Springs.
Q. Mostly local; do you sell?
A. Yes.
Q. You don't sell in the East at all?
3410 A. Yes; I handle through my Chicago firm in the East; they sell it and I simply buy it here for them.
Q. Prior to going to Albuquerque, did you ever sell New Mexico white pine?
A. Yes.
Q. In Chicago?
A. Yes.
Q. For how long a period?
A. Probably five years before I came out here.
Q. Since you have been in New Mexico have you had any complaint in furnishing ponderosa pine upon an order for New Mexico white pine, that they are getting a different species of pine than they expected to receive?
A. No, sir.
Q. Do you sell it as New Mexico white pine?
A. Yes.
Q. Under what name do you buy it from the manufacturers?
A. New Mexico white pine.
Q. Do you know what is the common name for the designation of the native pine among people of New Mexico?
A. White pine.
Q. How do your customers usually order it?
A. White pine.
Q. Your customers outside of the State?
A. Yes.
Q. Do they order as white pine or New Mexico white pine?
3411 A. New Mexico white pine.
Q. Are you acquainted at all with yellow pine?
A. Yes.
Q. Have you handled it at all?
A. A very limited extent. In the East; not here.
Q. Do you know the differences in the general characteristics and texture between the yellow pine and white pine?

A. Yes.
Q. I mean, and the native white pine?
A. Yes.
Q. Do you know the differences in the character and texture between the Idaho white pine and the native pine?
A. Yes.
Q. Would you say that the native white pine was more similar in character and texture to the yellow pine or to the Idaho white pine?
A. More similar to the Idaho white pine.
Q. What would you say as to color?
A. As compared with yellow pine?
Q. Compared with yellow pine.
A. It is whiter than yellow pine.
Q. What would you say as to its durability?
Mr. BURR. You haven't qualified him to see what he knows about durability.
Q. Have you had opportunity to observe the durability of
3412 the New Mexico white pine?
A. No; only from hearsay—you don't want any hearsay.
Q. No; not unless you have had opportunity to observe it.
A. I don't have, I think; I haven't been here long.
Q. Did you ever receive an order for western yellow pine?
A. No, sir.
Q. Either in Chicago or here?
A. No, sir.
Q. Do you ever receive orders for soft pine?
A. No, sir.
Q. Do you ever receive orders for pondosa pine?
A. No, sir.
Q. I believe your business was for some time in Santa Fe?
A. Yes; I lived four years in Santa Fe.
Q. Do you know what the custom is in Santa Fe about the designation given to this native pine?
A. White pine.
Q. Do you know the Governor's Palace in Santa Fe?
A. Yes.
Q. What is the Governor's Palace?
A. It is a building that was put up three hundred or more years ago for the use of the governors of that time.
Q. The old Spanish governors?
A. The old Spanish governors; it is a block long.
Q. Is the building still in use?
3413 A. Yes.
Q. As a museum?
A. Museum and offices.
Q. Have you ever examined the timbers in that building?
A. Casually.
Q. Is there any Pinus ponderosa used in that building?
A. All of the vigas or roof supports are Pinus ponderosa.

Q. Do you know the reputed age of those?
A. They are reputed to be three hundred years old.
Q. What, from your general observation, was their condition when you looked at them?
A. Good.
Q. What is the altitude of Santa Fe?
A. Seven thousand feet.

Cross-examination by Mr. BURR:

Q. Now, do you know anything about sugar pine?
A. I know it when I see it *im* the lumber.
Q. Did you handle that when you were in Chicago?
A. To a very limited extent.
Q. Then you handled northern white pine?
A. Very limited extent.
Q. And you handled Idaho white pine?
A. To a limited extent.
3414 Q. And you handled sugar pine?
A. Very little of it.
Q. Did you say ten per cent of your pine sales were Idaho white pine?
A. Approximately that.
Q. You are referring now to your total sales?
A. No.
Q. But to your pine sales?
A. Yes.
Q. Then you handled some yellow pine up there?
A. To a very limited extent; yes.
Q. Now, you handled the ponderosa under the trade term Western white and California white pine?
A. Yes.
Q. Did you buy any Arizona and New Mexico white pine at that time?
A. No; I am thinking of the early days of our selling there.
Q. Yes. How, as to the later years?
A. In the later years we did sell New Mexico pine.
Q. After you came down here yourself?
A. Yes.
Q. But not prior to your coming here?
A. To a limited extent we did; yes, sir.
Q. What do you find to be the characteristics of the ponderosa considered now in its general sense. Do you find considerable variety in the character of lumber received from these
3415 various districts, referring now to ponderosa only?
A. Yes; I should say so.
Q. Do you regard the native pine or Arizona as being as good as the California?
A. Better.
Q. California white pine of what localities; do you have any particular localities in mind?

A. Well, of course, I don't know that I do; when I said better I was thinking of certain purposes.

Q. What purposes have you in mind it is better for?

A. For sash and door and interior finish.

Q. And why?

A. It is softer and whiter.

Q. Does it hold its color better when exposed to the weather?

A. I don't know.

Q. Or to the light?

A. I don't know, I know it is easier worked.

Q. It is closer in quality than to the northern white pine, is it?

A. I don't think so.

Q. Are you familiar with the California white pine, so-called, that is raised in the Klamath district in Oregon?

A. Yes.

Q. And what you say you think would apply as compares with that?

A. For the purposes I have mentioned.

3416 Q. You think it is softer and whiter in color than that?

A. Yes.

Q. Are you familiar with the California white pine raised on the eastern slope of the Sierra County?

A. Yes.

Q. Modoc County and Alturus County?

A. No; I don't think so.

Q. When you were in business in Chicago, people would come in occasionally and ask for white pine, would they?

A. Yes.

Q. And then you supplied them with whichever of these varieties you had in stock designated as white pine?

A. No; we explained to them that there were two kinds.

Q. This was in the early days?

A. Yes; in the introductory period.

Q. They would designate themselves later?

A. They would say, I want Idaho white pine or western white pine.

Q. How recent is your actual familiarity with the Chicago situation in meeting customers, to how recent a day does it come down?

A. Prior to three years ago.

Q. In other words, you were meeting customers regularly up to three years ago?

A. Not very regularly after I came out here; I would go

3417 back and stay a month or two and come back here.

Q. When was the most recent time you were meeting customers regularly?

A. Prior to seven years ago.

Q. Prior to seven years ago customers would specify white pine without further designation?

A. No, sir.

Q. You are sure they always designated California or northern or Idaho, as the case might be?

A. Yes, sir.

Q. Did you have much call for sugar pine?

A. No, sir.

Q. How did you sell it when you did sell it?

A. We sold it for specific purposes, such as piano keys, something that required a fine-grained softwood, earier worked.

Q. How about pattern purposes?

A. Excellent for that purpose.

Q. For piano keys and pattern purposes you regard it as probably similar to Idaho white pine?

A. Very similar.

Q. Is it preferable to the ponderosa of the various descriptions?

A. Positively superior.

Q. For what reason do you regard it as superior for these
3418 purposes?

A. It is softer, finer-grained wood, not as hard to work.

Q. Is there a little difference with regard to the ability to stay in place and hold the shape?

A. Yes.

Q. Little less liable to warp?

A. Much less liable.

Q. Is that the reason for the market for sugar pine for French doors and windows also?

A. Yes; if there is any used for that purpose.

Q. Now, when the people here ask for your native pine, don't they, as a rule, come in and ask for pine; it is the only pine there is, isn't it?

A. Yes; that is true.

Q. Instead of saying native or white they say pine, do they?

A. I must say they say native pine more often than just pine.

Q. And they say native pine more often than white?

A. I think so.

Q. That product commands the pine market here completely?

A. Yes.

Q. How much more does it cost you a thousand to get in yellow pine than get your native pine?

A. There is such a limited amount of yellow pine used here; previous to ten years ago yellow pine was a big seller in this market; so far as I know, there hasn't been a carload of yellow pine used in Albuquerque in five years.

3419 Q. Did you hear the testimony of the previous witness, that there is fifty percent greater strength in size in the yellow than the native; how would you figure that?

A. That is what I would figure; I didn't hear that testimony, however.

Q. You think it makes a soft structural building material for strength?

A. Certainly.
Q. In that ratio?
A. Yes.
Q. Is it cheaper than the yellow pine when you have added fifty percent to the size?
A. I am not sufficiently familiar with yellow pine to compare the prices.
Q. Now, referring to your Chicago sales up to seven years ago, what percentage was retail and what percentage wholesale or commission business?
A. Ninety percent was wholesale and commission.
Q. Would you say at retail your customers were not quite so well posted as to the various varieties of white pine?
A. No.
Q. And they would come in occasionally and ask for white pine without knowing about the different varieties?
A. Yes.
Q. And in that case they would get whatever variety of
3420 white pine you had in stock; is that true?
A. Yes.
(Witness excused.)
(At this time an adjournment was taken until 10 a.m. the following day.)

FEBRUARY 11TH, 1930—10 A.M.

RAY MOORE, called as a witness in behalf of the respondents, having been first duly sworn, testified as follows:

Direct examination by Mr. WOOD:

Examiner BRULER. You may state your name and residence.
A. Ray Moore, Albuquerque, New Mexico.
Q. Mr. Moore, are you connected with the Breece Lumber Company?
A. I am.
Q. What is your position?
A. Secretary and auditor.
Q. How long have you been connected as secretary and auditor with the Breece Lumber Company?
A. Since its inception.
Q. When was the Breece Lumber Company organized?
A. August 1st, 1924.
Q. Did it purchase the property and assets of some other
3421 corporation?
A. It acquired by lease the assets of the McKinley Land & Lumber Company and a West Virginia timber company.
Q. Did those assets consist of the same mills you are now operating?
A. They did, except we have acquired one mill subsequent to the organization.
Q. Then what is the American Lumber Company, or was?

A. The American Lumber Company was originally a New Jersey corporation; they reincorporated, I would say, about 1907, changed their domicile.

Q. Give briefly the history of these four corporations you have mentioned, the American Lumber Company, the McKinley Land & Lumber Company, and the West Virginia Company and the Breece Company, and their relationship to each other.

A. The American Lumber Company was organized in 1902 as a New Jersey corporation by lumbermen then operating in Michigan, including bankers. They acquired several hundred thousand acres of timber land located in McKinley and Valencia Counties, New Mexico, from Mitchell Brothers, of Cadillac, Michigan. Mitchell Brothers had acquired the property from the old Atlantic and Pacific Railroad Company, who received the property as part of land that was given them when they built the railroad, for building it. They operated from about 1903 at Albuquerque until
3422 about June 1913, at which time they defaulted on an issue of bonds——

Q. I don't know it is necessary to go into changes made in the organization.

A. It will be necessary in order to lead up to our employment. They defaulted on issue of bonds, went into receivership. The McKinley Land & Lumber Company was organized as a New Mexico corporation in November 1916.

Mr. BURR. If the examiner please, I regard this as rather immaterial, the way in which the various subsidiary properties which have been acquired were obtained.

Examiner BRULER. There is no use taking time to go into that; just your connections now is the principal thing.

Q. In substance, Mr. Moore, the properties you are operating at the present time have been operated by three companies; the American Lumber Company, from what date did they operate?

A. 1903.

Q. To when?

A. To 1913.

Q. And then they were operated by the McKinley Land & Lumber Company?

A. From 1919 until August 1st, 1924.

Q. And then by the Breece Lumber Company?

A. From August 1st, 1924, to the present time.

3423 Q. Have you the price lists, copies of the price lists, that were issued by the American Lumber Company?

A. I have some of them.

Q. And by the McKinley Land & Lumber Company?

A. I have some.

Q. Have you examined the same?

A. I have.

Q. Have you those copies with you in the courtroom?

A. Yes, sir.

Q. Will you produce them?

(Witness produces price lists.)

Q. Have you some price lists with you showing how the American Lumber Company designated thie product?

A. I have.

Q. And what do they show as a heading to the price lists?

A. "White-pine lumber, sash, doors, and boxes."

Q. "Wholesale price list, American Lumber Company, manufacturers of white-pine lumber, sash, doors, and boxes, price list", under date of January 13——

A. 1909.

Q. What is the earliest one that you have in your book?

A. January 21st, 1907.

Q. And how does that read?

A. "Wholesale price list, American Lumber Company, manufacturers of Navajo white-pine lumber, sash, doors, and boxes."

3424 Q. Is any part of your timber holdings, timber contracts, located on the Navajo Reservation?

A. Our timber holdings are adjacent to the Navajo Indian Reservation.

Q. Do you know why the term "Navajo" was used?

A. It was adopted as a trade name by the American Lumber Company.

Q. Do you know how long they continued to use the term "Navajo white pine"?

A. I don't know when they commenced using it; the earliest price list is dated January 21st, 1907.

Q. Do you know when they discontinued using it?

A. About June 1st, 1907.

Q. And after that what term did they use?

A. White-pine lumber.

Q. Have you any price lists of the McKinley Land & Lumber Company?

A. Yes, sir; I have.

Q. You have one before you dated March 23rd, 1920?

A. I have.

Q. What is the heading?

A. McKinley Land & Lumber Company, manufacturers of white-pine lumber, Albuquerque, New Mexico.

Mr. BURCH. The terminology that you last quoted continued then until the Breece Lumber Company took it over, did it?

A. It did; yes.

Mr. WOOD. I will take care of that.

3425 Q. Now, then, Mr. Moore, what name is used at the present time in your price lists to designate your product?

A. Our present price list is headed "George E. Breece Lumber Company, manufacturers pondosa pine, fir, oak flooring, Albuquerque, New Mexico."

Q. Do you use the same price list for both your Albuquerque customers and for your customers in other parts of the country?

A. We use a different price list for our Albuquerque customers, our local trade.

Q. I show you a price list of the George E. Breece Lumber Company, a form, stating that it manufactures pondosa pine, fir, oak flooring, Albuquerque, New Mexico, and ask if that is a price list you use?

A. This is a printed form we use for price lists mailed to our various agents and customers outside the State of New Mexico, outside of Albuquerque.

(Price list marked "Respondent's Exhibit No. 45.)

Mr. Wood. I offer price list headed "The George E. Breece Lumber Company, manufacturers pondosa pine, fir, oak flooring, Albuquerque, New Mexico", in evidence.

A. That is a price-list form.

Mr. Wood. Price-list form.

Mr. Burr. No objection.

Q. I show you price list of the George E. Breece Lumber
3426 Company, manufacturers white pine, hardwood, yellow pine, Douglas fir, on yellow paper, containing the words "We quote f.o.b. Albuquerque, N.M.", and ask if that is the price list for this firm as used by your company?

A. That form is used by our company.

Q. For what purpose?

A. Quotations to local dealers.

Q. Is it ever used for quotations outside of the State?

A. This is quotations to local dealers; we adopt this other form for quotations outside of the State.

(Form marked "Exhibit Respondent's No. 46.")

Mr. Wood. I offer this form in evidence, respondent's exhibit 46.

Q. Those are the forms for price lists that are used at the present time?

A. Locally.

Examiner Bruler. Then, Mr. Wood, you are offering respondent's exhibit no. 46 for the record, are you?

Mr. Wood. For the record.

Mr. Burr. No objections.

Examiner Bruler. Received.

Q. Is this a form of invoice you are using at the present time?

A. It is.

Q. And how does that read as to its designation of the product?

A. "Pondosa pine, hardwood, red and white fir."

3427 Q. Is that used only in interstate trade or is it also used in the State of New Mexico?

A. That form is used generally by all of our offices.

(Form marked "Respondent's Exhibit No. 47.")

Mr. Wood. I offer this in evidence, respondent's exhibit 47.

Mr. BURR. No objection.

Examiner BRULER. Respondent's exhibit no. 47 offered and accepted in evidence.

Q. Do you advertise at all in trade journals?

A. Very little; we have some.

Q. Have you advertised in trade journals in the last two years?

A. We have.

Q. In what trade journals?

A. The Timberman.

Q. In any others?

A. Not to my knowledge.

Q. When did you last advertise?

A. Our last advertisement appeared in the December issue of the Timberman.

Q. How many advertisements have you had in the Timberman for the last two years?

A. I am not prepared to state; I don't know.

Q. Have you a copy of such advertisement?

A. I don't have with me; no, sir.

Q. How long have you used the term "pondosa pine" in
3428 designating your product for interstate commerce?

A. I couldn't say exactly, but from about May or June 1928.

Q. Prior to that time what term did you use in designating your product?

A. White pine.

Q. Have you a copy of your price lists that were used by the Breece Lumber Company prior to the time you changed to the use of the term pondosa pine?

A. It has been offered as an exhibit, the early one.

Q. That is the form that has been used from the inception of the company?

A. Yes.

Q. I show you form of invoice "The George E. Breece Lumber Company, manufacturers white pine, hardwood, yellow pine", and ask you if that is a form that was ever used by your company, and when?

A. That isn't an invoice form; that is an office form of an order when it is written up.

Q. Is that used at the present time?

A. Yes, it is; that form doesn't go outside of the office.

Q. It is only used for your own files?

A. That white sheet is only used when the order is written up for our own files.

Mr. WOOD. Please mark this.

(Form marked "Exhibit Respondent's No. 48.")

3429 Mr. WOOD. I offer in evidence original order form of George E. Breece Lumber Company, manufacturers, white pine, hardwood, yellow pine, Albuquerque, N.M.

Examiner BRULER. Respondent's exhibit no. 48 admitted for the record.

Q. I show you what purports to be copy of an advertisement I take from the Timberman and ask you if that is an advertisement that was inserted in the Timberman by the George E. Breece Lumber Company?

A. It is an advertisement published in the Timberman and paid for by the George E. Breece Lumber Company.

Examiner BRULER. What is the date of that?

A. There is no date on this.

Q. Do you know whether or not that is a form of advertisement that has been inserted in the Timberman in the last two years?

A. It appears to be.

Q. You have advertised in the Timberman in the last two years your product as "Soft texture New Mexico white-pine lumber", "ponderosa pine" in parentheses underneath?

A. We have.

Q. Who were those advertisements prepared by?

A. By the advertising department of the Timberman.

Q. Were they ever submitted to you before they were inserted?

A. Not to my knowledge.

3430 Q. How did you give the order to the Timberman?

A. The order was given probably to Mr. Cornwall, the editor of the Timberman, when he was in our office.

Q. What was said to him?

A. He was told to write up the advertisements.

Q. And he did not, so far as you know, submit them to you?

A. They were not submitted to me, and to my knowledge they were not submitted to our company; that is, the proofs were not.

(Marked "Respondent's Exhibit No. 49.")

Mr. WOOD. I offer this form of advertisement, apparently taken from the Timberman, in evidence.

Mr. BURR. No objection.

Examiner BRULER. Respondent's exhibit no. 49 admitted for the record.

Q. I show you form of letterhead "The George E. Breece Lumber Company, manufacturers white pine, hardwood, yellow pine", and ask you if that is a letterhead that is used or has been used by the George E. Breece Lumber Company?

A. That letterhead has been used by the George E. Breece Lumber Company.

Q. And is it still used?

A. It is now an obsolete form, although some of them may be scattered among our branches.

Q. That is, you use a new form of letterhead at the present time?

3431 A. We use a new form of letterhead at the present time.

Q. Have you got a copy of that letterhead with you?

A. I think we have.

Q. I show you form of letterhead reading "The George E. Breece Lumber Company, manufacturers pondosa pine, hardwood, red and white fir", and ask you if that is the form of letterhead you are at present using?

A. It is.

(Forms of letterheads marked "Respondent's Exhibits Nos. 50 and 51.")

Mr. Wood. I offer the form of letterhead reading "George E. Breece Lumber Company, manufacturers white pine, hardwood, yellow pine", in evidence (respondent's exhibit 50).

Examiner Bruler. That is respondent's exhibit no. 50 admitted for the record.

Mr. Wood. Which is the form of letterhead formerly used by the Breece Lumber Company.

I offer the form of letterhead reading "The George E. Breece Lumber Company, manufacturers pondosa pine, hardwood, red and white fir", as now used by the George E. Breece Lumber Company (respondent's exhibit no. 51).

Examiner Bruler. Respondent's exhibit no. 51 admitted for the record.

Q. How do you now sell your lumber outside of the State of New Mexico?

3432 A. Our principal price list is headed "pondosa pine."

Q. And you sell none under price lists of the designation of white pine?

A. Some of the typewritten matter in our current price lists reads "white pine."

Q. Will you explain that?

A. I would call it an error on the part of the girl who makes up the price list.

Q. What is the occasion for it; will you explain how it happens?

A. A large part of the orders we receive—I am not prepared to state how many—call for white pine, and the trade generally understands what we are selling, and the girl who makes up these price lists has used the word "white pine" for so long—she has been with us since 1920—that in making up price lists she occasionally drops into the use of the word "white pine"—New Mexico white pine, sometimes simply pine.

Q. Is it her custom to follow the language of the order?

A. Yes; it is.

Q. If a customer says "white pine", then she writes "white pine" in her order?

A. She would more than likely write her order up "white pine."

Q. And if they said "pine"——

A. She would write her order up "pine"; just specify the grade and size of the lumber; she probably wouldn't put anything

3433 in there to designate the kind of wood.

Q. What was the occasion of your changing of the name and designation of your lumber from white pine to pondosa pine?

A. The change was effected after the visit to our office of the examiner for the Federal Trade Commission.

Q. Do you remember when that visit occurred?

A. It was early in 1928; I think probably March or April.

Q. And do you remember what he said to you?

A. He said he was making an examination for the Federal Trade Commission on an informal complaint against ourselves and a number of other lumber companies for the use of the name "white pine" in designating our products.

Q. And after his visit did your official hold a conference?

A. They did.

Q. What did they determine to do?

A. Colonel Breece, our president and general manager, instructed our sales department that we should discontinue the use of the name "white pine" until this matter had been put out of the way.

Q. You mean until this case had been closed?

A. Until this case had been closed one way or the other.

Q. Did he give any reason for so doing?

A. As I recall, his reason was a spirit of fairness; that if we were using a name to which we were not entitled we didn't want to use it.

3434 Q. Have you any preference as to the use of the term "white pine" or "pondosa pine" in designating your product?

A. I most assuredly have.

Q. What is that preference?

A. White pine.

Q. Why?

A. Because our product has been generally sold under that name since the inception of our purchases in 1903, and the trade generally knows it as white pine.

Cross-examination by Mr. BURR:

Q. Do you know whether there has been a good deal of advertising done by the inland empire producers of ponderosa pine of the word "pondosa" pine?

A. I am not qualified to speak.

Q. You have not investigated whether there was a large amount of advertising of pondosa pine done by the inland empire producers?

A. I am not qualified to speak; I am not a student of the sales business; I am auditor and secretary of the sales department.

Q. You have a number of branches out of the Breece Lumber Company?

A. We have some branches out of the Breece Lumber Company.

Q. Where are they located?

3435 A. One at Alamagordo, New Mexico, where we operate a mill.

Q. Do you have sales branches, too?

A. No sales branches, other than our Monroe, Louisiana, office sells their yellow pine and hardwood from their office as well as from out office here.

Q. When you referred in your direct examination to branches you referred to those two?

A. I referred to those two, and I also referred to what I call operative branches; we have an office at Grants, New Mexico, that handles transportation matters and logging matters, nothing pertaining to sales; we also have an office at Cloudcroft, New Mexico, which fulfils the same purpose.

Q. And you think some of those branches may still be using the letterhead "White pine", do you?

A. They may be using the obsolete form.

Q. Do you have salesmen on the road?

A. We have no salesmen; we have commission representatives.

Q. They are selling for you rather than taking title and receiving shipment, aren't they?

A. They are.

Q. Do you know whether you have lost sales as a result of the use of the word "pondosa" instead of the word "white" pine?

A. I am not prepared to state; I am not in the sales depart-
3436 ment; we probably have, but I wouldn't want to say, because I don't know it to be a fact.

Redirect examination by Mr. WOOD:

Q. Do I understand you to say that you only have one sales office for the white Pinus ponderosa?

A. All of our Pinus ponderosa is sold from our Albuquerque office.

Q. And not from any of the other offices you refer to?

A. No.

Q. Your commission representatives throughout the country, do they use your letter forms?

A. No, sir; they use their own forms; they aren't provided with any of our stationery.

Mr. WOOD (to Mr. Burr). You don't care to have these books in evidence?

Mr. BURR. No, indeed; I will take the testimony as satisfactory. (Witness excused.)

DEWITT GARBER, called as a witness in behalf of the respondents, having been first duly sworn, testified as follows:

Direct examination by Mr. RYAN:

3437 Examiner BRULER. What is your name and address, please.

A. Dewitt Garber; Albuquerque, New Mexico.

Mr. RYAN. Mr. Garber, you are employed by the White Pine Lumber Company?

A. I am.

Q. What is your position with that company?
A. Assistant secretary and treasurer, and auditor.
Q. How long have you held that particular position?
A. I have held the position of auditor since about July 1925 and the other positions since the first of the year.
Q. First of January, 1930?
A. Yes, sir.
Q. When was the White Pine Lumber Company organized?
A. It was organized about 1922 or 1923, as I recall it, Judge.
Q. Its plant is situated where?
A. At Bernalillo, New Mexico.
Q. Where does it get its timber?
A. From the Canyon de Santiago land grant up in the Jemez Mountains.
Q. In New Mexico?
A. Yes.
Q. How far is that from Bernalillo?
A. About fifty miles to our logging camp.
Q. When did the White Pine Lumber Company begin operations?
A. About January 1st, 1924, as I recall.
3438 Q. And it operated from that date until when?
A. September 13th, 1928, we closed the sawmill.
Q. And also logging operations?
A. Well, we stopped the logging operations a short time before September 28th.
Q. When were logging operations resumed?
A. December 1929.
Q. They are now in progress, are they?
A. Yes.
Q. Preparatory to milling lumber?
A. Yes.
Q. And selling lumber?
A. Yes.
Q. As auditor or as assistant secretary and treasurer of the company, you are familiar with the affairs of the company, the business administrations of the company?
A. Yes.
Q. From the time of the inception of the company by what method were the sales of lumber handled?
A. We didn't have a sales manager until, I think, about the first of 1926, I don't recall the dates, they handled it themselves at Bernalillo; we didn't have much of a sales organization before that time, but, as I recall it, we employed a sales manager about the first of 1926.
Q. By that method the sales were handled directly by the
3439 company?
A. Yes.
Q. How long did that continue?

A. I don't know the exact time, but I should say in 1927 the sales were handled by the Southwest Lumber Sales Corporation of Albuquerque; I don't recall the date that sales organization took it over.

Q. That is the organization of which Mr. Ramshaw was at one time president and vice president?

A. Yes.

Q. I merely wanted to identify the same man that testified yesterday. I hand you a form of letterhead of the White Pine Lumber Company and ask you how long this form of letterhead has been in use by the company?

A. This is the form we are now using and have been using since the first part of 1926, I should say the early part of 1926.

Q. And that is the form of letterhead used in all your correspondence?

A. We are using that now. We had that one there——

Q. I will show you that.

(Letterhead marked "Respondent's Exhibit No. 52.")

Mr. RYAN. The respondent, White Pine Lumber Company, now offers in evidence the form of letterhead reading "The White Pine Lumber Company, manufacturers of high-altitude soft-texture double-band and resaw mill Pondosa pine, annual capacity
3440 60 million feet, modern millwork facilities, Bernalillo, New Mexico" (respondent's exhibit no. 52).

Examiner BRULER. Respondent's exhibit no. 52 is offered and admitted for the record.

Q. Now, at the time the company was handling its sales directly through its own organization, did you use this form of price list [handing witness price list]?

A. Yes; this was the form in use at that time we were handling our own sales at Bernalillo.

Q. And used by you up until the time that the sales of the company's product was handled by the Southwest Lumber Sales Corporation?

A. That is correct.

(Price list marked "Respondent's Exhibit No. 53.")

Mr. RYAN. Price list is offered as respondent's exhibit no. 53.

Examiner BRULER. Respondent's exhibit no. 53 offered and admitted for the record.

Q. This form of letterhead I hand you is the form of letterhead which you refer to as being used by the company prior to the use of respondent's exhibit no. 52?

A. This letterhead was used, as I recall it, prior to 1926; we still use some of the forms for communications between different departments, our logging camp, and mill superintendent.

Q. Just among the departments of the company at Bernalillo?

3441 A. Yes; none of this goes out to the trade; it was used prior to 1926.

(Letterhead marked "Respondent's Exhibit No. 54.")

Mr. RYAN. We offer this letterhead as respondent's exhibit no. 54.

Examiner BRULER. Respondent's exhibit no. 54 admitted for the record.

Q. I hand you form of invoice of the White Pine Lumber Company; how long has that been used?

A. Since the inception of the company, as far as I know; it was in use when I came to Bernalillo in February of 1925.

(Marked "Respondent's Exhibit No. 55.")

Mr. RYAN. We offer it in evidence as respondent's exhibit 55.

Examiner BRULER. Respondent's exhibit no. 55 offered and admitted as part of the record.

Q. This is a form of statement used by the company, is it? [Handing witness statement.]

A. This is a form used ever since I have been there, since 1925.

(Marked "Respondent's Exhibit No. 56.")

Mr. RYAN. We offer this in evidence (respondent's exhibit 56).

Examiner BRULER. Respondent's exhibit no. 56 offered and admitted as part of the record.

Q. Has the company done any advertising in trade journals you know of?

A. You mean the White Pine Lumber Company?

3442 Q. Yes.

A. Well, some local, just in programs.

Q. That is local advertising?

A. Yes; just more or less of a donation.

Q. That is in New Mexico?

A. Yes.

Q. But you haven't advertised in journals outside of New Mexico?

A. At one time we had several pages in the American Lumberman showing pictures of the mills, logging operations; I don't recall the date, but that is sometime ago.

Q. You haven't a copy of that advertising?

A. No.

Q. Beginning with 1927 when the sales were handled by the Southwest Lumber Sales Corporation——

A. I don't recall the date; I think it was 1927.

Q. They sold your product and after the sales you shipped directly to the buyer and sent the buyer the invoice?

A. Yes; they made the sale; we invoiced the lumber and made the collections.

Cross-examination by Mr. BURR:

Q. Where does your so-called "white pine" go; that is, what parts of the country?

A. It goes into the New England States, New York, Pennsylvania, Indiana, Michigan, Illinois, Kansas, Colorado, Oklahoma, Texas, principal points.

3443 Q. How large a percentage is sold right here in the State, more than half of it?

A. No; not half of it.

Q. Who are your customers; do you sell through commission houses, brokers, or how?

A. Before the Southwest Lumber Sales took it over we did sell more or less through commission men; a great deal of it was handled ourselves, but some sales were made through commission men.

Q. Well, now, since the Southwest Lumber Sales Corporation has discontinued selling your product, how are the sales now made?

A. We have had very little lumber to sell since then; we have been inoperative since 1928.

Q. That is right, I had forgotten. And you have just resumed?

A. Just resumed operations; we intend to start tomorrow with the mill.

Redirect examination by Mr. RYAN:

Q. Just one more question I didn't think to ask on direct examination. The contract with the Southwest Lumber Sales Corporation is not now in existence, is it?

3444 A. As far as I know it is not.

Q. And it is the plan of the company to sell directly through its own organization?

A. Yes, sir.

(Witness excused.)

W. G. RAMSHAW, recalled as a witness in behalf of the respondents, having been previously duly sworn, testified as follows:

Redirect examination by Mr. Wood:

Q. Have you a copy of the letterhead that is now in use by the Southwest Lumber Sales Corporation?

A. Yes, sir.

Q. Will you produce it?

(Witness produces letterhead, which is marked "Respondent's Exhibit No. 57.")

Mr. WOOD. I offer letterhead of the Southwest Lumber Sales Corporation now in use by it.

Mr. BURR. No objections.

Examiner BRULER. Respondent's exhibit no. 57 offered and admitted as part of the record.

Q. How long has that letterhead been used by the Southwest Lumber Sales Corporation to your knowledge?

A. Since July 1928.

3445 Q. Was that the date that the term "pick of the pondosas" was removed from the letterhead?

A. Yes.

Q. Do you know why it was removed?

A. Because it wasn't very appropriate for the general sales of the Arizona white pine.

Q. In what way?

A. Because the general trend of the trade is the Arizona white pine.

Q. Do you mean the word "pondosa" in your mind did not describe the Arizona white pine?

A. No; because the pondosa was used so much in the Spokane district.

Q. Were you the cause of the removal of the name from the lumber and sales list of the Southwest Lumber Sales Corporation?

A. Yes.

Q. And how long had the term "pick of the pondosas" been used?

A. About six months, I think.

Q. I believe you testified yesterday that a Mr. Hobb was responsible for it?

A. Yes; he had charge of the sales department.

Q. For about six months?

A. Yes.

Q. He came here from the North?

A. From Minneapolis.

3446 Recross-examination by Mr. BURR:

Q. The word "pondosa" suggests a technical name for the species that you are engaged in selling, ponderosa, does it not?

A. Yes.

Q. The word "pondosa" has been very extensively advertised, has it not?

A. Yes.

Q. Do you know whether that term is now being used by jobbers and wholesalers?

A. Yes, sir.

Q. In various parts of the country?

A. Yes.

Q. It is, is it?

A. Yes.

Q. Did you regard the use of the word "pick" in connection with the slogan "pick of the pondosas" as rather unfortunately comparitive in its character as against some of the other ponderosa manufacturers?

A. No; I didn't think it was appropriate for this district.

Q. Did you regard it as too much of a boast by saying the pick or best of the pondosas?

A. No; that wasn't my idea at all.

Q. That wasn't your motive to get rid of that. Now, there is just one question I would like to ask that was proper
3447 cross instead of recross, if I may. I think you testified that for French doors and windows the sugar pine was preferable, and I was going to ask you way, but it escaped my mind.

A. The sugar pine isn't considered a pondosa pine.

Q. I know it is not; I think you testified on your direct that the sugar pine was preferable to the pondosa for French doors and windows?

A. For certain purposes. It just seemed to be the choice of the sash and door manufacturers; that isn't my idea at all.

Redirect examination by Mr. WOOD:

Q. You stated that the term pondosa you know is being used by retailers and jobbers in selling ponderosa pine?

A. Yes.

Q. The term white pine is also being used by them, is it not?

A. Yes.

Q. Do you know which is being used the most?

A. I couldn't say that; no.

Q. Have you any opinion on the subject?

Examiner BRULER. If he says he couldn't say an opinion would be rather out of order, I should say.

Mr. WOOD. He has had occasion to see, he has been all over the country.

3448 A. From my own experience I would say the white pine is used more because that is my contact with the trade.

Q. In your contact with the trade, do they ever use the term "pondosa" in connection with your lumber?

A. Yes; they do.

Q. And they use the term "white pine"?

A. Yes.

Q. Which do they use more often?

A. In my experience, the white pine.

(Witness excused.)

GEORGE E. BREECE, called as a witness in behalf of the respondents, having been first duly sworn, testified as follows:

Direct examination by Mr. WOOD:

Examiner BRULER. Let me have your full name and address, please.

A. George E. Breece, Albuquerque, New Mexico.

Mr. WOOD. What is your age, Mr. Breece?

A. Sixty-six.

Q. Are you the president and general manager of the Breece Lumber Company?

A. Yes, sir.

Q. How long have you held that position?

A. Since its organization.

Q. And that was when, about eleven years ago?

3449 A. I can't now tell you the number of years, I forget.

Q. But ever since it has been organized?

A. Yes.

Q. Prior to that, were you in the lumber business?

A. Yes.

Q. How long have you been in the lumber business?

A. All my life.

A. You started as a sawyer?

A. I started in the sawmill.

Q. Where did you start?
A. Roundhead, Ohio.
Q. What kind of lumber did you manufacture there?
A. That was hard woods, oak, hickory, ash, and walnut.
Q. Subsequently you were in the lumber business in West Virginia?
A. Yes.
Q. What kind of lumber was that?
A. That was hardwoods; we had poplar and some hemlock.
Q. Then you went farther south?
A. Yes.
Q. And you were in the yellow-pine business in the South?
A. Yes.
Q. For how long?
A. For thirty years.
Q. During the World War were you connected with the United States Government in lumber matters?
3450 A. Yes.
Q. What position did you hold?
A. I had charge of the lumber department of the spruce division.
Q. Where were you located?
A. At Portland.
Q. Oregon?
A. Yes.
Q. How many mills does the Breece Lumber Company operate?
A. At present we are operating three mills.
Q. How many mills do you own?
A. That is all that is in operation; they were cut out other places.
Q. Where are those mills located?
A. Albuquerque, Alamagordo, and Monroe, Louisiana.
Q. At Albuquerque, what kind of lumber do you produce?
A. Pondosa pine.
Q. At the present time?
A. Yes.
Q. Any other?
A. Very little.
Q. Is that true also at Alamagordo?
A. We have the pine and have the fir.
Q. And how about your mill at Monroe?
A. That is yellow pine and some hardwood.
Q. What kind of yellow pine, both short and long leaf?
3451 A. Shortleaf and some longleaf.
Q. What is your present production of Pinus ponderosa?
A. I should say in one shift it is two hundred thousand feet; I have been only running one shift.
Q. A day?
A. Yes.
Q. What is your production of yellow pine at the present time?
A. At the present time it is small; we are pretty well cut out in yellow pine.

Q. About what percentage?

A. They run, I should say, about twenty-five percent yellow pine there now.

Q. Twenty-five percent of your total production?

A. Total cut.

Q. At one time——

A. It was all yellow pine at one time; now we are cutting the hardwood.

Q. Do you know the common name among the public generally in New Mexico for the ponderosa pine?

A. Well, we have always called it white pine.

Q. How long have you always called it white pine?

A. Well, I came out here in 1907 and looked over this tract, and it was called white pine at that time, the tract of timber we are now cutting.

Q. Would you say that is the common name for it throughout New Mexico?

3452 A. That was the common name throughout the State.

Q. And is it at the present time the common name?

A. At the present time it is the common name.

Q. On the occasion of the visit of a member of the Federal Trade Commission or investigator from the Federal Trade Commission at Albuquerque, you had a conversation with him, about two years ago?

A. I didn't, but the sales manager, Mr. Moore, did; I wasn't in the city.

Q. And as a result of that you changed the name from New Mexico white pine to pondosa pine in designating your product?

A. Yes, sir.

Q. What was the reason for that?

A. Well, we wanted to establish ourselves in some way; if we weren't to use white pine, we had to have some other trade name, and we just chose pondosa.

Q. Did you do it from preference?

A. No, sir.

Q. What name would you prefer to use?

A. White pine.

Q. Why?

A. It is the established word in this country; that is the established name of it.

Q. From the standpoint of the species and the general
3453 characteristics of the woods, is that a factor in your mind in determining that question?

A. The wood we have back there—would you gentlemen care to look at it?

Q. We will produce that later. Go ahead.

A. It is the same as white pine, as far as I can detect in any way. It looks like Michigan white pine.

Q. You consider it a real white pine?

A. Real white pine.

Q. Have you ever had an opportunity to observe the Michigan white pine?

A. Yes, sir.

Q. What has been that opportunity?

A. We used to have a yard—I was with the Advance Lumber Company for years—we had a yard in Cleveland, where we sold white pine.

Q. That is, the Michigan white pine?

A. Michigan and Minnesota.

Q. How, in your opinion, do the Michigan white pine and the ponderosa pine compare in general characteristics and texture?

A. Well, for finish, I think New Mexico white pine makes a better finish, the timber grows slower, it is an old-growth timber, and it makes a nicer finish.

Q. In any other way would you compare the two?

A. The Michigan white pine grows much larger; our pine in
3454 this country doesn't grow large; it is a very slow growth.

Q. What comparison would you make as to color?

A. Well, I think the New Mexico white pine is whiter; it has a whiter cast.

Q. Than the Michigan?

A. Than the Michigan. The difference lies in favor of New Mexico.

Q. From the standpoint of durability, what comparison would you make?

Mr. Burr. I wish you would qualify him on that first.

Q. Have you had opportunity to observe the durability of the Michigan white pine for exterior and interior work?

A. No more than the sale of it. I lived there—we sold it for years.

Q. You from time to time saw it in buildings?

A. I saw it in buildings, but I couldn't tell as to the years of durability.

Q. You have had opportunity to observe the durability of the New Mexico white pine?

A. Yes.

Q. From your observation, what would you say as to their comparitive durability?

Mr. Burr. I don't think he has qualified himself on that.

Examiner Bruler. No; I don't think he has qualified himself on that point. I don't think that question is proper.

3455 A. I couldn't say in regard to that; I think the two woods are on a par as to that.

Q. What would you say as to the difference between yellow pine—that is, the shortleaf and the long leaf—and the ponderosa pine?

A. There is no comparison in the two woods at all.

Q. In what respects?

A. Either in life or in color or in finish.

Q. Will you kindly state the differences as you have noted them that is, the short leaf and the long leaf—and the ponderosa pine?

A. Well, the yellow pine of the South, of course, is yellow; it grows with a quick growth, and it won't take finish and it won't take paint—that is, the paint won't hold on it; while the white pine will take a nice finish and it will hold paint, and it is superior in every way.

Q. By white pine, you mean ponderosa pine?

A. Ponderosa pine; yes, sir. I think the yellow pine has the greatest tensile strength than the white pine; it will carry a heavier load; it is better for certain classes of buildings where they have a heavy strain.

Q. Have you any other differences to note between the two?

A. Nothing, only the white pine is much better for doors, sash, interior finish that goes into a house, and is better for boxes and crates.

3456 Q. And why is it better for boxes and crates?

A. It makes a better-looking box and works easier, and it is lighter.

Q. Do you know whether the white pine or yellow pine is used for shook purposes in boxes at the present time?

A. Some of the yellow pine used there, but there is more white pine; people don't buy that yellow pine for shook.

Q. They used to, didn't they?

A. They used to down in Texas; in that part of the country the freight rates were so much better.

Q. At the present time they use the white pine?

A. They use the white pine, pondosa pine, and pay more money for it.

Q. And why is it preferable to the yellow pine?

A. It makes a nicer package; it is lighter wood, less freight.

Q. How about the comparison from the standpoint of nailing?

A. It nails easier.

Q. Does the yellow pine tend to split when nailed?

A. It splits easier than white pine does.

Q. Where do you sell your lumber?

A. Well, we sell it in New Mexico, Arizona, California, Texas, Arkansas, up in Michigan and Ohio, Illinois.

Q. You sell it throughout the country?

A. Throughout the country.

Q. What proportion of it is sold locally? By local, I mean

3457 in the State of New Mexico.

A. Well, I would say forty percent.

Q. Of your product is sold locally?

A. Yes.

Q. And the other sixty percent in the East and Southwest?

A. Larger in the West here, Texas, Arizona.

Q. What part of your lumber is sold in the Southwest—the area east of California? By that I mean the States of Arizona, New Mexico, Texas, Oklahoma, and Kansas.

A. In Arizona we sell nothing but box shook; in Texas we sell building material and box shook; the bulk of our lumber is sold through Kansas, Oklahoma, Texas, and New Mexico.

Q. For what purposes is it used through there?

A. Building purposes, boxes, crates.

Q. For exterior purposes in building?

A. Yes; for finish, anything that goes into a building.

Q. Framework?

A. Framework.

Q. Have you had an opportunity to observe how durable it is for exterior purposes?

A. In our own buildings out there it shows it; those buildings have been up, I think, twenty-eight years.

Q. And they are built of Pinus ponderosa?

A. Yes.

Q. Inside and outside?

A. Inside and outside.

3458 Q. What is their present condition?

A. Very good condition.

Q. Any evidence of rot and decay?

A. Some, of course.

Q. But no unusual evidence?

A. Where it lays close to the ground. I have samples there that I will show you gentlemen.

Q. Have you samples of that building?

A. Yes.

Q. Will you produce them?

A. Yes. This is part of the structure of the mill that laid on the ground, and that is the amount of rot in twenty-eight years [indicating another piece]. That didn't lay on the ground.

Mr. Wood. I would like to have those marked for identification.

(Marked "Respondent's Exhibits Nos. 58 and 59.")

Mr. Wood. I offer in evidence sample of Pinus ponderosa taken from the sawmill of the George E. Breece Lumber Company.

Examiner Butler. Respondent's exhibit no. 58 admitted in evidence.

Mr. Wood. And I offer in evidence another sample taken from the same mill.

Examiner Butler. Respondent's exhibit no. 59 offered and accepted in evidence.

Q. From what part of the mill were those exhibits taken?

3459 A. From under the back part of the mill; from under the mill.

Q. From the upper part?

A. No; on the ground.

Q. Did it lay on the ground?

A. This was exposed.

Q. Exhibit 58 was laid on the ground?

A. Yes; it was exposed to the ground.

Q. How about exhibit 57?

A. This was not.

Q. Where was that?

A. That is from the floor system; they are both from the floor system.

Examiner BRULER. Number 59 did not touch the ground?

A. No.

Examiner BRULER. Number 58 did touch the ground?

A. Yes.

Mr. WOOD. From the exterior construction?

A. Exterior construction in the lower part of the building.

Q. This is the one that touched the ground?

Examiner BRULER. I think you got them reversed. In order to get this matter straightened out, Mr. Wood, will you now state which touched the ground, by number, for the record.

Mr. WOOD. Exhibit 59 is the specimen of lumber that touched the ground, referred to by Mr. Breece in his preceding testimony.

3460 Q. Number 58 is the specimen of lumber which was in the building and did not touch the ground.

A. Yes; in the floor system.

Q. Which was in the floor system of the mill. What mill were they taken from?

A. Albuquerque sawmill.

Q. From the mill of the Breece Lumber Company in Albuquerque, to which you refer in your preceding testimony?

A. Yes.

Examiner BRULER. That corrects the record.

Q. Do you know how long those specimens of lumber have been in that mill?

A. The mill was built, I think, along about twenty-eight years ago; I can't state definitely; that is about the time; it must be along in there.

Q. Mr. Breece, have you any boards with you produced by your company?

A. Yes, sir.

Q. Of the different grades?

A. No, sir; showing the quality of the wood.

Q. Will you produce those.

(Witness produces boards.)

Q. I show you specimen of lumber; will you kindly describe it?

A. This is a piece of the wood from the Bernalillo mill down here at Bernalillo.

3461 Examiner BRULER. What kind of wood?

A. I would say it was white pine, but we have to say ponderosa; this is from the White Pine Lumber Company at Bernalillo.

Mr. BURR. Let me ask the colonel a question before it is offered.

A. The reason I am giving you these samples, we have them all in our own mill. I buy this lumber and sell it to the public, and we

have it from California, and we have it from Oregon and from our own State. It is all out here in the building; you can see it if you want to, but I want you to see the different casts of the white pine from Oregon and from California; this shows for itself here better than I can tell you.

Mr. BURR. Let me ask you a question or two in regard to that sample.

Q. Is that heartwood or sapwood, would you say?

A. It borders a little on the heart here, see. This is sapwood here.

Q. The part that has the yellowish grain in it is the heartwood?

A. Yes.

Q. Do you contend that that is about the average sample, or is that an especially good sample, or what?

A. I would say it is an average sample; that is the reason I brought the boards so you could see.

3462 Q. You would declare that to be an average sample?

A. I am going to tell you how we got this.

Q. I want you to answer the question, Is that an average sample?

A. This lumber is brought into our plant as finish.

Mr. WOOD. We identified this sample of lumber.

(Marked "Exhibit Respondent's No. 60.")

Examiner BRULER. Respondent's exhibit no. 60 is offered for identification.

Mr. WOOD. I offer for identification a sample with the word "California" on it.

(Marked "Respondent's Exhibit 61.")

Examiner BRULER. Respondent's exhibit no. 61 offered for identification.

Mr. WOOD. I offer for identification sample with the word "Arizona" written on it in pencil.

(Marked "Respondent's Exhibit No. 62.")

Examiner BRULER. Respondent's exhibit no. 62 offered for identification.

Mr. WOOD. I offer sample of lumber with Breece written in pencil on it.

Examiner BRULER. Respondent's exhibit no. 63 offered for identification.

(Sample marked "Respondent's Exhibit No. 63.")

Mr. WOOD. I show you exhibit no. 60, marked "Bernalillo

3463 Lumber", and ask where that came from?

A. That came from Bernalillo, the White Pine Lumber Company.

Q. Is that Pinus ponderosa?

A. It is what we call the pondosa white pine.

Mr. BURR. Is that the one as to which you testified as to the heart and sap wood a few moments ago?

A. No.

Mr. BURR. Is that an average sample of your wood?

A. That is an average sample of the finish we buy that comes from that mill.

Mr. Wood. I offer this in evidence.

Mr. Burr. No objection.

Examiner Bruler. Respondent's exhibit no. 60 offered and admitted in evidence.

Mr. Wood. I show you sample marked for identification "Number 61", containing the pencil marks on it "California", and ask you what kind of lumber that is?

A. It is the same thing.

Q. Pinus ponderosa?

A. Yes; that is from California.

Mr. Burr. What part, Colonel?

A. It is from the Clover Leaf Lumber Company.

Mr. Burr. Do you know where their mill is located?

A. The eastern part of California—Loyalton, Sierra County, California.

3464 Mr. Burr. Do you buy very much from the Clover Leaf Lumber Company?

A. I will explain to you how and why. Our timber, as I said on the start, is small. We don't cut as much wide lumber as we use. We have to buy our grain boards, our wide finish, from California. The timber grows bigger there, and we get wider boards, and we have to have it for drain boards in our sales of lumber. I get it out there—we buy it from them.

Mr. Burr. Referring to respondent's exhibit no. 61, would you say about three fourths of it is heartwood?

A. That is the reason I gave you—that is for that reason. This is the heartwood, and this the sap part of that wood; this is just bordering on the heart [indicating].

Mr. Burr. That finger won't show in the record; just say how large a percentage is heartwood and sapwood?

A. I will leave that to you; that is in the center.

Examiner Bruler. You are testifying; not he.

A. I would say the sapwood represents about half of that piece, wouldn't you?

Examiner Bruler. Don't ask questions; you are testifying.

Mr. Burr. Let me call your attention to the line that appears to be about in the middle of the stamp——

A. The yellow starts in about there—the yellow cast.

Q. Doesn't the yellow cast start in right through the middle of the rubber stamp?

3465 A. I would say that far over; wouldn't you?

Mr. Burr. You are the lumber expert; I am not.

A. Right there is where it starts in, just about one third sap.

Examiner Bruler. Then you want the record to show, Colonel, that that piece is just about one third sap?

A. Yes.

Mr. BURR. Is it about the average sample of what you get from California?

A. That is an average sample cut off; the whole board is there, too. We buy it C and better.

Mr. BURR. You regard that C select and better?

A. That is clear; we buy it C and better.

Mr. WOOD. You make a distinction between clear and C and better?

A. One grade higher.

Examiner BRULER. Very well, Mr. Wood; do you want to offer that in evidence now?

Mr. WOOD. I offer this in evidence, this sample marked for identification "Respondent's Exhibit No. 61."

Examiner BRULER. It may be admitted.

Mr. WOOD. I show you sample marked for identification "Respondent's Exhibit No. 62", having in pencil on it the word "Arizona"; is that a Pinus ponderosa piece of lumber?

A. Yes.

Mr. WOOD (to Mr. Burr). Do you want to ask any questions on this?

3466 Mr. BURR. Is that heart or sap?

A. Well, it is cut out of the sap; it is into the—close to the heart.

Q. It is pretty hard to say whether it is sap or heart?

A. Well, no.

Q. You think that is heart?

A. It is bordering in towards the heart; it is quite a little ways to the bark, and the growths begin to show, and the yellow cast begins to show there on it.

Q. Is that about the average piece of the Arizona ponderosa?

A. Of course, we have it with more sap than that, but in cutting the clear stuff that is an average piece, some of it whiter, might be a little closer to the heart; of course, the sap is the white wood; as you go in then it begins to get this color.

Q. That yellowish color?

A. Yes. As you get into the heart of the log.

Examiner BRULER. What you aim to say is that piece of wood represents a piece that is taken near the heart of the tree?

Mr. BURR. You don't mean the center?

A. Not near the center at all; probably one fourth in on the log, something like that, from the looks of the grain. It ain't sap and it ain't heart; it is between.

Examiner BRULER. That is what I had reference to when I asked you that question.

3467 Mr. BURR. From that part of the tree, that is the usual sample, is it?

A. Yes.

Mr. WOOD. I offer sample marked for identification, "Respondent's Exhibit No. 62."

Examiner BRULER. It is received in evidence. Go on.

Mr. WOOD. I show you sample of wood marked for identification "No. 63", and ask you what kind of lumber that is?

A. That is pondosa; white pine we call pondosa.

Q. Where did you get it?

A. Out of our lumber; that is all sap.

Mr. BURR. Is that about the average piece for your sapwood?

A. Yes, sir; our trees grow smaller and the sap is the big part of the log.

Mr. BURR. How large a percentage is sap, Colonel?

A. I would say it is about—nearly two thirds; would be in feet, two thirds of the log.

Mr. BURR. That, as a matter of fact, is a very choice piece of sap, isn't it, Colonel?

A. No; there is some over there. I just sent the man out. I didn't pick any of this stuff myself. I ordered them picked out.

Mr. BURR. Would you say your sapwood runs as clear and as broad as that on the average?

A. In the high-grade lumber; yes. Go out and look at it.

3468 Mr. BURR. That is an A select, isn't it?

A. That is the highest grade.

Mr. BURR. In other words, that is above the average?

A. Sure; we don't get any big percentage of that kind; that is what I am showing you, all of this wood.

Mr. BURR. I was asking you if that is average for sap?

A. The sap is clear.

Mr. WOOD. That is the average for sap of that grade?

A. Yes.

Mr. BURR. But that is an A select clear?

A. Sure. I would like just for your own knowledge to show you those boards, you don't need to take them. What I am trying to do is to show you what our timber is.

Mr. BURR. Have you got some boards you would like me to see?

A. Yes.

Mr. BURR. All right; I will look at them.

Examiner BRULER. You can take samples of them.

Mr. WOOD. I am offering exhibit 63 in evidence.

Examiner BRULER. That will be admitted.

(All parties inspect lumber samples.)

Mr. BURR. Colonel, do you recognize any more an A select grade?

A. Any more what?

Q. At this time do you have a grade you sell as A select?

A. We don't sell anything A select at all.

Q. Then, when I asked you a few moments ago if a certain

3469 board was A select, that was a B select?

A. B and better and C; we sell those. That is the way we grade them.

Q. That was a B and better piece?

A. That was a B a&d better.

Q. I used the word "A select", and it should have been B select and better.

Mr. Wood. You mean all the exhibits put in have been B and better?

A. Yes.

Mr. Burr. Then you do have a grade of first and second clear, do you not?

A. No.

Q. Do you follow the grades of the California white and sugar pine?

A. We buy that B a&d better.

Mr. Wood. You follow the grades of the California mills, don't you?

A. That probably is in name, when we buy a B a&d better; that is a clear board.

Q. You have the same grading, do you not, as the California mills?

A. If we have to have any lumber graded, if we ship it off and there is any objection, we are governed by those rules.

Mr. Burr. When you said a few moments ago that all the
3470 pieces you have testified about were B a&d better you referred to respondent's exhibits 60 to 63, inclusive?

A. Yes, sir; I brought the lumber because I didn't think maybe the pieces were big enough to satisfy you.

Mr. Wood. I show you a door, and ask you to have it marked for identification.

Examiner Bruler. It may be so marked, "Respondent's Exhibit 64."

(Door marked "Respondent's Exhibit No. 64.")

Q. Colonel Breece, of what wood is that door made?

A. White pine, we call it—pondosa.

Q. Of what grade is it made?

A. It is taken from shop.

Q. Shop lumber?

A. Shop lumber it is cut out of; it is clear.

Mr. Burr. Where did that particular lumber that is in respondent's exhibit 64 for identification, where did that come from?

A. From our mill here; it was made from our shop lumber in the yard; I am told by the door man that made it. He will testify to that.

Q. Do you know whether that was made from Arizona or California pondosa?

A. It came right here from New Mexico; that is our shop lumber in the yard.

Q. Is that made from heart or sap, or what?

3471 A. It is both; that is the reason I brought it here. It has got sap and it has got heart—it has got it all there.

Q. That is made from number one shop, is it?

A. What we call shop common, four quarter shop common.

Q. Shop common has knots in it, hasn't it?

A. Sure, but we cut that out in making a door.

Q. It isn't number one common shop?

A. It is made from shop; it is what they call shop.

Mr. Wood. I offer this sample of door, marked for identification "No. 64", in evidence.

Examiner Bruler. It is admitted.

Mr. Wood. May I ask if there is any objection to our introducing that large door if we ship it?

A. It shows the samples of wood exactly—the heart and the sap.

Mr. Burr. If the examiner please, I rather urge that you can prove most any kind of thing by samples; and opposing counsel in California more or less cooperated in cutting down expenses, and you must realize we have quite a little in the way of exhibits already, and I will say this, the multiplication of a great number of samples would serve to befog the Commission, and serve to have them disregard them all, rather than if we have just a few samples which can be readily comprehended.

Mr. Wood. If we would be allowed to send that one sample it would be sufficient.

3472 Mr. Burr. I am not going to object; I think it is competent.

Examiner Bruler. If you want to offer that sample and will be solely responsible in seeing it gets to Washington, it may be offered.

Mr. Wood. We will.

(Door marked "Respondent's Exhibit No. 65.")

Q. Referring, Mr. Breece, to sample of door marked for identification "Exhibit No. 65", will you state what kind of lumber that door is made of?

A. It is called pondosa, but it is white pine.

Q. Pinus ponderosa?

A. Yes.

Q. Do you know by whom that door was made?

A. Whitmer Jackson Company.

Q. Where did the lumber come from?

A. From our mill over there.

Q. Your mill where?

A. In Albuquerque.

Q. The door came from Whitmer Jackson's; are they sash and door manufacturers in Albuquerque?

A. They have their sash and door plant—they have our sash and door plant leased and we sell them our shop and lumber.

Q. Where did the timber come from?

A. The Zuni Mountains.

Q. Where are they located?

3473 A. In McKinley and Valencia Counties.

Examiner Bruler. New Mexico?

A. New Mexico.

Mr. Wood. What grade of lumber is used for it?

A. Shop.

Mr. Burr. Now, referring to respondent's exhibit 65, Colonel, referring to the top, the crosspiece—I don't know the technical name of it—that is about half heart and half sap, isn't it?

A. I would think so; don't you?

Examiner Bruler. Don't ask him a question; answer his question.

A. I am just guessing the same as you would be; you said about half. I think you are right.

Q. Referring to the two side pieces, are they heart or sap?

A. They are sap on this side.

Q. Referring now to the side where the Commission's mark is located?

A. This is bordering on the heart, don't you see?

Q. There is a line of demarcation between the heart and sap, is there, in the side piece?

A. Yes, sir; this is sap on this side, you see.

Q. Referring to the side, the perpendicular part, where the Commission's exhibit stamp is located, that is largely heart, is it?

A. No; it isn't largely heart. Here is the heart along here.

3474 Here is sap along out here; it is just bordering on the heart. That is off of the center of the log. It ain't heart and it ain't sap; that looks as though it was all sap.

Q. Referring now to the other perpendicular piece, you say it looks as though it was all sap?

A. That looks as though it was on that side; yes, that is all sap.

Q. Now, then, referring to the part below the open space; the first piece is all sap, is it?

A. This piece is all sap; yes.

Q. The first panel?

A. That is about, I should say, one third in towards the heart; it is betwixt and between, bordering on the heart; it hasn't got into the red wood yet.

Q. The next panel is all sap?

A. That is sap.

Q. The next panel is what?

A. That is sap; this is bordering on the heart here. You can see there as well as I do.

Q. Now, then, referring to the bottom cross board?

A. That shows the heart there.

Q. About half heart?

A. About half heart, over half heart.

Mr. Wood. Colonel Breece, how do your customers order ponderosa pine?

3475 Mr. Wood. I offer in evidence respondent's exhibit no. 65.

Examiner Bruler. It may be admitted in evidence.

Q. Colonel Breece, how do your customers customarily order Pinus ponderosa from the Breece Lumber Company? Under what name, if you know?

A. We advertise it as pondosa; I can't say just how they do that.

Q. You receive orders?

A. We receive orders, but I don't take care of that part of it.

Q. Do you ever receive any orders under the name of yellow pine?

A. Never.

Q. Did you ever see any orders under the name of soft pine?

A. Well, I have had them to inquire for soft-texture pine; I have noticed sometimes.

Q. But have you had the term "soft pine" used in ordering, to your knowledge?

A. I will tell you we get all kinds of terms; they ask for all kinds of stuff.

Q. Tell us what they ask for.

A. They ask for white pine, pondosa pine.

Q. Those are the two main things they ask for?

A. Yes.

Q. But they never have asked for yellow pine or western yellow pine?

A. I never had an inquiry; yes, I have seen inquiries for western yellow pine.

3476 Q. Were they from the Government?

A. I don't think so.

Q. Have you seen many inquiries for western yellow pine?

A. Very few.

Q. Did you at any time maintain retail yards outside of Albuquerque?

A. Yes, sir.

Q. Where did you maintain those?

A. Kansas and Colorado.

Q. How many yards did you maintain?

A. We had five.

Q. For how long a time did you maintain them?

A. Now, I can't just state the length of time; anywhere from three to five years.

Q. Did you sell any other kind of pine there?

A. Yes.

Q. Did you sell any other kind of pine ther?

A. Yes; we sold yellow pine at one of the yards. We sold the white pine at the other yards—pondosa pine.

Q. Do you know what purposes they were sold for?

A. Building purposes.

Q. In those yards, do you know how your customers used to order lumber from those yards?

A. Well, they would send us an order for what they needed.

Q. Sometimes they would designate it pine, sometimes white pine——

3477 A. All the yards handled it, and they would order it as white pine, pondosa pine.

Q. Then they would designate pondosa pine, white pine, or pine?

A. No; we advertised it as pondosa pine; I believe we did; I won't make that positive.

Q. Your customers in ordering sometimes ordered as white pine, didn't they?

A. I don't know; I didn't run the yards.

Q. You don't know how the customers ordered?

A. I don't know how they ordered; I wasn't there, but I know that is all we had in the yards.

Q. Has the Breece Lumber Company at any time, to the knowledge of yourself, received any complaint or objection on the part of a manufacturer of strobus pine, Idaho white pine, or sugar pine, to the use by the Breece Lumber Company of the term "New Mexico white pine", when you used it?

A. I don't know just what you mean by that.

Q. At any time has the Breece Lumber Company, to your knowledge, received any objection by any manufacturer of other pines—that is, the so-called "genuine white pines"—to the use by the Breece Lumber Company of the term "New Mexico white pine" in marketing your product?

A. I have never had any complaints in marketing our products.

Q. Have you had any other jobbers object?

A. Why, sometimes maybe the grades wouldn't be just right
3478 or the texture of the wood wouldn't be; we might have too many knots.

Q. Have you had any objection to the species that was given them?

A. Any what?

Q. Have you ever had any wholesaler or retailer object to the species of lumber that was given them when they ordered New Mexico white pine and received New Mexico white pine?

A. No, sir; never had any trouble on that score.

Q. Have you ever had any customers, so far as you know, state or represent to you or the Breece Lumber Company that in receiving Pinus ponderosa from you that they had expected to receive some other kind of a white pine?

A. No, sir.

Cross-examination by Mr. BURR:

Q. Colonel, when you were back there in Michigan and familiar with the northern white pine——

A. I wasn't back in Michigan.

Q. In Ohio, and familiar with the white pine, would you state whether that product had a high reputation for durability where exposed to the weather?

A. It did.

Q. If you were advising anybody for a drain board where it was going to be alternately wet and dry, would you advise ponderosa or northern white pine?

3479 A. If ours was white enough, I would say New Mexico white pine; I think it is better and I will tell you why: It is a slower growth than Michigan or California; the heart is smaller; it wouldn't hold the dampness or absorb the water much—there is no place for it to go.

Q. The cells are in an entirely different shape from the genuine white pines of the northern woods, aren't they?

A. I don't think so.

Q. Would you be surprised if you were informed that the experts have testified that the cells of the genuine white pines are different in shape from the cells of the ponderosa pine?

A. I have never been able to note it with my eye.

Q. That is a microscopic matter, those cells, isn't it?

A. They grow so fine in this timber here you can't detect it with your eye.

Q. What do you mean by a drain board?

A. They use them, I guess, where the ladies wash dishes in the kitchen to drain the dishes on.

Q. It is exposed to the running water, is it?

A. Yes, it is; after they wash the dishes they put them up there and have them drain off.

Q. Ponderosa doesn't have as high a reputation for durability as Michigan white pine, does it?

Mr. WOOD. Are you referring to any particular part of the country?

3480 Mr. BURR. Outside of this place, where they don't use the northern white pine.

A. This pine hasn't been known out of the State to amount to anything.

Q. Your answer would be it hasn't as high a reputation for durability as Michigan white pine, would it?

A. It is owing to where we talk about the reputation; in New Mexico it is good. Talk about reputation for durability, some of this pine has been in use for hundreds of years here in New Mexico.

Q. This is a very dry climate, isn't it?

A. Just now it is.

Q. It is a very dry climate usually, isn't it?

A. We don't have much rainfall here.

Q. And there is no humidity in the atmosphere to speak of?

A. Not much.

Q. That makes a difference in the durability of lumber, doesn't it?

A. That makes a difference in the growth of timber and makes it more compact, and it will last longer and take a better finish.

Q. It makes a difference also in the length of time where lumber exposed to the weather will last, this question of humidity, doesn't it?

A. What is that?

Q. The matter of humidity makes a difference in the length of time where lumber ordinarily will last when exposed to
3481 the weather, doesn't it?

A. I think so; we all agree to that.

Q. Returning to this question of reputation, the northern white pine of Michigan and Maine has a higher reputation than the ponderosa for durability where exposed to the weather, doesn't it?

A. Has a higher reputation?

Q. Yes.

A. It has been used back East longer.

Q. Your answer is yes, isn't it?

A. No; that ain't my answer.

Q. Answer yes or no and explain after.

A. It has a reputation back East, but take it out in this country where this wood is used, this wood is considered the most lasting wood there is.

Q. Northern white pine hasn't been used in New Mexico, has it?

A. It has been used in Kansas, through there.

Q. Let me get you to answer this question: In the eastern part of the country where you market your goods, which has a higher reputation for durability where exposed to the weather—the northern white pine or the New Mexico white pine?

A. I am not competent to answer that question; I don't know.

Q. You don't know?

A. I don't think any of us know.

Q. Now, do you have any sale for your product for pattern purposes?

3482 A. No, sir; if we do we don't know it. To begin with, we don't make pattern lumber.

Q. How do you mean?

A. We don't make any heavy planks; they want two, two and a half, three inch heavy planks for patterns, as a rule; we don't make it.

Q. You don't make it wide enough for that purpose?

A. We don't make it thick enough; we don't offer it for sale.

Q. I think you said there was no comparison between the yellow pine of the South and New Mexico or Arizona white pine, did you not?

A. I think so. Here it is; I will let you judge it.

Q. I am not the judge in this case, Colonel.

A. When you see it, that is the best way to tell it.

Examiner BRULER. Just answer the question; we will get along faster.

A. I have answered that question.

Q. Now, Colonel, do you sell your lumber for structural building purposes, beams, things of that kind, stringers?

A. Bridges—the State uses them for bridges all over the State.

Q. Do you regard that a safe use for that purpose?

A. The State engineers do; I will be governed by them.

Q. You also in this country use yellow pine of the South for that purpose?

A. Not that I know of.

3483 Q. It is used in other parts of the country?

A. There is some fir used here, but I don't think the yellow pine ever comes up here; I think it is shipped in here for piling purposes, where it is treated.

Q. You do use yellow pine and sell yellow pine from the Louisiana plant for those purposes, don't you, for structural work?

A. For house building; things of that kind.

Q. And for stringers?

A. No; we don't find any used for stringers.

Q. The yellow pine is used for that purpose, is it not?

A. It used to be the longleaf was used for stringers.

Q. Do you think the ponderosa is as strong for that purpose as the yellow pine?

A. No, sir.

Q. How do you think it compares?

A. In comparison, we use it in the highway, railroad stringers.

Q. You use it for bridges?

A. Yes.

Q. How much larger do you have to get it in order to have it equally strong with yellow pine longleaf?

A. I am not an engineer; I couldn't tell you the exact difference in strength; I would't be competent to do that. I will say to you that yellow pine is stronger, has more tensile strength, than our white pine here.

3484 Q. A smaller piece will do for the same strength of the yellow pine?

A. I think so, of the yellow pine; that is what all architects and everybody claim.

Q. You testified about your buildings from which respondent's exhibits 58 and 59 came?

A. Yes.

Q. Now, where were those buildings, that mill from which these came?

A. From underneath the mill out there; from the floor underneath.

Q. Where is that mill located?

A. Out here in Bernalillo County, in my mill yard right outside the city of Albuquerque.

Q. These were supports for the floor, were they?

A. They were joists underneath there.

Q. Underneath the building?

A. Underneath the floor. We have timbers out there that old that we are piling lumber on yet; you can go out and see them.

Q. Is it sometimes difficult to detect whether a given piece of your Arizona Ponderosa pine is heartwood or sapwood?

A. I don't think so.

Mr. WOOD. You mean, Arizona or New Mexico?

Mr. BURR. New Mexico, I should say.

A. No; anybody can tell the difference.

3485 Q. You seemed to hesitate over your testimony as to some of those pieces, where that line came.

A. I don't know whether my eyesight was as good as yours.

Q. Colonel, I am not an expert on that subject, and several times you used the term, "it is getting towards the heart."

A. That is what it is; here in the log here [indicating], and as you go in, you keep going in, of course, the grain gets larger as you go in, this is the white wood, still white wood here, grain keeps getting larger as you go in there, after a bit you strike the red wood.

Q. The heartwood is the redder type?

A. When it gets into the heart, of course, that is just cut lumber; you don't get any of the finish in the heart you are talking about, but it is bordering on the heart, the red part of the log.

Q. I think you used the word "heart" in two different senses in your testimony.

A. I was just trying to show you.

Q. The last time you used the word "heart" you used it in connection with the place where all the knots are.

A. I didn't say all the knots; you got that wrong. I was just trying to show you how the heart was in the log and how you cut in the log; I kept telling you those boards were one third or such a matter in the log towards the heart; as you go in, it gets more pronounced.

3486 Q. Isn't there a line of demarcation where you can say just where the heart beings and the sap leaves off?

A. Sure, if you have the 'og, but we couldn't do it in a board; you can't always tell just where it begins in a board, but if you will look at the log you can tell; no man in the world can tell exactly where it begins in a board.

Q. You woud say, would you, Colonel, that there is a——

A. Now, get this right. Now, here is what happens: You throw the log on the carriage here, you place it on your carriage, and you see in here, here is the sap portion.

Q. This won't all get on the record; this won't mean anything.

A. And as you go into the log the grain gets more pronounced, larger, and finally you have got to the red wood, if there is any in the tree, but when you get one fourth in your grain gets a little larger—that is your growth—and it keeps on until it gets to the heart. Every board you get off of there, it has a different look, until you get clear to the heart of the tree, and as you get to the heart the growths get bigger around the heart like that as we cut. You are a lumberman, or seem to be——

Examiner BRULER. Don't ask so many questions; you do the testifying.

Q. Would you say that there is a positive line of demarcation between the sapwood and heartwood of lumber?

A. Sure. The sapwood, of course, is different, just as I told you, and as you go in——

3487 Q. Sometimes in the case of viewing a board it is difficult to tell with this New Mexico white pine, so called, whether a given piece is heartwood or sapwood, is it?

A. It is hard to tell what part of the log it comes from exactly, if it ain't all sap it is closer to the heart, and then you cut in and it will be all heart.

Q. Colonel, when you changed from the word "heart" in your trade term to "pondosa", did you find that you lost a lot of sales to the people who were calling it white pine?

A. No, sir; I have always had sale for all of my lumber.

Q. Did you find you got a less price than you had been getting?

A. No, sir.

Q. Didn't bother you at all to make that change?

A. I ain't bothered a bit with the price.

Q. It hasn't bothered you at all to make that change?

A. It hasn't bothered, I don't think.

Redirect examination by Mr. WOOD:

Q. You say it hasn't bothered you to make the change from New Mexico white pine to pondosa pine from the standpoint of price and sale?

A. We never changed the price any; we know it is white pine.

Q. But as a matter of fact, you would prefer to use the word "New Mexico white pine"?

A. Sure; I have testified to that.

(Witness excused.)

3488 *Stipulation re effect of evidence taken elsewhere, etc.*

Mr. BURR. It is hereby stipulated, subject to the approval of the Commission, that all of the objections and exceptions heretofore made in this group of proceedings on behalf of other respondents, and any which may still be made at the hearings in Chicago and elsewhere, if any, shall inure to the benefit of respondents located in Arizona and New Mexico. It is further stipulated that the said respondents are entitled to the benefit and are charged with the disadvantages that may result from the testimony taken in these proceedings prior to the hearing at Flagstaff and at Albuquerque, and also of all testimony that may be taken for or against the other respondents at hearings yet to be held, to the same extent and in the same manner as is the case as regards other respondents.

Mr. WOOD. In which stipulation we join.

Mr. RYAN. And in which stipulation we join.

Mr. BURR. I move now we do adjourn to No. 2243 Transportation Building, Chicago, to meet for defense purposes primarily on Wednesday, the 19th day of February 1930, at 10 o'clock a.m.

Examiner BRULER. The motion is granted, and the taking of testimony in this matter is now continued unto the time and place above specified, pursuant to the order of the Commission.

(Testimony closed.)

3489 Before the Federal Trade Commission

Docket Nos. 1620–1629, inclusive

In the matter of White Pine cases

WEDNESDAY, FEBRUARY 19, 1930.

Met pursuant to adjournment 10:00 o'clock a.m.

Before: William W. Sheppard, examiner.

Appearances:

Eugene W. Burr, Washington, D.C., for the Federal Trade Commission.

Carl I. Wheat, representing McCutcheon, Olney, Manon & Greene, Balfour Building, San Francisco, California, for respondents.

Jesse Andrews, for respondents.

3490 PROCEEDINGS

The examiner convened the hearing pursuant to the adjournment taken in the case by the examiner then presiding in the city of Albuquerque, New Mexico, on the 11th instant, and reconvened by order of the Commission in Chicago before the examiner taking the place of the substituted examiner.

Examiner SHEPPARD. All right, gentlemen, I am ready to hear whatever you want to submit.

Mr. WHEAT. I will call Mr. Hornibrook.

Examiner SHEPPARD. All right, Mr. Hornibrook.

C. W. HORNIBROOK was thereupon recalled as a witness and, having been previously duly sworn, testified further, as follows:

Direct examination by Mr. WHEAT:

Q. You have appeared on the stand, on the witness stand, in this case at a prior hearing held in Madison, Wisconsin, have you?

A. Yes, sir.

Q. Subsequent to that hearing did you, at my request, make an examination of certain urns on the Charles Street Meeting House in the city of Boston?

2491 A. Yes.

Q. Will you state now what examination you made and what you found the situation to be?

A. Those urns—I was unable to make as close an examination as I would like to have, because of the rather precarious condition of the ladders inside the building and the ice on the roof, and one thing

and another, but those urns were built up and glued and then turned. They set about 40 feet above the level of the street, and the glue joints are open and can be seen from the street. And can be seen plainer from inside the steeple of the building as far up as I went. And that would just open the way for possible decay. I cannot say to what extent they had decayed.

Q. Now, would you say that the position in which these urns are placed is a difficult one for wood to be placed in?

A. Ordinarily; yes, sir.

Q. In your opinion and in your experience—well, may I first ask, did you climb to the steeple of this Charles Street Meeting House and obtain a close view of these urns?

A. Yes, sir. About eight or ten feet away.

Q. Did you take any photographs of the urns?

A. I only took one from the street. Had it enlarged. It does not show the glue joints.

Q. Does it show the location of the urns and how they are placed, exposed to the weather?

3492 A. Yes, sir.

Mr. WHEAT. Mr. Examiner, if there are no objections, I should like to have this photograph marked as respondent's exhibit in this matter.

Examiner SHEPPARD. Any objection, Mr. BURR?

Mr. BURR. None whatever.

Examiner SHEPPARD. Let it go in and be so marked.

(Said photograph was thereupon received in evidence and marked "Respondents' Exhibit No. 66.")

By Mr. WHEAT:

Q. Now, could you see the open glue joints from the street below the steeple of this meeting house?

A. Yes, sir.

Q. And could you also see them from the steeple when you climbed to the top?

A. Yes.

Q. Were they open to such an extent that moisture could enter into the interior of the urns?

A. Yes. The paint seal was broken.

Q. In that connection, have you found any other instances of wood failure which would confirm your opinion which you have just expressed as to the possibility of rotting because of exposure or the opening of joints?

A. Yes, sir.

Q. Will you just explain what this was?

3493 A. In the yard of the Charles H. White Sons Company in Philadelphia, Pennsylvania, at 18th and Indiana Avenue, they have some garage doors which they said were made of sugar pine, and the joints, the bottom part of all of these doors are all

rotted; some of them more visibly than others; but you can stick a knife in these lower joints any place.

By Examiner SHEPPARD:

Q. What house was that?

A. That is the garage at the yard of the Charles H. White Sons Company in Philadelphia.

By Mr. WHEAT:

Q. What, in your opinion, Mr. Hornibrook, was the cause of this particular instance of rotting?

A. I took a sample from one of those doors to show in connection with these pictures. These diagonal braces——

Q. Wait a minute. I will have to ask to have these photographs marked for identification first.

A. All right.

Mr. WHEAT. I will ask that the one you hold in your hand be marked "Respondents' Exhibit No. 67" for identification, if that is agreeable.

Examiner SHEPPARD. It may be so marked.

(Said document was thereupon marked "Respondents' Exhibit No. 67" for identification.)

Mr. WHEAT. And the second one as "Respondent's Exhibit
3494 68" for identification.

(Said document was thereupon marked "Respondents' Exhibit 68 for identification.")

By Mr. WHEAT:

Q. Will you please consider exhibit 67 for identification, and state where in that photograph this instance of wood failure occurred?

A. These diagonal braces come made up of the same size as this piece here, set in diagonally on the door; the water and rain fell on there and just ran down in the corner joints, and has no chance to run out.

Q. Did those joints open?

A. Some of them have opened. Most of them have rotted inside, as this piece here has [indicating]. This piece shows more evidence of rot from the outside than some of the others.

Mr. WHEAT. I will ask, Mr. Examiner, that the wood sample which he holds in his hand be marked "Respondents' Exhibit 69 for identification" at this time.

(Said sample was thereupon marked "Respondents' Exhibit No. 69 for identification.")

By Mr. WHEAT:

Q. When you mentioned "this piece of wood", you referred to respondents' exhibit 69 for identification, didn't you?

A. Yes, sir.

Q. Now, will you take the photograph which is marked
3495 "Respondents' Exhibit 69 for identification", and explain what that shows?

A. This is a close-up view of the joint from which this sample was cut.

Q. You mean when you say "this sample", you mean exhibit 69 for identification?

A. Exhibit 69.

Q. What, in your opinion again, was the cause of the deterioration of the wood?

A. The rain running down the joint, running down the sides of the piece into the joint.

Q. Now, Mr. Hornibrook, in connection with respondents' exhibit 69 for identification, have you had that examined by a wood technologist in order to ascertain what variety of wood it is?

A. Yes, sir.

Q. Will you explain, please?

A. It was examined by Professor Caylor, at Madison, Wisconsin, last week, and identified as of the——

Mr. BURR. Wait a minute; wait a minute. I think that is all hearsay.

By Mr. WHEAT:

Q. I will ask you whether you consulted Professor Caylor as to this piece of wood.

A. Yes, sir.

3496 Q. I will ask you what Professor Caylor reported it to be?

Mr. BURR. Wait a minute. That is all hearsay.

Mr. WHEAT. Now, Mr. Burr, what Professor Caylor reported these woods to be has been given by your witnesses time and time again, as the examiner will recall. In Detroit you asked the question time after time——

Mr. BURR. It was objected to and ruled out and we put Caylor on the stand.

Mr. WHEAT. It was not ruled out, Mr. Burr, as to what he said it was.

Mr. BURR. Oh, it was, and we put him on the stand. We went to Madison and put the gentleman on the stand; and, furthermore, you remember, you objected as hearsay to reports and correspondence of the same identical character as this as hearsay and it was ruled out.

Mr. WHEAT. I am not asking for a report.

Mr. BURR. I know, but you are asking for an oral statement of what the report was, which is hearsay second removed from the ordinary and legitimate testimony.

Mr. WHEAT. I will submit that this witness is entitled to make a statement as to what was found to be the species of the wood.

Examiner SHEPPARD. Mr. Wheat, of course, as Mr. Burr says, that testimony is clearly hearsay.

Mr. WHEAT. I agree.

3497 Examiner SHEPPARD. The best testimony would be the testimony of the gentleman himself, of course. If there is objection, I will have to sustain it. I hate to do it at this stage of the game.

Mr. WHEAT. Do you press your objection?

Mr. BURR. Certainly.

By Mr. WHEAT:

Q. Mr. Hornibrook, in your experience, have you had experience with both California white pine and sugar pine over a period of years?

A. Yes, sir.

Q. Will you take in your hand respondents' exhibit for identification no. 69, and, if you are able to identify the same from your experience, will you state what, in your opinion, that species of wood is?

Mr. BURR. Wait a minute. Better qualify him as an expert witness along that line. Let us see what he knows before he gives a guess.

Mr. WHEAT. I will submit that on the qualifications which he has already stated in the record, Mr. Burr, at length at the Madison hearing, showing his many years of experience in the selling of these woods.

Mr. BURR. Let me ask him a question or two before that matter is put.

Mr. WHEAT. Go ahead.

3498 Mr. BURR. Maybe I shan't object.

Examiner SHEPPARD. Go ahead.

By Mr. BURR:

Q. Have you ever taken a course in wood technology?

A. No, sir.

Q. Do you understand the testimony to be in this case that there are various varieties of yellow pine which cannot be distinguished in small samples among themselves?

A. Yes, sir.

Q. And the same is true of white pine?

A. Yes, sir.

Q. Now, have you made a study so that you are able to detect with a microscope whether the species of wood is of one variety of pine or another?

A. No, sir.

Mr. BURR. I submit he is not qualified.

Examiner SHEPPARD. I doubt if his testimony would help me much, Mr. Wheat.

Mr. WHEAT. I will ask that these samples of woods, that these exhibits marked for identification, now be received in evidence.

Examiner SHEPPARD. Any objection?

Mr. BURR. Yes; I object. I do not think they are competent. I do not think they are shown to be relevant to the issues in the case.

3499 Mr. WHEAT. I will ask the examiner, in order to conserve time and be certain of that, if in this connection and with

one other connection in this case which will appear in a moment, I will later wish to take the deposition of Mr. Caylor by correspondence, by written interrogatories, and that a sample of this piece of wood be sent to Professor Caylor again, and as to another matter which will come up in a moment, that the same be done.

Examiner SHEPPARD. Where is this professor?

Mr. WHEAT. He is at Madison, Wisconsin.

Examiner SHEPPARD. Couldn't you get him down here?

Mr. WHEAT. I doubt if we could get him down now.

Examiner SHEPPARD. That is the easiest way out.

Mr. BURR. He can come down in about three hours.

Examiner SHEPPARD. Get him down here and have his testimony. It takes a long time to get a deposition. It is rather a formal proceeding.

Mr. BURR. You have to make out formal interrogatories and——

Mr. WHEAT. I have done it forty times.

Mr. BURR. And so have I, but at the same time it holds up the case.

Mr. WHEAT. We are not in any rush. Well, I will be glad to see whether I can obtain Mr. Caylor's attendance at the hearing.

3500 Examiner SHEPPARD. Yes.

Mr. WHEAT. Probably tomorrow morning.

Examiner SHEPPARD. That will be all right.

Mr. WHEAT. I am not certain that I can.

Examiner SHEPPARD. It may delay things some, but I want you to have time to put your case in, absolutely.

Mr. WHEAT. I will do my best.

Examiner SHEPPARD. If Mr. Burr objects to it, I will have to, as I have already, uphold the objection; but if there is any way that you gentlemen can get together on it, I am perfectly willing.

Mr. WHEAT. We will attempt to obtain his attendance.

Examiner SHEPPARD. All right.

By Mr. WHEAT:

Q. Mr. Hornibrook, since the last hearing in this case, have you consulted the grading rules applicable to Arkansas soft pine?

A. Yes, sir.

Q. I will ask you whether or not those grading rules provide for any so-called "shop grades"?

A. No, sir.

Q. I will ask whether in selling California white pine from which sash and doors are made, in whatever grade that may be, you find that you come into competition with so-called "Arkansas soft pine"?

3501 A. No, sir.

Mr. WHEAT. You may cross-examine.

Cross-examination by Mr. BURR:

Q. Referring to respondents' exhibit 66, did you understand that some of these urns have been replaced?

A. Yes, sir.
Q. Did you examine the urn in the basement of the building?
A. No, sir.
Q. The removed urn?
A. I could not find it.
Q. You could not find it?
A. No, sir.
Q. Do you know whether it was one of the old ones or one of the new ones that you looked at?
A. One of the old ones.
Q. One of the old ones?
A. Yes; one that was put in, I understood, in 1920.
Q. Do you remember which one of these three that are in view in the picture you examined?
A. This one in the north corner.
Q. In the center of the picture?
A. Yes.

3502 Q. In the center of the picture. You say this was exposed to the weather. Is it your understanding that the liability of wood to decay is about proportional to the exposure to wet and drying processes alternately?
A. Not necessarily.
Q. Then what is the relevancy of your testimony to the effect that this was strongly exposed to the weather conditions?
A. The fact that practically nothing but end grain exposed on those urns. End grains absorb moisture and let the moisture out faster than a flat piece will.
Q. Now, that exposure to the weather does promote decay, of course, does it?
A. Yes, sir.
Q. And decay is more or less proportionate to precipitation and humidity, is it?
A. If the wood has the opportunity of absorbing it, and holding it.
Q. Sometimes painting actually induces decay, does it, by holding moisture in when it has had a chance to get out?
A. Sometimes; yes, sir.
Q. Now, referring to respondents' exhibit 68—by the way, has this been received?
Mr. WHEAT. For identification.

By Mr. BURR:

3503 Q. For identification. Will you state whether the rotted portion that is here dispayed is that which was exposed to weather rather than the painted portion?
A. No, sir; it was just the reverse.
Q. This is the part that was not exposed to the weather; is that true?
A. That picture is the portion that was exposed to the weather; yes.

Q. That is taken then from the outside?
A. Yes.
Q. Was that a painted surface?
A. Yes, sir.
Q. That is the picture of respondents' exhibit no. 69, is it?
A. Yes, sir.
Examiner SHEPPARD. Which one of those, Mr. Burr, on your picture? Is this straight here [indicating]?
Mr. BURR. I am referring to the obviously badly rotted piece to the left-hand side of the picture.
Examiner SHEPPARD. No; this or that [indicating].
Mr. BURR. That is what I am asking.
Examiner SHEPPARD. Go ahead.

By Mr. BURR:

Q. Respondents' exhibit 69 is the same as the piece which is shown at the left of the picture 68; is that true?
A. Yes, sir.
Examiner SHEPPARD. That is what I wanted to know.
Mr. BURR. I beg pardon?
3504 Examiner SHEPPARD. That is what I wanted to know.
Mr. BURR. Yes.

By Mr. BURR:

Q. And the picture—this is taken from the exterior of the building, is it?
A. Yes, sir.
Q. Now, the moisture, under your theory, ran down the inside of the piece, did it?
A. Ran down the edge of the piece [indicating].
Q. Ran down the edge of the piece?
A. Yes, sir.
Q. And then arose along that inside, is that true?
A. Under the joints.
Mr. BURR. That is all.
Examiner SHEPPARD. Anything else, Mr. Wheat?
Mr. WHEAT. No.
Examiner SHEPPARD. You are excused, Mr. Hornibrook.
(Witness excused.)
Mr. WHEAT. I will ask, Mr. Examiner, that respondents' exhibits 67 and 68 for identification be now received for the record.
Examiner SHEPPARD. They are those two pictures?
Mr. WHEAT. Those are the two photographs.
Examiner SHEPPARD. Any objection, Mr. Burr?
3505 Mr. BURR. I will suggest that we postpone that until we find out what kind of wood this is.
Mr. WHEAT. I am perfectly willing to do that.
Mr. BURR. All right.
Examiner SHEPPARD. I was going to ask if the record shows what kind of wood it is.

Mr. BURR. It does not.

Examiner SHEPPARD. Not yet.

Mr. BURR. No, indeed.

Examiner SHEPPARD. All right. I will put off the ruling on it until that comes in.

All right.

Mr. WHEAT. Call Mr. Murtha.

JAMES J. MURTHA was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. WHEAT:

Q. What is your name?

A. James J. Murtha.

Q. Where do you reside?

A. Kansas City, Missouri.

Q. In what business are you engaged?

A. Carpenter business with the R. A. Long Building.

Q. What is your position with the R. A. Long Building?

A. I am head carpenter.

3506 Q. How long have you been connected with that building?

A. Since March 6, 1911. Nineteen years the sixth of next March.

Q. What are the exact nature of your duties there?

A. Looking after all repairs in the building, carpenter work, and other work around, repairing and such.

Q. In that connection, do you have personal charge of all the work?

A. Yes, sir.

Q. Does that include the inspection and repair or rehanging of sash?

A. Yes, sir.

Q. I will ask whether or not the R. A. Long Building contains wooden sash?

A. Partly, and part metal.

Q. How many double-hung sash are there in that building?

A. Altogether?

Q. Yes.

A. I believe 827.

Q. How many wood sash?

A. 633.

Q. 633 out of the 827 are wood?

A. Yes, sir.

Mr. WHEAT. I will say for the examiner's benefit that we
3507 will undertake through Professor Caylor to identify the species of the wood when he arrives, which is used in those sash.

By Mr. WHEAT:

Q. I will ask you, Mr. Murtha, whether on February 10th you furnished me with three small cuttings from sash in the R. A. Long Building.

A. Yes.

Q. Was the sash from which you cut those small samples in place in the building?

A. Yes.

Q. Had it been in place ever since you have been in your present position with the building?

A. Yes, sir.

Q. So far as you could tell, Mr. Murtha, was this sash similar to the rest of the sash in that building?

A. Yes, sir.

Q. Did you select the sash from which to cut these small samples at random?

A. Yes, sir.

Q. I will ask whether or not you have ever replaced any sash or parts of sash in that building because any portion had decayed, and if so, explain just exactly what you did.

A. I never replaced a complete sash. I have replaced parts of sash, like meeting rails. I do not know whether you gentlemen know what a meeting rail is, but it is where the two sash
3508 meet right in the center there [indicating]. They are rabbitted so that they fit together tight when the window comes down or up.

Q. Does that mean the upper rail of the lower sash or the lower rail of the top sash?

A. Both on the top sash—the meeting rail on the top sash.

Q. Now, will you tell how many such meeting rails you have ever replaced in that building, and for what reasons?

A. Well, I would say a conservative estimate would be about seven; not more than seven windows that I remember.

Q. How many of those were replaced because of the wood rotting?

A. Well, I would say possibly about four.

Q. And for what reason did you replace the other meeting rails?

A. Defective woodwork.

By Mr. BURR:

Q. What is that?

A. In that case that was where a knotty piece of wood had been run in or a cross-grain piece. The last sash I took out, I believe was in Mr. Robinson's office, if I am not mistaken, and that was a long meeting rail with a knot and a cross-grain piece; that grain ran angleways instead of running longways of the sash.

By Mr. WHEAT:

Q. Did that meeting rail fail because of rot?

3509 A. No, sir.

Q. Now, what is the condition of the sash in general in the R. A. Long Building?

A. Well, from my observation, of course I haven't went over it lately, but I have a year ago, we go over it every year and make sure everything is all right, and they were in pretty good condition at that time. I would say in good condition.

Q. When was the R. A. Long Building constructed?

A. In the years 1906 and '07. I believe it was started in the early part of 1906 and opened up in March 1907. I only have that from the plans. I was not at Kansas City at that time.

Q. But you have been directly connected with the building, have you, since the year 1911?

A. Yes, sir.

Q. I will ask whether or not in Kansas City these sash are exposed to snow in the wintertime and to warm and humid weather in the summertime?

A. Very much so.

Q. Also to considerable rain and precipitation?

A. Yes, sir. Up until a few years ago we had no building on either the east or south side, and they were subject to considerable rain and snow; extreme hot suns in the summer.

Q. Has the painting of these sash ever been neglected over any period of years?

A. Yes; it was, during the war period, everybody was busy
3510 thinking of the war and the sash were neglected and they went for three or four or maybe five years without painting.

Q. Have you noticed any deterioration caused by that neglect?

A. Nothing with the exception that the putty came loose and we had considerable reputtying. If we had let the painting go much longer, of course, the rain would have got in the joints and worked a hardship on them.

Q. Did you find in reputtying the windows that there was rot or deterioration of that sort in the sash?

A. No, sir.

Mr. WHEAT. You may cross-examine.

Cross-examination by Mr. BURR:

Q. Do you know whether all of the wooden sash in the R. A. Long building is the same material?

A. Every one that I have handled so far.

Q. I beg pardon?

A. Every one that I have handled so far.

Q. Seems to you to be of the same material?

A. Yes, sir. Of course, we have considerable sash to ease once in a while on account of swelling, damp weather, or something like that.

Q. You are not qualified to make sure that it is the same species of wood, are you, in each case throughout the building?

3511 A. Well, I would not say yes to that question.

Q. I beg pardon?

A. I would not say yes to that question.

Q. No.

A. With the exception of my mechanical ability to determine wood.

Q. You would have to say "no" as to your knowledge of woods, would you not, and the identity of them?

A. Yes.

Q. Were the metal sash in that building put in prior to your time?

A. Yes.

Q. Do you know whether they were put in right at the beginning when the building was built?

A. Yes; I understand they was.

Q. They put in some metal and some wood?

A. Yes.

Q. Did they put the metal sash on only one side of the building?

A. On the west and the north sides.

Q. West and north sides?

A. Yes.

Q. And the wood on the south and east; is that true?

A. Yes. The wood is on the street sides of the building and the metal is on the north side where buildings are adjoining
3512 but do not come up as high. That is a fire wall.

Q. I see.

A. Also on the west.

Q. That distinction was then on account of the fire regulations?

A. Yes, sir.

Mr. BURR. That is all.

Mr. WHEAT. That is all, thank you.

Examiner SHEPPARD. Thank you. You are excused.

Mr. WHEAT. May I ask Mr. Murtha another question?

Examiner SHEPPARD. Sure.

Redirect examination by Mr. WHEAT:

Q. Mr. Murtha, have you brought with you a sample piece of one sash which was taken from the R. A. Long Building?

A. Yes.

Mr. WHEAT. I will say, Mr. Examiner, that I will ask Mr. Caylor when he arrives to make an examination of this sash. I may also state that I myself have already had Professor Caylor make an examination of the four samples of this sash but I will place that on the stand myself when Professor Calyor arrives.

Examiner SHEPPARD. All right.

Mr. BURR. Just marked for identification.

Mr. WHEAT. Will you mark for identification the wood
3513 sample which the witness holds in his hand as respondents' exhibit 70?

(Said sample was thereupon marked "Respondents' Exhibit No. 70" for identification.)

By Mr. WHEAT:

Q. Mr. Martin, I am not certain whether or not I asked you whether the wood samples, the small samples which you stated were

cut from the sash in the R. A. Long Building at random, were delivered to me on the 10th of January.

A. Yes, sir.

Q. Those were the three small samples, were they?

A. Yes.

Q. I will ask you whether this piece of sash, respondents' exhibit no. 70 for identification, shows any signs of rotting? And I also will ask you to explain the condition of the inside of the hole, how that happened?

A. I haven't noticed any deterioration in the wood. There is one place here where the metal dowel was. In putting the sash together they put a metal dowel in. Some people use wood dowels and others use metal dowels. There is where the metal dowel was in there. And in cutting this sash I had to hammer it so as to get the metal dowel out and it tore one side of the wood at one place. But I did not notice any deterioration there.

Q. I ask you whether that, in your opinion, is a fair sample
3514 of the sash and their condition, in the R. A. Long Building?

A. That is a very fair sample. That sash was in place for twenty-one and a half years, and it was only removed because I took out the window frame and took out the window. The people had a vault there, the Long Bell Lumber Company had a vault, and, of course, you could not have a window in a vault.

Mr. WHEAT. I will ask that that be received at a later time.

Examiner SHEPPARD. All right, just mark it.

Recross-examination by Mr. BURR:

Q. Those three samples that you cut, how were those taken? Were those taken all on the same side of the building or from both sides?

A. No; they were taken from one side of the building—no; two sides of the building.

Q. I beg pardon?

A. They were taken from two sides of the building.

Q. They were taken from two sides of the building?

A. One sample was taken from the court side of the building, and the other two were taken from the south side.

Q. Those taken from the south side were taken from different sash, I suppose?

3515 A. Yes, sir.

Redirect examination by Mr. WHEAT:

Q. Were they also taken from different floors?

A. Different floors.

Mr. WHEAT. I think that is all, sir.

The WITNESS. Well, sir, we could not take a big piece out of one, just took a small piece just back of the pulley side of the window in back of the stop. If you took too big a piece, it would show.

By Mr. BURR:

Q. That piece you have in your hand, respondents' exhibit 70, that is a piece that was exposed to the weather, is it?

A. Yes, sir. That is right where the meeting rail starts on the sash, that is the bottom side of the sash.

Q. Which surface is exposed to the weather there?

A. This [indicating].

By Mr. WHEAT:

Q. Will you explain which?

A. Just where it was at the side of the window, just inside of the window. Just outside of the window here. [Indicating.]

Q. Pardon me just a minute. That won't show in the record when you say "this." Will you explain for the reporter which you mean when you say "this" and "that"? Which side do you

3516 refer to as the exterior side of this sash?

A. This side [indicating].

Mr. BURR. The side with the tag.

The WITNESS. The side where the tag is on is the exterior side of the sash. The mahogany side is inside of the room.

By Mr. WHEAT:

Q. You mean the side finished in dark red?

A. Yes.

By Mr. BURR:

Q. The part where the paster is is the part exposed to the weather?

A. Yes, sir.

Examiner SHEPPARD. All right. Much obliged to you.

(Witness excused.)

H. T. HANSEN was thereupon called as a witness, and having been duly sworn, testified as follows:

Direct examination by Mr. WHEAT:

Q. What is your name?

A. H. T. Hansen.

Q. Your full name is Hans T. Hansen?

A. Yes.

Q. Where do you reside?

A. At Menominee, Michigan.

3517 Q. What is your business?

A. Inspector of lumber.

Q. How long have you been in that business?

A. More than 36 years.

Q. In connection with what wood have you been engaged in the profession of inspector of lumber?

A. I do not understand that question.

Q. In connection with what woods have you engaged in the business of inspector of lumber?

A. White pine, hemlock, and hardwoods.

By Mr. BURR:

Q. And what?

A. White pine, hemlock, and hardwood.

By Mr. WHEAT:

Q. Would you say that that included all of the commercial species of woods grown in what territory?

A. In northern territory. This territory.

Q. What States would that include?

A. Michigan, Wisconsin, and Canada.

Q. Just what is the nature of your inspection business?

A. I work for a firm who inspect, disinterested party between the buyer and seller, disinterested inspection bureau.

Q. Is that a customary matter in connection with the sale of lumber from the territory to which you have referred?

A. Yes, sir.

3518 Q. How long has that been the custom?

A. Well, for over forty years, to my knowledge.

Q. Are there other firms, or have there been other firms in your experience engaged in this same business?

A. Yes, sir.

Q. Will you tell me whether there are now as many such firms as there used to be?

A. There are a few left, sir.

Q. Since what period?

A. They commenced to dwindle about 1910, or it is 1900, I would say.

Q. For what reason have these firms gone out of this business?

A. Mostly on account of the white pine playing out, dwindling.

Q. Have you been constantly employed by the same firm during the whole period of your experience?

A. Yes, sir.

Q. I do not know whether you stated in what year you began this work?

A. In 1892 I started to learn inspection, and qualified as an inspector in 1896.

Q. Have you been continuously engaged in that business since that date?

A. Yes.

3519 Examiner SHEPPARD. Mr. Wheat, I would like from this gentleman whether he inspects lumber already manufactured or standing lumber or what?

Mr. WHEAT. Yes.

By Mr. WHEAT:

Q. Just explain to the examiner exactly what you do.

A. We inspect manufactured lumber.

By Examiner SHEPPARD:

Q. Manufactured lumber?

A. Yes.

Examiner SHEPPARD. All right. Go ahead.

By Mr. WHEAT:

Q. How are you called upon to inspect manufactured lumber, and by whom?

A. The contracts are made mentioning our concern as inspector in measurements of lumber.

Q. Contracts between whom?

A. Buyer and seller.

Q. Is that a general custom in that part of the country?

A. Yes, sir.

Q. Has it been throughout your entire experience?

A. Yes, sir.

Q. During the entire time that you have been employed by this firm—will you first tell us the name of the firm, and then tell me whether or not you have regularly inspected northern

3520 white pine.

A. I have been working for the Coman Inspection Bureau since 1892.

Q. During that period have you regularly inspected northern white pine?

A. Yes, sir.

Q. May I ask you, during the first few years of your work as an inspector for this bureau, what was the predominating softwood?

A. White pine.

Q. Has your work in connection with northern white pine increased or decreased during the period of your experience?

A. Decreased.

Q. Will you state the nature of that decrease and the time?

A. The timber played out and each year there was less white pine manufactured.

Q. How was this lumber shipped predominatingly in the early period of your inspection?

A. By cargo shipments.

Q. By water?

A. By water.

Q. To what particular destinations?

A. Chicago, Milwaukee, Buffalo, and Tonowando, New York.

Q. Do cargo shipments of northern white pine move today?

A. No, sir; very few.

3521 Q. How many cargo shipments do you have any personal knowledge of in the last ten years, for instance?

A. Perhaps fifteen.

Q. During the last year or two?

A. About three.

Q. Do you know, as a matter of fact, of any mills in the region producing northern white pine which now produce sufficient lumber, or lumber in sufficient amount to continue the practice of selling their log-run production in cargo lots?

A. No, sir.

Q. May I ask you whether or not that was at one time the general practice?

A. Yes, sir.

Q. Do you know whether there is any large stand of northern white pine left in the States of Wisconsin or Minnesota or Michigan?

A. No, sir.

Mr. BURR. He doesn't know?

The WITNESS. I do not know.

By Mr. WHEAT:

Q. You do not know?

A. I do not know.

Q. Do you know whether there is any such stands?

A. I understand there is some. To my knowledge, I do not know. I have never seen it.

3522 Q. Do you know whether or not any large white pine producing mill has closed down in recent years? If so, what is it?

Q. Quite a few of them have closed.

Q. Just state some of those.

A. In recent years only?

Q. Yes.

A. Well, there was a mill at Rapid River, Michigan, the Collins Lumber Company. They manufacture some pine. And last year the C. H. Worcester Lumber Company at Chessel, Michigan.

Q. Is there a mill producing northern white pine at Virginia, Minnesota?

A. No; I don't think so.

Q. Did there use to be?

A. Used to be.

Q. Has that closed down?

A. I understood it closed down some time ago.

Q. Will you state what company that was?

A. Virginia & Rainey Lake Lumber Company.

Q. Have you ever visited the mills producing northern white pine at Cloquet, Minnesota?

A. Yes, sir.

Q. When was the last date that you visited that mill?

A. 1918.

Q. Did you at that time notice the size of logs of northern
3523 white pine which were being cut at that mill?

A. Yes.

Q. Will you state what in your opinion was the average size of those logs?

A. About twelve inches.

Q. How many?

A. About twelve inches.

Q. Have you ever been in the Pinus strobus region, the northern white pine producing region of Canada?

A. Yes.

Q. Will you state whether or not the trees produced in that Pinus strobus region are larger or smaller than those with which you were familiar in Michigan, Wisconsin, and Minnesota territory?

A. Smaller.

Examiner SHEPPARD. Where is the Pinus strobus region of Canada you refer to?

By Mr. WHEAT:

Q. Where is it?

A. In Ontario.

By Examiner SHEPPARD:

Q. Ontario, the Province of Ontario?

A. The Province of Ontario.

Examiner SHEPPARD. All right.

By Mr. WHEAT:

3524 Q. Have you ever had occasion to notice the average size of the logs being cut in that area?

A. Yes, sir.

Q. Will you state what that was, from your experience?

A. About ten inches.

Q. Are you familiar with the grading practices in connection with the northern white pine, or have you been during all of this period?

A. Yes, sir.

Q. Has it been a part of your duty to keep fully informed of any changes in these practices?

A. Yes, sir.

Mr. BURR. If the examiner please, I am going to object to the introduction of the grading rules.

Mr. WHEAT. I am not introducing the grading rules.

Mr. BURR. Go ahead, answer that question.

Mr. WHEAT. I do not intend to produce the grading rules.

Examiner SHEPPARD. I think I said in New York I did not care anything about the grading rules.

Mr. WHEAT. No; I am merely asking as to the general practice.

Examiner SHEPPARD. All right, go ahead.

By Mr. WHEAT:

Q. Has it been a part of your duty to keep fully informed as to any change in these practices during that period?

3525 A. Yes, sir.

Q. Have you done so?

A. Yes.

Q. Without going into the particular detail, will you please tell the Commission how the general practices in shipping northern white pine differ today from when you started in this business?

A. When I started in, the practice was to cut four quarters, and the saps are piled by themselves and generally sold pile run.

By Mr. BURR:

Q. Sold what?

A. Pile run.

Q. I did not get you.

A. Pile run.

By Mr. WHEAT:

Q. Just as it runs?

A. Straight trees, pile run.

Q. When you started in grading or inspecting northern white pine, was bright sapwood considered a defect?

A. Yes, sir.

Q. What is the general practice now in selling northern white pine?

A. The defect is not considered—bright sap is not considered a defect.

3526 Q. When you say "bright sap", you mean to distinguish it from stained lumber?

A. Stained sap; yes.

Q. When you started inspecting northern white pine, did you say that you piled sapwood separately?

A. Most of the mills piled their saps separately. They called them saps.

Q. Now, when you started in inspecting northern white pine, would the average width of the boards or the logs run greater or less than it is today?

A. Greater.

Q. To what extent, sir?

A. I would say they would average more than twice as wide as they do today.

Q. What have been the underlying reasons for the changes which you have mentioned in the practice with reference to sapwood in inspecting and shipping northern white pine during this period?

Mr. BURR. I think you better qualify him on that. What does he know about it? I would like to know whether he knows what the reasons for it are.

By Mr. WHEAT:

Q. I will ask you, Mr. Hansen, whether or not the northern white pine has been constantly decreasing in amount, so far as its shipments have been concerned, throughout the period which

3527 you mentioned?

A. Greatly decreased.

Q. Pardon me?

A. Greatly decreased, sir.

Q. Has this practice of being more lenient in regard to sapwood been growing or lessening during these years in which you have been engaged in this business?

A. Would you repeat that, please?

Q. Has the practice of being more lenient with sapwood been growing or lessening during the period in question?

A. Lessening—I did not get your question. What is it?

Q. Have the inspectors of northern white pine been growing more lenient with sapwood?

A. Growing more lenient; yes, sir.

Q. You did not mean they had been growing less lenient when you answered the other question?

A. I did not get the drift of it there. They have not considered sap a defect.

Q. In what period?

A. For many years, late years.

Q. When you first started in grading northern white pine, was sap considered a defect?

A. Yes, sir.

Q. I see. Now, in inspecting northern white pine, have you found that it varies in its texture?

3528 A. Yes, sir.

Q. Will you explain?

A. Well, it is sometimes hard to tell it from Norway.

By Mr. BURR:

Q. From what?

A. From Norway.

By Mr. WHEAT:

Q. By Norway, you refer to Norway pine?

A. Norway pine.

Examiner SHEPPARD. Does the age of the tree have any effect on the texture?

The WITNESS. I do not know, sir.

By Examiner SHEPPARD:

Q. In other words, a tree that is many years old, does the texture of that differ from a younger tree?

A. I think not. I think it depends on where it grows, the height, high and low altitude, swampy ground or dry ground. That is my opinion.

By Mr. WHEAT:

Q. In that connection, Mr. Hansen, have you found that there is a greater proportion of sapwood in the smaller trees?

A. Yes, sir.

Q. What did lumbermen and millmen call northern white pine when you first started in inspecting this wood?

A. Pine.

3529 Q. Just pine?

A. Pine, yes.

Q. What did they call Norway pine?

A. Norway.

Q. When did the term white pine begin to come into practice, in your work?

A. In later years when they started cutting hemlock and hard wood.

Mr. WHEAT. That is all.

Cross-examination by Mr. BURR:

Q. What is the name of your concern?

A. It was John S. Coman. Now, Mr. Coman died and it is H. L. Coman, his son, continued on.

Q. Coman, how do you spell that?

A. C-o-m-a-n.

Q. Now, when you first went into this business of inspecting, the association did not have an inspector, did they?

A. Not in our territory; no, sir.

Q. Now they have inspectors, don't they?

A. Yes.

Q. Most of the inspection business is going through the association at the present time, is that true?

A. No, sir; not ours, sir.

Q. I beg your pardon?

3530 A. No, sir.

Q. But I mean, of the northern white pine that is cut, most of it goes through the inspectors of the association, does it not?

A. No, sir.

Q. Well, a great deal of it does.

A. Not as much as we ship.

Q. What?

A. Not as much as our concern ships.

Q. I see. How much does your concern inspect every year?

A. Well, in years past we have shipped up to 200,000,000 a year.

Q. How much are you shipping now?

A. Now, perhaps, I would say, about three or four million white pine.

Q. Three or four million?

A. Yes.

Q. How many concerns are there engaged in competing with you in that line of inspecting?

A. Not any, now.

Q. I see. As a matter of fact, would you be willing to swear that the inspector of the association does not inspect considerably more than you do?

A. Well, sir, I would not swear.

Q. You would not swear?

3531 A. In my opinion, he does not. I am personally acquainted with one of the association inspectors and we have talks at times, and I know from his say-so that he does not inspect anywhere near the amount that I do.

Q. I see. Now, how many inspectors are there in connection with the association?

A. There is two that I know of.

Q. Giving their entire time to it?

A. Yes.

Q. How many has your firm?

A. Our firm has right now four.

Q. Four giving their entire time to it?

A. Well, there isn't enough pine to ——

Q. Can't you answer the question whether or not they are giving their entire time to it?

A. Yes; I would say so. Yes, sir.

Q. They are giving it?

A. Yes.

Q. Now, when did the association begin its official inspection of the lumber?

A. I could not say the year, sir.

Q. Well, it has been several years back, has it?

A. Oh, yes.

Q. The inspection by associations is more widely the custom nowadays than by individual firms, isn't it?

3532 A. In our territory, it is not.

Q. Is your firm a licensed inspector for the National Hard Wood Association?

A. Yes, sir.

Q. How long has such been the case?

A. I could not say how many years, sir. Over twenty.

Q. It is association inspection, then, that you do?

A. Not in pine, sir.

Q. Not in pine?

A. Not in pine.

Q. The hardwood inspection that you do is association inspection now?

A. Yes.

Q. How long has that been the case?

A. More than twenty years. I could not say how many years.

Q. Now, in the lumber business, the general status is for one mill to play out and another one to go into business, isn't that true, cutting various territories?

A. Well, there has been very few new ones started in late years.

Q. Well, they have started in Canada during your recollection, haven't they? New mills? In your early days they did not cut any in Canada to speak of, did they?

A. I do not know anything about that. It is about fifteen or sixteen years ago when we started to go to Canada.

3533 Before that time I do not know anything about Canada.

Q. They were not cutting up there at that time?

A. Oh, yes, they were cutting, but we did not get the business.

Q. They were cutting for local business, weren't they?
A. I think their output went east, to Tonawando and Buffalo.
Q. What section of Canada have you visited?
A. I have been to Little Current, Ontario, and Cutler, and St. Joseph's Island.
Q. How long were you at St. Joseph's Island?
A. I was there about ten days.
Q. How long at Cutler?
A. Only a few days.
Q. How long at the other place that you mentioned?
A. Little Current, I was there several times.
Q. How long ago have those trips been made?
A. Well, last year I was at St. Joseph's Island, and about twelve or fourteen years ago I was at Little Current.
Q. Twelve or fourteen years ago?
A. Yes.
Q. Now, the direction the lumber goes has changed during these years, hasn't it? It does not go east by the lake so much nowadays, does it?
A. No, sir.
Q. Even the part that is still being cut goes in a different direction, doesn't it?
3534 A. I think so, sir.
Q. Yes; and that would account in part for the change in the cargo shipments, would it not, that you testified about?
A. Well, not so much.
Q. It would in part, would it?
A. Part, yes, sir.
Q. I see. Your cargo shipments of hardwood have also fallen off during that period, have they not?
A. Yes.
Q. Also of hemlock?
A. Yes, sir.
Q. Are you familiar with the New Mexico northern white pine—I mean the New Brunswick northern white pine?
A. No, sir.
Q. You don't know how much is going out of New Mexico, do you?
A. No, sir.
Q. You don't know anything about how much goes out of Maine or New England, do you?
A. No, sir.
Q. There is still virgin white pine being cut in Minnesota, is there not?
A. I do not know, sir.
Q. How long were you at Cloquet on your visit?
A. I was there several times in 1918.
3535 Q. You have not been there since, is that true?
A. No, sir.

Q. Who is doing the inspecting up in Canada to the extent that you are not doing it?

A. I do not know, sir.

Q. You do not know whether the association is doing it or whether there are other inspectors doing it, is that true?

A. No, sir.

Q. Where is your concern located, at Menominee?

A. Menominee, Michigan.

Q. Now, if clear lumber is asked for, that does not include sap, does it?

A. We have years ago—no, it would not include sap.

Q. It does not now, does it?

A. Clears?

Q. Yes.

A. When you say clear——

Q. There is such a grade, is there not?

A. We don't make it.

Q. What?

A. No, sir; it is not recognized.

Q. It is not recognized?

A. In northern territory.

Q. If clears were asked for, it would be without sap, would it not?

3536 A. No, sir.

By Examiner SHEPPARD:

Q. What is the best grade, B and better?

A. Today, B and better is the best grade.

Q. That was my impression.

A. The upper grades have been dropped.

Q. Yes. What is this association you have referred to? Is that the White Pine Association?

A. It is the Northern Pine Manufacturing Association.

Q. Northern Pine Manufacturers Association?

A. Yes. They maintain two inspectors that go around regardless of the company inspector.

Examiner SHEPPARD. I see.

The WITNESS. They do a lot of inspecting.

Examiner SHEPPARD. Anything else with this gentleman?

By Mr. BURR:

Q. Are you grading now under the Tonawanda rules, or what rules?

A. What?

Q. Do you grade by the Tonowanda rules, or what rules?

A. The Northern Pine Manufacturers Association rules.

Q. Are there any still grading under the Tonawanda rules?

A. No, sir.

Q. Not that you know of?

A. Not that I know of; no.

Mr. BURR. That is all.

3537 Redirect examination by Mr. WHEAT:

Q. Mr. Hansen, when you said that the association inspectors and the inspectors of your firm were giving their entire time to inspection, do you mean that they were giving their entire time to inspecting northern white pine?

A. No, sir.

Q. Will you explain what they do?

A. They inspect hemlock, hardwood, and white pine.

Q. And in your experience at the present time, what proportion of your time today is given to the inspection of northern white pine?

A. I would say about one tenth of my time.

Q. And the rest of your time is given to what wood?

A. Hardwoods mostly.

Q. You give your full time to inspection work, do you?

A. Yes, sir.

Q. During your experience, do you know whether or not the greater proportion of the mills manufacturing northern white pine have or have not belonged to this association?

A. Most of them have belonged of late years.

Q. Yes.

A. Yes, sir.

Q. At the present time, most of them do belong, do they?

A. Yes.

3538 Q. During the earlier period of your inspection, what was the situation?

A. Very few of them belonged to the association.

Q. I see. Now, you were asked on cross-examination whether cargo shipments had decreased because of a difference in the method in the way in which lumber is shipped. May I ask you whether the rail shipments of northern white pine have also decreased?

A. Yes, sir.

Q. To a marked degree, sir?

A. Yes, sir.

Q. You were asked also whether or not cargo shipments of hardwood and hemlock had decreased. I will ask you whether or not the general supply and manufacture of hardwood and hemlock from this region has increased or decreased?

A. Decreased.

Q. What?

A. Decreased.

Q. Decreased. Do those woods also move by rail?

A. Yes, sir.

Q. Has the rail shipment of those woods been increasing or decreasing?

A. Decreasing.

Q. When you originally started to inspect northern white pine, what was the general practice in shipping the highest grade;
3539 what was it called?

A. B and better.

Q. What is the general practice now?

A. C and better.

Q. What is the C grade; what does that include?

A. Includes white sap.

Mr. WHEAT. That is all.

Recross-examination by Mr. BURR:

Q. B and better; does that include white sap?

A. Yes; to a certain extent.

Q. To a certain extent. Sap in B and better would be considerably less than in C?

A. No, sir; it depends on other defects with it.

Q. I beg pardon?

A. It depends on other defects with it.

Q. With it?

A. Yes.

Q. With the sap?

A. Yes.

Q. But sap has an influence to place the piece of lumber into C rather than in B, does it not?

A. If it has other marked defects.

Q. They do consider, then, the amount of sap that a piece of B and better can have; is that true?

3540 A. They what?

Q. They do consider the amount of sap that a piece can have and still be in class B and better?

A. Depends upon the amount of sap.

Q. What?

A. Depends upon the amount of sap if it has other marked defects.

Q. If it has other marked defects?

A. Yes.

Q. And if it does have other marked defects, the amount of sap will be considered; is that true?

A. Considered; yes.

Q. I see. Now, where is the white pine that you inspect, is it in Michigan pretty much now?

A. Michigan and Wisconsin, and I said it has been in Canada the years past.

Q. Yes.

A. I have not been to Canada for some time.

Q. You do not get into Canada for inspecting purposes, do you?

A. Not now, sir.

Q. You do not get into Minnesota for inspecting purposes?

A. Yes, sir.

Q. Does anybody in your firm get into those districts?

A. No, sir.

3541 Q. That is where most of the northern white pine is coming from today, isn't it, Minnesota and Canada?

A. I could not say, sir.

Mr. BURR. I see. That is all.

Examiner SHEPPARD. Anything else, Mr. Wheat?

Mr. WHEAT. No, sir; that is all.

Examiner SHEPPARD. You are excused. Thank you, sir.

(Witness excused.)

Mr. WHEAT. I will call Mr. MacBride.

E. E. MACBRIDE was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. WHEAT:

Q. State your full name.

A. E. E. MacBride.

Q. Where do you reside, sir.

A. Chicago.

Q. What is your business?

A. Architect.

Q. Are you connected with some firm of architects?

A. Connected with Zimmerman, Saxe & Zimmerman.

Q. At what address, sir.

A. 212 East Superior.

Q. Mr. MacBride, will you state briefly your education and experience in the architectural profession?

3542 A. I have been a practising architect for, roughly, about twenty years, in Chicago. I went to the University of Chicago and I went to the University of Illinois.

Q. Have you been with the same firm of architects for a number of years?

A. I have been with the same firm for about twenty years.

Q. Are you a licensed architect?

A. Yes, sir.

Q. Just what is the general nature of your duties with Zimmerman, Saxe & Zimmerman?

A. My particular phase of the practice is in writing specifications and the general supervision of the buildings after they get under construction.

Q. And in that connection, have you engaged in the writing of specifications and general supervision of construction of residences?

A. Yes, sir.

Q. During what period?

A. During the twenty years of practice.

Q. Does your firm have occasion to prepare plans and specifications for residences continuously each year?

A. Yes, sir.

Q. Do you have occasion to specify pine for both interior and exterior uses?

A. Yes, sir.

3543 Q. How do you specify pine for sash uses?

A. I specify clear soft pine.

Q. Are you familiar with the term California white pine?

A. Yes, sir.

Q. Do you know whether or not the wood known commonly in the trade as California white pine is largely used for sash purposes?

A. Yes, sir.

Q. Do you know whether the wood commonly marketed as California white pine has been classified by botanists as yellow pine?

A. Yes.

Q. I will ask you, Mr. MacBride, whether that fact in itself has any particular significance to you as an architect?

A. No; not particularly. As a matter of fact, I did not know that botanists had called it yellow pine——

Q. When did you ascertain that?

A. Until lately.

Q. Until lately?

A. Yes.

Q. When you ascertained that it was classified by botanists as yellow pine, did that make any change in your practice?

A. No, sir.

Q. Are you interested in the number of needles or cell structure of the lumber which you use?

3544 A. No.

Q. What is your test?

A. I believe in the years I have been looking at these things that I can tell good workable soft pine from the texture and general appearance of the material.

Q. Have you found that California white pine in appearance is similar to the other soft pines which you have used?

A. Yes, sir.

Q. Including northern white pine?

A. Yes, sir.

Q. Sugar pine?

A. Yes, sir.

Q. Idaho white pine?

A. Yes, sir.

Q. As to workability, have you found California white pine to be satisfactory?

A. Yes, sir.

Q. Do you know whether or not the large remanufacturing mills manufacturing sash and doors, use California white pine in that process?

A. Yes, sir.

Q. I will ask you whether in your experience you have ever had a failure of any California white pine because of rotting?

A. Never have known of any.

Q. Have you had any complaints of such failure?

3545 A. No, sir.

Q. I will ask you whether or not you have ever investigated any of the old jobs of your firm?

A. We are continually doing that, alterations, and sometimes the old buildings are completely wrecked, at which time we have occasion to see how our work has stood the time.

Q. Do you receive complaints at times from your clients on grounds other than the rotting of the wood?

A. Yes, sir.

Q. You have, as I understand it, received no complaint on the ground that the California white pine wood in your buildings has rotted?

A. No complaint.

By Examiner SHEPPARD:

Q. Do I understand you right? Have you used California white pine for twenty years for this purpose?

A. No; I did not make that statement.

Examiner SHEPPARD. I did not think so. I just wanted to get that straight.

By Mr. WHEAT:

Q. Your statement——

A. Soft pine, I mentioned.

Q. In that connection, you have excepted California white pine in response to your specifications.

A. Yes, sir.

3546 By Examiner SHEPPARD:

Q. At times?

A. From time to time.

Examiner SHEPPARD. From time to time; yes. All right.

By Mr. WHEAT:

Q. I will ask you whether or not you have been conscious, in architectural practice, of any confusion because of the use of the California white pine?

A. I have not heard of any.

Q. Have you ever heard of any objection on the part of the trade in general, or of architects in general, as to the use of that name?

A. I have not heard any complaint or objection.

Q. Now that you have the botanical relationship of California white pine, will you continue to accept it if it is satisfactory?

Mr. BURR. I think that is objectionable. What he will continue to do is opinion, second removed.

Mr. WHEAT. You have been asking your witnesses that question many times, Mr. Burr.

Mr. BURR. I am objecting.

Mr. WHEAT. In various forms.

Mr. BURR. I am not going to have any further argument. I object to the question.

Examiner SHEPPARD. I will let him answer that, but I do
3547 not want it pursued.

Mr. WHEAT. Let me finish my question.

Examiner SHEPPARD. Yes.

By Mr. WHEAT:

Q. Will you now, now that you know the botanical relationship of California white pine, will you continue to accept it if it satisfactorily meets your requirements as to appearance and workability?

A. Yes, sir.

Q. I will ask whether in your opinion the fact that architects as a group may not be familiar with the various differences in woods constitutes confusion because of trade names?

Mr. BURR. I object to that. That is the thing that the Commission is here to decide, whether there is a confusion.

Examiner SHEPPARD. I think so, Mr. Wheat.

Mr. WHEAT. All right, I will withdraw the question.

Examiner SHEPPARD. That is the pith of this complaint, as I understand it.

Mr. WHEAT. Yes.

Examiner SHEPPARD. Something the Commission has got to answer.

Mr. WHEAT. Yes.

By Mr. WHEAT:

Q. Are architects in general interested in the botany of the woods that they use?

3548 A. Not professionally.

Q. Are they interested more in the quality and utility of the lumber?

A. Yes, sir,

Q. I will ask you whether or not the fact that any architect, any particular architect might not himself be able to tell the difference between one wood and another, would that be important in your mind in connection with the trade name for one of those woods?

Mr. BURR. I object. That is highly speculative.

Mr. WHEAT. I will bring that right down here.

Mr. BURR. The same question.

By Mr. WHEAT:

Q. I will ask you whether the fact that some particular architect might not himself be able to tell the difference between this California white pine, the appearance of it, and the old northern white pine, would that be important in your mind in connection with the use of the name California white pine?

Mr. BURR. I object. What his opinion is is immaterial here.

Examiner SHEPPARD. I will let him answer for himself, but not for other people.

Mr. BURR. We are after facts. What is important in his opinion is not——

Mr. WHEAT. All right; his opinion.

3549 The WITNESS. It is not important to me.

By Mr. WHEAT:

Q. Are architects in general wood technologists?

A. Interpreting that as technologists, I would say no. Do you mean botanists?

Q. The term wood technologists, Mr. McBride, has been defined in this case as a man who is acquainted scientifically with the means of determining one wood from another, its particular characteristics scientifically.

A. The architect is not, except in a very general way.

Q. Are architects in general to be classified as botanists?

A. No.

Q. I will ask you whether the term white pine in the architectural profession today is limited to some particular botanical species, or group of species.

A. I do not think it is thought of botanically at all.

Q. Do you believe that any confusion would be created if wood now marketed as California white pine were to be marketed under any name containing the word "yellow"?

Mr. BURR. I am going to object to this line of questioning. I do not think it is material here what the name constructively is going to be. The Commission has no power to tell them to call it yellow pine or to call it affirmatively anything.

Examiner SHEPPARD. Yes; I think I ruled on that a long

3550 time ago.

Mr. WHEAT. Mr. Examiner, I merely wish to state that all through this case there has been a vast amount of testimony along those lines, not dealing with what name should be used, in the opinion of any witness, but dealing with his opinion as to whether confusion would arise from the use of any particular name. That has been received time and time again throughout the hearing, even in the earlier hearings which Your Honor presided over. I think that is a proper question.

Mr. BURR. It has been received to a certain extent of late, no doubt. I had it ruled out before, but it was received of late over my objection. I think it should be ruled out.

Examiner SHEPPARD. I do not think I will go into that any more, to any extent. The fact is the Commission has got to pass on this matter, and its duty is to pass on the name now used, and it is not going to have anything to say as to any other name, in my judgment. So any testimony along that line I do not believe is applicable to this case.

Mr. WHEAT. I will withdraw this question to this witness.

Examiner SHEPPARD. Yes.

Mr. WHEAT. But I want it understood I do not withdraw my general testimony——

3551 Examiner SHEPPARD. Yes.

Mr. WHEAT. Which has been introduced in the record on this matter.

Examiner SHEPPARD. All right.

Mr. BURR. Oh, no.

By Mr. WHEAT:

Q. Mr. McBride, in your opinion as an architect, is it more important for the name of lumber in trade to disclose the quality and utility and the mechanical characteristics of the wood than its botanical relationship?

Mr. BURR. I think that is a question for the Commission, what the name should disclose.

Mr. WHEAT. You are becoming most captious. The question has been asked and answered a dozen times in this case by you personally in connection with other portions of the lumber world.

Examiner SHEPPARD. I think I will let him answer that, Mr. Wheat.

Mr. WHEAT. Just read the question, please.

(Question read.)

A. Yes.

Mr. WHEAT. You may cross-examine.

Cross-examination by Mr. BURR:

Q. If you specify a material other than wood, you expect and
3552 demand that you get that kind of wood that you have specified, do you not—I mean the material other than wood?

A. Yes; but sometimes the field is among several rather than a single one.

Q. Yes.

A. Yes; we expect to get what we specify.

Q. If you specify in the alternative you expect to get one of the varieties that you specify in the option?

A. That is it; yes, sir.

Q. That is in accordance with the option?

A. Yes, sir.

Q. If you specify one material rather than an optional choice of materials, then you expect to get the one thing that you specify?

A. Yes, sir.

Q. Now, do I understand you, until very recently you did not know California white pine was not a true white pine?

A. No; I did not know about the name.

Q. You did not know about the name?

A. Pinus, whatever it is.

Q. Pinus ponderosa?

A. Yes.

Q. You did not know that was not a genuine white pine, is that it?

3553 Mr. WHEAT. Mr. McBride, let me say this to you, the witness said he did not know it was yellow pine. Quite different.

By Mr. BURR:

Q. Now, you regarded that as white pine botanically, didn't you?

A. Mechanically.

Q. You better say "yes" and not nod.

A. Yes.

Q. You did not know that belonged to the yellow-pine group until you were consulted in this case, is that true?

A. That is correct.

Q. Now, how do your specifications read for pine lumber that you buy for exterior purposes, sash, for example?

A. Clear, soft pine.

Q. Clear, soft pine. You do not specify white at all, is that true?

A. No.

Q. How long has that been the case?

A. For many years. I do not know just how long.

Q. You never were in the habit of specifying white pine in writing your specifications?

A. I did before, for fifteen to twenty years ago we had to use the term white pine.

Q. White pine?

A. Yes. There was no other soft pine in those days, but
3554 what we called white pine, that was marketed.

Q. Any soft workable pine would meet the specifications that you make for sash and exterior trim; is that true?

A. Generally, yes.

Q. Now, you say you are not interested in the cell structure of the various varieties of wood, but that you think appearance is all you are interested in. Do I understand you correctly?

A. We can generally tell the characteristics of the cell structure by its appearance.

Q. You can tell the durability of the wood by its appearance?

A. Yes; pretty close.

Q. You can tell the durability of the wood?

A. Yes; pretty close.

Q. Now, if the cell structure of the white pine is so different from that of the yellow-pine group, that that is really the way by which wood technologists distinguish between the yellow pines and the white pines, would you be interested in the cell structure in view of the long durability reputation of the white-pine group?

A. Read that over for me, please; I cannot follow that.

(Question read.)

Mr. WHEAT. Just a minute.

Examiner SHEPPARD. Don't answer that until you understand it.

3555 Mr. WHEAT. Mr. Examiner, I wish to object to that question that there is not any evidence here as to any definite longer durability of any one wood. As stated in Madison by the expert of the Government, called by the Government, there is no test which he knew about, no scientific test by which the relative durability of these woods could be ascertained scientifically. I object to the question on the ground that there is no such.

Mr. BURR. If the examiner please, about a half a dozen of the respondents' own witnesses have testified to the high reputation of genuine white pine for durability.

Examiner SHEPPARD. I remember that.

Mr. BURR. Have done that very thing. I did not say actual durability, I said reputation for durability. So I think counsel's objections are not sustainable.

Examiner SHEPPARD. What I am interested in is to get the witness to understand the question.

The WITNESS. I will have to ask to have the question read again. It is too long for me to understand.

Mr. BURR. I will withdraw that question.

The WITNESS. Put it over; I will try and answer.

By Mr. BURR:

Q. If cell structure has anything to do with durability, you certainly would be interested in it?

A. Yes.

3556 Q. As an architect?

A. Yes; except that I could not attempt to go into the technicalities of those things. We cannot.

Q. No. You are not a wood technologist, you are not competent to testify on the technicalities of the wood, is that true?

A. That is right.

Q. In other words, you have to rely on the good faith of the men that you buy from with regard to what the wood is, to a large extent?

A. No; not entirely.

Q. Not entirely?

A. Except to a small degree.

Q. You do the inspecting for your firm, do you not?

A. Yes.

Q. You decide whether the wood delivered on the job is up to specification, do you?

A. Yes.

Q. And you so report to your firm?

A. Yes.

Q. By the way, are you a member of the firm?

A. Yes.

Q. How long have you been a member of it?

A. About twelve years.

Q. Now, are you able to say, for example, whether wood
3557 that is delivered on the job is Idaho white pine or northern white pine?

A. Generally, yes.

Q. Generally?

A. Not always. I cannot always tell.

Q. Would you be able to tell whether it was California white pine or Idaho?

A. Sometimes difficult to tell. Not always.

Q. You have to rely—if you are anxious to get one or the other variety of the so-called "white pines", you would have to rely upon your dealer, wouldn't you?

A. I do not think I would rely entirely on him.

Q. I see.

A. It is so hard to tell. I think I can confuse anybody with it.

Q. Have you ever sent samples to the Madison laboratory to find out whether it was white pine or not that was delivered to you?

A. No.

Q. Then you do have to rely upon your experience?

A. Our experience.

Q. And upon the dealer?

A. Our experience and the experience of the dealer.

Q. Yes; and his good faith.

A. Yes.

3558 Q. So that you are not able to tell really whether you are getting California white pine or Idaho white pine or northern white pine?

A. Not 100 percent, no, sir; nor can anyone else.

Q. Do your clients ever want white pine exterior trim?

A. I never heard any particular demand expressed for it that I can remember of.

Q. Yo do not remember any particular case where the client said he wanted white pine?

A. No.

Q. What?

A. No. It is unusual.

Mr. WHEAT. You mean for exterior?

Mr. BURR. For exterior trim or for any purpose, is that true? Did they ask for Idaho white pine or northern white pine?

A. I do not remember any client expressing any particular desire either way. If a man happens to be a lumberman, he may make some particular reference to a kind of lumber which he might want to use; otherwise that is left entirely to the architect.

By Mr. BURR:

Q. Left to the architect. You just specify pine, is that it?

A. Clear soft pine.

3559 Q. Clear soft pine?

A. Yes.

Q. Now, when you buy sash and doors, what do you ask for—exterior doors?

A. The same thing goes for exterior doors, if they are pine doors.

Q. If they are pine doors?

A. Yes.

Q. You just ask for soft clear pine, is that right?

A. That is it.

Q. And take the chances on what kind of soft clear pine you get?

A. Yes; take a chance on it.

Q. Now, where did you say you got your education along architectural lines?

A. The University of Illinois. However, I was there only two years.

Q. I see. Now, do you have clients ask you for something that will be exceptionally durable for exterior work?

A. Not particularly. I think their assumption is that we will give them the exceptional durability.

Q. I see. Now, the northern white pine has a high reputation for durability where it is exposed to the weather, hasn't it?

A. Yes.

3560 Q. Rather more than other varieties of pine, isn't that true?

A. I think maybe its reputation is that, or was that.

Examiner SHEPPARD. Why do you say "was"?

A. Very little, so little of it used now you never hear it discussed one way or the other. So I do not know what general reputation is only except as I hear it.

By Mr. BURR:

Q. So far as you know, there has been no change in the reputation of northern white pine for durability?

A. No; it has not deteriorated of late years.

Q. You say the matter of classification of pines is nothing to you and that the cell structure is nothing to you as an architect; is that correct?

A. It has meant nothing to me because I have never understood that cell structure made any particular difference in these soft pines.

Q. I see. If, however, they do have any effect upon durability, you, of course, as an architect would be interested?

A. If I found it did, I would be interested, if it were to any marked degree.

Q. Yes. Now, complaints as to the failure or falling down of material, they would come back to the contractor more than the architect, wouldn't they?

A. That is a hard question to answer. If your job, your building, were, say, a year or less in age, the contractor would
3561 probably be called in through the action of the architect. Any time after that, if the same owner still owned the building, he would probably call in Mr. Architect. Further than that, I do not know what would happen.

Q. You have used northern white pine in building work in times past, have you?

A. Yes, sir.

Q. Up until about what time did you use it, do you think?

A. Oh, I imagine—we are using it now.

Q. You use it now?

A. Yes; there is some on the market, I understand, a little used to make door cores and things of that kind.

Q. It is a matter of paying an extra price to get it, isn't it, rather than anything else?

A. I imagine that is just exactly what it amounts to.

Q. Yes. Now, as between Idaho white pine and northern white pine you would not make any particular choice as to which you would use; is that true?

A. I do not believe so, for our general interior work.

Q. You are more apt to use northern or Idaho white pine for exterior than you are for interior yes; is that true?

A. No; not particularly, except we pick on the soft woods for exterior work.

Q. There is plenty of Idaho white pine on the market, isn't there?

3562 A. I understand so.

Q. But it is higher priced than California white pine?

A. I understand it is a little bit.

Q. The reason you use California white pine, that is a question of price, isn't it?

A. To a certain degree.

Q. So far as the two woods are concerned, you did not recognize any difference in characteristics between them until you were consulted in this case; is that true? California and northern white pine?

A. California and northern, you are mentioning?

Q. Or Idaho.

A. California and northern?

Q. Yes.

A. No; I did not.

Q. You recognized no distinction between California white pine and Idaho until you were called in this case; is that true?

A. No.

Mr. BURR. That is all.

Examiner SHEPPARD. Anything else, Mr. Wheat?

Mr. WHEAT. That is all.

Examiner SHEPPARD. You are excused, Mr. McBride.

(Witness excused.)

Examiner SHEPPARD. We will take an adjournment until two o'clock.

(Whereupon a recess was taken until 2:00 p.m. of the same day, February 19, 1930.)

3563 Before the Federal Trade Commission

In the matter of White Pine cases

Dockets Nos. 1620–1629, incl.

WEDNESDAY, *February 19, 1930.*

Met pursuant to recess, 2:00 o'clock p.m.

Present: Same as before.

Examiner SHEPPARD. I am ready, gentlemen, to go ahead.

Mr. WHEAT. I will call Professor Jepson.

W. L. JEPSON was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination by Mr. WHEAT:

Q. What is your full name?

A. W. L. Jepson.

Q. Where do you reside?

A. Berkeley, California.

Q. What is your profession?

A. Botanist.

Q. Throughout what period have you been engaged in the
3564 profession or in the practice of the profession of botany?

A. From 1890 to the present time.

Q. Will you please relate your academic background?

A. I became associated with Mr. Green in the department of botany in August 1890, and have continued in an official capacity with that institution ever since, of course having occasional years off for study or for research.

Q. What is your scholastic background? Where did you study your botany?

A. I studied botany in the University of California, and later as a graduate student at Cornell University, and later still at Harvard University. With, of course, research years at later times.

Q. Where have you done any botanical research?

A. I have been at Harvard, at Washington, at New York, at the Royal Botanical Gardens at Berlin, the Royal Botanical Garden at Kew near London.

Q. What has been the nature of your research at these other points?

A. I have been concerned in research work upon the native vegetation of California. Limited to seed plants, what are known as flowering plants, generally speaking.

Q. I would like to have you review briefly the positions you have held and the work you have been engaged in throughout the
3565 entire term of your identification with the University of California.

A. Well, I was first assistant in botany, then instructor in botany, then through various grades of professorial rank to the rank of full professor which I have held for many years.

Q. In addition to that, Professor Jepson, have you ever engaged in any research for the United States Government?

A. Yes. I have been connected with the United States Forestry Service at certain times as an expert in research of special character.

Q. Just relate briefly what that has consisted of.

A. Well, I was engaged upon the research upon the tan oak of California, and later upon the tree known as Rhamnus purshiana, which yields the bark of which yields cascara sagrada.

Q. The exterior bark is known as——

A. The bark of the tree is known as cascara sagrada.

Q. That is produced in the western regions of the United States only, is it?

A. Produced almost exclusively in Oregon and Washington in commercial quantities.

Q. Professor Jepson, are you the author of any treatise on the trees of California?

A. Yes. I am the author of a work called "The Silva of California."

Q. Silva of California. When was that published, sir?

A. 1910.

3566 Q. When was the work upon it done by you?

A. Well, in my previous years as a working botanist, but the writing of it was chiefly done in the previous ten years.

Q. Are you the author of any other works of a botanical character? If so, please name the most important among them.

A. Well, there is the "Flora of California", a critical work upon the seed plants of California. Also a manual of the flowering plants of California, which is an illustrated work designed to serve as a technical handbook for the use of people interested in the native vegetation of California.

Q. Is that a large book, sir?

A. Oh, 1,250 pages.

Q. A number of illustrations?

A. Over 1,000 illustrations.

Q. Are there any other books of a critical nature of that type available?

A. No; none other of that kind.

Q. Have you also published a volume known as "Flora of Western-Middle California"?

A. Yes.

Q. When was that published?

A. 1901.

Q. Has that been republished?

A. In 1911.

Q. You mentioned, I believe, a critical work on the flora of
3567 California. Is that completed as yet? If not, how is it being published?

A. Well, that is being published in parts as the research work upon it is finished. It began in 1909, and about two thirds of the first two volumes is now done, now in print.

Q. How many parts are now published?

A. Some eight parts.

Q. Does this represent a methodical research over long periods of time?

A. Yes. This work is a work for professional botanists, for technical men.

Q. Have you completed as yet the manuscript on this complete work?

A. Well, very largely but not entirely.

Q. That is to be published in the future, is it?

A. Yes; it is going along now.

Q. Professor Jepson, are you familiar with a tree known to botanists as Pinus ponderosa?

A. Yes.

Q. Throughout what period have you been familiar with it?

A. Well, during the whole period of my life as a working botanist.

Q. What is the extent of your knowledge of this tree and under what circumstances was that knowledge gained? Just relate that in some detail, sir.

3568 A. Well, I have studied it for many years in the field, more particularly since 1890, though I had seen it before, carried on field studies of it, and have also studied it in the laboratory in connection with other members of the same family.

Q. Have you been interested in the logging and milling of the tree also?

A. Well, incidental to my field work as a botanist.

Q. When you first went into the Sierra region and saw this tree in its native habitat, was the lumber from this tree being used by persons in the vicinity?

A. Well, it was used by the hill men, mountaineers, woodsmen, men of the mines.

Q. For what purpose was it being used?

A. Well, it was being used for structural purposes, for the interior finish of their houses or cabins, or such things as wagon boxes, or buggy boxes, or the repair of such.

Q. What did you find that these people on the ground called this lumber?

A. Those men who were from the north, these pioneers whose origin was from the north, spoke of the lumber not the tree, spoke of the product as white pine. They spoke of a "white pine wagon box" that they had made.

Q. What did they call the tree in the forest?

A. They called the tree, the people in general called the tree yellow pine.

3569 Q. Can you state whether that name was given to it because of the color of its bark or because of any botanical consideration?

A. Oh, wholly on account of the color of the bark.

Q. When did you first know of this wood being sold at retail in California?

A. Well, my first direct experience with it would be in the years 1893 on, at various times.

Q. How was it sold at retail in California; under what name?

A. At those places I knew about it was sold as white pine.

Q. Did you have occasion to know about it?

A. Yes; because I knew the retailers personally. In certain cases I knew the retailers.

Q. Was there any eastern white pine or Pinus strobus on the market in California at that time?

A. No; not of which I had any knowledge. I think there was not.

Q. Do you know of it having been on the market at retail in California at any time during your experience?

A. No.

Q. Are you familiar with the botanical nomenclature of the pine trees, including Pinus ponderosa?

A. Yes; I think I am.

Q. In the classification of pine trees, is Pinus ponderosa placed within the group which includes the so-called yellow pines of the Southern States?

3570 A. Oh, yes.

Q. When and by whom did Pinus ponderosa receive its botanical name and classification?

A. Well, it received its botanical name from the botanical explorer David Douglas who found it in Oregon, and on account of its, to him, amazing size, he named it, "ponderosa", in order to emphasize to the people at home its utterly colossal nature, because he believed they would not credit his story of the size of this western forest tree that he first had discovered.

Q. At about what period did David Douglas give it that name?

A. 1825. Perhaps a year or so earlier or later, but I think not. I think it was 1825.

Q. Did he then describe the tree botanically?

A. Not in the sense of the botanical diagnosis of a botanist. He was killed not many years afterwards while on a botanical exploration in the field, and the botanical diagnosis, the proper botanical diagnosis, was published in England ten years later.

Q. What were the principal characteristics which determined the placing of Pinus ponderosa in the same botanical group with the so-called yellow pines of the South?

A. The characters of the cones, the form of the scales, the number of needles, the burr in the sheath or boot, and the characteristics of the flowers.

3571 Q. Did the cellular structure of the wood have anything to do with this original placing of Pinus ponderosa in that group?

A. No.

Q. Did Pinus ponderosa receive its botanical name and become allocated to that group of pine trees before it became the practice to make microscopic studies of the cellular structure of wood?

A. Well, that time the investigation or research upon the minute anatomy of pines and their allies had not proceeded very far. It was not until about the year 1875 that the minute anatomy of the pines began to be fairly well established. Of course that research is still going on, it is not yet completed.

Q. Am I to understand you, Professor Jepson, to say that Pinus ponderosa received its botanical classification prior to the general practice of making microscopic studies of wood cellular structure?

A. I should say that its relationships to the so-called yellow pines of the South, and their allies, was shown before that date.

Q. Now, in the determination of the botanical classification of Pinus ponderosa, did the scientist who made this classification give any consideration to the mechanical properties of the wood yielded by that tree, or to its industrial utility as lumber?

3572 A. No.

Q. If they had done so, what, in your opinion, would they have done with its classification?

Mr. BURR. I object to that as wholly hypothetical, conjectural, it has nothing to do with the issues in this case, and is immaterial.

Mr. WHEAT. This witness is the greatest botanical expert that has been in this country for years.

Examiner SHEPPARD. That is all true, Mr. Wheat, but for this gentleman to say what another bunch of gentlemen would do under certain circumstances, I think is going a little too far for any practical testimony or good that it may do me in this case. I will let you ask him.

Mr. WHEAT. Perhaps I better put it in another form.

Examiner SHEPPARD. I will let you ask him what he thinks about it without trying to get from him what another bunch of people might do.

By Mr. WHEAT:

Q. I will ask you, then, Professor Jepson, whether if you were to consider the mechanical properties of this wood and its industrial utility, it would properly fall within the group in which you say botanists have placed it.

A. Would you please repeat that question?

Mr. WHEAT. Read it.

By Examiner SHEPPARD:

3573 Q. Suppose you right now, Mr. Witness, were making a classification of this lumber, and having in mind its utility, its qualifications, its color, its texture, where would you put it?

Mr. BURR. Wait a minute. It does not seem this man is an expert on that branch of the subject, the mechanical properties. That is for the practical man who is familiar with the manufacture of this wood. This gentleman has not qualified along such lines of examination as that.

Mr. WHEAT. May I just make this observation? It seems to me the examiner has put this question precisely as it should be put in this case. I do not think it could have been worded better.

Examiner SHEPPARD. I am going to let him answer that and I will give it probative value.

Mr. BURR. It seems to me that after we have qualified this gentleman as a technical botanical expert, he is qualified to answer questions along that line; but so far as the classification of the wood for mechanical purposes, I submit he has not yet been qualified along that line. I do not think he has the experience, and he has not been shown to have had the experience as yet to answer that question as an expert, because his expert character is in a different field of human knowledge.

3574 Mr. WHEAT. Oh, I think he can be and will be qualified——

Mr. BURR. All right.

Mr. WHEAT. To answer that question before we are through.

Mr. BURR. Suppose you qualify him before he answers.

Mr. ANDREWS. That question relates to his botanical qualifications.

Mr. WHEAT. The question which has been put relates to what he, as a botanist, would do if the mechanical properties of the wood yielded by the tree, and its industrial utility, which he says botanists have not taken into consideration in their classification, were to be considered. If he knows.

Mr. BURR. If the examiner please, that is hypothetical because botanists do not leave out of consideration all these other things and consider solely mechanical properties; and if they did, they would ask someone who was competent from a mechanical standpoint, and the utility standpoint of the lumber, rather than rely upon their own information, that has not been shown this witness is in possession of.

Mr. WHEAT. Your very objection was that my first question was too broad, and I placed it down to this man himself. Now, the

examiner has asked the question in the form precisely that I think would definitely bring out this point in another way.

Examiner SHEPPARD. You understand the question now, do
3575 you?

Mr. WHEAT. Read the question, please, Mr. Reporter.

(Question read.)

A. I would put that particular species, ponderosa, in the white-pine group.

By Mr. WHEAT:

Q. Now, Professor Jepson, on examining the wood of the pine trees with the microscope, did botanists encounter any microscopic phenomena which tended to separate them into groups?

Mr. BURR. In the classification?

Mr. WHEAT. Read the question.

(Question read.)

A. On the basis of certain microscopic features of certain tissues, pines may be separated into two groups of very unequal size. One a white-pine group, the other we might call the yellow-pine group, though including other than yellow pine within it; and those marks, those diagnostic marks, are more nearly invariable than any other cellular markings or tissue features than we have in the tissue system of pines.

By Mr. WHEAT:

Q. Will you describe what these microscopic diagnostic marks are?

A. In white pines we have certain structures called the rays, the medullary rays. Those medullary rays consist of tissue system;
that is, not one type of cells but of more than one
3576 type of cells. One of those types of cell is called the ray tracheids. There may be a thickening of the upper and lower walls of the cells of those ray tracheids, but where there is a thickening, that thickening is smooth, not irregular. In the case of this other group, which colloquially we are speaking of as the yellow-pine group, we have also this system of medullary rays, and the medullary rays here again form the tissue system that is composed not of one kind of cells but more than one kind; and here again we find the ray tracheids. Here the ray tracheids on either the upper and lower walls are also thickened, but they are thickened unequally so as to make dentations or teeth. These dentations or teeth are not the same in all species. They may become so marked that the teeth will meet across the cavity of the cell and form a radiculum or neck. But in any case these pines that we are speaking of that form the yellow-pine group always have this particular kind of ray tracheids, and it is the diagnostic mark by which microscopically we determine whether a particular species by its wood belongs to this group.

By Examiner SHEPPARD:

Q. In other words, your white pine group do not have that marking.

A. The white pine do not have that particular marking.

Q. Exactly.

A. They have ray tracheids.

3577 Q. I understand that, but I mean teeth.

A. They do not have these particular teeth.

Examiner SHEPPARD. I get that. Go on.

By Mr. WHEAT:

Q. Now, when you use the term white pine group, do you use the term as a scientific or botanical term, or as a colloquial?

A. I use it in the colloquial. If I were talking to students or botanists, I would not use the word white or yellow pine.

Q. What would you use?

A. I would say the strobus section of pines or the pinaster section of pines.

Q. I will ask you this, What is the tree known as Pinus pinaster?

A. It is called colloquially the maritime pine.

Q. Where is it located?

A. In the Mediterranean regions, particularly in southern France.

By Examiner SHEPPARD:

Q. Don't they have it in this country?

A. No; except as it is planted as specimen trees.

By Mr. WHEAT:

Q. Now, are the microscopic diagnostic markings that you have mentioned invariable in the sense that they can be found in any part of the wood structure, regardless of its usability in commerce?

3578 A. Oh, yes; they are found in all parts, in all parts of the tissue system of the tree which represents wood. Botanical wood, I mean.

Q. Have the microscopic markings of identification any relation to the economic or industrial utility of the wood?

A. They have not.

Q. Have they any relation to its strength, density, specific gravity, capacity to shrink or not to shrink, or any other mechanical characteristic of the wood cut from the tree?

A. No.

Q. Is there any necessary relation between the botanical name of a tree and the industrial or commercial utility of the lumber obtained from that tree?

A. No.

Mr. BURR. I think these are rather leading questions. Why not let the witness tell his own story? He is very able to tell it.

Mr. WHEAT. He has told it very well.

Mr. BURR. I know he has up to the last two or three questions, where you leave nothing for him to do.

Examiner SHEPPARD. Here is a question I would like to ask myself right here. I gather, Doctor, from what you have said, that botanists have in numerous cases classified trees into one class or another prior to the time when the microscope became the
3579 agent of detection of certain things in one or the other of the pines; is that correct?

A. Yes.

Q. Now, has subsequent examination by the microscope of trees made any reallocation or reclassification of any of these trees by botanists in subsequent years, taking from one group and putting into another, or vice versa? In other words, has the microscope been able to change the classification of any tree that was classified prior to the use of the microscope? You get me?

A. Yes. I can give you a little illustration right from the pines. The white pines, in the sense in which I am speaking of white pines, have this even thickening of the walls of the tracheids I spoke about; and the yellow pines, the yellow pines proper, have this dentate thickening. There is, however, a group of pines which belongs, according to botanists and the traditional classification, with the yellow pine group, which, if this marking must be considered, will now be thrown over into the white pine group. Those are the foxtail pine and the nut pine of the desert. They are hard white pines.

Q. That reclassification was brought about by new information obtained by the microscope?

A. That was determinable only by the much larger powers of the microscope, particularly the compound microscope.

Examiner SHEPPARD. Go on.

3580 By Mr. WHEAT:

Q. I would like to ask whether these microscopic diagnostic marks are considered to be primary botanical factors? Are they the primary botanical factors in the classification?

A. The factors cannot be determined in advance. A botanist studies a plant as a whole, and he determines from his study what are to be the natural groups. And by natural groups we mean groups based upon relationship by community of descent, the test of ancestry, and by that test the botanist would keep to this former classification based upon the reproductive organs mainly.

Q. Has it been your experience in the study of botany that the mechanical characteristics of various woods run—and I will add also the industrial uses; run parallel to the botanical classification of the trees from which they are cut?

A. No; in general that is not test; the botanical classification is no test. We cannot, by determining the botanical position of the species, say what its mechanical character will be, either by its grown character or its minute character.

Q. Have you any illustration?

A. We cannot determine. We can determine its botanical position most reliably by consideration of its reproductive organs, that

is to say, the flowers, the fruits, or both together in the main. If you take other characteristics, you get a classification that
3581 is not natural, you bring together things which are, from the standpoint of natural classification, unlike.

For example, probably it would be agreed that there is no pine tree, no other pine tree in the United States, which is so valuable a pine for structural uses, having a combination of strength and stiffness and other desirable mechanical qualification, where a very strong timber was desired, as the so-called yellow pine of the South, Pinus palustris.

By Mr. ANDREWS:

Q. That is the longleaf you are referring to?

A. The longleaf pine of the southern pineries. There is another pine that is really and truly comparable with it. And we have another conifer that is comparable with the so-called Oregon pine or the California tree, which is not a pine at all.

Mr. BURR. Wait a minute. I move to strike out "which is not a pine at all", under the ruling of the Commission, that other misnomers are not to be gone into.

Mr. WHEAT. I am not trying any misnomer; I am asking what the name of the tree is.

Mr. BURR. If counsel wishes to make that——

Examiner SHEPPARD. I don't care, Mr. Wheat, to go into those other trees at all.

Mr. BURR. I move to strike out the answer, "which is not a pine at all."

3582 Examiner SHEPPARD. Strike the last part of the witness' answer where he made mention of the Oregon pine.

Mr. WHEAT. I will ask the witness to mention it in some other way. He mentions it as a comparison which he wants to make.

The WITNESS. May I ask Mr. Examiner a question?

Examiner SHEPPARD. Yes.

The WITNESS. By what other name shall I call this tree I am thinking of?

Examiner SHEPPARD. You mean——

The WITNESS. I mean the Pseudotsuga, and the specific name is taxifolia. Now, Mr. Examiner——

Examiner SHEPPARD. That is the Douglas fir, isn't it?

The WITNESS. But, Mr. Examiner, it is not a fir.

Mr. BURR. If the examiner please, I move to strike that.

Examiner SHEPPARD. Yes.

Mr. BURR. This has nothing to do with this case, this misnomer. We are not trying these other matters.

Examiner SHEPPARD. That has nothing to do with it.

Mr. WHEAT. May I suggest this, and you will see the materiality of the answer the witness is making. He is not using that as a

misnomer, he is just trying to find some way of telling what this wood is. He is trying to show——

Mr. BURR. He is not——

Mr. WHEAT. May I finish my statement?

3583 Mr. BURR. We are not interested in that.

Mr. WHEAT. I will certainly appreciate the courtesy of being allowed to proceed.

Mr. BURR. You interrupted——

Mr. WHEAT. Mr. Examiner, may I finish my statement now?

Examiner SHEPPARD. Go ahead.

Mr. WHEAT. My question was as to places where industrial utility and mechanical utility of the wood did not run parallel to botanical classification, and the witness is making an illustration. Now I am perfectly willing to have this wood called "X", so we will know that I am not in any sense trying to try any other wood.

Examiner SHEPPARD. Yes; I understand.

Mr. WHEAT. All we want now is for him to finish his answer, which I think will be important in this case.

Examiner SHEPPARD. I want you to finish your statement.

The WITNESS. This wood X, Mr. Examiner, is that it?

Examiner SHEPPARD. What?

The WITNESS. This wood X?

Examiner SHEPPARD. Exactly.

Mr. ANDREWS. What do you refer to, what is its botanical name?

Examiner SHEPPARD. That is already in, I think. He has already stated that botanically.

3584 The WITNESS. This wood I have referred to now, this example, and this species of the southern pinery to which I specifically referred, those two trees on a classification of mechanics of the timber, would inevitably be placed together. And they belong to different botanical genera. One belongs botanically to the genus Pinus and the other belongs botanically to the genus Pseudo.

Examiner SHEPPARD. Go ahead.

By Mr. WHEAT:

Q. Professor Jepson, following that up, can a botanist tell in advance what the mechanical characteristics of a wood will be by examining a piece of wood with the microscope?

A. They cannot. That is not possible because the mechanical characteristics of a tree depend upon certain qualities which are not determinable by the microscope. If we could determine in advance the mechanical quality of the timber by the microscope, we would inevitably do so, because we are now forced to do it by trial, experiment, observation, and where we do it with refinement we use exceedingly costly and expensive wood-testing machines.

Examiner SHEPPARD. Yes, I know that.

By Mr. WHEAT:

Q. Now, Professor Jepson, reading from the transcript of these cases at pages 2206 in the testimony of Colonel W. B. Greeley, at the hearing in Portland, Oregon, I am going to read a question and answer and then I ask your opinion as to the state-
3585 ment made in that answer.

Mr. BURR. I object to that method of examination. I do not think it is the proper way to proceed. Why not ask the witness such matters as he desires him to testify about without reading from the record.

Examiner SHEPPARD. Read the question, but I do not want it copied in the record again.

Mr. WHEAT. I will read the statement.

Examiner SHEPPARD. Yes.

Mr. WHEAT. And then ask a question about it.

Examiner SHEPPARD. Just ask him the question.

Mr. WHEAT. This is the statement as follows, this is my question, I will make the statement and then I am going to ask a question about it.

The structure of the wood, the formation of the cells, the typical wood structure forms, which in turn affect the character of the lumber, those things have entered extensively into botanical classifications.

By Mr. WHEAT:

Q. I would like to ask you what comment you have to make upon that statement.

The WITNESS. Will you please read that again?

(Question read.)

Examiner SHEPPARD. Now, Professor, before you answer, do yourself the justice of thoroughly understanding the ques-
3586 tion. If you want it read again, I will so order it. If you have got it, if you understand it and have it in your mind all right, why you may proceed.

The WITNESS. Yes, Mr. Examiner, I think I would like to have it read again.

Examiner SHEPPARD. Read it slowly.

(Question read.)

The WITNESS: A. I should like to separate those matters into two categories. The structure of the wood, the nature of the fibres, undoubtedly do affect the mechanical virtues of the wood, or lack of such. But the features of the wood which are of botanical importance, have no known relation to mechanical qualities. That is, those features which relate to botanical classification have no known mechanical significance as distinguishing timbers.

Examiner SHEPPARD. All right.

By Mr. WHEAT:

Q. Is there any necessary relation, in your opinion, between the popular name of a tree in the forest and the industrial or commercial utility of the lumber yielded by the tree?

A. No.

Q. I will ask whether the common or colloquial names, as you have expressed it, for trees possess any definite scientific meaning?

A. They have no scientific meaning to botanists. They do
3587 not fall under botanical laws. They do not mean anything precise to botanists, because botanists have their own nomenclature when they propose to give precision to natural species genera.

Q. How do they do that?

A. Botanists, first of all, initial a species, find the easiest writing to take, and give to a new species, a species when discovered, a Latin name consisting of two parts; the generic name first and the specific name second. That name is always in Latin for the reason that Latin is the common-term language of scientific men, and especially botanists, in all countries.

To further insure that there shall be a definite assignment of this binomial, the author of the binomial enters into the record. His name is placed after that binomial invariably when precise distinction is determined upon. In connection with the binomial there is always written a diagnosis of the species to distinguish it from all other known species. This diagnosis is what its name implies; it is diagnostic. And that must be published.

There may be other matters added by way of botanical information, matters of a great variety of kinds may be added to this diagnosis, matters that are purely scientific, purely distributional, purely ecological, relating to life history economic matters,
3588 relating to the species in question.

Q. Now, Professor Jepson, can anything accurate or scientific be associated with the common or colloquial terms for plants?

A. Not in the minds of botanists. Botanists would not use colloquial terms when they were publishing scientific papers.

Q. Are the terms "white pine" or "yellow pine" scientific or botanical terms?

A. Not in the eyes of botanists.

Q. Are you familiar with the common commercial name of the lumber yielded by Pinus ponderosa tree as cut in the forests of California and southern Oregon?

A. Well, yes; I know that such lumber is made.

Q. Are you familiar with the common commercial name of that lumber?

A. Yes.

Q. If so, what is it?

A. California white pine.

Q. Throughout what period have you been personally familiar with that term?

A. The term California white pine?

Q. Yes.

A. Well, since about 1903.

Q. Under what circumstances did you become familiar with that commercial name?

A. Well, one heard the mill men, the woodsmen, the log-
3589 gers use it. I also, in building a house, had occasion to buy window sash, which was billed to me as California white pine.

Q. From whom did you buy that sash?

A. The California Door Factory.

Q. The California Door Company?

A. California Door Factory—California Door Company; yes. That is the Oakland factor, is where I got it.

Q. Has this commercial term "California white pine" been dominant throughout the entire period of your familiarity with this lumber, as lumber?

A. As lumber; yes.

Q. Considering the wood of Pinus ponderosa as lumber, and that is with respect—that is without respect to its botany, and with respect to its essential mechanical properties and the industrial uses to which it is best adapted, will you state whether that lumber in your opinion falls more appropriately within the so-called "white pine group" or the so-called "yellow pine group", and why?

Mr. BURR. I object on the ground that this witness is not an expert with regard to the mechanical utility of various different types of lumber. We are now getting away from botany where he is an expert and into a field where he is not an expert. He has not been qualified and cannot give competent testimony.

Mr. WHEAT. This is a form of the particular question
3590 which the examiner himself put, and I am asking him now why, which is another matter.

Mr. BURR. I have a right to object, and I object twice.

Mr. WHEAT. Absolutely.

Examiner SHEPPARD. Let him answer.

Mr. BURR. Exception.

A. If you draw a hard and fast line between the lumbers that are called white pine and the lumbers produced from the yellow pines, then this particular product would, in my opinion, fall much nearer the white-pine group than it would the yellow-pine group, on account of the softness of the wood, its general freedom from resin, its smooth easy-working qualities.

By Mr. WHEAT:

Q. And on the basis of color?

A. Pardon me?

Q. Would the basis of color be one of those points also?

A. Color of the wood?

Q. Yes.

A. I mentioned the color of the wood.

Examiner SHEPPARD. Yes; he said color.

Mr. WHEAT. Excuse me. You may cross-examine.

Cross-examination by Mr. BURR:

Q. Now, referring to the color feature last referred to, the hardwood of the Pinus ponderosa is considerably darker than the
3591 sapwood, isn't it?

A. Yes.

Q. It is considerably darker than the hardwood of the white pines in the main, is it not?

A. It is sometimes difficult to distinguish them.

Q. Pardon?

A. It is sometimes difficult to distinguish them.

Q. I am talking about the average now. It is darker than the hardwood of the northern white pine, for example, the strobus?

A. It depends upon what you are talking about. You take the best quality from the Sierra Nevada, and that best quality is indistinguishable by color from the white pine.

Q. But as an average throughout the range of the Pinus ponderosa, the hardwood is considerably darker than the hardwood of the East?

A. The Pinus strobus——

Q. Answer my question now. Take the average now, the hardwood is unquestionably harder than the hardwood of the genuine white pine?

A. What do you mean by average? Geographical average?

Q. I mean the average as governed by output, lumber output.

A. But the lumber output in the Sierra Nevada is from the region where the tree has its best development, where the qualities I speak of are shown to the best advantage.

3592 Q. Yes; perhaps so. How about down in Arizona; that is still whiter down there?

A. I am not familiar with Arizona.

Q. Not familiar with Arizona Pinus ponderosa?

A. No.

Q. How about the inland empire; are you familiar up there?

A. No.

Q. What you testified to is based solely on the California Pinus ponderosa?

A. Southern Oregon and California.

Q. How far north into Oregon?

A. Well, I mean by southern Oregon, I mean well down in the south Clamath Falls region.

Q. Even in that region of the Pinus ponderosa there is a great deal of variability in the wood, is there not?

A. Yes; there is a certain range of variability.

Q. Are you familiar with what they call locally bull pine there?

A. Bull pine is a thing which is at the open edges of the range of the species, of its ecology.

Q. In its ecology?

A. That represents the habits of the tree, its importance in the production of the tree.

Q. Now, Pinus ponderosa has a much greater variety in soil and elevation and climate than the white pine, does it not?

A. Not as wide as the Pinus flexilis.

3593 Q. It has a greater range in those respects than Pinus ponderosa or Pinus lambertiana, does it not?

A. What has?

Q. Ponderosa.

A. I understood you to say ponderosa.

Q. Yes; Pinus ponderosa. Pinus ponderosa has a greater range as to elevation, type of soil it grows in, altitude and climate, than the genuine white pine, as the strobus and lambertiana, does it not?

A. It has greater range than lambertiana. It does not have a greater range in extremes of condition than does Pinus flexilis.

Q. But I did not have flexilis in my question. I said strobus and lambertiana. It has greater range in altitude and in differing conditions of climate and soil than strobus, does it not?

A. Yes; it does, but where it is producing the kind of timber that lumbermen must use, conditions are very uniform in the area, generally speaking.

Q. Do you know whether there is not more Pinus ponderosa shipped from the inland empire as far south as the northern extremity of the Klamath Falls district than there is in the Klamath Falls and in California taken together; do you know that?

A. I am not familiar with the lumber trade.

Q. Yes.

3594 A. With lumber sales.

Q. You are not familiar with the mechanical differences that there may be between these pines at all, are you?

A. My knowledge is limited to California.

Q. Well, it is limited to the botanical rather than the mechanical end of it, is it not?

A. I have some knowledge of the mechanical end.

Q. You are not a practical lumber manufacturer?

A. I am not.

Q. You have never worked in saw mills?

A. No.

Q. You have merely visited them as a casual spectator?

A. Yes.

Mr. BURR. I now move to strike the evidence to which I objected before of this witness where he testified as an expert with regard to the mechanical properties and utility of these various woods.

Examiner SHEPPARD. I think I will eliminate, Mr. Reporter, from consideration of the testimony of this witness any reference that he made to mechanical properties, but giving consideration to all that he stated with reference to botanical properties and considerations.

Mr. WHEAT. And particularly, Mr. Examiner, whatever you may do on this, I want it understood that his testimony as to whether or not botanists take into consideration the mechanics——

3595 Mr. BURR. That is not in——

Mr. WHEAT. Just a minute.

Mr. BURR. That is not within the scope of my objection.

Examiner SHEPPARD. Go ahead.

Mr. WHEAT. Mechanical properties or economics or industrial uses of the woods in their classification. Of course, that statement is not to be in any sense disregarded.

Mr. BURR. That is not in my motion.

Mr. WHEAT. I see.

Examiner SHEPPARD. All right.

By Mr. BURR:

Q. Now, the testimony on the part of a number of experts indicated that by the inspection of a small piece of pine wood it would be feasible for them to determine whether the piece of wood belonged to the white-pine group or whether it did not. What is your experience and your information on that subject?

A. That question apparently relates to the testimony which I gave as to the distinction between the——

Q. Yes.

A. White pines and the yellow pines, as to the ray tracheids.

Examiner SHEPPARD. Yes; that is what it means.

By Mr. BURR:

3596 Q. Yes; I think that is a fair answer. Would you say, Professor Jepson, it is feasible to determine that a given piece of lumber belongs to the white pines or the yellow pines by the ray tracheids, is that true?

A. Yes, sir.

Q. Now, is it possible for you to determine by the ray tracheids whether it is a piece of sugar pine, a piece of Idaho white pine or Monticola, or whether it is a piece of strobus? Can you tell invariably by the ray tracheids which of those three it belongs to?

A. You cannot.

Q. Now, is it possible for you to determine by a sample, by microscopic analysis, whether a given piece of wood belongs to Pinus ponderosa, Pinus taeda, or Pinus palustris?

A. Each of those species has certain histological characteristics of the wood.

Q. Histological?

A. Yes.

Mr. WHEAT. Will you explain?

The WITNESS. Histological means anatomical.

By Mr. BURR:

Q. Yes.

A. But those characteristics are not mutually exclusive.

Q. So that your answer is you would not be able invariably to pick out a small piece of wood and say that is taeda or

3597 this is palustris.

A. You could ordinarily, but there would be cases when you could not.

Q. I see.

A. Because the characters would cover each other.

Q. In other words, you would have to say this looks like palustris, but it may possibly be one of the other yellow pines, is that true?

A. One would say this has the characters of palustris, but those characters are not necessarily exclusive of certain characters of taeda.

Q. You would have to say, I think it is palustris, or I think it is Pinus ponderosa, but it might be possibly one or the other.

A. So far as these particular characters are concerned.

Q. Suppose I offer you a small sample of wood about two or three inches long and an inch wide, would it be possible for you invariably to say whether it is palustris, taeda, or ponderosa?

A. If one is handling those woods as a wood technologist, he would be able to distinguish them ordinarily, but there will be cases come up where he will be unable to distinguish them.

Q. Now, you are a wood technologist yourself, you handle the microscope.

A. I am a botanist.

3598 Q. Oh. What is the difference between a wood technologist and a botanist?

A. A wood technologist is one of the numerous special fields in botany.

Q. Is that one of the special fields that you have studied particularly?

A. I have studied it, the minute anatomy of plants. I have taken a course in minute anatomy in the field, using histology, but we don't call that wood technology in that situation. I might say I am a mathematician, not an adding machine. A wood technologist may not have the fundamental training in plant tissues which will enable him to meet any particular case. He may be a technologist in some particular narrow field of tropical wood, but he will be lost outside of that, because he has not the underlying fundamental botanical training in histology.

Q. What is the situation with yourself; have you the underlying training to determine that?

A. I have the underlying training, yes; but I am not a wood technologist.

Q. You have the underlying training, but you have not followed it up by the study of wood technology?

A. That has not been my special field.

Q. Wood technologists do recognize that there are certain groups that are so nearly alike in cell structure that small

3599 pieces cannot be determined apart, and they have determined upon the common course of referring to that group as white pine; isn't that true?

A. Read that question.

Q. Maybe my question is not any good. I will withdraw that question. Now, the botanists, wood technologists, know that there is a group—do I understand your testimony correctly—that it is impossible to tell and distinguish between so that it will infallibly apply, namely, the cell structure of the wood is such as to draw three types of commercial wood together, so that it is impossible for them to tell and distinguish which is which; those being strobus, Monticola, and lambertiana. Isn't that true?

A. I would not put it that way.

Q. Well, is it true or not, whether you put it in that way or some other way?

A. Botanists make this investigation without any reference to economic character.

Q. Yes; but I am not talking about the economic character. It is true botanists do find that there are three types, strobus, Monticola, and lambertiana, which it is impossible to distinguish infallibly as a matter of microscopic analysis, isn't that true?

A. There are others of the same group.

Q. But they are commercial; flexilis is not being used commercially?

3600 A. Yes.

Q. Add flexilis to the group. They are unable to tell the difference microscopically between those four woods; isn't that true?

A. They are ordinarily.

Q. Yes.

A. But there might be certain woods coming in——

Q. They could not be sure of telling the difference, isn't that true?

A. They do tell the difference for practical purposes.

Q. In carload lots you can tell the difference?

A. Yes.

Q. But you cannot tell the difference by a small sample, is that true?

A. A small sample isolated from its context, so to speak.

Q. Botanists use the words "white pine" for that group, don't they?

A. They do not.

Q. They do not?

A. They use the word "strobus."

Q. The strobus group?

A. Yes.

Q. These four woods belong to the strobus group, is that true?

A. Yes.

Q. As a matter of fact, botanists, when they write books
3601 for the general public, do refer to this as the white pine group, don't they?

A. When botanists write for the public—of course there are many botanists, technical botanists who never write for the public.

Q. I wish you would answer the question. Such botanists as do write for the public, they refer to the group as the white pine group, don't they?

A. But that——

Q. Wait a minute; you may answer yes or no and then explain afterwards. I don't object to the explanation, but I want an answer.

A. I should say that foresters use the term white pine group.

Q. Well, don't botanists?

A. Botanists will occasionally.

Q. Haven't you used that phrase yourself, Professor?

A. I might use it conversationally, yes.

Q. Haven't you used it in your book for the public that you wrote on California woods?

A. In a purely popular treatise.

Q. Yes; a purely popular treatise. Then there is another group that it is impossible for technologists to distinguish in the case of small pieces, on account of the similarity of their cell structure as a group, which they have referred to as the yellow pine group
3602 in popular treatises and for convenience sake; isn't that true?

A. Well, there are certain species in that group that cannot be told by their minute characters.

Q. But you cannot tell strobus or pilustris or Pinus ponderosa infallibly by small samples?

A. Yes, sir; you cannot, but I insist there are others that you can.

Q. Now, this foxtail and nut pine group, these Pinous, these two, they are frequently classified in neither one of these two groups, either yellow pine or the white pine, isn't that true?

A. They are classified by botanists in the yellow-pine group.

Q. They are?

A. Yes.

Q. Both the foxtail and the nut pines?

A. Foxtail and nut pines; yes.

Q. Aren't there a number of botanists who say there ought to be more than two families of pines and give it a separate designation?

A. Most of the authoritative botanists in the United States have made two groups. You take Sargent's Silva of North America, a twenty-five volume work with magnificent plates, that is considered to be the work of last resort on the classification of the pines.

Q. Yes.

3603 A. A whole volume is given to pines. He makes two groups, the strobus group and the pinaster group, and only two.

Q. Doesn't he refer to them as white pine and yellow pine in that book also as well as strobus?

A. He does not refer to the second group as yellow pines. He refers to them as hard pines or pitch pines.

Q. Doesn't he refer to the first group as white pines?

A. He refers to the first group as white pines.

Q. He is a botanist, would you say?

A. He is undeniably a botanist. Director of Arnold Arboretum at Harvard University.

Q. Where does he place Pinus ponderosa, do you know?

A. He places it in the usual place botanists place it, in the pinaster group.

Q. Do botanists consider the presence or absence of pitch as one of the things which they give weight to in connection with the classification of species in this group, in this pine group?

A. No; do not.

Q. Do not pay any attention whether more or less pitch is there, or the character or quality of it?

A. Because it varies too much. There are pines of one species growing probably very close to each other, one tree will be very largely free from pitch and the other will be quite pitchy.

3604 Q. Pitch has a great deal to do with the hardness or softness, doesn't it?

A. I do not know what it has to do with hardness or softness.

Q. Isn't the density of the wood, of pine wood, almost in the ratio of the amount of resinous substance in the wood?

A. Densities of the wood are due to the rate of growth.

Q. Not due to pitch at all, you would say?

A. Not due to pitch at all. Pitch is an ancestral character.

Q. Are you prepared to say that the difference in cell structure, character of the cell, has nothing to do with the mechanical characteristics of the wood?

A. I should say that the fibres have everything to do with the mechanical characteristics of the wood.

Q. But doesn't the cell have something to do with the fibre?

A. Fibres are cells.

Q. Then the cell structure has a reflection in the mechanical characteristics of the wood.

A. The cell structure in this sense is the fibre of every wood. We have to go back to the fibres of every wood to get our mechanical characteristics, but these peculiarities of the cell have nothing to do with mechanical qualities because in two woods of one species, possibly even growing side by side, we have wood, for example, of great durability, and we have in the other tree a wood which perishes rapidly. Yet the cellular structure is the same. The most

3605 striking, the most spectacular example we could give in California would be in the case of our unexampled tree, the redwood. The redwood has a structure of its cells which is uniform from tree to tree. That is, there are certain kinds of cellular struc-

tures in that tree which mark that tree which are found throughout every individual. But certain trees within my own experience will have great durability in contact with the soil. There are posts upon my father's place in California, redwood posts, that have been there now for sixty years. There are other posts that have been there only two or three years before rotting. Both redwood.

Q. Yes.

A. As to mechanical quality, there is the similar diversity. We find it even in the pines, not merely in other than those pines but very notably in the pines. The wood from two pine trees, either from the same district or different districts, will vary greatly in mechanical quality, but their cellular structure is the same throughout.

Q. Nevertheless, the redwood is known as a wood of long durability, isn't that true?

A. In general it is a wood of very long durability, but there are certain trees which produce wood that is exceedingly short lived.

Q. Yes. Science has not been able yet to discover the reason for one tree having great durability and another lacking it,

3606 is that true?

A. That is true; we do not know the principles which govern durability. We do not know the underlying principles which govern the various mechanical qualities that we prize, that is tensile strength or breaking strength, or elasticity or resilience.

Q. At present science would not be able to say whether the kind of ray tracheids is entirely irrelevant to the subject of durability, would it?

A. I think we should.

Q. You think you should?

A. Yes.

Q. You think its presence has nothing to do—the cell structure hasn't anything on earth to do with durability, is that true?

A. That is certainly true. That is true for the reason that we have infallible evidence that in the case of the two trees growing side by side of the same species, and having without any peradventure of a doubt the same botanical characteristics of the wood, those two woods will differ markedly in some mechanical peculiarity or in some character of durability.

Q. That does not affect the possibility that as an average proposition the shape of the cell in one class of wood might have a certain effect, as contrasted with another species or another cell shape, isn't that true?

3607 A. Oh, we could not distinguish the yellow pine fibres from the white pine fibres.

Q. Suppose one cell type was more impervious to moisture than another cell type, it might still be true, might it not, the individual specimen might have other characteristics which would affect the matter of durability while at the same time the shape of the cells might have its influence; isn't that true?

A. I do not see how I can answer a purely hypothetical question of that kind. That is outside of the range of science.

Q. Science has not at present ascertained what the reason for the different cell structure or what the effect of the different cell structure is, has it?

A. We know that the cell structures, insofar as they are diagnostic, or have any relation to the particular species, that those have no relation to the mechanical qualities which we prize, or to durability.

Q. Now strobus is a remarkably durable pine, is it not?

A. Undoubtedly.

Q. Monticola is also a highly durable pine, isn't it?

A. Yes; that is a fairly durable pine.

Q. And the same is true of lambertiana, is it not?

A. No; it varies a great deal.

Q. You would not recommend Pinus ponderosa for durability, particularly where exposed to weather?

3608 A. I think we have not the scientific evidence to give an answer in that case.

By Examiner SHEPPARD:

Q. Has it been on the market too short a time?

A. But Pinus strobus, which he referred to, has been in use for 300 years here in this country.

By Mr. BURR:

Q. Yes.

A. And I would like to say this, that as regards Pinus strobus, to my own knowledge I have no evidence of my own, my own experience and practice as to durability.

Q. Yes.

A. That tree is in the eastern United States.

Q. Now, the Pinus ponderosa——

A. I have been only speaking of its general reputation.

Q. Yes. Now, Pinus ponderosa is a wood which has a large percentage of sapwood as contrasted with heartwood, isn't it?

A. My experience with that would be simply as I saw the cut logs in the forest.

Q. You do not regard sapwood, generally speaking, as nearly as durable as the heartwood?

Mr. WHEAT. Mr. Examiner, Mr. Burr himself has tried to avoid the question of wood technology with this witness——

Mr. BURR. Technology?

3609 Mr. WHEAT. The relation of durability of sap to heartwood, that is the question on which Mr. Burr made his objection that this witness could not——

Mr. BURR. I have not avoided the subject of technology, I have been working on technology right along.

Examiner SHEPPARD. I take it the doctor here is very broadly competent to go into this subject pretty deeply.

Mr. WHEAT. I want him to.

Examiner SHEPPARD. Go on.

(Question read.)

A. It is not in any tree.

By Mr. BURR:

Q. Now, that is generally speaking true, isn't it?

A. Not in any tree.

Q. Now, these redwood posts that you referred to, do you know whether they are sapwood or heartwood?

A. These were all heartwood.

Q. Those that rotted quickly were heartwood?

A. They were heartwood, they were the duramen, what is technically called the duramen.

Q. Now, the ray tracheids are the same in the sapwood and the heartwood, are they? That distinction does not differ, does it, between sapwood and——

A. Tracheids belong to what we call the rays. That is the tissue which extends from the center of the trunk out towards
3610 the margin, and, of course, necessarily extends through both the heartwood and the sapwood. That, of course, those ray tracheids, if you are referring to their peculiar identification marks——

Q. Yes.

A. That, of course, is only the secondary wood and does not characterize primary wood. But inasmuch as primary wood is of negligible significance in the case of the lumber log, it may be dismissed.

Q. What is the difference in primary and secondary wood? I don't get it.

A. Primary wood is that which is formed when the shoot begins to grow. It forms the central axis of the twig. The moment the twig begins to increase it grows a layer of cambian, and that is secondary wood, and for the purposes of trade, for the purposes of lumber, there is only secondary wood.

Q. I see.

A. Yes.

Q. Now, are there not other numerous distinctions that divide the white pines off as a group by themselves? Liability to disease, or immunity from disease, which are considerations for placing the white pine in one group and the yellow pine in another?

A. You mean one group is more liable to disease than
3611 another?

Q. One group is more liable to one disease and the other group more liable to another. Take as an illustration the blister rust. Are you familiar with blister rust as a disease?

A. I am familiar with its life history. I am not working upon it.

Q. It attacks only white pine, doesn't it?

A. It attacks so far only white pines.

Q. And yellow pines have been exposed to it without being able to get them to take the disease at all, isn't that true?

A. I think that the yellow pines probably will not be found susceptible to it.

Q. In other words, the division of white pine and yellow pine is a division which is not purely a technical matter. It is a very practical matter in various respects, isn't it?

A. Well, that is as to disease.

Q. I wish you would answer the question and then make an explanation if you like. It is a very practical division, isn't it, for various purposes?

A. You use certain terms——

Q. Won't you answer yes or no and then make your explanation?

Mr. WHEAT. If the witness does not understand the question, he is entitled to have it.

3612 Mr. BURR. Yes; certainly; I think so.

By Mr. BURR:

Q. Is the question clear? If not, we will have the question read.

Examiner SHEPPARD. Yes; just read it.

(Question read.)

By Mr. BURR:

Q. I do not think *think* there should be any hesitancy about that, Professor. Can't you answer yes or no?

A. I think there should be, because the most recent wood technologists are dividing the pines into two groups based upon this character of the ray tracheids.

Q. Well, that divides them just about as the old division.

A. Oh, not at all, because it throws into the old group, which includes Pinus strobus, it throws into them these hard pines and nut pines.

Q. Hard pines?

A. They are hard pines, the nut pines and foxtail pines.

Q. Those are not commercial pines, are they?

A. Yes; they are commercial pines in the West, to a certain extent.

Q. Oh, just for fuel purposes, they are not making lumber out of them, are they?

A. Where timber is scarce they use them for mines.

Q. Locally, used to shore up mines and other work of that

3613 kind, is that right?

A. Yes.

Q. In other words, they are not shipped throughout the country in any way, are they?

A. No; probably no.

Q. No. For our purpose those are not of any commercial importance, are they, for interstate commerce?

A. I have once stated that I am no student of the lumber market or lumber sales.

Q. I see. Now, the distinction between the yellow pines and the white pines then has something more than technical significance, doesn't it? It has a pathological consideration to consider in various ways, hasn't it?

A. You are using white pines and yellow pines in the sense of a wood technologist, his division?

Q. Yes. It also has a distinction of a very practical nature with regard to this very matter of blister rust; one group susceptible to attack and the other is not.

A. But there are members of the white-pine group that are susceptible of attack.

Q. If you put the pinons and the foxtails in there, there may be.

A. Yes; they are of equal importance if you consider that blister rust.

Q. What botanists are putting them in the strobus group?

3614 A. Record of Yale, also Penhallow, of McGill University.

Q. You are sure Record puts the foxtail opinions in that group, or does he put them in a separate group, two separate groups?

A. He puts them into this group of the class having no dentations upon the ray tracheids.

Q. Doesn't Professor Record refer to the white-pine group and does he not exclude the pinions and the foxtail from his group, in his book?

A. It is my remembrance that he puts those two under the same heading as opposed to the yellow-pine group.

Q. He does not put them in the white-pine group, does he?

A. He puts them in the soft-pine group.

Q. Does he have a soft-pine group?

A. He has a soft-pine group in the sense of this assemblage having ray tracheids without any dentations.

Q. Well, he refers to the white pines and yellow pines, does he not, in his book?

A. Oh, repeatedly.

Q. Yes. Now, he is a very eminent botanist, isn't he?

A. He is a well-known botanist; yes.

Q. A very eminent botanist?

A. He is an eminent forester. He is in forestry, not in botany.

Q. You have not specialized on trees particularly in your

3615 study; you have specialized on flowers and everything else, have you not?

A. My research has been upon the seed plants of California.

Q. Seed plants?

A. Yes.

Q. That includes practically all the trees, does it not; practically all annuals and perennials, shrubs, and bushes, and everything else?

A. Yes.

Q. You haven't made a specialty, then, of trees particularly more than these other varieties of vegetable growth?

A. Well, I have written several books upon trees and I have not written several books on the others.

Q. In your study of trees you have not particularly specialized on the conifers, have you? You have covered hardwood and everything else?

A. The conifers of course, in the case of the book on California trees are the main motif.

Q. You have a great deal of deciduous trees, do you not, trees of hardwood and everything else, in the State of California?

A. Not as compared with other countries.

Mr. BURR. That is all.

Redirect examination by Mr. WHEAT:

3616 Q. Just two questions, in view of the many questions that have been asked you on cross-examination, Professor Jepson, with reference to these ray tracheids and other botanical considerations. I want to ask you whether or not botanists consider the mechanical characteristics of wood in classifying trees botanically? Do botanists consider the mechanical characteristics of the wood in classifying trees botanically?

A. They do not.

Q. Do they consider the industrial utility of the lumber yielded by the trees in classifying them botanically?

A. They do not. Their character varies too much.

Mr. WHEAT. That is all.

Mr. BURR. That is all.

Examiner SHEPPARD. All right, Doctor, you are excused. I thank you very much.

(Witness excused.)

Examiner SHEPPARD. I will adjourn this hearing until ten o'clock tomorrow morning.

(Whereupon an adjournment was taken until Thursday, February 20, 1930, at 10:00 o'clock a.m.)

3617 Before the Federal Trade Commission

In the matter of White Pine cases

Dockets Nos. 1620–1669, inclusive

CHICAGO, *February 20, 1930.*

Met, pursuant to adjournment, 10:00 o'clock a.m.

Before William W. Sheppard, examiner.

Appearances:

Eugene W. Burr, Washington, D.C., on behalf of the Commission.

Messrs. Carl I. Wheat and Jesse Andrews, on behalf of the respondents.

3618 PROCEEDINGS

Examiner SHEPPARD. You may proceed.

Mr. WHEAT. Mr. Examiner, I would like to take the stand just a moment to identify a few matters.

Examiner SHEPPARD. Have you been sworn?

Mr. WHEAT. I have not.

Examiner SHEPPARD. Be sworn, please.

CARL I. WHEAT was thereupon called as a witness and, having been duly sworn, testified as follows:

Direct examination:

The WITNESS. On February 10th, at the R. A. Long Building in Kansas City, I requested Mr. James Murtha, who has been a witness in this case, to cut for me from sash in that building some small samples; also in my presence in the office of Mr. Flavel Robertson, connected with the law firm of Baker, Botts, Parker & Garwood in that building, another small sample was cut for me from one of the sash in my presence.

On the same day I placed the three small samples which Mr. Murtha furnished me and the one which had been cut in my presence from the sash in Mr. Robertson's office in an envelope addressed to Mr. Arthur Koehler at the United States Forest Products Laboratory, of Madison, Wisconsin, postage prepaid, together with a letter asking him to identify the species of tree from which these samples had been cut.

3619 On February 13th I received a letter from Mr. Koehler, which I will now ask to have marked for identification. You have seen the letter, Mr. Burr?

Mr. BURR. I don't think I have seen it.

Mr. WHEAT. Here it is. That will be respondents' exhibit 71 for identification.

(The document referred to was thereupon marked "Respondents' Exhibit 71" for identification.)

The WITNESS. You may cross-examine.

Mr. BURR. No questions.

(Witness excused.)

Mr. WHEAT. I will call Professor Koehler.

ARTHUR KOEHLER was thereupon recalled as a witness and, having been previously duly sworn, resumed the stand and testified further, as follows:

Direct examination by Mr. WHEAT:

Q. Mr. Koehler, I will ask you whether on or about the 11th day of February in this year you received a letter over my signature ask-

ing you to identify four small samples of wood which were enclosed with the letter?

A. I did.

Q. And did you make such identification?

A. I did.

Q. And did you write a letter to me under date of February
3620 12th, which now appears in this case as respondents' exhibit no. 71 for identification?

A. I did.

Q. I will ask now that this——

Mr. BURR. Wait a minute. I think you might better have him testify now to what he found and leave the letter out.

Mr. WHEAT. I will be glad to do that.

By Mr. WHEAT:

Q. Refreshing your memory from the letter, Mr. Koehler, will you state what you identify these four samples of wood to be?

A. I identify them to belong to the yellow-pine group, and according to their fine texture, one of the western yellow pines, probably Pinus ponderosa.

Q. I will ask you, Professor Koehler, whether this sample of wood marked "Respondents' Exhibit No. 69"—I believe, Mr. Examiner, it should show for identification.

Examiner SHEPPARD. Yes.

By Mr. WHEAT:

Q. (Continuing.) Has been examined by you to ascertain the species from which it was cut.

A. Yes; I remember examining that.

Q. Will you state for the record what you found as to the identity of respondents' exhibit no. 69 for identification?

3621 A. I identify that as sugar pine.

Mr. WHEAT. I will ask, Mr. Examiner, that respondents' exhibit no. 69 for identification be now received as respondents' exhibit no. 69.

Examiner SHEPPARD. Any objection?

Mr. BURR. No.

Examiner SHEPPARD. Let it be accepted and marked.

(The sample heretofore marked "Respondents' Exhibit No. 69" for identification was thereupon received in evidence.)

By Mr. WHEAT:

Q. I hand you now, Mr. Koehler, a portion of a sash marked "Respondents' Exhibit No. 70" for identification and will ask you whether you have examined that wood sample and have identified the species of the tree from which it was cut.

A. I have. I examined that and identify it as one of the yellow pines and undoubtedly of the species of yellow pine.

Q. Would you say it is probably ponderosa?

A. Very likely Pinus ponderosa.

Mr. WHEAT. I will ask now, Mr. Examiner, that respondents' exhibit no. 70 for identification be received as respondents' exhibit no. 70.

Examiner SHEPPARD. Any objection?

Mr. BURR. No; I think not.

Examiner SHEPPARD. Let it go in.

3622 (The sample heretofore marked "Respondents' Exhibit No. 70" for identification was thereupon received in evidence.)

Examiner SHEPPARD. Mr. Wheat, I don't think you offered this letter.

Mr. WHEAT. No, I don't think I will bother with that; it will be covered by the witness' testimony.

Mr. BURR. I object to any duplication. The best evidence is his own testimony rather than the letter.

Examiner SHEPPARD. The witness has already testified to the main feature of it.

Mr. WHEAT. Yes.

Mr. BURR. That is right.

Mr. WHEAT. You may cross-examine.

Cross-examination by Mr. BURR:

Q. Now, the four samples which you refer to in your testimony as having received with Mr. Wheat's letter of February 10th, you identified those as western pine, did you?

A. Yes.

Q. Now, by western pine could you include Arkansas soft pine?

A. No.

Q. What are the distinguishing marks between the samples and the Arkansas soft pine?

A. These samples have very narrow annual rings, with a
3623 very small amount of summer wood such as practically never found in the southern pines.

Q. Then by western pines you mean either of which variety of pine?

A. The two varieties or species that are—there are three varieties that are cut into lumber; western yellow pine, Pinus ponderosa, Jeffrey pine. Do you want the scientific names?

Q. No, I guess not.

Mr. WHEAT. I would like to have it.

A. All right. Pinus jeffreyi; and Lodgepole pine; Pinus contorta.

By Mr. BURR:

Q. And those are the ones to which you referred as western varieties of the so-called yellow pine group?

A. Yes.

Q. You are sure from that examination that these samples were not any one of the white pine group, so-called?

A. Absolutely sure.

Q. Now, then, did you notice whether those samples were heartwood or sapwood?

A. I could not tell from the samples. It was absolutely impossible.

Q. You bore that in mind when you looked at them, did you?

A. No, I did not, because I know it was useless to try to

3624 determine that.

Q. You made these examinations yourself, personally?

A. Yes.

Q. Using the microscope yourself, did you?

A. Let me see. In this case I had an assistant who did microscopic work, and I examined them afterwards visually to check up.

Q. Can you tell anything visually?

A. Yes; I can tell very well that it is not a great many other species. I could not in every case tell whether it was a white pine or a yellow pine.

Q. You could not tell that, could you, whether it was white or yellow?

A. Not in every case, but in this case it was evident that the amount of summer wood was sufficient to be yellow pine, just as in that piece number 70 I could tell without a microscopic examination that that is not a white pine.

Q. Now, referring to respondents' exhibit no. 69, will you state whether that is a piece to which you gave microscopic examination personally?

A. My assistant made the microscopic examination and I checked that visually also, which is in that case just as good as a microscopic examination.

Q. What would you say in regard to that; is that heart or sapwood?

3625 A. It is practically impossible to say, without a closer examination and comparing it with heartwood and sap sugar pine, what that is.

Q. There is a good deal of difference in durability between the heartwood and sapwood, of all varieties of wood, is there not?

A. Not all varieties, but most varieties.

Mr. WHEAT. Mr. Burr, I suppose you are having in mind that I have asked this man only to identify this wood. I have not gone into with him the other matters.

Mr. BURR. That is probably true.

Mr. WHEAT. I do not wish to broaden his examination at this time.

Mr. BURR. That is all right.

By Mr. BURR:

Q. Were you able to ascertain whether this was sugar pine or some other variety of white pine?

A. By the odor, or, rather, lack of odor, I identified that as sugar pine.

Q. What do you know about the odor?

A. The white pines have a characteristic odor. It is not very pronounced, but if one is familiar with them he can recognize them.

Q. You mean you can tell strobus, monticola, and sugar pine apart by odor?

3626 A. If I have a good-sized sample; yes.

Q. And how long does that odor exist?

A. Indefinitely.

Q. You can tell them after many years, can you?

A. Yes.

Q. And you can tell them from the yellow pines by odor, can you?

A. If I have a good-sized sample—I beg your pardon. I didn't understand your question.

Q. You can tell each one of these white mines from any of the yellow-pine group by odor, can you?

A. Yes. I would like to modify that and say if I have a good-sized sample that has not been treated in some way to annihilate the odor.

Q. Creosote or something of that kind would do away with the odor, would it?

A. Yes. High-temperature treatment will do away with the odor.

Q. What do you mean? Kiln-drying?

A. If it is kiln-drying to a high temperature, 200 degrees or so, it practically eliminates the odor.

Q. If this happens to be a kiln-dried piece of strobus or monticola, you would not be able to tell it by odor in that case from sugar pine, could you?

A. The kiln-drying temperature would have to be high
3627 enough so it begins to brown the wood before that is true, and that wood does not seem to have been subjected to that high temperature.

Q. Now, what you testified to as to the character of this as a western pine applies equally to no. 70 as it did with the small samples that you received with Mr. Wheat's letter of February 10th—is that true—that is, that this wood might be either contorta, Jeffreyi, or Pinus ponderosa—is that true—referring still to respondents' exhibit 70?

A. I would like to look at it once more.

Q. Do so.

A. This is not contorta.

Q. No. 70—might that be Arkansas soft, as far as your analysis would go?

A. No; I never saw a piece of Arkansas soft pine with as fine texture.

Mr. BURR. I see. That is all.

Examiner SHEPPARD. Anything further, Mr. Wheat?

Mr. WHEAT. No further questions.

Examiner SHEPPARD. Thank you, Mr. Koehler, very much.

(Witness excused.)

Mr. WHEAT. Mr. Examiner, may I ask now that the photographs marked, respectively, "Respondents' Exhibits 67 and 68", for identification, be received as respondents' exhibit 67 and 68, respectively?

3628 Examiner SHEPPARD. They were identified yesterday, were they?

Mr. WHEAT. They were; yes, sir.

Examiner SHEPPARD. Any objection, Mr. Burr?

Mr. BURR. That is all right.

Examiner SHEPPARD. They will be received in evidence and marked, respectively, "Exhibits 67 and 68."

(The photographs heretofore marked "Respondents' Exhibits Nos. 67 and 68", respectively, for identification, were thereupon received in evidence.)

Mr. WHEAT. I forget whether respondents' exhibit 66 was also received. In case it was not, I want the record to show it has been received. I believe it was.

Mr. BURR. That is agreeable.

Examiner SHEPPARD. All right; let that be received and shown by its exhibit number.

(Said document heretofore marked "Respondents' Exhibit No. 66", for identification, was thereupon received in evidence.)

Mr. WHEAT. The respondents now rest.

Examiner SHEPPARD. Any rebuttal?

Mr. BURR. Let the record show that this is now rebuttal testimony on the part of the Government.

Examiner SHEPPARD. Show this witness as being recalled,

3629 already sworn, appearing in rebuttal testimony on behalf of the complainant.

R. E. DANAHER was thereupon recalled as a witness and, having been previously duly sworn, resumed the stand and testified further as follows:

Direct examination by Mr. BURR:

Q. Give your name again, please, Mr. Danaher.

A. R. E. Danaher.

Q. Mr. Danaher, I want to invite your attention to a few points in the record that was made in your testimony, for the reason I think that on some of the points the reporter, or someone, has blundered.

A. Yes, sir.

Q. Referring to page 599 of the record, without reading too much of the testimony relating to the drying-out process in sugar pine as contrasted with Pinus ponderosa, and particularly the liability or lack of liability to warp and twist in the two species, the question is:

"Is the same thing true of lumber of the two species referred to in the process of kiln-drying?"

Your answer was: "I would not be qualified to answer that, because it is not usual to dry sugar pine to any great extent, or it has not been until the last year or two."

Is that answer correct?

3630 A. No; it should have been "kiln-dry."

Q. The word "kiln" should have been inserted before the word "dry", should it?

A. Yes, sir.

Mr. WHEAT. What line is that, sir?

Mr. BURR. That is on line 18 of the page mentioned.

Q. (By Mr. BURR.) Now, the testimony with regard to the presence of sugar in the sugar-pine lumber rather than the sugar-pine tree seems not to be particularly well cleared up here. Just what is the sugar that appears in the lumber?

Mr. WHEAT. What page are you mentioning now?

Mr. BURR. Well, particularly referring to page 593.

A. The question being, Just what is sugar that appears in sugar-pine lumber?

By Mr. BURR:

Q. Yes.

A. Well, sugar, as it comes out of sugar pine, what we call sugar, is a rather thin—when it first comes out—kind of watery substance. As it dries on the lumber it forms either a crystal or a powder, or something that looks a little white, and you could wet your finger and put it on it and taste it, and it tastes sweet. It is not a pitch as pitch is generally known to the public. I would call it a pitch, personally, a sugar pitch; but pitch to the general public, I under-

3631 stand, means thick, sticky mass of stuff. Now, this is not a pitch. It comes out of the sugar-pine lumber, particularly out of the sap part of sugar pine when it is green.

Q. Now, does that occur in the seasoned lumber after it is sold?

A. In seasoned lumber this sugar dries in the board. It shows up sugar or it shows in little pin-point flecks of a dark hue through the board; yes, sir.

By Examiner SHEPPARD:

Q. What you refer to are little pitch pockets?

A. On pitch pockets you have to get back to grading rules. A pitch pocket, according to grading rules, is something that has a thick pitch in what might be called a pitch pocket, because it is a little pocket, just a little separating of the grain with this material

in it, but it is not what you would call in the grading rules really a pitch pocket.

Q. Those little dots?

A. Those little dots. You will find it in strobus, and I think that was introduced in New York samples of ponderosa, of which one of the men down there told me, "Here is sugar pine cut from a white-pine tree"; and you will find it once in a while in a ponderosa, that little fleck. I could illustrate it better. A lot of these questions are awfully hard to illustrate unless you have a blackboard.

Mr. WHEAT. Let me interrupt there, Mr. Burr. This matter
3632 of these little flecks in sugar pine has been gone into very fully. I do not know that we need to go into that again here.

Examiner SHEPPARD. Yes; I understand that. I remember seeing it on the samples.

The WITNESS. Yes.

By Mr. BURR:

Q. How far is that a defect in the lumber?

A. That is not a defect in sugar pine.

Q. Pardon me?

A. That is not a defect in the grading of the lumber.

Q. (By Examiner SHEPPARD.) Just a characteristic of the wood?

A. Just a characteristic of the wood; yes, sir. It is a characteristic of a great many soft pines. We used to have that in strobus once in a while.

By Mr. BURR:

Q. How does sugar pine compare with Pinus ponderosa with regard to the presence of what is known to the grading rules as "pitch pockets"?

A. In the lumber?

Q. Yes.

A. I don't know that I could tell you. Probably——

Mr. WHEAT. If the witness cannot tell, I object to him going on and saying it probably is.

Mr. BURR. This witness knows.

3633 Mr. WHEAT. The witness has said that he cannot tell, Mr. Burr, and I submit that that is his statement on the part of the witness.

Examiner SHEPPARD. Yes; we don't want anything that is not precise.

Mr. BURR. If the examiner please, the witness' introductory comment was rather unfortunate.

By Mr. BURR:

Q. Is it not a fact that you are familiar with the Pinus ponderosa lumber?

A. Yes, sir.

Q. From your cutting of it in your own mills?

A. Yes, sir.

Q. And you have been familiar with it for twenty or thirty years, haven't you?

A. Not Pinus ponderosa; no, sir.

Q. How long have you been familiar with it? Your boyhood was in the East, was it not?

A. Yes; in Michigan.

Q. Yes.

A. I have been familiar with Pinus ponderosa for fourteen or fifteen years.

Q. I think you testified you have been in the woods ever since you were fifteen.

A. No; I testified I had been in the wood since about 1901
3634 or 1902.

Q. Was it not your testimony that you were in the strobus wood as a boy of thirteen?

A. Oh, as a boy; yes.

Q. Yes; not in the western woods, but in the East.

A. Yes; I have been them but not working them at thirteen. I worked in a lumber mill at thirteen, in a strobus mill.

Q. You have had occasion to observe these defects in both these types of lumber, haven't you?

A. Yes, sir.

Q. I wish you would tell us whether Pinus ponderosa or sugar pine are more pitchy in their character as lumber.

A. Well, now, when you say "pitchy," I would like to know just what you mean by "pitchy," because pitch consists of so many things. It consists of pitch pockets, from a very small, little pitch pocket to a large pitch pocket. It consists of streaked pitch and mass pitch. Pitch, I think, is a defect in all soft pines, or all pines that I know of, even southern pines, and so forth. If you will tell me just what kind of pitch defects you are talking about now, I could tell you what my opinion is.

Q. You have mentioned four different varieties, haven't you?

A. Yes.

Q. Will you take the first one and make a comparison of the first one?

3635 A. It is my opinion that there are more pitch pockets—that is, from the little, small pitch pocket to the fairly good-sized pitch pocket—in sugar pine than there is in ponderosa.

Q. Are they taken into account in connection with the grading of the lumber?

A. Absolutely. Pitch is a defect, a pitchy board or pitch pockets. Those defects are counted like a knot or any other defect in the grade.

Q. You refer to mass pitch, did you?

A. Yes.

Q. How about that? Which has the more mass pitch?

A. I think ponderosa has more mass pitch.

Q. Then what were the other varieties that you referred to?

A. There is streak pitch. You get a piece of board with a streak of pitch down one side of it.

Q. Which is the more subject to that?

A. Again I think ponderosa is.

Q. Then you mentioned a fourth variety of pitch, did you?

A. I don't think so. I think I said "pitch pockets from the small to the good size."

Q. Those were the three?

A. Yes.

Q. There were only three?

A. Yes.

Q. Testimony has been given in this case on the defense,
3636 interposed by respondents, to the effect that it was a certainty that the manufacturers of sugar pine would adopt—that is, if the manufacturers of ponderosa desist from the use of the term "California white pine"—it is a certainty that the sugar-pine manufacturers would adopt the term "white pine" or "California white pine" for their products. Have you ever had any consultation with other manufacturers of sugar pine looking toward such a plan?

A. I have had a good many consultations with practically all the manufacturers of sugar pine, and I have never yet heard that suggestion made. I think I testified on direct testimony in New York—or maybe it was redirect, I don't know—but I testified, I am sure, in New York, that I would be opposed to any such move. I think it would be very foolish. The thing tended to confusion in the trade. I do not think that any sugar-pine manufacturers in California who have really thought the matter out would consider such a move. It would be foolish. I certainly would oppose that move to the best of my ability if it were proposed.

Q. No such suggestion, you say, has ever been made you?

A. Not to my knowledge.

Q. Have you ever talked with other manufacturers of sugar pine with regard to this pending case at any time?

A. Yes; I have talked to them several years ago. I don't think I have talked to anybody particularly about this case—
3637 oh, I have, just in general conversation, but we have never gone into details since the case has been on. I have talked to two or three people.

Q. Who are manufacturers of sugar pine?

A. Yes.

Q. Now, on page 642 the following occurs, referring to a sales organization which was formed in 1926 or 1927 by sugar-pine manufacturers. Reading at the top of the page:

"Were any changes in prices of sugar-pine lumber made after the company was formed?

"Yes. I think immediately after the company was formed we got about $2 a thousand less for sugar pine than it was before.

"Did the market price advance or fall upon the formation of the company?

"I think it remained stationary."

Now, those two answers do not strike me as consistent. Will you explain what the situation was at that point?

A. Yes, sir; I was speaking of our own experience. Before the formation of that sugar-pine sales company we used to sell sugar pine and ponderosa pine, delivered, either rough or surfaced, at the same price. That was not the usual custom in the trade. And when the sales company was formed they made a different price on rough and surfaced delivered lumber. In making the differential
3638 in price it reduced our average price $2 a thousand. Now, that came about in a great many ways. There is about 300 pounds' difference in weight between surfaced and rough sugar pine. On a 90-cent rate that amounted to $2.70 a thousand saving in freight on surfaced lumber over a delivered rough lumber. We had to, for that saving in freight, pay the cost of surfacing the lumber; and as we did not surface very much at that time, and we tried to avoid surfacing as much as possible, our per thousand cost of surfacing was very high. We also had to stand the down grades that come through surfacing. That is, when you put a pressure bar on and surface, you have a certain amount of splits also, regardless of how closely you sort the rough stock.

Mr. WHEAT. Now, Mr. Burr, I don't understand the relevancy of all this detail about it.

Mr. BURR. I don't think it is necessary to go into so much detail.

The WITNESS. I was just trying to show you what my testimony meant. What I meant by that $2 was our own company's experience.

By Mr. BURR:

Q. Then when you said the price was cut $2 you did not regard that as a price advance, but, rather, as the result of the operation of a freight charge in connection with the loss of weight through planing; is that true?

A. No, sir. What is true in that, if you will read the ques-
3639 tions again at the top of the page that refer to that; when I said there was a reduction of $2, I was referring to our own net on lumber, on sugar-pine lumber. When I said that the price remained stationary, I don't think there was any advance over the general market at that time, any advance or reduction in sugar-pine prices over the general market at that time.

Q. You mean no change in the sales price to your customer?

A. No.

Q. I see. Now, what is the average weight of sugar pine for shipping purposes in the form of lumber?

Mr. WHEAT. Average weight is that?

Mr. BURR. Shipping weight.

A. On surfaced lumber it is about 2,000 average, of all thicknesses.

By Mr. BURR:

Q. 2,000?

A. Yes, sir; 2,000 pounds to the thousand feet of lumber.

Q. How does it run on Pinus ponderosa?

A. I would say from 250 to 300 pounds heavier. That, I think, is shown by the association weights on which they figure their price statistics, on the California.

Q. The record shows that the logs of sugar pine, some, at least, of them, have a greater tendency to sink in the pond than is the case with Pinus ponderosa. What is your explanation of that?

A. I think practically all the butt logs of sugar pine sink.
3640 That is because they contain more water, sap, or whatever you want to call it, than the butt logs of ponderosa.

Q. How about the higher cuts?

A. Sometimes a second log sinks, but beyond that we do not have sinkers; and you do not have them in ponderosa, although it is my opinion that the ponderosa logs do not float as high in the water, the upper parts, as the sugar pine, but I am not——

Mr. WHEAT. The witness has not quite finished his answer.

The WITNESS. I said "that is my opinion."

Mr. WHEAT. You started to say "I am not."

The WITNESS. All right, sir. I am not qualified to give an expert opinion on it.

By Mr. BURR:

Q. Does the heartwood of both of these two species turn a darker shade in the form of lumber during the process of time?

A. Yes, sir.

Q. Which turns darker, the sugar-pine heartwood or the ponderosa heartwood?

A. Ordinarily the ponderosa heart turns a reddish color. The sugar pine turns a light golden brownish color.

Q. There has been some testimony on defense on the prevalence of stump rot in sugar pine as contrasted with ponderosa. What is your experience with regard to that?

A. That depends on the locality in which the ponderosa
3641 grows. Sugar pine has stump rot; stump rot and rink rot both; but particularly stump rot is an old-age disease, I might call it. A mature tree very often has stump rot. That is so in all of the conifers.

Q. In all the what?

A. All the conifers; the evergreen trees.

Q. Yes.

A. That means the tree is mature and on the down grade. It generally means that when you find that in timber you are getting the

best timber, most surfaces and more clears out of the tree, and so forth. In California, in the inland empire, stump rot is not so prevalent in ponderosa. In New Mexico, the Zuni Mountains, stump rot is prevalent. Practically every tree down there has stump rot or ring rot.

Q. You mean in the Pinus ponderosa tree?

A. Pinus ponderosa. There is no sugar pine that I have ever seen in that territory.

Q. That is a disease of mature trees, is it?

A. I am not a technologist now. That is my opinion, that that is a disease of mature trees.

Q. The stump rot and ring rot are eliminated, are they, in the grading rules?

A. Defects in a tree have nothing to do with the grading of lumber. Whatever kind of defects there are in a tree when the lumber is cut and graded, these defects are taken into account,
3642 and, of course, a defect will likely grade the lumber, but the grades are comparable, to a certain extent, between different classes of lumber.

Q. Yes.

A. Or different species of lumber.

Q. They are defects which would place a given of lumber in a lower grade?

A. A lower grade; yes, sir.

Q. That is true equally of Pinus ponderosa and sugar pine, is it not?

A. Yes.

Q. And that is true equally of stump rot and ring rot, is it?

A. Yes.

Q. Do you regard Pinus ponderosa as wholly unsuitable for shop uses, where the product is to be exposed to the weather?

A. No, sir. I would like to explain that if I may.

Examiner SHEPPARD. Go ahead.

By Mr. BURR:

Q. I wish you would.

A. I think that there is a market for every class and quality of lumber, just as I think there is a market for different qualities in clothing or shoes or anything else. If your market won't stand the test, or if you are satisfied with a poorer equality, you are entitled to use it. I think ponderosa makes a wonderfully good shop
3643 lumber for certain uses, but I think it should be confined mostly to interior finish, for interior uses.

Q. What is the percentage of heartwood in sugar pine?

A. I could not tell you.

Q. Is the percentage of heartwood in sugar pine greater or less than the percentage of heartwood in Pinus ponderosa?

Mr. WHEAT. If the witness has made any investigation of that in percentages—you ask for percentages.

Q. (By Mr. BURR.) As the result of your experience, sir. I am not asking percentages.

Mr. WHEAT. Mr. Burr, may I have the question read?

Mr. BURR. Certainly.

(Question read as above recorded.)

Mr. BURR. I am not asking for percentages.

Mr. WHEAT. Then may I ask that you reframe your question?

Mr. BURR. No, sir.

Mr. WHEAT. You asked whether the percent is greater or not.

Mr. BURR. I want to know whether it is greater or less. That is all I want to know. That is all the question calls for, and that is all you have got a right to demand.

The WITNESS. Am I allowed to answer the question?

Examiner SHEPPARD. Yes; go on.

3644 The WITNESS. My observation is that there is more or a larger proportion of heartwood in sugar pine than there is in ponderosa.

By Mr. BURR:

Q. Now, is the typical so-called "California white-pine lumber" a heartwood or a sapwood, bearing in mind the change of color to which you just testified?

A. The upper grades of the ponderosa, California white pine, run very heavy to sapwood. There is some heartwood, but the big percentage of the upper grades of ordinary white pine are sapwood. When you get into the heart you generally get into the common grades. It is either box lumber or two, three, or four common.

Q. The ponderosa lumber that is closely similar to the genuine white pines, is it sap or heartwood?

A. I would like to ask that that question be read. I did not get it.

Examiner SHEPPARD. Read it.

(Question read as above recorded.)

By Mr. BURR:

Q. In appearance. I want to insert "in appearance", closely similar in appearance.

A. You said ponderosa or California white pine?

Mr. BURR. Just read the question again as I modified it.

(Question read as follows: "The ponderosa lumber
3645 that is closely similar in appearance to the genuine white pines, is it sap or heartwood"?)

By the WITNESS:

A. The sapwood of ponderosa looks a great deal like the heartwood of the Pinus strobus. It is in appearance a great deal similar, although it is a little lighter in color than the heartwood; a little whiter, you might say.

Q. Does it resemble the sapwood of Pinus strobus also?

A. Yes; to a great extent.

Q. Now, the white-pine lumber, so-called, made from Pinus ponderosa, then, is sapwood rather than heartwood, is it?

Mr. WHEAT. Now, may I ask whether you refer in that question to California white pine or to what? We have admitted the general use in the trade of the term "California white pine."

Mr. BURR. Yes.

Mr. WHEAT. Now, you have said white-pine lumber cut from Pinus ponderosa.

Mr. BURR. I said so-called "white-pine lumber", didn't I?

Mr. WHEAT. I am asking you whether you refer to California white pine.

Mr. BURR. Yes; I am referring to California white pine; certainly.

Mr. WHEAT. I think there is a very important distinction there.

3646 The WITNESS. May I have the question now, please?

Examiner SHEPPARD. Read it.

(Question read as above recorded.)

Mr. WHEAT. I am asking that the word "California" be added before the term "white pine."

Mr. BURR. All right.

A. (By the WITNESS.) The upper grades; yes.

By Mr. BURR:

Q. And the same would be true of the Arizona and New Mexico white pine, wouldn't it, so-called?

A. Yes, sir.

Q. To how great an extent does the sapwood of sugar pine enter into the selected grades of lumber?

Mr. WHEAT. May I ask what you refer to by "selected grades"?

Mr. BURR. Select grades, then.

Mr. WHEAT. Select grades; yes.

Mr. BURR. Yes; I am referring to D select, C select, and B select and better. Perhaps you better describe each one of those in turn. Would that be the best way to answer that, Mr. Danaher?

Mr. WHEAT. I think the details of the grading rules have been ruled out here.

Mr. BURR. This is not the details of the grading rules.

3647 This is the question of the heart and sap, sir.

A. (By the WITNESS.) That depends a great deal on the thickness of the lumber of which you are speaking. In inch, sap is predominant, I would say. By predominant, I mean there is a larger proportion of sap than there is of heartwood in all of the C select and better grades. When you get down to the D select I am not so certain. It is a rather new grade. But the general practice of cutting sugar-pine logs is to cut inch boards until you have reached a heart face. You go in from one side of the log and cut, and you find sap, until you reach a heart face that runs the entire length of the board. When you have done that you have got a fairly wide

board. Then you can go in and take thicker boards. Some of that sap is lost in the edgings of the board—possibly split on the edger—so that one piece may be almost entirely sap and the other otherwise. It is very hard to determine. But sap is predominant in inch thickness. In thicker lumber I think heart would predominate, but when you get up to the higher sizes, two-, three-, four-inch lumber, it is practically all heart grade. Sometimes we do have a little sap on the edge, but very little.

By Mr. BURR:

Q. What are shop grades? No. 1. 2, 3 shop, and then you have another, haven't you, no. 3 clear?

A. No. 3 clear; yes.

3648 Q. When you get into those, is that almost entirely heart or is there sap still remaining?

A. It is practically all heart, except when you get a very small tree, and sometimes you do get a heart grade with some sap on the edging, but by far the greater proportion of that lumber is heart.

Q. In the cutting of the wood for the D select and the no. 3 clear, are they taken adjoining one another in the tree?

A. Now you are going into grades.

Q. Never mind. I withdraw the question.

A. We can talk forever on that.

Mr. BURR. I think that is possibly true. I withdraw the question.

Examiner SHEPPARD. Yes.

Mr. BURR. That is all.

Examiner SHEPPARD. Anything else?

Mr. WHEAT. Yes; I have a few questions.

Cross-examination by Mr. WHEAT:

Q. I believe you stated, Mr. Danaher, that the so-called "pitch flecks" in sugar pine do not constitute defects in the grading rules of sugar pine.

A. Yes, sir.

Q. Have you ever known any instance where these pitch flecks have affected sugar pine which has been painted?

3649 A. You want personal knowledge or hearsay, Mr. Wheat?

Q. I want your general experience, the same as you have been giving for counsel for the Trade Commission.

Mr. BURR. I should object to hearsay, of course.

Mr. WHEAT. I want your general experience.

Mr. BURR. Yes. All right.

By Mr. WHEAT:

Q. Based upon your general experience, in the same manner that you have been testifying for counsel for the Commission.

A. I want to answer that in this way: that I have not had any experience along those lines. My opinion is, if you want an opinion——

Q. Yes.

A. And I am allowed to answer it——

Mr. BURR. Unless it is based on experience, he does not call for it.

Mr. WHEAT. This gentleman has expressed his opinion on many subjects on direct examination. I believe he should be allowed to express his opinion on this subject.

Mr. BURR. He has expressed no opinion that was not based on experience, so far as I know.

Examiner SHEPPARD. Read the question to me.

(Question read as above recorded.)

Examiner SHEPPARD. Now, if you know of any such instance
3650 which you can tell us about, do so. If you do not, say so, and that will end it.

A. (By the witness.) No personal knowledge.

By Mr. WHEAT:

Q. Then I will ask you, Mr. Danaher, what the reputation of sugar pine is as to this matter on which I have questioned you?

A. The reputation is that in some pieces, and sometimes, those flecks do come through white enamel and show a stain.

Q. Is it also true that it is the reputation that heartwood of sugar pine will at times show through light enamel?

A. The heartwood?

Q. That over the heartwood there will be a discoloration in sugar pine?

A. I never heard of that.

Q. You never heard such reputation?

A. No, sir.

Q. I believe you said that pitch, mass pitch, in your opinion, is slightly more prevalent in Pinus ponderosa than in sugar pine. Is mass pitch a defect in the grading rules?

A. It certainly is a defect in the grading rules.

Q. Now, is streak pitch also a defect in the grading rules?

A. All pitch is a defect in the grading rules.

Q. And the grading rules are the same in all except common grades, aren't they, for both sugar pine and California
3651 white pine?

A. Yes; practically the same, unless there has been some revision that I do not know of. I am not up on these new rules as well as I should be.

Q. So far as you know, the grading rules of sugar pine and California white pine, that is, the Pinus ponderosa, which is marketed as such, are the same in all grades above the commons?

A. Practically the same; yes, sir.

Q. Now, I would like to ask you why in your opinion it would cause a confusion in the trade to change the name of sugar pine to California white pine?

A. I think it would cause a confusion in the trade, because the greater percent of our better grades of sugar pine—and by better grades I mean No. 1 shop and better—are marketed in the East, that

is, the Atlantic Coast States, practically east of the Buffalo-Pittsburgh line. This territory has always demanded quality in lumber. They were the strong users of white pine. That was the original habitat of white pine so far as this country is concerned. Pinus strobus——

Q. I don't want to break in on you, but I am asking you about the one thing, why you believe it would definitely cause confusion, to change the name of sugar pine to California white pine.

A. I am trying to tell you.

3652 Mr. BURR. He is answering that.

Mr. WHEAT. I want him to answer that, but I think he can answer it in a straightforward manner.

Mr. BURR. That is straightforward.

The WITNESS. I thought it was. If I tell you I think so, then I have to give you my reasons for thinking so, don't I?

By Mr. WHEAT:

Q. All right, Mr. Danaher, you go ahead.

A. It is my opinion that the term white pine means to a great many people in that territory just as it means to me, the product of Pinus strobus, and unless you have some qualifying word, they are going to be misled. The addition of the word or the calling of sugar pine California white pine would mislead them, because they are now acquainted with sugar pine and to a certain extent they are acquainted with or have heard of California white pine under that trade name.

Q. Now, the term sugar pine is well known to the trade which uses it, is it not?

A. Yes; I would say it is.

Q. And it has been for many years?

A. Yes, sir.

Q. Do you believe that any change in the name of sugar pine would be advisable for the sugar pine producers?

A. No, sir; I do not.

3653 Q. How long has this name been known or been used generally in marketing that lumber in the eastern markets?

A. That I do not know.

Q. What is your experience on it?

A. Well, until fifteen or sixteen years ago I did not know very much about sugar pine. It was known at that time as it had been sold in the East——

Q. Do you ever remember of Pinus lambertiana being sold under any other name than sugar pine?

A. I do not, sir.

Q. It has been a general commercial practice over a long period of years, hasn't it?

A. Yes, sir; so far as I know.

Q. And a continuous practice, so far as you know?

A. Yes, sir.

Q. By all of the producers of sugar pine, so far as you know?

A. So far as I know; yes, sir.

Q. And the name is well known in the lumber trade, is it?

A. Yes.

Q. When you were discussing the matter of prices in connection with this sugar pine sales company, did I understand you correctly that you now wish to relate all of your prior testimony as to those matters to your own company only?

A. No, sir. I do not remember what my testimony was at that time. I would not want to relate it to my own company only
3654 except as it was brought up to me and I could go back and say that that related to my own company and other stuff related to the general trade.

Q. Well, as to all of the matters which counsel for the Commission has questioned you just now, relating to prices of sugar pine during the existence of this sugar pine sales company or relating to that sugar pine sales company, do you wish to refer your testimony in New York entirely to your own company?

A. No, sir; except the only place I would refer to my own company entirely was the reduction of $2.

Q. Were there any other price changes you had in mind when you were answering Mr. Matthews' question?

A. No, sir; when I answered that question and said there was a reduction of $2, I was referring there to our own experience and our average price. I afterwards testified that I did not think there was any change in price, and that referred to the general market.

Q. Had there been any change in the general sugar pine price in a period, say, of one year prior to the formation of that company? I am referring now to your own company, sir.

A. I could not tell you, because the prices change over night.

Q. Do you recall any general price change?

A. I do not.

Q. Are you familiar with the Pinus ponderosa which is cut
3655 in the Feather River Canyon section, the West Wood section, the Altura and Klamath Falls section?

A. Yes.

Q. Are you prepared to say, Mr. Danaher, that on the average the California white pine shipped from those areas which I have mentioned and considering its shipping weight, is greater than 2,000 pounds to the thousand feet?

A. No, sir; I am not prepared to say, from those districts.

Q. You do not know?

A. I do not know the shipping weight. I am familiar with the timber there to a greater extent than I am the lumber products and the shipping.

Q. Then I will ask you if it is your opinion that it is greater than 2,000 pounds to the thousand?

A. Whether it is my opinion?
Q. Yes.
A. It is my opinion that it is in excess of 2,000 pounds.
Q. Have you any opinion as to the amount?
A. No; I have not any decided opinion as to the amount. I know that that is very much lighter in those districts that you have mentioned and the California white pine or ponderosa in central California, the Sierras, on the west side of the Sierras——
Q. Where your mill is located?
A. Where our mill is located and where a great many other
3656 mills in that district are located.
Q. What color does the heartwood of Pinus strobus turn to after it has been exposed and cut for some time?
A. It turns kind of a golden brown, not quite as dark as sugar pine. What I would describe in my mind as a golden brown; that is Pinus strobus.
Q. Is wood of Pinus ponderosa which is now marketed under the trade name of pondosa produced in shop grades?
A. Is it used in shop grades?
Q. Is it produced in shop grades?
A. Yes.
Q. And is it sold in shop grades?
A. Yes, sir.
Q. And for what uses in general are the shop grades of Pinus ponderosa which is sold as pondosa used?
A. Generally sash and doors. There are other uses, I suppose, but the big percentage of that stuff goes into sash and doors.
Q. Now, from what portion of the tree does shop lumber come, and by shop lumber, in order that our minds may meet, I take it that that is the lumber which has defects, which will allow of clear cuttings between the defects; is that true?
A. Yes, sir.
Q. From what part of the tree does that come? Does it come from the part where the old knots are located?
3657 A. Yes, sir.
Q. It comes from a part of the tree, does it, which is beneath the clear exterior?
A. No, sir; it does not come from outside of the tree. The immediate outside of the tree. Where it comes in the tree depends on the tree and the defects in that tree.
Q. Would you say that it is true that the grades of no. 2 and 3 shop are predominantly used for the sash and door trade?
A. Predominantly used for the sash and door trade?
Q. Yes.
A. By the larger factories that manufacture stock sash and doors.
Q. That is a very large proportion, is it, of the sash and doors manufactured in the United States?
A. Yes, sir.

Mr. WHEAT. I think Mr. Andrews may have some questions.

Mr. ANDREWS. I just want to ask the witness a couple of questions.

By Mr. ANDREWS:

Q. As I understood your testimony, it was to the effect that pitch such as mass pitch or streak pitch was more prevalent in Pinus ponderosa than in sugar pine; is that correct?

A. Yes.

Q. In cutting clears or clear pieces for shop, that pitch is eliminated, whether it be ponderosa or sugar pine?

A. Yes, sir.

3658 Q. So if it is true that ponderosa runs slightly heavier to pitch than sugar pine, the loss comes on the operator in eliminating the pitch in making the clear?

A. Yes; in making the cutting.

Q. In making the cut?

A. Yes.

Examiner SHEPPARD. For shop grades?

By Mr. ANDREWS:

Q. For shop grades?

A. Yes.

Q. So the condition or the characteristics of the tree in that respect are not reflected in the lumber that is shipped?

A. No, sir; the defects in the tree have nothing to do with the grades that are shipped. They are all eliminated through the grading rules.

Q. Just one other thing. You spoke of the relative merits of ponderosa and sugar pine for outside ues.

A. Yes.

Q. I think your testimony was that it was your opinion that sugar pine was preferable for outside use; is that correct?

A. Yes.

Q. The so-called white pines have had a history in this country for several hundred years, haven't they?

A. Yes, sir.

Q. And you have considerable data on which to base an

3659 opinion as to their durability?

A. Yes.

Q. Is that true of ponderosa?

A. Of ponderosa?

Q. Yes.

A. No, sir.

Q. You have not anything like the historical background upon which to base an opinion as to the durability of ponderosa?

A. No, sir.

Q. I wonder if you have any experience upon which to base a judgment as to whether or not the heart of ponderosa for exterior use is as good or not as good as sugar pine?

A. I have no experience; no.

Q. You heard the testimony about the sash taken from the R. A. Long Building, didn't you?

A. Yes, sir.

Mr. ANDREWS. That is all.

The WITNESS. That is, I heard the testimony yesterday.

Mr. ANDREWS. That is what I am referring to.

The WITNESS. Yes, sir.

Mr. ANDREWS. That is all.

Examiner SHEPPARD. Anything else, gentlemen?

Redirect examination by Mr. BURR:

Q. Is there a treatment of sugar pine that is given to re-
3660 move the sugar flecks prior to painting or enameling?

A. Not to remove it. You can give sugar pine a treatment that will prevent those sugar flecks staining through a white enamel.

Q. What treatment is that?

A. Shellac will generally do it, shellac'ing the piece before painting or putting on a priming coat and then shellac'ing.

Q. That is called a deadener, is it?

A. I don't know what it is called.

Mr. BURR. That is all.

Mr. WHEAT. May I ask just one question?

Examiner SHEPPARD. Certainly.

Recross examination by Mr. WHEAT:

Q. In other words, Mr. Danaher, if a special treatment is given to sugar pine, this trouble you mention can be avoided?

A. Can be eliminated. The flecks do not come through in every piece.

Q. No.

A. It is an occasional piece. Sometimes you get it and sometimes you don't. You are not quite sure when it is coming.

Mr. WHEAT. That is all.

Mr. BURR. That is all.

Examiner SHEPPARD. You are excused.

(Witness excused.)

3661 *Colloquy*

Mr. BURR. I would like to talk to Mr. Koehler a minute. I might call him as a witness.

Mr. WHEAT. Well, I have paid him a special fee to come down here today.

Examiner SHEPPARD. This will be off the record.

(Discussion outside the record.)

Mr. BURR. I will waive it.

Examiner SHEPPARD. Is there anything else, gentlemen?

Mr. BURR. Yes; I have here, if the Examiner please, certain weather charts or weather bureau compilations which bear on the climate at the points where testimony with regard to durability has been received. They are respectively from the series of the U.S. Department of Agriculture, Weather Bureau; Summary of the Climatological Data for the United States, by sections, a reprint of section 4, northern Arizona, as one pamphlet. A reprint of section 15, northeastern California as another. A reprint of section 68, southern Indiana as a third, and, finally, a reprint of section 101, New Hampshire, Vermont, Massachusetts, Rhode Island and Connecticut.

I ask that these be received in evidence as Commission's exhibits for the record nos. 53, 54, 55, and 56, and ask that they be received in evidence for the information of the examiner and the Commission and for the use of such parts as opposing counsel or myself
3662 may see fit to refer to your Board.

Examiner SHEPPARD. Any objection?

Mr. WHEAT. Offhand, Mr. Examiner, I do not believe that these documents, whatever they may show, are proper rebuttal in this case. Whatever they might have been as direct, I feel that we are now in the field of rebuttal, and, frankly—perhaps counsel can enlighten me—I see no proper field of rebuttal in which these can be of interest.

Mr. BURR. If it please the Examiner——

Mr. ANDREWS. Just a moment. I will add to that that it seems to me this is hearsay and objectionable on that ground.

Mr. BURR. I think, if the Examiner pleases—are you through for the moment?

Mr. ANDREWS. Yes.

Mr. BURR. With regard to Mr. Wheat's objection, I want to say this: The Commission proved the great longevity of Pinus strobus in the northeastern section of the country, particularly in the environs of Boston, and then, in defense, the opposing counsel put in evidence with regard to longevity in California and also in New Mexico and Arizona.

Examiner SHEPPARD. What?

Mr. BURR. Pinus ponderosa. Then it became encumbent upon the Commission, as a matter solely and exclusively of rebuttal, to show the contrast, if any there be, between the two climates as re-
3663 gards the particular feature, namely, precipitation, which automatically bears upon the longevity of wood. Therefore, it is only a matter of defense to make this material advisable or pertinent.

Now, then, addressing myself to the objection of Mr. Andrews, it seems to me that the question of hearsay is not important here. I might also ask the Commission to take judicial notice of these matters, just as you would of a census or of a population set of data. It is certainly the best evidence that we have of precipitation in any part of the country, this evidence right here, and I think it would

be an absurd rule if the Commission has no right to the information unless we call all of these people who compiled this data in all parts of the United States.

Mr. WHEAT. Mr. Burr, you do not recall——

Mr. BURR. You have got a weather bureau man compiling data at various points throughout the country and it is impossible, impracticable, and, it seems to me, absurd to ask me to call these people from all over the country who compiled this data.

Mr. ANDREWS. Mr. Examiner, I took no exceptions yesterday to Mr. Burr's rather strict insistence upon the rule against hearsay evidence. I thought he was clearly right, but, nevertheless, it necessitated calling Professor Koehler here this morning. I take it from that that Mr. Burr in this hearing—and I inferred it
3664 had been true of the previous hearings—that the rather definite rules of evidence had been adhered to. This is a publication that Mr. Burr characterizes as a reprint. As far as I know, it is not a Government publication. It comes under no seal or certificate from any Department of the Government. It might just as well have been taken from a newspaper. It seems to me it is wholly lacking in those characteristics and qualities which make a Government statistics admissible. There is a way to prove those statistics; not by calling weather bureau employe's, of course. This does not meet the requirements of the rule, as I understand it.

Mr. BURR. If the examiner pleases, we put in the bulletin with regard to the mechanical properties of these various woods without calling anybody.

Mr. WHEAT. Mr. Burr, do you recall that the author of that bulletin was put on the stand?

Mr. BURR. I withdraw that. I guess I am in error on that. But you have several others.

Mr. WHEAT. We have one bulletin and we put it in by stipulation, because both you and I felt it was an utterly impossible thing and both of us felt it could not be proved in any other manner.

Mr. BURR. If the examiner please, I could ask the Commission to take judicial notice of this matter, but I am sure they would
3665 rather have the figures than have me point out the figures. I think it is just as admissible as census matter and I think it would be possible to dig up authorities on that point, if there are authorities on the question of taking judicial notice of the census figures.

Mr. ANDREWS: Mr. Examiner, if Mr. Burr is right, that the Commission can take judicial notice of these figures, it is an answer to the offer to introduce the evidence. If they can take judicial notice of them, then he does not need to introduce them. He can refer to them in his briefs or any other way that he pleases. That is one thing. It is quite a different thing to put a mass of printed matter here in the record which none of us have had an opportunity to examine. We do not know where it comes from, who makes the

reprint, how carefully compiled the data is. It seems to me it is a complete instance or example of hearsay testimony.

Examiner SHEPPARD. Mr. Burr, I am more interested, not so much in whether the matter is a reprint of some Government figures or not, but I am more interested in the real purpose for which they are put in. You stated something about longevity. It appears to me that the question of longevity is not a question of geological situation at all, whether the timber lasts longer in California or the New England States or whether climatic conditions in California or the rainfall in California is greater than in New England. Longevity in timber applies universally all over the country. Timber
3666 that will stand up on the west coast and timber that will stand up on the east coast, that is a matter of longevity; whether climatic conditions on one side are more effective than on the other side of the country, it does not seem to me that is a question. Timber ought to stand up everywhere, no matter what kind of climate it is, and if I get the purpose of the introduction of these things, I do not see that they are going to help me or the Commission at all.

Mr. BURR. If the examiner pleases——

Examiner SHEPPARD. Just point out to me in what respect those things are going to affect the question of longevity in this case.

Mr. BURR. I will be glad to do so. The situation is this: Witnesses for the defense have admitted that the precipitation, rainfall, has a direct bearing upon the life of wood.

Mr. WHEAT. Where was this?

Mr. BURR. This was in California and also in New Mexico and Arizona, witness after witness has admitted that precipitation, the greater or less precipitation, has a direct reflex on the length of life of wood where used for exterior purposes as lumber.

Examiner SHEPPARD. All right. Do you want to show by these papers that lumber used in California, where it rains more than it does in New England, will deteriorate quicker?

3667 Mr. BURR. I want to show this; that the long life of strobus in New England, where there is a great precipitation, great humidity, has a greater showing of longevity than that, for example, in Arizona and New Mexico, where they proved that the old Spanish structures had been built of Pinus ponderosa for a long period of years; that in that part of the country where it is dry, where there is evaporation, where there is sunshine, where there is no precipitation, hardly, in some sections, that that means nothing compared with what is meant by the longevity of strobus under conditions of heavy rainfall.

Now, then, this proposition here, it seems to me, is absolutely competent to show the contrast. Here is northern California, which shows how much importance is to be attached to the showing of longevity as to Pinus ponderosa in certain sections of California, Suisan Bay, for example, where they showed the longevity in that part of the State; and here is Arizona, which shows precipitation in that part of the country; and here is southern Indiana, which

shows precipitation in that part of the country, and here is Boston, showing here, as an example of the precipitation in the part of the country where strobus has a longevity of 300 years, untainted in some instances.

Now, then, it seems to me to contrast here between the longev-
3668 ity in woods is directly in point, and this is the best information to be had anywhere in the country or anywhere in the world. And, furthermore, it seems to me exceedingly captious that these gentlemen object that we are not calling all of these people. If they doubt it is as Government publication, let them check it up, or I will check it up.

Mr. WHEAT. May I ask you a question?

Mr. BURR. Yes.

Mr. WHEAT. You recall in California when I placed on the stand a witness to testify to the longevity of Pinus ponderosa in these mountain regions I asked him questions as to his experience with the climate as to the amount of snowfall, as to all of those questions which you now mention, and I gave you an opportunity to cross-examine upon those matters, which you are not allowing us at the present time.

Mr. BURR. That proves it is proper rebuttal. I am giving better information as to what the rainfall in that country was. That proves the necessity of having accurate figures.

Mr. ANDREWS. Mr. Examiner, I make a suggestion, which has been concurred in by Mr. Wheat, that may solve this. If Mr. Burr wants to put in the Government figures as to rainfall, we have no objection to those figures going in. I think we will have no difficulty in checking those figures with you, Mr. Burr, and stipulating that they are correct figures and may go in, but we have not had
3669 a chance to examine these. We cannot consent to these now.

Examiner SHEPPARD. Mr. Andrews, I was going to suggest that, that you gentlemen look over these papers. The examination you just have given is so cursory that it is impossible for you to know what is in there at all.

Mr. ANDREWS. Yes.

Examiner SHEPPARD. I have great reluctance to allow anything to go into the record where the other side does not have the opportunity to examine.

Mr. BURR. Let us adjourn for a couple of hours and let them look at them.

Examiner SHEPPARD. You gentlemen both remember when I was in Wisconsin I barred something Mr. Burr wanted to put in in that hearing, just because you gentlemen did not have an opportunity to examine it. It is noon hour now, or close to it, and I am going to adjourn this hearing until two o'clock and let you gentlemen have an opportunity to look over these figures, and if you can stipulate the information to go into this record that will do you or either side or the Commission any good, take it up with me at two o'clock and I will see what can be done.

Mr. WHEAT. May I just off the record say something?

Examiner SHEPPARD. Certainly. Off the record, please, Mr. Reporter.

(Discussion outside the record.)

3670 Examiner SHEPPARD. We will take a recess now until two o'clock.

(Whereupon, a recess was taken until 2:00 o'clock p.m. of the same day, February 20, 1930.)

3671 Before the Federal Trade Commission

In the matter of White Pine cases

Docket Nos. 1620–1669, inclusive

CHICAGO, *February 20, 1930.*

Court met, pursuant to recess, 2:00 o'clock p.m.

Before William W. Sheppard, examiner.

Appearances: Same as before.

Examiner SHEPPARD. We will convene the hearing pursuant to the adjournment.

Mr. BURR. I believe my offer is pending, Mr. Examiner.

Examiner SHEPPARD. Yes.

Mr. BURR. If the Examiner please, may I make a little statement off the record?

Examiner SHEPPARD. Certainly.

(Discussion outside the record.)

Mr. BURR. It is hereby stipulated that the four weather documents heretofore described and offered for the record be received, subject to the privilege of counsel for the Commission to mark in ink

3672 such portions of these four documents as he desires to have received as the portion of the pamphlets to be deemed of record, and that copies will be obtained and similarly marked and mailed to the firm of McCutcheon, Olney, Manon & Greene, and that that firm may request that additional portions of these four pamphlets be made of record within fifteen days after receipt of the documents.

Mr. WHEAT. May I ask you whether in that connection you intend in each instance to offer the text which precedes the figures in each one of these pamphlets?

Mr. ANDREWS. If he wants, he can mark it up in either way.

Mr. WHEAT. All right.

Mr. BURR. Then you can mark whatever you want in them.

Mr. WHEAT. Yes.

Examiner SHEPPARD. All right, Mr. Reporter, under the stipulation above, you will introduce those exhibits into the record under the numbers indicated.

(Said documents were thereupon received in evidence and marked "Commission's Exhibits Nos. 53, 54, 55, and 56.")

Mr. BURR. The Government is prepared to rest at this time in rebuttal and on the case.

Mr. WHEAT. I should like to recall Mr. Hornibrook for just two or three questions further.

3673 C. W. HORNIBROOK was thereupon recalled as a witness and, having been previously duly sworn, resumed the stand and testified further, as follows:

Direct examination by Mr. WHEAT:

Q. Mr. Hornibrook, are you familiar with the shipping weight of Pinus ponderosa as produced in the Klamath Falls region?

A. Yes, sir.

Q. I will ask you whether or not that varies with the thicknesses of the boards which are shipped.

A. It varies in surface lumber considerably.

Q. What is the average shipping weight from the Klamath Falls region of four quarters, that is, inch, select surfaced Pinus ponderosa lumber?

A. Surfaced to American lumber extra standards, about 1,800 pounds.

Q. Per thousand feet?

A. Per thousand board feet.

Q. That is dry weight?

A. Yes, sir.

Q. Now, take five quarters surfaced lumber, what would that weigh?

A. Surfaced to American lumber extra standards, just about 2,000 pounds.

3674 Q. Take your shop lumber, five quarters, six quarters, and eight quarters—the examiner will understand those are quarter inches; that is the way the lumber men deal with that—will you tell us what the average shipping weight from that area is?

A. Five quarters surfaced to American lumber extra standards, about 2,025 pounds; six quarters, about 2,050 pounds, and eight quarters, about 2,000 pounds.

Q. Are you familiar with the general average shipping weights of Pinus ponderosa lumber marketed as California white pine from the other portions of its range?

A. Some of it; yes, sir.

Mr. BURR. First let us find out what his knowledge is.

Mr. WHEAT. The record will show his qualifications.

By Mr. WHEAT:

Q. You may state again just where you have been connected with California white pine lumber.

A. My knowledge on the Klamath Falls stuff is based on my present connection with the box company, where we keep very detailed records of the weights of every car, straight items shipped, and I know from knowledge and observation that stock shipped from

the Klamath Falls district is all very similar to ours. There would be no material variation, if any.

Q. Now, take your experience in other portions of the California white pine region.

A. I am familiar with the Pinus ponderosa that was manu-
3675 factured at Oroville, California, by the Hutchinson Lumber Company; which was of as hard texture as I have ever seen in that specie, and that stock averaged, according to my recollection, about 200 pounds higher than the Klamath Falls stock. That heavier textured stock constituted a comparatively small percentage of the total stock sold as California white pine. So that I would say that the average weights for the whole district would be from 50 to possibly 100 pounds higher than those from the Klamath Falls district.

Mr. WHEAT. You may cross-examine.

Cross-examination by Mr. BURR:

Q. You say it varies with the surfaced lumber. That depends on how small the pieces are. If you have got surface on both sides, a narrow width and also edged at both edges, it would run considerably lighter in weight, will it not, if it is two-inch boards surfaced both sides?

A. No; the width on stock surfaced two sides has little, if anything, to do with the weight. In fact, the narrower the stock, the heavier it would average because it is the practice of the mill to cut the lumber overwidth, about the same amount for the different widths. The variation in weight between different thicknesses of surfaced lumber comes because of the varying percentage of actual volume of lumber shipped in the different thicknesses as com-
3676 pared with the basis on which it is measured.

Q. Now, if you are going to take a board that is two inches thick and surface both sides, you lose weight from both operations, don't you?

A. You would lose the weight to whatever thicknesses you dressed the stock to.

Q. Yes; and those thicknesses are all prescribed as a minimum proposition, that is, as a maximum reduction by the rules of the association?

A. The association has rules, or, rather, standard surfacing specifications.

Q. Yes; and you must not bring your surfaced lumber down to a greater degree and take off more than will result in observing the minimum requirements of the rule.

A. It must be exact.

Q. Now, then, if instead of having one two-inch board you have got two one-inch thick boards and then you surface both of those, you have surfaced off part of the weight four times instead of twice, haven't you?

A. Yes.

Q. And that would result in a diminished weight, wouldn't it?

A. Yes, sir.

Q. That is what I am getting at. And that is part of what you mean by saying it varies in surfaced lumber, is not that true?

A. Yes.

3677 Q. Now, the same is true as between a two by four and a four by four?

A. Yes, sir.

Q. There is a pretty wide variation on the width of the board if you are going to edge twice, is not that true?

A. I don't understand.

Q. You have got a six-inch wide board and you edge twice, that makes the same difference there.

A. If you surface four sides; yes.

Q. As contrasted with an inch wide or two feet wide board, you lose more?

A. Yes. The weights I gave you are on what we know as the stock surfaced two sides only.

Q. If you have rough lumber, that is going to run heavier in weight to the thousand?

A. Yes.

Q. And if Mr. Danaher's figures that you heard this morning referred to rough lumber, his figures would be pretty nearly correct, wouldn't they?

A. His statement that rough lumber weighs approximately 300 pounds more than surfaced lumber is true in practically all thicknesses.

Mr. BURR. I see. That is all.

By Mr. ANDREWS:

3678 Q. How about his statement as to the differential between ponderosa and sugar pine, as to weight?

A. I have forgotten just what differential he gave.

Q. 200 pounds.

Mr. BURR. Is he familiar with sugar pine?

The WITNESS. Yes, sir. The average California white pine, in my estimation, will not average 200 pounds more than sugar pine. Some of the hard-textured stockwood.

By Mr. ANDREWS:

Q. What would the average difference be?

A. I would say in surfaced lumber it would not exceed 100 pounds at the most. Possibly not that much.

Q. And in rough lumber?

A. Sir?

Q. And in rough lumber, that is, the difference between the sugar pine and rough ponderosa?

A. The same difference as in surfaced lumber, assuming that both species cut the same thicknesses.

By Mr. BURR:

Q. Is that based upon your experience with sugar pine and ponderosa in your own mills?

A. Yes, sir. My sugar pine knowledge was gained when I was connected with the Hutchinson Lumber Company.

Q. How large a percentage there did they cut of sugar pine?

A. They had about 20 percent sugar pine and 20 percent California white pine.

3679 Q. That is not the best sugar pine belt in Oregon?

A. That is a very excellent sugar pine.

Mr. BURR. That is all.

Examiner SHEPPARD. Is that all?

Mr. WHEAT. Yes.

Examiner SHEPPARD. You are excused.

(Witness excused.)

*Colloquy*

Examiner SHEPPARD. Do the gentlemen on both sides rest?

Mr. BURR. That is correct.

Mr. WHEAT. Yes, sir.

Examiner SHEPPARD. Mr. Wheat and Mr. Burr, have you arrived at any agreement so that you can stipulate as to what shall be our procedure in making findings of fact on all these various matters?

Mr. BURR. Off the record.

(Discussion outside the record.)

Examiner SHEPPARD. Gentlemen, I am going to proceed to close this case and give you instructions on the record.

It is our rule that ten days from the date I receive the record in all cases, this included, findings of fact will be made thereon and a copy served on counsel for the Commission and counsel for the respondent respectively. I believe there are about three appearances in this case on the part of the respondents. Am I right in that, Mr. Wheat?

Mr. WHEAT. Yes.

3680 Mr. BURR. More than that.

Mr. WHEAT. There have been three attorneys or firms of attorneys appearing for various respondents.

Mr. BURR. I don't think that is correct. More than that.

Mr. WHEAT. There may have been others.

Examiner SHEPPARD. Will the record show who they are?

Mr. BURR. Yes; the record shows. There have been five or six.

Examiner SHEPPARD. That is all I need on that. Now, Mr. Wheat and Mr. Andrews, you two being the only ones present, you are

the only ones I can give instructions to, with the request that you inform your associates. After you receive the copy of the findings I have been just speaking of, you have ten days in which to make exceptions, which exceptions raise the question in this case to be decided. A copy of your exceptions will be served upon Mr. Burr and if he has any exceptions a copy of his will be served upon each one of you who makes appearance here. Then, Mr. Burr, as you know, under our rule, you have thirty days from the date you get the findings to make and prepare your brief and the gentlemen of the respondents counsel have thirty days from the time you get Mr. Burr's brief in which to serve yours. If Mr. Burr has a reply brief, that will follow afterwards and is discretionary with him.

3681 With those remarks——

Mr. WHEAT. May I ask you before the record closes; after the filing of these briefs I take it that the Commission sets the matter down for oral argument.

Examiner SHEPPARD. You are right, and the Commission will set a date which will be conveyed to you in sufficient time for you to make appearance.

Mr. WHEAT. And that argument takes place in Washington, D.C.?

Examiner SHEPPARD. In Washington, D.C., before the Commission in full.

Mr. WHEAT. Thank you.

Examiner SHEPPARD. With those remarks I am going to close this case, and I want to express to both of you my appreciation of the manner in which both sides have conducted the proceeding. It has been orderly and a spirit of kindliness and appreciation shown by all of you.

Mr. ANDREWS. Mr. Examiner, before you leave, I think it would be only proper, and justice to my feelings require, that the atotrneys express their appreciation of the very fair manner and very sincere manner in which you have handled the case.

Mr. WHEAT. I was just going to express that sentiment myself.

Mr. BURR. I certainly concur in that thought.

3682 Examiner SHEPPARD. Thank you, gentlemen. This hearing is closed.

(Whereupon, at 2:45 o'clock p.m., February 20, 1930, the hearing in the above-entitled matter was closed.)

No. 6716

ALGOMA LUMBER COMNANY, BIG LAKES BOX COMPANY, CALIFORNIA Fruit Exchange, Clover Valley Lumber Company, Davies-Johnson Lumber Company, Diamond Match Company, Ewauna Box Company, Feather River Lumber Company, Hobart Estate Company,

Lassen Lumber and Box Company, Pelican Bay Lumber Company, and Red River Lumber Company, petitioners

vs.

FEDERAL TRADE COMMISSION, RESPONDENT

*Order allowing filing of petition for review, etc.,*

Filed Jan. 4, 1932

The petitioners above named having presented to this court a petition for a review of and to set aside certain orders of respondent, Federal Trade Commission, issued on June 8, 1931, in certain proceedings theretofore instituted by respondent against said petitioners, and it appearing that said petitioners are entitled to have said orders reviewed by this court, and for that purpose to file said petition with this court, and to have a transcript of the entire proceedings had therein by and before respondent, Federal Trade Commission, filed in this court,

3684 Now, therefore, it is hereby ordered that petitioners herein be, and they are hereby, allowed and given consent to file said petition with the clerk of this court, and to have said action docketed and placed on the calendar in accordance with the rules and practice of this court for the purpose of a review of said orders of respondent as provided by law, and

It is further ordered that respondent, Federal Trade Commission, shall be, and it is hereby, directed and ordered to prepare, certify, and file with the clerk of this court, within sixty (60) days from this date, a complete transcript of said entire proceedings had by and before respondent, including the several complaints, the several answers, the "Trial examiner's report upon the facts", and the reports and orders of said Commission in such proceedings; and that a certified copy of the said petition for a review of such orders be served forthwith upon respondent, Federal Trade Commission, by the clerk of this court, and

It is hereby further ordered that both petitioners and respondent, Federal Trade Commission, as the respective parties herein, shall be, and they are hereby, accorded the right and privilege of filing briefs and being heard in oral argument by counsel in accordance with the rules of practice and procedure of this court.

Dated this 4th day of January, 1932.

3685 In United States Circuit Court of Appeals for the Ninth Circuit

No. 6716

[Title omitted.]

*Petition of above-named petitioners for a review of and to set aside certain orders of the Federal Trade Commission*

Filed Jan. 4, 1932

*To the Honorable the Presiding Judge of the United States Circuit Court of Appeals for the Ninth Circuit and to the Honorable the Circuit Judges of said Court:*

The petition of your petitioners, above named, respectfully shows:

I

That each of your petitioners, Algoma Lumber Company, California Fruit Exchange, Davies-Johnson Lumber Company, Feather River Lumber Company, Hobart Estate Company, and Lassen Lumber and Box Company, is now, and was during all of the times herein mentioned, a corporation organized and existing under the laws of the State of California; that each of your petitioners, Big
3686 Lakes Box Company, Ewauna Box Company, and Pelican Bay Lumber Company, is now, and was during all of the times herein mentioned, a corporation organized and existing under the laws of the State of Oregon; that your petitioner, Diamond Match Company, is now, and was during all of the times herein mentioned, a corporation organized and existing under the laws of the State of Illinois; that your petitioner, Red River Lumber Company, is now, and was during all of the times herein mentioned, a corporation organized and existing under the laws of the State of Minnesota; that your petitioner, Clover Valley Lumber Company, is now, and was during all of the times herein mentioned, a corporation organized and existing under the laws of the State of Nevada; that each of your petitioners owns and operates certain lumber mills, at which, among other things, forest products are manufactured from that certain tree known botanically as Pinus ponderosa; that each of your petitioners now sells, and for many years past continuously has sold, such forest products in interstate and foreign commerce under the commercial name "California white pine."

II

That on the 23rd day of May 1929 respondent, Federal Trade Commission, in certain proceedings entitled severally as follows:

In the matter of Algoma Lumber Company, a corporation, its officers and agents, docket no. 1654.

In the matter of Big Lakes Box Company, a corporation, its officers and agents, docket no. 1647.

In the matter of California Fruit Exchange, a corporation, its officers and agents, docket no. 1626.

In the matter of Clover Valley Lumber Company, a corporation, its officers and agents, docket no. 1621.

3687 In the matter of Davies-Johnson Lumber Co., a corporation, its officers and agents, docket no. 1624.

In the matter of Diamond Match Company, a corporation, its officers and agents, docket no. 1625.

In the matter of Ewauna Box Company, a corporation, its officers and agents, docket no. 1648.

In the matter of Feather River Lumber Company, a corporation, its officers and agents, docket no. 1629.

In the matter of Hobart Estate Company, a corporation, its officers and agents, docket no. 1632.

In the matter of Lassen Lumber and Box Company, a corporation, its officers and agents, docket no. 1643.

In the matter of Pelican Bay Lumber Company, a corporation, its officers and agents, docket no. 1652.

In the matter of Red River Lumber Company, a corporation, its officers and agents, docket no. 1644.

issued its complaints against your petitioners severally, in each of which complaints it was alleged, among other things, that the use by your petitioners of the commercial name "California white pine" for forest products manufactured from Pinus ponderosa constitutes an unfair method of competition in interstate and foreign commerce in violation of the provisions of section 5 of the act of Congress approved September 26, 1914 (38 Stat. 717; 15 U.S.C.A., sec. 41), commonly known as the Federal Trade Commission Act.

III

That thereafter your petitioners severally filed their answers to the said complaints issued against them respectively, by which answers your petitioners severally admitted that they were engaged in the manufacture of forest products from Pinus ponderosa, and in the sale of such forest products in interstate and foreign commerce under the commercial name "California white pine",

3688 alleged that said commercial name has been in general and continuous use for such forest products for more than forty years past, but denied that such practice was or is in violation of

the provisions of section 5 of said Federal Trade Commission Act, and denied other material allegations in said complaints contained.

IV

That thereafter said Federal Trade Commission consolidated the said several proceedings against your petitioners for hearing with certain other proceedings against certain respondents other than your petitioners, and held hearings before a trial examiner appointed by said Federal Trade Commission, and received testimony and other evidence in support of said complaints and in opposition thereto, which said testimony so taken was reduced to writing and filed in the office of said Federal Trade Commission.

V

That thereafter the said trial examiner of the said Federal Trade Commission made and filed his "Trial examiner's report upon the facts" in said proceedings, copies of which said report were served upon your petitioners; that thereafter your petitioners filed with said Federal Trade Commission their exceptions to said "Trial examiner's report upon the facts"; that thereafter briefs were filed with the Commission in said proceedings by the attorney for the Federal Trade Commission and by the attorneys for your petitioners and each of them; that thereafter these several causes came on for oral argument before the said Commission and following such argument were taken under submission by the said Commission.

3689

VI

That thereafter, on the 8th day of June, 1931, said Commission issued in each of said proceedings a purported "Report, findings as to the facts, and conclusions", together with a purported "Order to cease and desist"; that said orders to cease and desist are directed severally against your petitioners, and each of them, their officers, agents, representatives, and employees; that said orders are in identic terms, excepting that each is directed against a specifically named respondent; that the order directed against your petitioner Algoma Lumber Company is in the words and figures following, to-wit:

"It is now ordered that the Algoma Lumber Company, a corporation, its officers, agents, representatives and employees, in connection with the advertising, offering for sale and/or sale, in commerce among the several States of the United States, or with foreign countries, of lumber, logs or other forest products made from the pine species known as Pinus ponderosa, which have been designated by respondent in its trade as 'California white pine' products, do cease and desist from using, either orally or in writing, the word 'white' in connection, combination, or conjunction with the word 'pine', or in connection with other word or words used in combination or conjunction with the word 'pine.'

"And it is further ordered, that the said respondent, within sixty (60) days from the receipt of this order, shall file with the Commission its report in writing, setting forth in detail the manner and form in which it has complied with the order to cease and desist hereinabove set forth."

VII

That the said "Report and findings as to the facts" of said Commission in each of said proceedings are, in material and controlling respects, without support in the evidence received by the said Commission in said proceedings, but are contrary to such evidence; that said "Conclusion" of said Commission in each of said proceedings is not supported by the findings or by the evidence received
3690 by the said Commission; that each of the said several orders entitled "Order to cease and desist", so made by the said Commission against your petitioners severally, is not supported by the record before the said Commission in said proceedings and is beyond the authority and jurisdiction of said Commission.

VIII.

That in making, entering, and publishing its said several "Orders to cease and desist" the said Federal Trade Commission erred in concluding that the use by your petitioners of the commercial name "California white pine" in selling forest products manufactured from said Pinus ponderosa in interstate and foreign commerce is "an unfair method of competition in interstate commerce" in violation of the provisions of section 5 of said Federal Trade Commission Act.

IX

That no proof was adduced in said proceeding before the said Federal Trade Commission showing or tending to show that your petitioners have, or that any of them has, committed any act or acts, or engaged in any practice or practices prohibited by the provisions of section 5 of said Federal Trade Commission Act, or that your petitioners have, or that any of them has, committed any other act or engaged in any other practice cognizable by the said Federal Trade Commission under the said Federal Trade Commission Act, or warranting the issue by said Commission of its said several "Orders to cease and desist"; that under the proofs adduced before said Federal Trade Commission in said proceedings the said Commission was without authority or jurisdiction to enter any order respecting your petitioners, or any of them, other than an order or orders dismissing its said several complaints.

3691 X

That the said Federal Trade Commission erred in taking or purporting to take jurisdiction over your petitioners, or any of them,

by the issuance of its said respective "Orders to cease and desist"; that the said several "Orders to cease and desist" are, and each of them is, erroneous, contrary to law, and wholly void.

Wherefore your petitioners respectfully pray:

1. For a review by this honorable court of the said "Orders to cease and desist" and of each thereof heretofore made and entered by said Federal Trade Commission in said proceedings;

2. For an order of this court directing the Federal Trade Commission, upon being served with a copy of this petition, forthwith to certify and file in this court a transcript of the entire record in the said proceedings heretofore had by and before the Federal Trade Commission, including the said several complaints, the said several answers, the said "Trial examiner's report upon the facts.", and the said several "Reports, findings as to the facts, and conclusions" and "Orders to cease and desist";

3. For an order permitting a brief or briefs to be filed herein on behalf of your petitioners and fixing the time for filing the same;

4. For an order permitting oral argument to be had herein on behalf of your petitioners and fixing the time for the same;

5. For a judgment vacating and setting aside the said orders
3692 of the Federal Trade Commission to cease and desist, and requiring a dismissal of said proceedings, and each of them, by the Federal Trade Commission;

6. For such other orders and relief as may be proper in the premises.

[Title omitted.]

No. 6716

*Motion to amend order allowing the filing of petition for review and certification of record*

Filed Jan. 25, 1932.

Comes now the Federal Trade Commission, respondent herein, by its attorneys and respectfully moves this honorable court that an order be made and entered amendatory of the order dated the fourth day of January 1932 allowing the petition herein, so as to strike from the said order the requirement that this respondent shall include with the transcript a copy of the "Trial examiner's report upon the facts"; and

The respondent further moves the honorable court that this motion be submitted upon memoranda on the part of the respective counsel without oral argument and that the court cause attor-
3697 neys for the petitioners to know within what period their memorandum in opposition to said motion shall be presented.

ROBT. E. HEALY,
*Chief Counsel,*

vs.

FEDERAL TRADE COMMISSION, RESPONDENT

Upon motion to amend order allowing filing of petition for review, etc.

Before: WILBUR and SAWTELLE, Circuit Judges

*Opinion*

Filed March 7, 1932

WILBUR, Circuit Judge:

An ex parte order was made in this matter for the inclusion in the record to be certified by the Federal Trade Commission of a copy of the trial examiner's report upon the facts, and motion is made to amend the order by striking out the requirement that the report of the examiner should be included in the transcript. The statute upon the subject is in general terms (38 Stat. 717, §5, pp. 720; 15 U.S.C.A. §45) and provides that the Commission shall file with the court "a transcript of the entire record in the proceeding, including all the testimony taken and the report and order of the commission." The statute also provides that the Commission
3706 after its hearing "shall make a report in writing in which it shall state its findings as to the facts" and further provides that the findings of the Commission as to the facts, if supported by the testimony, shall be conclusive, but either party may apply to the court for leave to adduce additional evidence. The Commission states in its application that its uniform practice has been to omit from its transcripts of proceedings the findings of the examiner, and that out of a total of 148 petitions to the various Circuit Court of Appeals in only three have the examiner's reports been accepted by the Circuit Courts. The Commission contends that the findings of the examiner are no proper part of the record and states "In the present case the examiner's findings comprise 58 pages of mimeographed material and the exceptions thereto by the present petitioners cover 105 printed pages, while those by counsel for the Commission occupy 20 (mimeographic) pages." The petitioners who seek to review the order of the Commission maintain that the question as to whether or not the report of the examiner and proceedings with relation thereto shall be included in the record to be certified to the court by the Commission is a matter resting in the sound discretion of the court. This we think is correct and

in accordance with the rulings of the various courts. The petitioners in opposing the application for the amendment of the order so as to omit the requirement that the examiner's report be certified by the Commission frankly state their purpose in insisting upon that inclusion. That purpose, briefly stated, is that the report illustrates the fact that the Commission has neglected to consider matters which are involved as shown by the examiner's report, which have been brought to its attention. In short, although it is conceded that the examiner's report has no binding effect and that the ultimate decision of the facts rests with the Commission it is insisted that the report will be a valuable addition to the record.

We are inclined to agree with the contention of the Federal Trade Commission that in the routine certification of its records to the courts it should not be required to certify the report of the examiner or the exceptions thereto unless such report and exceptions are referred to in the findings of the Commission and thereby adopted by it as its findings. It is stated, and there is no suggestion to the contrary, that in the present proceeding the findings of the Commission did not refer in any wise to the examiner's report. If upon the hearing of the matter before the court it seems desirable
3707 that any part of the record or proceedings before the Federal Trade Commission would be helpful in determining the cause, and such part of the record has not been certified it can be supplied upon the hearing or afterward by stipulation of counsel or certification by the Federal Trade Commission upon a supplemental order requiring that to be done. Usually, in such case there is no disagreement between counsel as to the terms of such an order. In the case at bar the purpose suggested by counsel can be covered by argument and by briefs without the actual presence of the examiner's report. We are not impressed that the report of the examiner would be of any assistance in coming to a conclusion in the matter, particularly where the contention is that it has been disregarded by the Commission.

The order will be amended by striking out the requirement that the Federal Trade Commission certify the report of the examiner or the objections thereto. If, on the hearing and argument, the matter seems to the court to be relevant and counsel cannot agree on the terms of the examiner's report the court will make such supplemental order as seems proper. Congress has provided that "such proceedings in the circuit court of appeals shall be given preference over other cases pending therein, and shall be in every way expedited." It is in the interest of expedition that the uniform course of procedure adopted in the presentation of these records be followed, and we feel that the course usually adopted by the Commission of omitting the examiner's report in the transcript is the better practice to be followed unless upon the hearing of the

matter the inclusion of the report for some reason appears necessary to correct the decision.

Motion granted.

3708 In United States Circuit Court of Appeals

[Title omitted.]

*Order granting motion of respondent to strike from order allowing filing of petition to review the requirement that trial examiner's report be made part of transcript of record*

March 7, 1932

Upon consideration of the motion of respondent filed January 25, 1932, to strike from the order of January 4, 1932, allowing the filing of the petition to review in this cause, the requirement that the respondent Federal Trade Commission shall include with the transcript a copy of the "Trial examiner's report upon the facts" and of the answer of petitioners thereto, filed February 15, 1932, and good cause therefor appearing.

It is ordered that said motion be, and hereby is, granted, and the requirement that the respondent Federal Trade Commission include with the transcript a copy of the "Trial examiner's report upon the facts" be, and hereby is, stricken from the order of January 4, 1932.

3709 In United States Circuit Court of Appeals

[Title omitted.]

*Order of submission*

June 24, 1932

Ordered petition to review argued by Mr. Allan P. Matthew, counsel for the petitioners, and by Mr. Eugene W. Burr and Mr. Martin A. Morrison, attorneys, Federal Trade Commission, counsel for respondent, and submitted to the court for consideration and decision, with leave to counsel for petitioners to file tabulations re testimony of witnesses, and with leave to counsel for the respective parties to file reply brief to brief of amici curiae.

3710 In United States Circuit Court of Appeals

[Title omitted.]

*Order directing filing of opinion and filing and recording of judgment*

April 4, 1933

By direction of the court, ordered that the typewritten opinion this day rendered by this court in above cause be forthwith filed by

the clerk and that a judgment be filed and recorded in the minutes of this court in accordance with the opinion filed.

No. 6716

[Apr. 4, 1933]

ALGOMA LUMBER COMPANY ET AL., PETITIONERS

vs.

FEDERAL TRADE COMMISSION, RESPONDENT

Petition to review orders of the Federal Trade Commission

Before: WILBUR, Circuit Judge, and JAMES and NORCROSS, District Judges

*Opinion*

Filed April 4, 1933

NORCROSS, District Judge:

The petition presents for consideration a review of orders made by the Federal Trade Commission on June 8, 1931, in the so-called "White Pine cases" requiring the petitioning lumber manufacturers to cease and desist from using the word "white" in conjunction with the word "pine" in connection with the sale in interstate commerce of lumber manufactured from the species of pine tree botanically known as Pinus ponderosa.

Petitioners herein are twelve of a group of fifty manufacturers on the Pacific coast, against which the Commission issued similar complaints on May 23, 1929. Each of these concerns was charged with the interstate sale of lumber under various terms, including the phrase, "white pine", with the alleged result of misleading and deceiving the trade and public to the injury of competitors and the public, and that the same is an "unfair method of competition forbidden by section 5 of the Federal Trade Commission Act." The term employed by each of petitioners here is "California white pine."

"To sustain the orders of the Commission three requisites must exist: (1) That the methods used are unfair; (2) that they are methods of competition in interstate commerce; and (3) that a proceeding by the Commission to prevent the use of the methods appears to be in the interest of the public." Federal Trade
3712 Commission v. Royal Milling Co., — U.S. — (decided February 6, 1933); Fed. Trade Comm. v. Raladam Co., 283 U.S.

643, 646-647. That the use of the expression, "California white pine", is a method of competition, there is no question. The only questions presented are whether requisites (1) and (3), found by the Commission to exist, are supported by the testimony. If so supported, the statute provides that such findings "shall be conclusive." (Fed. Trade Comm. v. Winsted Hosiery Co., 258 U.S. 483, 491.)

In Federal Trade Commission v. Raladam Co., 283 U.S. 643, the Supreme Court said:

"In a case arising under the Trade Commission Act the fundamental questions are, whether the methods complained of are 'unfair', and whether, as in cases under the Sherman Act, they tend to the substantial injury of the public by restricting competition in interstate trade and 'the common liberty to engage therein.' The paramount aim of the act is the protection of the public from the evils likely to result from the destruction of competition or the restriction of it in a substantial degree, * * *."

In Federal Trade Commission v. Sinclair Refining Co., 261 U.S. 463, the Court said:

"The general purpose of both statutes was to advance the public interest by securing fair opportunity for the play of the contending forces ordinarily engendered by an honest desire for gain. And to this end it is essential that those who adventure their time, skill, and capital should have large freedom of action in the conduct of their own affairs."

This Court in Hills Bros. v. Fed. Trade Comm., 9 F. (2d) 481, 484, said:

"The Court is only concerned with the question whether there is any competent testimony to support findings of the Commission."

Pinus ponderosa belongs botanically with the so-called "yellow pine" group. The typical "yellow pine" is the longleaf pine of the South, a hard lumber useful where strength is needed, and classified botanically as Pinus palustris and Pinus taeda. When lumber from the Pinus ponderosa trees came into local use in California it
3713 was given the name "California white pine" in order to distinguish it from the hard "yellow pines" of the South. By 1886 it was so marketed in the States of California, Nevada, and Utah, with occasional shipments further east. By about 1900 it was so marketed in the Middle West sections, and about 1915 shipments extended to the Atlantic coast.

The only species of true botanical white pines of commercial importance are northern white pine, and two Pacific coast varieties—Idaho white pine and sugar pine. The annual production of northern white pine in the United States is 825,000,000 feet b.m., of which 358,000,000 feet is from virgin timber in Minnesota, the remainder, 467,000,000 feet, being in the main second growth from the original forests stretching throughout the northern and eastern sections of the United States from Minnesota to the Atlantic coast. The annual production of Idaho white pine is 500,000,000 feet and of sugar

pine 280,000,000 feet. The annual production of ponderosa is 2,800,000,000 feet, of which more than half has been sold since 1924 as pondosa pine and the remainder as California white pine, Arizona white pine, and New Mexico white pine.

Prior to 1924 the majority of Washington, Idaho, western Montana and northern and central Oregon producers of ponderosa were designating their lumber western white pine. Upon application for complaints against them the Commission investigated this trade term. As a result of an agreement entered into by most of such producers in that year the name pondosa pine was adopted as a substitute. In the brief of counsel appearing as amicus curiae is the statement that following the said orders of the Commission of June 8, 1931, the name was again changed to ponderosa pine.

Statistical Bulletin #21 of United States Department of Agriculture (commission's exhibit 34) gives a statement of the total timber stand in the United States for the year 1920 in board feet as follows:

Pinus ponderosa (California white pine) and Pinus jeffreyi (Jeffrey pine), 249,578,000,000.

Pinus strobus (northern white pine) and Pinus resinosa (norway pine), 23,457,000,000.

Pinus monticola (Idaho white pine) and Pinus lambertiana (sugar pine), 57,071,000,000.

3714 From the foregoing it appears that the available supply of ponderosa and its kindred Jeffrey pine is about three times greater than the total available supply of the botanically true white-pine timber in this country. The record also discloses an estimate of more than 15,000,000,000 board feet of northern white pine (strobus) within the Canadian Provinces. At the rate of consumption given, not considering second growth, the present stand of timber will be practically exhausted within sixty years.

In respondent's exhibit #31—"U.S. Department of Commerce Bureau of Standards—Lumber—Simplified Practice Recommendation R 16-29" (issued December 5, 1929), there appears under the heading "Nomenclature of commercial softwoods" the statement:

"The following standard commercial names for lumber cut from the principal species of softwoods shall be used in the formulation of lumber-grading rules and in the construction of contracts and the terms of purchase and sale of American standard lumber. Preferred commercial names are shown in italic."

Here follows under subheadings of various names of trees such as cedars, firs, hemlocks, etc., the standard commercial name of lumbers produced therefrom. Under the subheading Pines appear sixteen names, the following among others: Arkansas soft pine, California white pine, Idaho white pine, longleaf pine, North Carolina pine, northern white pine, norway pine, pondosa pine, southern pine, sugar pine. Placed opposite each such standard commercial name is the proper botanical name or designation. Of the sixteen names, ten are of the botanical yellow pine. While commercially pine lumber falls within two main groups—the white and the yellow

pines—it may be noted that the Bureau of Standards in the exhibit referred to makes no such groupings as it does in the case of douglas fir and the true firs.

While action taken by the Bureau of Standards is persuasive in a case of this character, it is not necessarily controlling on the Federal Trade Commission or the courts. There may be cases in which the action of the Bureau should be regarded as decisive. As said by the Circuit court of Appeals, Seventh Circuit, in a recent case, Kirk & Co. v. Fed. Trade Comm., 59 F. (2d) 179, 183:

3715 "We deem it quite pertinent and decisive of the question before us. The Government, through its agency, the Bureau of Standards, has thus committed itself to the proposition that castile soap may be made of oily and fatty elements other than olive oil. Being solely a question of fact, we deem it expedient for other departments of the Government, including the judiciary, to accept such construction, if for no other reason than that of consistency."

It would not necessarily follow from this decision that a yellow pine might be sold as a white pine if such sales were unfair to the trade and injurious to the public, notwithstanding the Bureau of Standards had specified a name such as "California white pine" in a list of "Standard commercial names" for pine lumber. It would be different, however, if the particular lumber sold under such name possessed substantially the same qualities possessed by the white pines of commerce as distinguished from certain well-known commercial yellow pines.

As shown by Bulletin 556 of the U.S. Department of Agriculture (respondent's exhibit 21) in the physical properties of weight, stiffness, strength, hardness, and shrinkage, ponderosa compares favorably with strobus. Expert witnesses from the United States Forest Products Laboratory place ponderosa in its mechanical properties with the typical white-pine lumbers. There appears to be no serious question in this respect.

A statement by E. P. Ivory, formerly with the U.S. Forest Service, a witness called by the Commission, succinctly presents certain facts:

"There are 37 pine species in the United States, and just as the oaks are divided into white and red oak groups, so the pines are divided into white and yellow pine groups. Botanically, California white pine falls in the yellow-pine group, chiefly because it has three long needles in each bundle, whereas the white pines have five. The physical properties and uses of the wood cut from this tree, however, align it with the white-pine group and set it apart very distinctively from the yellow-pine group."

From the testimony of this witness there also appears the statement:

"Physical properties of California white pine, as demon-
3716 strated in tests made at the U.S. Government Forest Products Laboratory, Madison, Wisconsin, and its uses, closely align California white pine with the botanical white pines. In fact, in many of its most important qualities and uses California white pine

is more typically a white pine than are some species which botanically are classified as white pines."

The finding of the Commission to which objection is principally directed as not being supported by the evidence reads:

"True white-pine lumber is far more durable than ponderosa lumber when exposed to weather conditions. The ponderosa pine has on an average a far greater amount of sapwood than trees generally used for lumber. The sapwood of the ponderosa is less durable than any other part of the tree—especially when exposed to weather conditions. It is the sapwood of the ponderosa that most closely resembles the heartwood of the true white pines in appearance and softness. It is the sapwood of the ponderosa that is usually sold for uses and purposes for which the heartwood of the true white pines is celebrated. The close resemblance between the heartwood of the true white pines and the sapwood of the ponderosa above noted is one of the greatest causes of the confusion and deception in the marketing of the two species."

The gist of this finding is that true white-pine lumber is far more durable and has a far less percentage of sapwood than ponderosa lumber, and that the close resemblance between the heartwood of true white pines and the sapwood of ponderosa is one of the greatest causes of confusion and deception in the marketing of the two species.

An exhibit in the record discloses that the sapwood of the true white-pine tree appears to be about 1¾ inches in thickness as compared with three inches for the yelllow pine. The relative percentage of sapwood in a particular tree depends largely upon its diameter. The attention of the court is directed to a chart showing a strobus tree 9½ inches in diameter to have 60% sapwood, while a ponderosa tree 18 inches in diameter has 55% sapwood content, and trees of 21 inches in diameter have a sapwood content of 30% and 48%,

3717

respectively. While these figures are interesting as showing the proportion of sapwood and heartwood content of logs, they do not necessarily indicate the relative proportion of sapwood and heartwood content in the lumber produced therefrom. That there is a greater percentage of sapwood content in ponderosa lumber than there is in the true white-pine lumber there is no question. This variation, however, appears to be of importance only as it has a bearing upon the relative durability of the two classes of lumber. It is the sapwood which was found by the Commission to be more subject to decay when applied to exterior uses.

Upon the question of durability of ponderosa as compared with the true white pines the testimony of a number of witnesses appears in the record. A reference to the testimony of a few only will be sufficiently illustrative. Russell F. Whitehead, a New York City architect and editor of an architectural journal, testified that lumber made from ponderosa "is not a satisfactory substitute for genuine white pine to use in exterior of a building, in any way, shape, or form." The witness further testified that he regarded it as reason-

ably satisfactory for interior purposes, "but not if exposed to the weather." W. B. Greeley, for seven years Chief Forester of the United States and now manager of the West Coast Lumberman's Association, Seattle, testified: "The genuine white pines have the reputation for greater durability in uses exposed to the weather. That would not apply to interior uses protected from the weather." George W. Kelham, for twenty-two years an architect in San Francisco, testified as to the use of ponderosa where exposed to the weather: "It is unsatisfactory under those conditions, and that would be the general opinion of the architects that I know. * * * It doesn't, in our opinion, last well. It decays more rapidly than other wood."

Professor C. P. Winslow, Director of the United States Forest Products Laboratory at Madison, Wisconsin, since 1917, to the question, "What is the difference between white pine and Pinus ponderosa as to durability?" answered: "I don't know."

Professor G. M. Hunt, of the same laboratory, testified:

"The general experience with the use of the white pines during the 200 years since they began to be used indicated that these pines had moderately high durability. The general experience with Pinus ponderosa indicated that that wood had low durability in contact with the ground or any place favoring the growth of decay. That is a matter of common knowledge."

3718 To the question, "Have there been tests which will adequately settle the question as to the relative decay-resisting qualities of the heartwood of Pinus ponderosa and the heartwood of Pinus strobus?" Professor Hunt answered: "There have not."

The weight to be given to testimony above outlined upon the question of the relative durability of the two lumbers is not as clear as it might otherwise seem to be, viewed in the light of other facts and circumstances. The expression that ponderosa lumber is not a satisfactory substitute "for use in exterior of a building, in any way, shape, or form" may well be viewed in the light of the fact that buildings erected from lumber from the original northern white-pine forests have withstood the elements for two centuries, while but few, if any, erected with lumber from the ponderosa tree may lay claim to an age in excess of about seventy-five years. Specific instances of decay under ordinary conditions of upkeep are almost wholly lacking in the record. The Director of the Forest Products Laboratory did not know what the difference in durability is. Professor Hunt's testimony was to the effect that it was a matter of common knowledge from general experience that ponderosa "had low durability in contact with the ground or any place favoring the growth of decay." As most of the lumber used even for exterior purposes does not come in contact with the ground, it would not necessarily follow that such lumber might not in other respects have moderately high durability unless the witness meant to say that any exterior use was a "place favoring the growth of decay." The testimony of the wit-

ness does not appear to warrant the latter interpretation. What the testimony appears to establish is that northern white pine has relatively a greater durability for exterior use without establishing any comparative degree of such durability.

Upon the question of public confusion in the matter of lumber nomenclature, the testimony of a number of witnesses appears in the record. Mr. Alfred Busselle, for twenty-five years a practicing architect in New York, specializing in high-grade residential work, testified "In my experience there is a great deal of confusion in the pine market due to the terminology, and some of the confusion is quite honest. * * * I know that California white pine connotes to some people a distinct type of wood, but it connotes to other people white pine in general, and therein lies the confusion." Those
3719 who are confused, generally speaking, the witness testified, were the "millmen and the lumber dealers, as well as the architects." Just why architects and lumber dealers should be confused in view of the aid and assistance furnished by the Government through the Bureau of Standards is not readily apparent. It may properly be assumed that architects have a general knowledge of the qualities of the various materials they specify. If it is deemed important that a particular residence or other building be constructed of so-called true white pine because of its known or claimed superior wearing or other qualities, a reference to the standard commercial names, "northern white pine", "Idaho white pine", or "sugar pine", will enable the architect to so specify and the contractor and dealer to comply with the specifications. The testimony does not support a view that when architects so specify there is any confusion or even any material amount of intentional substitution of some other lumber than that specified. It is clearly established by the testimony that the true white pines are sufficiently well known in the trade to be able to command a higher price over that sold under the trade name of California white pine or pondosa.

The testimony of a number of witnesses engaged in the retail trade in various States is to the effect that orders for white-pine lumber without other designation, would be filled by any lumber using the designation "white", including California white pine. It does not appear, however, from the testimony of these witnesses that in filling such orders with California white pine, or with other lumber using the designation "white", and which was not a botanically true white pine, a practice prevailed of charging a price therefor on a basis of the market price for northern or Idaho white pine.

P. J. Curley, president for five years of a wholesale and retail lumber house at Chicago, testified:

"It is commonly known among the sash and door men if a specification comes in for white pine, they will furnish California white pine or so-called "western pine" or "pondosa pine", without attempting to get the genuine northern white pine or Idaho white pine."

The reason for the substitution, the witness testified, "is the lower price, lower cost to the sash and door men or to the interior men." The amount of such substitution the witness estimated at "about ninety-five percent."

3720 If it be considered that manufacturers of sash and doors and exterior trim use ponderosa lumber principally in such manufacture, and supply the same when the specification calls for white pine, the important question remains of the character of material so supplied, and whether a price is charged therefor based on the difference in cost of the two lumbers. There is no testimony touching the question of price of this particular character of manufactured product. With the exception of the possible question of durability, the materiality of which has not been established, it does not otherwise appear the public is injured by action of such manufacturers. If, as testified by the witness Curley, these manufacturers use ponderosa pine as readily as they do California white pine in filling specifications calling for white pine, it is not apparent that an affirmance of the Commission's orders would afford any relief if injury from such manufacture in fact occurs.

In the finding of the Commission complained of appears the statement: "It is the sapwood of ponderosa that most closely resembles the heartwood of the true white pines in appearance and softness." In respondent's brief appears the statement: "True white pines excel ponderosa in the soft texture of the wood as an average * * *." The court's attention has not been called to any tests made of the relative hardness of heartwood as compared with sapwood. The tests made by the United States Forest Products Laboratory for "hardness (side section)" show ponderosa softer by 2% and "(end section)" softer by more than 6% than strobus. In comparison with the southern yellow pine (longleaf) both woods are softer by more than 50%.

As bearing on the question relative to the contention that the use of the commercial name "California white pine" is unfair to the trade, we quote the following excerpt from the brief of respondent:

"Idaho white pine in 1922 and 1923 had a premium of $16 or $17 per thousand feet. Since the decline of 1927 the premium has been but $5.50 to $8.50. In September 1927 the Weyerhaeuser Sales Company made a drastic cut in Idaho white pine largely for the reason that the Weyerhaeuser concerns 'had come to the conclusion that, because other woods not true white pines were being marketed under the white-pine name, it was no longer possible to get the price preferences that we had previously gotten.'"

3721 It may be noted, however, in connection with the foregoing statement, that the reduction in price did not occur until three years after the commercial name of half of the ponderosa of commerce was changed from western white pine to pondosa.

It may be conceded that if the use of the commercial name California white pine is prohibited in the lumber trade, northern white pine and Idaho white pine will be able to command a higher price

than that which now prevails over lumber produced from the forests of ponderosa pine. If this situation be conceded, and it be further conceded that the increased price of strobus lumber finds a correlative reduction in the price of ponderosa lumber, the further question remains whether such change in commercial methods of sale will be in the interest of the public.

The case of Federal Trade Commission v. Winsted Hosiery Co., 258 U.S. 483, is stressed in the brief of respondent as one presenting a "remarkable parallel" respecting the use of unfair methods, the prevention of which is in the interest of the public. From the opinion we quote the following excerpt:

"A substantial part of the consuming public, and also some buyers for retailers and sales people, understand the words 'merino', 'natural merino', 'gray merino', 'natural wool', 'gray wool', 'Australian wool', and 'natural worsted' as applied to underwear to mean that the underwear is all wool. By means of the labels and brands of the Winsted Company bearing such words, part of the public is misled into selling or into buying as all wool, underwear which in fact is in large part cotton. And these brands and labels tend to aid and encourage the representations of unscrupulous retailers and their salesmen who knowingly sell to their customers, as all wool, underwear which is largely composed of cotton."

The sale or purchase of a material as all wool which in fact is in large part cotton presents a situation which may not be said to be parallel to that presented upon the facts in this case. If a material from a gray wool from some other breed of sheep than a merino were dealt with in commerce under the name of "merino" or "gray merino", then there might be some parallel between the two cases.

In the case at bar we are considering questions as between cer-
3722 tain pine lumbers. The use of the word "white" is here sought to be prohibited in connection with the trade name of a lumber produced from a certain species of pine tree which botanically falls within the yellow-pine group but which in its industrial utility comes within the white-pine group as known to commerce and industry. In the field of commerce and industry there are but two groups of pine lumbers—the white and the yellow. Primarily this grouping reflects the industrial utility of the several lumbers. While botanically Pinus ponderosa falls within the same general classification as Pinus polustris, the lumber from which latter trees first became known to commerce as southern yellow pine, ponderosa in industrial utility possesses more nearly the qualities of Pinus strobus, which as northern white pine was the first of the pines known to commerce using the designation "white."

It may be conceded that the evidence establishes that northern white pine lumber from the forests of Minnesota, and Idaho white pine lumber possess certain qualities which make those lumbers a superior grade to lumber produced and sold as California white pine. When we compare Idaho white pine with northern white pine

we find that the Department of Agriculture (exhibit 21) records the former as possessing greater strength and stiffness, but with all a softer quality. As said in the brief for respondent: "Lumber is a product of growth, not an inorganic, chemical product. Lumber from any given species, even the most uniform, will vary somewhat in quality. Where species are similar in average quality, or where the variations in a species are great there will be some overlapping." In considering California white pine with northern white pine, for example, the fact may not be overlooked that the greater portion of the annual production of such lumber, 467,000,000 board feet, comes from second-growth timber. Concerning this second-growth lumber, in the brief of respondent, we read: "While most of the new growth of strobus is being prematurely cut and used for inferior purposes, yet doubtless many areas are being allowed to stand for their maximum value." This statement is suggestive of the fact that the public interest is not promoted by the premature cutting of second-growth timber.

In considering the fact that certain of the so-called true white pines produce lumber superior in certain respects to that produced from ponderosa, there is also to be considered the fact that
3723 these species of true white pines differ also from each other as the so-called true yellow pines differ from each other. Whatever these differences are, in commerce and industry pine lumber is classified into two groups, white pine and yellow pine, and any lumber falls within one or the other of these two main groupings, largely if not entirely because of its peculiar industrial utility.

In considering the weight to be given to the fact that ponderosa is not only not a botanical true white pine but in certain respects is also inferior in a more or less uncertain degree to certain of the true white pines of commerce, the past history as well as the future of the industry is deserving of consideration. The supply of the botanical true white pine is far more limited than that of ponderosa. The public is not only interested in not being deceived in the material it purchases under a certain nomenclature, but possibly in an even larger sense in the conservation of the forests. In the brief for respondent appears this statement:

"The superiority of true white-pine lumber over ponderosa has been reflected in the fact that northern white pine, Idaho white pine, and sugar pine have all commanded a higher price on the market than ponderosa. The price differentials still continue."

It is manifest from this statement that, notwithstanding the fact that ponderosa has been sold in markets throughout the country under the commercial name "California white pine", and under other names using the word "white", for more than fifteen years prior to the institution of this proceeding, the so-called "true white pine" were able to command a higher price.

It is the conclusion of the court that, viewing the testimony in the light of all the facts of the case, it is insufficient to support findings that petitioners' use of the commercial name "California white pine" is an unfair method of competition or that its prevention would be in the interest of the public.

The orders complained of should be annulled and set aside. It is so ordered.

No. 6715

ALGOMA LUMBER COMPANY, ET AL., PETITIONERS

vs.

FEDERAL TRADE COMMISSION, RESPONDENT

*Judgment*

Filed April 4, 1933

Upon petition to review orders of the Federal Trade Commission.

This cause came on to be heard on the transcript of the record from the Federal Trade Commission, and was duly submitted:

On consideration whereof, it is now here ordered and adjudged by this court that the orders of the said Federal Trade Commission in this cause be, and hereby are, annulled and set aside.

[File endorsement omitted.]

FEDERAL TRADE COMMISSION, PETITIONER

*v.*

ALGOMA LUMBER COMPANY, BIG LAKES BOX COMPANY, California Fruit Exchange, Clover Valley Lumber Company, Davies-Johnson Lumber Company, Diamond Match Company, Ewauna Box Company, Feather River Lumber Company, Hobart Estate Company, Lassen Lumber & Box Company, Pelican Bay Lumber Company, and Red River Lumber Company, respondents

**PETITION FOR A WRIT OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE NINTH CIRCUIT**

The Solicitor General and the Chief Counsel of the Federal Trade Commission, on behalf of the Commission, pray that a writ of certiorari issue to review the decree of the Circuit Court of Appeals

for the Ninth Circuit, entered in this cause on April 4, 1933, which set aside the orders of the Federal Trade Commission requiring the Algoma Lumber Company and the eleven other respondents named above to cease and desist from certain alleged unfair methods of competition.

## OPINION BELOW

The opinion of the Circuit Court of Appeals (R. 1889) is reported in 64 F. (2d) 618.

## JURISDICTION

The decree of the Circuit Court of Appeals was entered April 4, 1933 (R. 1899). The jurisdiction of this Court is invoked under Section 5 of the Federal Trade Commission Act, c. 311, 38 Stat. 717, 719 (U.S.C., Title 15, Sec. 45), and under Section 240 (a) of the Judicial Code as amended by the Act of February 13, 1925.

## QUESTIONS PRESENTED

(1) Whether respondents' use of the commercial name "California white pine" is, under the circumstances of this case, an "unfair" method of competition.

(2) Whether the statutory requirement that the proceeding be "to the interest of the public" permits the court or the Commission to consider, or to give dominant consideration to, the probable effect of the Commission's order upon conservation of natural resources.

(3) Whether the court in reviewing an order of the Commission may, without holding that any of the Commission's findings of fact are not supported by testimony, weigh and appraise the evidence for the purpose of independently determining for itself, upon the evidence, whether the method of competition employed is unfair.

## STATUTE INVOLVED

The material portions of Section 5 of the Federal Trade Commission Act are set forth in the Appendix, *infra,* pp. 17–20.

## STATEMENT

Respondents are twelve of a large group of manufacturers on the Pacific Coast against which the Commission issued similar complaints on May 23, 1929, charging that their interstate sale of ponderosa pine under the name "California white pine" was an unfair method of competition (R. 5). After testimony had been taken before an examiner, the Commission entered orders against 39 corporations, including the 12 respondents, directing them to cease and desist from using the word "white" in conjunction with the word "pine" in connection with the interstate sale of lumber manufactured from ponderosa pine. The findings of the Commission upon which these orders were based may be summarized as follows:

Botanists, foresters and the buying public have long known certain pine species and the lumber

made therefrom as "white pines." The commercial "white pines" are the Northern white pine, the Idaho white pine, and the sugar pine. This grouping is confirmed by the cell structure of the wood (pars.[1] 5–7, R. 28–29). Northern white pine is also known by various other trade names, each of which includes the phrase "white pine" (par. 8, R. 29).

Lumber of the white pine species has a high degree of uniformity of qualities as a group and is preeminent for its high average of the following characteristics:

> Durability under exposure to weather and to other conditions of moisture, a great proportion of heartwood content as contrasted with sapwood content, lightness of color, lightness in weight, softness and evenness of texture, closeness and fineness of grain, freedom from resinous content, from shrinkage * * * and warping (par. 9, R. 29).

The public has long associated and still associates with lumber marketed under terms which include the words "white pine" the qualities above mentioned (par. 19, R. 31). In contrast with these qualities, ponderosa (respondents' wood) is not botanically a white pine (par. 26, R. 32), and its lumber has a high degree of variability, so that an order therefor may be filled with lumber of widely divergent qualities (pars. 35–41, R. 34–36). On an

[1] The numbered paragraphs of the Commission's findings will be referred to by the abbreviation "Par."

average, it shrinks and warps more, has greater resinous content, less softness and lightness in color and weight and less workability, than true white pine (pars. 42–44, R. 36). Ponderosa lumber also has a far less proportion of heartwood than that of the true white pines, the heartwood being the more durable portion of lumber (pars. 45–52, R. 36, 37). The public believes that white pine has great durability where exposed to the weather. This reputation is borne out by experience. In contrast with true white pine, ponderosa does not enjoy a reputation for durability where exposed to the weather and in practice becomes unserviceable in comparatively few years (pars. 53–57, R. 37, 38).

Ponderosa lumber, particularly in its sapwood content, resembles true white pine in appearance and is used for purposes for which true white pine is used. It is excellent for inside finish (pars. 58–59, R. 38). Ponderosa lumber was given terms which included the words "white pine" in other than far western trade in 1900 and by 1915 was so designated in national distribution. The original purpose for the adoption of this term was to distinguish this lumber from the hard "yellow pine" of the South. The purpose actuating its continuance is to associate this lumber with the true white pines in the public mind. Since 1924, however, more than half of the ponderosa lumber marketed has been sold as "Pondosa pine" (pars. 30–33, R. 33, 34). The true white pines, on account of

their superiority for certain purposes and their comparative scarcity, have consistently brought higher prices than ponderosa (par. 61, R. 39).

A substantial number of the retailers of lumber do not know that the so-called "California white pine" is not a true white pine and does not possess the true white pine qualities and are confused and misled by the use of that term for ponderosa lumber. Other retailers, who realize the distinctions, are aided in selling ponderosa upon orders for "white pine" by the use of trade terms for ponderosa which include the words "white pine." They are induced to this course by the price differential (pars. 64–69, R. 40, 41). The general public and most architects do not have the technical knowledge to distinguish ponderosa lumber, particularly in its sapwood content, from true white pine. They desire true white pine quality and usually order "white pine" for exterior uses. They actually receive in many instances, and in the regular practice of many retailers, ponderosa as "California white pine", in the belief that it is true white pine. Although the term "California white pine" has long been used for ponderosa lumber, it is still misleading and confusing to almost the entire buying public (pars. 70–74, R. 41, 42).

Use of the words "white pine" for this lumber has a money advantage because it associates the lumber with true white pine. Manufacturers selling white pine are placed at a trade disadvantage

by the use of trade terms which include the phrase "white pine" for the lower priced and, for certain purposes, inferior ponderosa lumber. Manufacturers selling ponderosa under the trade term "pondosa pine" also lose sales. Retailers prefer to stock with ponderosa coming to them under a trade term which includes the words "white pine" because it can be sold more easily as white pine. The public confidence in true white pine is thus lessened and the market for both true white pine and ponderosa is impaired for the respective purposes for which they are best adapted (pars. 73–80, R. 42. 44).

The court below set aside the Commission's orders. It stated that it did so upon the ground that the testimony did not support what it termed the Commission's "findings" that respondents' method of competition was unfair and that the proceeding would be in the interest of the public (R. 1899).

## SPECIFICATION OF ERRORS TO BE URGED

The Circuit Court of Appeals erred—

(1) In reviewing the testimony without reference to the Commission's specific findings of fact, but for the purpose of determining whether the Commission's conclusion that respondents' method of competition is unfair was supported by testimony.

(2) In weighing the evidentiary value of nomenclature approved by the Bureau of Standards.

(3) In holding that the testimony is insufficient to support the Commission's findings that respondents' use of the commercial name California white pine "is an unfair method of competition or that its prevention would be in the interest of the public", without having held that any of the Commission's specific findings were unsupported by substantial evidence, or that the Commission's findings did not support its orders.

(4) In disregarding the provisions of the Federal Trade Commission Act that the Commission's findings of fact shall be conclusive "if supported by testimony."

(5) In holding that the indirect effect of the Commission's order upon the conservation of forests is a relevant consideration in determining whether the proceeding was "to the interest of the public".

(6) In setting aside the cease and desist orders of the Commission.

## REASONS FOR GRANTING THE WRIT

I. This case presents two questions of law of general importance which have not been, but should be, decided by this Court. The first concerns the circumstances under which the use of a commercial name which may and does mislead purchasers, to the detriment of competitors, is an unfair method of competition.

Botanically pine is divided into two general classifications, white pine and yellow pine. Respondents make and sell in interstate commerce lumber from *pinus ponderosa*. This is botanically a yellow pine but, from the standpoint of its industrial uses, is more closely allied with white pine. Ponderosa is inferior to true white pine for some uses, and possibly is superior for other uses. It commonly sells at a lower price than true white pine so that there is a constant incentive to furnish ponderosa rather than true white pine when a contract merely calls for "white pine."

Respondents' product is ordinarily sold by the *producers* as "California white pine." It was marketed under this name in some of the far western States as early as 1886 and about 1915 shipments of ponderosa under this commercial name extended to the Atlantic Coast. Many producers of ponderosa in the so-called "Inland Empire" (Eastern Washington and Oregon, Idaho, and Western Montana) formerly sold their product as "Western white pine" (par. 29, R. 33). In 1924 the majority of them adopted the name "Pondosa pine" and this term is employed by the producers of slightly more than half of the ponderosa marketed (par. 33, R. 34). True white pine was widely known and used in this country many years before ponderosa lumber was first marketed.

Many of the purchasing public believe that any product designated by terms which include the

words "white pine" has the characteristics of true white pine and the use of the name "California white pine" thus causes confusion on the part of the purchasers and detriment both to producers of true white pine and to producers of ponderosa who do not market it under the name of white pine. (*Supra*, pp. 6, 7.)

This case presents the broad question whether, when a commercial name is used for two different products and therefore causes confusion, it is unfair for the producers with the lesser claim of right to the name to continue its use.[2] In other words, does the Federal Trade Commission Act authorize the Commission, where a commercial name was originally adopted without improper motive or purpose,[3] to compel use of more accurate and specific commercial names than those theretofore employed? There is also involved the subsidiary question of what degree of departure from the true meaning of a commercial name makes its use unfair.

We believe that there has been no case where this Court has considered these questions. *Federal Trade Commission* v. *Winsted Hosiery Co.*, 258

[2] It should be noted that the Commission's orders would not prevent respondents from advertising their product as having most of the qualities and characteristics of white pine.

[3] The Commission found that the respondents desire to continue use of trade terms, including the words "white pine", because these words associate ponderosa in the market with true white pine and afford respondents a substantial monetary sales advantage (par. 31, R. 34).

U.S. 483, held that use of the labels "Natural Merino", "Gray Wool", etc., for products which were in large part cotton was an unfair method of competition, although these labels had long been established in the trade and were generally understood by it as indicating goods partly of cotton. But the labels in question were indubitably false. Under these circumstances, as long as any deception resulted, their use was an unfair method of competition.

Cases involving deceptive trade names, commercial names, labels, or trade designations have become among the most important of those presented to the Commission under the Trade Commission Act. While precisely the same combination of circumstances may not arise in any other case, we believe that a review of the decision below by this Court will be of great assistance to the Commission in administering the Act. A review by this Court will tend to chart the authority of the Commission to compel abandonment of commercial names which are not patently false, but which nevertheless cause an important amount of confusion in the trade.

II. The second question of law of general importance is whether the statutory requirement that a proceeding be in the public interest permits the Commission or the court to consider the general social or economic effects which may indirectly result from the Commission's order.

The court below held that the Commission's orders are not in the interest of the public because they tend to stimulate the cutting of true white pine, the supply of which is far more limited than that of the ponderosa, thus promoting "the premature cutting of second growth timber" (R. 1898). It said (R. 1898):

> The public is not only interested in not being deceived in the material it purchases under a certain nomenclature, but possibly in an even larger sense in the conservation of the forests.

We submit that the public interest required by the statute is the interest of the public in being protected against unfair methods of competition. Every aspect of this question is relevant. But the statute does not mean that the public interest in preventing unfair competition is to be balanced against some other social or national interest, such as conservation of natural resources. For example, it does not mean that if a manufacturer is more just than his competitors in his treatment of employees, he may therefore be immune from a proceeding against him by the Commission to prevent him from selling his goods by means of false representations.

The holding by the court below that, in passing upon the public interest of the proceeding, it might consider indirect effects extraneous to those inci-

dent to the question of unfair competition tends to create uncertainty as to the meaning of the law. If the case is followed by other courts, the decision in cases arising under the Trade Commission Act may turn upon the divergent views of different courts upon questions of national policy wholly collateral to the issues directly involved.

III. A further reason for granting a writ of certiorari is that this is a case where large interests are involved and where the court below failed to observe the statutory provisions governing judicial review of orders of the Commission.

This is a test case which affects the entire white pine and ponderosa industries. Not only the respondents but also producers of white pine and producers of ponderosa who do not use a commercial name including the words " white pine ", are concerned with the outcome of this litigation. In the court below a brief in support of the Commission's orders was filed *amicus curiae* on behalf of nearly forty of respondents' competitors.

Under the Trade Commission Act the Commission's findings of fact are conclusive "if supported by testimony ", but what is an unfair method of competition is a conclusion of law which the courts must ultimately decide. Accordingly, the proper function of a reviewing court is to decide whether, upon the basis of the facts found by the Commission which testimony supports, the method of competition under attack is or is not unfair.

We submit that the court below did not observe these limitations upon its jurisdiction. It treated the Commission's ultimate conclusion, that respondents use an unfair method of competition, as a finding of fact. It therefore examined the testimony, not to determine which findings the testimony supported, but to determine whether they supported the Commission's ultimate conclusion. The necessary effect of this kind of a review is to substitute the judgment of the court upon the facts for that of the Commission.

Of the Commission's eighty specific findings of fact, the court discussed only one, and did not state that this one was not supported by testimony. But the court appraised for itself the weight of certain testimony and drew its own inferences concerning the facts. Thus, with reference to testimony that California white pine connotes to certain persons, including architects, white pine in general, the court said (R. 1895):

> Just why architects and lumber dealers should be confused in view of the aid and assistance furnished by the Government through the Bureau of Standards is not readily apparent. It may properly be assumed that architects have a general knowledge of the qualities of the various materials they specify.

The court also said (R. 1894):

> The weight to be given to testimony above outlined upon the question of the relative

> durability of the two lumbers is not as clear as it might otherwise seem to be, viewed in the light of other facts and circumstances.

It said that the inclusion of the name "California white pine" in a Simplified Practice Recommendation of the Bureau of Standards was "persuasive in a case of this character" and might be "decisive" (R. 1892).

The proper limitation upon the function of the court in reviewing an order of the Commission under the Trade Commission Act was stated in *Federal Trade Commission* v. *Pacific States Paper Trade Association*, 273 U.S. 52, 63:

> The weight to be given to the facts and circumstances admitted, as well as the inferences reasonably to be drawn from them, is for the commission.

This Court cannot properly be asked to review every erroneous decision of a Circuit Court of Appeals. But we believe that there has been a recent tendency on the part of these courts to weigh the evidence in Federal Trade Commission cases and to set aside the Commission's orders when their views as to preponderance differ from those of the Commission. This tendency, if it exists, is particularly insidious where the court, as here, does not discuss the evidence from the standpoint of its sufficiency to support the Commission's findings of fact, but from the standpoint of its sufficiency to support the ultimate conclusion that the method of competition

was unfair. When, furthermore, this error occurs in a case affecting substantially all producers in a large group of an industry, a question of sufficient general importance to warrant review by this Court would seem to be presented.

Wherefore, it is respectfully submitted that the petition for writ of certiorari should be granted.

## APPENDIX

Section 5 of the Federal Trade Commission Act, c. 311, 38 Stat. 717, 719 (U.S. Code, Title 15, Sec. 45), provides, *inter alia:*

> That unfair methods of competition in commerce are hereby declared unlawful.
>
> The commission is hereby empowered and directed to prevent persons, partnerships, or corporations, except banks, and common carriers subject to the Acts to regulate commerce, from using unfair methods of competition in commerce.
>
> Whenever the commission shall have reason to believe that any such person, partnership, or corporation has been or is using any unfair method of competition in commerce, and if it shall appear to the commission that a proceeding by it in respect thereof would be to the interest of the public, it shall issue and serve upon such person, partnership, or corporation a complaint stating its charges in that respect, and containing a notice of a hearing upon a day and at a place therein fixed at least thirty days after the service of said complaint. The person, partnership, or corporation so complained of shall have the right to appear at the place and time so fixed and show cause why an order should not be entered by the commission requiring such person, partnership, or corporation to cease and desist from the violation of the law so charged in said complaint. Any person, partnership, or corporation may

make application, and upon good cause shown may be allowed by the commission, to intervene and appear in said proceeding by counsel or in person. The testimony in any such proceeding shall be reduced to writing and filed in the office of the commission. If upon such hearing the commission shall be of the opinion that the method of competition in question is prohibited by this Act, it shall make a report in writing in which it shall state its findings as to the facts, and shall issue and cause to be served on such person, partnership, or corporation an order requiring such person, partnership, or corporation to cease and desist from using such method of competition. Until a transcript of the record in such hearing shall have been filed in a circuit court of appeals of the United States, as hereinafter provided, the commission may at any time, upon such notice and in such manner as it shall deem proper, modify or set aside, in whole or in part, any report or any order made or issued by it under this section.

If such person, partnership, or corporation fails or neglects to obey such order of the commission while the same is in effect, the commission may apply to the circuit court of appeals of the United States, within any circuit where the method of competition in question was used or where such person, partnership, or corporation resides or carries on business, for the enforcement of its order, and shall certify and file with its application a transcript of the entire record in the proceeding, including all the testimony taken and the report and order of the commission. Upon such filing of the application and transcript the court shall cause notice thereof to be served upon such per-

son, partnership, or corporation and thereupon shall have jurisdiction of the proceeding and of the question determined therein, and shall have power to make and enter upon the pleadings, testimony, and proceedings set forth in such transcript a decree affirming, modifying, or setting aside the order of the commission. The findings of the commission as to the facts, if supported by testimony, shall be conclusive. If either party shall apply to the court for leave to adduce additional evidence, and shall show to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for the failure to adduce such evidence in the proceeding before the commission, the court may order such additional evidence to be taken before the commission and to be adduced upon the hearing in such manner and upon such terms and conditions as to the court may seem proper. The commission may modify its findings as to the facts, or make new findings, by reason of the additional evidence so taken, and it shall file such modified or new findings, which, if supported by testimony, shall be conclusive, and its recommendation, if any, for the modification or setting aside of its original order, with the return of such additional evidence. The judgment and decree of the court shall be final, except that the same shall be subject to review by the Supreme Court upon certiorari as provided in section two hundred and forty of the Judicial Code.

Any party required by such order of the commission to cease and desist from using such method of competition may obtain a review of such order in said circuit court of

appeals by filing in the court a written petition praying that the order of the commission be set aside. A copy of such petition shall be forthwith served upon the commission, and thereupon the commission forthwith shall certify and file in the court a transcript of the record as hereinbefore provided. Upon the filing of the transcript the court shall have the same jurisdiction to affirm, set aside, or modify the order of the commission as in the case of an application by the commission for the enforcement of its order, and the findings of the commission as to the facts, if supported by testimony, shall in like manner be conclusive.

The jurisdiction of the circuit court of appeals of the United States to enforce, set aside, or modify orders of the commission shall be exclusive.

# In the Supreme Court of the United States

OCTOBER TERM, 1933

No. 240

FEDERAL TRADE COMMISSION, PETITIONER

*v.*

ALGOMA LUMBER COMPANY, BIG LAKES BOX COMPANY, California Fruit Exchange, et al.

*ON WRIT OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE NINTH CIRCUIT*

## BRIEF FOR THE FEDERAL TRADE COMMISSION

### OPINION BELOW

The opinion of the Circuit Court of Appeals for the Ninth Circuit (R. 1889) is reported in 64 F. (2d) 618. There were also preliminary proceedings with regard to the record on review. (R. 1883–1888; 56 F. (2d) 774.)

### JURISDICTION

The decree of the Circuit Court of Appeals was entered April 4, 1933 (R. 1899). Petition for certiorari was filed July 3, 1933, and was granted October 9, 1933. Jurisdiction of this Court rests

on Section 5 of the Federal Trade Commission Act, c. 311, 38 Stat. 717, 719 (U.S.C., Title 15, Sec. 45), and Section 240 (a) of the Judicial Code as amended by the Act of February 13, 1925.

QUESTIONS PRESENTED

1. *Falsity of label and comparative quality of products.*—Whether the labelling of forest products made from Pinus ponderosa (a species of yellow pine), by a term including the words "white pine" and their sale in competition with forest products made from true "white pine" is an unfair method of competition under Section 5 of the Federal Trade Commission Act (assuming the existence of competition and "public interest"); and whether, in addition to a misdescription of the character or kind of products, it must be shown that the misbranded articles were also inferior in quality.

2. *Effect of "simplified practice recommendation" of Bureau of Standards.*—Whether the "simplified practice recommendation" of the Bureau of Standards listing "standard commercial names" may be taken as ousting the Federal Trade Commission from jurisdiction to find, upon testimony, that one of the "standard commercial names" listed is falsely applied by certain manufacturers and constitutes an unfair method of competition; and whether, in considering the effect of misdescription upon consumers and retailers, the "simplified practice recommendation" of the Bu-

reau of Standards can be taken to demonstrate that the trade could not have been misled despite testimony and the finding of the Commission to the contrary.

3. *Usage, intent and desire to avoid identification with third product.*—Whether usage, innocence of purpose to deceive, or the desire to avoid identification with a third type of product may be taken to excuse misdescription which, otherwise, constitutes an unfair method of competition.

4. *Price differences.*—Whether, in determining confusion, as well as misinformation and injury to consumers and the trade in connection with the "unfairness" of the practice or the "public interest" in its suppression, it is material that (1) normally there was a difference in price between the misdescribed product and the true products, or that because of the misdescription (2) the misdescribed products brought a higher price than the same products truthfully branded, or (3) that the true products were forced down in price to meet the competition.

5. *Propriety of considering forest conservation in determining "public interest."*—Whether, in determining whether the "public interest" prerequisite was satisfied and sustained, the Circuit Court of Appeals could properly take account of the so-called public interest "in the conservation of the forests".

6. *Revaluation of the evidence by the lower court.*—Whether, despite testimony and the finding

of the Commission to the contrary, the Circuit Court of Appeals could properly "assume" that the lumber trade and "architects have a general knowledge of the qualities of the various materials they specify"; and whether the Circuit Court of Appeals, in reviewing the order of the Federal Trade Commission, is empowered to make its own independent appraisal of the evidence (regarding the falsity of the description of products and the effect of such misdescription upon both consumers, retailers and architects), draw its own inferences, reject the plain testimony of experts and other evidence in the record, ignore the Commission's findings, and annul the Commission's order based thereon.

## STATUTE INVOLVED

The relevant portion of Section 5 of the Federal Trade Commission Act is set forth in the Appendix, pp. 69–72, *infra*.

## STATEMENT

For a number of years complaints have reached the Federal Trade Commission that certain lumber producers in the West have labelled by terms including the words "white pine" the products manufactured from the species of tree known as Pinus ponderosa, whereas in fact that tree is not one of the "white" pines. Partly as a result of investigations, in 1924 some of the producers, notably those of the "inland empire" (including parts of Oregon, Washington, Idaho and Montana), volun-

tarily abandoned the practice and gave their products the trade name "Pondosa pine"; some California, Arizona and other producers did likewise; and a number of manufacturers, wholesalers and retailers of products made from Pinus ponderosa ceased the use of the phrase "white pine" to describe the lumber products made from Pinus ponderosa.[1] Certain western producers of lumber, however, after 1925 persisted in labelling the products of ponderosa by terms including the words "white pine." During the next five years "California white pine" became an even more important factor in the lumber market,[2] and finally proceedings were undertaken by the Commission which resulted in the orders to desist here involved.

The complaints issued by the Federal Trade Commission charged that respondents (who are

[1] See the finding of the Commission, Par. 32, R. 34. Before 1924 ponderosa from the "inland empire" was called "western white pine." A Michigan lumberman abandoned the term "California white pine" from the necessity of "absolute integrity in grades" which became apparent as a result of meetings called by Secretary of Commerce Hoover. (R. 339–340.) A California manufacturer testified to the same effect (R. 1184–1185) as did a Minnesota (R. 328) and other manufacturers (R. 860, 1019–1022) because it was "misleading to the consuming public" (R. 620). Some of these changes were made at the instance of the Federal Trade Commission. (R. 1753–1754, 1763.)

[2] Architects, retailers and manufacturers testified that "California white pine" had noticeably entered the market only within the "last four or five years." (R. 625, 644, 737, 749, 279, 536, 92, 72, 76.)

twelve of a group of fifty manufacturers on the Pacific Coast against which the Commission issued similar complaints on May 23, 1929) engaged in "unfair methods of competition in interstate commerce in violation of the provisions of Section 5" of the Federal Trade Commission Act in their use of the phrase "white pine" (almost always used with other qualifying words such as "California") in the manufacture and sale of forest products from a species of tree native to the mountainous regions of the Pacific slope, botanically designated "Pinus ponderosa", the latter being neither a true botanical white pine nor its lumber equal in quality or price to the true white pine. The complaints also charged that respondents were competitors of the manufacturers of the true white pine, and that the manufacture and sale of lumber, different in kind, quality and price, under the same or similar name, resulted in confusion and misled and deceived both the trade and consumers in numerous particulars. (R. 5–11.) The respondents answered (R. 12–23), the cases were consolidated (R. 24–26), and the testimony of nearly 200 witnesses was taken before examiners at hearings held in Massachusetts, New York, Michigan, Indiana, Illinois, Wisconsin, Washington, Oregon, California, Arizona, and New Mexico (R. 49–1877). Thirty-nine simultaneous reports of findings of fact and conclusions were filed and cease and desist orders were issued; of these, twelve are the subject of this proceeding. (R. 26, 46, 47.)

The Commission's findings of fact (comprising eighty paragraphs, R. 28–44, plus fifteen paragraphs of summary and conclusions of fact, R. 44–45) may be summarized and grouped as follows:

(1) Certain pine species have long been known to botanists, lumber technologists, and the public as the white-pine group (Par. (b), R. 44), particularly the northern white pine, the lumber products of which for more than 200 years have held a preeminent reputation with the trade and public for their qualities (Par. (c), R. 44; Par. 16, R. 30; Par. 17, R. 31), and as a result of this long and sustained reputation the consuming public understands that "white pine" is not merely a white colored pine but lumber made from a true white pine species. Par. (d), R. 44; Par. 19, R. 31. Not only do producers and dealers in true white pine describe their product as "white pine", but a substantial number of dealers in various species of pines sell only this true white pine upon orders for "white pine." Par. (f), R. 44; Par. 65, R. 40.

(2) Another species of pine, Pinus ponderosa, does not belong either botanically or in public understanding to the white-pine group (Par. (e), R. 44; Par. 26, R. 32), its lumber products being inferior to the true white pine in important qualities and for important uses. Par. (e), R. 44; Par. 10, R. 30; Par. 40, R. 35; Par. 43, R. 36; Par. 44, R. 36; Par. 52, R. 37; Par. 54, R. 37; Par. 55, R. 38; Par. 56, R. 38; Par. 57, R. 38. But ponderosa

products actively compete with true white pine in many uses. Par. 58, R. 38; Par. 59, R. 38. More than half the ponderosa is now marketed without the word "white" (e.g. "Pondosa Pine"). Par. 33, R. 34.

(3) Respondents, among others, are engaged in producing and marketing this latter species, Pinus ponderosa, the products of which they designate, nationally advertise, and sell under a term including the phrase "white pine." Par. (a), R. 44; Par. 3, R. 28; Par. 29, R. 33. The practice of labelling the products of ponderosa as "white pine" for sale beyond the places of production had become increasingly common until 1925; now somewhat less than half the ponderosa is so marketed. Par. (i), R. 45; Par. 30, R. 33; Par. 31, R. 33. A substantial number of retailers, who purchase these ponderosa products under trade names which include the phrase "white pine" (e.g. "California White Pine"), sell ponderosa upon orders for "white pine." Par. (f), R. 44. Some retailers make this substitution knowingly (Par. (f), R. 44; Par. 64, R. 40; Par. 65, R. 40; Par. 66, R. 40; Par. 68, R. 41), others do so without understanding that ponderosa is not white pine, though so labelled by the manufacturer, and differs from white pine in important qualities and uses. Par. (f), R. 44; Par. 65, R. 40; Par. 68, R. 41. These sales of ponderosa are directly promoted by the fact that dealers purchase ponderosa products under trade names which include the phrase "white pine." Par. (f), R. 44;

Par. 65, R. 40; Par. 67, R. 41. A further inducement for the substitution of ponderosa upon orders for "white pine" is the lower prices paid by the dealers for ponderosa lumber than for the true white pine. Par. (g), R. 45; Par. 61, R. 39; Par. 69, R. 41; Par. 76, R. 42. On the other hand, there are substantial numbers of producers and dealers in ponderosa who do not describe it as "white pine" but who use some other name such as "Pondosa Pine." Par. 33, R. 34.

(4) The use of the phrase "white pine" in connection with sales of ponderosa products frequently results in the unintentional purchase by retailers, architects, and consumers of ponderosa under orders for "white pine." Pars. (h) (o), R. 45; Par. 41, R. 36; Par. 62, R. 39; Par. 63, R. 39; Pars. 70–72, R. 41; Par. 74, R. 42. Similarly, some architects unknowingly approve ponderosa products when true white pine and the qualities thereof are sought by the buyer and the architect. Pars. (h) (o), R. 45. Thus, ponderosa is unwittingly secured for uses for which it is comparatively lacking in durability. Pars. (h) (k), R. 45; Par. 74, R. 42. Confusion is increased by the fact that ponderosa lumber frequently resembles that of the true white pine in several of the latter's obvious qualities and uses. Par. (j), R. 45; Par. 40, R. 35. As a result, the confusion tends to lower the public estimation of true white pine products (Par. (1), R. 45; Par. 80, R. 43), trade is diverted from competitors selling true white pine products (Par. (m), R. 45;

Par. 75, R. 42; Par. 77, R. 42) as well as from competitors who sell ponderosa products under trade terms which do not include the deceptive and misleading phrase "white pine." Par. (n), R. 45; Par. 75, R. 42; Pars. 78–79, R. 43.

The Commission concluded that respondents' acts "are to the injury and prejudice of the public and are unfair methods of competition in interstate commerce" in violation of the Federal Trade Commission Act (R. 46), and ordered respondents to cease and desist from using the word "white" in connection with the word "pine" to describe forest products made from Pinus ponderosa. (R. 47–48.)

Respondents filed a petition in the Circuit Court of Appeals for the Ninth Circuit praying that the Commission's orders be set aside. (R. 1879–1883.) There were preliminary proceedings with regard to the record on review. (R. 1883–1888.) The matter was argued and submitted, and the Circuit Court of Appeals concluded that the description of ponderosa as "white pine" was not an unfair method of competition nor its suppression in the public interest. The court, admitting that the lumber products were different in kind, determined that difference in quality was material and refused to accept the evidence and findings as to differences in quality and utility but, instead, relied upon certain statements in pamphlets issued by the Bureau of Standards and the Department of Agriculture. The court seems to have failed to consider the evidence in the record and the findings

of the Commission as to confusion and injury to both consumers and the trade and, in addition, seems to have assumed that injury because of price differences was essential and that there was no sufficient evidence to show such injury. Public interest in "conservation of forests" was held to outweigh the public interest in maintaining fair competition; since the court thought that if the use of white pine were maintained the white pine forests would be exhausted. The orders of the Commission were annulled. (R. 1889–1899; 64 F. (2d) 618.)

SPECIFICATION OF ERRORS TO BE URGED

The Circuit Court of Appeals erred—

(1) In reviewing the testimony without reference to the Commission's specific findings of fact, but for the purpose of determining whether the Commission's conclusion that respondents' method of competition is unfair was supported by testimony.

(2) In weighing the evidentiary value of nomenclature approved by the Bureau of Standards.

(3) In holding that the testimony is insufficient to support the Commission's findings that respondents' use of the commercial name California white pine "is an unfair method of competition or that its prevention would be in the interest of the public", without having held that any of the Commission's specific findings were unsupported by substantial evidence, or that the Commission's findings did not support its orders.

(4) In disregarding the provisions of the Federal Trade Commission Act that the Commission's findings of fact shall be conclusive "if supported by testimony."

(5) In holding that the indirect effect of the Commission's order upon the conservation of forests is a relevant consideration in determining whether the proceeding was "to the interest of the public."

(6) In setting aside the cease and desist orders of the Commission.

## SUMMARY OF ARGUMENT

### I

The term "white pine" applied to the products of Pinus ponderosa, admittedly a species of yellow pine, is false and therefore "unfair" under the Trade Commission Act (*Federal Trade Commission* v. *Winsted Hosiery Co.*, 258 U.S. 483), despite the "Simplified Practice Recommendation" of the Bureau of Standards which is both inapplicable upon its face and immaterial, and regardless of the comparative qualities of ponderosa since the unfairness of the misdescription is not altered by offering "an exactly similar article or one equally as good" (*Federal Trade Commission* v. *Royal Milling Company*, 288 U.S. 212, 216). (It may be noted, however, that there are admitted differences in the properties or character of the two species of pine, and furthermore not only substantial evi-

dence but the weight of the evidence supports the finding that ponderosa is inferior, as compared with the true white pines, for certain purposes—particularly for exterior uses.)

Length of use of untrue terms is immaterial since misdescription and deception are shown; in any event substantial evidence discloses that confusion and demoralization in the industry and injury to the public has increased and has become important only in the last five years. Similarly, deception being shown, intent to mislead is immaterial (*Federal Trade Commission* v. *Winsted, supra*); moreover, there is ample evidence to disclose improper state of mind.

Competition between "California white pine" products and both true white pine and ponderosa products not labelled as "white" pine is established by the evidence, found by the Commission, and its existence admitted by the court below; accordingly, this case does not fall within the rule of the *Raladam* case, where there was not even "evidence as to the existence of competitors." *Federal Trade Commission* v. *Raladam Co.*, 283 U.S. 643, 653.

## II

Misdescription of the product and misuse of the term "white pine", which is shown to have settled significance in the trade and in the minds of consumers, the practice of substitution of ponderosa products upon orders for "white pine", and the

general confusion and demoralization in the pine industry and trade renders the practice (of using the word "white" to describe the products of ponderosa, a yellow pine) both an "unfair method of competition" and within the "public interest" under the Federal Trade Commission Act. *Federal Trade Commission* v. *Winsted Hosiery Co., supra.* Price differences in the two species of lumber are immaterial, but in any event differences in price are established and are shown to aggravate the unfairness of the situation.

III

The "public interest" requirement is amply sustained by the record. *Federal Trade Commission* v. *Winsted Hosiery Co.,* 258 U.S. 483, 493, 494; *Federal Trade Commission* v. *Raladam Co.,* 283 U.S. 643, 649, 651; *Federal Trade Commission* v. *Klesner,* 280 U.S. 19, 28. The matter of conservation of forests is wholly collateral and immaterial, and even if conservation were pertinent, the record supports the finding and order of the Commission.

IV

The Circuit Court of Appeals exceeded its jurisdiction by making its own independent appraisal of the evidence and disregarding substantial and specific evidence in the record as well as ignoring the findings of the Commission which are "supported by testimony." *Federal Trade Commission*

v. *Pacific States Paper Trade Association*, 273 U.S. 52, 61, 63.

## ARGUMENT

### I

### THE USE OF THE TERM "WHITE PINE" APPLIED TO PINUS PONDEROSA IS FALSE AND IS AN "UNFAIR METHOD OF COMPETITION" UNDER THE FEDERAL TRADE COMMISSION ACT AND DECISIONS OF THIS COURT

The evidence discloses that Pinus ponderosa, from which respondents manufacture forest products, is not "white pine" but is, instead, a species of yellow pine. This is well summarized in the testimony of a professor of forest products in Yale University with twenty years' experience and specialization in classification who testified that Pinus ponderosa "is in the pitch-pine group," the "white pines or soft pines being ordinarily softer, much more uniform in texture and growth, and less highly resinous than the pitch pines and hard pines" and given a sample an expert can tell the differences "very definitely" as between the "yellow pine group" and the "white pine group." (R. 152, 154, 155.) The trade, also, generally testified to the distinction in kind between the yellow and white pines; thus, retailers do not consider "California white pine" as a white pine (R. 97, 92) or a "genuine white pine" (R. 485, 277) but regard it as "in the nature of the yellow pine" (R. 88–89) or "hard pine" (R. 96, 104) and not "the equal" of white pine (R. 504), there being a "difference as between day and night" (R. 297); and architects

and builders testified to the same effect (R. 78 and see *infra,* pp. 24–32). Furthermore, the United States Forest Service has been designating ponderosa "in its timber sales and in its publications" as "western yellow pine" while Idaho white pine (a true white pine) has been designated as "western white pine." (R. 1080.) Even in California "where it grows" the residents refer to ponderosa as "yellow pine" (R. 1152, 1164, 1252, 1258, 1326); a California retail lumberman testified that "nearly all of our customers are recently from the East, and their idea of white pine is based on their experience in the eastern markets of the northern white pine" (R. 1221); some California manufacturers and retailers call ponderosa "pondosa" (R. 1184–1185, 1247) and others retail it as "yellow pine" (R. 1232, 1460) but wholesalers more often misdescribe it as "California white pine" (R. 1234).[3]

In Arizona some producers of ponderosa call it "Western yellow pine" or "Arizona soft pine" (R. 1666). Indeed, respondents admit the difference in kind. As one of their counsel said: "Let me state very definitely that we concede, and we have stated right from the start, that Pinus ponderosa has normally been classified in the so-called yellow pine group * * *" (R. 164); it is not respondents' position that "technologists in lumber or lumber experts had graded * * * Pinus

[3] Even as a description of locality the term "California" white pine is untrue because much of it is produced in southern Oregon (R. 169, 1454, 1522).

ponderosa and placed it into a wrong designation or grade" but that "it was rather unfortunate and misleading that ponderosa pine had been classified in the group of pines which are referred to commonly as hard or pitch pines." (R. 165.) The falsity of the description is generally acknowledged by respondents' witnesses (R. 393, 437, 441–442, 1357) particularly when "white pine" is desired (R. 1358), and it is admitted that a retailer who "shipped California white pine on an order that specified white pine" would be "very much in the wrong" (R. 445).[4]

The Circuit Court of Appeals itself stated that "Pinus ponderosa belongs botanically with the so-called 'yellow pine' group" and that "the only species of true botanical 'white pines' of commercial importance are northern white pine, and two Pacific Coast varieties—Idaho white pine and sugar pine"—and also stated that "in the field of commerce and industry there are but two groups of pine lumbers—the white and the yellow"—which grouping "primarily * * * reflects the industrial utility of the several lumbers". The court thought, however, that this difference between the pines was minimized by some testimony to the effect that "California white pine" falls in the yellow pine group because "it has three long needles

[4] An occasional witness for respondents, however, denies the difference as a practical matter (R. 1447, 1457, 448–458) and one expert even denied the validity of the classification into white and yellow pines (R. 1832).

in each bundle, whereas the white pines have five." (R. 1890, 1892; 64 F. (2d) 618, 620.) But the distinction according to the number of "needles in each bundle" is not strictly true since the number of needles does not always determine the classification of the pines (as one of respondents' own witnesses, a forester and teacher, testified). (R. 1367.) A real difference is, instead, the "cell structure" of the wood (R. 699, 1329, 1633–1634), there being certain cells or projections in yellow pine and ponderosa absent from the white pines (R. 669) which may explain the susceptibility of ponderosa to rot and the differences in durability (R. 1331).[5]

*The "simplified practice recommendation" of the Bureau of Standards*

The court below also believed that the effect of the admitted misdescription was altered by a publication of the Bureau of Standards (Respondents' Exhibit No. 31) entitled, "Lumber—Simplified Practice Recommendation", which listed as "standard commercial names" the various kinds

[5] It is, of course, immaterial that other groupings beside the division into white and yellow pines could be devised (as attempted by respondents' expert witness; R. 1826). One expert witness for respondents did attempt to deny the validity of the classification between white and yellow pines (R. 1819–1845) but the same witness testified that the woods could be distinguished on "histological" or "anatomical" examination (R. 1836). It is also significant that all the wood experts testified that the pines could be distinguished upon either casual or microscopic examination of cell structure.

of pines including "California white pine." This was suggested by a decision of the Circuit Court of Appeals for the Seventh Circuit (*Kirk & Co.* v. *Federal Trade Commission,* 59 F. (2d) 179, 183), but it is unsound for the following reasons:

(1) The publication of the Bureau of Standards does not purport to go into the relation of one trade name to another or to determine the fairness of their use. The Bureau of Standards merely "recommends" a "simplified" commercial practice and does not attempt to prevent deception. In this connection it may be noted that the Bureau of Standards is only interested in "eliminating unnecessary sizes and varieties" and "the division's activities are not mandatory." *National Bureau of Standards—Its Functions and Activities,* Department of Commerce, Circular No. 1, Second Edition, pp. 93, 94. "Simplified practice is a method of eliminating superfluous variety through the voluntary action of an industrial group" and not the Government but a representative of the industry is selected to "ascertain" the "current practice." Furthermore, "the department in no case assumes the prerogative of taking final action in connection with a simplified practice recommendation", for "the Department of Commerce has no 'police powers'" or "regulatory powers with respect to Simplified Practice" and hence "it is highly desirable that this recommendation be kept distinct from any plan or method of governmental regulation or control." "The Department cooperates

only when requested to do so * * *" *The Purpose and Application of Simplified Practice,* National Bureau of Standards, Department of Commerce, July 1, 1931, pp. 2, 7, 10, 17. It is also significant that this same Department of Commerce called conferences which resulted in further units of the industry abandoning the word "white" in the description of products made from ponderosa. (R. 339–340.)

(2) The functions of the Bureau in no way overlap or supersede the functions of trade regulation, and the Bureau is not authorized or empowered to perform the functions of the Federal Trade Commission and determine the fairness of trade names. The statutory functions of the Bureau are the "custody", "comparison" and "construction" of standards, the "testing * * * of standard measuring apparatus", "solution of problems", and the "determination of physical contents and the properties of materials, when such data are of great importance to scientific or manufacturing interests and are not to be obtained of sufficient accuracy elsewhere." C. 872, Sec. 2, 31 Stat. 1449; U.S.C., Title 15, Sec. 272.

(3) The determination (such as it was) of the Bureau of Standards was a matter of conference and tacit approval and not a decision upon the merits after hearing. (R. 1361.)

(4) The admitted practice of another department of government, the United States Forest Serv-

ice, designates ponderosa as western "yellow" pine. (R. 1080.)

(5) The testimony preponderates to the effect that the trade and consumers were misled and confused to their injury (see *infra,* divisions II, III), despite the "simplified practice recommendation" of the Bureau of Standards.

(6) And, finally, the decisions of this Court do not permit such effect to be given findings (if the action of the Bureau of Standards may be called such) made in connection with "quite diverse administrative functions", particularly where "neither the administrative nor the statutory classification has * * * been uniform." The action of another administrative agency "in any event is not controlling * * *." *Piedmont & Northern Ry.* v. *Commission,* 286 U.S. 299, 312. In *Brougham* v. *Blanton Manufacturing Company,* 249 U.S. 495, 499, this Court said of the deceptive use of a trade name that "the test of the product is the meat inspection laws, not the trade-mark laws, and therefore we are concerned with the action of the Department of Agriculture and not with that of the Interior Department."[6]

[6] Thus, the action of a Corporation Commission in granting a charter and approving a name therefor is immaterial upon a bill to enjoin the use of the name. *Standard Oil Co. of New Mexico* v. *Standard Oil Co. of California,* 56 F. (2d) 973, 975. So, too, the action of the Patent Office in approving or disapproving a trade mark or name is immaterial upon a bill to enjoin or upon proceedings to enforce a contrary order of another administrative agency. *Brougham* v. *Blanton*

*Differences between ponderosa and white pine and their comparative qualities and uses*

The term "white" being false technically (*supra*, pp. 15–18) and in popular as well as commercial understanding (*infra*, pp. 42–44) when applied to Pinus ponderosa, it is unnecessary to show further that there is material difference in the quality of the products, for this Court has held that the unfairness of the practice is not altered by offering "an exactly similar article or one equally as good." *Federal Trade Commission* v. *Royal Milling Co.*, 288 U.S. 212, 216 (1933). Nevertheless, the court below assumed that if the lumber sold under some such name as "California white pine" did in fact possess "substantially the same qualities possessed by the white pines of commerce" then there was no unfairness. (R. 1892; 64 F. (2d) at 620.) In

---

*Manufacturing Co., supra; Straus* v. *Notaseme Company*, 240 U.S. 179; *Federal Trade Commission* v. *Kay*, 35 F. (2d) 160; *Marietta Mfg. Co.* v. *Federal Trade Commission*, 50 F. (2d) 641. The decision of a single Circuit Court of Appeals (relied upon by the lower court in the case at bar) to the effect that the determination of the Commission is binding "were it not for the action of the Bureau of Standards" (*Kirk & Co.* v. *Federal Trade Commission*, 59 F. (2d) 179, 182) is both unsound and contrary to the prior decision of the same court in refusing to give weight to the approval of a trade mark by the Patent Office (*Federal Trade Commission* v. *Kay*, *supra*). Nor can it be said that the decision in *Federal Trade Commission* v. *Kay* illustrates the applicability of determinations by the Bureau of Standards, because there the Commission itself submitted materials to the Bureau for test and, together with other evidence, received and gave credence to the testimony of a witness from the Bureau.

addition to the fact that such inquiry is expressly immaterial under the decision of this Court, the evidence as to quality and durability, while conflicting to some extent, sustains and greatly preponderates in favor of the findings that ponderosa is inferior to white pine for important purposes. The court below selected only parts of the evidence and disregarded the great mass of testimony.[7]

*Differences in character.*—Regardless of whether white pine or ponderosa is superior in quality, it is generally conceded in the testimony that there are material differences in the lumber products. As one witness testified, the products are "different in color, different in texture" and "there is a very distinct difference in * * * winter and summer wood—there are grain differences." (R. 287.) Ponderosa varies more in its character than

[7] The lower court found doubt in the testimony "viewed in the light of other facts and circumstances." (R. 1894; 64 F. (2d) 618, 620–622.) In addition to the paucity of the evidence examined by the lower court in its opinion, it is to be noted that the bulletin of the Department of Agriculture upon which the court relied treats only of the "mechanical" properties of forest products (R. 774–780, 806–812, 1367–1369) and of the "Strength of North American Woods" for which latter there was "no new basic data" (R. 781), whereas the question is not strength of materials but the different utilities of the white and yellow pines, particularly the superior lasting qualities of white pine when exposed to weather. It is also to be noted that there was an insufficiency of data supporting these publications (R. 792–793), and one of respondents' expert witnesses testified that his experience led him "to believe that the Government's statistics were in error on certain points" (R. 1393).

do the true white pines (R. 152), "some grades" of ponderosa "so far as the organic properties are concerned being like the hard pines * * * and some more like the pitch pines" (R. 158); and there is also greater variation in the wood of a single tree "between the portions of the growth layers" than in the true white pines. (R. 152, 153, 154.) In short, ponderosa being less uniform in character than the white pines, the risk of receiving lumber of different characteristics than those desired is greater than where white pine is secured. (R. 108, 267, 341, 342, 543, 834, 876, 1081–1083, 1141, 1145, 1153, 1180, 1321, 1328–1329, 1455, 1696–1697.)

*Differences in quality and utility.*—Not only are there differences in the products, but the evidence supports the Commission's findings that ponderosa is actually inferior for important purposes and "more subject to shrinkage and warping * * * and more difficult to work than any of the members of the white-pine group" (Par. 10, R. 30) and "true white pine lumber is far more durable than ponderosa lumber, especially when exposed to weather conditions" (Par. 40, R. 35).[8] To illustrate, a specialist in wood classification testified that the more uniform white pines, including the western true white pines, are noted for their quality of staying "in place" and do "not shrink much or swell much." (R. 156.) A Detroit manufacturer of doors and screens testified that

[8] See also the findings of the Commission: Par. 8, R. 29; Par. 43, R. 36; Par. 44, R. 36; Par. 54, R. 37; Par. 55, R. 38; Par. 56, R. 38; Par. 57, R. 38.

"California white pine" is regarded as "inferior" in that "it does not stay good, does not mill as well, and does not hold paint so well, does not work up so clear." (R. 515.) A Brooklyn retailer testified that "California white pine", which was "coming into vogue", is not "equal to the Idaho white pine in its quality" since the latter is "softer and it will stand up better; it won't warp and twist, such as California white will." (R. 253.) Another retailer testified that "if a man wants good pine, if he asks for good pine, he does not want California white pine, because it does not work up and it is not as soft a pine, and it does not answer the purposes for a good job" because "it is apt to twist, warp, and it has this heavy grain which is apt to show through paint" and "will not last as genuine white pine." (R. 275–276.) A manufacturer testified that he was induced by "Pacific Coast people" to try ponderosa under the name of "California white pine" but that in following this suggestion he "did not fare so well; it did not stand up so good" but he continued to use it anyway though he knew that true white pine was better "on account of the texture" since "it does not twist or warp as bad as the others" and has greater lasting qualities. (R. 259–263.) Similar testimony was given by numerous wholesalers, retailers, manufacturers, and a lumber grader (R. 572–573, 543, 390, 291–293, 904, 1259, 980, 1250–1251, 1278), by a member of the staff of the United States Forest Products Laboratory (R. 816–817, 821), by the

supervisor of the Sierra National Forest (R. 1264), and by the former chief of the United States Forest Reserves (R. 1081, 1090).[9]

In addition to its greater variation in character and quality, the inferiority of ponderosa in several particulars and for certain purposes is set forth in the testimony in the following respects:

*Sapwood and heartwood.*—The sapwood of any species of tree is inferior in durability to the "heartwood" (R. 156) and ponderosa runs more to sapwood than to heartwood in comparison with the true white pines. (R. 153, 154.) A lumber executive of 40 years' experience testified that ponderosa "runs much heavier to sap than this white pine" and to increase the confusion "the sapwood of pondosa pine is almost equal in appearance" to the heartwood of white pine. (R. 115.) A Minnesota manufacturer testified that "the big reason we prefer" white pine "is that it is obtainable practically free from sap" while it is not "feasible to make frames from the ponderosa tree, confining yourself to heartwood." (R. 326.) A manager of

[9] A wholesaler who was a witness for respondents testified that "for common boards Idaho white pine is superior to California white pine" because "the knot is sounder; the tree produces smaller, sounder knots" and Idaho white pine is recommended "to stay in place rather than California" where "exposed to heat and cold, as any wood would be exposed, no matter what it is used for" (R. 443). Of course, some of respondents' witnesses denied the superiority of the true white pines. (R. 134–135, 1417, 1418, 1444, 1453, 1485, 1490, 1527, 1550, 1573, 1592, 1612, 1809–1810.)

one of the respondent companies identified a piece of lumber from his plant as "all sap" and "a typical specimen of Pinus ponderosa" of "the very highest type" and "the highest grade." (R. 448–449, 450.) It was also shown that in manufacturing sash and frames from white pine the sapwood could be turned in so as not to be exposed to the weather. (R. 175, 199, 200, 215–217. It was also disclosed that inquirers of the Government Forest Products Laboratory are advised that "the heartwood of the white pine has more decay resistance, will give longer service under conditions favoring decay than the heartwood of Pinus ponderosa" and "the mill run of the white pine probably would average higher in durability under decay-producing conditions than the mill run of Pinus ponderosa, because we believe the mill run of the white pine has a lower percentage of sapwood than the mill run of Pinus ponderosa." (R. 821.)[10]

*Hardness.*—Ponderosa was also shown to differ in "hardness and evenness of the grain" (R. 78–79), being "very much harder than the heartwood of

[10] This was the testimony of manufacturers (R. 1003, 1249, 1278, 670), salesmen (R. 412, 1320, 1325), retailers (R. 1230), respondents' witness (R. 1556), lumbermen (R. 986–990), a lumber grader (R. 1211), a United States Forest Service inspector (R. 1153–1157), a supervisor of the Sierra National Forest (R. 1266), and members of the staff of the United States Forest Products Laboratory (R. 763, 795–801, 821). An occasional witness for respondents testified to the contrary. (R. 435, 1375, 1419, 1801.)

white pine" (R. 115), "more apt to check and split" than the clear white pines (R. 97) and "not satisfactory to the customers" because it is "too hard" (R. 51).

*Resin.*—Again, ponderosa was shown to be resinous and more "pitchy" as compared with white pines (R. 1603, 1650, 1210), to such an extent that experiments were conducted to discover whether turpentine could be produced from ponderosa (R. 968). An architect testified that "California white pine discolors." (R. 512.)

*Paintability.*—A Chicago retailer testified that "undoubtedly" white pine stands up better "without paint" than "California white pine." (R. 613.) In addition, ponderosa is inferior in "paintability" according to the testimony of one of the staff of the United States Forest Products Laboratory. (R. 802–805.)

*Susceptibility to rot.*—As a result of these characteristics of ponderosa, it is more susceptible to rot than the white pines. (R. 1168, 1221–1223, 1248, 1258, 1319.) Consequently, the true white pines are much preferable for exterior uses. An architect and architectural editor testified that "California white pine" is not "a satisfactory substitute for genuine white pine to use in exterior of a building, in any way, shape, or form" though it is "reasonably satisfactory for interior purposes" because California white pine "disintegrates and has a life of from three to five to seven years whereas the life of a white pine is still to be noted" and

true white pine lumber, on the other hand, "is still alive in all cases * * * examined" so that among architects "for durability and general utility for exterior finish" true white pine "is the wood preeminent." (R. 307, 308, 311.) A Boston lumber dealer testified that white pine was the "best wood for outside" and California white pine was "never" recommended because it would not "stand so well under the weather" but would "check and split quicker and then it will commence to get a little decayed" and "will rot quicker than the other pines." (R. 104–105.) A Detroit lumber wholesaler and retailer testified that "real white pine" is "most assuredly" better "for exterior purposes" because "it does not rot as soon in this climate" as shown by experience whereas "ponderosa" had "rotted in two or three years." (R. 467.) New York dealers testified that Idaho white pine "would stand the weather better" than California white pine and that either California white pine or "ponderosa" were good for interior work "exclusively." (R. 283, 287.) A Minnesota manufacturer said that "the genuine white pine is less prone to split and warp, which are points in its favor for exposed work" (R. 326), and the testimony of manufacturers (R. 1181–1183, 1276), wholesalers (R. 379–380), architects (R. 206–208, 741), retailers (R. 650–651, 659–660, 733, 750) and of one of respondents' witnesses (R. 406) was to the same effect. The truth of this conclusion is illustrated by

testimony regarding the white pine used in colonial structures which are still standing in the Atlantic States as well as by testimony regarding old structures in California.[11]

*Frequent replacement of ponderosa.*—On the other hand, it was shown that exteriors made from ponderosa soon decayed and had to be replaced. Thus, a lumber dealer testified that his experience had shown that ponderosa "rotted in two or three years and we had to replace it" (R. 467), another testified that when "pondosa" was used for ex-

[11] Thus, Christ Church built in 1761 and the old houses in Cambridge, such as the Longfellow house, are all of white pine and in "excellent condition", with very little replacement if any (R. 58–63). So, too, the Fairbanks house, built in 1636 and said to be the "oldest frame structure now standing in the United States, had not had the exterior replaced until about 40 years ago and had never been painted" (R. 66–67). The same testimony was given as to other structures in New England (R. 69–71, 143–149). The white pine from which these houses were built was said to be "much the same, clear and free from knots" as the Idaho and other white pines of today (R. 65, 182, 648) if indeed the latter were not better than the older eastern white pine (R. 84). Old structures in California built of sugar (white) pine also survive (R. 1165–1167, 1313–1318). On the other hand, more recent structures built of ponderosa or so-called California white pine were found to have begun to rot in a comparatively few years, such as the "Towne house" in Connecticut, built in 1914, and a house in Georgia (R. 222–227).

In rebuttal, respondents offered evidence of the lasting qualities of ponderosa in New Mexico (R. 1693–1781) and in the interiors of the ancient Hopi structures (R. 1688–1692), but evidence of structures in places of altitude and dryness is immaterial because there the lack of humidity "has a tendency to preserve wood" (R. 1710).

teriors, or doors or sash he had to take it out "and replace that with northern pine" whereas "Idaho white pine" and other true pines were "durable for uses where exposed to the weather" (R. 472–475), another testified that in his own house ponderosa "rotted out in five years" but he nevertheless continued to sell "pondosa pine as white pine on orders for white pine" for exterior use because the true white pines were "higher in price" (R. 528–529), and another testified that "pondosa and California white pine" in numerous cases had "rotted out under the paint and siding in cornice lumber" disclosing that Idaho white pine was "undoubtedly" the "more durable" of the western pines (R. 599). A wood technologist testified that of cases of wood sent to him for analysis he had had "more cases of Pinus ponderosa than any other" showing "failure when exposed to the weather" and discoloration. (R. 157.) This was the general line of testimony by dealers and owners. (R. 487–489, 661–662, 700–703, 609–610.) For the same reasons true white pine, such as Idaho white pine, is preferred for sash and trim, as shown by the testimony of dealers (R. 467, 1220, 1229), a staff member of the United States Forest Products Laboratory (R. 761–762), the former chief of the United States Forest Reserves (R. 1084–1085), a San Francisco architect (R. 1158–1160) and others. And white pine, particularly Idaho white pine or sugar (white) pine, is demanded for the exacting uses of pattern work (R. 648–649, 52, 101–102,

347–348, 522–523, 557, 558, 874, 1356, 1359, 1700), as illustrated by the testimony of a sales representative of one of the respondents below (R. 436), the former chief of the United States Forest Reserves (R. 1093), and witnesses for respondents (R. 1425, 1553) though an occasional witness flatly denied the fact (R. 1371, 1057 but see 1065).

*Usage, intent and purpose*

Respondents in these proceedings have insisted that the labelling of ponderosa as "white pine" is innocent and without intent or purpose to injure competitors or mislead the public. Intent to mislead is not enumerated in those decisions of this Court dealing with the essentials in misdescription cases. Furthermore, this proceeding is not brought by private parties but by a governmental agency—it is brought "in the interest of the public", who are unconcerned with respondents' motives. Respondents are presumed to have intended the necessary consequences of their acts, shown to be false, misleading, confusing and injurious.[12] There is, also, ample testimony to show improper motive as

[12] See, for example: *Straus* v. *Notaseme Company*, 240 U.S. 179, 180–182; *Addyston Pipe and Steel Co.* v. *United States*, 175 U.S. 211, 243; *United States* v. *Patten*, 226 U.S. 525, 543.

*Juvenile Shoe Company* v. *Federal Trade Commission*, 289 Fed. 57, 59, certiorari denied, 263 U.S. 705; *Royal Baking Powder Company* v. *Federal Trade Commission*, 281 Fed. 744, 752; *Indiana Quartered Oak* v. *Federal Trade Commission*, 26 F. (2d) 340, 342; *Federal Trade Commission* v. *Balme*, 23 F. (2d) 615, 621, certiorari denied, 277 U.S. 598.

well as deliberate deception. The state of mind of the trade in passing off ponderosa, aided by the various labels including the word "white", is illustrated throughout the record in such statements as that wholesalers are "not in a position to prevent" substitution by retailers (R. 194), that "the lumber dealer is not particularly interested in the durability of the lumber * * * his customers are supposed to know what they want and all that he is in business for is to give them what they want" and the trade is not "particularly interested as to whether it is genuine white pine or not" (R. 282, 283), that the "speculative" trade is "not particularly interested in the longevity of the wood" but is "more interested in a smooth, good-appearing lumber at a low price" (R. 493) and "speculators don't care what it is" (R. 300), and that retailers sell ponderosa since "carpenters, manufacturers and architects" ordinarily "don't know the difference" (R. 234, 235). The wholesaler or manufacturer "cuts out of the bill of lading the name and the origin of the shipping point" and insists that "the Interstate Commerce Commission allows" this, so that retailers "can never establish the fact" (R. 232). In soliciting, the California people "did not use the term 'true' but they called it white pine" (R. 258–259), or represented it as "genuine white pine" (R. 243), and "showed" retailers "inducements" (R. 258–259). Another retailer testified that he ordered white pine "stamped as genuine white pine" only "where it goes up in its original board" and can

be seen. (R. 552.) The president of one of the respondent companies having the largest production of "California white pine" admitted that the use of the term "has a monetary advantage" to respondents "because it classifies our woods with the other woods that have been known to the trade, including itself, as white pine." (R. 1551–1552, 918–919.) It is also represented in selling ponderosa that "genuine white pine was gone" (R. 499, 563), whereas supply in commercial quantities is established both by statistics and the testimony of experts (see *infra*, page 66); and the desire of retailers to stock with only one kind of pine served "to build up the myth that there was no more white pine" (R. 305). Regardless of original purpose, present intent is demonstrated in the record (R. 1457–1458, 1542).

The court below did not consider intent an essential factor but it did mention that ponderosa was called "white pine" in order to avoid identification with the "yellow pines" of the South. However, California manufacturers cannot, in avoiding classification with southern yellow pine, falsely assume identity with northern white pine. Ponderosa, in addition to being a yellow pine, may be said to be more nearly like Arkansas soft (yellow) pine than anything else, as disclosed, for example, in the testimony of the former Chief of the United States Forest Reserves (R. 1082; see also 124–125, 155, 116); it is an intermediate wood between the true white pine and southern yellow pine (R. 104, 1082).

The court also mentioned that since 1915 ponderosa has been marketed nationally as "white pine." However, California "white" pine has been in general use just long enough to disclose the differences in quality and utility. As a Detroit architect testified, the "market condition of pine is one that we are just beginning to appreciate" (R. 525). Despite the fact that, upon earlier investigation by the Commission, about half the ponderosa producers agreed in 1924 to call their product "pondosa pine", the confused market condition has become pronounced since that time.[13] In any event, this Court has determined that "the fact

[13] For example, an architect testified that the trouble in terminology arose "three years ago" (R. 536), another said that "lately" there was "great confusion as to what white pine is" (R. 644), a Minnesota manufacturer had used California white pine "four years", and a Wisconsin retailer had handled California white pine "just in the past two or three years" (R. 737) and another "about five years" (R. 749), a New York retailer testified that California white pine had been on the market as such "about five or six years" (R. 237) and another said "not over five years" (R. 279), a Chicago retailer testified that substitutions of California white pine upon orders for "white pine" had been a practice "within the last four or five years" (R. 625) and another witness said that it had been a practice only during the last five or ten years (R. 72, 76), and it was said that California white pine had been known in New England for "five or six years" (R. 92), while a distributor of lumber products throughout the region from the Great Lakes eastward testified that he had only known California white pine for "probably ten years" (R. 440), and one of the largest retailers in Chicago testified that the billing and labelling of pine by western manufacturers "has changed so in the past five years" that it is impossible to say generally just how shipments are represented (R. 621).

that misrepresentation and misdescription have become * * * common" is immaterial, because "a method inherently unfair does not cease to be so because those competed against have become aware of the wrongful practice." *Federal Trade Commission* v. *Winsted Hosiery Co.*, 258 U.S. 483, 493–494. This Court will recall that long usage was argued in the *Royal Milling* case, but the argument did not prevail there any more than it did ten years earlier in the *Winsted* case, or in other cases.[14]

*The element of competition*

The testimony discloses keen competition. Not only do the producers of true white pine lumber products lose business to the producers of "California white pine" but also those producers of ponderosa who, instead of misdescribing their products, use some trade name such as "pondosa pine" find themselves at a disadvantage in competition when the same lumber is offered by competitors as California "white" pine. The testimony in this respect is substantial and specific, and is illustrated under II and III, and in note 17, as well as by the following: A lumber salesman representing a marketing company for the products of a large group of producers testified that, among the

[14] The length of use of the term "Creamo" was held not to be determinative of the company's right to continue it, nor was the large investment in the name determinative. *Brougham* v. *Blanton Manufacturing Company*, 249 U.S. 495. Mere lapse of time is no defense. *Heger Products Co.* v. *Polk Miller Products Corp.*, 47 F. (2d) 966, 967; *Harvey* v. *American Coal Co.*, 50 F. (2d) 832, 834–6.

reasons why he lost sales "to manufacturers of California white pine", were the following:

> * * * In some cases price. Other cases we have some of the dealers who feel that the California white pine is better than our pondosa pine; we also have cases where some other dealers demand it because it is called white pine and they feel that they can pass it on to their customers with clear conscience as a white pine.

"* * * Some absolutely demand it over pondosa. They think * * * that it is better, and others on account of its being called white pine." (R. 201.) A sales agent in New York, New Jersey, and New England who handled both ponderosa and white pine, selling the former as "pondosa" pine only, though other dealers sold it as "white pine", testified that—

> there is another class of dealers that tell me that they know that California white pine is not a true white pine, but it is invoiced to them as white pine and they sell it to the trade requiring white pine as white pine and because it is invoiced to them as white pine, they can pass it on as white pine and do it with just a little safer feeling than they would if it was invoiced as something else besides white pine, and buy it at considerable less than they would have to pay for true white pine.

(R. 178, 179, 180.) A large manufacturer of sash testified that California white pine was furnished

for exterior trim "only just when we find that the competition demands that we furnish that." (R. 658.)[15]

Since the evidence and findings establish the existence of competition between "California white pine" products and those made either from true white pine or from ponderosa not labeled as "white" pine, this case does not fall within the *Raladam* case where there was not even "evidence as to the existence of competitors." *Federal Trade Commission* v. *Raladam Co.*, 283 U.S. 643, 653. The evidence relating to competition is interwoven with the subjects of confusion, substitution or "passing off", and injury to the trade and public, which are treated in the following divisions of this brief.

## II

### THE MISDESCRIPTION IS MISLEADING AND CONFUSING TO BOTH THE CONSUMERS AND THE TRADE, AND THIS RENDERS THE PRACTICE BOTH AN "UNFAIR METHOD OF COMPETITION" AND WITHIN THE "PUBLIC INTEREST" UNDER THE TRADE COMMISSION ACT

Where both consumers and buyers for retailers and sales people are misled by misdescription, "it

[15] To the same effect is the testimony of lumber salesmen (R. 209–210, 984–986), manufacturers and their representatives (R. 348, 399–400, 847, 852–3, 855, 867, 876–877, 882–884, 898, 916, 1187, 1278–1279, 1326–1327), retailers (R. 246, 650), and witnesses for respondents (R. 1107, 1436, 1485, 1525, 1571), though some of respondents' witnesses denied the existence of competition (R. 435–436, 1055, 1099, 1462, 1562, 1566, 1571, 1584, 1612).

is to the interest of the public that a proceeding to stop the practice be brought" and these same facts "show also that the practice constitutes an unfair method of competition * * *" *Federal Trade Commission* v. *Winsted Hosiery Co.*, 258 U.S. 483, 493.

Misdescription in the face of settled and generally accepted nomenclature, substitution or "passing off" of products, and resulting confusion is overwhelmingly shown in the record (*infra*, pp. 42–56); yet the court below sought to dispose of the evidence by arguments in mitigation of selected parts of the testimony of expert witnesses only. An architect of twenty-five years' practice in New York, specializing in high-grade residential work, testified that "there is a great deal of confusion in the pine market due to the terminology, and some of the confusion is quite honest. * * * I know that California white pine connotes to some people a distinct type of wood, but it connotes to other people, white pine in general, and therein lies the confusion." The witness also testified that those who were confused, generally speaking, were the "millmen and the lumber dealers, as well as the architects." The court below, after quoting this testimony, said it could not see "just why architects and lumber dealers should be confused in view of the aid and assistance furnished by the Government through the Bureau of Standards" and the court "assumed that architects have a general knowledge of the qualities of the various materials they

specify." (R. 1895; 64 F. (2d) 622.) The inapplicability of the "simplified practice recommendation" of the Bureau of Standards has been treated above, and the court's "assumption" contrary to the evidence and findings, that the trade has knowledge, is beyond the powers of the court under the Act. Furthermore, "the fact that misrepresentation and misdescription have become so common * * * that most dealers no longer accept labels at their face value, does not prevent their use being an unfair method of competition" and "a method inherently unfair does not cease to be so because those competed against have become aware of the wrongful practice" nor "does it cease to be unfair because the falsity of the manufacturer's representation has become so well known to the trade that dealers * * * are no longer deceived." *Federal Trade Commission* v. *Winsted Hosiery Co.*, 258 U.S. 483, 493–494. Notwithstanding this clear rule, the court below held that the very prevalence of the practice of substituting or "passing off" the lower-priced product demonstrated that "it is not apparent that an affirmance of the Commission's orders would afford any relief if injury from such manufacture in fact occurs."

The court below also concluded that it did "not appear" that "a practice prevailed of charging a price [for "California white pine"] on a basis of the market price for Northern or Idaho White Pine," and therefore, no injury was shown. In answer to testimony that producers of white pine

had to bring their prices down because of the competition by manufacturers who misdescribed ponderosa, the court below said that the reduction "did not occur until three years after the commercial name of half of the Ponderosa of commerce was changed from Western White Pine to Ponderosa", but it later stated that, despite the competition with manufacturers of ponderosa, "for more than fifteen years prior to the institution of this proceeding the so-called true white pines were able to command a higher price." (R. 1895, 1896, 1898; 64 F. (2d) at 623, 622–623, 624.) There are inconsistencies in these statements of the court on relative prices. The court disregarded the admitted and overwhelming evidence of differences in price which were shown to aggravate the situation (see *infra*, pp. 50–52). In any event the matter of price is immaterial in this type of proceeding, for it is the unfair diversion of trade and misrepresentation to consumers that is the gist of the matter. The point is that "if consumers or dealers prefer to purchase a given article * * * they have a right to do so" and "the result of respondents' act is that such purchasers are deceived into purchasing an article which they do not wish or intend to buy, and which they might or might not buy if correctly informed as to its origin" for "the purchasing public is entitled to be protected against that species of deception, and * * * its interest in such protection is specific and substantial." *Federal Trade Commission* v. *Royal*

*Milling Co.*, 288 U.S. 212, 216–217 (1933). (In the *Royal Milling* case it may be noted that the court below "failing to see any * * * financial loss in the methods of competition," found that "no public interest exists" (58 F. (2d) 581 at 583); but this Court reversed the decision).

---

The evidence on (1) the generally accepted terminology for lumber products, (2) the substitution of different products for those specified, and (3) the resulting confusion is vital in this type of proceeding; it is more than ample in the case at bar to support the findings of the Commission and may be summarized as follows:

(1) *"White" pine is an accepted and settled term in the building and lumber trades meaning "true" or "genuine" white pine and has similar significance for the consumer as well*

Architects from every part of the country testified that they specified "white pine", expecting to secure the true white pine, and had to rely upon dealers and contractors to get it for them: Thus an architect and architectural publisher and editor testified that the term "white pine" has not "lost its significance" but instead "means everything to the architect who has had any experience in building" (R. 304), and consequently architects specify simply "white pine" (R. 303, 316), of which California white pine is not a species (R. 317), and have no way of checking up on materials actually fur-

nished. (R. 303, 304, 312–313, 314–315.) For exteriors Cass Gilbert specifies "clear white pine" but has no way of checking on the product furnished except by inspection. (R. 238, 239.) Other architects testified that "white pine" has not "lost its significance" and that real meaning is attached to "genuine white pine" (R. 333, 334), that the term "white pine" has peculiar significance and "California white pine" is not a "fulfillment" of orders or specifications (R. 335), that they always "say merely white pine" (R. 499, 500), and "architects don't specify a certain material, they specify a white pine or yellow or spruce." (R. 535, 536.) This was the testimony of other experienced architects. (R. 195–196, 615, 682, 688, 722, 757.) To the same effect is the testimony of wholesalers, retailers and other lumbermen: Thus a dealer testified that the public "as a rule" asks for "white pine" and never for "California white pine" and that while either "pondosa" or "California white pine" could properly be furnished upon orders for ponderosa pine products, these could not properly be substituted for Idaho white pine, and that California white pine has not come to be accepted as a "white pine" among lumber dealers "although there are a class of lumber dealers who do not seem to know the difference and don't care." (R. 292.) Another testified that architects and builders "very often" specify "white pine" and properly are given "strobus, Idaho or sugar" pine but never

"California white pine" or pondosa since the latter are usable only for interiors and "are of less value for making doors and so forth" because "they stain more easily and pull out of shape more easily, and they are of harder texture". (R. 256.) Other dealers testified that the term "white pine" retains significance "in the lumber industry at the present time" (R. 340), that the public "as a rule" asked for "white pine" and should be given Idaho white pine but never pondosa "on that order" (R. 288), that "in the specification for lumber" the "customers on occasion ask for white pine" and the retailers "know the distinction" since "it is easily visible to anyone who knows and has had experience" (R. 293–296), that "builders, contractors, and the like" ordinarily "ask for white pine" because "that is all they know about it * * *" (R. 298), that "when somebody asks for genuine white pine" he "means either Idaho white pine or northern white pine" (R. 213), that "white pine" has not lost its "original specific signification" with the advent of the various trade names (R. 189), and that calls are received "every day" for simply "white pine" and they do not regard "California or Arizona white pine as real white pine" (R. 472.) This was the testimony of other members of the trade (R. 193, 679–680, 691, 731, 732, 749, 1087), though some of respondents' witnesses sought to give evidence to the contrary (R. 375, 387, 414, 417, 430, 1464, 1809).

(2) *As a result of the use of trade names such as California or Arizona "white" pine, ponderosa products are furnished upon orders for "white pine", the substitution being aided by similarity in nomenclature and appearance of the woods and induced by differences in price and the tendency of dealers to stock only one kind of pine*

A wholesaler who purchased lumber throughout the country testified that he sold all of his pine as "white pine" and filled orders for "white pine" with California white pine, though he knew the difference and did "not consider that as white pine" (R. 86, 87, 88); and this was the testimony of producers and their sales representatives. (R. 1001, 1066–1067, 1102, 1184.) Moreover, retailers in purchasing from wholesalers, cannot tell where the lumber comes from because, as already shown above, the wholesaler "cuts out of the bill of lading the name and the origin of the shipping point" and the railroads "say that the Interstate Commerce Commission allows them to erase the name of the company and the shipping point, so we can never establish the fact" (R. 232), the result being that retailers order "white pine" from manufacturers and take what is sent them (R. 589) and pass it on to the trade as "white pine" though they know or suspect it to be California white pine and not satisfactory for exteriors (R. 593, 594). Flagrant substitution was shown to be the practice: Thus, a mill-

man testified that ponderosa is sold "every day" upon orders for "white pine". (R. 487.) Retailers generally testified: that although they did "not think it is white" they would furnish California white pine upon orders for "white pine" and would "regard that as compliance with the specifications" because they "buy it as such" (R. 750); that customers "practically all ask for white pine" and are supplied with "California white pine under any of those orders" because the latter was kept in stock "principally as a matter of price" (R. 577–578); that yards got "a good many orders" for "white pine" and filled them with ponderosa or California white pine as a general practice "within the last four or five years" (R. 625); that lumber yards received "orders calling for white pine without a further specification or description" and felt free to fill them with Idaho white pine or California white pine or pondosa "without necessarily explaining" (R. 633); that "the building trade" asks "for white pine without any specification" and "we give them pondosa" or California white pine (R. 637); that there was "about ninety-five percent" substitution on orders for white pine (R. 650); that California white pine is used "interchangeably with the Idaho" (R. 298–301); that "the average person as a rule orders white pine" and is given Idaho white pine or California white pine as the retailer deems expedient and happens

to have lumber in stock because "carpenters, manufacturers and architects" don't "know the difference as a rule" (R. 234, 235); that the trade is in the habit of "delivering to customers California white pine when the said customer has ordered white pine" (R. 277, 278); that "if anybody comes in and asks for white pine he may receive Idaho white pine or California white pine" (R. 291); and that customers usually ask for "white pine" and are sometimes given "Arizona white pine" purchased from one of respondents (R. 461–464.) Substitution was no less rife among manufacturers, other than producers of lumber: Thus, a grader in a millwork concern testified that upon orders for "just white pine" California white pine was furnished to retailers, builders and consumers. (R. 176.) (Specific instances of substitution also appear in the record.)[16] This is the run of the testimony of other retailers, manufac-

[16] For example, a Detroit architect related an incident of substitution in the "Detroit Community Fund Building". The wood was tested by a man from the United States Forest Products Laboratory who "reported that the sash there were not white pine, and that they were yellow pine, mostly pondosa" though he would not put his report in writing because he said he was "supposed to be 'neutral'" (R. 536–538). In another case, a sash and door manufacturer had ordered "sash white pine" but was given ponderosa by the wholesaler. Architects "would not accept it" and he "had a run-in with the State of New York, and after a six-months' fight" he "took it that Pinus strobus means white pine" and also learned the meaning of ponderosa. (R. 261; see also R. 309–310.)

turers' salesmen, and architects (R. 51, 54, 71–76, 510, 599, 267–268, 272, 679–680, 685, 733, 738, 749–750, 1001, 1184), even of the representatives of respondent companies and of respondents' own witnesses (R. 1066–1067, 1102, 1113–1115). It is interesting to note that one of the largest manufacturers of sash, who was a most positive witness for respondents, admitted that he made all his products from ponderosa though he sold them under the name "*White* Pine Sash Company" (italics ours) (R. 1066–1068). The substitution is, of course, aided directly by the term "white" pine: Thus, an executive officer of one of the larger companies testified that he thought the misdescription "had a tendency to have the products of ponderosa used under a misapprehension that they [customers] are getting white pine" (R. 38) and even an eastern sales representative of one of the respondents admitted upon cross examination that the term "white" as applied to ponderosa products is misleading to some at least (R. 439). Substitution is aided by the following:

*Similarity in appearance.*—The superficial similarity in appearance between some of the products of ponderosa and of true white pine aids in the substitution of the former upon orders for "white pine": The manager of one of the respondent companies testified that "some specimens of these various lumbers" are "so similar in appearance as to make it difficult in some instances to identify

them" (R. 448). Architects generally testified that they could not tell the difference between the woods but had to rely upon the contractors (R. 74, 75, 80–81) and even where they had reason to believe that something else has been furnished they used it anyway "from time to time" because they do "not have time to change." (R. 220.) The owner of a retail lumber chain testified that among architects not "one out of a dozen can tell the difference between pondosa pine, genuine white pine, or Arizona white pine" and "there isn't any of them, half of them can't tell the difference between yellow pine and white pine" and when they ask for "white pine" we "give them what we have" which "might be Arizona or Idaho or northern white pine" or "California white pine if * * * in stock", that this was done, moreover, despite the fact that the "white pines" were "most durable for outside weather" and the California pine "rots out much quicker" and "the sash that is made of pondosa pine frequently comes back to us in six or seven years for new bottom rail, which indicates that they are rotting out" (R. 546–547).

*Lower price of ponderosa.*—The lower price at which so-called California or Arizona "white" pine is sold both aids in the substitution of this lumber upon orders for "white pine" and adds to the injury to competitors who produce genuine white pine or who produce ponderosa but do not misdescribe it. Salesmen and millmen testified that retailers make the substitution "because it is more profit to them" (R. 180, 184), that "in some cases

price" resulted in the loss of sales in favor of "manufacturers of California white pine" (R. 201), and that the species was furnished according to the price the customer was willing to pay (R. 240–241). A wholesaler testified that his customers (retailers) insisted upon ponderosa, though in the name of "white pine", because of the differences in price. (R. 212–213.) The retailers themselves generally admitted that price determined what would be furnished (R. 505), that "it is a question considerably of price" (R. 284), that California white pine had "only been handled by us because of economic necessity of getting the price down" (R. 279), that "to the small trade" it is "a matter of price, which is the cheapest" (R. 295), and that the dealer does not "care as to the durability—all he knows is he pays more for his Idaho pine than he will pay for his California pine". (R. 296.) The "speculative trade" will "accept most anything that is cheap" (R. 250–251, 292). The relation of price differences to competition is specifically shown: Thus, the trade testified that they must furnish "ponderosa pine upon orders that call for white pine" because "competitors do, and we have only to meet the price, we have to buy cheap, cheap lumber, in order to meet the price" (R. 488, 489), that "if I can sell California pine * * * then I buy that because it is four or five dollars a thousand cheaper" (R. 550), that they are "only interested" in pine upon which they "can make the most money" (R. 1461), that ponderosa was labelled to include the word "white" pine "merely for sales purposes—to

get a little better price" (R. 1695), and that the word "white" had a "monetary advantage" (R. 1551) or "a monetary value" and is "worth about two dollars a thousand". (R. 1281.) Even respondents' witnesses testified that the word "white" had a "monetary advantage" (R. 1551), that "it is entirely a question of price" (R. 411), and that California white pine "is a little cheaper" (R. 430). Even the Forest Service prices are higher for sugar (white) pine (R. 1155). This was the run of the testimony of manufacturers (R. 530–532, 325, 847, 848, 867, 877–879, 885, 898, 1005–1007, 1678), retailers (R. 578, 581, 594, 648, 649–650, 686, 735) and architects (R. 306, 682) generally, as well as of manufacturers, retailers, and architects who were witnesses for respondents. (R. 1054, 1109, 1118, 1576, 1724, 1818.) It is to be noted that respondents claimed that the differences in cost of production were immaterial and "not a proper matter of inquiry." (R. 112, 113, 368.)

*Tendency to stock only the cheaper ponderosa.*— "As a matter of price" (R. 577–578, 235) and also because dealers seem to desire to stock only one kind of pine, the cheaper ponderosa (under its various labels) is more often carried by the smaller dealers, and upon orders for "white pine" some brand of ponderosa is supplied. An architect and architectural editor testified that the desire of retailers to stock with only one species "served to build up the myth that there was no more white pine" and moved dealers to pass off California white pine which they "get elsewhere at cheaper

prices"; and because of the press of time and necessity for architects to take what they could get quickly the retailers got far with their substitutions. (R. 305, 313.) Another architect testified that "we are dependent a little bit on the mills" and "we follow the course of least resistance" and "specify and expect what they give us" which "helps us a little bit." (R. 758.) Retailers testified that the stock on hand determines what is given the customer (R. 299, 258, 129, 133, 426, 607), and the representative of one of respondent manufacturers testified that "it is usually a case of what the dealer has is what the fellow gets" as between "Idaho, pondosa, or California." (R. 410.)

(3) *Disregard of the settled term "white pine" and substitution of products has resulted in confusion and demoralization in the building trades*

Demoralization in the pine industry, as a result of the confusion of terms from indiscriminate use of the word "white" to describe ponderosa, is shown in the evidence of architects, manufacturers, and the trade: Thus, architects testified that "there is such confusion on it, the white pine is claimed to be of certain quality, but one branch of the lumber industry denies it and another branch recommends it" that "we are simply at sea on the whole white-pine situation" (R. 499); that there is "a great deal of confusion" (R. 524); that though "white pine" is specified for "exterior work usually" nevertheless "great confusion as to what white pine is" has existed "lately" (R. 644–645);

that there is "a great deal of confusion in the pine market due to the terminology" because an architect deals with three persons—"the lumber producer, the lumber merchant or millman; and the contractor"—and since "especially those in smaller lines of business" say their lumber was sold to them "as white pine" in "this day * * * California white pine connotes to some people a distinct type of wood, * * * it connotes to other people white pine in general and therein lies the confusion" on the part of "the millmen and the lumber dealers as well as architects" (R. 267, 272); that the term "white pine" is becoming "ambiguous" and "at the present time you get a lot of things that we did not use to mean by it" and even upon more technical specifications "very often we don't get it" (R. 231); that "there is confusion in the minds of the architect, as regards" the various pines which "results in the fact that the architect thinks that California white pine is a true white pine and until he is informed of his mistake he is still in ignorance of that" (R. 312). This confusion is increased since architects simply specify "white pine" (R. 511, 534, 546, 597) intending to "secure genuine white pine" (R. 513) and relying "on the contractor" or manufacturers to supply it to them (R. 512, 585). A representative of lumber manufacturers, who took part in some twenty odd lumber industry conferences, called at the instance of Secretary of Commerce Hoover, and who had some 200 interviews with consumers, testified that he had

"been asked repeatedly to explain the differences in the pines" and was "told that the actual differences were not understood" and had "dealers and distributors" tell him "that they did not pass on to their trade the information that so-called California white pine is not a genuine white pine", and that "actual consumers, house builders, etc." had told him that "they did not know the wood they were using and had purchased as white pine, which had come from the species Pinus ponderosa, was not a genuine white pine." (R. 1324.) The service manager for a large manufacturer of western pine said that "the entrance into the trade of California white pine in various localities" has "caused confusion, and by reason of the failure of pondosa pine it has to some extent, in my opinion, caused confusion in the name of white pine." (R. 518.) Dealers testified that "there has been confusion" with California white pine (R. 476), that even upon explanation the consumers would not understand the differences in the pines because of the diverse trade names (R. 192–193). Another dealer was attempting to avoid the use of the term "California white pine" because it is "misleading." (R. 620.) This was the line of testimony of manufacturers (R. 1187, 1278, 660–661, 1006, 1067) and of the former chief of the United States Forest Reserves (R. 1088–1089, 1142). A considerable number of respondents' witnesses flatly contradicted this testimony regarding confusion, but it is to be noted that these witnesses, who were

in many cases manufacturers and wholesalers, did not know how the retailers sold the product (R. 388) or how the contractor or consumer specified it (R. 434) or how architects and the speculative trade treated the matter (R. 441), and some of them admitted that confusion and deception were easier or at least "possible" (R. 393, 446, 395) and that there was no means for the consumer to discover substitutions. (R. 409.). As to the consumers' interest and deception, one of respondents' witnesses testified that "the lumberman cannot control those things" (R. 408).

---

The insistence upon misdescription of lumber is a short-sighted policy on the part of that minority of the western pine industry who indulge in the practice. The injury to the lumber industry as a whole is clearly set forth in the testimony of an executive officer of one of the larger companies, who said (R. 349):

> * * * I think the integrity of grades, species, and manufacture of lumber is important to all lumber, because the misuse of lumber or using of the wrong lumber, or lumber in the wrong place or a wrong class of lumber for a certain thing, where the lumber does not stand up, produces a dissatisfied customer and tends to throw the market off of lumber for building material to the lumber's substitute, and I think it is important for all lumber, not only soft pine but all lumber, that each lumber be marketed

> under a name that is not misleading, and that the grades * * * be absolutely true.

Misdescription

> would naturally have the effect of producing suspicion in the mind of the person who built, the builders, architects, and also in the minds of everybody who heard of it that lumber, as such, was not fit building material and that they should use some substitute, such as brick, cement—in order to get durability.

Another leader in the pine industry testified that—

> the most deep-seated source of trouble in the lumber business has been the failure of lumber manufacturers to consider the real interests of the consumer of lumber. * * * The result of a confusion in nomenclature is the failure of a consumer to be able to get exactly what he wants, or get the material which will best suit his needs, and the result of which is, where failures occur, this same consumer naturally will turn to substitutes for lumber, with the result that lumber is gradually losing its volume over the United States. (R. 1280; and see R. 1186–1187.)

Nomenclature in the lumber industry is no less important than in the commercial life of the nation generally. The former chief of the U.S. Forest Reserves testified that nomenclature in the lumber industry—

> is important from a number of respects, among which is that of accurate identifica-

> tion of the product that is being offered to the trade. * * * The ultimate consumer should have assurance in commercial practices that he is actually obtaining the species and grades of lumber which he desires to obtain. (R. 1087.)

He also testified that there was a relation "between the good will of the public toward the lumber industry and the use of proper nomenclature in the sale of lumber." (R. 1093.) "White pine", he testified, "is still standard white pine as established in the public mind. * * * When you go beyond those trees of very similar commercial characteristics you certainly reach a point somewhere where it becomes incorrect, and I think you have reached that when you go beyond the sugar pine and Idaho white pine." (R. 1141.) "I regard the use of the term 'white' as applied to the lumber of Pinus ponderosa as the most serious instance of confusion to the buying public that now exists." (R. 1142.) Architects testified that they regarded "the terminology of the pines as a confused condition" (R. 524) and "one name ought to mean one thing and not to describe several qualities" (R. 273); another witness put the matter succinctly in saying that, although "it is immaterial what the botanical name of a particular tree might be" nevertheless "you should have a name for what you want so that when you name a thing in your specification and when you contract for it you get it by name" (R. 81).

It will not do for respondents to say that, while there is a botanical category of "white pine" which does not include ponderosa, a commercial usage has grown up which establishes ponderosa as a "white" pine—for the evidence and findings of the Commission are to the contrary and, in any event, this Court has determined that "the fact that misrepresentation and misdescription have become * * * common" is immaterial because the practice is "inherently unfair." *Federal Trade Commission* v. *Winsted Hosiery Co.*, 258 U.S. 483, 493–494.

## III

THE PUBLIC INTEREST REQUIREMENT IS AMPLY SUSTAINED BY THE RECORD; AND THE MATTER OF CONSERVATION OF WHITE PINE FORESTS IS COLLATERAL AND IMMATERIAL

This Court has defined the "public interest" requirement; it involves injury to the public and injury to competitors. Not only ample evidence, but the preponderance of the evidence, discloses that the practice of labelling ponderosa as "white" pine is misleading, injurious and confusing to the trade and the consumers of lumber products.[17]

---

[17] In addition to the mass of evidence summarized above, the direct injury to producers of true white pine is illustrated in the testimony of a lumberman of long experience who testified that there was difficulty in getting the retailers to handle the true white pines because of competition from other manufacturers who misrepresented their products as "white pine" (R. 111–112). The injury to producers of ponderosa who do not misdescribe their products is illustrated in the testimony of a wholesaler who said that in

Since "a substantial part of the public was still misled by the use of the labels, * * * the public had an interest in stopping the practice as wrongful * * *". *Federal Trade Commission* v. *Winsted Hosiery Co.*, 258 U.S. 483, 493, 494.

So far as injury to competition is concerned, the same evidence applies and is more than ample to show actual injury, although it need only appear that the business of competitors "is *likely* to be lessened or otherwise injured" and "it is not necessary that the facts point to any particular trader or traders" since—

> it is enough that there be present or *potential* substantial competition, which is shown by proof, or appears by necessary inference, to have been injured, or to be clearly *threatened* with injury. (Italics ours.)

*Federal Trade Commission* v. *Raladam Co.*, 283 U.S. 643, 649, 651. In the case at bar, it is shown that the misdescription draws trade from producers of true white pine and that is a matter of public interest "because the unfair method employed

---

attempting to sell "pondosa" he could not make his customers understand that it was the same wood as "California white pine" (R. 192–193, 194)—which confusion is shown in the testimony of other witnesses (R. 649, 675, 733, 750, 1275). Injury to the public is illustrated in the testimony of a lumber dealer who said "the lumber dealer is not particularly interested in the durability of the lumber—his customers are supposed to know what they want and all that he is in business for is to give them what they want" and the trade is not "particularly interested as to whether it is genuine white pine or not" (R. 282, 283).

threatens the existence of present or potential competition", and "the aggregate of the loss entailed * * * [is] so serious and widespread as to make the matter one of public consequence." *Federal Trade Commission* v. *Klesner*, 280 U.S. 19, 28.

Furthermore, it is to be noted that in the case at bar two types of competitors are injured—(1) the manufacturers of true white pine, and (2) the manufacturers of ponderosa who label it truthfully as ponderosa or use some trade name (generally "pondosa") not including the term "white" pine. The situation falls squarely within the rule announced in the *Winsted* case wherein these same facts (that both consumers and two branches of the trade were injured) were held to demonstrate "that it is to the interest of the public that a proceeding to stop the practice be brought" and

> also that the practice constitutes an unfair method of competition as against manufacturers * * * [of the true product] and as against those manufacturers * * * who brand their product truthfully * * *

for "when misbranded goods attract customers by means of the fraud which they perpetrate, trade is diverted from the producer of truthfully marked goods." *Federal Trade Commission* v. *Winsted Hosiery Co.*, 258 U.S. 483, 493.

In attempting to avoid the applicability of the *Winsted* case, the lower court insisted that there "the sale or purchase of a material as all wool which in fact is in large part cotton presents a situa-

tion which may not be said to be parallel to that presented upon the facts in this case" because there the misbranded product was not "from some other breed of sheep". (R. 1897; 64 F. (2d) at 623.) But this is a distinction without a difference, for the finished product in either case is nevertheless misrepresented as to material or kind. The *Winsted* case involved the passing off of mixed wool and cotton as though it were all wool, and both the facts and the rule laid down seem to dispose of the case at bar completely.[18] But this Court went even further in the *Royal Milling* case and determined that, even where the products were made from identical raw materials, misdescription of the method of manufacture or the character of the manufacturer (the manufacturers describing them-

[18] In fact, the *Winsted* case was taken as controlling in the "Philippine mahogany" case which involved the misdescription of forest products as to the species of tree from which they were secured (just as in the case at bar), and this Court denied certiorari. *Indiana Quartered Oak Co.* v. *Federal Trade Commission*, 26 F. (2d) 340, certiorari denied, 278 U.S. 623. The decree in that case was later modified without opposition from the Commission, which had retried the entire character of the term "Philippine mahogany" on the merits and upon a new record in a subsequent proceeding. *Indiana Quartered Oak Co.* v. *Federal Trade Commission*, 58 F. (2d) 182. Of course, the determination of the Commission on a new record does not affect the precedent established and this Court (as said in connection with the Interstate Commerce Commission) is not interested in "the consistency of its conclusion with those reached in similar cases." *Western Paper Makers' Chemical Co.* v. *United States*, 271 U.S. 268, 271.

selves as millers when they did not in fact grind the grain from which their flour was made) was an unfair method of competition, since the unfairness of the misdescription is not altered by the manufacture and sale of "an exactly similar article, or one equally as good." *Federal Trade Commission* v. *Royal Milling Co.*, 288 U.S. 212, 216 (1933).

*The unrelated policy of conservation*

The court below sought to avoid the clearly defined authority of the Commission and the evidence disclosed in the record by adverting to the "public interest" in conservation of forests. Remarking that "the supply of the botanical white pine is far more limited than that of Ponderosa", the lower court determined that "the public is not only interested in not being deceived in the material it purchases under a certain nomenclature, but possibly in an even larger sense in the conservation of the forests." (R. 1898; 64 F. (2d) at 624.) This is immaterial and unsound for the following reasons:

(1) The court below is authorized by the Federal Trade Commission Act to review the record to discover whether the findings and order of the Commission are "supported by testimony." It is not given jurisdiction to consider and weigh some other public policy unrelated to the policy embodied in the statutes for the maintenance of free and fair competition in trade and industry. The Federal Trade Commission Act is not only an expression of

public policy but it is the law of the land which it is the duty of both the executive and judicial arms of government to apply and enforce irrespective of other policies, such as the conservation of natural resources. If other general policies may be used to oust the Commission of jurisdiction, it would be impossible to say what power, if any, remained under the Federal Trade Commission Act in view of the numerous, and perhaps conflicting, policies embodied in legislative and executive acts.

(2) The conservation policy is for the executive and legislative departments to determine. So far as it relates to the forests, it has been determined by the creation of national forests and forest preserves, and neither Congress nor the executive has directed that trade legislation be suspended as to forest products.

(3) Manufacturers of white pine forest products, in many instances, secure their raw material from the national forests and preserves under license from the Forest Service,[19] the use of which is not only duly authorized by the Government but necessary to prevent crowded growth and fire hazard.

(4) "Not considering second growth", the court below finds that in 60 years "the present stand of [white pine] timber will be practically exhausted."

---

[19]As indicated in the evidence—under "Government Contracts" (R. 344, 346)—and by references to Forest Service sales (R. 843, 875, 1147, 1151, 1155, 1247, 1251, 1264).

(R. 1891; 64 F. (2d) at 619–620.) This conclusion does not take account of second growth, reforestation and reversion of farm lands. The Commission found that reforestation had, in fact, taken place, which enhanced the commercial importance of white pine. (Par. 18, R. 31.) A forestry expert testified to the adequacy of supply (R. 953 et seq.). It was shown that there is also a "reversion of farm lands" to forest even on the Atlantic Seaboard (R. 953) and an "inevitable" increase "as these immature stands come into maturity" (R. 956), and in general the production of white pine is on the "increase" (R. 970), which was corroborated by the former chief of the United States Forest Reserves (R. 1091, 1092). An architect of note testified that the desire of retailers to stock with only one species "served to build up the myth that there was no more white pine" (R. 305), which is illustrated in the testimony of another architect who related that lumber industry representatives told him "the genuine white pine was gone" (R. 499).

(5) Lastly, it is obvious that this is not even conservation, for the use of inferior woods where they are unsuited (such as the use of ponderosa for exteriors) and where they last but a small fraction of the life of true white pine is far more wasteful than the legitimate uses of the present stands of white pine. (R. 1279).

## IV

THE CIRCUIT COURT OF APPEALS EXCEEDED ITS JURISDICTION BY MAKING ITS OWN INDEPENDENT APPRAISAL OF THE EVIDENCE AND REJECTING ALL OF THE ESSENTIAL FINDINGS MADE BY THE COMMISSION THOUGH THE FINDINGS ARE "SUPPORTED BY TESTIMONY"

The Federal Trade Commission Act, under which this proceeding was initiated and under which the court below is given jurisdiction, provides that "the findings of the commission as to the facts, if supported by testimony, shall * * * be conclusive." *Federal Trade Commission Act,* Sec. 5, c. 311, 38 Stat. 717, 719; U.S.C., Title 15, Sec. 45. This Court has stated that "the weight to be given to the facts and circumstances admitted, as well as the inferences reasonably to be drawn from them, is for the commission." *Federal Trade Commission* v. *Pacific States Paper Trade Association,* 273 U.S. 52, 61, 63. Nevertheless, the court below did not give effect to the findings of the Commission and did not limit itself to determining whether the "inferences" were "reasonably to be drawn" from the testimony or whether the findings were "supported by testimony," but instead rejected the plain statements of witnesses as to the differences between white and ponderosa pine and accepted for far more than its face value the "simplified practice recommendation" of the Bureau of Standards.

Similarly, as to testimony on the misleading and confusing result of the misdescription, the court again referred to the pamphlet of the Bureau of

Standards and "assumed" that architects had a general knowledge "of the qualities of the various materials they specify" and thus could not be misled. (R. 1895; 64 F. (2d) at 622.)

On the question of "public interest", this Court has said that "in determining whether a proposed proceeding will be in the public interest the Commission exercises a broad discretion" and "its preliminary determination that institution of a proceeding will be in the public interest * * * will ordinarily be accepted by the courts." *Federal Trade Commission* v. *Klesner,* 280 U.S. 19, 28, 29–30. However, the court below, relying upon the wholly collateral and inapplicable policy of forest conservation, found that the maintenance of fair competition in the white pine lumber industry would not be consistent with conservation of resources and, therefore, not in the interest of the public.

## CONCLUSION

The following main propositions on the questions of "unfairness", "public interest", and the jurisdiction of the court below are established:

(1) Pinus ponderosa differs from white pine botanically, in character, in quality, and in popular and commercial significance. Trade names such as California "white" pine, when applied to ponderosa, are misleading, and the use of such terms is "unfair" under the Trade Commission Act.

(2) Architects, consumers and the trade generally, in ordering lumber or lumber products, specify "white pine" and expect to receive true or genuine white pine. Many dealers, however, either knowingly or unknowingly, upon such orders substitute ponderosa, which they purchase from manufacturers or wholesalers under trade names such as California "white" pine; this substitution or "passing off" is aided by the superficial similarity of ponderosa and true white pine, and dealers are induced to indulge in the practice because of the lower price of ponderosa and their tendency to stock only one kind of pine; the practice is, finally, facilitated and made safe for the dealer since the lumber is invoiced to him as some form of "white" pine. As a result of this misdescription and substitution, consumers and the trade have become confused and the lumber industry as a whole has suffered. These facts bear both upon the "unfairness" of the practice and the "public interest" in its prevention.

(3) Consumers are injured in not receiving the products they specify in their orders. Manufacturers, wholesalers and dealers in true white pine are injured since the cheaper ponderosa, when labeled with some trade name including the word "white", draws trade from them; in addition, those who manufacture and market ponderosa without using trade names including the misleading word "white" find themselves at a disadvantage in com-

petition with those who market the same product under the deceptive trade names. These facts satisfy the "public interest" requirement of the Federal Trade Commission Act.

(4) The great weight of the testimony supports each of these facts. The Commission found them to be true. Yet the court below set aside the Commission's orders to cease the practice and determined that the misdescription was not an "unfair" method of competition and its suppression not in the "public interest." The court is not given jurisdiction to so reject the order and findings of the Commission which are "supported by testimony".

It is respectfully submitted that the decrees below should be reversed, with directions to affirm the orders of the Commission.

## APPENDIX

Section 5 of the Federal Trade Commission Act, c. 311, 38 Stat. 717, 719 (U.S. Code, Title 15, Sec. 45), provides, *inter alia:*

> That unfair methods of competition in commerce are hereby declared unlawful.
>
> The commission is hereby empowered and directed to prevent persons, partnerships, or corporations, except banks, and common carriers subject to the Acts to regulate commerce, from using unfair methods of competition in commerce.
>
> Whenever the commission shall have reason to believe that any such person, partnership, or corporation has been or is using any unfair method of competition in commerce, and if it shall appear to the commission that a proceeding by it in respect thereof would be to the interest of the public, it shall issue and serve upon such person, partnership, or corporation a complaint stating its charges in that respect, and containing a notice of a hearing upon a day and at a place therein fixed at least thirty days after the service of said complaint. The person, partnership, or corporation so complained of shall have the right to appear at the place and time so fixed and show cause why an order should not be entered by the commission requiring such person, partnership, or corporation to cease and desist from the violation of the law so charged in said complaint. Any person, partnership, or

corporation may make application, and upon good cause shown may be allowed by the commission, to intervene and appear in said proceeding by counsel or in person. The testimony in any such proceeding shall be reduced to writing and filed in the office of the commission. If upon such hearing the commission shall be of the opinion that the method of competition in question is prohibited by this Act, it shall make a report in writing in which it shall state its findings as to the facts, and shall issue and cause to be served on such person, partnership, or corporation an order requiring such person, partnership, or corporation to cease and desist from using such method of competition. Until a transcript of the record in such hearing shall have been filed in a circuit court of appeals of the United States, as hereinafter provided, the commission may at any time, upon such notice and in such manner as it shall deem proper, modify or set aside, in whole or in part, any report or any order made or issued by it under this section.

If such person, partnership, or corporation fails or neglects to obey such order of the commission while the same is in effect, the commission may apply to the circuit court of appeals of the United States, within any circuit where the method of competition in question was used or where such person, partnership, or corporation resides or carries on business, for the enforcement of its order, and shall certify and file with its application a transcript of the entire record in the proceeding, including all the testimony taken and the report and order of the commission. Upon such filing of the application and transcript the court shall cause

notice thereof to be served upon such person, partnership, or corporation and thereupon shall have jurisdiction of the proceeding and of the question determined therein, and shall have power to make and enter upon the pleadings, testimony, and proceedings set forth in such transcript a decree affirming, modifying, or setting aside the order of the commission. The findings of the commission as to the facts, if supported by testimony, shall be conclusive. If either party shall apply to the court for leave to adduce additional evidence, and shall show to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for the failure to adduce such evidence in the proceeding before the commission, the court may order such additional evidence to be taken before the commission and to be adduced upon the hearing in such manner and upon such terms and conditions as to the court may seem proper. The commission may modify its findings as to the facts, or make new findings, by reason of the additional evidence so taken, and it shall file such modified or new findings, which, if supported by testimony, shall be conclusive, and its recommendation, if any, for the modification or setting aside of its original order, with the return of such additional evidence. The judgment and decree of the court shall be final, except that the same shall be subject to review by the Supreme Court upon certiorari as provided in section two hundred and forty of the Judicial Code.

Any party required by such order of the commission to cease and desist from using such method of competition may obtain a review of such order in said circuit court of

appeals by filing in the court a written petition praying that the order of the commission be set aside. A copy of such petition shall be forthwith served upon the commission, and thereupon the commission forthwith shall certify and file in the court a transcript of the record as hereinbefore provided. Upon the filing of the transcript the court shall have the same jurisdiction to affirm, set aside, or modify the order of the commission as in the case of an application by the commission for the enforcement of its order, and the findings of the commission as to the facts, if supported by testimony, shall in like manner be conclusive.

The jurisdiction of the circuit court of appeals of the United States to enforce, set aside, or modify orders of the commission shall be exclusive.

**Brief for Respondents in Opposition to Petition for Writ of Certiorari.**

## INTRODUCTORY.

By its petition in this cause the Federal Trade Commission seeks a review of a decision of the United States Circuit Court of Appeals for the Ninth Circuit which annulled orders made by the Commission in a group of related trade nomenclature cases. The Commission's orders condemned the use of "California White Pine" as the commercial name for respondents' lumber. The court concluded that the record in the proceedings before the Commission was insufficient to support the Commission's findings that the use of the commercial name "California White Pine" is "an unfair method of competition or that its prevention would be in the interest of the public." (R. 1899). The sole question now pending is whether such "special and important reasons" have been shown by petitioner as would warrant this Court, in the exercise of its discretion, in granting the writ sought by the petition (Supreme Court, Rule 28 (5)).

Preliminarily attention should be directed to the failure of the petition to state or suggest a case falling within the terms or purpose of the Federal Trade Commission Act. In the case of

> *Federal Trade Commission v. Raladam Co.*, (1931) 283 U. S. 643; 51 Sup. Ct. Rep. 587; 75 L. ed. 1324,

this Court has pointed out that Section 5 of the Federal Trade Commission Act is "supplementary to the Sherman Anti-Trust Act and the Clayton Act" and has declared that

> "the paramount aim of the Act [Federal Trade Commission Act] is the protection of the public from the

> evils likely to result from the destruction of competition or the restriction of it in a substantial degree * * *."

It is significant, therefore, that the pending petition contains no averment or intimation

> (1) that the respondent lumber companies have offended against the Sherman Anti-Trust Act or the Clayton Act; or
>
> (2) that the respondent lumber companies have attempted or conspired to destroy or restrict competition; or
>
> (3) that the name "California White Pine" was adopted for the purpose of misleading or deceiving the trade or the public, or for any other unlawful or improper purpose.

Not only does the pending petition fail in these respects, but the record in the proceedings before the Commission, as well as the Commission's findings, are similarly deficient.

Counsel for the Federal Trade Commission has formally stipulated of record that "no conspiracy among these several respondents being [is] charged or proved herein". (R. 26).

Counsel for the Federal Trade Commission has likewise admitted, upon brief filed before the Commission in these proceedings, that "there is no proof that the practice of designating *ponderosa* products by terms including the word 'white' was adopted for the purpose of misleading or deceiving the trade or the public".

The conclusion is impelled that neither the record before the Commission nor the Commission's findings can suffice to make out a case cognizable by the Commission under the Federal Trade Commission Act. No such case is tendered by the petition herein.

---

## STATEMENT OF FACTS.

Before addressing ourselves to the several questions of law presented by the petition we shall offer a brief analysis of essential and undisputed facts. We shall attempt to state them in terms which cannot be subject to challenge.

1. "California White Pine" is the commercial or trade name under which the lumber yielded by the tree identified botanically as *Pinus ponderosa* has been marketed throughout the United States for more than 32 years last past. (In the Pacific Coast area since 1886 and nationally since 1900.)

2. "California White Pine" was adopted as the commercial name for this lumber in order to distinguish it from the typical "yellow pine" lumbers of the southern states. (It is stated upon page 5 of the petition that "the original purpose for the adoption of this term was to distinguish this lumber from the hard 'yellow pine' of the South".)

3. The *Pinus ponderosa* tree is conventionally assigned by botanists to the so-called "pinaster" or yellow pine group, but the lumber which it yields belongs with the white pine lumbers in mechanical properties and industrial utility. (The following is quoted from page 9 of the petition: "This is botani-

cally a yellow pine but, from the standpoint of its industrial uses, is more closely allied with white pine.")

4. The botanical grouping of pine *trees* has no relation to the commercial nomenclature or industrial utility of pine *lumbers*.

5. The pine lumbers of the United States have been placed by trade and industry in two groups—viz., the white pine group and the yellow pine group. "California White Pine" has always been known to trade and industry as a white pine lumber. It is far removed from typical yellow pine lumbers in mechanical properties and industrial utility.

6. "California White Pine" has been formally adopted and recommended as a "preferred commercial name" for this lumber by the Bureau of Standards of the United States Department of Commerce. This recommendation has been accepted by the major organizations of the lumber industry and by the American Institute of Architects.

Upon the record before the Commission it is indisputable that the name "California White Pine" came naturally and honorably into being; that it has received the considered approval of a Department of the Federal Government, and that it has never been used by respondents for a fraudulent or dishonest purpose throughout the period of more than 30 years during which the name has become firmly established in trade and industry throughout the United States.[1]

(1) The complaints before the Commission contain certain charges of sinister motive and improper practice, but such charges wholly failed of proof. All have been abandoned, either expressly or tacitly.

The pending petition does not allege, nor does the record contain any proof,

(a) that the respondent lumber companies have offended against the Sherman Anti-Trust Act;

(b) that the respondent lumber companies have violated the Clayton Act;

(c) that "California White Pine" was adopted or has been used with intent to deceive, for the purpose of trading upon another's name, for the purpose of destroying or injuring the business of a competitor, or for the purpose of misleading the public.

Neither fraud, intent to deceive, nor dishonesty in any form has been proved or found by the Commission or alleged in the pending petition.

The petition alleges "confusion" through the use of the term "California White Pine" and suggests that the public is misled. There are also averments of relative inferiority. These are offered to justify the intervention of the Commission, and its attempt to compel a change in the commercial name for respondents' lumber. We shall show that these cannot suffice to make out a case cognizable by the Commission or warranting the issue of a writ of review by this Court.

---

**NATURE OF JURISDICTION CLAIMED BY THE COMMISSION.**

The real character of the authority claimed by the Commission and which it attempted to exercise in these pro-

ceedings is disclosed by the following excerpt from page 10 of the pending petition:

> "In other words, does the Federal Trade Commission Act authorize the Commission, where a commercial name was originally adopted without improper motive or purpose, to compel use of more accurate and specific commercial names than those heretofore employed?"

We note the concession that respondents' commercial name "was originally adopted without improper motive or purpose". Nevertheless the Commission claims the right "to compel use of more accurate and specific commercial names". Such is the far-reaching power which the Commission has sought to exercise, and which has repeatedly encountered judicial disapproval. The refusal of the Circuit Court of Appeals in this cause to recognize such authority in the Commission is in conformity with authoritative pronouncements of this Court, which we shall shortly review.

---

**DECISION OF UNITED STATES CIRCUIT COURT OF APPEALS.**

The opinion of the Circuit Court of Appeals (R. 1889-1899, incl.) is reproduced for the convenience of the Court in the Appendix to this Brief. Upon consulting the text of the opinion it will be found that the court kept scrupulously within its proper jurisdiction, and expressly refrained from entering the province of the Commission. The third paragraph of the opinion reads as follows (R. 1889-1890):

> " 'To sustain the orders of the Commission three requisites must exist: (1) That the methods used are

unfair; (2) that they are methods of competition in interstate commerce; and (3) that a proceeding by the Commission to prevent the use of the methods appears to be in the interest of the public.' Federal Trade Commission v. Royal Milling Co., ..... U. S. ..... (decided February 6, 1933); Fed. Trade Comm. v. Raladam Co., 283 U. S. 643, 646-647. That the use of the expression, 'California white pine', is a method of competition, there is no question. The only questions presented are whether requisites (1) and (3), found by the Commission to exist, are supported by the testimony. If so supported, the statute provides that such findings 'shall be conclusive.' (Fed. Trade Comm. v. Winsted Hosiery Co., 238 U. S. 483, 491.)"

After reviewing the record and the findings of fact of the Commission, the court reached the following conclusion (R. 1899):

> "It is the conclusion of the court that, viewing the testimony in the light of all the facts of the case, it is insufficient to support findings that petitioners' use of the commercial name 'California White Pine' is an unfair method of competition or that its prevention would be in the interest of the public."

Certainly no excess of jurisdiction on the part of the court is here indicated.[1]

---

(1) It is well settled that the ultimate determination of what constitutes "unfair methods of competition" is for the courts and not for the Commission:

*Federal Trade Commission v. Curtis Publishing Co.* (1923), 260 U. S. 568; 43 S. Ct. 210; 67 L. ed. 408.

*Temple Anthracite Coal Co. v. Federal Trade Commission* (1931), 51 Fed. (2d) 656.

Obviously, such a conclusion of ultimate fact cannot be withheld from judicial review by the device of wording it in the language of a finding, for by whatever name it be denoted, it must remain a question for the court.

## REPLY TO REASONS ADVANCED BY PETITIONER FOR GRANTING WRIT OF CERTIORARI.

We shall comment in turn upon the several reasons advanced by petitioner for the review of this decision upon certiorari.

### I.

### AUTHORITY OF THE FEDERAL TRADE COMMISSION OVER COMMERCIAL NOMENCLATURE.

The petitioner suggests that the initial question which it desires to present has not been, but should be, decided by this Court. It is our view that the point has been repeatedly and authoritatively determined by this Court, and adversely to petitioner's contentions.

We have heretofore reproduced the petitioner's claim that it has authority, "where a commercial name was originally adopted without improper motive or purpose, to compel the use of more accurate and specific commercial names than those theretofore employed" (Petition p. 10). The power thus claimed in behalf of the Commission would sanction a general revision of trade nomenclature, whenever the Commission might be moved to devise what in its opinion might be "more accurate and specific commercial names". It matters not that the respondents have not offended against the Sherman Anti-Trust Act or the Clayton Act. It matters not that the respondents are not chargeable with fraud, with intent to deceive, with design to injure a competitor, or with any other improper motive or purpose.

The very terms in which petitioner's contention is phrased will suffice to condemn it. No such far-reaching

censorship over trade names has been conferred upon the Commission. Upon this point the decisions are clear.

In *Federal Trade Commission v. Raladam Co.*, supra, (a decision which has served notably to clarify the law on this subject) this Court said:

> "In a case arising under the Trade Commission Act, the fundamental questions are, whether the methods complained of are 'unfair', and whether, as in cases under the Sherman Act, they tend to the substantial injury of the public by restricting competition in interstate trade and 'the common liberty to engage therein'. The paramount aim of the act is the protection of the public from the evils likely to result from *the destruction of competition or the restriction of it in a substantial degree,* * * * " (Emphasis added.)

The unfair methods mentioned in the Act are

> "those resorted to for the purpose of destroying competition or of eliminating a competitor or of introducing a monopoly—such as tend unfairly to destroy or injure the business of a competitor."

Heretofore the Commission has recognized no such limitation upon its powers, but has assumed the widest range of discretion, attempting to exercise its corrective processes in fields far removed from the terms and purposes of the Trade Commission Act as now authoritatively established by this Court. As was pointed out by the court below, this Court, in the case of

> *Federal Trade Commission v. Sinclair Refining Co.*, (1923) 261 U. S. 463, 43 S. Ct. Rep. 450, 67 L. ed. 746,

declared that

> "The great purpose of both statutes was to advance the public interest by securing fair opportunity for the play of the contending forces ordinarily engendered by an honest desire for gain. And to this end it is essential that those who adventure their time, skill and capital should have large freedom of action in the conduct of their own affairs."

The Circuit Court of Appeals for the Second Circuit has characterized the purpose of the Federal Trade Commission Act as follows:

> "Its purpose is to strike down at their inception practices which are unfair and which, if permitted to run their full course, would result in the creation of a monopoly and an undue restraint of trade." (*Northam Warren Corporation v. Federal Trade Commission*, (1932) 59 F. (2d) 196, 198.)

The petitioner claims "confusion" in the public mind because of the use of this trade name. Upon analysis it will be found that the alleged confusion is little more than ignorance as to the botanical identity of the several trees yielding lumber which is marketed under white pine names. This is not such confusion as will sustain a claim of unfair competition.

The petitioner cites the decision of this Court in

> *Federal Trade Commission v. Winsted Hosiery Company* (1922), 258 U. S. 483; 42 S. Ct. Rep. 183; 66 L. ed. 729.

That case cannot be assimilated to the instant case. There the offending manufacturer had, with express design,

adopted labels for his goods, which were "indubitably false". There was intent to defraud, and the public was in fact defrauded and business competitors were injured. The instant case is in no sense a counterpart, as the court below distinctly recognized. Petitioner admits that respondents' commercial name "was originally adopted without improper motive or purpose". Petitioner admits that the name was not adopted "for the purpose of misleading or deceiving the trade or the public". There is neither fraudulent purpose nor fraud in fact. The Commission has not attempted to make findings to that end.[1]

Unless it appears that the respondent has offended against the terms or purpose of the Anti-Trust Act or the Clayton Act, or that his course of conduct is motivated by intent to deceive or to defraud the public or to injure competitors, no jurisdiction exists to compel revision of trade nomenclature.

It would therefore seem clear that the initial reason advanced by the petitioner is invalid, for the point has already been determined adversely to petitioner's claim. The Circuit Court of Appeals correctly concluded, upon the record before the Commission, that the use of "California White Pine" as the commercial name for respondents' product, is not an unfair method of competition. This conclusion was within the province of the court.

---

(1) That fraudulent intent is a necessary ingredient of unfair competition is amply shown by the authorities:
*Elgin National Watch Co. v. Illinois National Watch Co.* (1901), 179 U. S. 665, 674; 45 L. ed. 365.
*Howe Scale Co. v. Wyckoff, Seamans, etc.* (1905), 198 U. S. 118, 140; 49 L. ed. 972.

## II.

### THE INTEREST OF THE PUBLIC

The second issue tendered by the petition is in effect a challenge to the conclusion of the court that the action of the Commission was not in the interest of the public. The point is not so phrased, but such is the purport of petitioner's reasoning. In the language of the petition, the question presented is "whether the statutory requirement that a proceding be in the public interest permits the Commission or the court to consider the general social or economic facts which may indirectly result from the Commission's order" (Petition p. 11).

In this the petition fails aptly to state or fairly to characterize the substance of the opinion of the Circuit Court of Appeals in dealing with the question of the public interest. *That court specifically found, upon a review of the record, that the evidence before the Commission was insufficient to show that action by the Commission to force a change in this long-established trade name was in the public interest.* The court examined the evidence and considered the Commission's findings, and advisedly reached a conclusion adverse to the Commission upon this jurisdictional question.

As a mere incident to this conclusion the court observed that the public is not only interested in not being deceived in the material it purchases under a certain nomenclature, "but possibly in an even larger sense in the conservation of the forests" (R. 1890). It is in this remark that petitioner purports to find the indicia of an excess of jurisdiction on the part of the court.

At the worst, the observation thus made by the court was surplusage, and could not possibly be judicial error. It was enough that the court found that the evidence before the Commission was insufficient to support its findings with respect to unfair methods of competition and with respect to the public interest. These are the jurisdictional prerequisites, and it was immaterial, at most, that the court suggested further considerations militating against the propriety of the Commission's action (4 *Corpus Juris* 1057).

We have pointed out that the generic grant of authority to the Commission to forbid unfair methods of competition in commerce confers no license to traverse the fields of trade and industry and compel the revision of trade names which it may find objectionable for one reason or another. It is not enough that the challenged practice may appear to the Commission to be misleading or confusing. It cannot be stated too emphatically that the prerequisites to action on the part of the Commission comprehend not only (a) the existence of unfair methods of competition in commerce, but also (b) a determination that action on the part of the Commission is "to the interest of the public".

The meaning of these terms has been definitely charted by the decision of this Court in the *Raladam* case supra. It is there held that "unfair methods" are "*those resorted to for the purpose of destroying competition or eliminating a competitor or of introducing a monopoly—such as tend unfairly to destroy or injure the business of a competitor*". It is also there held that the words "to the interest of the public" "*are not substantive words of jurisdiction but*

*complementary words of limitation upon the jurisdiction conferred by the language immediately preceding*". It is not enough "that a given person, partnership or corporation has been or is using any unfair method of competition in commerce". The court declares that "the Commission still may not proceed, unless it further appear that a proceeding would be to the interest of the public, and that such interest is specific and substantial".

Accordingly, the Commission may not insist that its action is "to the interest of the public" in any case wherein the record fails to show a public interest which is "specific and substantial". It was the holding of the Circuit Court of Appeals that no such public interest appears in respect to the practice of these respondents. This was a proper question for judicial determination, and the ruling is not impaired by harmless collateral comment.

---

## III.

### ALLEGED EXCESS OF JURISDICTION BY CIRCUIT COURT OF APPEALS.

Petitioner has phrased its third point in the following terms (Petition p. 13):

> "A further reason for granting the writ of certiorari is that this is a case where large interests are involved and where the court below failed to observe the statutory provisions governing judicial review of orders of the Commission."

The fact that "large interests are involved" affords insufficient reason for the review of a decision upon certi-

orari. If it should appear, however, that the court below failed to observe the statutory restraints upon its reviewing authority, the intervention of this Court could properly be invoked. We shall proceed to show that the court below did not exceed the limits of its authority.

It is true, as the petition points out, that the Commission's findings of fact are conclusive "if supported by testimony". We agree also that the weight to be given to the facts, as well as the inferences reasonably to be drawn from them, are matters for the Commission. But the Circuit Court of Appeals expressly recognized these limitations upon its reviewing authority, as the text of its opinion clearly discloses. The court undertook only to determine (a) whether the record before the Commission could support a finding of unfair competition and (b) whether the record and findings sufficed to show that the intervention of the Commission was in the public interest. As we have hitherto pointed out, this Court has expressly ruled that "the ultimate determination of what constitutes unfair competition is for the court, not the Commission".

*Federal Trade Comm. v. Curtis Publ. Co.*, supra.

It is suggested in the concluding portion of the petition that there is a tendency on the part of the courts to weigh evidence and to set aside the Commission's orders when their views as to preponderance differ from those of the Commission (Petition p. 15). If there is such tendency on the part of any court, it is not exemplified by the decision of the Circuit Court of Appeals in this case. There is nothing whatever in its opinion which can support the criticism that it has assumed either "to weigh

the evidence" or to formulate its own "views as to preponderance". It did make passing comments upon the significance of certain of the Commission's findings of fact, but the evidentiary findings of the Commission were not disturbed. Not one such finding was either set aside or modified. Nor did the court make findings of its own, either in substitution for findings of the Commission, or otherwise. Certainly, passing comments upon the findings, and upon the record itself, are entirely appropriate, and do not constitute an invasion of the province of the Commission.[1]

The fact is that the court below reviewed the testimony only for the purpose of ascertaining whether such testimony could be held to support the Commission's conclusions upon the *ultimate questions* involved in these proceedings, (1) whether respondents' practice was unfair, and (2) whether action by the Commission would be in the public interest. The court expressly recognized the finality of the Commission's findings of fact, when supported by testimony, and sought only to determine whether those findings are supported by evidence, and whether they sustain the Commission's conclusions upon these ultimate questions. Such inquiries were within the province of the reviewing court.[2]

Since the petition fails to identify a single specific instance wherein the court set aside or disturbed an evi-

(1) The Commission made no finding in respect to the adoption and recommendation of "California White Pine" as a "preferred commercial name" for this lumber by the United States Bureau of Standards. The court below commented upon this phase of the record, but again refrained from making a finding of its own.

(2) The distinction between "ultimate facts" and "evidentiary facts" is, of course, well understood.

*Temple Anthracite Coal Co. v. Federal Trade Commission*, supra.

dentiary finding upon the ground that it was unsupported by testimony, it would appear that petitioner cannot justly assert or imply that the court failed to observe the accepted limitations upon its jurisdiction.

---

## CONCLUSION.

It has been said by a former Chief Justice of this Court that the office of the writ of certiorari is "to secure uniformity of decisions in subordinate courts of appeal and to decide questions of general, public importance which are not well settled" (Volume VIII, *American Bar Association Journal,* 603).

*Hamilton-Brown Shoe Company v. Wolf Bros.,* (1916) 240 U. S. 251; 60 L. ed. 629.

The petition for certiorari herein fails to present a case responding to these requirements.

It presents no conflict between different circuits.

It tenders no questions of "general, public importance which are not well settled". On the contrary, it seeks to reopen questions which have been authoritatively settled by this Court.

The petition does not represent, nor does the record before the Federal Trade Commission in these proceedings show,

(1) That respondents have offended against the Sherman Anti-Trust Act or the Clayton Act; or

(2) That respondents have attempted or conspired to destroy or restrict competition; or

(3) That the commercial name used by respondents for their lumber (established through the United States for more than thirty years) was adopted for the purpose of misleading or deceiving the trade or the public or for any other fraudulent or improper purpose.

The petition for certiorari should be denied.

Respectfully submitted,

ALGOMA LUMBER COMPANY ET AL., PETITIONERS

vs.

FEDERAL TRADE COMMISSION, RESPONDENT

Petition to review orders of the Federal Trade Commission
Before: WILBUR, Circuit Judge, and JAMES and NORCROSS, District Judges

*Opinion*

Filed April 4, 1933

NORCROSS, District Judge:

The petition presents for consideration a review of orders made by the Federal Trade Commission on June 8, 1931, in the so-called "White Pine cases" requiring the petitioning lumber manufacturers to cease and desist from using the word "white" in conjunction with the word "pine" in connection with the sale in interstate commerce of lumber manufactured from the species of pine tree botanically known as Pinus ponderosa.

Petitioners herein are twelve of a group of fifty manufacturers on the Pacific coast, against which the Commission issued similar complaints on May 23, 1929. Each of these concerns was charged with the interstate sale of lumber under various terms, including the phrase, "white pine", with the alleged result of misleading and deceiving the trade and public to the injury of competitors and the public, and that the same is an "unfair method of competition forbidden by section 5 of the Federal Trade Commission Act." The term employed by each of petitioners here is "California white pine."

"To sustain the orders of the Commission three requisites must exist: (1) That the methods used are unfair; (2) that they are methods of competition in interstate commerce; and (3) that a proceeding by the Commission to prevent the use of the methods appears to be in the interest of the public." Federal Trade Commission v. Royal Milling Co., ... U. S. .... (decided February 6, 1933); Fed. Trade Comm. v. Raladam Co., 283 U. S. 643, 646-647. That the use of the expression, "California white pine", is a method of competition, there is no question. The only questions presented are whether requisites (1) and (3), found by the Commission to exist, are supported by the testimony. If so supported, the statute provides that such findings "shall be conclusive." (Fed. Trade Comm. v. Winsted Hosiery Co., 258 U. S. 483, 491.).

In Federal Trade Commission v. Raladam Co., 283 U. S. 643, the Supreme Court said:

"In a case arising under the Trade Commission Act the fundamental questions are, whether the methods com-

plained of are 'unfair', and whether, as in cases under the Sherman Act, they tend to the substantial injury of the public by restricting competition in interstate trade and 'the common liberty to engage therein.' The paramount aim of the act is the protection of the public from the evils likely to result from the destruction of competition or the restriction of it in a substantial degree, * * *."

In Federal Trade Commission v. Sinclair Refining Co., 261 U. S. 463, the Court said:

"The general purpose of both statutes was to advance the public interest by securing fair opportunity for the play of the contending forces ordinarily engendered by an honest desire for gain. And to this end it is essential that those who adventure their time, skill, and capital should have large freedom of action in the conduct of their own affairs."

This Court in Hills Bros. v. Fed. Trade Comm., 9 F. (2d) 481, 484, said:

"The Court is only concerned with the question whether there is any competent testimony to support findings of the Commission."

Pinus ponderosa belongs botanically with the so-called "yellow pine" group. The typical "yellow pine" is the longleaf pine of the South, a hard lumber useful where strength is needed, and classified botanically as Pinus palustris and Pinus taeda. When lumber from the Pinus ponderosa trees came into local use in California it was given the name "California white pine" in order to distinguish it from the hard "yellow pines" of the South. By 1886 it was so marketed in the States of California, Nev-

ada, and Utah, with occasional shipments further east. By about 1900 it was so marketed in the Middle West sections, and about 1915 shipments extended to the Atlantic coast.

The only species of true botanical white pines of commercial importance are northern white pine, and two Pacific coast varieties—Idaho white pine and sugar pine. The annual production of northern white pine in the United States is 825,000,000 feet b. m., of which 358,000,000 feet is from virgin timber in Minnesota, the remainder, 467,000,000 feet, being in the main second growth from the original forests stretching throughout the northern and eastern sections of the United States from Minnesota to the Atlantic coast. The annual production of Idaho white pine is 500,000,000 feet and of sugar pine 280,000,000 feet. The annual production of ponderosa is 2,800,000,000 feet, of which more than half has been sold since 1924 as pondosa pine and the remainder as California white pine, Arizona white pine, and New Mexico white pine.

Prior to 1924 the majority of Washington, Idaho, western Montana and northern and central Oregon producers of ponderosa were designating their lumber western white pine. Upon application for complaints against them the Commission investigated this trade term. As a result of an agreement entered into by most of such producers in that year the name pondosa pine was adopted as a substitute. In the brief of counsel appearing as amicus curiae is the statement that following the said orders of the Commission of June 8, 1931, the name was again changed to ponderosa pine.

Statistical Bulletin #21 of United States Department of Agriculture (commission's exhibit 34) gives a statement of the total timber stand in the United States for the year 1920 in board feet as follows:

Pinus ponderosa (California white pine) and Pinus jeffreyi (Jeffrey pine), 249,578,000,000.

Pinus strobus (northern white pine) and Pinus resinosa (norway pine), 23,457,000,000.

Pinus monticola (Idaho white pine) and Pinus lambertiana (sugar pine), 57,071,000,000.

From the foregoing it appears that the available supply of ponderosa and its kindred Jeffrey pine is about three times greater than the total available supply of the botanically true white pine timber in this country. The record also discloses an estimate of more than 15,000,000,000 board feet of northern white pine (strobus) within the Canadian Provinces. At the rate of consumption given, not considering second growth, the present stand of timber will be practically exhausted within sixty years.

In respondent's exhibit #31—"U. S. Department of Commerce Bureau of Standards — Lumber — Simplified Practice Recommendation R 16-29" (issued December 5, 1929), there appears under the heading "Nomenclature of commercial softwoods" the statement:

"The following standard commercial names for lumber cut from the principal species of softwoods shall be used in the formulation of lumber-grading rules and in the construction of contracts and the terms of purchase and sale of American standard lumber. Preferred commercial names are shown in italic."

Here follows under subheadings of various names of trees such as cedars, firs, hemlocks, etc., the standard commercial name of lumbers produced therefrom. Under the subheading Pines appear sixteen names, the following among others: Arkansas soft pine, California white pine, Idaho white pine, longleaf pine, North Carolina pine, northern white pine, norway pine, pondosa pine, southern pine, sugar pine. Placed opposite each such standard commercial name is the proper botanical name or designation. Of the sixteen names, ten are of the botanical yellow pine. While commercially pine lumber falls within two main groups—the white and the yellow pines—it may be noted that the Bureau of Standards in the exhibit referred to makes no such groupings as it does in the case of douglas fir and the true firs.

While action taken by the Bureau of standards is persuasive in a case of this character, it is not necessarily controlling on the Federal Trade Commission or the courts. There may be cases in which the action of the Bureau should be regarded as decisive. As said by the Circuit court of Appeals, Seventh Circuit, in a recent case, Kirk & Co. v. Fed. Trade Comm., 59 F. (2d) 179, 183:

"We deem it quite pertinent and decisive of the question before us. The Government, through its agency, the Bureau of Standards, has thus committed itself to the proposition that castile soap may be made of oily and fatty elements other than olive oil. Being solely a question of fact, we deem it expedient for other departments of the Government, including the judiciary, to accept such construction, if for no other reason than that of consistency."

It would not necessarily follow from this decision that a yellow pine might be sold as a white pine if such sales were unfair to the trade and injurious to the public, notwithstanding the Bureau of Standards had specified a name such as "California white pine" in a list of "Standard commercial names" for pine lumber. It would be different, however, if the particular lumber sold under such name possessed substantially the same qualities possessed by the white pines of commerce as distinguished from certain well-known commercial yellow pines.

As shown by Bulletin 556 of the U. S. Department of Agriculture (respondent's exhibit 21) in the physical properties of weight, stiffness, strength, hardness, and shrinkage, ponderosa compares favorably with strobus. Expert witnesses from the United States Forest Products Laboratory place ponderosa in its mechanical properties with the typical white-pine lumbers. There appears to be no serious question in this respect.

A statement by E. P. Ivory, formerly with the U. S. Forest Service, a witness called by the Commission, succinctly presents certain facts:

"There are 37 pine species in the United States, and just as the oaks are divided into white and red oak groups, so the pines are divided into white and yellow pine groups. Botanically, California white pine falls in the yellow-pine group, chiefly because it has three long needles in each bundle, whereas the white pines have five. The physical properties and uses of the wood cut from this tree, however, align it with the white-pine group and set it apart very distinctively from the yellow-pine group."

From the testimony of this witness there also appears the statement:

"Physical properties of California white pine, as demonstrated in tests made at the U. S. Government Forest Products Laboratory, Madison, Wisconsin, and its uses, closely align California white pine with the botanical white pines. In fact, in many of its most important qualities and uses California white pine is more typieally a white pine than are some species which botanically are classified as white pines."

The finding of the Commission to which objection is principally directed as not being supported by the evidence reads:

"True white-pine lumber is far more durable than ponderosa lumber when exposed to weather conditions. The ponderosa pine has on an average a far greater amount of sapwood than trees generally used for lumber. The sapwood of the ponderosa is less durable than any other part of the tree—especially when exposed to weather conditions. It is the sapwood of the ponderosa that most closely resembles the heartwood of the true white pines in appearance and softness. It is the sapwood of the ponderosa that is usually sold for uses and purposes for which the heartwood of the true white pines is celebrated. The close resemblance between the heartwood of the true white pines and the sapwood of the ponderosa above noted is one of the greatest causes of the confusion and deception in the marketing of the two species."

The gist of this finding is that true white-pine lumber is far more durable and has a far less percentage of sap-

wood than ponderosa lumber, and that the close resemblance between the heartwood of true white pines and the sapwood of ponderosa is one of the greatest causes of confusion and deception in the marketing of the two species.

An exhibit in the record discloses that the sapwood of the true white-pine tree appears to be about 1¾ inches in thickness as compared with three inches for the yellow pine. The relative percentage of sapwood in a particular tree depends largely upon its diameter. The attention of the court is directed to a chart showing a strobus tree 9½ inches in diameter to have 60% sapwood, while a ponderosa tree 18 inches in diameter has 55% sapwood content, and trees of 21 inches in diameter have a sapwood content of 30% and 48%, respectively. While these figures are interesting as showing the proportion of sapwood and heartwood content of logs, they do not necessarily indicate the relative proportion of sapwood and heartwood content in the lumber produced therefrom. That there is a greater percentage of sapwood content in ponderosa lumber than there is in the true white-pine lumber there is no question. This variation, however, appears to be of importance only as it has a bearing upon the relative durability of the two classes of lumber. It is the sapwood which was found by the Commission to be more subject to decay when applied to exterior uses.

Upon the question of durability of ponderosa as compared with the true white pines the testimony of a number of witnesses appears in the record. A reference to the testimony of a few only will be sufficiently illustrative. Russell F. Whitehead, a New York City architect and

editor of an architectural journal, testified that lumber made from ponderosa "is not a satisfactory substitute for genuine white pine to use in exterior of a building, in any way, shape, or form." The witness further testified that he regarded it as reasonably satisfactory for interior purposes, "but not if exposed to the weather." W. B. Greeley, for seven years Chief Forester of the United States and now manager of the West Coast Lumberman's Association, Seattle, testified: "The genuine white pines have the reputation for greater durability in uses exposed to the weather. That would not apply to interior uses protected from the weather." George W. Kelham, for twenty-two years an architect in San Francisco, testified as to the use of ponderosa where exposed to the weather: "It is unsatisfactory under those conditions, and that would be the general opinion of the architects that I know. * * * It doesn't, in our opinion, last well. It decays more rapidly than other wood."

Professor C. P. Winslow, Director of the United States Forest Products Laboratory at Madison, Wisconsin, since 1917, to the question, "What is the difference between white pine and Pinus ponderosa as to durability?" answered: "I don't know."

Professor G. M. Hunt, of the same laboratory, testified: "The general experience with the use of the white pines during the 200 years since they began to be used indicated that these pines had moderately high durability. The general experience with Pinus ponderosa indicated that that wood had low durability in contact with the ground or any place favoring the growth of decay. That is a matter of common knowledge."

To the question, "Have there been tests which will adequately settle the question as to the relative decay-resisting qualities of the heartwood of Pinus ponderosa and the heartwood of Pinus strobus?" Professor Hunt answered: "There have not."

The weight to be given to testimony above outlined upon the question of the relative durability of the two lumbers is not as clear as it might otherwise seem to be, viewed in the light of other facts and circumstances. The expression that ponderosa lumber is not a satisfactory substitute "for use in exterior of a building, in any way, shape, or form" may well be viewed in the light of the fact that buildings erected from lumber from the original northern white-pine forests have withstood the elements for two centuries, while but few, if any, erected with lumber from the ponderosa tree may lay claim to an age in excess of about seventy-five years. Specific instances of decay under ordinary conditions of upkeep are almost wholly lacking in the record. The Director of the Forest Products Laboratory did not know what the difference in durability is. Professor Hunt's testimony was to the effect that it was a matter of common knowledge from general experience that ponderosa "had low durability in contact with the ground or any place favoring the growth of decay." As most of the lumber used even for exterior purposes does not come in contact with the ground, it would not necessarily follow that such lumber might not in other respects have moderately high durability unless the witness meant to say that any exterior use was a "place favoring the growth of decay." The testimony of the witness does not appear to warrant the latter

interpretation. What the testimony appears to establish is that northern white pine has relatively a greater durability for exterior use without establishing any comparative degree of such durability.

Upon the question of public confusion in the matter of lumber nomenclature, the testimony of a number of witnesses appears in the record. Mr. Alfred Busselle, for twenty-five years a practicing architect in New York, specializing in high-grade residential work, testified "In my experience there is a great deal of confusion in the pine market due to the terminology, and some of the confusion is quite honest. * * * I know that California white pine connotes to some people a distinct type of wood, but it connotes to other people white pine in general, and therein lies the confusion." Those who are confused, generally speaking, the witness testified, were the "millmen and the lumber dealers, as well as the architects." Just why architects and lumber dealers should be confused in view of the aid and assistance furnished by the Government through the Bureau of Standards is not readily apparent. It may properly be assumed that architects have a general knowledge of the qualities of the various materials they specify. If it is deemed important that a particular residence or other building be constructed of so-called true white pine because of its known or claimed superior wearing or other qualities, a reference to the standard commercial names, "northern white pine", "Idaho white pine", or "sugar pine", will enable the architect to so specify and the contractor and dealer to comply with the specifications. The testimony does not support a view that when architects so specify there is any confusion

or even any material amount of intentional substitution of some other lumber than that specified. It is clearly established by the testimony that the true white pines are sufficiently well known in the trade to be able to command a higher price over that sold under the trade name of California white pine or pondosa.

The testimony of a number of witnesses engaged in the retail trade in various States is to the effect that orders for white-pine lumber without other designation, would be filled by any lumber using the designation "white", including California white pine. It does not appear, however, from the testimony of these witnesses that in filling such orders with California white pine, or with other lumber using the designation "white", and which was not a botanically true white pine, a practice prevailed of charging a price therefor on a basis of the market price for northern or Idaho white pine.

P. J. Curley, president for five years of a wholesale and retail lumber house at Chicago, testified:

"It is commonly known among the sash and door men if a specification comes in for white pine, they will furnish California white pine or so-called 'western pine' or 'pondosa pine', without attempting to get the genuine northern white pine or Idaho white pine."

The reason for the substitution, the witness testified, "is the lower price, lower cost to the sash and door men or to the interior men." The amount of such substitution the witness estimated at "about ninety-five percent."

If it be considered that manufacturers of sash and doors and exterior trim use ponderosa lumber principally in such

manufacture, and supply the same when the specification calls for white pine, the important question remains of the character of material so supplied, and whether a price is charged therefor based on the difference in cost of the two lumbers. There is no testimony touching the question of price of this particular character of manufactured product. With the exception of the possible question of durability, the materiality of which has not been established, it does not otherwise appear the public is injured by action of such manufacturers. If, as testified by the witness Curley, these manufacturers use ponderosa pine as readily as they do California white pine in filling specifications calling for white pine, it is not apparent that an affirmance of the Commission's orders would afford any relief if injury from such manufacture in fact occurs.

In the finding of the Commission complained of appears the statement: "It is the sapwood of ponderosa that most closely resembles the heartwood of the true white pines in appearance and softness." In respondent's brief appears the statement: "True white pines excel ponderosa in the soft texture of the wood as an average * * *." The court's attention has not been called to any tests made of the relative hardness of heartwood as compared with sapwood. The tests made by the United States Forest Products Laboratory for "hardness (side section)" show ponderosa softer by 2% and "(end section)" softer by more than 6% than strobus. In comparison with the southern yellow pine (longleaf) both woods are softer by more than 50%.

As bearing on the question relative to the contention that the use of the commercial name "California white pine"

is unfair to the trade, we quote the following excerpt from the brief of respondent:

"Idaho white pine in 1922 and 1923 had a premium of $16 or $17 per thousand feet. Since the decline of 1927 the premium has been but $5.50 to $8.50. In September 1927 the Weyerhaeuser Sales Company made a drastic cut in Idaho white pine largely for the reason that the Weyerhaeuser concerns 'had come to the conclusion that, because other woods not true white pines were being marketed under the white-pine name, it was no longer possible to get the price preferences that we had previously gotten.'"

It may be noted, however, in connection with the foregoing statement, that the reduction in price did not occur until three years after the commercial name of half of the ponderosa of commerce was changed from western white pine to pondosa.

It may be conceded that if the use of the commercial name California white pine is prohibited in the lumber trade, northern white pine and Idaho white pine will be able to command a higher price than that which now prevails over lumber produced from the forests of ponderosa pine. If this situation be conceded, and it be further conceded that the increased price of strobus lumber finds a correlative reduction in the price of ponderosa lumber, the further question remains whether such change in commercial methods of sale will be in the interest of the public.

The case of Federal Trade Commission v. Winsted Hosiery Co., 258 U. S. 483, is stressed in the brief of respondent as one presenting a "remarkable parallel" respecting the use of unfair methods, the prevention of

which is in the interest of the public. From the opinion we quote the following excerpt:

"A substantial part of the consuming public, and also some buyers for retailers and sales people, understand the words 'merino', 'natural merino', 'gray merino', 'natural wool', 'gray wool', 'Australian wool', and 'natural worsted' as applied to underwear to mean that the underwear is all wool. By means of the labels and brands of the Winsted Company bearing such words, part of the public is misled into selling or into buying as all wool, underwear which in fact is in large part cotton. And these brands and labels tend to aid and encourage the representations of unscrupulous retailers and their salesmen who knowingly sell to their customers, as all wool, underwear which is largely composed of cotton."

The sale or purchase of a material as all wool which in fact is in large part cotton presents a situation which may not be said to be parallel to that presented upon the facts in this case. If a material from a gray wool from some other breed of sheep than a merino were dealt with in commerce under the name of "merino" or "gray merino", then there might be some parallel between the two cases.

In the case at bar we are considering questions as between certain pine lumbers. The use of the word "white" is here sought to be prohibited in connection with the trade name of a lumber produced from a certain species of pine tree which botanically falls within the yellow-pine group but which in its industrial utility comes within the white-pine group as known to commerce and industry. In the field of commerce and industry there are but two groups

of pine lumbers—the white and the yellow. Primarily this grouping reflects the industrial utility of the several lumbers. While botanically Pinus ponderosa falls within the same general classification as Pinus palustris, the lumber from which latter trees first became known to commerce as southern yellow pine, ponderosa in industrial utility possesses more nearly the qualities of Pinus strobus, which as northern white pine was the first of the pines known to commerce using the designation "white."

It may be conceded that the evidence establishes that northern white pine lumber from the forests of Minnesota, and Idaho white pine lumber possess certain qualities which make those lumbers a superior grade to lumber produced and sold as California white pine. When we compare Idaho white pine with northern white pine we find that the Department of Agriculture (exhibit 21) records the former as possessing greater strength and stiffness, but with all a softer quality. As said in the brief for respondent: "Lumber is a product of growth, not an inorganic, chemical product. Lumber from any given species, even the most uniform, will vary somewhat in quality. Where species are similar in average quality, or where the variations in a species are great there will be some overlapping." In considering California white pine with northern white pine, for example, the fact may not be overlooked that the greater portion of the annual production of such lumber, 467,000,000 board feet, comes from second-growth timber. Concerning this second-growth lumber, in the brief of respondent, we read: "While most of the new growth of strobus is being prematurely cut and used for

inferior purposes, yet doubtless many areas are being allowed to stand for their maximum value." This statement is suggestive of the fact that the public interest is not promoted by the premature cutting of second-growth timber.

In considering the fact that certain of the so-called true white pines produce lumber superior in certain respects to that produced from ponderosa, there is also to be considered the fact that these species of true white pines differ also from each other as the so-called true yellow pines differ from each other. Whatever these differences are, in commerce and industry pine lumber is classified into two groups, white pine and yellow pine, and any lumber falls within one or the other of these two main groupings, largely if not entirely because of its peculiar industrial utility.

In considering the weight to be given to the fact that ponderosa is not only not a botanical true white pine but in certain respects is also inferior in a more or less uncertain degree to certain of the true white pines of commerce, the past history as well as the future of the industry is deserving of consideration. The supply of the botanical true white pine is far more limited than that of ponderosa. The public is not only interested in not being deceived in the material it purchases under a certain nomenclature, but possibly in an even larger sense in the conservation of the forests. In the brief for respondent appears this statement:

"The superiority of true white-pine lumber over ponderosa has been reflected in the fact that northern white

pine, Idaho white pine, and sugar pine have all commanded a higher price on the market than ponderosa. The price differentials still continue."

It is manifest from this statement that, notwithstanding the fact that ponderosa has been sold in markets throughout the country under the commercial name "California white pine", and under other names using the word "white", for more than fifteen years prior to the institution of this proceeding, the so-called "true white pine" were able to command a higher price.

It is the conclusion of the court that, viewing the testimony in the light of all the facts of the case, it is insufficient to support findings that petitioners' use of the commercial name "California white pine" is an unfair method of competition or that its prevention would be in the interest of the public.

The orders complained of should be annulled and set aside. It is so ordered.

| I. The trade-name "California White Pine" as applied to lumber yielded by *Pinus ponderosa* is truly descriptive of the physical properties, the commercial qualities and industrial utility of the lumber. The term has no botanical significance. Its use is therefore not misdescriptive | 23 |
| Botanical classification v. commercial nomenclature | 24 |
| The Circuit Court of Appeals properly gave consideration to the "Simplified Practice Recommendation" of the Bureau of Standards, U. S. Department of Commerce, adopting and recommending "California White Pine" as a *preferred commercial name* for respondents' lumber. This was a "material fact not reported by the Commission" | 37 |
| Alleged differences between *ponderosa* and other pine lumbers | 42 |
| The current meaning of "white pine" | 47 |
| Usage, intent and purpose | 48 |
| The element of competition | 51 |

Page

II. The commercial name "California White Pine" has neither been devised nor used for the purpose of misleading or deceiving the trade or the public ..... 52

III. "Unfair methods of competition" within the meaning and intendment of the Federal Trade Commission Act have not been established against the respondents upon the record or by the Commission's findings ..... 56

A. "The paramount aim of the Act is the protection of the public from the evils likely to result from the destruction of competition or the restriction of it in a substantial degree" ..... 56

B. "Unfair methods" are "those resorted to for the purpose of destroying competition or of eliminating a competitor or of introducing a monopoly—such as tend unfairly to destroy or injure the business of a competitor" ..... 56

C. "The object of the Trade Commission Act was to stop in their incipiency those methods of competition which fall within the meaning of the word 'unfair'." ..... 56

IV. Neither fraud, dishonesty nor deception has been found against respondents ..... 60

V. The Commission exceeded its province in ordering a suppression of respondents' trade name ..... 64

VI. The public interest requirement has not been sustained of record. The decision of the court below was not rested upon a consideration of forest conservation ..... 67

Pending controversy essentially private in nature 68

Reference to the policy of conservation ..... 71

VII. The Circuit Court of Appeals made no independent appraisal of the evidence; neither did it reject any of the evidentiary findings made by the Commission 73

The reviewing court is not bound by the Commission's conclusions as to ultimate facts ..... 74

CONCLUSION ..... 75

OCTOBER TERM, 1933

No. 240

FEDERAL TRADE COMMISSION,
*Petitioner,*

vs.

ALGOMA LUMBER COMPANY, et al.,
*Respondents.*

On Writ of Certiorari to the United States Circuit Court of Appeals for the Ninth Circuit.

## Brief for
## Algoma Lumber Company, et al., Respondents.

### THE OPINION OF THE COURT BELOW.

The opinion of the Circuit Court of Appeals for the Ninth Circuit is reported in 64 F. (2d) 618, and is printed at page 1889 of the record herein. The decree of the court was entered on April 4, 1933 (R. 1899). Petition for cer-

tiorari was filed July 3, 1933, and was granted October 9, 1933 (R. 1900).

---

**REPORT AND ORDER OF THE FEDERAL TRADE COMMISSION.**

The report and order of the Federal Trade Commission are printed in the record at pages 26-48 inclusive.

---

**STATEMENT OF THE CASE.**

On or about May 23, 1929, the Federal Trade Commission, purporting to act in the public interest, filed complaints against the respondents and certain other lumber producers charging in brief that the use of the term "California White Pine" in the sale in interstate and foreign commerce of lumber yielded from the tree *Pinus ponderosa* is an "unfair method of competition" forbidden by Section 5 of the Federal Trade Commission Act. The trade name thus assailed came naturally and honestly into existence many years ago, and has been used by respondents and their predecessors continuously for more than 30 years in marketing this lumber throughout the United States.

Respondents own and operate lumber mills in the Sierra Nevada pine belt in California and southern Oregon. The lumber which they produce is yielded by the dominant pine of the Sierra forests, known to botanists as *Pinus ponderosa*. This lumber is marketed under the name "California White Pine" (Findings of Commission, Paragraphs two and three—R. 28).

As early as 1880, this lumber was marketed locally in California, New Mexico and Arizona under trade names

which included the words "white pine." By 1886 it was being generally marketed under terms including "white pine" in California, Nevada and Utah, with occasional shipments to the eastward. By about 1900 it had progressed into middle western territories and by 1915 national distribution was completed by entrance into New England (Findings of Commission, paragraph thirty—R. 33).

As this lumber commenced to move in volume into the markets of the Middle West and East, it naturally retained its established local name, "California White Pine." There were additional reasons for the employment of this commercial name. Then, as now, there were two types of pine lumber known to trade and industry—viz., "white pine" and "yellow pine" (R. 282). "White pine" lumber is white in appearance and soft in texture and its primary use is for shop or finish purposes—e. g., in the manufacture of sash and doors and interior trim (R. 613). "Yellow pine" lumber, on the other hand, is yellow in color and hard in texture and its primary use is for structural purposes where strength is required (Findings of Commission, Paragraph ten—R. 30). Respondents' lumber is of the "white pine" type, and far removed from the "yellow pine" type. Accordingly, it has always been known to trade and industry by a "white pine" name (R. 159, 778-9, 1368-9). The word "California" has been included for the purpose of specific identification.

The record shows without conflict that the name "California White Pine" was employed in national distribution in order to avoid confusion with the typical yellow pine lumbers of the southern states (R. 1189, 1206, 1273).

Until very recently no other trade name had been called into being. In short, from the introduction of this lumber into the channels of interstate commerce and continuously throughout the years, it has been predominantly known as "California White Pine."

In or about the years 1924 and 1925 a movement directed to a change in commercial nomenclature arose within the industry. Certain lumber manufacturers proposed a change from "California White Pine" to "Pondosa Pine" (a corruption of "ponderosa"), and such change was actually made by some of the producers. These respondents were unwilling to abandon the use of "California White Pine" (Complaint of Federal Trade Commission, Paragraph eight—R. 8). They were opposed to the newly coined "Pondosa" name. Thereupon the proceedings were commenced by the Commission.

Pursuant to its conventional practice, the Commission instituted its proceedings in response to *ex parte* representations and inquiries. The complaints tendered certain charges of fraudulent motive and wrongful conduct in the origin and use of the name, but these charges wholly failed of proof and were of necessity abandoned. The averments of the complaints were erroneous in other material respects. We take note of these unfounded charges and erroneous averments at this juncture in order to preclude misunderstanding as to the nature of the case tendered by the complaints and alike as to the nature of the case actually developed by the evidence.

**Averments of complaints which failed of proof.**

(1) The complaints charged that respondents sell their lumber, and designate it on letterheads, bill-heads and invoices, as "white pine," with or without the addition of further words of identification (R. 6). The evidence shows that the full term "California White Pine" has invariably been used by respondents, and the Commission has so found (Commission's Findings, Paragraph three—R. 28).

(2) The complaints aver that *Pinus ponderosa* does not "in the character of lumber made therefrom, belong to that group of pine species known as white pine * * *" (R. 6). The proofs shows without conflict that the character of this lumber places it in the white pine group (R. 159, 778-9, 1368-9).

(3) The complaints aver that *Pinus ponderosa* is, "by the average commercial qualities and characteristics of the species, a member of the aforesaid yellow pine group" (R. 7). The proofs show without conflict that in commercial qualities and characteristics this lumber is far removed from the yellow pine group (R. 159, 778-9, 1368-9).

(4) The complaints allege that the term "California White Pine" "was adopted and has been continued by respondents and other manufacturers thereof as a substitute for that of western yellow pine * * *" (R. 8). The record shows without contradiction that "California White Pine" was not adopted as a substitute for western yellow pine or as a substitute for any other name whatever. From the beginning this lumber carried a "white pine" name (R. 1189, 1468, 1470-2).

(5) The complaints aver that the term "California White Pine" "was adopted and has been continued by respondents and other manufacturers * * * in order to cause the trade and buying public to minify or ignore the characteristics wherein *Pinus ponderosa* is inferior to *Pinus strobus* * * *" (Northern White Pine) (R. 8). The record shows without conflict that "California White Pine" was adopted for the purpose of avoiding confusion with the typical yellow pine lumber of the southern states (R. 1189, 1206, 1273).

(6) The complaints charge that jobbers and retailers have been "misled into buying *Pinus ponderosa* in the belief that they thus secure genuine white pine * * *" (R. 9). No jobber or retailer has so testified.

(7) The complaints charge that respondents and other manufacturers "have been enabled to fill and have actually filled orders for genuine white pine with consignments of *ponderosa* pine" (R. 10). The record contains no proof that any respondent, or any person in privity with any respondent or otherwise, has at any time "filled orders for genuine white pine with consignments of *ponderosa* pine."

It appears accordingly that the complaints were founded upon two major premises which were false in fact: *first*, that the name "California White Pine" had been devised and used for the purpose of misleading and deceiving the trade and the public, and, *second*, that the characteristic qualities and uses of this lumber place it in the "yellow pine" group rather than in the "white pine" group. As to the first premise, counsel for the Commission was com-

pelled to admit upon brief filed before the Commission that *"there is no proof that the practice of designating ponderosa products by terms including the word 'white' was adopted for the purpose of misleading or deceiving the trade or the public."* As to the second premise, it is established incontestably that "California White Pine" lumber belongs in the "white pine" group in physical properties and essential industrial utility.

In order to make it clear beyond the possibility of a doubt that the Commission has expressly exonerated respondents from improper motive in the adoption of this trade name, we quote the following from page 80 of the brief for the Federal Trade Commission in these proceedings before the Circuit Court of Appeals:

> "It is true that the Commission alleged in its complaints that the respondents were actuated by an intent to secure the advantage of the association of the public mind with true white pine in the adoption of the term here in controversy.
>
> Such evidence as the Commission offered, as respects the origin of the term, indicated that the term 'California White Pine' was used before Northern or Idaho white pine came into local market where 'California White Pine' was offered, and that the term was adopted to avoid confusion with the hard 'yellow pine' of the south.
>
> *Accordingly, the allegations as to the improper motive at the adoption of the term 'California White Pine' were not sustained."* (Emphasis supplied.)

Having failed completely to sustain the complaints upon these major issues *(and these were the only substantial*

*charges tendered),* the Commission was relegated to *botanical* distinctions. Briefly stated, the claim appears to be that since the tree *Pinus ponderosa* has been grouped by botanists with those pine species commonly styled "yellow pines," the lumber which it yields may not lawfully be called by a commercial name containing the word "white." It will be found upon final analysis that the entire argument of "misdescription," "confusion" and "substitution" has been founded precariously upon the botanical criterion. But this issue was also found to rest upon a false premise, since the record shows without conflict that botanical classification and nomenclature have nothing in common with commercial nomenclature, that lumber buyers are not concerned with botanical distinctions and that their sole concern is with the characteristics of the lumber. The Commission now so concedes in its findings (Commission's Findings, Paragraph sixty-two—R. 39).

Notwithstanding that the material issues were thus resolved in their entirety against the allegations of the complaints, the Commission nevertheless proceeded upon its course.

**Summary of essential facts from the record before the Commission.**

For convenience the several complaints were consolidated for hearing and disposition. The controlling facts, as we conceive them, developed in the course of the proceedings before the Commission may be set forth in summary form as follows:

1. "California White Pine" is the commercial or trade name under which the lumber yielded by the

tree identified botanically as *Pinus ponderosa* has been marketed throughout the United States for more than 32 years last past. (In the Pacific Coast area since 1880 and nationally since 1900.) (See Paragraph thirty, Findings of Federal Trade Commission—R. 33.)

2. "California White Pine" was adopted as the commercial name for this lumber in order to distinguish it from the typical "yellow pine" lumbers of the southern states. (It is stated upon page 5 of the petition for certiorari in this cause that "the original purpose for the adoption of this term was to distinguish this lumber from the hard 'yellow pine' of the South.") (R. 1189, 1206, 1273.)

3. The botanical grouping of pine *trees* has no relation to the commercial nomenclature or industrial utility of pine *lumbers*. Botanical groupings respond to plant characteristics, while commercial groupings respond to physical properties and industrial use (R. 707, 962-3, 1366, 1387, 1450, 1822-3, 1827, 1839-40, 1845; see also Paragraph five, Commission's Findings—R. 28-29).

4. The *Pinus ponderosa* tree is conventionally assigned by botanists to the so-called "pinaster" or yellow pine group, but the lumber which it yields belongs with the white pine lumbers in mechanical properties and industrial utility (R. 778-9, 794, 812, 1368-9, 159, 168-9, 358, 731, 1082, 1123, 1338, 1374, 1408, 1410, 1666-7, 1863, 1824-5, 1832). (The following is quoted from page 9 of the petition for certiorari: "*This is*

*botanically a yellow pine but, from the standpoint of its industrial uses, is more closely allied with white pine.*" Emphasis supplied.)

5. The pine lumbers of the United States have been placed by trade and industry in two groups—viz., the white pine group and the yellow pine group. "California White Pine" has always been known to trade and industry as a white pine lumber (R. 282). It is far removed from typical yellow pine lumbers in mechanical properties and industrial utility. White pine lumbers are used for "finish" and "mill-work"; yellow pine lumbers are used for structural purposes (see references to Record under paragraph 4 *supra*).

6. It is admitted on the part of the Commission that "there is no proof that the practice of designating *ponderosa* products by terms including the word 'white' was adopted for the purpose of misleading or deceiving the trade or the public" (Brief for Federal Trade Commission in proceedings before the Commission, p. 87).

7. Scientific tests made at the United States Forest Products Laboratory at Madison, Wisconsin, show that in mechanical properties the lumber of *Pinus ponderosa* (California White Pine) belongs in the white pine group and is far removed from the yellow pine group (Respondents' Exhibits 21-23, 32; R. 778-780, 783, 784, 1368-9).

8. The experts of the United States Forest Products Laboratory at Madison, Wisconsin, state that there

are no tests which they regard as reliable permitting a conclusion as to the relative durability of *ponderosa* pine and the botanical white pines (R. 816, 820, 821, 822).

9. There is neither proof nor finding that the term "California White Pine" was devised or that it has been used for the destruction or restriction of competition, or for the purpose of trading on another's name. There is no proof that any respondent has at any time sold or invoiced this lumber under any other term than the full name "California White Pine."

10. "California White Pine" has been formally adopted and recommended as a "preferred commercial name" for this lumber by the Bureau of Standards of the United States Department of Commerce. This recommendation has been accepted by the major organizations of the lumber industry and by the American Institute of Architects (Respondents' Exhibit No. 31; R. 1353, 1360-1363).

These statements of fact are unassailable. They are established without conflict of record.

If we may single out the facts which appeal to us as being dominant in the cause, they would be briefly these:

*First:* That the botanical grouping of pine *trees* has no relation to the commercial grouping of pine *lumbers;*

*Second:* That there are only two groups of pine lumbers known to trade and industry—viz., the white

pine group and the yellow pine group—and that California White Pine belongs in the white pine group in physical properties and in industrial utility;

*Third:* That the term "California White Pine" came into being naturally and honestly, *admittedly without improper motive,* and that it has been used for upwards of 30 years throughout the United States in identifying and marketing this lumber.

**Material facts not found by Commission.**

The court should be advised that the Federal Trade Commission refrained from making findings with respect to certain phases of the record which were obviously material. Specifically it failed to find:

(1) That scientific tests conducted by government experts at the United States Forest Products Laboratory at Madison, Wisconsin, demonstrate that in mechanical properties, *ponderosa* lumber belongs with the white pine lumbers and not with the yellow pine lumbers (R. 778-780, 1368-9).

(2) That the government experts at the United States Forest Products Laboratory at Madison, Wisconsin, testified that there have been no scientific tests regarded as reliable which can afford a conclusion as to the relative durability of *ponderosa* pine and so-called botanical white pine lumbers (R. 816, 820-822).

(3) That "California White Pine" has been formally adopted and recommended as a "preferred commercial name" for this lumber by the Bureau of

Standards of the U. S. Department of Commerce (R. 1353, 1360-3).

All of this evidence was material to the issues, and yet the Commission studiously avoided making appropriate findings. It failed to report the results of the "mechanical properties" tests made by the United States Forest Products Laboratory. It predicated its findings respecting wood quality upon the opinions, prejudices and preferences of lay witnesses. It made no reference whatever to the approval of "California White Pine" by the United States Bureau of Standards.

The court below properly commented upon these material portions of the record (see opinion of the Circuit Court of Appeals, R. 1891-2, 1893, 1894).

**The order of the Commission.**

On June 8, 1931, the Commission made its findings and orders. The orders required each respondent to "*cease and desist from using, either orally or in writing, the word 'white' in connection, combination or conjunction with the word 'pine' or in connection with other word or words used in combination or conjunction with the word 'pine'*" (R. 47).

By these orders the Commission required the effectual suppression of this trade name, with all of the goodwill acquired throughout more than thirty years of continuous use in the lumber markets of the United States. Respondents are forbidden to call this lumber "white," either orally or in writing, in association with any other words

whatsoever. They are denied the use of the particular word which is essential in order to convey to trade and industry the characteristics and the industrial utility of this lumber. They may not call it "white" even though they should be willing to add other words of specific identification. This attempted suppression of a long-established trade name, honestly adopted and honestly used, would seem to exceed the furthermost bounds of the administrative authority committed to the Commission.

**Proceedings in the Circuit Court of Appeals.**

In proper course, in pursuance of Section 5 of the Federal Trade Commission Act, c. 311, 38 Stat. 717, 719 (U. S. C., Title 15, Sec. 45), these respondents filed their petition in the Circuit Court of Appeals for the Ninth Circuit seeking a review of the Commission's orders (R. 1879-1883). On April 4, 1933, the Circuit Court of Appeals filed its opinion in the cause. The opinion of the court concludes as follows:

> "It is the conclusion of the court that, viewing the testimony in the light of all the facts of the case, it is insufficient to support findings that petitioners' use of the commercial name 'California White Pine' is an unfair method of competition or that its prevention would be in the interest of the public.
>
> The orders complained of should be annulled and set aside. It is so ordered." (R. 1899.)

The judgment annulling and setting aside the orders of the Commission was entered on April 4, 1933 (R. 1899).

We are not content with the characterization of the opinion of the Circuit Court of Appeals as set forth in the

petition for certiorari and in the opening brief for the Federal Trade Commission. A brief review of the opinion of the court will be appropriate in order to make it clear that the court recognized the limits upon its reviewing jurisdiction and kept scrupulously within those limits.

Following a brief statement of the case and a summary of the elements of the law of unfair competition, conformably with the decisions of this court, the court recognizes that if the findings of the Commission are supported by the testimony, they are conclusive (R. 1890). The court proceeds to review the evidence of record in connection with the Commission's findings. It attaches significance to respondents' exhibit No. 31, "U. S. Department of Commerce, Bureau of Standards—Lumber—Simplified Practice Recommendation, R. 16-29," which approves "California White Pine" as a standard commercial name for this lumber (R. 1353, 1360-3). It is observed that while action by the Bureau of Standards is persuasive, "it is not necessarily controlling" (R. 1892). Reference is made to Bulletin 556 of the U. S. Department of Agriculture (respondents' exhibit No. 21—R. 779-780) reporting on the physical properties of *Pinus ponderosa* as compared with other pine lumbers, and the court notes that—

> "Expert witnesses from the U. S. Forest Products Laboratory place *ponderosa* in its mechanical properties with the typical white pine lumbers." (R. 1892.)

The court refers to the testimony given by the same experts of the U. S. Forest Products Laboratory at Madison, Wisconsin, directed to the durability of the several pine lumbers, showing in particular that there have been no

tests which can serve adequately to determine their relative decay-resisting qualities (R. 1894).

All of this evidence was material, particularly because it was supplied by unbiased government experts, and it was the duty of the court to give it consideration, *especially in view of the failure of the Commission to report it.*

Other evidence deemed material by the court was reviewed and pertinent decisions were considered. It is important to note, however, that the court did not "weigh the evidence," in the sense that it undertook to substitute its judgment for the judgment of the Commission as to the findings which should be made. *The court did not set aside a single evidentiary finding of the Commission.* It undertook to do no more than to exercise the reviewing authority expressly committed to it under the decisions of this court *(Federal Trade Commission v. Curtis Publishing Co.,* 260 U. S. 568; 43 Sup. Ct. Rep. 210; 67 L. Ed. 408).

---

## THE ISSUES.

According to our view, the issues as framed in the brief for the Federal Trade Commission are largely misconceived. On our part we believe that the essential issue may be tersely and yet completely phrased in the following terms:

May the Federal Trade Commission competently suppress the use of a particular trade name as an "unfair method of competition in commerce":

(1) When there is neither proof nor finding that the use of the trade name is likely to result in "the destruction of competition or the restriction of it in a substantial degree";

(2) When it appears, and is admitted on the part of the Commission, that the trade name was not adopted "for the purpose of misleading or deceiving the trade or the public";

(3) When there is neither proof nor finding of intent to deceive or deception in fact;

(4) When there is neither proof nor finding that the name was adopted, or has at any time been used, for the purpose of trading upon another's name or for the purpose of destroying or injuring the business of a competitor;

(5) When it appears that the name is correctly descriptive of the properties and uses of the product and identifies the territory of its origin;

(6) When it appears that the name was adopted, and has been continuously used, for the purpose of avoiding confusion with other products having dissimilar properties and uses;

(7) When it appears, and without conflict, that the name came honestly into being and has been honestly used by respondents for upwards of 30 years in trade and industry throughout the United States.

In thus phrasing the issues we have kept strictly within the undisputed facts of record.

## NATURE OF POWER ASSERTED BY FEDERAL TRADE COMMISSION.

The true nature of the power sought to be exercised by the Federal Trade Commission in these proceedings is aptly disclosed by the following excerpt from page 10 of the petition for certiorari in this cause:

> "In other words, does the Federal Trade Commission Act authorize the Commission, where a commercial name was originally adopted without improper motive or purpose, to compel use of more accurate and specific commercial names than those heretofore employed?"

This language reveals the Commission's preoccupation with trade nomenclature, irrespective of the law of unfair competition as commonly understood. It invites reference to the comment of the Circuit Court of Appeals for the Fourth Circuit in

> *Flynn & Emrich Co. v. Federal Trade Commission,* 52 Fed. (2d) 836, 838,

in which it was said:

> "It was never intended that the Commission should act the part of a petty traffic officer in the great highways of commerce."

If the Commission may competently exercise as wide an authority as that here claimed, it is subject to no appreciable restraint in the arbitrary revision of trade nomenclature. We expect to show that the law of unfair competition which the Commission administers has no such scope.

## SUMMARY OF ARGUMENT.

I. The trade-name "California White Pine" as applied to lumber yielded by *Pinus ponderosa* is truly descriptive of the physical properties, the commercial qualities and industrial utility of the lumber. The term has no botanical significance. Its use is therefore not misdescriptive.

The botanical classification of pine trees is not a criterion of the commercial nomenclature of pine lumbers. In classifying the several species of pines, the botanists have not considered either the mechanical properties, commercial qualities or the industrial utility of the lumber product. Purchasers and users of lumber have no interest in the botanical place of the tree which yields the lumber but are interested solely in the characteristics of the product itself.

Considered with respect to mechanical properties, commercial qualities and industrial utility, the lumber of *Pinus ponderosa* falls distinctly within the "white pine" group and is wholly dissimilar to the lumber of the so-called "yellow pines."

There are only two kinds of pine lumbers known to trade and industry, viz., "white pine" lumbers and "yellow pine" lumbers. "California White Pine" has always been considered a white pine in the trade.

The Federal Trade Commission has itself rejected botanical distinctions as criteria of commercial nomenclature (*In the Matter of the Gillespie Furniture Co.*, Docket 1739, order dated June 30, 1931).

No scientific tests have been made by which the relative durability of the several white pines of commerce can be ascertained.

The Circuit Court of Appeals properly gave consideration to the "Simplified Practice Recommendation" of the Bureau of Standards, United States Department of Commerce, adopting and recommending *"California White Pine"* as *preferred commercial name* for respondents' lumber. This was a "material fact not reported by the Commission." Action taken by the Bureau of Standards is persuasive and in some cases may be regarded as decisive *(Kirk & Co. v. Federal Trade Commission,* 50 Fed. (2d) 179).

The words "in the interest of the public," as used in the Federal Trade Commission Act, are not substantive words of jurisdiction but complementary words of limitation *(Federal Trade Commission v. Raladam Co.,* 283 U. S. 643; 75 L. Ed. 1324; 51 S. Ct. Rep. 587).

II. The commercial name "California White Pine" has neither been devised nor used for the purpose of misleading or deceiving the trade or the public.

Commercial names are addressed to trade and industry. "California White Pine" carries the representation that the lumber is a white pine lumber in mechanical properties and industrial uses. This is a truthful representation. A "yellow pine" name would be misdescriptive and misleading.

Respondents are entitled to a trade name which will place their lumber in one of the two groups of pine lumbers recognized by trade and industry. A white pine name appropriately characterizes this lumber in quality and utility.

III. "Unfair methods of competition" within the meaning and intendment of the Federal Trade Commission Act have not been established against the respondents upon the record or by the Commission's findings.

"Unfair methods" are "those resorted to for the purpose of destroying competition or eliminating a competitor or of introducing a monopoly—such as tend unfairly to destroy or injure the business of a competitor" *(Federal Trade Commission v. Raladam Co.,* supra).

There is neither charge nor proof of acts on the part of respondents tending to restrict competition or unfairly to destroy or injure the business of their competitors.

Fraudulent purpose and intent to deceive are indispensable elements of unfair competition *(Elgin National Watch Co. v. Illinois National Watch Co.,* 179 U. S. 665; *Howe Scale Co. v. Wyckoff, Seamans, etc.,* 198 U. S. 118; *Thum v. Dickinson,* 245 Fed. 609; *Wirfs v. Bosley Co.,* 20 Fed. (2d) 632; *Queen Mfg. Co. v. Ginsberg & Bros.,* 25 Fed. (2d) 284; *Vortex Mfg. Co. v. Ply-Rite Contracting Co.,* 33 Fed. (2d) 302).

IV. Neither fraud, dishonesty nor deception has been found against respondents. The decision of this court in *Federal Trade Commission v. Winsted Hosiery Co.,* 258 U. S. 483; 66 L. Ed. 729; 42 S. Ct. Rep. 384, is therefore inapposite.

V. The Commission exceeded its province in ordering a suppression of respondents' trade-name.

Trade-names which have been long in use constitute valuable business assets in the nature of good-will, the destruction of which should not be ordered if less drastic

means will accomplish the same result (*Federal Trade Commission v. Royal Milling Co.*, 288 U. S. 212; 77 L. Ed. 493; 53 S. Ct. Rep. 335; *Fluegelman & Co. v. Federal Trade Commission*, 37 Fed. (2d) 59; *Federal Trade Commission v. Cassoff*, 38 Fed. (2d) 790; *Federal Trade Commission v. Good-Grape Co.*, 45 Fed. (2d) 70).

VI. The public interest requirement has not been sustained of record.

The proceedings before the Commission arose out of a controversy essentially private in its nature. They are not founded upon a substantial public interest (*Federal Trade Commission v. Klesner*, 280 U. S. 19; 74 L. Ed. 131; 50 S. Ct. Rep. 5).

The comment of the lower court respecting the interest of the public in forest conservation was not a ground of the decision.

VII. The Circuit Court of Appeals made no independent appraisal of the evidence; neither did it reject any of the evidentiary findings made by the Commission.

The reviewing court has power to examine the whole record and ascertain for itself the issues presented and whether there are material facts not reported by the Commission (*Federal Trade Commission v. Curtis Publishing Company*, 260 U. S. 568; 67 L. Ed. 408; 43 S. Ct. Rep. 210).

The court is not bound by the Commission's conclusions as to ultimate facts (*Temple Anthracite Coal Co. v. Federal Trade Commission*, 51 Fed. (2d) 656, 659; *Federal Trade Commission v. Curtis Publishing Company*, supra; *International Shoe Co. v. Federal Trade Commission*, 280 U. S. 291; 74 L. Ed. 431; 50 S. Ct. Rep. 89, 91).

## ARGUMENT.

### I.

**THE TRADE-NAME "CALIFORNIA WHITE PINE" AS APPLIED TO LUMBER YIELDED BY PINUS PONDEROSA IS TRULY DESCRIPTIVE OF THE PHYSICAL PROPERTIES, THE COMMERCIAL QUALITIES AND INDUSTRIAL UTILITY OF THE LUMBER. THE TERM HAS NO BOTANICAL SIGNIFICANCE. ITS USE IS THEREFORE NOT MISDESCRIPTIVE.**

Preliminarily we should note that the trade-name here under review is "California White Pine." These respondents have invariably sold and invoiced their lumber under that complete name, and not merely as "White Pine" without further word of identification, as the opposing brief would suggest.

The argument in behalf of the Commission perpetuates a confusion, initially tendered by the text of the complaints themselves, between the *botanical grouping of pine trees* and the *commercial grouping of pine lumbers*. The two groupings have nothing in common; one is not a criterion of the other. The botanical grouping of *pine trees* is responsive to plant characteristics. The commercial grouping of *pine lumbers* is responsive to mechanical properties and industrial utility.

It may be conceded that the tree *Pinus ponderosa* is commonly assigned by botanists to the group of *pine trees* popularly known as the "yellow pine group" but it does not follow that the lumber yielded by the tree must be assigned to the "yellow pine group" of *pine lumbers*. On the contrary the record shows that, in mechanical prop-

erties[1] and industrial utility, the lumber belongs in the white pine group and is far removed from the yellow pine group. To call this lumber by a *white pine name* is therefore neither false nor misdescriptive. Obversely, it would be misdescriptive to call this lumber by a *yellow pine name,* and counsel for the Federal Trade Commission has so argued.

(The opposing brief is in error in reciting that "The falsity of the description is generally acknowledged by respondents' witnesses." There has been no such admission.)

All of this is established without conflict of record, but apparently some exposition will be appropriate in order to preclude erroneous impressions.

**Botanical Classification v. Commercial Nomenclature.**

In classifying the several species of the *genus Pinus* botanists have commonly separated them into two main groups, the technically correct names for which are: (1) the "strobus group" and (2) the "pinaster group," each taking the name of its most important species (R. 1826). *In making this grouping, however, botanists did not and do not consider either the industrial utility, the mechanical properties or the commercial quality of the lumber produced from these trees.* These factors have been found to vary greatly, and to cut across rather than to run parallel

(1) We have reproduced in the Appendix certain charts (A to F, inclusive) based upon the laboratory tests made at the U. S. Forest Products Laboratory at Madison, Wisconsin (Respondents' Exhibits 21 and 22—R. 778-780, 783-4, 1368-9) showing graphically that in mechanical properties this lumber falls immediately within the white pine group.

with other plant factors (R. 1506-7, 1826, 1827-9, 1830). Their use as a basis of plant classification would not give scientifically dependable results, and botanists have therefore entirely disregarded them in their groupings. Instead, they have considered such non-variable characteristics as the nature of the reproductive organs of the plants in question, and, in the case of the pines, the structures of the cones, the arrangement of the needles, and to a minor degree the bark.[2]

By such methods, and considering these primary botanical characteristics only, botanists have arrived at the groupings above mentioned. So considered, and with no reference whatever to the commercial qualities, the industrial utility or the mechanical properties of the lumber produced from it, the tree *Pinus ponderosa* has been assigned botanically to the "pinaster" group of pines, to which the several species commonly known as the "southern yellow pines" also belong. Similarly, considering only

(2) At one stage of the proceedings before the Commission, counsel for the Commission insisted that "botanical distinction includes the quality of the wood product" (R. 1512). This was doubtless an inadvertence on his part, since the experts are agreed that botanical classification takes no account of wood quality (R. 707, 963, 1450, 1823, 1827, 1839-40, 1845) and is based primarily on the nature of the seeds, bark, needles and cones of the several trees (R. 962-3, 1366, 1387, 1822-3; Commission's finding No. 5, R. 28). It was because of the statement of counsel, above mentioned, that respondents determined to secure the testimony of Professor Jepson, of the University of California, and the highest authority on the trees of the Pacific Slope, who testified at length on this subject. It is clear that "wood quality" is not, and never has been, considered by botanists as a factor in either botanical classification or nomenclature. Respondents' Exhibits 21, 22, 23 and 32 (R. 778-784, 1368-9) disclose that *Pinus ponderosa* belongs distinctly in the "white pine" group when judged by its characteristics *as wood*.

their purely botanical characteristics, the trees *Pinus monticola* and *Pinus lambertiana* have been placed botanically in the so-called "strobus" group.[3]

It cannot be too strongly stressed that, in making their groupings, botanists have never considered and do not now consider either the commercial qualities, the industrial utility or the mechanical properties of the lumber produced from these several trees, and also that, when it is appraised with respect to these factors, the lumber of *Pinus ponderosa* which is marketed as "California White Pine" is found to fall distinctly within the so-called "white pine group," and to be almost wholly dissimilar in these respects to the lumber of the so-called "yellow pines." In this connection Prof. J. A. Newlin, an expert of the United States Forest Products Laboratory at Madison, Wisconsin, Engineer in Forest Products, in charge of timber tests, and co-author of official bulletins on the mechanical properties of woods grown in the United States, was questioned as follows:

---

(3) The following testimony of the Commission's witness, Professor Koehler, of the United States Forest Products Laboratory, on cross-examination is illuminating:

> "Q. The most we can say is that certain of these pines have been conveniently grouped together and termed members of the white pine group and others have been grouped together for convenience and termed members of the yellow pine group. Is that a fair statement?
> A. Yes." (R. 706.)

The witness added that the distinguishing characteristics are certain microscopic cell indentations in the "yellow pines" and certain other differences such as the number of needles in a "bundle". But he was emphatic to the effect that the mechanical properties of the woods of these trees are not considered at all in determining their classification, "because they vary and overlap". (R. 707.)

"Q. Is it a fair summary or characterization of these tests that the mechanical properties of *Pinus ponderosa* as disclosed by the data in these tables more closely resemble the mechanical properties of the white pines, botanically speaking, than the southern yellow pines?

A. Yes, sir.

Q. Let us assume for the moment, Professor Newlin, that we are making one group of the three true white pines as they have been termed, botanically speaking, namely the *Pinus strobus,* the *Pinus monticola,* and the *Pinus lambertiana.* Then we make a second group of the three leading Southern yellow pines, namely the *Pinus palustris, Pinus echinata,* and the *Pinus taeda.* We now address ourselves to the consideration of the mechanical properties of the *Pinus ponderosa* in comparison to the relation of the mechanical properties of the white pines and yellow pines to which I refer. Now, considering the mechanical properties alone, would you again say that *Pinus ponderosa* is more directly to be assimilated to the white pine group than to the Southern yellow pine group?

A. The *Pinus ponderosa* in its mechanical properties more properly belong(s) in with the white pines than with the Southern yellow pine group, that is, it is much closer in its mechanical properties to that group." (R. 778-779.)

Another recognized authority on wood technology and nomenclature, Prof. T. J. Starker, of the Oregon State College, succinctly stated the situation:

"Q. In relation to the comparative mechanical properties of the wood, does the lumber yielded by the

> *Pinus ponderosa* tree belong more appropriately in the white pine group or the yellow pine group?
>
> A. These mechanical properties of *Pinus ponderosa*—in every test it falls within the limits set by the white pine group, and is very far removed from the average of the yellow pine." (R. 1368-9.)[4]

When the Commission's findings speak of "genuine" or "true" white pine, therefore, they should be understood as speaking of *a technical botanical relationship, wholly apart and distinct from the commercial quality and industrial utility of the lumber yielded by the several trees.* It is on the latter basis, however, that the propriety of accepted commercial names must, of course, be judged, as the Commission itself at length impliedly conceded. When judged on that basis "California White Pine" is in every essential respect a "white pine" and is properly so designated in commerce. As one Commission witness succinctly declared:

> "* * * when you come right down to it, basically speaking, there are only two kinds of pine, white pine and yellow pine, that are known in the lumber business, and that" (California White Pine) "is not a yellow pine; it is considered as a white pine in the trade." (R. 282.)

The opposing argument apparently suggests that the respondents have represented their lumber to be so-called "true white pine." There has been no such representation.

---

(4) The tests of the United States Forest Products Laboratory at Madison, Wisconsin, show distinctly that in its mechanical properties this lumber fits *within the limits* set by the other "white pines" of commerce. (Respondents' Exhibits 21, 22, 23 and 32; Record, 779, 794, 812, 1368-9, 1374, 1408, 1410.)

The Commission's findings expressly acquit respondents of that charge. We quote the concluding sentence of Paragraph twenty-nine of the Commission's findings (R. 33):

> *"Nor have these producers supported their designation of ponderosa products by terms which include the phrase 'white pine' by express declarations to their customers that said products are true white pine."* (Emphasis supplied.)

*There has been no representation that "California White Pine" is botanically anything which it is not.* The record in these proceedings contains no evidence of even a single instance of a sale of this lumber by any of the respondents under the claim, declaration or imputation that it is produced from a tree *botanically* classified in the same group of pine species to which *Pinus strobus, Pinus monticola* and *Pinus lambertiana* are assigned by botanists. Furthermore, there is no evidence in this record that these respondents or any of them have at any time or in any instance whatsoever either "been enabled to fill" or have actually filled orders (or, even a single order) for "genuine white pine" with *ponderosa* pine. In point of fact, there is no evidence that any lumber producers or lumber merchants, whether privy to these respondents or not, have been supplying this lumber upon orders for so-called "genuine white pine" or upon orders for "Northern White Pine," "Idaho White Pine" or "Sugar Pine."

The lumber of *Pinus ponderosa* which is marketed as "California White Pine" fell naturally and honestly by its commercial name. Those who originally adopted that designation were not only unfamiliar with technical botan-

ical distinctions, but had in mind solely the practical necessity, in the interest of the lumber-consuming public, of distinguishing this lumber from the totally different lumber produced from the "yellow pines" of the south.

The facts respecting the origin of the term "California White Pine" were brought out by the Commission's witness Cox, who though hostile to the respondents stood firmly upon the ground that the name was adopted in order to distinguish this lumber from that of Southern Yellow Pine. We quote from page 1206 of the record:

"By Mr. Burr:

Q. What were the reasons for the change?

A. The name was adopted to distinguish it from Southern pine or yellow pine.

Q. Yes.

A. It wasn't called yellow pine because it was different. If we called it yellow pine we thought that it would be mixed or confused with the product of the south.

Q. Well, why call it white?

A. I don't know—just because it was whiter than yellow pine, that was all."

Even when the Commission's counsel resorted to leading and suggestive questions, the testimony of the witness was not modified. We quote further from page 1206 of the record:

"By Mr. Burr:

Q. Are you sure that in the debate there was no other reason given for the use of the word white in connection with it?

A. That is my memory."

The Commission's witness, Frederick Weyerhaeuser, an official of one of the largest lumber producing and marketing organizations in the United States, in response to a question as to why his company had originally adopted the name "Western Soft Pine" for *Pinus ponderosa* lumber produced by it in the "Inland Empire" region, testified:

> "We thought it was desirable to give it a name different from the yellow pine of the south, as it was a soft wood." (R. 1273.)

Again the witness Weyerhaeuser, when asked whether or not "California White Pine" lumber and longleaf yellow pine from the south are in competition, said:

> "They are not very active competitors, one wood being rather the complement of the other, for many uses." (R. 1507.)

That this distinction is an important one in commerce is shown by the fact that counsel for the Commission himself declared in his brief before the Commission that to call this lumber by any commercial name containing the word "yellow" would be a "wrong" and would cause confusion (Par. 100). He had previously so stated at the hearings (R. 967, 1402). From every practical viewpoint this lumber belongs exactly where the commercial practice of the lumber trade for the past thirty years has placed it, to-wit, along with the other pine lumbers that are soft and white and are used for finish as contrasted with structural purposes. This has been a natural grouping, and

there is not now and never has been any question of an intent to "trade on another's name."[5]

*Under whatever name it were to be marketed, it is admitted that this wood must go into these general "white pine" uses.*

Indeed, the technical, botanical relationships of wood used for lumber are not ordinarily significant when their commercial names are under consideration, and the failure of the practical lumber merchant in this instance to follow such distinctions is neither unique nor unusual. For example, the well-known lumber commonly marketed throughout the country as "Douglas Fir" is not produced from a tree which is botanically a fir tree, but from a tree which is neither fir, spruce nor pine but which botanists have classified as "Pseudotsuga" (literally "false hemlock"). For many years this wood was also marketed as "Oregon Pine," and this is still its standard commercial name in California and in the export trade.[6]

Again, no species of tree which is botanically a "cedar" grows in the United States, yet the lumber of several trees

(5) As we have already stated, the charge of "trading on another's name" has been withdrawn. This was necessary, as the Commission was unable to prove a single instance of any such action. Not only was the origin of the name "California White Pine" free from such taint, but its use has likewise been universally free from any such purpose.

(6) The Record contains much testimony respecting the non-botanical commercial names for the lumber known to the trade as "Douglas Fir" and "Oregon Pine". (R. 843-4, 961, 964, 1028, 1093-4, 1128, 1129, 1201, 1231-2, 1380, 1498-1501, 1504, and Respondents' Exhibit 31, R. 1360-3.) "True" botanical "fir" is produced and marketed in large quantities (R. 964-5) and is used for many purposes for which "Douglas Fir" is unsuitable or distinctly inferior. (R. 1129.)

of other botanical *genera* is commonly advertised and marketed as "cedar." Thus the well-known "Port Orford Cedar" is not botanically a cedar (R. 965-6, 1129-30, 1160-1, 1502).

Moreover, by a recent decision, the Federal Trade Commission has itself rejected botanical distinctions (of much greater technical extent than those here involved) as criteria of commercial nomenclature. We refer to the so-called second "Philippine Mahogany" decision, by which the use of that term in commerce for woods not belonging even to the botanical family of "genuine" mahogany is held to be proper and not to constitute an "unfair method in commerce," thus reversing a previous decision which had condemned the use of that term as misleading *(In the Matter of the Gillespie Furniture Co.,* Docket 1739, order dated June 30, 1931). Furthermore, the so-called "longleaf pine" lumber of the south may be and often is the product of any one of the three main southern pines, the distinction being the appearance and utility of the particular piece of wood rather than the botany of the tree from which it was cut. This is also true of the "shortleaf pine" lumber of the south, which may in practice come in part from the tree *Pinus palustris,* commonly known as "longleaf pine." In other words its utility and adaptability are considered in commerce rather than its botany (R. 120, 162-3, 1139, 1380).

This list might be greatly enlarged, the fact being that commerce and industry have taken little account of the purely botanical distinctions between various trees. The controlling considerations in commerce and industry are

*the mechanical properties and the quality and utility of the lumber* rather than the number of needles in a "bundle," the character of the bark or cones or the nature of the flowering organs.

It was stipulated by the Commission's counsel in this connection that purchasers and users of lumber are neither familiar with nor concerned with botanical classification, nomenclature or relationship (R. 919-20), and that their primary concern is with its quality, mechanical characteristics and industrial utility (R. 873; see also R. 78, 270, 279, 375, 388, 389, 508, 550, 555 and 570).

The Commission's witness Greeley declared:

> "I think the actual characteristics and similarities of the wood is a more important factor in commercial practice than botanical distinctions." (R. 1143.)

He also stated:

> "I can readily see from the standpoint of the manufacturer, and the standpoint of the trade, logical commercial reasons for making clear that the lumber of *ponderosa* is in no wise confused with lumber of southern yellow pine.
>
> Q. And does this also go to the standpoint of the consumer?
>
> A. Yes." (R. 1121.)

The record shows overwhelmingly that purchasers and users of lumber have no interest in the botanical place of the tree which yields the lumber, but that they are interested solely in the characteristics of the lumber itself. We

close this phase of the discussion by reproducing the concluding sentences of Paragraph sixty-two of the Commission's findings (R. 39):

> "Nor are these classes of buyers informed of or concerned over the purely botanical distinctions considered by scientists in the classification of species. They buy by common names and are concerned over distinction between the characteristics of the lumber of the various species."

These findings should suffice. Botanical terms and botanical identities hold no interest either for the practical lumberman, the lumber merchant, the architect or the consumer.

The Federal Trade Commission is concerned solely with trade practices in commerce and industry, and in commerce and industry the term "white pine" has never possessed any technical significance of a botanical character.[7] As the

---

(7) The use of the term "white pine" as the "common name" of the tree *Pinus strobus* and certain related species is of no import. The record is clear to the effect that so-called "common names" of plants are not words of science. Neither do they possess botanical significance. They are merely convenient and frequently arbitrary nicknames of a purely colloquial rather than scientific character. They are never used by botanists in an exact sense, but are included in botanical literature purely as an aid to popular description, either because exact translation of the botanical title is impossible or impracticable, or because that title is too cumbersome for popular use. (R. 964, 1131-2, 1367, 1383-4, 1830-1, 1837.) Professor Cheney of Minnesota, a Commission witness, had the following to say on this subject:

"Q. Why are common names adopted by botanists?
A. I do not think they are.
Q. They are not?
A. They are adopted by other people.

wood of *Pinus strobus* has become scarcer this term has quite naturally attained a broader significance wholly apart from botany.[8] Both "Idaho White Pine" and "California White Pine" have been terms in common use for a long period of years, while "Sugar Pine" has never been marketed as "White Pine." The lumber sold as "California White Pine" came into the markets of the east and middle west along with, if not slightly earlier than, "Idaho

---

Q. Then they are really not, technically not correct, at all, are they?

A. No." (R. 964.)

Such common names possess no relation to the lumber cut from any tree, nor to its botany. (R. 1338, 1372-3, 1446-7, 1830-1.) The common names "white pine" and "yellow pine" are of such character. Neither is descriptive of the trees in the forest, and "white pine" trees are not white. The term possesses meaning only to distinguish the *wood* cut from them from that of the so-called "Southern yellow pines." On this basis the lumber of *Pinus ponderosa* is fully entitled to the term "white," since it is not at all to be assimilated to the "yellow" pines, and is frequently lighter in color than that of the other "white pines" of commerce. (R. 1367.) The Forestry Department's term "Western Yellow Pine" for *Pinus ponderosa* is not a "common name" at all, but was arbitrarily adopted for convenience in referring to that tree at a time *after* its lumber had been for many years sold as "California White Pine." It bears no relation to the color, quality, mechanical characteristics or utility of this truly "white pine" lumber.

---

(8) For at least thirty years the term "white pine" has not been confined in the lumber trade to lumber produced solely from trees to which the term was also applied colloquially (R. 213, 923-4, 1812), and during that period the term has been undergoing a broadening of meaning (R. 330, 505-6, 752-3), until it has come to signify pine lumber of the soft or finish type as distinguished from the structural pine lumber of the "yellow pines" of the south. (R. 557-8, 589-90, 1400.)

White Pine" and "Sugar Pine";[9] it possesses the industrial characteristics and utility of the old so-called "white pine," and is wholly dissimilar in its qualities and uses to the lumber of the so-called "yellow pines." It has never been, and admittedly should not be, marketed as "yellow pine." *In its mechanical properties it falls distinctly within the class of the so-called "white pines,"* as is clearly disclosed by the unanimous testimony of the experts.

Doubtless enough has been said to reveal the error inherent in the attempted assimilation of *botanical classification of pine trees* to *commercial grouping of pine lumbers.* The former relates to the pines as *trees;* the latter relates to *pine lumbers.* The two groupings have distinctive meaning and purpose, and have never been in conformity. To our minds the persistent confusion exhibited by the opposing brief in dealing with the incidents of botanical classification and commercial nomenclature, respectively, is gratuitously unnecessary.

**The Circuit Court of Appeals properly gave consideration to the "Simplified Practice Recommendation" of the Bureau of Standards, U. S. Department of Commerce, adopting and recommending "California White Pine" as a PRFERRED COMMERCIAL NAME for respondents' lumber. This was a "material fact not reported by the Commission."**

The brief for the Federal Trade Commission finds error

(9) "Idaho White Pine" came on the market of the United States at approximately the same time as, or a little later than, "California White Pine." (R. 664, 932, 1270, 1272-3, 1485-6, 1570-1.) Sugar Pine and "California White Pine" have been marketed under those distinctive trade names throughout their history in the lumber markets. Sugar Pine has never been marketed under any other name, and has never been known in the lumber trade by any name containing the word "white."

in the consideration given by the Circuit Court of Appeals to the Simplified Practice Recommendation of the Bureau of Standards, United States Department of Commerce, adopting and recommending "California White Pine" as a preferred commercial name for lumber yielded by *Pinus ponderosa*. (The second specification of error recites that the court erred "in weighing the evidentiary value of nomenclature approved by the Bureau of Standards.") The court committed no error in this respect but kept expressly within its reviewing jurisdiction as defined by this court.

In the proceedings before the Federal Trade Commission these respondents offered in evidence a copy of a bulletin of the Bureau of Standards, United States Department of Commerce, captioned "Lumber, 4th Edition, Simplified Practice Recommendation R. 16-29," dated July 1, 1929. This was received in evidence as respondents' Exhibit No. 31 (R. 1353, 1360-1363). This bulletin carries various recommendations under the caption "American Lumber Standards," and sets forth in particular that the commercial name "California White Pine" is a preferred name for lumber yielded by *Pinus ponderosa* (R. 1361). The bulletin was tendered and received for that specific purpose.

Certainly this was material evidence. It had a bearing both upon the issue of unfair competition and the issue of the public interest. If any administrative agency of the federal government such as the Bureau of Standards, attempting to bring about uniform and simplified practices in trade and industry, recommends specific trade nomenclature as "preferred," surely that recommendation is

significant of a conviction that the recommended trade-name is neither deceptive nor misleading nor confusing, nor opposed to the public interest. The bulletin was received in evidence. But the Federal Trade Commission made no reference to the bulletin, or to the simplified practice recommendation as to "California White Pine," in its findings in these proceedings. This was a material fact, not reported by the Commission, and this court has held that the reviewing court has "power to examine the whole record" and to ascertain for itself "whether there are material facts not reported by the Commission." The following is quoted from the opinion of this court in

*Federal Trade Commission v. Curtis Publishing Co.*, 260 U. S. 568, 43 S. Ct. 210, 213, 67 L. Ed. 408:

"Manifestly, the court must inquire whether the commission's findings of fact are supported by evidence. If so supported, they are conclusive. But as the statute grants jurisdiction to make and enter, upon the pleadings, testimony and proceedings, a decree affirming, modifying or setting aside an order, *the court must also have power to examine the whole record and ascertain for itself the issues presented and whether there are material facts not reported by the commission.* If there be substantial evidence relating to such facts from which different conclusions reasonably may be drawn, the matter may be and ordinarily, we think, should be remanded to the commission—the primary fact-finding body—with direction to make additional findings, but if from all the circumstances it clearly appears that in the interest of justice the controversy should be decided without further delay the

court has full power under the statute so to do. The language of the statute is broad and confers power of review not found in the Interstate Commerce Act." (Emphasis supplied.)

It will be found upon examining the opinion of the Circuit Court of Appeals in this cause that the consideration given to the simplified practice recommendation of the Bureau of Standards is within the limits of the reviewing jurisdiction as defined by this court (R. 1891, 1892). It has reported a material fact which was not reported by the Commission. But the court has been particular to say that while action by the Bureau of Standards is persuasive, it is not necessarily controlling on the Federal Trade Commission or the courts. We quote from the opinion of the court below (R. 1892):

"While action taken by the Bureau of Standards is persuasive in a case of this character, it is not necessarily controlling on the Federal Trade Commission or the courts. There may be cases in which the action of the Bureau should be regarded as decisive. As said by the Circuit Court of Appeals, Seventh Circuit, in a recent case, Kirk & Co. v. Fed. Trade Comm., 59 F. (2d) 179, 183:

" 'We deem it quite pertinent and decisive of the question before us. The Government, through its agency, the Bureau of Standards, has thus committed itself to the proposition that castile soap may be made of oily and fatty elements other than olive oil. Being solely a question of fact, we deem it expedient for other departments of the Government, including the judiciary, to

accept such construction, if for no other reason than that of consistency.'

"It would not necessarily follow from this decision that a yellow pine might be sold as a white pine if such sales were unfair to the trade and injurious to the public, notwithstanding the Bureau of Standards had specified a name such as 'California white pine' in a list of 'Standard commercial names' for pine lumber. It would be different, however, if the particular lumber sold under such name possessed substantially the same qualities possessed by the white pines of commerce as distinguished from certain well-known commercial yellow pines."

The case of *Kirk & Co. v. Federal Trade Commission,* supra, cited in the opinion of the court below, seems to be directly pertinent. It appeared in that proceeding that the Bureau of Standards had prescribed rules as to what should constitute castile soap. The Federal Trade Commission ignored this material fact, and its order was set aside by the Circuit Court of Appeals of the Seventh Circuit. Certiorari was denied by this court on December 5, 1932 (287 U. S. 663, 53 S. Ct. Rep. 220, 77 L. Ed. 238).

These respondents do not contend, as the opposing argument may imply, that the functions of the Bureau of Standards "overlap or supersede the functions of trade regulation." We do contend, however, that irrespective of the precise legal aspects of the functions exercised by the Bureau of Standards, the adoption of "California White Pine" as a preferred commercial name by the bureau was a material piece of evidence upon which findings should properly have been made by the Commission. Since

the Circuit Court of Appeals has "*power to examine the whole record and ascertain for itself the issues presented and whether there are material facts not reported by the Commission,*" the court below did not exceed its powers in taking cognizance of this material fact in its efforts to determine whether the entire record could support the Commission's findings that respondents were guilty of unfair methods of competition.

**Alleged differences between ponderosa and other pine lumbers.**

As the brief for the Commission would have it, these respondents are attempting to excuse terminology which is "false technically" upon the plea that they are offering "an exactly similar article or one equally as good." This is an erroneous characterization of respondents' position, and alike of the opinion of the court. We contend that the term "California White Pine" is technically correct as applied to the lumber yielded by *Pinus ponderosa* because it properly characterizes its physical properties and industrial uses. The term has no botanical connotation.

We deny misdescription. Again pointing out that there are but two groups of pine lumbers known to trade and industry, viz: the white pine lumbers and the yellow pine lumbers, our task is to determine in which group this lumber appropriately falls. To our minds this is the controlling question. Applying the dual test of "mechanical properties" and "industrial utility," we find that the lumber of *Pinus ponderosa* belongs definitely within the white pine group and not within the yellow pine group. The record will admit of no other conclusion. Therefore

this lumber is entitled to a white pine name. "California" is added for specific identification.

Refined argument respecting the relative merits of competing lumbers would seem to lend little assistance toward a determination of the real issues here presented. In many particulars, as it seems to us, the opposing brief is careless of the record, but we shall not devote space to correction. Admittedly the lumber market is highly competitive and the numerous witnesses called by the Commission and by the respondents had their several preferences and prejudices. The prevailing fact, however, is that *no evidence has been offered remotely suggesting that this lumber belongs in the yellow pine group or that it should have a yellow pine name.*

We find an apparent suggestion in the opposing brief that since this lumber is yielded by a tree which has been assigned botanically to the yellow pine group, the lumber should bear a yellow pine name. Such at least is the implication conveyed by the brief for the Federal Trade Commission. However, it should be made clear to the Court that the Commission is opposed with equal vigor to a yellow pine name for this product. This is apparent from the record declaration of counsel for the Federal Trade Commission which we here reproduce (R. 165):

> *"Now, then, I do not believe that these gentlemen should be required to call their product western yellow pine. The Government has not taken one step or made one single attempt to introduce evidence in this case which could be construed as forcing or attempting to force the Pinus ponderosa interests to call*

*their product western yellow pine or anything else with the name 'yellow pine' in it.*

*I should be opposed to such an order."*

In brief, the argument seems to be that although *ponderosa* is assigned botanically to the yellow pine group of trees, *the lumber cannot be called yellow;* and although the properties of the lumber place it in the white pine group, *it cannot be called white.* The vagaries of administrative regulation could not be more vividly exemplified.

Particular differences in quality, utility, durability or any other characteristic need not engage us, except to say that the witnesses were not in accord. This is sufficiently shown by the findings of the Commission. We think, however, that the court should know that the only expert testimony received of record respecting relative durability—*a point strongly stressed in the Commission's findings and urged with equal ardor in the Commission's brief*—completely fails to sustain the Commission's findings of relative inferiority for this lumber.

The experts of the United States Forest Products Laboratory at Madison, Wisconsin, testified without exception that *no scientific tests have ever been made by which the actual relative durability of these several white pines of commerce can be ascertained.* Typical of the expert testimony on this subject was that of Professor G. M. Hunt, of the United States Forest Products Laboratory. When asked whether there have been any tests which in his opinion are adequate to enable him to advise with assurance as to the relative decay resisting qualities

of the heartwood of *Pinus lambertiana* and the heartwood of *Pinus ponderosa,* he said:

"A. There have been no tests which we consider adequate to settle the question of comparative decay resisting properties of those two woods.

Q. Have there been such tests as will enable you to advise with assurance as to the relative decay resisting qualities of the heartwood of pinus ponderosa and pinus monticola?

A. There have been no tests to settle that question.

Q. Have there been tests which will adequately settle the question as to the relative decay resisting qualities of the heartwood of pinus ponderosa and the heartwood of pinus strobus?

A. There have not." (R. 821.)

The same witness also stated:

"Q. In this matter of durability do you know of any tests that have been attempted which would show a comparison between the durability of the white pines and pinus ponderosa?

A. No." (R. 816.)

In the interest of completeness we add the testimony of Professor C. P. Winslow, Director of the United States Forest Products Laboratory since 1917. Professor Winslow was called as a witness for the Commission. We quote from page 820 of the record:

"Q. (By Mr. Burr) What is the difference between white pine and pinus ponderosa as to durability?

A. I don't know."

As to alleged wood failures, they were not satisfactorily identified as *Pinus ponderosa,* and Professor Koehler of the Forest Products Laboratory, a witness for the Commission, and an authority on wood technology and identification, explicitly stated that the samples submitted to him were for the most part too small to admit of absolute identification. They were "yellow pine", but the species could not be determined with certainty (R. 698, 699-700, 706).

This evidence was material, in the view of the Commission, and yet the Commission ignored it in its findings. It preferred to rest its findings upon lay testimony based upon individual preference, prejudice and repute. The failure of the Commission to report the testimony of the government experts again exemplifies the omission of material facts. Under the ruling of this court in *Federal Trade Commission v. Curtis Publishing Company,* supra, it was within the province of the lower court to take note of this omission. This the court did, with appropriate quotations from the testimony. (R. 1894.)

The Commission has again been unfair in making findings respecting relative heartwood and sapwood content which are wholly without support of record. We refer to paragraph 40 which contains the following statement (R. 35):

> "The ponderosa pine has on an average a far greater amount of sapwood than trees generally used for lumber."

This statement is wholly devoid of record support, and counsel for the Commission so admitted in oral argument

before the Circuit Court of Appeals. We assume that the same admission is in order now.

The court below comments upon this paragraph of the findings in its opinion (R. 1896). Again the court was within its proper province.

It was apparently found necessary to traduce the qualities of this lumber in order to find some occasion for condemning this long established trade name. If the findings were valid they could not serve, as we understand the law, to make out a case of unfair competition. Be the facts what they may as to the precise relative merits of these several competing lumbers, it is certain that neither the record nor the findings can justly deny to these respondents their right to use a white pine name with an appropriate term of identification, i. e., "California White Pine".

**The current meaning of "white pine."**

The fact may be conceded that, many years ago, "white pine" meant lumber yielded by *Pinus strobus* only. It has long ceased to have that restricted meaning. For example, "Idaho White Pine" has been known by that name for some 30 years, although the lumber is not yielded by *Pinus strobus*. "California White Pine" has been known by that name for more than 30 years throughout the United States and for practically a half century in the Pacific coastal area, although it is not yielded by a botanical white pine.

This extension of the original meaning to include lumbers other than those yielded by *Pinus strobus* has

been a natural transition and in no respect responsive to improper motive or purpose. Today "white pine" means any one of several lumbers of the finish type, as distinguished from the structural type, and with an appropriate prefix such as "Northern", "Idaho", and "California" in the interest of specific identification. Trade and industry have been completely adjusted to this prevailing nomenclature.[10]

**Usage, intent and purpose.**

The brief for the Commission observes that this proceeding is not brought by private parties but is brought by a governmental agency and "in the interest of the public". The Commission, however, overlooks the fact that these words, "in the interest of the public", are *"not substantive words of jurisdiction, but complementary words of limitation"*.

This Court so held in

*Federal Trade Commission v. Raladam Co.*, 283 U. S. 643, 649; 51 Sup. Ct. Rep. 587; 75 L. Ed. 1324.

In brief, the phrase "in the interest of the public" added nothing to the law of unfair competition. Unfair competition must first appear, and even then the Commission cannot proceed unless it further appears that its pro-

(10) That "white pine" cannot mean *strobus* only is attested by the fact that the proceedings before the Commission were avowedly brought in behalf of three distinct lumbers, viz., "Northern White Pine", "Idaho White Pine" and "Sugar Pine". As previously noted, the latter wood has never been marketed under a white pine name although it is yielded by a tree assigned by botanists to the white pine group.

ceeding is "in the interest of the public." The preexisting law of unfair competition itself has not been changed.

The Commission now represents upon brief that there is "ample testimony to show improper motive as well as deliberate deception" (Brief for Commission, p. 33). This we deny. There is neither testimony nor finding to such effect. Counsel for the Commission made the following express admission upon page 87 of his brief filed before that body in these proceedings:

> "There is no proof that the practice of designating *ponderosa* by terms including the word 'white' was adopted for the purpose of misleading or deceiving the trade or the public."

That admission was compelled by the record.

It is also suggested in the brief for the Commission that respondents' "present intent" is wrongful (Brief for Commission, p. 34). In short, since respondents defend their well-established trade name in the belief that it has monetary value, since they state that this name "classifies our woods with the other woods that have been known to the trade, including itself, as white pine" (R. 1551-2), an improper motive may be ascribed to them. An argument so strained, and so patently unfair, will not require extended answer. Suffice it to say that the use of a trade name which places this lumber where it clearly belongs by virtue of its mechanical properties and industrial utility—i. e., in the white pine group of lumbers—proceeds from a proper motive. Resistance to change to the Latin terminology employed by botanists is equally free from any sinister aspect.

The case of

*Straus v. Notaseme Co.*, 240 U. S. 179, 60 L. Ed. 590, 36 S. Ct. Rep. 288,

holds nothing in common with the instant case, for there the offending manufacturer undertook to retain a trade design originated by a competitor after he was put on notice of the competitor's priority of right. These respondents are not chargeable with the simulation or use of a rival's trade name or device.

The Commission has made no findings of improper motive either in the adoption or in the retention of this trade name. *It has made no findings of deception on the part of these respondents in the use of this trade name in all of the eighty paragraphs of its findings.* (R. 28-43.)

In its petition for certiorari in this cause the Commission tendered issue in the following terms:

> "In other words, does the Federal Trade Commission Act authorize the Commission, *where a commercial name was originally adopted without improper motive or purpose,* to compel use of more accurate and specific commercial names than those heretofore employed." (Petition for certiorari, p. 10.)

This is not only a complete acquittance of improper motive or purpose on the part of the respondent lumber companies in the adoption of their trade name, but it reveals the extravagant nature of the power which the Commission seeks to exercise over commercial nomenclature.

The decision of this court in

*Federal Trade Commission v. Winsted Hosiery Co.*,
258 U. S. 483; 66 L. Ed. 729; 42 S. Ct. Rep. 384,

is far from apposite. There the offending manufacturer had, with deliberate intent to deceive, misbranded his wares. He had knowingly resorted to false and misleading labels, to the injury of honest manufacturers and the consuming public. This is not such a case, as we shall show in a later portion of this argument.

It is enough here to point out that the test of "usage, intent and purpose" is wholly favorable to these respondents. "Usage", throughout all the years during which this lumber has been known, assigns it to the white pine lumbers and accords to it a white pine name. "Intent and purpose", by the consensus of the testimony, are to identify its properties and uses and to avoid confusion with the "yellow pine" lumbers, from which it is far removed in appearance, quality and essential industrial utility.

**The element of competition.**

We are at a loss to understand the occasion for the discussion of competition in the brief for the Federal Trade Commission. The existence of competition between California White Pine and other lumbers entering into the so-called white pine uses has at all times been conceded. The court below expressly recognized in its opinion that the use of this trade name is a method of competition in commerce (R. 1890). No controversy exists on this point.

## II.

### THE COMMERCIAL NAME "CALIFORNIA WHITE PINE" HAS NEITHER BEEN DEVISED NOR USED FOR THE PURPOSE OF MISLEADING OR DECEIVING THE TRADE OR THE PUBLIC.

We have heretofore noted the admission of counsel for the Commission that there is no evidence showing that "California White Pine" was adopted for the purpose of misleading or deceiving the trade or the public. We add that it has never been used by respondents for that purpose or with that effect.

There is no evidence, nor any finding, that any respondent has ever sold or invoiced this lumber under any other term than the full name "California White Pine" (see Paragraph three of findings—R. 28).

There is no evidence that any respondent, or any person in privity with a respondent or otherwise, has at any time sold this lumber in response to an order for so-called botanical "white pine".

There is no evidence that any respondent, or any other person in trade or industry, has at any time represented this lumber to be a botanical "white pine".

Keeping in mind that the botanical classification and nomenclature of *pine trees* do not run parallel with the commercial classification and nomenclature of *pine lumbers*, it is not difficult to meet the persistent argument of "misdescription".

The term "California White Pine" conveys no botanical implications. It is not a representation that the lumber is

yielded by a tree which has been placed by botanists in the group popularly known as white pine trees. Commercial names are addressed to trade and industry, i. e., to the purchasers and users of the product. "California White Pine" is such a commercial name and carries the representation that the lumber is a white pine lumber in mechanical properties and in industrial uses. This is a truthful representation. It is in no sense misdescriptive.

Obversely, the name "California White Pine" suggests that the lumber is not a yellow pine lumber in mechanical properties and industrial uses. This again is a truthful representation.

The fact is that the entire argument of "misdescription", "false labelling" and "misbranding" is predicated upon a premise which is false in fact. That premise is that "California White Pine" carries an implied representation that the lumber comes from a *botanical* white pine tree. Since such is not the representation, either express or implied, the premise is false and the claim of misdescription fails.

Trade and industry know little and care less about botanical classification. This is the consensus of the testimony and is attested by the Commission's findings (Commission's findings, paragraph sixty-two, R. 39).

The architect witnesses were agreed that their interest is not in the botanical identity of the tree which yields the lumber; rather their interest is in quality and utility (R. 78, 677-8). It is inconceivable that the consumer is interested in botanical nomenclature. The Commission has found to the contrary (R. 39).

Indeed, until this trade name lately became the subject of agitation, it is certain that neither the lumber industry nor the lumber users exhibited any concern either with the botanical names or the classification of trees. Their concern was with the lumber itself—its mechanical properties, qualities and industrial uses.

A like fallacy underlies the argument directed to "confusion". The alleged "confusion" has been largely engendered by the proponents of a change in trade-name, and that confusion is mainly unfamiliarity with the botanical place of the several pine trees which yield commercial lumber. Whether this be termed "confusion" or more exactly "ignorance", it is not truly attributable to the use of this commercial name nor would it be remedied by a change in the name.

How could "ponderosa" (or "pondosa", the name favored by our adversaries) assist trade or industry toward a knowledge of the place occupied by this lumber, either botanically or industrially? It suggests neither white pine nor yellow pine. It would not remove such confusion as exists; it would not be a cure for ignorance, nor would it obviate misleading practices.

As far as the supposed competitive difficulties which confront other lumbers are concerned, it is enough to say that these difficulties simply evidence the normal rivalry between lumbers which are sold and used for a common purpose. These competitive conditions will of course persist irrespective of trade nomenclature.

The plain fact is that these lumber manufacturers are rightfully entitled to a trade name which will place their

lumber in one of the two groups of pine lumbers recognized by trade and industry. A yellow pine name is forbidden, because this would be misdescriptive, misleading and confusing in the highest degree. A white pine name is appropriately indicated because this places the lumber in the group where it belongs in physical properties, essential quality and industrial utility.

Surely these respondents should not be forbidden to use either a white pine or a yellow pine name and be relegated to the use of a nondescript Latin term, as the Federal Trade Commission seems to desire.

It should be noted that the findings of confusion are quite wanting in concreteness. There are these significant deficiencies:

(1) No wholesale or retail dealer has testified that the name "California White Pine" has induced him to buy lumber which otherwise he would not have purchased.

(2) No user or consumer has testified that the name has caused him to use this lumber when he did not desire it.

(3) No architect has testified that he has been misled into specifying "California White Pine" when, without that name, he would have specified some other lumber.

The evidence and alike the findings do not reveal deception in fact. A careful scrutiny of the Commission's report will show that there is no finding of deception, nor any other finding reflecting adversely upon the honesty or good faith of these respondents.

## III.

**"UNFAIR METHODS OF COMPETITION" WITHIN THE MEANING AND INTENDMENT OF THE FEDERAL TRADE COMMISSION ACT HAVE NOT BEEN ESTABLISHED AGAINST THE RESPONDENTS UPON THE RECORD OR BY THE COMMISSION'S FINDINGS.**

A. "The paramount aim of the Act is the protection of the public from the evils likely to result from the destruction of competition or the restriction of it in a substantial degree."

B. "Unfair methods" are "those resorted to for the purpose of destroying competition or of eliminating a competitor or of introducing a monopoly—such as tend unfairly to destroy or injure the business of a competitor."

C. "The object of the Trade Commission Act was to stop in their incipiency those methods of competition which fall within the meaning of the word 'unfair'."

In the interest of precision we have couched the foregoing propositions of law in the authoritative language of this court, excerpted from the opinion in

*Federal Trade Commission v. Raladam Co.*, supra.

This decision served clearly to define the limits of the jurisdiction conferred upon the Federal Trade Commission by the Federal Trade Commission Act. Little doubt can now exist as to the nature and purpose of the administrative power granted to the Commission.

The following excerpt from the opinion of the court (pp. 647-648) establishes beyond question that the pur-

pose of the statute is to enforce by administration the prohibitions of the Sherman Act and the Clayton Act:

> "In a case arising under the Trade Commission Act, the fundamental questions are, whether the methods complained of are 'unfair', and whether, as in cases under the Sherman Act, they tend to the substantial injury of the public by restricting competition in interstate trade and 'the common liberty to engage therein'. The paramount aim of the Act is the protection of the public from the evils likely to result from *the destruction of competition or the restriction of it in a substantial degree,* * * *." (Emphasis supplied.)

The court also inquired into the genesis of the statute and set forth the results of its inquiry as follows (pp. 649-650):

> "The foregoing view of the powers of the Commission under the act finds confirmation, if that be needed, in the committee reports and the statements of those in charge of the legislation, as well as in the debate which took place in the Senate, extending over weeks of time and covering hundreds of pages in the Congressional Record. In that debate the necessity of curbing those whose unfair methods threatened to drive their competitors out of business was constantly emphasized. It was urged that the best way to stop monopoly at the threshold was to prevent unfair competition; that the unfair competition sought to be reached was that which must ultimately result in the extinction of rivals and the establishment of monopoly; that by the words 'unfair methods' was meant those resorted to for the

purpose of destroying competition or of eliminating a competitor or of introducing monopoly—such as tend unfairly to destroy or injure the business of a competitor; that the law was necessary to protect small business against giant competitors; that it was an effort to make competition stronger in its fight against monopoly; that unfair competition was that practice which destroys competition and establishes monopoly."

The court points out further (p. 648) that:

"The object of the Trade Commission Act was to stop in their incipiency those methods of competition which fall within the meaning of the word 'unfair'."

Finally it is observed (p. 649):

"Unfair trade methods are not *per se* unfair methods of competition."

When the record in this cause and the findings of the Commission are appraised in the light of these principles, it is clear that no case cognizable by the Commission—no case falling within the intendment or purpose of the Act—has been made out against these respondents.

Specifically, there is neither allegation nor proof of conspiracy among the respondents. Counsel for the Commission has formally stipulated of record that "no conspiracy among these several respondents being (is) charged or proved herein" (R. 26).

There is neither charge nor proof of any act tending to "the destruction of competition or the restriction of it in a substantial degree".

There is neither charge nor proof that respondents have resorted to any course "for the purpose of destroying competition or of eliminating a competitor".

There is neither charge nor proof of any course of action tending "unfairly to destroy or injure the business of a competitor".

Clearly these respondents have been charged with no offense within the range of the statutory provisions which the Federal Trade Commission was created to enforce.

It seems to have been the view of the Federal Trade Commission that its powers exceed the provisions of the Sherman Anti-Trust Act and the Clayton Act and extend alike beyond the range of the law of unfair competition. As we read the decisions of this court, however, the pre-existing law of "unfair competition" was not expanded by the Federal Trade Commission Act. This much has been determined by the cases already cited. And note may be taken of the fact that the cases dealing with unfair competition characteristically hold that "fraudulent purpose", "wrongful, fraudulent intention", "intent to deceive", "fraudulent misrepresentations" are indispensable elements of the offense. Such "fraudulent purpose" or "intent to deceive" must be established, either directly or as a justifiable "inference from the inevitable consequences of the act complained of". Representative decisions are:

*Elgin National Watch Co. v. Illinois National Watch Co.*, 179 U. S. 665;

*Howe Scale Co. v. Wyckoff, Seamans, etc.*, 198 U. S. 118;

*Thum v. Dickinson*, 245 Fed. 609;

*Queen Mfg. Co. v. Ginsberg & Bros.*, 25 Fed. (2d) 284;

*Vortex Mfg. Co. v. Ply-Rite Contracting Co.*, 33 Fed. (2d) 302.

Not only are the respondents free of wrongful motive, but in the succeeding subdivision we shall undertake to make it clear that they are not chargeable with fraud, dishonesty or deception in any form.

---

## IV.

### NEITHER FRAUD, DISHONESTY NOR DECEPTION HAS BEEN FOUND AGAINST RESPONDENTS.

We are familiar with no decision of this court in which an order of the Commission compelling a revision of trade nomenclature has been sustained in the absence of satisfactory proof of dishonesty, fraud or deception in the origin or use of the name.

The Commission's "Findings as to the Facts" are set forth in 80 paragraphs, reproduced upon pages 28 to 44, inclusive, of the record. Upon a careful reading of the entire text it will be found that *there is no finding or suggestion of fraud, dishonesty or deception in any particular.* There is not a sentence which reflects even remotely upon the conduct of the respondents in the use of their trade name. There are findings of "confusion" (due to general unfamiliarity with botanical distinctions and nomenclature), but not a word ascribing or imputing

to these respondents anything in the nature of wrongful conduct.

The Commission has set forth its conclusions under the caption "Summary and Conclusions of Fact" (R. 44-45). These conclusions are not binding upon the reviewing court, but we find that even here no fraudulent or dishonest act has been ascribed to respondents. The net result of this examination of the Commission's entire report is that *the Commission has found neither a wrongful motive nor a wrongful act on the part of these respondents.* In this behalf we note that—

1st: The Commission has found no case of fraud or fraudulent representation on the part of the producers of "California White Pine".

2nd: The Commission has made no finding against these respondents of deception in fact.

3rd: The Commission has expressly exonerated these respondent lumber manufacturers of any "express declaration to their customers that said products" (*ponderosa*) "are true white pine". (Commission's findings, Paragraph twenty-nine—R. 33.)

4th: The Commission has made no finding that *ponderosa* lumber has been furnished or "substituted" by any respondent upon an order for "true white pine".

There is no testimony of record from any witness (jobber, retailer, architect or consumer) to the effect that he has purchased "California White Pine" in the belief that he is obtaining so-called "true white pine". The final

paragraph (Paragraph (o)) of the Commission's "Summary and Conclusions of Fact" (R. 45) is wholly unsupported by concrete testimony of this character.

The conclusion is impelled, upon a review of the findings themselves, that the essential ingredients of a charge of "unfair methods of competition" have not been made out against these respondents.

The brief for the Federal Trade Commission relies upon the decision of this court in

*Federal Trade Commission v. Winsted Hosiery Co.*, supra.

The facts of that case are not in parallel with the facts here presented, and the decision is inapposite. It will not be difficult to point the distinction.

In the *Winsted* case the Federal Trade Commission was confronted with a deliberate and premeditated act on the part of a hosiery manufacturer in placing palpably false and misleading labels on his goods. Underwear which contained only a small percentage of wool, "some as little as ten per cent", was branded or labelled as "Natural Merino", "Natural Wool", "Australian Wool" and similar terms. The bulk of the fabric was cotton. The manufacturer was falsely representing that his *cotton* was *wool*. The deliberate purpose and necessary effect of his course was to deceive the public and of course unfairly to compete with "honest manufacturers". This court found that the labels in question were "literally false" and in most instances "palpably so". *There was intent to deceive.* It was held that the public is entitled to protection against

such deception and that "honest manufacturers" are entitled to protection against such unfair competition.

Clearly this case affords no precedent against these respondents. In the *Winsted* case the offending manufacturer was guilty of a dishonest purpose and a dishonest practice. No such dishonest purpose or practice was or could be established in the instant proceedings. There has here been no desire to mislead the consumer or to obtain an advantage over "honest manufacturers". Respondents are not misrepresenting either the quality or the utility of their product. The sole motive which led to the adoption of the commercial name "California White Pine" was accurately and properly to characterize this lumber with respect to its quality and utility, to avoid confusion with "Southern Yellow Pine" and to identify it with respect to the locality of its origin. We need not repeat the testimony upon this question, for, as previously noted, the admission has been made on the part of the Commission that in the adoption of this name there was no purpose or intent to mislead or deceive the trade or the public. This admission effectively places this case outside the *Winsted Hosiery* case and related cases.

We have heretofore noted the present contention of the Commission that although the term "California White Pine" came into being in response to an honorable purpose and although this name was not adopted for the purpose of misleading the trade or the public, nevertheless a wrongful motive may be "imputed" to respondents because they are not now willing to cease the use of their long-established and well-known trade name. We may

note that in the brief filed for the Commission in the Circuit Court of Appeals (p. 81) it was expressly conceded that the evidence of respondents' witnesses "does not go to the point that petitioners" (respondents) "have a fraudulent motive * * *". In spite of this concession it was nevertheless insisted that "a motive wrongful in law is imputed to them * * *".

The desire, honest in purpose, of these manufacturers to retain their established trade name cannot thus be translated into wrongful motive. The Commission has made no finding of intent to deceive, either past or present, and on this record it is plain that it could not do so. Respondents' present intent is the same as was that of their predecessors who first used the name "California White Pine" many years ago. It is to avoid rather than to create confusion; it is to place this wood in commerce where it justly and inevitably belongs. Dishonest motive or intent could not be imputed to those who originated the name, nor can such motive or intent be imputed to respondents now.

---

## V.

### THE COMMISSION EXCEEDED ITS PROVINCE IN ORDERING A SUPPRESSION OF RESPONDENTS' TRADE NAME.

Reliance is placed by the Commission upon the decision of this court in

*Federal Trade Commission v. Royal Milling Co.*, 288 U. S. 212, 216-217; 77 L. Ed. 493; 53 S. Ct. Rep. 335 (1932).

That case seems rather to be an authority favorable to these respondents. There the respondents were doing business under such names as "Royal Milling Company" although none of the respondents was actually engaged in the performance of any milling operations. In brief, they were not "grinders of wheat". The orders of the Federal Trade Commission forbade the use of the words "milling company" or words of like import. Upon review the Circuit Court of Appeals set aside the orders. The case was brought to this court on certiorari and it was there held that "the purchasing public is entitled to be protected against this species of deception". In the instant case the Commission has not found that respondents are guilty of any "species of deception" whatever.

It should be expressly noted, however, that although the court sustained the Commission's findings and conclusions, it found that *"the Commission went too far in ordering what amounts to a suppression of the trade names"*. The court continues (p. 217):

> "These names have been long in use, in one instance beginning as early as 1902. They constitute valuable business assets in the nature of good will, the destruction of which probably would be highly injurious and should not be ordered if less drastic means will accomplish the same result. *The orders should go no further than is reasonably necessary to correct the evil and preserve the rights of competitors and public and this can be done, in the respect under consideration, by requiring proper qualifying words to be used in immediate connection with the names.*" (Emphasis supplied)

(The court here cited *Fluegelman & Co. v. Federal Trade Commission,* 37 Fed. (2d) 59, 61; *Federal Trade Commission v. Cassoff,* 38 Fed. (2d) 790; *Federal Trade Commission v. Good-Grape Co.,* 45 Fed. (2d) 70, 72.)

If this decision is in any respect pertinent to the pending controversy, it shows clearly that the Federal Trade Commission has exceeded its proper province *in attempting a suppression of trade names which have been in use for upwards of 30 years.* The most that the Commission could properly require upon this record is the use of "proper qualifying words". We have a proper qualifying word—viz., "*California*"—in the trade name which is here under review. It gives this lumber a separate and specific identification.

It would seem accordingly that the present trade name used by respondents conforms with the essence of the principle laid down by this court in the *Royal Milling Co.* case. The name does afford a specific identification of the lumber. This is precisely what respondents desire. They believe that their full trade name has value. It is difficult to see that greater particularity can be attempted without exceeding the requirements of reason.

Respondents stand upon the propriety of including the word "white" in their trade name, not only because of long usage but because it serves appropriately to indicate the essential properties and industrial uses of the lumber. The elimination of the word "white", as the orders of the Commission require, would wholly deprive these manufacturers of a trade name which will suggest either the characteristics or the utility of the product.

We find nothing in the opinion of this court in the *Royal Milling Co.* case or in any other decision which can remotely justify the extraordinary requirement of the Commission's orders that respondents

> *"do cease and desist from using either orally or in writing, the word 'white' in connection, combination or conjunction with the word 'pine' or in connection with other word or words used in combination or conjunction with the word 'pine'."*

---

## VI.

**THE PUBLIC INTEREST REQUIREMENT HAS NOT BEEN SUSTAINED OF RECORD. THE DECISION OF THE COURT BELOW WAS NOT RESTED UPON A CONSIDERATION OF FOREST CONSERVATION.**

The brief for the Commission assails the conclusion of the court that the action of the Commission was not in the interest of the public. We submit that the court correctly so held.

It is our view that the opposing brief fails aptly to state or fairly to characterize the substance of the opinion of the Circuit Court of Appeals in dealing with the question of public interest. That court specifically found, on a review of the record, that the evidence before the Commission was insufficient to show that action by the Commission to force a change in this long established trade name was in the public interest. The court examined the evidence and considered the Commission's findings and

advisedly reached a conclusion adverse to the Commission on this jurisdictional issue.

The lower court did not hold, as the opposing argument would imply, that the public is not injured by false and misleading commercial names. It held rather that the term "California White Pine" is neither false nor misleading. It expressly distinguished the decision of this court in *Federal Trade Commission v. Winsted Hosiery Company,* supra, which condemned trade names which are palpably false and misleading and injurious both to honest manufacturers and the consuming public.

In substance the court found nothing false, misleading or dishonest in the use of "California White Pine" by respondents as the commercial name for their lumber. The court could appropriately have added that there is no concrete evidence of record that the use of this trade name has caused any member of the public to purchase or use lumber which otherwise he would not have ordered.

**Pending Controversy Essentially Private in Nature.**

The blunt truth is that the proceedings before the Commission "arose out of a controversy essentially private in its nature". As we view it, the action of the Commission in this trade name controversy was not in the public interest but was responsive to its preoccupation with internal trade name disputes.

Proof that this controversy is of private origin is found in the text of the complaints themselves, which recite in Paragraph Eight (R. 8) that

> "in or about the years 1924 and 1925 there was among various manufacturers of lumber an advocacy of, on the part of some, and an opposition on the part of others to, a proposal to change the trade name and designation of forest products made from Pinus ponderosa from 'white pine' or from the designations named in Paragraph Three thereof which include the words 'white pine' to some other designation and particularly to 'pondosa' pine * * *."

Such is the origin of this trade name controversy, as authoritatively declared by the Commission in its own pleadings. (See also R. 1203, 4.) The refusal of these respondents to abandon "California White Pine", with the prestige gained by more than thirty years of use, eventuated in an effort on the part of certain lumber manufacturers to persuade the Federal Trade Commission to intervene. We feel free to declare that the objective of the proceedings, although covert as far as the findings and order are concerned, is to compel respondents to accept "pondosa" (or "ponderosa")—an unpalatable and lately coined trade name—a corruption of a Latin word employed by botanists.

Not only have these proceedings been motivated by disaffected lumber manufacturers following a controversy suddenly precipitated respecting trade nomenclature, but there is neither suggestion nor proof of any complaint on the part of the public respecting "California White Pine". There is no evidence that any purchaser or consumer of lumber has expressed dissatisfaction with "California White Pine" or has pressed for a change in name. The

controversy in which the Commission intervened was not of public cognizance but was purely a private controversy within an industry.

This court has held that the Commission may not competently intervene in a controversy which is essentially private in its nature.

*Federal Trade Commission v. Klesner,* 280 U. S. 19; 74 L. Ed. 131; 50 S. Ct. Rep. 5.

The following language excerpted from page 29 of the opinion of the court in that case appears to be apposite:

> "If members of the public were in 1920, or later, seriously interested in the matter, it must have been because they had become partisans in the private controversy between Sammons and Klesner."

It is highly significant that the pending controversy *did not arise until at least twenty-seven years after the term "California White Pine" had become standard in the general lumber trade. The Commission did not issue its complaints until May, 1929, or some twenty-nine years thereafter. Obviously, the complaints followed upon the refusal of these respondents to submit to the demand of competing producers and join in the adoption of a novel and unwelcome trade name.*

Paraphrasing the words of the Supreme Court above quoted, it would seem that

> If members of the public were in 1929 or later seriously interested in the matter, it must have been because they had become partisans in the private controversy between the producers of "California

White Pine", on the one hand, and the producers of "Northern White Pine", "Idaho White Pine", "Sugar Pine" and "Pondosa" on the other hand.

Enough has been said, we think, to make it clear that these complaints have emanated from a purely private controversy and that they are not founded upon a genuine public interest. The record is barren of any public complaint against "California White Pine" and equally barren of any demand from purchasers or consumers that existing trade nomenclature be changed.

**Reference to the Policy of Conservation.**

The opposing brief seeks to find in a casual observation of the lower court respecting forest conservation some indicia of an excess of jurisdiction. We may concede that the comment was "collateral and immaterial", but it has been treated in the opposing brief as if it constituted a ground of the decision. We think that this treatment is unfair to the opinion of the lower court and that the argument founded upon it is misconceived. The sentence to which exception is taken reads as follows:

> "The public is not only interested in not being deceived in the material it purchases under a certain nomenclature, but possibly in an even larger sense in the conservation of the forests." (R. 1890.)

This has been translated in the opposing brief into a holding that "Public interest in 'conservation of forests' was held to outweigh the public interest in maintaining fair competition * * *" (Brief for Commission, p. 11).

At the worst, the observation thus made by the court was surplusage, and could not possibly be reversible error. It was enough that the court found that the evidence before the Commission was insufficient to support its conclusions with respect to unfair methods of competition and with respect to the public interest. These are the jurisdictional prerequisites, and it was immaterial, at most, that the court suggested further considerations militating against the Commission's action.

(4 *Corpus Juris* 1057.)

It will be clear upon a reading of the entire opinion of the lower court that the remark respecting forest conservation was casually made, and merely parenthetical in character. It was not a ground of the decision. The comment was harmless and the extended effort made in the opposing brief to convert this observation into judicial error seems rather exaggerated. As we view it, a feigned issue has been raised.

Even if the statement were deemed to be error, the action of the court would not thereby be invalidated. It is enough that neither the record nor the findings can serve to make out a case of "unfair competition" as defined by this court.

## VII.

### THE CIRCUIT COURT OF APPEALS MADE NO INDEPENDENT APPRAISAL OF THE EVIDENCE; NEITHER DID IT REJECT ANY OF THE EVIDENTIARY FINDINGS MADE BY THE COMMISSION.

The final argument tendered by the opposing brief is to our minds wholly without foundation in point of fact. It is insisted that the court exceeded its jurisdiction "by making its own independent appraisal of the evidence and rejecting all of the essential findings made by the Commission". (Brief for Commission, p. 66.) We are compelled to challenge this characterization of the court's action in its entirety. We insist that the court recognized and faithfully observed the limitation upon its reviewing jurisdiction as fixed by this court. Upon the very threshold of its opinion the lower court stated that if the findings of the Commission are supported by the testimony, such findings shall be conclusive (R. 1890). It entered upon its examination of the record with this limitation in mind, and it scrupulously refrained from transgressing that limitation.

Unquestionably the court reviewed the evidence, and in the light of the findings of the Commission. Such was its right and duty. As previously noted, this court has held that the Circuit Court of Appeals has power in these cases "to examine the whole record and ascertain for itself the issues presented and whether there are material facts not reported by the Commission".

*Federal Trade Commission v. Curtis Publishing Company,* supra.

We have been unable to find upon an examination of the opinion of the court below that any evidentiary finding of the Commission was rejected. The court reported certain matters which were material, and as to which the Commission refrained from making findings, but this was within the reviewing power.

**The Reviewing Court is not Bound by the Commission's Conclusions as to Ultimate Facts.**

The real complaint tendered by the opposing argument is that the court refused to accept the ultimate determination of what constitutes "unfair methods of competition". This was within the province of the court. Moreover, the court was not obligated to accept the Commission's conclusions as to "ultimate facts" as distinguished from "evidentiary facts". It is clear upon the authorities that, while the Commission's evidentiary findings are conclusive if supported by evidence, the court is not bound by the Commission's "conclusion as an ultimate fact". As the Circuit Court of Appeals for the Third Circuit said in

*Temple Anthracite Coal Co. v. Federal Trade Commission,* 51 Fed. (2d) 656, 659,

> "We will therefore consider whether that ultimate finding of fact is sustained by the basic facts as found from the evidence before the Commission. While the Act provides that the findings of fact made by the Commission are final and conclusive, it still remains the duty of the supervising court to determine whether the facts found are such as to warrant the conclusion * * *."

See also

*Federal Trade Commission v. Curtis Publishing Co.*, supra;

*International Shoe Company v. Federal Trade Commission*, 280 U. S. 291, 297; 50 S. Ct. Rep. 89, 91; 74 L. Ed. 431.

It will be found upon detailed examination of the opinion of the court below that it has rejected none of the evidentiary findings of the Commission but has kept expressly within the limits of its reviewing jurisdiction.

---

## CONCLUSION.

Neither the record nor the Commission's findings can serve to make out a case of "unfair methods of competition" against these respondents.

Respondents are not charged with any practice tending to "the destruction of competition or the restriction of it in a substantial degree".

They are not charged with practices tending "unfairly to destroy or injure the business of a competitor".

They are not charged with attempted monopoly or restraint of trade.

They are not charged with fraudulent or deceitful purpose nor with fraud or deception in fact.

The record shows without conflict that the trade name which respondents defend was adopted for a proper and lawful purpose, and that it has never been used by re-

spondents for a fraudulent, deceitful or other wrongful purpose.

These, as we conceive it, are the determinants of unfair methods of competition. All else is unrelated to the authority reposed in the Commission with respect to "unfair methods of competition".

If the Commission may competently assert the authority which it claims in its petition for certiorari in this cause —viz.,

> "Where a commercial name was originally adopted without improper motive or purpose, to compel use of more accurate and specific commercial names than those heretofore employed" (Petition for certiorari, p. 10)

—it should be content with the requirement that the full name "California White Pine" should always be used. If a still more "accurate and specific commercial name" should be proved necessary, this can be readily attained, as shown by the decision of this court in the case of

*Federal Trade Commission v. Royal Milling Co.*, supra.

These respondents have no objection to "accurate and specific commercial names", but they stand upon the right to retain the word "white" in their commercial name, not only because of the goodwill acquired through many years of continuous use, but because it is indispensable in denoting the essential character and utility of the lumber.

The Circuit Court of Appeals correctly held that the record "is insufficient to support findings that petitioners'

use of the commercial name 'California white pine' is an unfair method of competition or that its prevention would be in the interest of the public''.

Respectfully submitted,

FEDERAL TRADE COMMISSION,
*Petitioner,*

vs.

ALGOMA LUMBER COMPANY, et al.,
*Respondents.*

**On Writ of Certiorari to the United States Circuit Court of Appeals for the Ninth Circuit.**

## RESPONDENTS' REPLY TO BRIEF OF AMICUS CURIAE.

### INTRODUCTORY.

The brief of *amicus curiae* has been so lately filed as to preclude extended reply within the time now available to respondents. Under the circumstances we are content to permit our brief in reply to the brief for the Federal Trade Commission to serve likewise as our reply to the brief of

*amicus curiae.* We shall take note here only of such matters as may seem to require separate response.

The brief of *amicus curiae* is characterized throughout by prodigal references to the trade name "California White Pine" as "misrepresentation," "false description," "instrument of fraud," "deception" and "fraudulent." *The record warrants no such characterization and no citations to the record are offered in support.*

*There is no finding or suggestion of fraud, dishonesty or deception in any respect in the Commission's "Findings as to the facts"* (R. 28 to 44). Moreover, the brief of *amicus curiae* inconsistently admits that the name "California White Pine" was honestly adopted. It is stated (p. 5) "While in this case, *as was found,* the term 'California White Pine' may originally have been used to distinguish Ponderosa Pine from Southern Yellow Pine, * * * " (Emphasis supplied). In the brief of counsel for the Commission before that body it was admitted (p. 87):

> "There is no proof that the practice of designating *ponderosa* by terms including the word 'white' was adopted for the purpose of misleading or deceiving the trade or the public."

A similar admission apears in the brief for the Commission in the Circuit Court of Appeals (p. 80).

The argument of *amicus curiae* is rested upon the assumption that, in order to be lawful, the *commercial* grouping or classification of *pine lumbers* must necessarily conform with the *botanical* grouping or classification of the *pine trees* from which the lumber is produced. The fact is that the trade has little interest in and less knowledge with respect to botanical groupings or classifications of trees. The Commission has so found. (R. 39.) It is concerned only with commercial nomenclature which will fairly characterize the qualities and uses of the particular lumber. The brief of *amicus curiae* disregards this distinction. The record shows that "California White Pine" is truly de-

scriptive of the lumber yielded by Pinus ponderosa in view of its physical properties and industrial utility and that it belongs in the white pine group by virtue of these qualities. The term has no botanical significance.

## I.

### The Public Interest.

There is no tangible evidence of record that respondents' use of "California White Pine" works injury to the public or to respondents' competitors. There is some assertion by hostile witnesses to that end, but no concrete cases have been presented. Specifically we note the following:

(a.) *No user of this lumber* has testified that he has been led by this trade name to purchase lumber which otherwise he would not have bought.

(b.) *No wholesale or retail dealer* has testified that he has been deceived by this name into purchasing lumber which otherwise he would not have ordered. (The Commission called fifty-two such dealers to the witness stand.)

(c.) *No architect,* out of the thirty architects summoned by the Commission, has testified that he has been influenced by this trade name to specify respondents' lumber, and that otherwise he would not have specified it.

(d.) *No remanufacturer* has testified to such effect, and it should be understood that this lumber now supplies the bulk of the requirements of the remanufacturing industries. Mr. Frederick Weyerhaeuser, who may fairly be styled our principal opponent, has testified explicity that he has no doubt that "the remanufacturers of lumber, such as the manufacturers of sash and doors, understand fully that they are getting a lumber, under the name of California White Pine, which is yielded from the Ponderosa pine tree." (R. 1282)

The precise truth respecting the current lumber situation is that "Northern White Pine" has become so scarce, and its quality has so declined, that it can supply only a minor fraction of the requirements of trade and industry. (R. 279-80; 489; 571; 575; 628; 631; 735; 1294; 1608) Mr. Weyerhaeuser admits that the larger factories now obtain the bulk of their lumber from the Pacific Slope States (R. 1295), and that there has been a "natural economic replacement" of Strobus pine lumber with western pine. (R. 1296) He also testifies that Idaho White Pine yields little lumber of the "shop type" (R. 1296) and believes it to be "quite natural that the ponderosa pine lumber should supply the needs of the remanufacturers in the Middle West engaged in making sash and doors and other materials from shop lumber" (R. 1296). He expects that, irrespective of trade nomenclature, "the bulk of the shop trade will be supplied, as now, with ponderosa pine lumber" * * * "except as coast fir may make inroads on it." (R. 1301.)

Sugar pine lumber cannot supply the shop demand. Its annual cut is about 10 per cent of the ponderosa cut. (Commission's findings, R. 32, 33.) The Commission also finds that "There is a tendency for sugar pine to become a specialty wood." (R. 32.)

These are the substantial and controlling facts, established mainly by the testimony of our adversaries. They should serve to destroy the persistent representation that this lumber has acquired its dominating position by "misuse" of a trade name and by practices characterized as "substitution". The truth is that this lumber has attained dominance because it alone can meet the requirements and supply the demands of trade and industry. If this be "substitution", it is wholly proper and lawful, and no wrong is done either to respondents' competitors or the public.

## II.

### Respondents' Trade Name "California White Pine" is Not Misdescriptive and Its Use is Not Unfair.

Respondents' trade name here under review is "California White Pine" and not merely "White Pine" as the opposing brief constantly implies.

The argument tendered by our adversaries may well give rise to the inference that respondents are attempting to defend misdescription and misrepresentation in trade nomenclature. Such is not respondents' position. We deny misdescription and we deny misrepresentation. The name was not assumed as a disguise. We insist that this name truthfully denotes the essential properties and the industrial utility of this lumber and that it serves adequately as a particular identification.

The charge that the name is false and deceptive and that "it is an artifice by which one group of traders secure for themselves custom which, but for it, would probably come to another group" is wholly gratuitous. It has no support in the findings of the Commission. We may search the findings of the Commission in vain for anything tending to show that this trade name is an "artifice" by which respondents seek to obtain trade belonging to others.

The undisputed circumstances under which this name came into being completely acquit these respondents of any design to "trade on another's name" or to "pass off" their lumber for another's product. The name was adopted, as the record shows without conflict, not merely because it had long been in use locally in the Pacific coastal area, but in order to distinguish this lumber from the typical yellow pine lumbers of the southern states. This was a proper purpose. The motive was to avoid confusion, and that motive is still present.

Our adversaries affect to find improper purpose in the respondents' desire to perpetuate this name because it associates the lumber with the other white pine lumbers of

commerce. The argument is not only strained but it plainly distorts the facts. We may again point out that there are but two groups of pine lumbers known to trade and industry—viz., the white pine group and the yellow pine group. Respondents are entitled to a name which will place their lumber in one of these two groups. A white pine name is appropriately indicated because the lumber is of the white pine type and goes into the characteristic white pine uses. Assuredly no improper motive can be ascribed to respondents because they seek to perpetuate a name which truthfully characterizes the properties and uses of their product.

It will be found upon final analysis that the contention of our adversaries that this trade name is "false," "untruthful" and "misleading" is founded upon the botanical criterion. We have sufficiently considered the question of botanical identities in our brief in reply to the Commission. We have shown, as the Commission has indeed found, that trade and industry are not interested in botanical classification or botanical nomenclature but that their interest is in the quality and utility of the lumber. We have also shown that the botanical classification of *pine trees* is not a criterion for the commercial classification of *pine lumbers*. The two classifications have different objectives. The botanist classifies pine *trees* with respect to the number of needles in a bundle and the nature of the cones, bark and flowers. His criterion is found in plant characteristics. In this classification no consideration whatever is given either to the mechanical properties or the industrial utility of the lumber product. Trade and industry, on the other hand, classify *pine lumber* with respect to texture, quality and primary industrial use. It follows that the lumber manufacturer and the lumber merchant do not speak botanically when they give trade names to forest products. *A fortiori* neither the purchaser nor the consumer speaks botanically when ordering lumber under a common trade name. Hardly would it be contended that either botanical

nomenclature or botanical distinctions were in mind when the commercial names now common in the lumber trade came into being.

There can be no justification, either upon the record or without the record, for this persistent effort to identify the botanical classification of pine *trees* with the commercial nomenclature of pine *lumbers*. They have never been identical in point of fact, nor was there any suggestion that they should be identified until this controversy lately arose.

The Commission has perforce abandoned its apparent initial reliance upon botanical classification. At least its reliance on botany has been extensively qualified. *Amicus curiae* can hardly sustain a contention which is now thoroughly discredited. It is enough to say by way of summary that the expert witnesses who testified of record were agreed:

> *First,* that in the classification of pine trees by botanists no consideration was given either to the mechanical properties or the quality or utility of the lumber product;
>
> *Second,* that commercial nomenclature has never given heed to botanical identities or distinctions;
>
> *Third,* that the mechanical properties of California White Pine place it in the white pine group rather than in the yellow pine group;
>
> *Fourth,* that the industrial uses of California White Pine place it within the white pine group and not in the yellow pine group.

If anything further is needed in order to condemn the effort to force botanical classification as the guide for commercial nomenclature, it will be found in the following excerpt from Paragraph 62 of the Commission's findings in these proceedings:

> "The dealers, architects and consuming public are influenced by common names given to lumber products and not by the botanical names. They seldom know the

> Latin term for the respective species although of late there has been a tendency on the part of certain architects to use 'strobus' in their specifications of Northern white pine. Nor are these classes of buyers informed of or concerned over the purely botanical distinctions considered by scientists in the classification of species. They buy by common names and are concerned over distinctions between the characteristics of the lumber of the various species."

These findings on the part of the Commission afford a sufficient answer to the argument implicit in the brief of *amicus curiae* that botanical distinctions are significant in trade nomenclature.

Without any justification whatever, our adversaries seek to assimilate botanical classification to commercial classification. If these two matters could properly be assimilated, there might be small occasion for criticising this trade name. Inasmuch as such assimilation is not possible, our adversaries are patently confusing facts when they predicate the argument of misnomer upon botanical classification and identities.

## III.

### Current Meaning of "White Pine."

The Court will understand that today the term "white pine" does not mean the lumber from a single genus of pine tree, namely *Pinus strobus*. Indeed these complaints are avowedly brought in behalf of the lumber yielded by three distinct genera, one of which has never been marketed under a white pine name. For at least a third of a century, "white pine" has meant any one of four lumbers, separately identified by individual trade names.

The record affords convincing proof that a trade name which adheres to the botanical criterion may yet be misleading and dishonest in fact. The lumber of *Pinus lambertiana* has been marketed throughout the years as "sugar

pine". The tree is a "5-needle pine" and therefore is assigned to the white pine group. It grows almost entirely in California. The botanical argument suggests that this sugar pine lumber can most appropriately be sold as "California White Pine," and such may well be the program of our adversaries if they should prevail in their present effort to excise "white" from respondents' trade name. Thereby they would appropriate the good-will established by respondents through a generation of continuous use. Botany would justify the attempted appropriation, and yet it is agreed that that name would be misdescriptive, misleading and confusing in the highest degree. (R. 128) In short, "California White Pine" is a well established name for respondents' lumber and it would be nothing other than fraud to market "sugar pine" under the name "California White Pine."

## IV.

## The Word "California" in Respondents' Trade Name is Sufficiently Distinctive.

Respondents use the full name "California White Pine" and they desire to use that full name. The word "white" denotes the quality and utility of the lumber. The word "California" particularly identifies the lumber as a product distinct from Northern White Pine and Idaho White Pine and other competing lumbers. It is not the occasion of confusion; it rather serves to avoid confusion.

If the trade name "Idaho White Pine" is not calculated to confuse that lumber with "Northern White Pine", it is difficult to see wherein "California White Pine" should lead to confusion.

The record shows without conflict that "California White Pine" has been known to trade and industry for a generation and that purchasers know what they are getting under that name.

## V.

### Quality and Utility.

Further debate respecting relative quality and utility would be of doubtful assistance to this Court. It was to be expected that our adversaries would seek to disparage respondents' product, but we have noted that the Government experts do not sustain them. The Commission called a hearing at Madison, Wis., in order to get the testimony of the experts of the United States Forest Products Laboratory, but counsel for the Commission was frankly discomfited when he discovered that they were not prepared to give evidence in support of his contentions respecting wood quality, including durability. He expressed a preference for the omission of their testimony. (R. 703, 704.) Nevertheless, the testimony was received, and was found to be in no respect unfavorable to respondents' lumber.

We have protested in our brief in reply to the Commission against the refusal of Commission to report the results of the Government tests and the evidence given by the expert technologists. It is enough here to suggest that such evidence should take precedence over disparaging comments on the part of our adversaries. (Resp. Exhibits Nos. 21-23, 32. R. 778-780, 783-784, 1368-9.)

## VI.

### The Status of Competitors.

It will be granted that much of this lumber is now sold under the trade name "Pondosa Pine", a term of very recent origin. It is represented that those producers who have adopted the "pondosa" name are at a disadvantage. If so, it is because they have adopted a name which is meaningless to trade and industry. It fails to denote the properties and industrial utility of the lumber. It suggests neither white pine nor yellow pine. It is so wanting in the informative qualities which trade names should possess

that it is small wonder that "pondosa" manufacturers encounter difficulty in giving their product a proper place in the public mind. This is a problem which the "pondosa" manufacturers have created for themselves. Assuredly the act of these respondents in adopting "California White Pine" some 33 years ago cannot be regarded as the occasion for such difficulties as may now confront those who use the "pondosa" name.

As far as the manufacturers of "Northern White Pine" and "Idaho White Pine" are concerned, their chief grievance is that respondents' lumber has become a strong competitor of their product. It could not have become such a competitor except upon its merits. It will be found upon a careful review of the record that the alleged competitive disadvantages of "Northern White Pine" and "Idaho White Pine" are attributable to nothing other than the normal rivalry of competing lumbers in trade and industry. As Mr. Weyerhaeuser has testified, there has been a natural economic replacement of the older pine by the western pine. In brief the name "California White Pine" has not produced this alleged competitive disadvantage. The lumber itself is the competitor.

## VII.

### The Opinion of the Court Below.

We have sufficiently dealt with the essentials of the opinion of the court below in our major brief in this cause. We need not repeat that discussion.

As our adversaries would have it, the lower court was disposed to excuse misdescription for reasons which do not go to the merits of the controversy. A careful reading of the opinion of the court below will show that this characterization is not warranted. The grievance of our adversaries here is akin to the objections raised in the brief for the Federal Trade Commission. The court reported material facts which the Federal Trade Commission refrained

from reporting. In consideration of those facts and of the findings of the Commission, the conclusion was reached that respondents are not chargeable with unfair methods of competition forbidden by the Federal Trade Commission Act.

We think it immaterial that the opinion of the lower court referred to matters which the Federal Trade Commission ignored. Neither are we concerned with the reasoning of the court below. We understand that the case is now before this court on the merits and that if neither the record nor the findings of the Commission can sustain a charge of unfair methods of competition the orders of the Commission cannot be sustained.

The findings of the Commission will be searched in vain for facts requisite to the establishment of a case of unfair competition. The pertinent cases are reviewed in our brief in reply to the Commission, and need not be again reviewed here.

## CONCLUSION.

The opposing brief goes beyond the facts of record when it characterizes this trade name as a "false designation" and when it represents that particular purchasers have been deceived. *There is no testimony on the part of any purchaser that he has been deceived by this trade name, and the Commission has made no findings to that end.*

The findings of fact actually made by the Commission cannot serve to make out a violation of law on the part of these respondents.

## MOTION FOR LEAVE TO FILE BRIEF AS AMICUS CURIAE IN SUPPORT OF PETITION.

---

Comes now Edward S. Rogers, a member of the Bar of this Court, as *amicus curiae* acting on behalf of the lumber companies named on the cover and moves the Court for leave to file the attached brief as *amicus curiae* under the following circumstances:

The undersigned is acting in this matter on behalf of forty-two lumber companies. These companies include some of the largest lumber interests in the United States.

A brief *amicus curiae* was filed in their behalf in Circuit Court of Appeals without objection, and on account of the great importance of the case to these companies they desire to file a brief as *amicus curiae* in this Court. On the assumption that no objection would be raised, since none was raised in the Circuit Court of Appeals, the undersigned as counsel prepared and printed the brief which is attached hereto, and obtained the consent of the Federal Trade Commission, Petitioner, to its filing. Counsel for Respondents, however, some time after a proof of Petition-

er's proposed brief had been delivered to them, refused to consent and objected to its being filed on the ground that it imposed an unnecessary burden upon the Respondents.

Under these circumstances, it is respectfully submitted that the Court should permit the attached brief to be filed. The forty-two lumber companies are vitally interested parties in the litigation and ordinarily would be actual parties to the suit if it arose under any other branch of the Federal Law, as for instance under the Interstate Commerce Act. They should, therefore, on principle and in fairness be allowed the small privilege of informing this Court of the nature and importance of the case and their interest in it, and offering the attached brief in support of the petition.

It may be noted that in many cases the government when asked to consent to a brief being filed by an *amicus curiae* has not given its consent but, not objecting to such filing, this Court upon an oral motion for leave to file has permitted the brief to be received. In addition it has been the uniform practice of this Court to allow the government and the Attorneys General of the various States to file briefs as *amici curiae* even where objection has been made by one of the parties, in order to allow the interest of the government or of the various States to be placed before the Court. It is submitted that in many cases the interest of the Federal Government, or of a State, is no more important than the interests of private parties where, as in the present instance, a class case is presented vitally involving a basic industry and with a large amount ultimately at stake.

Lastly, counsel respectfully suggests that while appearing at the instance of the lumber companies above referred to, he is still appearing as *amicus curiae,* to give such assistance to the Court as he may be able. It would seem that such possible assistance should not be refused because counsel for one of the parties does not desire the Court

to have it; it is suggested too that putting it in the power of opposing counsel to deny such possible assistance to the Court is not in accord with the traditional right of any person to offer any help, however slight, to aid the Court in its administration of justice.

Respectfully submitted,

EDWARD S. ROGERS, *amicus curiae*

FEDERAL TRADE COMMISSION, *Petitioner,*

*vs.*

ALGOMA LUMBER COMPANY, ET AL., *Respondents.*

## BRIEF AMICUS CURIAE IN SUPPORT OF PETITION.

This brief is filed on behalf of a large number of producers of White Pine and Ponderosa Pine lumber who do not use trade designations which include the words "White Pine" except as applied to true White Pine. These parties are in competition with the respondents.

The unfair methods of competition which the Commission proceeded against in this case are of the same kind as those condemned by this court in *Federal Trade Commission v. Winsted Hosiery Co.*, 258 U. S. 483. There the act was the use of the terms "wool" and "merino" for products which were not wool. In this case respondents use a term which includes the words "White Pine", for lumber which is not White Pine.

The Commission, from the evidence, found as a fact that true White Pine lumber is useful for certain pur-

poses, has a good reputation, commands a ready sale and has and deserves public confidence. (Par. 17, R. 31.)

The Commission also found from the evidence that the respondents misapply a designation which includes the words "White Pine" to lumber cut from trees botanically of the Yellow Pine group. The scientific name of this tree is Pinus Ponderosa. Lumber from Pinus Ponderosa differs structurally and commercially from true White Pine. It is cheaper and not as good as true White Pine for many purposes. (Pars. 35-41, R. 34-36; Pars. 53-57, R. 37-38; Par. 61, R. 39.)

The Commission also found that substantial deception resulted from respondents' inclusion of the words "White Pine" in their trade term. (Par. 63, R. 39-40; Pars. 70-74, R. 41-42.)

The Commission followed the *Winsted* case, *supra*, and held respondents' acts to be unfair methods of competition. The Commission thereupon entered the cease and desist order which the Circuit Court of Appeals for the Ninth Circuit set aside (64 Fed. (2d) 618).

The testimony in this case, as in most cases where the meaning of words is in question, was not harmonious. The Commission considered the conflicting evidence and made eighty specific findings of facts. The Circuit Court of Appeals seems to have made its own analysis of the testimony and to have come to a different conclusion. In this, we think, it failed to observe the requirement of the statute, "The findings of the Commission as to the facts, if supported by testimony, shall be conclusive." There is no doubt that the Commission's findings of fact were supported by testimony—we believe by a great preponderance. Indeed, it is not clear that the court disagreed with the specific findings of fact made by the Commission but apparently set aside its order because it differed

with the Commission's conclusion that the facts found were, as a matter of law, unfair methods. This aspect of the case is discussed in the brief filed on behalf of the Commission and raises an important question under the Federal Trade Commission Act.

In this brief, we wish to draw the court's attention to the effect which respondents' conduct has on their competitors. Those in whose behalf this brief is filed are competitors of respondents. They are in two categories: (1) producers of true White Pine lumber who use the designation "White Pine" truth fully and who are compelled to meet the competition of a different and cheaper lumber represented as White Pine; and (2) producers of lumber from Ponderosa Pine who sell it under names which truthfully represent it and do not apply to it designations which include the words "White Pine". These parties are compelled to compete with respondents who, by including the words "White Pine" in the name they apply to Ponderosa Pine are able to obtain a wider market for the same product.

Respondents' use of trade designations including the words White Pine gives them an unfair advantage in their competition both with the sellers of true White Pine and sellers of Ponderosa Pine. The false inclusion by respondents of the words White Pine in their designation of lumber which is not White Pine, either in scientific or in common understanding, must of necessity injure all competitors who truth fully use the description which respondents use untruthfully, as well as all those who sell the same lumber which respondents sell and will not apply a misleading description to it.

Respondents' misdescription injures the public by fostering the substitution of a wood unfit for many of the purposes for which White Pine is well known to be fit. The consumer is led by respondents' misuse of the words

"White Pine" into paying his money for that which he does not intend to buy and might not otherwise consider. Consumers who are thus misled are potential customers for the lumber sold by the parties on whose behalf this brief is filed. They are in the market ordering "White Pine" and expecting to get true White Pine which these parties mill and sell. Moreover, the misdescription as White Pine of Ponderosa Pine gives it a greater salability than if this wood were sold for what it is.

The misdescription which the court below permitted to continue cannot be employed without taking away an appreciable portion of their market from the competitors of the respondents who sell true White Pine and Ponderosa Pine and describe them truthfully.

It is, of course, not necessary to show specific instances of substitution and loss to producers of true White Pine where both are the plain consequences of the situation. It appears from this record that the custom of the retail trade is to a large extent one of substitution and passing off without the knowledge or consent of the buyer, and that the retailer is induced to this course by the fact that he buys the Ponderosa lumber under a trade term which includes the words "White Pine". The producers of true White Pine are thus deprived of a legitimate market and the public is being deceived by respondents' misdescription, into purchasing lumber not intended to be purchased and for uses for which it is not adapted. Respondents' use of a trade description which includes the words White Pine is the instrument of fraud which produces this result. This matter is of great importance to the producers of true White Pine, to the producers of Ponderosa Pine who sell it on its merits, and to the public.

That respondents' conduct is an unfair method of competition goes without saying. It is an artifice by which

one group of traders secure for themselves custom which, but for it, would come to another group. As Mr. Justice Holmes in *International News Service v. Associated Press,* 248 U. S. 215, said, p. 246:

> "If a given person is to be prohibited from making the use of words that his neighbors are free to make some other ground must be found. One such ground is vaguely expressed in the phrase unfair trade. This means that the words are repeated by a competitor in business in such a way as to convey a misrepresentation that materially injures the person who first used them, by appropriating credit of some kind which the first user has earned. The ordinary case is a representation by device, appearance, or other indirection that the defendant's goods come from the plaintiff. But the only reason why it is actionable to make such a representation is that it tends to give the defendant an advantage in his competition with the plaintiff and that it is thought undesirable that an advantage should be gained in that way."

No one would have any complaint if the producers of Ponderosa Pine should compare it with White Pine and point out the good qualities which Ponderosa admittedly has, its usefulness for interior trim, its abundance, its moderate price. In short, an effort to sell this wood on its merits, under its own proper name, would be commendable and fair competition but to disguise it under the name of another wood is unfair and we should suppose, unlawful. As early as 1846, Senator Lott in *Taylor v. Carpenter,* 11 Paige, 292, 2 Sand., Ch. 603, remarked:

> "A disguise is not usually assumed for an honest object. It is a mark more characteristic of deception and fraud. It defeats the very end and object contemplated by legitimate competition, the choice to the public to select between the articles exposed to sale."

While in this case, as was found, the term "California

White Pine" may have been originally used to distinguish Ponderosa Pine from Southern Yellow Pine, the respondents now desire to perpetuate the term in order to enjoy the resulting identification of their lumber in the public mind with true White Pine, and the larger profit which admittedly accrues to them from the use of the words "White Pine." While the original use of the term may have been innocent, continuation after attention had been called to the confusion it was producing is fraudulent and unfair.

In *Cochrane v. McNish* (1896), A. C. 225, 13 R. P. C., 100, 107, Lord Morris said:

> "The respondents erred unwittingly at first. But as they persisted in their error after their attention was called to the fact that they were infringing the appellant's rights, their conduct, in the eye of the law, amounts to fraud, and they must be held responsible for the consequences."

In *Huntley & Palmer v. Reading Biscuit Co.*, 10 R. P. C., 277, 280, Mr. Justice Chitty said:

> "Again, the defendants set up by their counsel, and they set up on the affidavits that they did not mean anything wrong, and their intentions were fair and proper at the time. I need not refer to what Lord Justice James has said on this matter in *Hendriks v. Montagu*, L. R., 17 Ch. D., 638, p. 646, as to stealing a plaintiff's name, and as to its being a defendant's persistence, after his attention has been called to his use of the plaintiff's name, that justifies the court in using a harsh term."

That a deceptive practice has been going on for some time is an added reason why it should be stopped, not continued. The test is not how long a misrepresentation may have been used but whether it still deceives.

The undersigned desire to make it plain to the court that they regard respondents' actions an unfair method of competition which is injurious to them. It is urged

therefore, that the court grant the writ and review the decision of the Circuit Court of Appeals of the Ninth Circuit.

Respectfully submitted,

## BRIEF AMICUS CURIAE.

This brief, by leave of court, is filed on behalf of the lumber companies whose names are printed on the cover. They are in direct competition with the respondents and are in two categories: (1) producers of true White Pine lumber who use the designation "White Pine" truthfully and who are compelled to meet respondents' competition in selling a different and cheaper lumber represented as White Pine; and (2) producers of lumber from Ponderosa Pine who sell it under names which do not misrepresent it as white pine. These parties are obliged to meet the competition of the respondents who, by applying a designation which includes the words "White Pine" to Ponderosa Pine (which is not White Pine, either in scientific or in common understanding), are enabled to obtain a wider market and a better price for the same product and

encounter less trade resistance in its sale.* Thus, those in the second group, because they are unwilling to apply a false description to the lumber that they sell, are handicapped in their competition with respondents.

Respondents' use of trade designations including the words "White Pine" gives them an unfair advantage over competitors in both classes.

The misdescription which the court below permitted respondents to continue, cannot be employed without taking away an appreciable portion of their market from the competitors of the respondents in one group or the other.

## The Public Interest.

Respondents' methods inflict an injury on the public as well as upon their competitors. The misdescription fosters the substitution of a wood unfit for many of the purposes for which White Pine is well known to be fit and thus consumers are led, by respondents' misuse of the words "White Pine", into paying their money for lumber not intended to be bought and which might not otherwise be considered. The consumers who are thus misled are potential customers of the parties on whose behalf this brief is filed. They are in the market ordering "White Pine" and expecting to get true White Pine which these parties mill and sell, or they might buy Ponderosa Pine if sold on its merits and not under a disguise.

---

* Willis J. Walker, president of the Red River Lumber Company, one of the respondents and one of the most prominent "California White Pine producers", testified (Rec., 1551):

"Q. You think there is an advantage in the use of the word 'white' in connection with the term 'California white pine'? A: Yes.

Q. Have you at any time estimated that it is worth about $2 a thousand to the California white pine manufacturers? A. I don't remember ever having tried to put it in dollars and cents.

Q. But you think it has a monetary advantage to you. A. I do.

Q. Why is that? A. Because it classifies our woods with the other woods that have been known to the trade, including itself as white pines, the general group with this (sic) similar characteristics.

Q. Well, now, that is one of the reasons you want to continue to use it, is it? A. That is one of the reasons; yes."

It is no answer to say that Ponderosa is a good wood for certain purposes and that purchasers, who buy it as White Pine, although fooled, are not much hurt. As far back as 1848, in a case where it was argued that there was no actionable misrepresentation because the spurious article was as good as the genuine, the defense was disposed of with the remark, "The privilege of deceiving the public, even for their own benefit, is not a legitimate subject of commerce." (*Partridge* v. *Menck*, 2 Sandf., Ch. 622, How. App. Cas. 558.) As Mr. Justice Butler said in *U. S.* v. *95 Barrels of Vinegar*, 265 U. S. 438, 444, 445:

> "If an article is not the identical thing that the brand indicates it to be it is misbranded. * * * And it makes no difference whether vinegar made from dried apples is or is not inferior to apple cider vinegar."

**Respondents' Methods Are Unfair.**

As the direct result of respondents' methods, the producers of true White Pine and Ponderosa Pine, truthfully named, are deprived of their legitimate market. Potential customers are taken away from them by competitors' misrepresentation. The public is being deceived into purchasing lumber not intended to be purchased and for uses for which it is not adapted. Respondents' misuse of a trade description which includes the words "White Pine" is the instrument of fraud which produces these results.

That respondents' use of the expression "California White Pine" is a method of competition was found by the court below (Rec., 1890). That it is an unfair method seems almost too plain for denial. It is false. It deceives the public. It injures competitors. It is an artifice by which one group of traders secure for themselves custom which, but for it, would probably come to another group. It is the appropriation by respondents for their lumber, of

credit which another wood has earned. By this means, respondents' lumber is given a salability it would not otherwise have.* Respondents thus secure an advantage over their competitors. This is unfair competition at common law. As Mr. Justice Holmes said in *International News Service* v. *Associated Press*, 248 U. S. 215, 246:

> "If a given person is to be prohibited from making the use of words that his neighbors are free to make some other ground must be found. One such ground is vaguely expressed in the phrase unfair trade. This means that the words are repeated by a competitor in business in such a way as to convey a misrepresentation that materially injures the person who first used them, by appropriating credit of some kind which the first user has earned. The ordinary case is a representation by device, appearance, or other indirection that the defendant's goods come from the plaintiff. **But the only reason why it is actionable to make such a representation is that it tends to give the defendant an advantage in his competition with the plaintiff and that it is thought undesirable that an advantage should be gained in that way.**"

The fact that those injured by the misrepresentation are so numerous that it is doubtful if an action could be maintained by any one of them, is one of the reasons which moved Congress, in the public interest, to confer upon the Commission jurisdiction over such wrongs.*

No one would have any complaint if the producers of Ponderosa Pine should compare it with White Pine and point out the good qualities which Ponderosa admittedly has, its usefulness for interior trim, its abundance, its moderate price. In short, an effort to sell this wood on its merits, under its own proper name, or under some trade name not including the phrase "White Pine", would be commendable and fair competition, but to disguise it under a name which inevitably suggests another wood seems un-

* *Roy. Baking Powder Co.* v. *Federal Trade Commission* (C. C. A. 2), 281 Fed. 744, 751, 753.

fair and we should suppose, unlawful. As early as 1846, Senator Lott remarked, in *Taylor* v. *Carpenter*, 11 Paige, 292, 2 Sandf. Ch. 603:

> "A disguise is not usually assumed for an honest object. It is a mark more characteristic of deception and fraud. It defeats the very end and object contemplated by legitimate competition, the choice to the public to select between the articles exposed to sale."

The essence of fair competition, where names and brands are concerned, is the opportunity to choose between goods offered for sale. In no other way can good will and good reputation be perpetuated and profited by. If purchasers have no chance to distinguish between an article desired and one not desired or not known, there could be no credit for good merchandise, no responsibility for bad, and no competition except in cheapness and sophistication.

While in this case, as was found, the term "California White Pine" may originally have been used to distinguish Ponderosa Pine from Southern Yellow Pine, the respondents now desire to perpetuate the term in order to enjoy the resulting identification of their lumber in the public mind with true White Pine, and the larger profit which admittedly accrues to them from the use of the words "White Pine". While the original use of the term may have been innocent, continuation, after attention had been called to the confusion it was producing, is fraudulent and unfair.

In *Cochrane* v. *McNish* (1896), A. C. 225, 13 R. P. C. 100, 107, Lord Morris said:

> "The respondents erred unwittingly at first. But as they persisted in their error after their attention was called to the fact that they were infringing the appellant's rights, their conduct, in the eye of the law, amounts to fraud, and they must be held responsible for the consequences."

In *Huntley & Palmer* v. *The Reading Biscuit Co.*, 10 R. P. C., 277, 280, Mr. Justice Chitty said:

> "Again, the defendants set up by their counsel, and they set up on the affidavits that they did not mean anything wrong, and their intentions were fair and proper at the time. I need not refer to what Lord Justice James has said on this matter in *Hendriks* v. *Montagu*, L. R., 17 Ch. D., 638, p. 646, as to stealing a plaintiff's name, and as to its being a defendant's persistence, after his attention has been called to his use of the plaintiff's name, that justifies the court in using a harsh term."

That a deceptive practice has been going on for some time is an added reason why it should be stopped, not continued. The test is, not how long a misrepresentation may have been used, but whether it still deceives.

**The Word "California" in Respondents' Trade Description Is Not a Distinction.**

The use by respondents of the qualifying word California —"California White Pine"—in their trade description of Ponderosa lumber, is not a distinction which would prevent deception. The true White Pines have always been distinguished as to their geographical origin by the use of locality names. The Commission found:

> "This lumber is often referred to merely as 'White pine'. Of its other names the commonest is 'Northern white pine'. It is also given various designations including 'New England white pine', 'Maine white pine', 'Michigan white pine', 'Michigan cork pine', 'Wisconsin white pine', 'Minnesota white pine', 'Canadian white pine', 'New Brunswick white pine', among others." (Par. 13, Rec., 30.)

This finding is directly supported by the testimony. (Rec., 415, 417, 504, 899, 921, 985, 1067.) The fact is assumed by many witnesses, (Rec., 109, 242-3, 271, 291, 510, 547, etc.), and indeed it is a matter of common knowledge.

It is unreasonable to expect the architect and general

buyer or even the majority of retailers to know that each of the various white pines from "Maine white pine" and "New Brunswick white pine" in the east to "Idaho white pine" in the west, are true white pines and yet that "California white pine", "New Mexico white pine" and "Arizona white pine" are not. Prefixing the geographical name does not distinguish, but adds to the confusion and makes discovery of the deception all but impossible. "California White Pine" would be understood to mean, not that the wood is not White Pine at all, but that it is White Pine coming from California. The situation is analagous to the use of a defendant's name in connection with the plaintiff's trade-mark. "That is an aggravation and not a justification, for it is openly trading in the name of another upon the reputation acquired by the device of the true proprietor." (*Menendez* v. *Holt*, 128 U. S. 514, 521.)*

## The Opinion of the Court Below.

*Algoma Lumber Co.* v. *Federal Trade Commission*, 64 Fed. (2d) 618 (Rec., 1889).

The Circuit Court of Appeals, without overruling the Commission's findings, made some of its own which would

* "'Duraleather' is a coined word. 'Dura' admittedly is an abbreviation of the word 'durable', and the word thus composed can be given no other meaning than 'Durable leather'. So read and considered it is an assertion that the product marked, advertised and sold as 'Duraleather' consists of leather. By putting this imitation product bearing a false name into the channels of trade, whatever may have been the petitioner's motive in so doing, they furnished their customers and those dealing with them the means to misrepresent that the goods made from that product were made of leather, and when such a false trade name is subsequently associated with the sale of goods made from such product, the petitioners cannot escape legal responsibility by disclaiming any intention to deceive or by showing that those with whom they dealt directly—first purchasers of the product—well knew that it was but an imitation or substitute for the genuine article. While this imitation leather, as it passed from the petitioners in the first instance, was to its customers a finished product, it was to their knowledge and purpose to be used ultimately in upholstering and in the manufacture of suitcases and other goods and to come into the hands of those usually called the consuming public." *Masland Duraleather Co.* v. *Federal Trade Commission* (C. C. A. 3), 34 Fed. (2d) 733, 736.

seem to confirm those of the Commission and lead to a conclusion exactly contrary to the one reached by the court. The court found:

> "That the use of the expression 'California White Pine' is a method of competition, there is no question." (Rec., 1890.)

The court stated that the only questions are, is it an unfair method and is the proceeding in the interest of the public? Concerning the falsity of the description complained of, the court concedes that:

> "Pinus Ponderosa belongs botanically with the so-called 'yellow pine' group." (Rec., 1890.)
>
> * * * * * * *
>
> "The only species of true botanical 'white pines' of commercial importance are Northern White Pine, and two Pacific coast varieties—Idaho White Pine and Sugar Pine." (Rec., 1890.)

That the misdescribed lumber is inferior is also admitted. The court says:

> "That there is a greater percentage of sap wood content in ponderosa lumber than there is in the true white pine lumber, there is no question. This variation, however, appears to be of importance only as it has a bearing upon the relative durability of the two classes of lumber. It is the sapwood which was found by the Commission to be more subject to decay when applied to exterior uses." (Rec., 1893.)*

---

* Willis J. Walker, president of the Red River Lumber Company, one of the respondents, testified. (Rec., 1556):

> "Q. Is the trade unable or is it able to tell the California white pine from the so-called genuine white pines by appearance? A. I think so—by appearance—I don't know, not necessarily.
>
> Q. In the clear grades, the California white pine is largely sap, isn't it, rather than heart in character? A. The clear grade will run more to heart; yes.
>
> Q. More to heart? A. More to sap—excuse me."

The inferiority of sapwood to heartwood in joinery has always been recognized. In Robert Greene's "**A Quip for an Upstart Courtier, or A Quaint Dispute between Velvet Breeches and Cloth Breeches**", 1592 (Crosart, Works, Vol. 11, p. 270), there is an argument between a plain man and a courtier, each pointing out the vices of the other's class. Velvet Breeches cites the rascality of the various trades,—the saddler

Durability is one of the factors which influence the purchase of building material.

The court then quotes from the testimony of five witnesses who state that Ponderosa lumber is well known to be unsatisfactory for exterior use, but concludes that although buildings of true White Pine have survived for two hundred years, the use of Ponderosa is too recent to permit of comparison, notwithstanding the fact that it is known to rot quickly when exposed to the weather. The court concludes,

> "What the testimony appears to establish is that Northern white pine has relatively a greater durability for exterior use without establishing any comparative degree of such durability." (Rec., 1895.)

This is equivalent to saying that Ponderosa is inferior in durability to true White Pine, so we have up to this point, findings by the court below that so-called "California White Pine" is misdescribed, that it is not White Pine, and that it is inferior to genuine White Pine.

The court then quotes testimony showing that architects and others are deceived by the use for Ponderosa, of trade names which include the words White Pine, but comments:

> "Just why architects and lumber dealers should be confused in view of the aid and assistance furnished by the government through the Bureau of Standards is not readily apparent." (Rec., 1895.)

---

for selling cheap skin as if it came from Muscovy or Calabria; the cutler, a blade that can only be thrust into a bushel, swearing it came from Turkey or Toledo; the butcher for selling a piece of an old cow for a chop from a young ox; Tom Tapster for filling the poor man's can of small beer half full of froth; and "the joiner, though an honest man, yet he maketh his joints weak, and putteth in sap in the mortices, which should be the heart of the tree, and all to make his stuff slender".

Oxford Dictionary, Vol. VIII, p. 100.

Architects and lumber dealers are in fact confused, but, the court thought they ought not to be.*

The court then cites testimony showing passing off of "California White Pine" on specifications for White Pine and refers without dissent to the testimony of a witness who estimates the amount of this substitution to be "about ninety-five per cent". (Rec., 1896.)

This shows that 95 per cent of the trade are in fact confused by a misdescription into buying an inferior wood for a superior one, although "just why" they "should be confused * * * is not readily apparent." The apparent, indeed the only, cause of the confusion is respondents'

---

* This seems completely to overlook the well-known rule that if a false representation in fact deceives the person to whom it is made, it is unlawful:

> "Defendants' contention that customers need not have been deceived, had they taken note of the differences disclosed to their senses in the appearance between the Prest-O-Lite package filled by complainant and such package filled by defendant, is answered by the truism that the imitation need not be such as to mislead the careful and discriminating purchaser; it is enough that it misleads the ordinary and casual buyer." *Auto Acetylene Light Co.* v. *Prest-O-Lite Co.* (C. C. A. 6th) 264 Fed. Rep. 810, 813.

Indeed the courts have often said that any representation is unlawful which is likely to deceive the "unwary". (*Battle* v. *Finlay*, 45 Fed. 796, 798; *Liebig's Extract of Meat Co.* v. *Chemists Co-Op. Co.*, 13 R. P. C. 635; C. A. 13 R. P. C. 736, 739, Lord Justice Smith: "The real question in this case is whether the Defendants' goods are made up in such a way as to deceive an unwary purchaser." In *McLean* v. *Fleming*, 96 U. S. 245, 256, Mr. Justice Clifford speaks of the deception of "the unwary". Anything "which would be likely to deceive or mislead an ordinary unsuspecting customer is obnoxious to the law", Mr. Justice Bradley in *Celluloid Mfg. Co.* v. *Cellonite Mfg. Co.*, 32 Fed. 94, 97; in *Florence Mfg. Co.* v. *J. C. Dowd Co.*, 178 Fed. 73 (C. C. A. 2), it is said that the law is made for the protection of the "ignorant, the unthinking and the credulous, who, in making purchases, do not stop to analyze, but are governed by appearances, and general impressions." This court has held that the test is "* * * the eye of an ordinary observer giving such attention as a purchaser usually gives", Mr. Justice Strong in *Gorham Co.* v. *White*, 14 Wall. 511, 528. It has been held that a purchaser has a right to be careless. *Pillsbury* v. *Pillsbury*, 64 Fed. 841, 847 (C. C. A. 7):

> "Indeed, some cases have gone to the length of declaring that the purchaser has a right to be careless, and that his want of caution in inspecting brands of goods with which he supposes himself to be familiar ought not to be allowed to uphold a simulation of a brand that is designed to work a fraud upon the public. However that may be, the imitation need only to be slight if it attaches to what is most salient, for the usual inattention of a purchaser renders a good will precarious if exposed to imposition."

false trade description. It seems as if the court below substituted its own conjecture for proved facts.

In reference to the respondents, the court says (Rec., 1896):

> "With the exception of the possible question of durability, the materiality of which has not been established, it does not otherwise appear the public is injured by action of such manufacturers."

If this statement means what it unmistakably says, it is incredible that any court should hold that the inferior quality of the article passed off on a purchaser for and under the name of a superior one is not material. To say that in such circumstances the public is not injured is to deny the obvious. The injury is two-fold: (1) The article passed off is not the one expected; (2) It is not as good.

The court then refers to the *Winsted* case which it distinguishes by saying (Rec., 1897):

> "The sale or purchase of a material as all wool which in fact is in large part cotton presents a situation which may not be said to be parallel to that presented upon the facts in this case. If a material from a gray wool from some other breed of sheep than a Merino were dealt with in commerce under the name of 'Merino' or 'Gray Merino', then there might be some parallel between the two cases."

To apply this reasoning to the present case, no one could be deceived unless, on specifications for White Pine, there should be furnished not wood, but imitation wood. In short, it seems to have been held below that deception must be by nouns and cannot be by adjectives. This court has held the exact opposite: In *Brougham* v. *Blanton Mfg. Co.* 249 U. S. 495, Mr. Justice McKenna said, 502:

> "There may be value in the use of the trade-mark 'Creamo', as the company asserts, and detriment, it may be, in any change or qualification of it; but its value may be in its deception—its suggestion of cream appealing to the popular preference for that article

over skimmed milk, though the scientific judgment may be in favor of the latter, a judgment possibly not known, or if known not appreciated or accepted." * * *

"If 'Creamo Oleomargarine' is to be regarded as the name of the product it is false and deceptive * * *".

The product was in fact oleomargarine.

After further discussion, the court below continues (Rec., 1897):

"It may be conceded that the evidence establishes hat Northern White Pine lumber from the forests of Minnesota and Idaho White Pine lumber possess certain qualities which make those lumbers a superior grade to lumber produced and sold as California White Pine. When we compare Idaho White Pine with Northern White Pine we find that the Department of Agriculture (Exhibit 21) records the former as possessing greater strength and stiffness, but with all a softer quality."

Thus again admitting that the imitation is not as good as the genuine.

The court concludes thus (Rec., 1898):

"The supply of the botanical true white pine is far more limited than that of Ponderosa. The public is not only interested in not being deceived in the material it purchases under a certain nomenclature, but possibly in an even larger sense in the conservation of the forests."*

*The court below, in discussing the production of white pine (Rec. 1890) mentions that part of the supply of white pine is taken from "second growth from the original forests stretching throughout the northern and eastern sections of the United States from Minnesota to the Atlantic coast." Later the court said "the fact may not be overlooked that the greater portion of the annual production of (white pine) comes from second growth timber." This was taken to be "suggestive of the fact that the public interest is not promoted by the premature cutting of second growth timber." (Rec. 1898). However, a recent publication of the Forest Service indicates that production in California is just reaching the stage where second growth is of commercial significance: It is there stated that "the area of virgin timber constitutes about 41 per cent of the area of all commercial timber in California, including redwood." The Forest Service points out that "with the continued depletion of old-growth stands" in California there is "increasing need" for study and recognition of the commercial importance "of the second-growth timber that is rapidly coming in on many cut-over areas in this region." *Preliminary Yield Tables for Second-Growth Stands in the California Pine Region*, Technical Bulletin No. 354, Department of Agriculture, June 1933, pp. 4, 20.

Therefore, the conclusion seems to have been reached that in the interest of forest conservation, misrepresentation, deception, unfair methods of competition, and any sort of commercial depravity, should not be interfered with.

## Conclusion.

The parties on whose behalf this brief is filed have a real interest in this case. As previously stated, they comprise those who produce lumber from true White Pine and truthfully describe it, and those who produce lumber from Ponderosa pine and do not misdescribe it. The importance of this case to them is plainly deduced from the record.

The volume of Ponderosa lumber in former years of normal production was 2,800,000,000 feet b. m. That of the three true White Pines was 1,600,000,000 feet. (Findings, Par. 28; Rec., 33, Statistical Bulletin 21, Dept. of Agriculture; Commission's Ex. 34-G, Rec., 945; Commission's Ex. 27, maps; Commission's Ex. 39 A & B, Rec., 957, 958.) Of the latter about 467,000,000 feet was of second growth White Pine (Commission's Ex. 27), used for inferior purposes not of interest in this case. On the other hand more than half of the Ponderosa production is now given names (chiefly 'pondosa") which do not include the words "White Pine". (Findings, Par. 33; Rec., 34; cf. state by state Forestry Service figures in Commission's Ex. 27 with Commission's Ex. 34-F and 35, Rec., 945.)

Hence the aggregate of the "pondosa pine" and true White Pine (the producers of both of which are injured by the use of the term "California White Pine") is in volume approximately twice as great as the volume of Ponderosa sold as "California White Pine", or under

similar misdescriptions. When the difference in price is taken into account, the value of the product of competitors injured by respondents' unfair methods is substantially more than twice the value of the products sold by respondents under the misleading names used by them.

With respect to the damage to competitors resulting from respondents' trade term it is, of course, unnecessary under the authorities to prove that dealers who do not misdescribe their lumber have lost specific orders to "California White Pine" producers, or that particular purchasers have been deceived.

The evidence in this record shows injury more positively than this. It shows that diversion of business from true White Pine and from Ponderosa Pine sold as such, to "California White Pine" is **a practice** on the part of a substantial portion of dealers at various typical centers of trade. The court below quoted testimony which estimated this substitution as 95 per cent. (Rec., 1896.)

The trade practice complained of in this case is of precisely the same sort as that condemned by this court in *Federal Trade Commission* v. *Winsted Hosiery Co.* 258 U. S. 483. It is unfair to the public because the description is untrue and misleading. It is unfair to the parties on whose behalf this brief is filed because it subjects them to a kind of competition which they should not have to meet. The decree below deprives the producers of true White Pine of the higher price legitimately obtainable for it and takes from them the value of the good will which this wood has earned during the past two centuries. The decree will compel the producers who now sell Ponderosa lumber on its merits to apply a false designation to it before they can compete in the same product on equal terms with respondents. The public will have to take care of itself.

These are the conditions forced upon the industry by respondents' persistent misuse of the term White Pine and the decision of the court below sanctioning it.

Respectfully submitted,

**On Writ of Certiorari to the United States Circuit Court of Appeals for the Ninth Circuit.**

## RESPONDENTS' PETITION FOR REHEARING.

Come now the respondents and respectfully petition for a rehearing herein and for grounds thereof show:

I.

*That there has been no ruling by the Court upon the jurisdiction of the Federal Trade Commission over the subject matter of the complaints.*

II.

*That the Court has mistakenly ascribed to respondents a contention that misleading trade nomenclature is excusable in consideration of forest conservation.*

III.

*That the findings of the Commission are insufficient to establish a case of unfair competition against respondents, since neither fraudulent or deceptive motive nor fraud or deception in fact has been shown.*

---

## *Foreword.*

Respondents conceive it to be their duty to direct the Court's attention to the fact that the opinion rendered in this cause upon the 8th day of January, 1934, (1) omits to rule upon the point of jurisdiction, which was aptly raised and presented, and (2) ascribes to respondents a dubious contention which they have not in fact advanced. In addition we cannot but feel that (3) the Court's conclusions as to the facts go beyond anything that is fairly warranted either by the record or by the findings of the Commission. We shall seek brevity in urging these matters upon the consideration of the Court, but shall trust that such brevity of treatment may not be taken to evidence lack of confidence in the merit of this petition.

## *Argument in Support of Petition.*

### I.

### THERE HAS BEEN NO RULING BY THE COURT UPON THE JURISDICTION OF THE FEDERAL TRADE COMMISSION OVER THE SUBJECT MATTER OF THE COMPLAINTS.

The third point presented by respondents upon brief (p. 56) was directed to the jurisdiction of the Commission and was phrased in the following terms:

> "'Unfair methods of competition' within the meaning and intendment of the Federal Trade Commission Act have not been established against the respondents upon the record or by the Commission's findings."

There followed three subsidiary propositions, phrased in the language of the Supreme Court in

> *Federal Trade Commission v. Raladam Co.*, 283 U. S. 643, 51 S. Ct. Rep. 587, 75 L. Ed. 1324.

It seemed to respondents, and it still appears to them, that they had aptly invoked the decision of this Court in the *Raladam* case in order to make clear the Commission's excess of jurisdiction. The opinion of the Court in that case affords a complete exposition of the genesis and purpose of the Federal Trade Commission Act, and it was specifically held therein that "unfair methods" are those resorted to for the purpose of destroying competition or of introducing a monopoly. It was there shown that the aim of the statute is to reach through administration the evils condemned generally by the Sherman Anti-Trust Act and the Clayton Act. Respondents relied with confidence upon this authoritative pronouncement. They undertook to demonstrate that the findings of the Commis-

sion could not serve to make out a case within the meaning or intendment of the statute. The discussion is found upon pages 56 to 60, inclusive, of respondents' brief. We need not again traverse the ground. The point was urged upon the Court in oral argument.

Respondents had faith in the validity of their contention that the Commission's orders proceeded from an excess of jurisdiction. True, the point attracted little notice on the part of the Commission, but it could not be thus lightly waved aside. The issue was necessarily in the case, and respondents anticipated that it would be the subject of a ruling by the Court.

There has been no such ruling. The point is not mentioned in the opinion. There is no reference to *Federal Trade Commission v. Raladam Co.*, the only case in which this Court has spoken specifically respecting the nature and objects of the statute, and defined the limits within which the jurisdiction of the Commission must be exercised.

Respondents seek a ruling upon the jurisdictional issue.

---

## II.

### THE COURT HAS MISTAKENLY ASCRIBED TO RESPONDENTS A CONTENTION THAT MISLEADING TRADE NOMENCLATURE IS EXCUSABLE IN CONSIDERATION OF FOREST CONSERVATION.

The fourth point noticed in the opinion of this Court is phrased and considered in the following terms:

> "*Fourth.* Finally, the argument is made that the restraining orders are not necessary to protect the public interest (see *Federal Trade Commission v. Royal Milling Co., supra*), but to the contrary that the public interest will be promoted by increasing the demand for *pinus ponderosa,* though it be sold with a misleading label, and thus abating the destruction of the pine forests of the east.
>
> "The conservation of our forests is a good of large importance, but the end will have to be attained by methods other than a license to do business unfairly."

The language employed by the Court seems clearly to imply that respondents have argued that "a misleading label" may be excused because thereby the sale of their lumber will be advanced and destruction of the eastern pine forests will be abated. Surely the reader would so understand. But the fact is that no such argument has been tendered on the part of respondents. We have not urged, nor intimated, that improper trade nomenclature is excusable, either in aid of forest conservation or otherwise. We have offered no argument whatever directed to forest conservation.

The Court apparently took note of the argument founded by our adversaries upon an observation of the lower court respecting the interest of the public in forest conservation. Apparently it has been assumed that this observation was responsive to a contention advanced by respondents. But respondents in fact advanced no such contention, as our adversaries will doubtless concede.

As it now stands, the opinion of the Court ascribes to respondents and to their counsel an argument which they have not advanced, and visits upon them a censure which is undeserved. Whatever may be the measure of the resulting obloquy, the respondents may justly petition for acquittance.

---

## III.

### THE FINDINGS OF THE COMMISSION ARE INSUFFICIENT TO ESTABLISH A CASE OF UNFAIR COMPETITION AGAINST RESPONDENTS, SINCE NEITHER FRAUDULENT OR DECEPTIVE MOTIVE NOR FRAUD OR DECEPTION IN FACT HAS BEEN SHOWN.

Respondents feel that in many important respects the Court's review of the facts goes beyond anything that is warranted by the Commission's findings. As a result respondents are in effect convicted of purposes and practices which the Commission itself, in view of the record, would hardly feel free to charge against them.

We cannot expect that the Court will now entertain a specification of the respects in which respondents feel that the terms of the decision transcend the Commission's findings, but at least we may point out that there cannot be discovered in the Commission's findings

(1) Fraudulent motive or purpose;

(2) Misrepresentation by respondents of their lumber, either as to identity, quality or utility;

(3) Substitution by respondents of their lumber upon orders for so-called "true white pine";

(4) The "passing off" by respondents of their lumber as and for a different product.

The opinion of the Court refers to "the woods that the respondents are selling as a substitute." (p. 7.) The Commission itself has not found that respondents are selling their lumber as a "substitute" for other lumber, at least in any culpable sense.

The opinion of the Court recites:

> "The consumer is prejudiced if upon giving an order for one thing, he is supplied with something else." (p. 8.)

It is further said:

> "Dealers and manufacturers are prejudiced when orders that would have come to them if the lumber had been rightly named, are diverted to others whose methods are less scrupulous." (pp. 8, 9.)

These and cognate statements found in the opinion of the Court are unexceptionable as declarations of principle, but we protest that they may not fairly be directed to any of the practices of respondents, either as recited in the Commission's findings or as shown of record. These respondents are not chargeable with "substitution", nor can they justly be placed in the category of "the careless and the unscrupulous".

In these respects, and in others, we think the statements found in the opinion of the Court go beyond the facts and that respondents are thereby subjected to unwarranted condemnation.

We think that the attention of the Court should again be directed to the fact that no witness in the proceedings before the Commission testified that he had been deceived or misled by this trade name into the purchase or use of

respondents' lumber. (Respondents' brief, p. 55.) It would seem that if deception or a substitution were as prevalent as the Commission's findings may superficially imply, some witness could have been obtained who would testify that he had been deceived.

It would not be appropriate here to seek either to renew or extend the argument, but we may summarize this feature of our protest in the confident declaration that there is neither evidence nor finding that respondents have employed their trade name as an instrument of fraud or deception. In this respect the case is wholly dissimilar to *Federal Trade Commission v. Winsted Hosiery Co.*, 258 U. S. 483, 42 S. Ct. Rep. 384, 66 L. Ed. 729, in which the falsity of labels was palpable, and fraud and deception were intended and achieved.

Throughout the opinion of the Court there is evident a misapprehension as to the nature of respondents' defense. It is not that respondents seek to retain a name which is false, misleading or deceptive or which will permit their lumber to pass into trade or industry as something which it is not. It is not that they seek to take trade unjustly from a competitor or to supply to a consumer a product which, except for the particular trade name, would not be accepted. It is rather the position of respondents that this lumber, in essential mechanical properties and commercial qualities, belongs in the white pine group of pine lumbers, where it has always been placed by the consensus of the trade; that this trade name has no botanical connotation—in other words, that it does not represent or imply that the lumber is yielded by a tree which botanists have assigned to their "white pine

group''; and that it has not been used in contravention of the terms or purpose of the statute. Whether or not this defense be sufficient, it has at least been honorably advanced.

---

## *Conclusion.*

Respondents seek a rehearing to the following ends:

1. That the issue as to the Commission's jurisdiction over the subject matter of the complaints may be determined;

2. That respondents may be acquitted of a contention, not advanced on their part, which the Court has mistakenly ascribed to respondents and thereupon visited upon them an undeserved rebuke;

3. That respondents may be relieved of all charges or implications of fraudulent or unscrupulous dealing.

Respectfully submitted,

WARREN OLNEY, JR.,

CERTIFICATE OF COUNSEL.

The undersigned hereby certifies that he is one of the counsel for the respondents herein, and that the foregoing Petition for Rehearing is presented in good faith and not for delay.

ALLAN P. MATTHEW.

Dated: San Francisco, California,
January 27, 1934.

# SUPREME COURT OF THE UNITED STATES.

No. 240.—October Term, 1933.

Federal Trade Commission, Petitioner,
*vs.*
Algoma Lumber Company, Big Lakes Box Company, California Fruit Exchange, et al., Respondents.

On Writ of Certiorari to the Circuit Court of Appeals for the Ninth Circuit.

[January 8, 1934.]

Mr. Justice Cardozo delivered the opinion of the Court.

In May, 1929, the Federal Trade Commission filed and served complaints against a group of fifty manufacturers on the Pacific Coast charging "unfair competition in interstate commerce" in violation of § 5 of the Federal Trade Commission Act. 38 Stat. 717, 719, c. 311, § 5; 15 U. S. C. § 45.

After the service of answers the proceedings were consolidated and many witnesses examined. The outcome was a series of reports sustaining the complaints as to thirty-nine manufacturers, with orders to "cease and desist" from the practice challenged as unfair. Twelve companies thus enjoined petitioned the Circuit Court of Appeals for the Ninth Circuit to review the orders of the Commission. Such review being had, the orders were annulled. 64 F. (2d) 618. A writ of certiorari brings the case here.

The practice complained of as unfair and enjoined by the Commission is the use by the respondents of the words "California white pine" to describe lumber, logs or other forest products made from the pine species known as *pinus ponderosa*. The findings as to this use and its effect upon the public are full and circumstantial. They are too long to be paraphrased conveniently within the limits of an opinion. We must be content with an imperfect summary.

The respondents are engaged in the manufacture and sale of lumber and timber products which they ship from California and Oregon to customers in other states and foreign lands. Much of what they sell comes from the species of tree that is known among

botanists as *pinus ponderosa*. The respondents sell it under the name of "California white pine," and under that name, or at times "white pine" simply, it goes to the consumer. In truth it is not a white pine, whether the tests to be applied are those of botanical science or of commercial practice and understanding.

Pine trees, the genus "pinus," have for a long time been divided by botanists, foresters and the public generally into two groups, the white pine and the yellow. The white pine group includes by common consent, the northern white pine (*pinus strobus*), the sugar pine and the Idaho white pine. It is much sought after by reason of its durability under exposure to weather and moisture, the proportion of its heartwood as contrasted with its sapwood content as well as other qualities. For these reasons it commands a high price as compared with pines of other species. The yellow pine group is less durable, harder, heavier, more subject to shrinkage and warping, darker in color, more resinous, and more difficult to work. It includes the long leaf yellow pine (*pinus palustris*), grown in the southern states, and the *pinus ponderosa*, a far softer wood, which is grown in the Pacific coast states, and in Arizona and New Mexico as well as in the "inland empire" (eastern Washington, Oregon, Idaho, and western Montana).

Of the varieties of white pine, the northern or *pinus strobus* has been known better and longer than the others. It is described sometimes as northern white pine, sometimes as white pine simply, sometimes with the addition of its local origin, as Maine white pine, Michigan, Wisconsin, Minnesota, Canadian, New Brunswick. It is native to the northeastern states and to the Great Lakes region, as far west as Minnesota. It is found also in Canada and along the Appalachian highlands. It was almost the only building material for the settlers of New England, and so great is its durability that many ancient buildings made from it in the seventeenth and eighteenth centuries survive in good condition. The sugar pine is native to the upland regions of California, southern Oregon and parts of Nevada. The Idaho white pine grows in the mountainous sections of Idaho, Washington and Oregon and in parts of British Columbia. The white pine species "still holds an exalted reputation among the consuming public" and "in general esteem is the highest type of lumber as respects the excellences desired in soft wood material." "It is coming more and more to be

a specialty wood, largely devoted to special purposes, as it becomes scarcer and higher in price. It is in great demand."

About 1880 the *pinus ponderosa*, though botanically a yellow pine, began to be described as a white pine when sold in the local markets of California, New Mexico, and Arizona, the description being generally accompanied by a reference to the state of origin, as "California white pine," etc. By 1886, sales under this description had spread to Nevada and Utah with occasional shipments farther east. About 1900, they entered the middle western states, and about 1915 had made their way into New England, though only to a small extent. The pines from the inland empire traveled east more slowly, and when they did were described as western white pine, a term now generally abandoned. The progress of the newcomers both from the coast and from the inland empire was not wholly a march of triumph. In their movement to the central and eastern markets they came into competition more and more with the genuine white pine with which those markets had been long familiar. Mutterings of discontent were heard. In 1924, partly as a result of complaints and official investigations, many of the producers, notably those of the "inland empire", as well as some producers in California and Arizona, voluntarily gave up the use of the adjective "white" in connection with their product, and adopted the description "pondosa pines," pondosa being a corruption or abbreviation of the ponderosa of the botanists. "Pondosa pine is the term employed for ponderosa by the representatives of producers of slightly more than half of the ponderosa marketed." The respondents and others, however, declined to make a change. During the next five years California white pine and its equivalents became an even more important factor in the lumber markets of the country. Accumulating complaints led to an inquiry by the Commission, which had its fruit in this proceeding.

The confusion and abuses growing out of these interlocking names have been developed in the findings. Many retail dealers receiving orders for white pine deliver California white pine, not knowing that it differs from the lumber ordered. Many knowing the difference deliver the inferior product because they can buy it cheaper. Still others, well informed and honest, deliver the genuine article, thus placing themselves at a disadvantage in the

race of competition with the unscrupulous and the ignorant. Trade has thus been diverted from dealers in white pine to dealers in *pinus ponderosa* masquerading as white pine. Trade has also been diverted from dealers in pinus ponderosa under the name pinus pondosa to dealers in pinus ponderosa under the more attractive label. The diversion of trade from dealers of one class to dealers of another is not the only mischief. Consumers, architects and retailers have also been misled. They have given orders for the respondents' product, supposing it to be white pine and to have the qualities associated with lumber of that species. They have accepted deliveries under the empire of that belief. True indeed it is that the woods sold by the respondents, though not a genuine white pine, are nearer to that species in mechanical properties than they are to the kinds of yellow pine indigenous to the south. The fact that for many purposes they are half way between the white species and the yellow makes the practice of substitution easier than it would be if the difference were plain. Misrepresentation and confusion flourish in such a soil. From these findings and others the Commission was brought to the conclusion that the respondents compete unfairly in transacting business as they do, and that in the interest of the public their methods should be changed.

"The findings of the Commission as to facts, if supported by testimony, shall be conclusive." 15 U. S. C. § 45. The Court of Appeals, though professing adherence to this mandate, honored it, we think, with lip service only. In form the court determined that the finding of unfair competition had no support whatever. In fact what the court did was to make its own appraisal of the testimony, picking and choosing for itself among uncertain and conflicting inferences. Statute and decision (*Federal Trade Commission* v. *Pacific States Paper Trade Association*, 273 U. S. 52, 61, 63) forbid that exercise of power.

*First.* The argument is made that unfair competition is disproved by the "simplified practice recommendations" of the Bureau of Standards when read in conjunction with the testimony as to the comparative utility of the genuine white pine and *pinus ponderosa.*

The Court of Appeals concedes that the recommendations of the Bureau will not avail without more to control the action of the

Commission. Cf. *Brougham* v. *Blanton Mfg. Co.*, 249 U. S. 495, 499; *Piedmont & Northern Ry. Co.* v. *Interstate Commerce Commission*, 286 U. S. 299, 312. The view was expressed, however, that alone they are in a high degree persuasive, and that in conjunction with other evidence they are even controlling. In particular that result was thought to follow in this case because the substituted wood, in the judgment of the court, is so nearly equal in utility that buyers are not injured, even though misled.[1]

Such a holding misconceives the significance of the Government's endeavor to simplify commercial practice. It misconceives even more essentially the significance of the substitution of one article for another without notice to the buyer.

(a) The Bureau of Standards is a branch of the Department of Commerce. At its instance representatives of manufacturers, sellers, and users of lumber, as well as architects, engineers and others, met in conference at various times between 1922 and 1928 in an endeavor to simplify methods of business in the lumber industry. Following these conferences the Bureau in 1929 issued a report entitled "Lumber, Simplified Practice Recommendations." Many subjects that were considered are without relation to this case. The report dealt with standards of size, of inspection, of structural material, and other cognate themes. One of its subdivisions, however, enumerates the standard commercial names for lumber of many types. Sixteen names of pines are stated in the list, and among them is the name "California white pine" with its botanical equivalent, *pinus ponderosa*.

The recommendations of the Bureau of Standards for the simplification of commercial practice are wholly advisory. Dealers may conform or diverge as they prefer. The Bureau has defined its own function in one of its reports. The Purpose and Application of Simplified Practice, National Bureau of Standards, Department of Commerce, July 1, 1931, pp. 2, 7, 10, 17. "Simplified

[1] "It would not necessarily follow . . . that a yellow pine might be sold as a white pine if such sales were unfair to the trade and injurious to the public, notwithstanding the Bureau of Standards had specified a name such as 'California white pine' in a list of 'Standard commercial names' for pine lumber. It would be different, however, if the particular lumber sold under such name possessed substantially the same qualities possessed by the white pines of commerce as distinguished from certain well known commercial yellow pines." 64 F. (2d) 618 at p. 620.

practice is a method of eliminating superfluous variety through the voluntary action of industrial groups." "The Department of Commerce has no regulatory powers" with reference to the subject, and hence "it is highly desirable that this recommendation be kept distinct from any plan or method of governmental regulation or control." There is nothing to show that in making up the list of names the Bureau made any investigation of the relation between *pinus ponderosa* and the white pines of the east. Certainly it had no such wealth of information on the subject as was gathered by the Commission in the course of this elaborate inquiry. There is nothing to show to what extent its advice has been accepted by the industry. The record does show that the recommendation does not accord with the practice of other governmental agencies. For example, the United States Forest Service in its publications and forest signs describes the ponderosa species as western yellow pine. In such circumstances the action of the Bureau was at most a bit of evidence to be weighed by the Commission along with much besides. It had no such significance as to discredit in any appreciable degree a conclusion founded upon evidence otherwise sufficient. The powers and function of the two agencies of government are essentially diverse. The aim of the one is to simplify business by substituting uniformity of methods for wasteful diversity, and in the achievement of these ends to rely upon cooperative action. The aim of the other is to make the process of competition fair. There are times when a description is deceptive from the very fact of its simplicity.

(b) The wood dealt in by the respondents is not substantially as good as the genuine white pine, nor would sales under the wrong name be fitting if it were

The ruling of the court below as to this is infected by a twofold error. The first is one of fact. The supposed equivalence is unreal. The second is one of law. If the equivalence existed, the practice would still be wrong.

The Commission found as a fact that the genuine white pine is superior for many reasons to *pinus ponderosa*, and notably because of its greater durability. The court held the view that the difference in durability had not been proved so clearly as to lay a basis for the orders, and this, it seems, upon the ground that though the superiority exists, the evidence fails to disclose its precise degree. "What the testimony appears to establish is that

Northern white pine has relatively a greater durability for exterior use without establishing any comparative degree of such durability." 64 F. (2d) 618 at p. 622.

Court and counsel for the respondents lean heavily at this point upon the testimony of the Director of the United States Forest Products Laboratory at Madison, Wisconsin, and his assistant Mr. Hunt. The Director testified that he did not know the comparative durability of the pines, and would refer any inquirer to specialists, of whom Mr. Hunt was one. The testimony of Mr. Hunt is that there have been no tests in a strict sense, but that the comparison between the white pines and *pinus ponderosa* has been based upon observation and opinion. He continues: "The general experience with the use of the white pines, during the two hundred years since they began to be used, indicated that those pines had moderately high durability. The general experience with *pinus ponderosa* indicated that that wood had low durability in contact with the ground or any place favoring the growth of decay. That is a matter of common knowledge." Inquirers at the Laboratory were accordingly advised that "the heartwood of the white pine has more decay resistence, will give longer service under conditions favoring decay than the heartwood of pinus ponderosa," and "the mill run of the white pine probably would average higher in durability under decay producing conditions."

This testimony, even if it stood alone, would tend to sustain rather than to discredit the findings by the Commission that the genuine white pines are materially superior to the woods that the respondents are selling as a substitute. It is fortified, however, by evidence from many other sources. To be sure there is contradiction which we have no thought to disparage. For present purposes we assume the credibility of those who spoke for the complainants. Wholesalers, retailers, manufacturers, lumber graders, laboratory experts and others bore witness to the comparative merits of the woods, stating their own experience as well as common opinion among their fellows in the industry. If all this may be ignored in the face of the findings of the Commission, it can only be by turning the court into an administrative body which is to try the case anew.

What has been written has been aimed at the position that *pinus ponderosa* is as good or almost as good as the white pines of the

east. We have yet to make it plain that the substitution would be unfair though equivalence were shown. This can best be done in considering another argument which challenges the finding of the Commission that there has been misunderstanding on the part of buyers. To this we now turn.

*Second.* The argument is made that retailers and consumers are not shown to have been confused as to the character of the lumber supplied by the respondents, and that even if there was confusion there is no evidence of prejudice.

Both as to the fact of confusion and its consequences the evidence is ample. Retailers order "white pine" from manufacturers and take what is sent to them, passing it on to their customers. At times they do this knowing or suspecting that they are supplying California white pine instead of the genuine article, and supplying a wood that is inferior, at least for the outer parts of buildings. Its comparative cheapness creates the motive for the preference. At times they act in good faith without knowledge of the difference between the California pines and others. Architects are thus misled, and so are builders and consumers. There is a suggestion by the court that for all that appears the retailers, buying the wood cheaper, may have lowered their own price, and thus passed on to the consumer the benefit of the saving. The inference is a fair one that this is not always done, and perhaps not even generally. If they lower the price at all, there is no reason to believe that they do so to an amount equivalent to the saving to themselves.

But saving to the consumer, though it be made out, does not obliterate the prejudice. Fair competition is not attained by balancing a gain in money against a misrepresentation of the thing supplied. The courts must set their faces against a conception of business standards so corrupting in its tendency. The consumer is prejudiced if upon giving an order for one thing, he is supplied with something else. *Federal Trade Commission* v. *Royal Milling Co.*, 288 U. S. 212, 216; *City of Carlsbad* v. *W. T. Thackeray & Co.*, 57 Fed. 18. In such matters, the public is entitled to get what it chooses, though the choice may be dictated by caprice or by fashion or perhaps by ignorance. Nor is the prejudice only to the consumer. Dealers and manufacturers are prejudiced when orders that would have come to them if the lumber had been rightly

named, are diverted to others whose methods are less scrupulous. "A method inherently unfair does not cease to be so because those competed against have become aware of the wrongful practice." *Federal Trade Commission* v. *Winsted Hosiery Co.*, 258 U. S. 483, 494.[2] The careless and the unscrupulous must rise to the standards of the scrupulous and diligent. The Commission was not organized to drag the standards down.

*Third.* The argument is made that the name for the respondents' lumber was adopted more than thirty years ago without fraudulent design, and that a continuation of the use is not unfair competition, though confusion may have developed when the business, spreading eastward, attained national dimensions.

The Commission made no finding as to the motives animating the respondents in the choice of the contested name. The respondents say it was chosen to distinguish their variety of yellow pine from the harder yellow pines native to the southern states. We may assume that this is so. The fact remains, however, that the pines were not white either botanically or commercially, though the opportunity for confusion may have been comparatively slight when the sales were restricted to customers in local markets, buying for home consumption. Complaints, if there were any, must have been few and inarticulate at a time when there was no supervisory body to hold business to its duty. According to the law as then adjudged, many competitive practices that today may be suppressed (*Federal Trade Commission* v. *Winsted Hosiery Co., supra*), were not actionable wrongs, the damage to the complainants being classified often as collateral and remote. *American Washboard Co.* v. *Saginaw Mfg. Co.*, 103 Fed. 286.[3] The Federal Trade Commission was not organized till 1914, its jurisdiction then as now confined to interstate and foreign commerce. Silence up to that time is not even a faint token that the misapplied name had the approval of the industry. It may well have meant no more than this, that the evil was not great, or that there was no champion at hand to put an end to the abuse. Even silence there-

[2]The many cases in which the Federal Trade Commission has acted to prevent misbranding or like misrepresentation will be found collected in Henderson, The Federal Trade Commission, p. 182, *et seq.*

[3]The cases are reviewed by Henderson, The Federal Trade Commission, p. 179, *et seq.*

after will not operate as an estoppel against the community at large, whatever its effect upon individuals asserting the infringement of proprietary interests. *French Republic* v. *Saratoga Victor Co.*, 191 U. S. 427. There is no bar through lapse of time to a proceeding in the public interest to set an industry in order by removing the occasion for deception or mistake, unless submission has gone so far that the occasion for misunderstanding, or for any so widespread as to be worthy of correction, is already at an end. Competition may then be fair irrespective of its origin. This will happen, for illustration, when by common acceptation the description, once misused, has acquired a secondary meaning as firmly anchored as the first one. Till then, with every new transaction, there is a repetition of the wrong.

The evidence here falls short of establishing two meanings with equal titles to legitimacy by force of common acceptation. On the contrary, revolt against the pretender, far from diminishing, has become increasingly acute. With the spread of business eastward, the lumber dealers who sold pines from the states of the Pacific coast were involved in keen competition with dealers in lumber from the pines of the east and middle west. In the wake of competition came confusion and deception, the volume mounting to its peak in the four or five years before the Commission resolved to act. Then, if not before, misbranding of the pines was something more than a venial wrong. The respondents, though at fault from the beginning, had been allowed to go their way without obstruction while the mischief was not a crying one. They were not at liberty to enlarge the area of their business without adjusting their methods to the needs of new conditions. An analogy may be found in the decisions on the law of trade marks where the principle is applied that a name legitimate in one territory may generate confusion when carried into another, and must then be given up. *Hanover Milling Co.* v. *Metcalf*, 240 U. S. 403, 416; *United Drug Co.* v. *Rectanus Co.*, 248 U. S. 90, 100. More than half the members of the industry have disowned the misleading name by voluntary action and are trading under a new one. The respondents who hold out are not relieved by innocence of motive from a duty to conform. Competition may be unfair within the meaning of this statute and within the scope of the discretionary powers conferred on the Commssion, though the practice

condemned does not amount to fraud as understood in courts of law. Indeed there is a kind of fraud, as courts of equity have long perceived, in clinging to a benefit which is the product of misrepresentation, however innocently made. *Redgrave* v. *Hurd,* L. R. 20 Ch. D. 1, 12, 13; *Rawlins* v. *Wickham,* 3 De G. & I. 304, 317; *Hammond* v. *Pennock,* 61 N. Y. 145, 152. That is the respondents' plight today, no matter what their motives may have been when they began. They must extricate themselves from it by purging their business methods of a capacity to deceive.

*Fourth.* Finally, the argument is made that the restraining orders are not necessary to protect the public interest (see *Federal Trade Commission* v. *Royal Milling Co., supra*), but to the contrary that the public interest will be promoted by increasing the demand for *pinus ponderosa,* though it be sold with a misleading label, and thus abating the destruction of the pine forests of the east.

The conservation of our forests is a good of large importance, but the end will have to be attained by methods other than a license to do business unfairly.

The finding of unfair competition being supported by the testimony, the Commission did not abuse its discretion in reaching the conclusion that no change of the name short of the excision of the word "white" would give adequate protection.

The judgment is
